12-47. Note that this 10 percentage point reduction in the federal tax rate is only applicable to income earned in a Canadian province or territory. When a corporation has foreign operations in permanent establishments outside of Canada, less than 100 percent of its income will be allocated to the various provinces and territories. When this is the case, the amount of abatement to be deducted is reduced by multiplying the 10 percent abatement by the total percentage of Taxable Income that was allocated to the provinces and territories. For example, if only 80 percent of a corporation's Taxable Income was allocated to one or more provinces, the abatement would effectively be reduced to 8 percent [(10%)(80%)].

## General Rate Reduction

### General Rate Reduction Percentage

12-48. In implementing changes in the federal rate on corporations, the government has decided to use a process which maintains the basic rate of 38 percent. When changes are required, the desired result is accomplished by using a "general rate reduction percentage". This percentage is applied to what is referred to as "full rate taxable income" (see explanation which follows). Since 2011, the general rate reduction percentage has been 13 percent.

12-49. In those situations where all of a corporation's income is both allocated to a province and eligible for the general rate reduction, the corporate rate at the federal level is 15 percent:

| | |
|---|---|
| Basic Corporate Rate | 38% |
| Less: Federal Tax Abatement | (10%) |
| Balance | 28% |
| Less: General Rate Reduction | (13%) |
| General Federal Corporate Rate | 15% |

### Full Rate Taxable Income

12-50. As noted, the "general rate reduction percentage" must be applied to "full rate taxable income". In fairly simple terms, full rate taxable income is income that does not benefit from certain other tax privileges. The most common of these privileges are the small business deduction, the manufacturing and processing profits deduction (M&P deduction), and the refundability of certain types of taxes on the investment income of private companies.

12-51. Both the small business deduction and the M&P deduction are discussed later in this Chapter. Full Rate Taxable Income will also be considered in this Chapter, with detailed coverage beginning at Paragraph 12-149. The coverage of refundable taxes on the investment income of private companies will not be dealt with until Chapter 13.

### Exercise Twelve - 6

**Subject:** Geographical Allocation And Federal Tax Payable

Sundown Ltd., a Canadian public company, has Taxable Income for the taxation year ending December 31, 2019 in the amount of $226,000. It has Canadian permanent establishments in Ontario and Manitoba. The Company's gross revenues for the 2019 taxation year are $2,923,000, with $1,303,000 of this accruing at the permanent establishment in Ontario, and $896,000 accruing at the permanent establishment in Manitoba. Wages and salaries total $165,000 for the year. Of this total, $52,000 is at the permanent establishment in Ontario and $94,000 is at the permanent establishment in Manitoba. Sundown has sales to the U.S. through a U.S. permanent establishment. Calculate federal Tax Payable for the taxation year ending December 31, 2019. Ignore any foreign tax implications.

**SOLUTION available in print and online Study Guide.**

# Provincial Tax Payable

## General Rules

12-52. In calculating Tax Payable for individuals, a graduated rate structure is involved at both the federal and provincial levels. While limits on the brackets may differ from those used at the federal level, all of the provinces assess taxes on individuals using graduated rates applied to Taxable Income.

**Figure 12 - 3**
**Combined Federal/Provincial Corporate Rates - March 31, 2019**

| | General Rate | M&P Rate | Small Business Rate |
|---|---|---|---|
| Federal Tax Only | 15.0% | 15.0% | 9.0% |
| **Combined Federal/Provincial** | | | |
| Alberta | 27.0% | 27.0% | 11.0% |
| British Columbia | 27.0% | 27.0% | 11.0% |
| Manitoba | 27.0% | 27.0% | 9.0% |
| New Brunswick | 29.0% | 29.0% | 11.5% |
| Newfoundland | 30.0% | 30.0% | 12.0% |
| Nova Scotia | 31.0% | 31.0% | 12.0% |
| Ontario | 26.5% | 25.0% | 12.5% |
| Prince Edward Island | 31.0% | 31.0% | 12.5% |
| Quebec | 26.6% | 26.6% | 15.0% |
| Saskatchewan | 27.0% | 25.0% | 11.0% |

12-53. In contrast, provincial corporate taxes are based on a flat rate applied to a Taxable Income figure. With the exception of Alberta and Quebec, the federal Taxable Income figure is used. While these two provinces collect their own corporate taxes, the Taxable Income figure that they use is normally similar to that used at the federal level.

## General Rate

12-54. As calculated in Paragraph 12-49, the general federal corporate rate is 15 percent. When the varying provincial rates are added to this percentage, Figure 12-3 shows that the general corporate tax rate ranges from a low of 26.5 percent in Ontario, to a high of 31 percent in Nova Scotia and Prince Edward Island.

## Manufacturing And Processing Rate

12-55. For many years, manufacturing and processing (M&P) income has been eligible for a tax deduction at the federal level. As discussed later in this Chapter, the deduction still exists. However, since the introduction of the general rate reduction (covered later in this Chapter), any income that qualifies for the M&P deduction also qualifies for the general rate reduction. As shown in Figure 12-3, the federal M&P rate (15 percent) is identical to the federal general rate (15 percent). As will be discussed later in this Chapter, the base for the general rate reduction is reduced by amounts eligible for the M&P deduction, so that the M&P deduction is not of any benefit to corporations in terms of federal Tax Payable.

12-56. This is also the situation with all but two of the provinces. At one time, there were more provinces with reduced M&P rates, but now only Ontario and Saskatchewan apply reduced rates to this type of income. Because it is still relevant in these two provinces, we provide coverage of the M&P deduction in this Chapter.

## Small Business Rate

12-57. The lowest rates in Figure 12-3 are referred to as the small business rates. As will be discussed later in this Chapter, Canadian controlled private corporations (CCPCs) are eligible for a small business deduction that lowers the federal rate to 9 percent on a limited amount of income. In general, the availability of this reduced rate is limited to the first $500,000 of active business income earned in a year.

12-58. All of the provinces, with the exception of Saskatchewan, also apply their small business rate to the first $500,000 of active business income. Saskatchewan uses an increased limit of $600,000.

12-59. When the reduced federal and provincial rates are combined, the resulting rates range from a low of 9 percent in Manitoba, to a high of 15 percent in Quebec. You might note that the 15 percent rate for Quebec is significantly higher than the rate in other provinces. The next highest rate is 12.5 percent in Ontario and Prince Edward Island.

### Investment Income Rates

12-60. While this is not illustrated in Figure 12-3, different rates are applicable to certain types of investment income. We will provide coverage of these rates in Chapter 13.

### Other Provincial Taxes

12-61. At one time, provincial taxes on corporate capital were fairly common. However, though some provinces levy capital taxes on specific types of entities (e.g., financial institutions), none of the provinces has a general tax on corporate capital.

12-62. Several provinces currently levy payroll taxes, often to fund the provincial health care system. For example, Ontario has a payroll tax on annual payrolls totalling more than $450,000.

## Other Goals Of The Corporate Tax System

12-63. If raising revenues was the only goal of the corporate taxation system, there would be nothing much to discuss with respect to this matter, and there would be little need for the Chapters on corporate taxation that follow. However, in addition to raising revenues, the Canadian corporate taxation system has been structured to accomplish a number of other objectives. These include:

- **Incentives For Small Business** While there are several features of the tax system directed at encouraging small businesses, the major tax incentive for these organizations is the small business deduction.
- **Incentives For Certain Business Activities** The Canadian tax system provides generous investment tax credits for scientific research as well as for the employment of apprentices. Support is also provided to the natural resource industries through a variety of programs.
- **Incentives For Certain Regions** Certain regions of Canada are given assistance through investment tax credits and other programs.
- **Integration** One of the goals of the Canadian tax system is to keep the level of taxes paid on a given stream of income the same, regardless of whether or not a corporation is placed between the original source of the income and the ultimate recipient.

12-64. The small business deduction and the manufacturing and processing profits deduction will be examined in this Chapter. Integration will be dealt with in detail in Chapter 13. Our material on scientific research and experimental development expenditures and investment tax credits can be found in Chapter 14.

## Small Business Deduction

### Introduction

12-65. It has been a longstanding goal of the Canadian taxation system to provide incentives to small business. The underlying assumption is that, particularly during their formative years, these businesses need some degree of tax relief in order to allow them to accumulate the capital required for expansion. In very simplified terms, the small business deduction provides a deduction against the Tax Payable of a Canadian controlled private corporation.

12-66. Over the last 3 years, the deduction has been increased from 17.5 percent in 2017, to 18 percent in 2018, and to 19 percent for 2019 and subsequent years.

12-67. The federal deduction is only available on the first $500,000 of active business income. While almost all provinces use the same $500,000 limit, we have noted previously the Saskatchewan limit is $600,000.

12-68. A simple example will serve to illustrate the application of this deduction.

**EXAMPLE** A Canadian controlled private corporation has Taxable Income of $100,000 for the year ending December 31, 2019. All of this income is earned in Canada and eligible for the small business deduction. The provincial tax rate applicable to income eligible for the small business deduction is 3 percent.

**ANALYSIS** The corporation's Tax Payable would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($100,000)] | $38,000 |
| Federal Tax Abatement [(10%)($100,000)] | ( 10,000) |
| Small Business Deduction [(19%)($100,000)] | ( 19,000) |
| General Rate Reduction (Note) | Nil |
| Federal Tax Payable | $ 9,000 |
| Provincial Tax Payable [(3%)($100,000)] | 3,000 |
| Total Tax Payable | $12,000 |

**Note** As explained later in this Chapter, the general rate reduction is not available on income that is eligible for the small business deduction.

12-69. As can be seen in the example, when the small business deduction is available, it reduces the federal rate to 9 percent ($9,000 ÷ $100,000). We have also applied a provincial rate of 3 percent (roughly the average provincial rate). This produces a combined federal/provincial rate of 12 percent ($12,000 ÷ $100,000).

12-70. The small business deduction provides a significant incentive to businesses that qualify. Only certain types of corporations qualify for this deduction and it is only available on certain amounts and types of income. The criteria for qualification can be described in non-technical terms as follows:

**Type Of Corporation** The availability of the small business deduction is restricted to Canadian controlled private corporations (CCPCs).

**Type Of Income** The deduction is only available on income earned in Canada that qualifies as "active business income". This would include the income of professional corporations and management companies, provided they are private and Canadian controlled. However, the income of specified investment businesses and personal services corporations (see definitions later in this Chapter) does not qualify.

**Limit On Amount** The federal deduction is available on the first $500,000 of active business income earned in a year. This amount is referred to as the annual business limit and, in some circumstances, it is subject to a reduction formula.

**Associated Corporations** The $500,000 annual business limit must be shared among associated corporations.

12-71. The issues associated with these criteria are discussed in the material that follows.

## Canadian Controlled Private Corporation (CCPC)

12-72. CCPCs are defined in ITA 125(7) as private corporations that are not controlled, directly or indirectly, by one or more non-resident persons, by one or more public corporations, or a combination of non-resident persons and public corporations. In addition, corporations that have shares listed on a designated stock exchange, in or outside of Canada, do not qualify as CCPCs.

## Active Business Income

### The General Idea

12-73. ITA 125(7) contains the following definition of "active business":

> **Active business carried on by a corporation** means any business carried on by the corporation other than a specified investment business or a personal services business and includes an adventure or concern in the nature of trade.

12-74. While the preceding defines active business, a further definition in ITA 125(7) defines income from an active business as follows:

> **Income of the corporation for the year from an active business** means ... the income of the corporation for the year from an active business carried on by it, including any income for the year pertaining to or incident to that business, other than income for the year from a source in Canada that is a property ... [The definition goes on to cover an amount under ITA 12(10.2) that is of no interest to users of this material.]

12-75. While this definition is not a model of clarity, it expresses the basic idea that active business income involves "doing something" to produce income. The concept excludes what is usually referred to as property income. Property income is distinguished by the fact that it generally becomes available with little or no effort on the part of the recipient (e.g., interest earned on long-term bonds).

### The Problem With Defining Property Income

12-76. As noted, the preceding definitions of active business and active business income are largely directed towards excluding property income such as interest, dividends, and rents from eligibility for the small business deduction. The federal government does not wish to allow individuals to have access to the small business deduction by simply placing their passive investments in the shelter of a Canadian controlled private corporation. However, a blanket exclusion of property income is inappropriate since there are corporations that are "actively" involved in earning such income.

12-77. The difficulty is in finding a way to distinguish between corporations that are simply being used as tax shelters for property or passive income, and corporations that engage in active property management. For example, if a corporation has a single residential rental property, the rents from this property would undoubtedly be viewed as passive income.

12-78. Alternatively, a corporation that owns a chain of hotels with more than 10,000 rooms would certainly be entitled to view the rentals of these properties as an active business. The question is, at what point does the corporation cross the line between earning passive investment income and active business income?

12-79. Similar, but less obvious problems arise with interest income. If a corporation has no activity other than collecting interest on term deposits, the amounts that it earns would almost certainly be viewed as passive investment income. Alternatively, interest earned by a company actively involved in providing mortgage financing to corporate clients could be viewed as business income. Again, a problem exists in finding the point at which a crossover is made between the two situations.

### The Solution - Specified Investment Business

12-80. The concept of a "specified investment business" provides a somewhat arbitrary solution to this problem. The term is defined in ITA 125(7) as follows:

> **Specified Investment Business** carried on by a corporation in a taxation year, means a business (other than a business carried on by a credit union or a business of leasing property other than real or immovable property) the principal purpose of which is to derive income (including interest, dividends, rents and royalties) from property but, except where the corporation was a prescribed labour-sponsored venture capital corporation at any time in the year, does not include a business carried on by the corporation in the year where

(i) the corporation employs in the business throughout the year more than five full-time employees, or

(ii) any other corporation associated with the corporation provides, in the course of carrying on an active business, managerial, administrative, financial, maintenance or other similar services to the corporation in the year and the corporation could reasonably be expected to require more than five full-time employees if those services had not been provided.

12-81. As the activities of these specified investment businesses are excluded from the definition of active business, it means that income from property generated by such businesses is not eligible for the small business deduction. Stated alternatively, for corporations that are primarily engaged in earning income from property, the *Act* specifies that only those with more than five full-time employees involved in earning such income are considered to be earning active business income and eligible for the small business deduction.

12-82. While this is an arbitrary solution to the problem of distinguishing between active and passive investment income from a business, it does serve to resolve most of the uncertainty in this area. With respect to interpreting this rule, IT-73R6 states that "more than five full-time employees" means that at least six employees are working full business days on each working day of the year. However, this interpretation has been overturned in a Tax Court of Canada Decision (489599 B.C. Ltd. vs. The Queen).

12-83. In this decision, the court indicated that a combination of five full-time employees and one part-time employee would constitute "more than five full-time employees". While IT-73R6 is archived and will not be revised to reflect the results in this case, the CRA has indicated that they accept this decision and will rule accordingly in future applications of the specified investment business definition.

### Incidental Property Income

12-84. The definition of active business income includes incidental property income that is earned by a corporation engaged in an active business. In this regard, many corporations experience temporary excess cash balances, and these balances will usually be invested in interest bearing assets. Within reasonable limits, such interest can be included as a component of active business income. In similar fashion, revenues resulting from temporary rentals of excess space may be included in active business income.

### Property Income Received From An Associated Corporation

12-85. Income from a specified investment business and non-incidental property income earned by a CCPC do not qualify for the small business deduction. However, when a corporation derives income from holding property, and the income is received from an associated company that deducted the amounts in computing active business income, ITA 129(6)(b) deems the income to be active business income to the recipient.

12-86. The logic behind this is that, while the amounts received by one of the associated companies must be considered property income, because of its legal form, the deduction by the payer corporation reduces the total active business income within the associated group.

**EXAMPLE** Lardin Inc. is associated with Dwarm Ltd. Lardin lends $100,000 to Dwarm to use in active business activities. During the current year, Dwarm pays $6,000 of interest to Lardin.

**ANALYSIS** Normally, Lardin could not classify the interest received as active business income. However, if Dwarm is earning active business income, the payment to Lardin reduced the amount of this income, as well as the total active business income of the associated group. In order to prevent this reduction, the recipient corporation is allowed to treat such interest as active business income.

## Annual Business Limit

12-87. The federal limit on the amount of active business income that is eligible for the small business deduction is $500,000 per taxation year. As discussed in the paragraph which follows, this annual limit must be shared by associated corporations. In addition, as will be discussed beginning at Paragraph 12-102, this $500,000 limit will be reduced for CCPCs with either Taxable Capital Employed in Canada in excess of $10 million or ADJUSTED Aggregate Investment Income in excess of $50,000 in the previous year. We have capitalized ADJUSTED to avoid confusion with Aggregate Investment Income (see Paragraph 12-142).

## Allocation Among Associated Companies

12-88. In the absence of special rules, it would be very easy to avoid the annual limit that applies to the small business deduction. This could be accomplished by dividing a single corporation's activities between two separate corporations, thereby doubling up on the annual business limit of $500,000. However, the *Act* prevents this by requiring that associated companies share their annual business limit.

12-89. In some cases, association is fairly obvious. If, for example, a single individual owned all of the shares to two separate corporations, these corporations are clearly associated. However, a complete coverage of this subject becomes very complex. Because of this, we have allocated our detailed coverage of this subject to Chapter 14, Other Issues In Corporate Taxation.

12-90. While we are deferring our detailed coverage of this subject, we would note here that a group of associated companies can allocate the $500,000 limit in any manner that they wish. It can be divided equally among the group, allocated 100 percent to a single member of the group, or split in any proportions that the group chooses to use.

## Calculating The Small Business Deduction

### The General Formula

12-91. After noting that to qualify for this deduction, a corporation must be a CCPC throughout the year, ITA 125(1) specifies that the deduction from federal Tax Payable is equal to 19 percent of the least of three figures (note that for ease of reference, this formula is included at the front of this text in "Rates and Other Data"):

(a) Net Canadian active business income.

(b) Taxable Income, less:

  (i) 100/28 times the ITA 126(1) credit for taxes paid on foreign non-business income, calculated without consideration of the additional refundable tax under ITA 123.3 (see Chapter 13) or the general rate reduction under ITA 123.4; and

  (ii) 4 times the ITA 126(2) credit for taxes paid on foreign business income, calculated without consideration of the general rate reduction under ITA 123.4 (see Note)

(c) The annual business limit of $500,000, less any portion allocated to associated corporations, less any Taxable Capital Employed In Canada or ADJUSTED Aggregate Investment Income grind. (These grinds are explained later in this Chapter.)

**Note** ITA 125(1)(b)(ii) actually has a more complicated calculation as follows:

... the amount determined by the formula

$$1 \div (A - B), \text{ where}$$

**A** is the percentage set out in paragraph 123(1)(a) [the basic federal rate of 38 percent], and

**B** is the percentage that is the corporation's general rate reduction percentage (as defined by section 123.4) for the taxation year [13 percent].

Given these numbers, ITA 125(1)(b)(ii) is calculated as [1 ÷ (.38 - .13)] = 4. We will use this number 4 in all of our examples and problems, without showing the complete calculation.

## Constraints - Type Of Income And Annual Business Limit

12-92. We have already noted that the deduction is only available on active business income earned in Canada, the item A constraint. We have also noted that the annual business limit of $500,000, the item C constraint, must be shared by associated companies.

## Constraints - Taxable Income

12-93. With respect to the limit which uses Taxable Income, we would note that active business income earned during the taxation year is included in Net Income For Tax Purposes. In many cases, this amount will also be included in full in Taxable Income. However, it is possible that large Division C deductions could eliminate all or part of this income from the Taxable Income total. Examples of such Division C deductions would be as follows:

- charitable donations
- non-capital loss carry overs
- farm loss carry overs

12-94. You will notice that neither dividends nor net capital losses are included in this list. This reflects the fact that these amounts can only be deducted to the extent that either dividends or taxable capital gains are included in Net Income. Given this, they cannot serve to offset amounts of active business income that are included in Net Income For Tax Purposes.

12-95. A simple example will illustrate the need for this Taxable Income constraint on the small business deduction:

**EXAMPLE** During the current year, Allard Ltd. has active business income of $123,000, taxable capital gains of $15,000, and dividends received from taxable Canadian corporations of $50,000. At the beginning of the year, Allard Ltd. has a net capital loss carry forward of $35,000 and a non-capital loss carry forward of $105,000. The Company will use the loss carry forwards to the extent possible during the current year. The calculation of Allard's Net Income For Tax Purposes and Taxable Income would be as follows:

| | |
|---|---|
| Net Income For Tax Purposes | |
| ($123,000 + $15,000 + $50,000) | $188,000 |
| Dividends Received | ( 50,000) |
| Net Capital Loss Carry Forward | |
| (Limited To Taxable Capital Gains) | ( 15,000) |
| Subtotal (Equal To Active Business Income) | $123,000 |
| Non-Capital Loss Carry Forward | ( 105,000) |
| Taxable Income | $ 18,000 |

12-96. Note that if only the net capital loss carry forward and dividends were deducted, Taxable Income would have been equal to the $123,000 in active business income. The problem is the non-capital loss carry forward. It has further reduced Taxable Income to $18,000, an amount well below the active business income.

12-97. If, in this case, the small business deduction was based on active business income, the amount would be $23,370 [(19%)($123,000)]. As this deduction is in excess of the Tax Payable on $18,000 of Taxable Income, this is not a reasonable outcome. The example clearly illustrates the need for the Taxable Income constraint on the small business deduction.

## Constraints - Foreign Tax Credits

12-98. Another concern of the federal government is to ensure that the small business deduction is not provided on income that has not been taxed in Canada. To prevent this from happening, the B component of the ITA 125(1) formula reduces Taxable Income by:

- 100/28 times the ITA 126(1) credit for taxes paid on foreign non-business income, calculated without consideration of the additional refundable tax under ITA 123.3 (see Chapter 13) or the general rate reduction under ITA 123.4; and
- 4 times the ITA 126(2) credit for taxes paid on foreign business income, calculated without consideration of the general rate reduction under ITA 123.4.

12-99. The 100/28 figure is based on the notional assumption that foreign non-business income will be subject to a federal tax rate of 28 percent (i.e., if the credit is equal to the taxes paid at 28 percent, 100/28 times the credit will equal the notional amount of income received).

12-100. In similar fashion, the 4 times figure that is applicable to foreign business income is based on the notional assumption that this income will be subject to a federal tax rate of 25 (1 ÷ 4) percent.

12-101. Based on the preceding analysis, subtracting these amounts from Taxable Income has the effect of removing from this figure the amounts of foreign income on which the foreign tax credit has eliminated the Canadian taxation at the assumed rates of 28 and 25 percent. A simple example can be used to clarify this point:

> **EXAMPLE** A corporation earns $100,000 in foreign non-business income, with $18,000 being withheld by the foreign government.
>
> If this income had been earned in Canada, it is assumed that the tax would be $28,000 (using the notional rate on this type of income of 28 percent). Being received from a foreign source, the $28,000 in Canadian Tax Payable will be offset by the $18,000 foreign tax credit. This will leave a net Canadian Tax Payable of $10,000.
>
> Using the foreign tax credit of $18,000 and an assumed tax rate of 28 percent, the formula removes $64,286 [(100/28)($18,000)] from Taxable Income, leaving $35,714 ($100,000 - $64,286). If we multiply this $35,714 by the notional rate of 28 percent, the result is $10,000, the amount of Canadian tax remaining after the application of the foreign tax credit. This demonstrates how the formula ensures that the small business deduction is not available on Taxable Income on which foreign tax credits have eliminated Canadian taxation.
>
> If the foreign tax withheld and the foreign tax credit had been $28,000 [(28%)($100,000)], the formula would have removed $100,000 [(100/28)($28,000)], or all of the foreign source income.

## Exercise Twelve - 7

**Subject:** Amount Eligible For The Small Business Deduction

Kartoom Ltd. is a CCPC that began operations on January 1, 2019. It is not associated with any other corporation. For the year ending December 31, 2019, Kartoom has Net Income For Tax Purposes of $570,000. This amount is made up of dividends from taxable Canadian corporations of $85,000, active business income of $425,000, and foreign non-business income of $60,000. The foreign income was subject to withholding in the foreign jurisdiction at a rate of 15 percent. Kartoom receives a foreign tax credit against federal Tax Payable that is equal to the amount withheld. Kartoom has a non-capital loss carry forward of $160,000 which it intends to deduct during 2019.

Determine the amount eligible for the small business deduction for the year ending December 31, 2019.

**SOLUTION available in print and online Study Guide.**

## Annual Business Limit Reduction

### Problem I

12-102. As the name implies, the small business deduction was designed to provide assistance to small corporations. For a variety of reasons, including the belief that such corporations have a positive impact on employment growth, and the fact that small corporations often experience financing difficulties in their formative years, the generous tax advantages provided by this deduction were thought to be appropriate.

12-103. However, in designing the small business deduction provisions, eligibility was based on the type of income earned (active business income) and the type of corporation (CCPCs). No consideration was given to the size of the corporation's income or assets. As a consequence, under its usual provisions, some very large private corporations received the benefit of the small business deduction on amounts of active business income that were below the annual business limit. This was clearly not in keeping with the intent of this legislation.

12-104. To deal with this problem, there has been a grind (i.e., a programmed reduction) in the annual business limit for many years. For CCPCs that have Taxable Capital Employed in Canada (TCEC) in excess of $10 million, the annual business limit for the small business deduction is gradually reduced, with the basic $500,000 completely disappearing when the TCEC reaches $15 million.

### Problem II

12-105. A second and more recently identified problem was described in the introductory Note to this Chapter. This is the fact that the low small business rate allows those shareholders that do not need all of the income from their corporation to accumulate large portfolios of passive investments.

12-106. As of 2019, a second grind is applied to the annual business limit. This grind is based on a CCPC's ADJUSTED Aggregate Investment Income. This unique version of investment income, defined in ITA 125(7), is used only for purposes of determining this grind of the small business deduction. In somewhat simplified terms it contains:

- interest, rents and royalties;
- net taxable capital gains on the disposition of capital assets not used in the active business of the corporation;
- dividends received from taxable Canadian corporations with the exception of those from connected corporations (defined in Chapter 13); and
- dividends from foreign corporations with the exception of those from foreign affiliates (defined in Chapter 20)

12-107. This grind is accompanied by some very complex provisions related to the Refundable Dividend Tax On Hand (RDTOH) balance. As we do not cover investment income received by a CCPC or the determination of the RDTOH balance until Chapter 13, there is a case for deferring coverage of this grind until Chapter 13. However, the revised ITA 125(5.1) requires that the overall grind be based on the greater of the Taxable Capital Employed in Canada grind and the ADJUSTED Aggregate Investment Income grind. Because of this relationship, we are providing coverage of both grinds in this Chapter 12. Note, however, our coverage of the ADJUSTED Aggregate Investment Income grind will be limited to the calculation of the small business deduction. When investment income is involved, we cannot illustrate the determination of Tax Payable for a CCPC at this stage.

### Taxable Capital Employed In Canada (TCEC) Grind - ITA 125(5.1)

12-108. The formula for this component of the annual business limit grind is as follows:

$$\textbf{Taxable Capital Employed in Canada REDUCTION} = A \times \frac{B}{\$11{,}250} \text{ where,}$$

**A** is the amount of the corporation's annual business limit for the year ($500,000 or less if shared with associated corporations).

**B** is 0.225 percent (.00225) of the excess over $10 million of the previous year end's total Taxable Capital Employed In Canada of the corporation and any associated companies.

**NOTE** This formula is for the **reduction** of the annual business limit, not for the available balance.

12-109. "Taxable capital employed in Canada" is defined in ITA 181.2. In somewhat simplified terms, it has the following meaning:

**Taxable Capital Employed In Canada (TCEC)** GAAP determined debt and equity capital of the corporation, less certain types of debt and equity investments in other corporations. When not all of the corporation's Taxable Income is allocated to a province, the resulting amount is multiplied by the same percentage that is applied to the abatement in order to determine the portion of the total capital that is employed in Canada.

12-110. The mechanics of this formula are easily understood. If a corporation has $10 million or less TCEC, B will equal nil ($10 million or less, minus the $10 million specified deduction). This means the formula amount will be nil and there will be no reduction in the corporation's annual business limit.

12-111. When the amount of TCEC for the previous year reaches $15 million, B in the formula will be equal to $11,250 [(.00225)($15,000,000 - $10,000,000)]. The annual business limit will then be multiplied by one ($11,250 ÷ $11,250) and the reduction in the annual business limit will be 100 percent of the available amount.

12-112. Not surprisingly, a CCPC that is associated with one or more other corporations in a taxation year ending in a given calendar year will be required to take into account the TCEC of all of these firms.

## Example Of The TCEC Grind

12-113. The following example illustrates the reduction of the small business deduction for a large CCPC:

**EXAMPLE** Largess Inc. is a CCPC with a December 31 year end. All of its income is earned in Canada, and it is not associated with any other corporation. On December 31, 2019, the following information is available:

| | |
|---|---|
| 2019 Active Business Income | $ 523,000 |
| 2019 Taxable Income | 550,000 |
| 2018 Taxable Capital Employed In Canada | 13,700,000 |
| 2018 ADJUSTED Aggregate Investment Income | Nil |

**ANALYSIS** For the preceding year, 2018, B in the reduction formula would be equal to $8,325 [(.00225)($13,700,000 - $10,000,000)]. Using this in the ITA 125(5.1) formula would produce the following reduction in the 2019 annual business limit:

$$\$500{,}000 \times \frac{\$8{,}325}{\$11{,}250} = \underline{\underline{\$370{,}000}}\ \textbf{Reduction}$$

Given this, the reduced annual business limit would be $130,000 ($500,000 - $370,000) and the small business deduction for 2019 would be 19 percent of the least of:

| | |
|---|---|
| Active Business Income | $523,000 |
| Taxable Income | 550,000 |
| Reduced Annual Business Limit ($500,000 - $370,000) | 130,000 |

The reduced annual business limit is the least of the three figures and the 2019 small business deduction would be $24,700 [(19%)($130,000)], a significant reduction from the $95,000 [(19%)($500,000)] that would have been available in the absence of the ITA 125(5.1) requirement for reducing the annual business limit for large CCPCs.

## Exercise Twelve - 8

**Subject:** Taxable Capital Employed In Canada (TCEC) Grind

Largely Small Inc. is a Canadian controlled private corporation. For the year ending December 31, 2019, its Net Income For Tax Purposes is $1,233,000, all of which is active business income, except for $36,000 in foreign source non-business income. Fifteen percent of this amount was withheld in the foreign jurisdiction and the corporation receives a foreign tax credit against federal Tax Payable that is equal to the amount withheld. The corporation's only deduction in the calculation of Taxable Income is for a non-capital loss carry forward of $914,000. The corporation had Taxable Capital Employed In Canada of $11,300,000 for the year ending December 31, 2018, and $11,600,000 for the year ending December 31, 2019. It is not associated with any other corporation. Determine the amount of Largely Small Inc.'s small business deduction for the year ending December 31, 2019.

**SOLUTION available in print and online Study Guide.**

### *ADJUSTED Aggregate Investment Income Grind - ITA 125(5.1)*

12-114. The formula for the ADJUSTED Aggregate Investment Income grind is as follows:

**ADJUSTED Aggregate Investment Income REDUCTION**

$$= \left[\frac{D}{\$500{,}000}\right]\left[(5)(E - \$50{,}000)\right] \text{ where,}$$

**D** is the amount of the corporation's annual business limit for the year ($500,000 or less if shared with associated corporations).

**E** the total of all amounts each of which is the ADJUSTED Aggregate Investment Income of the corporation or of any corporation with which it is associated for the preceding year.

12-115. As we have noted, ADJUSTED Aggregate Investment Income is a unique concept that is only used for the purposes of determining this grind of the annual business limit.

12-116. As was the case with the TCEC grind formula, the ADJUSTED Aggregate Investment Income grind formula is fairly easy to understand. If the CCPC's ADJUSTED Aggregate Investment Income for the previous year is $50,000 or less, there is no reduction in its annual business limit.

**EXAMPLE** Before the grind, DOC Inc. has an annual business limit of $500,000 and ADJUSTED Aggregate Investment Income for the previous year of $50,000. Its TCEC for the previous year is less than $10 million.

**ANALYSIS** The required reduction would be calculated as follows:

[($500,000/$500,000)][(5)($50,000 - $50,000)] = Nil

This would leave the company's annual business limit at $500,000.

12-117. Alternatively, for every dollar of ADJUSTED Aggregate Investment Income in excess of $50,000, the company's annual business limit will be reduced by $5.

**EXAMPLE** Before the grind, Arc Ltd. has an annual business limit of $500,000 and ADJUSTED Aggregate Investment Income for the previous year of $75,000. Its TCEC for the previous year is less than $10 million.

**ANALYSIS** The required reduction would be calculated as follows:

[($500,000/$500,000)][(5)($75,000 - $50,000)] = $125,000 **Reduction**

This would leave an annual business limit of $375,000 ($500,000 - $125,000).

## Exercise Twelve - 9

**Subject:** ADJUSTED Aggregate Investment Income Grind

Investco Ltd. is a Canadian controlled private corporation. For the fiscal year ending December 31, 2019, its Net Income For Tax Purposes and Taxable Income is made up of active business income of $350,000, plus ADJUSTED Aggregate Investment Income of $125,000. For 2018, its ADJUSTED Aggregate Investment Income was $105,000. Its TCEC was $9 million for 2019 and $8 million for 2018. Because of its association with Subco Ltd., its 2019 allocation of the annual business limit is $300,000. Subco's TCEC was $200,000 for 2019 and for 2018. Subco has no ADJUSTED Aggregate Investment Income in either year.

Determine the amount of Investco's small business deduction for the year ending December 31, 2019.

**SOLUTION available in print and online Study Guide.**

### Economic Impact

12-118. As indicated previously, the actual reduction in the annual business limit will be the greater of the TCEC grind and the ADJUSTED Aggregate Investment Income grind. With respect to the TCEC grind, it will only have an effect on CCPCs that have TCEC in excess of $10 million. This means that the great majority of CCPCs would not be affected.

12-119. With respect to the new ADJUSTED Aggregate Investment Income grind, in its notes to the new legislation, the Department Of Finance has indicated their belief that only about 3 percent of the companies claiming the small business deduction will be affected.

12-120. Even in those situations where there is a reduction in the annual business limit, this may have no impact on the company's small business deduction. There are many CCPCs that do not have sufficient active business income to fully use their annual business limit. In such situations, the application of these grinds will only increase Tax Payable in those situations where the annual business limit is reduced below the CCPC's active business income.

## Exercise Twelve - 10

**Subject:** Annual Business Limit Reduction

Reduco Inc. is a Canadian controlled private corporation. For the fiscal year ending December 31, 2019, its Net Income For Tax Purposes of $540,000 is made up of active business income of $450,000 and $90,000 of ADJUSTED Aggregate Investment Income. For 2018, the Reduco's ADJUSTED Aggregate Investment Income was $72,000. Its only deduction in the determination of 2019 Taxable Income is a non-capital loss carry forward of $60,000. Because of its association with another company, Reduco's share of the annual business limit is $350,000. The associated company has no ADJUSTED Aggregate Investment Income for either 2018 or 2019.

Determine Reduco's small business deduction for the year ending December 31, 2019, assuming that the combined TCEC of Reduco and its associated company was:

**Case 1** $11,000,000 for 2019 and $13,500,000 for 2018.

**Case 2** $13,500,000 for 2019 and $11,000,000 for 2018.

**SOLUTION available in print and online Study Guide.**

## Personal Services Corporations

12-121. The small business deduction represents a very significant reduction in corporate taxes and, as a consequence, taxpayers have a strong incentive to channel income into a corporation qualifying for this benefit.

12-122. At one point in time, this could be accomplished by having an executive of a corporation resign, establish a company, and immediately have his company sign a contract with his former employer to provide the same services as the individual was previously performing as an employee. Since this new corporation could then qualify for the small business deduction, the use of such personal services corporations provided significant tax deferral and, in some cases, significant tax avoidance, for individuals such as executives, professional athletes, and entertainers.

12-123. Under the current rules, such blatant tax avoidance schemes are no longer possible. To begin, ITA 125(7) defines a "personal services business" as follows:

> ... a business of providing services where
>
> (a) an individual who performs services on behalf of the corporation (referred to as an incorporated employee), or
> (b) any person related to the incorporated employee
>
> is a specified shareholder of the corporation and the incorporated employee would reasonably be regarded as an officer or employee of the person or partnership to whom or to which the services were provided but for the existence of the corporation, unless
>
> (c) the corporation employs in the business throughout the year more than five full-time employees, or
> (d) the amount paid or payable to the corporation in the year for the services is received or receivable by it from a corporation with which it was associated in the year.

12-124. In less technical language, a corporation is classified as a personal services business when a "specified shareholder", or a person related to a "specified shareholder", is providing services to another business and the individual who is performing the services can reasonably be regarded as an officer or employee of the entity for which the services are performed. As the term is used in this definition, in general, "specified shareholder" refers to an individual who owns, directly or indirectly, not less than 10 percent of the shares of any class of the corporation that is providing the services.

12-125. Being classified as a personal services corporation is costly in terms of tax. Such a corporation is not eligible for the small business deduction or the general rate reduction. In addition, due to the fact that the maximum individual federal rate is 33 percent, these corporations are subject to an additional tax of 5 percent, resulting in an overall federal rate of 33 percent (38% - 10% + 5%) which is equal to the maximum individual federal rate.

12-126. In addition to this high rate, personal services corporations cannot deduct any expenses other than:

- salaries, wages, other remuneration, and benefits paid in the year to the individual who performed the services on behalf of the corporation; and
- other expenses that would normally be deductible against employment income, for example, travel expenses incurred to earn employment income.

12-127. These rules serve to make the use of a personal services corporation undesirable in situations where they were once used to save taxes on an executive's employment income. However, athletes, entertainers and consultants may still find it attractive to incorporate. In many cases, they will qualify for the small business deduction either because they have sufficient diversity of income, or more than five full-time employees. In addition, there is an advantage in that all of the income of a personal services business is added to the GRIP balance (see Chapter 13), meaning that all of the income can be paid out as eligible dividends.

## Professional Corporations And Management Companies

12-128. In general terms, these two types of corporations can be described as follows:

> **Professional Corporations** This term is used where a corporation is established to carry on the practice of a profession specified in ITA 248(1). The ITA definition includes a corporation that carries on the professional practice of an accountant, dentist, lawyer, medical doctor, veterinarian, or chiropractor. Each province has different laws and rules as to which professions are allowed to incorporate. The incorporation of the professional practice of an engineer or architect would not meet the ITA definition.
>
> **Management Companies** This is a term that refers to corporations established to provide various management services, primarily to an unincorporated business. The unincorporated business is usually a professional practice, such as that of a doctor or dentist.
>
> The services provided by this type of company include various personnel functions, such as payroll and accounting services, purchasing all supplies and equipment necessary to carry on the business, and providing the necessary office space required by the professional practice.
>
> The unincorporated business pays fees to the company to cover the cost of providing management services and to provide for some income. A 15 percent markup for profit is usually allowed. The fees paid are deductible from the revenues of the professional practice. These companies are often used to transfer a portion of a professional's income to a lower income spouse or other related parties.

12-129. Both types of companies are eligible for the small business deduction. However, the fact that medical services are exempt goods under the GST/HST legislation has made management companies unattractive for doctors and dentists. While GST/HST must be paid on services billed by the management company, these amounts cannot be recovered by medical professionals because their services are GST/HST exempt. (For coverage of GST/HST exempt services, see Chapter 21, GST/HST.) Given this situation, and the fact that professionals can incorporate, management companies for medical professionals delivering GST/HST exempt services are not as common as they once were.

# Manufacturing And Processing Profits Deduction

## Introduction

12-130. Given the importance of such activity to the Canadian economy, it is not surprising that the federal government has provided tax assistance to enterprises that are involved in manufacturing and processing (M&P). As an example of this, in Chapter 5, Capital Cost Allowances, we noted that the government is providing significantly enhanced CCA rates on both buildings used for M&P and for M&P machinery and equipment.

12-131. A more general incentive is the M&P deduction available to some corporations for their M&P profits. IT Folio S4-F15-C1, "Manufacturing and Processing", discusses the calculation of this deduction and activities that are and are not considered to be manufacturing or processing.

12-132. As was explained previously, the rate for this deduction is the same as the percentage for the general rate reduction. Since the general rate reduction does not apply to income that is eligible for the M&P deduction, the use of the M&P deduction does not provide any direct tax benefits at the federal level. Given this situation, it would seem logical for the government to eliminate the complex legislation related to the M&P deduction. However, this has not happened. The probable explanation for this is that two provinces, Ontario and Saskatchewan, provide special treatment for income that qualifies for the federal M&P deduction. Because of this, and the special CCA rates for M&P assets, we will continue to provide some coverage of the M&P rules.

## Calculating The Deduction

### General Formula

12-133. ITA 125.1 provides for a deduction from Tax Payable equal to the general rate reduction of 13 percent, times the company's M&P profits. Given that this amount is deducted from Tax Payable, it would be more consistent to refer to this "deduction" as a tax credit. However, ITA 125.1 uses the term deduction and, as a consequence, we will also use this terminology.

12-134. While the basic idea is that the deduction is equal to the general rate reduction percentage applied to M&P profits, there are a number of other constraints on the amount that is eligible for this deduction. ITA 125.1(1) specifies that the deduction will be equal to the corporation's general rate reduction percentage multiplied by the lesser of:

A. Manufacturing and processing profits, less amounts eligible for the small business deduction; and

B. Taxable income, less the sum of:

   1. the amount eligible for the small business deduction;

   2. the relevant factor (see note) multiplied by the foreign tax credit for business income calculated without consideration of the general rate reduction under ITA 123.4; and

   3. where the corporation is a Canadian controlled private corporation throughout the year, Aggregate Investment Income as defined in ITA 129(4).

**Note** The relevant factor is the same for both the small business deduction and the M&P deduction. While this is a simplification, we will use 4 as the relevant factor in our examples and problems (see Paragraph 12-91 for an explanation).

12-135. Part A of this formula provides the basic limit based on the amount of M&P profits earned during the year. As will be noted subsequently, M&P profits is a technical term and must be calculated by a formula established in ITR 5200. In many cases, particularly for large public companies, this will be the factor that limits the amount of the M&P deduction.

12-136. Like the small business deduction formula, for ease of reference, this M&P deduction formula is included at the front of this text in "Rates and Other Data".

### Constraints - Small Business Deduction

12-137. As was previously discussed, the small business deduction provides certain corporations with a deduction equal to 19 percent of the first $500,000 of their active business income. It appears that the government believes that granting both the 13 percent M&P deduction, and the 19 percent small business deduction on the same income stream would be too generous. As a consequence, any amounts of income that are eligible for the small business deduction are not eligible for the M&P deduction. In the preceding ITA 125.1(1) formula, this is accomplished by removing amounts eligible for the small business deduction from both the A and B components. Note that it is the "amount eligible" for the small business deduction that is removed, not the deduction itself.

### Constraints - Taxable Income

12-138. As was explained in our discussion of constraints on the availability of the small business deduction, the government wants to ensure that credits are not given on amounts that are not included in Taxable Income. As was the case with the active business income that is eligible for the small business deduction, M&P profits that are included in Net Income For Tax Purposes may not find their way into Taxable Income.

12-139. This can occur when the corporation has deductions for such items as charitable donations, non-capital loss carry overs, or farm loss carry overs. For reasons that were discussed and illustrated in the discussion of the small business deduction, amounts eligible for the M&P deduction are limited by the amount of Taxable Income for the year.

### Constraints - Foreign Tax Credits

12-140. As was the case with the Taxable Income constraint, the nature of the constraint created by deducting a multiple of foreign tax credits was explained in our discussion of the small business deduction. There is, however, one significant difference.

12-141. In the ITA 125.1(1) formula for the M&P deduction, Taxable Income is reduced by a multiple of the foreign business income credit only. It is not adjusted for the foreign non-business income credit as was the case with the ITA 125(1) formula for the small business deduction. This probably reflects the fact that the M&P formula contains an extra deduction from Taxable Income for Aggregate Investment Income, an amount that includes foreign non-business income.

### Constraints - Aggregate Investment Income

12-142. This constraint is more difficult to explain at this stage of the text. It is based on the fact that part of the federal tax paid on the Aggregate Investment Income of a Canadian controlled private corporation can be refunded to the corporation (this procedure is discussed in detail in Chapter 13.) As it would not be appropriate to provide a tax credit against taxes that are intended to be refunded, these amounts are removed from the Taxable Income that is eligible for the M&P deduction.

12-143. In the formula in Paragraph 12-134, note the reference to "Aggregate Investment Income as defined in ITA 129(4)". As discussed fully in Chapter 13, Taxation Of Corporate Investment Income, this somewhat unusual concept of investment income is defined as follows:

| | |
|---|---|
| Net Taxable Capital Gains | $xxx |
| Property Income (Including Foreign Source) | |
| Interest (That Is Not Active Business Income) | xxx |
| Rents | xxx |
| Royalties | xxx |
| Total Positive Amounts | $xxx |
| Net Capital Loss Carry Overs Deducted During The Year | ( xxx) |
| ITA 129(4) Aggregate Investment Income | $xxx |

Note that, in contrast to the usual concept of investment income, this definition does not include most dividends. Technically only dividends that are deductible in computing a corporation's Taxable Income are excluded. This calculation is included at the front of this text in "Rates and Other Data".

Also note that this definition is different from the ADJUSTED Aggregate Investment Income that is used in calculating the ADJUSTED Aggregate Investment Income grind on the annual business limit for the small business deduction.

## Eligibility

12-144. On the surface, eligibility for the M&P deduction appears to be easily determinable. Any corporation that derives 10 percent or more of its Canadian active business gross revenues from Canadian manufacturing or processing is eligible. The problem with this rule is the determination of what constitutes M&P activity.

12-145. The *Income Tax Act* does not define the terms manufacturing or processing. However, ITA 125.1(3) specifically excludes several types of activity from the designation of manufacturing or processing. These include logging, farming and fishing, construction, producing industrial minerals, and processing mineral resources.

## M&P Profits Defined

12-146. We have noted that the M&P deduction is calculated by multiplying the general rate reduction percentage by "M&P profits". The determination of M&P profits is based on a

fairly complex calculation that is found in ITR 5200. Given that this is largely a mechanical process and the fact that the M&P deduction no longer has an effect on the amount of federal Tax Payable, we are not providing coverage of this calculation in our text.

**Exercise Twelve - 11**

**Subject:** Amounts Eligible For Small Business and M&P Deductions

Marion Manufacturing is a Canadian controlled private corporation throughout 2019 and is not associated with any other company. It has Net Income For Tax Purposes of $462,000, a figure that includes $411,000 in manufacturing and processing profits (as per ITR 5200). The $462,000 also includes foreign source business income of $21,000 and taxable capital gains of $30,000. Because of withholding on the foreign source business income, the Company is entitled to a foreign tax credit of $3,150 [(15%)($21,000)].

The Company's only deduction in the calculation of Taxable Income is donations to registered Canadian charities in the amount of $310,000. Marion anticipates large increases in Taxable Income in the next few years.

Determine the amount of Marion's small business deduction and M&P deduction for the year ending December 31, 2019, assuming that the Company deducts all of the $310,000 of charitable donations. Do you believe that deducting all of the donations is the best alternative for Marion? Explain your conclusion.

**SOLUTION available in print and online Study Guide.**

# General Rate Reduction - ITA 123.4(2)

## Approach To Rate Reductions

12-147. In our discussion of the basic federal tax rate for corporations, we noted that, in implementing reductions in corporate tax rates, the government has left the basic rate of 38 percent unchanged (see Paragraph 12-45). Instead of reducing the basic rate, they have created a deduction from this rate. This deduction is referred to as the "general rate reduction" percentage and the rate is currently 13 percent.

12-148. While the government wished to reduce corporate tax rates through the use of this general rate reduction, they did not want it to be available on income that was already benefitting from some other tax privilege (e.g., the small business deduction). To deal with this potential problem, the government introduced the concept of Full Rate Taxable Income.

## Full Rate Taxable Income

12-149. In defining Full Rate Taxable Income, the goal was to develop a measure of income that did not benefit in a significant way from other legislative provisions. In particular, the government did not want this reduction to be applied to income that was eligible for:

- The small business deduction. This deduction is only available to CCPCs.
- The M&P deduction. This deduction is available to CCPCs, public companies, and private companies that are not Canadian controlled.
- Refundable Taxes. Refundable taxes are applicable to the investment income of CCPCs and, in some applications to the investment income of private companies that are not Canadian controlled. They are not applicable to public companies. While we need to consider the impact of refundable taxes on Full Rate Taxable Income at this point, detailed procedures related to refundable taxes are discussed in Chapter 13.

12-150. Since the availability of the relevant benefits depends on the type of company, we

will have to give separate attention to the calculation of the Full Rate Taxable Income of CCPCs, and to the Full Rate Taxable Income of companies that are not CCPCs (public companies and private companies that are not Canadian controlled).

## Application To Companies Other Than CCPCs

12-151. For these companies, the only adjustment to Taxable Income that is required to determine Full Rate Taxable Income is the removal of income eligible for the M&P deduction. Given this, for companies other than CCPCs, Full Rate Taxable Income is defined as follows:

| | |
|---|---|
| Regular Taxable Income | $x,xxx |
| Income Eligible For The M&P Deduction | ( xxx) |
| Full Rate Taxable Income | $x,xxx |

12-152. A simple example will serve to illustrate the relevant calculations:

**EXAMPLE** For the year ending December 31, 2019, Daren Ltd., a Canadian public company, has Taxable Income equal to $100,000, with $40,000 of this amount eligible for the M&P deduction.

**ANALYSIS** Full Rate Taxable Income is equal to $60,000 ($100,000 - $40,000). Given this, total federal Tax Payable for Daren Ltd. would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($100,000)] | $38,000 |
| Federal Tax Abatement [(10%)($100,000)] | ( 10,000) |
| M&P Deduction [(13%)($40,000)] | ( 5,200) |
| General Rate Reduction [(13%)($100,000 - $40,000)] | ( 7,800) |
| Federal Tax Payable | $15,000 |

12-153. For a corporation with income consisting entirely of M&P profits, there is no general rate reduction as there is no Full Rate Taxable Income. This is illustrated by revising the example in Paragraph 12-152:

**EXAMPLE - Revised** Assume that the $100,000 in Taxable Income of Daren Ltd. was generated solely by M&P activities.

**ANALYSIS** Total federal Tax Payable for Daren Ltd. would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($100,000)] | $38,000 |
| Federal Tax Abatement [(10%)($100,000)] | ( 10,000) |
| M&P Deduction [(13%)($100,000)] | ( 13,000) |
| General Rate Reduction [(13%)($100,000 - $100,000)] | Nil |
| Federal Tax Payable | $15,000 |

12-154. This calculation illustrates the fact that the overall federal rate on income that is eligible for the M&P deduction is 15 percent. This is, of course, identical to the overall rate on income that is eligible for the general rate reduction, illustrating the fact that the M&P deduction is not advantageous at the federal level.

### Exercise Twelve - 12

**Subject:** Federal Tax Payable For A Public Company

For the year ending December 31, 2019, Marchand Inc., a Canadian public company, has Taxable Income of $320,000. Of this total, $180,000 qualifies for the M&P deduction. Calculate Marchand's federal Tax Payable for the year ending December 31, 2019. Include in your solution any M&P deduction available.

**SOLUTION available in print and online Study Guide.**

## Application To CCPCs

12-155. Not surprisingly, the calculation of Full Rate Taxable Income for a CCPC is somewhat more complex than it is for a public company. As we have noted, in addition to the M&P deduction, these companies may benefit from the small business deduction and the refundable tax provisions on investment income.

12-156. Given the potential presence of these additional tax privileges, Full Rate Taxable Income for a CCPC is defined as follows:

Taxable Income, reduced by:

1. Income eligible for the small business deduction.
2. Income eligible for the M&P deduction.
3. The corporation's Aggregate Investment Income for the year as defined in ITA 129(4). [This is to remove income that will benefit from refundable taxes when it is distributed by the corporation. These taxes are explained in Chapter 13.]

12-157. The definition of Aggregate Investment Income in ITA 129(4) was discussed in the coverage of the M&P deduction (see Paragraph 12-143). It includes both foreign and Canadian amounts of net taxable capital gains, interest, rents, and royalties, but not dividends that are deductible in computing Taxable Income. The balance is reduced by net capital loss carry overs deducted during the year.

12-158. As is covered in Chapter 13, a portion of the Part I tax paid by CCPCs on their Aggregate Investment Income is refunded when dividends are paid. Because of this refund, Aggregate Investment Income is already taxed advantageously when it is flowed through a CCPC. Given this, it does not receive the benefit of the general rate reduction.

12-159. The following example illustrates the application of the general rate reduction rules to a CCPC with no investment income.

**EXAMPLE** For the year ending December 31, 2019, Zaptek Ltd., a CCPC, has $200,000 in Taxable Income. This amount is made up entirely of active business income earned in Canada, none of which relates to M&P activity. Zaptek is associated with another company and, as per the agreement with that company, Zaptek is entitled to $100,000 of the annual business limit.

**ANALYSIS** The federal Tax Payable for Zaptek Ltd. would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($200,000)] | $76,000 |
| Federal Tax Abatement [(10%)($200,000)] | ( 20,000) |
| Small Business Deduction [(19%)($100,000)] | ( 19,000) |
| General Rate Reduction [(13%)($200,000 - $100,000)] | ( 13,000) |
| Federal Tax Payable | $24,000 |

12-160. The overall rate of federal tax in this example is 12 percent ($24,000 ÷ $200,000). This reflects a combination of a rate of 9% (38% - 10% - 19%) on the $100,000 of income that was eligible for the small business deduction, and a rate of 15% (38% - 10% - 13%) on income that was not eligible for this deduction.

## Exercise Twelve - 13

**Subject:** Federal Tax Payable For A CCPC

Redux Ltd. is a Canadian controlled private corporation. For the year ending December 31, 2019, the Company has Taxable Income of $200,000, all of which is active business income. Of this amount, $145,000 results from M&P activity. As it is associated with two other corporations, its share of the annual business limit is $140,000. Determine the Company's federal Tax Payable for the year ending December 31, 2019. Include in your solution any M&P deduction available.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problems Twelve-6, 7, 8, and 9 at this point.**

# Foreign Tax Credits For Corporations

## Introduction

12-161. The foreign tax credits that are available to individuals earning foreign business or non-business income are discussed in detail in Chapter 11. Under rules that are very similar to those applicable to individuals, corporations are also allowed to use foreign taxes paid on business and non-business income as credits against Canadian Tax Payable. While the rules are similar to those for individuals, there are differences that will be discussed here. IT Folio S5-F2-C1, "Foreign Tax Credit" gives interpretations with respect to some of the most commonly encountered requirements contained in these foreign tax credit provisions.

## Calculation Of Foreign Tax Credits

### *Foreign Non-Business (Property) And Business Tax Credits*

12-162. The formula that limits the Canadian tax credit for foreign taxes paid on foreign source non-business income is as follows:

The **Foreign NON-BUSINESS Income Tax Credit** is the lesser of:

- The tax paid to the foreign government (for corporations, there is no 15 percent limit on the foreign non-business taxes paid by a corporation)
- An amount determined by the following formula:

$$\left[\frac{\text{Foreign } \textbf{NON - BUSINESS} \text{ Income}}{\text{Adjusted Division B Income}}\right] [\text{Tax Otherwise Payable}]$$

12-163. The meaning of "Adjusted Division B Income" and "Tax Otherwise Payable" are explained beginning at Paragraph 12-166. Both of the foreign tax credit formulae are included at the front of this text in "Rates and Other Data".

12-164. The formula that limits the amount of foreign business income taxes paid that can be used as a foreign tax credit is as follows:

The **Foreign BUSINESS Income Tax Credit** is the least of:

- The tax paid to the foreign government
- An amount determined by the following formula:

$$\left[\frac{\text{Foreign } \textbf{BUSINESS} \text{ Income}}{\text{Adjusted Division B Income}}\right] [\text{Tax Otherwise Payable}]$$

- Tax Otherwise Payable for the year, less any foreign tax credit taken on non-business income under ITA 126(1).

12-165. As was the case with individuals, there is an additional factor to consider in the case of foreign business income tax credits. This is the "Tax Otherwise Payable", reduced by any foreign non-business income tax credit deducted under ITA 126(1).

### Adjusted Division B Income

12-166. While the general descriptions in the formulae (e.g., Adjusted Division B Income and Tax Otherwise Payable) are the same as those applicable to individuals, their meaning is somewhat different. More specifically, for a corporation, "Adjusted Division B Income" is determined as follows:

| | |
|---|---|
| Division B Income (Net Income For Tax Purposes) | $x,xxx |
| Net Capital Loss Carry Overs Deducted Under ITA 111(1)(b) | ( xxx) |
| Taxable Dividends Deducted Under ITA 112 | ( xxx) |
| Dividends From A Foreign Affiliate Deductible Under ITA 113 | ( xxx) |
| Adjusted Division B Income | $x,xxx |

### Tax Otherwise Payable

12-167. The following table compares the components included in the calculation of Tax Otherwise Payable for foreign non-business tax credits with those used to calculate foreign business tax credits.

| Tax Otherwise Payable Components | Non-Business | Business |
|---|---|---|
| Base Amount Of Part I Tax (38%) | Yes | Yes |
| Plus: Additional Refundable Tax (ART) On Investment Income Of CCPC (See Chapter 13) | Yes | No |
| Minus: Federal Tax Abatement | Yes | No |
| Minus: General Rate Reduction | Yes | Yes |

12-168. "Tax Otherwise Payable" is a particularly confusing term as its calculation is different for individuals and corporations. As shown in the table, adding to the confusion is the fact that its components differ depending on whether it is being used to calculate foreign non-business tax credits or foreign business tax credits for corporations.

12-169. You will recall that the purpose of the 10 percent federal tax abatement is to leave room for the provinces to tax corporations. It is deducted in the formula for determining foreign non-business tax credits because non-business income will, in general, be taxed in a province. As a consequence, it is appropriate to deduct this abatement in determining the limit on the foreign non-business tax credit.

12-170. In contrast, in the calculation of the foreign business income tax credit, "Tax Otherwise Payable" is not reduced by the 10 percent federal tax abatement, reflecting the fact that foreign business income will not be taxed in a province. Also different is the fact that this calculation of "Tax Otherwise Payable" does not include the additional refundable tax on investment income under ITA 123.3. (See Chapter 13.)

12-171. You may recall that the foreign tax credit constraint in the small business deduction calculation uses foreign tax credit amounts that do not consider the general rate reduction (see Paragraph 12-98). The reason for this is a potentially circular calculation. Since the general rate reduction amount uses the amount eligible for the small business deduction and the small business deduction calculation uses the foreign tax credits, these amounts cannot all be calculated at the same time. As a result, the foreign tax credits used in calculating the small business deduction may not be equal to the actual foreign tax credits.

### Foreign Tax Credit Carry Overs

12-172. Unlike the situation with individuals, where the amount of foreign taxes that can be used as a credit is limited to 15 percent of the foreign source non-business income, the only limit for a corporation is the limit that is found in the second component of the formula. If the actual amount of foreign taxes paid is greater than this limit, there is no carry over of the excess

as a tax credit. However, as was noted in Chapter 11, unclaimed amounts can be deducted under ITA 20(12) in the determination of Net Income For Tax Purposes.

12-173. Unlike the case with foreign non-business income taxes paid in excess of amounts used as tax credits, unused foreign business taxes paid can be carried over as a tax credit to the 3 preceding taxation years or the 10 subsequent taxation years. In calculating the allowable tax credit for such carry overs, these unused amounts will be added to the foreign tax paid factor in the calculation of the foreign business income tax credit.

**Exercise Twelve - 14**

**Subject:** Foreign Tax Credits

Internat Inc. is a Canadian public company. For the year ending December 31, 2019, it has Net Income For Tax Purposes of $146,000, including foreign business income of $20,000. The foreign government withheld $3,000 in taxes on this income, resulting in a net remittance of $17,000. None of the Company's income involves manufacturing and processing and, based on the ITR 402(3) formula, 88 percent of the Company's income was allocated to a province. In calculating Taxable Income, the Company deducts $30,000 in dividends received from taxable Canadian companies, a non-capital loss carry forward of $75,000, and a net capital loss carry forward of $25,000. Determine the Company's Part I Tax Payable for the year ending December 31, 2019. Include in your answer any carry overs available at the end of the year.

# Refundable Journalism Labour Tax Credit

## Described

12-174. The March 29, 2019 budget introduced three provisions designed to encourage Canadian journalism organizations.

- A 25 percent refundable credit for salaries and wages paid to Eligible Newsroom Employees of a Qualifying Canadian Journalism Organizations. This credit is available for expenditures made after January 1, 2019.
- A non-refundable credit for individuals based on the cost of their subscriptions to digital news services. This credit is not available until 2020.
- A provision that allows some journalism organizations to register as qualified donees able to issue tax receipts for donations. These provisions are not applicable until 2020.

12-175. The 25 percent credit is capped at $55,000 for each Eligible Newsroom Employee, providing a maximum credit of $13,750 [(25%)($$55,000)] for each such employee. The base for the credit will be reduced by any financial assistance received during the year from any level of government.

12-176. It appears that, even though journalism organizations that qualify as registered donees do not pay income taxes, they will be eligible for this refundable credit.

## Definitions - ITA 125.6

12-177. As usual, the application of this credit requires an understanding of some technical definitions. These are as follows:

**Qualifying Canadian Journalism Organization** To qualify, the organization must meet the following conditions:

- it must be primarily engaged in the production of written news content;
- it must not be carrying on a broadcasting operation;
- it does not receive any amount from the Canada Periodical Fund; and
    - if it is a public corporation, its shares must be listed on a designated stock exchange in Canada; or
    - if it is not publicly traded, at least 75 percent of its shares must owned by Canadian citizens or a publicly traded qualifying journalism organization.

**Eligible Newsroom Employee** This means an individual who:

- is employed by a Qualifying Canadian Journalism Organization;
- works a minimum of 26 hours per week throughout the portion of the taxation year in which the individual is employed;
- is employed for a minimum period of 40 consecutive weeks; and
- spends at least 75% of their time engaged in the production of news content, including researching, collecting information, verifying facts, photographing, writing, editing, designing and otherwise preparing content.

**Additional Supplementary Self Study Problems Are Available Online.**

# Key Terms Used In This Chapter

12-178. The following is a list of the key terms used in this Chapter. These terms, and their meanings, are compiled in the Glossary located at the back of the Study Guide.

Active Business
Active Business Income
Adjusted Active Business Income
ADJUSTED Aggregate Investment Income
Allowable Business Investment Loss
Allowable Capital Loss
Annual Business Limit
Associated Corporations
Business Income
Business Investment Loss
Canadian Controlled Private Corporation
Carry Over
CCPC
Common Shares
Corporation
Designated Stock Exchange
Disposition
Eligible Newsroom Employee
Federal Tax Abatement
Foreign Taxes Paid Credit
Full Rate Taxable Income
GAAP
General Rate Reduction
Grind
Loss Carry Back
Loss Carry Forward
Manufacturing And Processing Profits Deduction (M&P Deduction)
Net Business Income
Net Capital Loss
Non-Capital Loss
Ordering Rule
Permanent Establishment
Personal Services Business
Preferred Shares
Private Corporation
Professional Corporation
Property Income
Public Corporation
Qualifying Canadian Journalism Organization
Refundable Journalism Labour Tax Credit
Small Business Deduction
Specified Investment Business
Stop Loss Rules
Taxable Capital Employed In Canada
Term Preferred Shares

# Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 12:

- 10 Self Study problems,
- 5 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

# Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### *Assignment Problem Twelve - 1*

***(Corporate Taxable Income)***

The Income Statement that has been prepared by Margo Ltd.'s accountant for the year ending December 31, 2019, is as follows:

| | | |
|---|---|---|
| Sales Revenue | | $925,000 |
| Cost Of Goods Sold (Note 1) | | ( 717,000) |
| Gross Profit | | $208,000 |
| Operating Expenses: | | |
| Salaries And Wages | ($40,200) | |
| Rents | ( 22,200) | |
| Property Taxes (Note 2) | ( 8,800) | |
| Amortization Expense | ( 35,600) | |
| Write-Down Of Goodwill (Note 3) | ( 1,700) | |
| Charitable Donations | ( 19,800) | |
| Legal Fees (Note 4) | ( 2,220) | |
| Bad Debt Expense (Note 5) | ( 7,100) | |
| Warranty Provision (Note 6) | ( 5,500) | |
| Social Club Membership Fees | ( 7,210) | |
| Other Operating Expenses | ( 39,870) | ( 190,200) |
| Operating Income | | $ 17,800 |
| Other Revenues (Expenses): | | |
| Gain On Sale Of Investments (Note 7) | $9,500 | |
| Interest Revenue | 2,110 | |
| Interest On Late Income Tax Instalments | ( 1,020) | |
| Investment Counsellor Fees | ( 500) | |
| Foreign Interest Income (Note 8) | 1,530 | |
| Dividends From Taxable Canadian Corporations | 3,000 | 14,620 |
| Income Before Taxes | | $ 32,420 |

**Notes And Other Information:**

1. The calculation of Cost Of Goods Sold was based on an opening inventory of $225,000 and a closing inventory of $198,600. In addition, the closing inventory was reduced by $15,000 for a reserve for future declines in value. This is the first year the Company has used an inventory reserve.
2. Property Taxes include $1,200 for tax paid on vacant land. The company has held this land for 5 years, in anticipation of relocating its head office.
3. As the result of a business combination on January 15, 2019, Margo Ltd. recorded $34,000 in goodwill. As of December 31, 2019, this goodwill was found to be impaired and a goodwill impairment loss of $1,700 was recorded.
4. The maximum CCA for the current year is $79,785. This includes the appropriate write-off of the goodwill described in Item 3.
5. The legal fees are made up of $1,200 paid to appeal an income tax assessment and $1,020 paid for general corporate matters.
6. The Company bases its accounting Bad Debt Expense on the values used for tax purposes.
7. This is the first year that the Company has deducted a provision for estimated warranties.
8. The gain on the sale of investments involved marketable securities with a cost of $21,000. The securities were sold for $30,500.
9. The gross foreign interest income of $1,800 was received net of $270 in foreign tax withholdings.

**Required:** Determine the minimum Net Income For Tax Purposes and Taxable Income of Margo Ltd., for the year ending December 31, 2019.

## *Assignment Problem Twelve - 2*

### *(Corporate Taxable Income)*

Cabrera Digital is a Canadian public company. It has always used a taxation year that ends on December 31. During the year ending December 31, 2019, it had operating revenues of $1,234,000 and operating expenses of $962,000, resulting in an operating income $272,000.

Also during 2019, it received the following dividends:

| | |
|---|---|
| • Non-Eligible Dividends From 100 Percent Owned Subsidiary | $23,600 |
| • Eligible Dividends From Canadian Public Companies | 61,300 |

The Company's only other property income was a $312,000 capital gain on a holding of temporary investments. Because of this very fortunate investment result, the Company decides to make a $241,000 donation to a registered Canadian charity. No other capital gains are anticipated in the foreseeable future.

At the beginning of the year ending December 31, 2019, the Company had the following carry forward balances:

| | |
|---|---|
| • Net Capital Losses | $262,000 |
| • Non-Capital Losses | 193,000 |

**Required:** Calculate the minimum Net Income For Tax Purposes and Taxable Income for Cabrera Digital for the year ending December 31, 2019. Indicate the amount and type of any carry forwards that are available at the end of that year.

## *Assignment Problem Twelve - 3*

***(Corporate Net And Taxable Income)***

Vertin Ltd. is a Canadian public company that has always used a December 31 year end. However, as December is a very busy time for their business activities, it has requested a change in their taxation year end to July 31, a date at which their business activity is at the low point for the year. They have presented this situation to the CRA and the Department has accepted their request for the change.

The change will be implemented during 2019, resulting in a short fiscal period ending July 31, 2019. The Company's Income Statement, prepared in accordance with generally accepted accounting principles, for the period January 1, 2019 through July 31, 2019 is as follows:

**Vertin Ltd.**
**Income Statement**
**7 Month Period Ending July 31, 2019**

| | | |
|---|---|---|
| Sales (All Within Canada) | | $1,796,600 |
| Cost Of Sales | | ( 973,400) |
| Gross Margin | | $ 823,200 |
| Other Expenses (Excluding Taxes): | | |
| Wages And Salaries | ($108,200) | |
| Cost Of Sales | ( 194,200) | |
| Amortization | ( 97,600) | |
| Rent | ( 113,400) | |
| Interest Expense | ( 13,200) | |
| Foreign Exchange Loss | ( 7,600) | |
| Travel And Promotion | ( 86,300) | |
| Bad Debt Expense | ( 6,200) | |
| Warranty Expense | ( 7,400) | |
| Charitable Donations | ( 8,100) | |
| Other Operating Expenses | ( 51,200) | ( 693,400) |
| Operating Income | | $ 129,800 |
| Gain On Sale Of Investments | | 7,800 |
| Income Before Taxes | | $ 137,600 |

**Other Information:**

1. Wages and salaries includes a $28,000 bonus to Vertin Ltd.'s CEO. Because she anticipates retiring at the end of 2020, this bonus will not be paid until January, 2021.
2. In determining the Cost Of Sales, the Company deducted a $23,400 reserve for inventory obsolescence.
3. Amortization is on a Class 1 building, Class 8 furniture and fixtures, and Class 10 delivery vehicles. The following information is relevant for the determination of CCA for the 7 month period ending July 31, 2019:

   **Building** The January 1, 2019 UCC for the building was $872,000. During 2019, the Company spent $42,000 on improved flooring in all areas of the property. The building was not a new building when it was acquired.

   **Furniture And Fixtures** The January 1, 2019 UCC balance for Class 8 was $285,000. During 2019, new furniture was acquired at a cost of $40,600. Old furniture with a capital cost of $28,200 was sold for $17,600.

   **Delivery Vehicles** On January 1, 2019, the Class 10 UCC balance was $198,300. There were no additions or disposals in this Class during the 7 month period ending July 31, 2019.

4. The interest expense relates to a line of credit that was used to finance seasonal fluctuations in inventory.

5. The foreign exchange loss resulted from financing costs related to the purchase of merchandise in the United Kingdom.

6. The travel and promotion expense consisted of the following items:

| | |
|---|---|
| Business Meals And Entertainment | $32,400 |
| Hotels And Airfare | 41,800 |
| Golf Club Memberships | 12,100 |
| Total Travel And Promotion Expense | $86,300 |

7. For accounting purposes, the Company establishes a warranty reserve based on estimated costs. On January 1, 2019, the reserve balance was $8,200. On July 31, 2019, a new reserve was established at $7,400.

8. The accounting gain on the sale of investments is equal to the capital gain for tax purposes.

9. During the period January 1, 2019 through July 31, 2019, the Company declared and paid dividends of $31,400.

10. On January 1, 2019, the Company has available a $24,600 non-capital loss carry forward and a $7,200 [(1/2)($14,400)] net capital loss carry forward.

**Required:** Calculate the minimum Net Income For Tax Purposes and Taxable Income for Vertin Ltd. for the 7 month period ending July 31, 2019. Indicate the amount and type of any carry forwards that will be available for use in future years.

## Assignment Problem Twelve - 4

### (Corporate Loss Carry Forwards)

The following information relates to the operations of Notem Inc. for the taxation year ended December 31, 2019 (all amounts are based on the relevant tax rules):

| | |
|---|---|
| Net Business Loss | $141,800 |
| Dividends From Taxable Canadian Corporations | 33,500 |
| Taxable Capital Gains | 9,600 |
| Allowable Capital Losses | 4,425 |
| Charitable Donations | 5,400 |

At the beginning of the taxation year, the Company had a carry forward of unused charitable donations of $1,350 from the previous year, and a net capital loss carry forward of $10,500 [(1/2)($21,000)].

It is the policy of the Company to minimize net capital loss balances prior to using any other type of carry over balance.

**Required:** Calculate the corporation's minimum Net Income For Tax Purposes and Taxable Income for its 2019 taxation year. Indicate any balances available for carry forward to subsequent years.

## Assignment Problem Twelve - 5

### (Corporate Loss Carry Forwards - 4 Years)

Linden Industries Inc. began operations in 2016 and has a December 31 fiscal year end. While it was fairly successful in its first year of operation, excessive production of an unmarketable product resulted in a large operating loss for 2017. Profits have come back in 2018 and 2019.

The relevant Division B income and loss figures, along with charitable donations made during the years under consideration are as follows:

| | 2016 | 2017 | 2018 | 2019 |
|---|---|---|---|---|
| Business Income (Loss) | $95,000 | ($205,000) | $69,500 | $90,000 |
| Capital Gains (Losses) | ( 10,000) | ( 14,000) | 9,000 | 10,000 |
| Dividends Received | 12,000 | 42,000 | 28,000 | 32,000 |
| Charitable Donations | 21,400 | 4,600 | 8,000 | 22,000 |

All of the dividends have been received from taxable Canadian corporations. It is the policy of the Company to minimize its net capital loss carry forward balance.

**Required:** For each of the four years 2016 through 2019, provide the following information:

- The minimum Net Income For Tax Purposes and Taxable Income that would be reported for Linden Industries. Indicate the amount and type of any current year losses that are available for carry back or carry forward.
- The amended figures for any years to which losses are carried back.
- An analysis of the amount and type of carry forwards that would be available at the end of the year.

### *Assignment Problem Twelve - 6*

### *(Corporate Loss Carry Forwards - 4 Years)*

Metronet Inc. is a Canadian public company with a December 31 year end. It commenced operations in 2016 and has had mixed results since that time. In terms of its business income (loss), the results, determined using the relevant tax legislation, were as follows:

| | 2016 | 2017 | 2018 | 2019 |
|---|---|---|---|---|
| Net Business Income (Loss) | $233,500 | $34,000 | ($163,000) | $57,000 |

**Other Information:**

1. In each of the years 2016 through 2019, Metronet receives dividends from taxable Canadian companies of $13,500.
2. In 2016, Metronet made charitable donations of $4,800, followed by a donation of $15,600 in 2017. The donations declined to $7,400 in 2018. No contributions were made in 2019.
3. In 2016, Metronet realized a capital loss of $24,600, followed by a $45,600 capital gain in 2017. In 2018, there was a capital loss of $48,400. Things improved in 2019, during which Metronet realized a $33,200 capital gain.

It is the policy of the Company to minimize its net capital loss carry forward balance, prior to minimizing other types of carry forwards.

**Required:** For each of the four years 2016 through 2019, provide the following information:

- The minimum Net Income For Tax Purposes and Taxable Income that would be reported for Metronet Inc. Indicate the amount and type of any current year losses that are available for carry back or carry forward.
- The amended figures for any years to which losses are carried back.
- An analysis of the amount and type of carry forwards that would be available at the end of the year.

### Assignment Problem Twelve - 7

#### (Geographical Allocation Of Income)

The Sundean Company has its national headquarters in Toronto, and all of its senior management people have their offices at this location. The Company also has operations in Vancouver, Calgary, Saskatoon, and Halifax. In each of these cities, warehouse space is maintained and orders are filled. In addition, a sales staff operates out of office space in each warehouse, taking orders throughout the province in which the warehouse is located.

For the current taxation year, the Company's Taxable Income totalled $1,546,000, on gross revenues of $10,483,000. Also during the current year, the Company had salaries and wages totalling $1,247,000. These gross revenues and expenses were distributed among the provinces where the Company has operations in the following manner:

| | Gross Revenues | Wages And Salaries Accrued |
|---|---|---|
| Alberta | $ 1,886,940 | $ 261,870 |
| British Columbia | 2,306,260 | 274,340 |
| Nova Scotia | 1,362,790 | 174,580 |
| Saskatchewan | 1,257,960 | 99,760 |
| Ontario | 3,669,050 | 436,450 |
| Total | $10,483,000 | $1,247,000 |

**Required:** Calculate the amount of the Sundean Company's Taxable Income for the current year that would be allocated to each of the five provinces. Any percentages used in your calculations should be rounded to one decimal place.

### Assignment Problem Twelve - 8

#### (Part I Tax With Reduced SBD)

Jordu Inc. is a large Canadian controlled private corporation (CCPC). Gross revenues for 2019 totaled $3,460,000, with 28 percent of this amount generated in Ontario, 63 percent in British Columbia, and the remainder coming from outside of Canada. The revenues were earned in a country where Jordu has a permanent establishment. Wages and salaries for this period totaled $1,250,000, all of which were paid in British Columbia.

Taxable Income for the 2019 tax year was determined to be $1,265,000, with all but $130,000 of this total consisting of Canadian active business income. The $130,000 is foreign business income. The foreign jurisdiction withheld $19,500 in tax, remitting the remaining $110,500 to Jordu.

Jordu is associated with three other companies. The four companies split the annual business limit equally. The combined Taxable Capital Employed in Canada for Jordu and its associated companies is $14,126,384 for 2019. For 2018, the corresponding figure is $13,246,900.

Neither Jordu, nor any of its associated companies, have any Adjusted Aggregate Investment Income for all years under consideration.

Assume that Jordu's tax credit will be equal to the amount of foreign taxes paid.

**Required:** Calculate Jordu's minimum federal Part I Tax Payable for the year ending December 31, 2019.

### Assignment Problem Twelve - 9

#### (Corporate Tax Payable)

For the taxation year ending December 31, 2019, Lorne Inc., a Canadian controlled private company, has Net Income For Tax Purposes of $340,500. This is made up of $312,400 of active business income and $28,100 of dividends from various Canadian public companies. It

has been determined that $211,300 of the active business income qualifies as manufacturing and processing profits.

During 2019, the Company makes donations to registered charities totaling $31,400.

At the beginning of 2019, the Company has a non-capital loss carry forward of $29,300. It intends to deduct all of this carry forward during 2019.

Lorne Inc. is associated with three other CCPCs. The companies have agreed that each company will claim one-quarter of the annual business limit. The combined Taxable Capital Employed In Canada for the four associated companies is less than $10 million in both 2018 and 2019. The combined Adjusted Aggregate Investment Income of the four companies was $45,000 in 2018.

**Required:** Determine the minimum Taxable Income and Part I federal Tax Payable for Lorne Inc. for the year ending December 31, 2019. Show all calculations, whether or not they are necessary to the final solution. As the corporation operates in a province that has a reduced tax rate for M&P activity, a separate calculation of the federal M&P deduction is required.

### *Assignment Problem Twelve - 10*
### *(Comprehensive Corporate Tax Payable)*

For the year ending December 31, 2019, Mamora Ltd. had accounting income before taxes of $1,115,050. Mamora is a Canadian controlled private company throughout 2019.

Other Information related to the Company's 2019 taxation year is as follows:

1. The accounting income figure included a deduction for Amortization Expense of $405,525.
2. On January 1, 2019, Mamora Ltd. had the following UCC balances:

| | |
|---|---|
| Class 1 | $1,050,000 |
| Class 8 | 1,460,000 |
| Class 10 | 142,000 |
| Class 13 | 175,000 |

The Class 1 balance relates to a single building acquired at a cost of $1,650,000. It is estimated that the cost of land included in this amount is $350,000. In June, 2019, this building is sold for $1,725,000, including an estimated value for the land of $375,000. In accounting records this real property was carried at $1,550,000, a net book value for the building of $1,200,000, plus $350,000 for the land. As a result of this sale, a gain of $175,000 was included in the accounting income figure.

The old building is replaced on February 15, 2019 with a new building acquired at a cost of $2,100,000, of which $400,000 is allocated to land. The building is used 95 percent for manufacturing and processing activity and it is allocated to a separate Class 1.

During 2019, Class 8 assets are acquired at a cost of $150,000. There are no dispositions of Class 8 assets during the year.

As the Company has decided to lease all of its vehicles in the future, all of the assets in Class 10 are sold during the year. The capital cost of these assets was $285,000 and the proceeds of disposition amounted to $122,000 with no asset disposed of for more than its capital cost. The net book value of these assets was $185,000, resulting in a loss of $63,000 being included in accounting income.

The Class 13 balance relates to a single lease that commenced on January 1, 2014. The lease has an initial term of 6 years, with an option to renew for 4 years. Expenditures on this leasehold were $250,000 in 2014 and $60,000 in 2018. There were no further expenditures in 2019. The write-off of these expenditures for accounting purposes is included in the Amortization Expense figure that was deducted in the determination of accounting income.

It is the policy of Mamora to deduct maximum CCA in each year.

3. The accounting income figure included a Gain On The Sale Of Vacant Land of $75,000. This land had been acquired several years ago for $620,000. While the Company had intended to construct a new building on this site, they had concluded that their current operations did not justify this investment. Given this, the land was sold for $695,000. The buyer provided a 2019 payment of $295,000, with the balance due in four annual payments of $100,000 each, beginning on December 31, 2020.

4. The Company spent $53,000 during the year on landscaping for its new building. While this was treated as an asset for accounting purposes, Mamora did not amortize the balance as it believed the work had an unlimited life.

5. Using the formula found in the *Income Tax Regulations*, 88 percent of Mamora's income has been allocated to provinces.

6. Mamora's accounting income includes foreign business income of $15,300. This amount is net of withholdings in the foreign jurisdiction in the amount of $2,700.

7. As the Company expects to issue more shares during 2020, it made a number of amendments to its articles of incorporation. The legal costs for these changes were $21,000. They have been deducted in the determination of accounting income.

8. Other amounts deducted in the determination of accounting income are as follows:

| | |
|---|---|
| Bond discount amortization | $ 4,600 |
| Donations to registered charities | 12,500 |
| Interest on late income tax instalments | 1,400 |
| Interest on late municipal tax payments | 625 |

9. Accounting income was reduced by $42,000 for the cost of business meals and entertainment. In addition, a deduction of $23,000 was made for the cost of a membership in a golf club for the president of the Company. She uses the club only for entertaining business clients.

10. At the beginning of 2019, Mamora had a net capital loss carry forward of $210,000, as well as a non-capital loss carry forward of $95,000.

11. For 2019, Mamora has active business income in Canada of $976,380, $425,000 of which results from M&P activity.

12. Mamora Ltd. is associated with several other CCPCs. Mamora's share of the group's annual business limit for 2019 is $175,000. The combined Taxable Capital Employed In Canada of the group of associated companies is less than $10 million in both 2018 and 2019.

13. The combined Adjusted Aggregate Investment Income of the group of associated companies is equal to $39,800 for 2018.

**Required:**

A. Calculate the minimum Net Income For Tax Purposes for Mamora Ltd. for 2019. In addition, calculate the UCC balance on January 1, 2020 for each class of assets. Ignore the possibility of using the replacement property election.

B. Calculate the minimum Taxable Income for Mamora Ltd. for 2019. Indicate the amount, and type, of any carry overs that are available at the end of the year.

C. Calculate the minimum federal Part I Tax Payable for Mamora Ltd. for 2019. As the corporation operates in provinces that have a reduced tax rate for M&P activity, a separate calculation of the federal M&P deduction is required. Assume that the foreign tax credit for foreign business income is equal to the foreign taxes withheld.

# CHAPTER 13

# Taxation Of Corporate Investment Income

## Note On Current Developments

As was discussed more extensively in a note at the beginning of Chapter 12, the government is concerned about the accumulation of passive investments resulting from the retention of the after tax income that has been taxed at low corporate rates. As a reflection of this concern, legislation related to the income on such passive investments becomes effective for years that begin after 2018.

In simple terms, when such passive income exceeds $50,000 per year, there will generally be a reduction (grind) in the annual business limit that is available to Canadian Controlled Private Corporations (CCPCs). This annual business limit grind was covered in Chapter 12, along with the grind that occurs when a CCPC has Taxable Capital Employed in Canada (TCEC) in excess of $10 million.

As noted in that Chapter, there is a second component of the legislation related to passive investments. You will recall from Chapter 7 that dividends that are designated as eligible are taxed more favourably than non-eligible dividends. The new legislation does not change the ability to designate dividends as eligible. What has changed is the corporation's ability to access refundable taxes on the payment of eligible dividends. Corporations will be faced, in some situations, with the choice of giving up potential refunds if dividends are designated as eligible, and not designating eligible dividends in order to recover these taxes. This is likely to make the accumulation of investment income in private corporations less attractive.

We would note that this legislation will make the material in this Chapter much more complex, both in the text and in the majority of the problem material.

## Integration

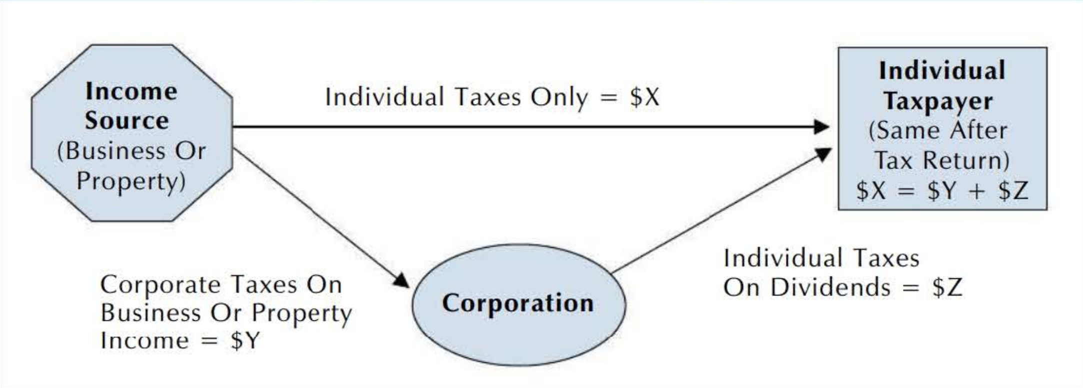
### The Basic Concept

#### *The Goal*

13-1. An individual who is entitled to receive business or property income has the choice of:

- Receiving that income directly as an individual. If this approach is used, the only taxes that will be assessed are at the personal level.

**Figure 13 - 1 The Goal Of Integration**



- Alternatively, the relevant assets can be transferred to a corporation. If this approach is used, there will be two levels of taxation. The income will be subject to corporate taxes prior to its distribution. Then, when the after tax amounts are distributed, they will be subject to a second level of tax at the personal level.

13-2. As depicted in Figure 13-1, the goal of integration is to ensure that the use of a corporation does not alter the total amount of taxes that will be paid on a given stream of business or property income. Stated alternatively, integration procedures are directed at equating the amount of taxes paid by an individual on the direct receipt of income, with the combined corporate/individual taxes that would be paid if that same stream of income was channeled through a corporation.

## Integration Procedures

13-3. As we will find in the various chapters dealing with corporate taxation, there are a number of procedures associated with achieving this goal. However, from the point of view of individual taxpayers, the dividend gross up and tax credit procedures are the primary tools used in building a system which integrates corporate and individual tax amounts.

13-4. As discussed in Chapter 7, the basic idea underlying the gross up and tax credit procedures is that the taxable amount of dividends received by an individual will be grossed up to reflect the amount of pre-tax income earned by the corporation. This will be accompanied by a credit against Tax Payable that will compensate the individual for the taxes that were paid at the corporate level. A simple example, using hypothetical rates, will serve to illustrate the fundamentals of this approach:

**EXAMPLE** Marion Fluery has a business that produces $100,000 of income in each year. If she receives this income directly from the business, it will be subject to tax at her marginal rate of 51 percent.

Alternatively, if she transfers this business to a corporation, the corporation will be subject to taxes at 20 percent.

When the after tax income of the corporation is distributed as dividends, it will be subject to a gross up of 25 percent. The combined federal/provincial dividend tax credit in Marion's province is equal to the amount of the gross up.

**ANALYSIS** If the business does not incorporate, Marion's after tax retention would be as follows:

| | |
|---|---|
| Pre Tax Income | $100,000 |
| Personal Taxes At 51 Percent | ( 51,000) |
| After Tax Retention | $ 49,000 |

If, alternatively, the business is transferred to a corporation, results at the corporate level would be as follows:

| | |
|---|---|
| Corporate Income Before Taxes | $100,000 |
| Corporate Taxes At 20 Percent | ( 20,000) |
| After Tax Income And Maximum Dividend Payable | $ 80,000 |

If the maximum dividend is paid by the corporation and a gross up of 25 percent is applied to this amount, the result would be as follows:

| | |
|---|---|
| Dividends Received | $ 80,000 |
| Gross Up [(25%)($80,000)] | 20,000 |
| Taxable Dividends = Pre-Tax Corporate Income | $100,000 |

As the amount of the gross up is equal to the corporate taxes paid, adding the gross up results in taxable dividends equal to the pre-tax corporate income.

Based on this amount, Marion's Tax Payable would be calculated as follows:

| | |
|---|---|
| Taxable Dividends (After Gross Up) | $100,000 |
| Marion's Tax Rate | 51% |
| Tax Payable Before Dividend Tax Credit | $ 51,000 |
| Dividend Tax Credit (Equal To Gross Up) | ( 20,000) |
| Marion's Tax Payable | $ 31,000 |

Based on the preceding calculation of Tax Payable, Marion's after tax retention would be calculated as follows:

| | |
|---|---|
| Dividends Received | $80,000 |
| Tax Payable | ( 31,000) |
| After Tax Retention - Use Of Corporation | $49,000 |

13-5. You will note that this is exactly the same $49,000 of after tax retention that would result from Marion receiving the $100,000 in income directly and being taxed on it at 51 percent. This means that, in this example, the gross up and tax credit procedures have produced perfect integration. That is, Marion has retained exactly the same amount of after tax income, without regard to whether the pre-tax income is received directly or, alternatively, is channeled through a corporation.

**AN IMPORTANT NOTE An understanding of dividend gross up and tax credit procedures is essential to the material which follows in this Chapter and Chapters 14, 15 and 16. If you do not fully understand these procedures, you should review the material on dividends that is found in Chapter 7.**

## Eligible Vs. Non-Eligible Dividends

### *The Problem*

13-6. The preceding example illustrates the fact that, given the appropriate combination of corporate tax rate, gross up percentage, and dividend tax credit rate, the dividend gross up and tax credit procedures can provide perfect integration. In attempting to implement a system that provides for integration, all of the provinces use the federal gross up rates. However, there are significant variations in effective corporate tax rates, both because of the type of income earned by the corporation and the different rates applied at the provincial level. This means that there is no possibility that any single combination of gross up and tax credit rates could consistently provide integration for all corporations.

13-7. For many years, the government ignored this issue, applying a single gross up rate and a single dividend tax credit rate, without regard to the differences in corporate tax rates. While it would not have been practical to have an array of gross up and credit rates that would reflect all of the different corporate tax rates, it was recognized that the single rate approach was not proving effective in providing for integration. In particular, the single rate that was being used was unfair to public companies that were subject to much higher rates than those applicable to CCPCs earning active business income (see Chapter 12).

13-8. In response to this problem, a dual system of rates was developed. The two rate system was based on a split between dividends paid out of income that was taxed at full corporate rates and dividends paid out of income that benefitted from the small business deduction or refundable taxes. The former were referred to as eligible dividends, with the latter being referred to as non-eligible. In general terms, most of the dividends paid by public companies will be designated as eligible. In contrast, most of the dividends paid by CCPCs will not be designated as eligible and, as a result, will be non-eligible.

## Eligible Dividends

13-9. You may recall from Chapter 7 that ITA 89(1) defines eligible dividends as any taxable dividend that is designated as such by the company paying the dividend (designation procedures are covered in detail later in this Chapter). Dividends that are designated as eligible are grossed up by 38 percent and receive a federal dividend tax credit equal to 6/11 of the 38 percent gross up. As was discussed in Chapter 7, the application of these rates will result in the shareholder receiving these dividends being taxed at a more favourable tax rate than would be the case if the dividends were non-eligible. The term eligible dividends refers to the fact that such dividends are eligible for this "enhanced" dividend tax credit procedure.

13-10. With the exception of capital dividends, all types of dividends may be designated as eligible dividends. This includes the cash dividends, stock dividends, dividends in kind, and the various types of deemed dividends that will be introduced in Chapter 14 (e.g., ITA 84(3) dividends on redemption of shares).

## Non-Eligible Dividends

13-11. It is common terminology to refer to dividends that have not been designated as eligible, as non-eligible dividends, and this is the term we use. (Unfortunately, the term used in tax returns is "other than eligible" dividends which can cause confusion.) For 2019, these non-eligible dividends are grossed up by 15 percent and receive a federal dividend tax credit of 9/13 of the 15 percent gross up.

13-12. Any taxable dividend that has not been designated as eligible will be considered to be non-eligible. This includes cash dividends, stock dividends, dividends in kind, and the various types of deemed dividends that are discussed in Chapter 14. Note, however, as capital dividends are not taxable dividends, they do not qualify for either the dividend gross up procedure or the tax credit procedure.

## Importance

13-13. The distinction between eligible and non-eligible dividends is extremely important. The reasons for this are as follows:

> **Effective Tax Rates** For an individual subject to maximum tax rates, the effective tax rates on non-eligible dividends can be over 10 percentage points higher than the rate on eligible dividends. Note, however, the size of this difference varies considerably from province to province, ranging from less than 5 percentage points to over 10 percentage points.
>
> **Tax Free Dividends** As we will discuss in Chapter 15, an individual with no other source of income can receive a substantial amount of dividends without paying any taxes. For a single individual receiving non-eligible dividends, the amount is just over \$30,000. In contrast, this same individual could avoid taxes on nearly \$60,000 of

eligible dividends. This is of great importance when a source of income is being split with low income family members. Keep in mind, however, that this process is made much more difficult with the expansion of the Tax On Split Income (TOSI).

13-14. Because of this importance, we will need to give attention to the rules for designating dividends as eligible. These rules will be covered after our discussion of Part I and Part IV refundable taxes. However, with the need to divide the Refundable Dividend Tax On Hand (RDTOH) account into eligible and non-eligible components, the material on designating eligible dividends will be covered prior to dealing with these accounts.

## Rates Required For Integration

### *Corporate Rates And Provincial Dividend Tax Credits*

13-15. The goal of integration is to ensure that, if an individual chooses to channel an income stream through a corporation, he will retain the same after tax amount of funds that he would have retained if he had received the income directly. The procedures associated with integration are directed at equating the amount of taxes paid by an individual who does not incorporate an income source and pays taxes only at the individual level, with the total amount of taxes that would be paid if the relevant assets were transferred to a corporation and the resulting income taxed at both the corporate level and at the individual level on distribution of the after tax corporate income.

13-16. In Chapter 7, we also demonstrated that, for integration to work, certain assumptions were required with respect to both the combined federal/provincial tax rate on corporations and the combined federal/provincial dividend tax credit. As noted in that chapter, those assumptions are as follows:

**Corporate Federal/Provincial Tax Rate** For integration to work perfectly, the corporate rate must be such that the dividend gross up percent must restore the after tax corporate amount to the pre corporate tax amount. The relevant rates are as follows:

- For eligible dividends which have a 38 percent gross up, the required rate is 27.54 percent. For example, $10,000 of corporate income would result in corporate taxes of $2,754 and an after tax amount of $7,246 ($10,000 - $2,754). When the $7,246 is grossed up by 38 percent, the result is the original $10,000 [($7,246)(1.38)] of corporate earnings.
- For non-eligible dividends which have a 15 percent gross up, the required rate is 13.04 percent. For example, $10,000 of corporate income would result in corporate taxes of $1,304 and an after tax amount of $8,696 ($10,000 - $1,304). When the $8,696 is grossed up by 15 percent, the result is the original $10,000 [($8,696)(1.15)] of corporate earnings.

If the provincial dividend tax credit is at the level required for integration, combined corporate tax rates above 27.54 percent (for eligible dividends) and 13.04 percent (for non-eligible dividends) will result in higher taxation on income flowed through a corporation. This type of situation is referred to as under integration.

**Provincial Dividend Tax Credit** For the total taxes on income flowed through a corporation to be equal to taxes that would be paid on the direct receipt of income, there must be a credit against personal taxes that is equal to the taxes paid at the corporate level. As you can see in our examples of the required rates for perfect integration, when the corporate tax rate is the one required for perfect integration, the gross up will be equal to the corporate taxes paid. Putting these two facts together leads to the conclusion that the combined dividend tax credit must be equal to the gross up of dividends received. The required rates are as follows:

- For eligible dividends, the federal dividend tax credit is equal to 6/11 of the gross up (54.5%). This means that, for the combined credit to equal the gross up, the provincial credit must be equal to 5/11 (45.5%) of the gross up.

**Figure 13 - 2**
**Corporate Rates And Dividend Tax Credits Required For Integration**

| Type Of Dividends | Required Corporate Combined Tax Rate | Required Provincial Dividend Tax Credit |
|---|---|---|
| Eligible (38% Gross Up) | 27.54% | 5/11 ≈ 45.5% |
| Non-Eligible (15% Gross Up) | 13.04% | 4/13 ≈ 30.8% |

- For non-eligible dividends, the federal dividend tax credit is equal to 9/13 of the gross up (69.2%). This means that, for the combined credit to equal the gross up, the provincial credit must be equal to 4/13 (30.8%) of the gross up.

If the corporate tax rate is at the level required for integration, provincial dividend tax credits below these rates will result in under integration, (i.e., additional taxation because a corporation is used). These required tax and dividend credit rates are summarized in Figure 13-2.

## *Actual Vs. Required Corporate Tax Rates*

13-17. It is important to be aware of how closely actual corporate tax rates compare to the rates required to implement integration. The following general comments are relevant to this:

**Eligible Dividends** For eligible dividends, integration requires a combined federal/provincial corporate tax rate of 27.54 percent. As most eligible dividends will be paid by public companies, the relevant rate is the one applicable to these companies. The combined rates for such companies currently range from roughly 26 to 31 percent. As these rates are fairly close to the required 27.54 percent, integration is working reasonably well, with modest amounts of over or under integration in specific provinces.

**Non-Eligible Dividends** For non-eligible dividends, integration requires a federal/provincial tax rate on corporations of 13.04 percent. The situation here is more complex in that the source of such dividends may be either the income of CCPCs that have benefitted from the small business deduction, or the investment income of such companies.

To the extent that the non-eligible dividends reflect income that has benefitted from the small business deduction, the appropriate combined federal/provincial rates range from 9 percent to about 14 percent (this ignores Quebec's unusually high rate on this income). As was the case with eligible dividends, these rates are close to the required 13.04 percent, suggesting that integration is working fairly well here.

There is a problem, however, when the source of the non-eligible dividends is investment income earned by CCPCs. As we shall discover in this Chapter, the combined federal/provincial rates on this type of income are, in general, over 50 percent. While integration would clearly not work with overall corporate rates at this level, we will find that the effect of these rates is mitigated by the fact that a substantial portion of these taxes are refunded to the corporation when the investment income is paid out to shareholders as dividends.

13-18. For both types of dividends, the preceding analysis makes it clear that the effectiveness of integration is very dependent on the province in which the corporation operates.

## *Actual Vs. Required Dividend Tax Credits*

13-19. Also of importance is the relationship between actual provincial dividend tax credit rates and those that currently exist. The following general comments are relevant here:

**Eligible Dividends** For eligible dividends, the required provincial dividend tax credit is 45.5 percent of the gross up. There is currently a wide range of such credits, going from under 20 percent to just over 45 percent. However, the distribution is skewed to the low side, with the average rate being approximately 30 percent. Given this, there will generally be under integration with respect to eligible dividends.

**Non-Eligible Dividends** For non-eligible dividends, the required provincial dividend tax credit rate is 30.8 percent of the gross up. Here again, there is a wide range of actual rates. However, the average is just under 30 percent, which suggests that integration is working better for this type of dividend.

13-20. As is the case with corporate tax rates, variations in the dividend tax credit rates make it clear that the effectiveness of integration is highly dependent on the province in which the shareholder resides.

## Exercise Thirteen - 1

**Subject:** Integration (Non-Eligible Dividends)

Jan Teason has a business that she estimates will produce income of $100,000 during the taxation year ending December 31, 2019. If she incorporates this business, all of the income would be eligible for the small business deduction and any dividends paid will be non-eligible. In the province where she lives, such corporate income is taxed at a combined federal/provincial rate of 15 percent. Ms. Teason has other income sources that place her in a combined federal/provincial tax bracket of 45 percent. In her province, the provincial dividend tax credit on non-eligible dividends is equal to 30 percent of the gross up. Would Ms. Teason save taxes if she was to channel this source of income through a corporation? Explain your result.

## Exercise Thirteen - 2

**Subject:** Integration (Eligible Dividends)

John Horst has a business that he estimates will produce income of $100,000 during the taxation year ending December 31, 2019. Because he controls another corporation that fully utilizes $500,000 of its small business deduction, if he incorporates this business, none of this income will be eligible for the small business deduction and any dividends paid would be designated eligible. In the province where he lives, such corporate income is taxed at a combined federal/provincial rate of 30 percent. Mr. Horst has other income sources that place him in a combined federal/provincial tax bracket of 42 percent. In his province, the provincial dividend tax credit on eligible dividends is equal to 28 percent of the gross up. Would Mr. Horst save taxes if he was to channel this source of income through a corporation? Explain your result.

### *Alternative Calculations For Dividend Tax Credits*

13-21. Note that, while federal legislation calculates the dividend tax credit as a fraction of the gross up, you often see this credit expressed as a percentage of dividends received, or a percentage of the grossed up amount of the dividends.

13-22. Because our focus is largely on federal legislation, we will generally present dividend tax credits as a fraction of the gross up. However, if needed, it is quite simple to convert different approaches to a uniform base. For example, if an eligible dividend of $100 is paid, the federal dividend tax credit of $20.73 can be calculated as:

- 6/11 (54.55%) of the $38 [(38%)($100)] gross up. (Which is our standard approach.)
- 20.73 percent of the $100 in dividends received, or
- 15.02 percent of the $138 of grossed up dividends.

# Refundable Taxes On Investment Income

## Meaning Of Aggregate Investment Income

### Regular Meaning

13-23. In the following material on refundable taxes, we will be using the term Aggregate Investment Income. For purposes of determining the amount of refundable taxes available, this term is defined in ITA 129(4) and has a very specific definition. You may recall that we provided this definition in Chapter 12 and it is also included at the front of this text in "Rates And Other Data". It is provided again here for your convenience.

**ITA 129(4) Aggregate Investment Income**

| | |
|---|---|
| Net Taxable Capital Gains | $xxx |
| Interest | xxx |
| Rents | xxx |
| Royalties | xxx |
| Total Positive Amounts | $xxx |
| Net Capital Loss Carry Overs Deducted During The Year | ( xxx) |
| ITA 129(4) Aggregate Investment Income | $xxx |

13-24. Note carefully the differences between this Aggregate Investment Income and what we normally think of as property or investment income. Unlike the normal definition of property or investment income, this concept includes net taxable capital gains for the current year, reduced by net capital loss carry overs deducted during the year.

13-25. The other difference between Aggregate Investment Income and the usual definition of investment income is that it excludes most dividends from other Canadian corporations. This reflects the fact that dividends from Canadian corporations generally flow through a corporation without being subject to Part I corporate taxes. You should also note that Aggregate Investment Income includes income from both Canadian and foreign sources.

### ADJUSTED Aggregate Investment Income

13-26. Chapter 12 introduced an alternative definition of investment income, referred to as ADJUSTED Aggregate Investment Income [ITA 125(7)]. We have capitalized ADJUSTED to avoid confusion with Aggregate Investment Income and because this is the first year the term has been in use. This ADJUSTED definition differs from the regular definition as follows:

- It includes dividends from taxable Canadian corporations with the exception of those from connected corporations. This can also be referred to as portfolio dividends.
- It only includes net taxable capital gains on the disposition of assets that are not used in an active business.
- There is no deduction for net capital loss carry overs that are deducted during the current year.

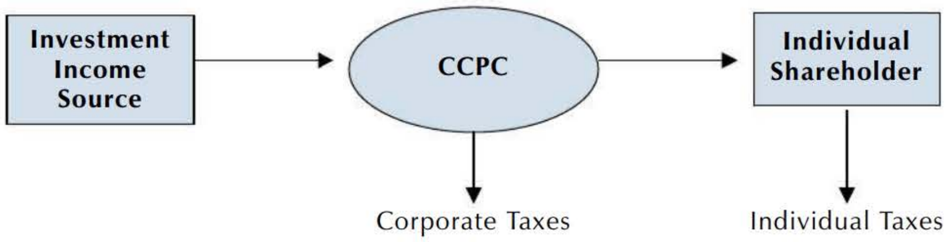
13-27. It is important to note that this alternative ADJUSTED definition is only used for the determination of the annual business limit grind. In all other applications, the ITA 129(4) definition of Aggregate Investment Income is used.

## Basic Concepts

### The Problem

13-28. As shown in Figure 13-3 (following page), when income is flowed through a corporation, it is subject to two levels of taxation. It is taxed first at the corporate level and, if the after tax corporate amount is distributed to the individual shareholder, it will be taxed again in the

**Figure 13 - 3**
**Tax On Flow Through Of Investment Income**



hands of that individual. If we assume that the corporate tax rate on the investment income of a CCPC is 52 percent and that the individual shareholder is taxed at a combined rate of 39 percent on non-eligible dividends received, the overall rate of taxation on investment income flowed through a corporation would be 70.7 percent [52% + (1 - 52%)(39%)].

13-29. This is significantly higher than the maximum federal/provincial tax rate on Canadian individuals of 54 percent. Such a large difference is clearly not consistent with the concept of integration. Given this, it was necessary to find some method of providing tax relief for shareholders of CCPCs earning investment income.

### The Solution

13-30. The most obvious solution to this problem would be to lower the rate of corporate taxation on the investment income of a CCPC. For example, if the corporate rate was lowered to 22 percent, the overall rate on the flow through of income would be taxed at 52.4 percent [22% + (1 - 22%)(39%)]. This is within the range of rates that are applied to high net worth individuals who receive business or property income directly.

13-31. The problem with this solution is that it would provide for a significant deferral of taxes on investment income. If an individual received the investment income directly, the full amount of taxes must be paid when the income is earned. In contrast, when a corporation is used, only the first, or corporate level, of taxation is assessed when the income is earned. If the after tax amount is left in the corporation, the assessment of the individual level of tax can be deferred indefinitely.

13-32. For higher income individuals who do not require all of their investment income for current expenditures, this would present an outstanding opportunity for tax deferral, as well as for the accumulation of large portfolios of passive investments. This would be the case whenever the corporate tax rate on investment income is below the rate applicable to the individual on the direct receipt of income.

13-33. Given the opportunity for tax deferral that would result from the use of lower corporate tax rates, it is not surprising that a different solution to the problem of excessive tax rates on the flow through of a CCPC's investment income has been adopted. This solution involves leaving the corporate tax rate at a high level, but having a portion of the tax being designated as refundable. The refund of this portion of the corporate tax occurs when the income is distributed in the form of dividends that will be subject to the second level of taxation in the hands of the shareholders.

13-34. Consistent with this concept of keeping the basic rate high on the Aggregate Investment Income of a CCPC, this type of income is excluded from the definition of Full Rate Taxable Income and, as a consequence, is not eligible for the general rate reduction.

### Refundable Tax Procedures

13-35. While the detailed procedures related to these refundable taxes are complex, the basic concept is not. A portion of the tax paid on investment income at the corporate level is

refunded when the income is distributed to investors in the form of dividends. This keeps the combined corporate and personal tax rate in line with the rate that would be applicable to an individual on the direct receipt of income. The high rate of corporate tax discourages tax deferral, while at the same time, the refund procedures avoid the excessive rate of taxation that would occur if this high corporate tax rate was combined with individual taxes on the same income stream.

13-36. Stated simply, the use of a refundable tax allows the government to charge a corporate tax rate that is high enough to remove much of the incentive for accumulating investment income in a corporation and, at the same time, provides a reasonable overall rate of taxation when the income is flowed through the corporation and taxed in the hands of the individual shareholder.

13-37. In implementing this refundable tax approach, the *Income Tax Act* designates three different components of total taxes paid that can be refunded on the payment of dividends. They can be described as follows:

**Ordinary Part I Tax** At this point, you should be familiar with the calculation of the regular Part I tax that is assessed on the Taxable Income of a corporation. A portion of this tax, conceptually the portion of the Part I tax that is applicable to investment income, will be designated as refundable on the payment of dividends. Note the fact that a portion of the Part I tax being designated as refundable does not change, in any way, the manner in which the Part I tax is calculated.

**Additional Refundable Tax On Investment Income (ART)** The Additional Refundable Tax On Investment Income, a Part I tax, was introduced in order to ensure that the combined federal/provincial tax on investment income was sufficiently high that it would discourage the use of a corporation to defer taxes. To achieve this objective, this combined tax rate had to be at a level that was higher than the rate applicable to high net worth individuals.

The ART rate is 10-2/3 percent, resulting in a federal rate on investment income of 38-2/3 percent (38% - 10% + 10-2/3%). When the various provincial rates on this type of income are taken into consideration, applicable combined rates are all in excess of 50 percent, with the top rate at nearly 55 percent. As this is comparable to, or higher than, the maximum rate on individuals in all of the provinces, ART serves to discourage earning investment income that is retained within a corporation.

**Part IV Tax** Even with the Part I refundable tax and ART in place, there is still the possibility of using a related group of corporations to defer taxation on investment income. Based on this, a Part IV tax is assessed at a rate of 38-1/3 percent on certain intercorporate dividends received by a private corporation.

13-38. In dealing with this material, we will first consider the issues involved with a single corporation. In these single corporation situations, only the refundable Part I tax and the additional refundable tax on investment income will be considered.

# Refundable Part I Tax On Investment Income

## Additional Refundable Tax On Investment Income (ART)

### *Basic Calculations*

13-39. As was noted previously, tax legislation contains a refundable tax on the investment income of a Canadian controlled private corporation (CCPC). This additional refundable tax (ART) is assessed under ITA 123.3 (the definition is available at the front of this text in "Rates And Other Data"). The amount payable is equal to 10-2/3 percent of the lesser of:

- the corporation's "Aggregate Investment Income" for the year [as defined in ITA 129(4)]; and
- the amount, if any, by which the corporation's Taxable Income for the year exceeds the amount that is eligible for the small business deduction.

13-40. The basic objective of this tax is to make it undesirable to shelter investment income within a corporate structure in order to defer full taxation of the amounts earned. As we have noted, when this additional 10-2/3 percent is added to the usual rates applicable to a CCPC's investment income, the combined rate is over 50 percent in all provinces.

13-41. This means that, with the addition of the ART, rates on the investment income of a CCPC will generally be higher than the rates applicable to an individual receiving the same income directly. Given this, there is little or no tax incentive to use a corporation to defer taxation on this type of income.

13-42. As described in Paragraph 13-39, the ART is based on the lesser of Aggregate Investment Income and the amount of Taxable Income that is not eligible for the small business deduction. The reason for the latter limit is to ensure that such deductions as charitable donations or non-capital loss carry overs have not totally or partially eliminated the investment income from the amount flowing through to Taxable Income. The goal is to prevent the ART from being inappropriately applied to active business income.

## Exercise Thirteen - 3

**Subject:** Additional Refundable Tax On Investment Income

Zircon Inc. is a CCPC with a December 31 year end. Zircon is not associated with any other company. For the 2019 taxation year, its Net Income For Tax Purposes is equal to $281,000. This is made up of active business income of $198,000, dividends from taxable Canadian corporations of $22,000, interest income on long-term investments of $15,000 and taxable capital gains on the disposition of capital assets used in the active business of $46,000.

The Company has available a net capital loss carry forward of $26,000 [(1/2)($52,000)] and a non-capital loss carry forward of $23,000. The Company intends to deduct both of these carry forwards in the 2019 taxation year. In 2018, the corporation's ADJUSTED Aggregate Investment Income was $13,000, and its Taxable Capital Employed In Canada was $6 million.

Determine Zircon's Taxable Income and its additional refundable tax on investment income for the 2019 taxation year.

**SOLUTION available in print and online Study Guide.**

### ART And Foreign Tax Credit Calculations

13-43. As discussed in Chapter 12, the use of foreign taxes paid as credits against Canadian Tax Payable is limited by a formula that includes the "tax otherwise payable". In the case of foreign taxes paid on non-business income, the "tax otherwise payable" in the formula adds the ART that is assessed under ITA 123.3.

13-44. This creates a potential problem in that the calculation of the ART includes the amount eligible for the small business deduction. Since one of the factors limiting the small business deduction [ITA 125(1)(b)] is Taxable Income reduced by 100/28 of the foreign non-business income tax credit and 4 times the foreign business income tax credit, this could have created an insolvable circular calculation.

13-45. As is explained in Chapter 12, there is a similar circularity issue involving the general rate reduction under ITA 123.4. The calculation of this amount also requires knowing the amount of income that is eligible for the small business deduction.

13-46. To avoid both of these problems, for the purposes of calculating the small business deduction, ITA 125(1)(b)(i) permits the foreign tax credit for taxes paid on foreign non-business income to be calculated using a "tax otherwise payable" figure that does not include the ART under ITA 123.3 or the general rate reduction. ITA 125(1)(b)(ii) permits the foreign tax

credit for taxes paid on foreign business income to be calculated using a "tax otherwise payable" figure that does not include the general rate reduction.

13-47. This means that in situations where the small business deduction, foreign tax credits, and the ART are involved, the following procedures should be used:

1. Calculate the foreign non-business tax credit using a "tax otherwise payable" figure that excludes both ITA 123.3 (ART) and ITA 123.4 (general rate reduction). This initial version of the foreign non-business tax credit will be used only for the purpose of determining the small business deduction, with the actual credit available calculated after the ITA 123.3 and 123.4 amounts have been determined.

2. Calculate the foreign business tax credit using a "tax otherwise payable" figure that excludes ITA 123.4 (as business income is involved, ITA 123.3 is excluded by definition). However, this credit is limited by the amount of tax otherwise payable, reduced by the foreign non-business tax credit. As a consequence, it will be necessary to calculate an initial version of this foreign business tax credit, using the initial version of the foreign non-business tax credit. This initial version will be used only for the purpose of determining the small business deduction and the M&P deduction.

3. Calculate the amount eligible for the small business deduction and M&P deduction using the numbers determined in steps 1 and 2.

4. Using the amount eligible for the small business deduction and the M&P deduction determined in step 3, calculate the ART and the general rate reduction.

5. Calculate the actual foreign non-business tax credit using a "tax otherwise payable" figure that includes the ART and the general rate reduction determined in step 4.

6. Calculate the actual foreign business tax credit using the actual foreign non-business tax credit determined in step 5 and the general rate reduction from step 4.

## Problem One: Excessive Tax Rates On The Flow Through Of A CCPC's Investment Income

13-48. With the addition of the 10-2/3 percent ART on the investment income of a Canadian controlled private corporation, this investment income is taxed at a combined federal/provincial rate that is consistently over 50 percent (see Paragraph 13-40).

13-49. All of these combined rates are far higher than the 13.04 percent rate required for perfect integration (the 13.04 percent rate for non-eligible dividends is used as the investment income of a CCPC cannot be used as a basis for paying eligible dividends). In the absence of some type of relieving mechanism, the objective of integrating corporate and individual tax rates would not be met.

13-50. The problem of excessive rates of tax on investment income flowed through a corporation was discussed previously in Paragraph 13-28. This is a more complete example:

**EXAMPLE** Mr. Monroe has investments that generate interest income of $100,000 per year. He is personally subject to a combined federal/provincial tax rate of 49 percent. The dividend tax credit for non-eligible dividends in his province of residence is equal to 4/13 of the gross up. Calculate the amount of cash Mr. Monroe will retain from this investment income under the following alternative assumptions:

**Case A** He receives the $100,000 in interest income directly.

**Case B** Mr. Monroe is the sole shareholder of a Canadian controlled private corporation that earns the $100,000 of investment income. The corporation is subject to a combined federal/provincial tax rate, including the ITA 123.3 tax on investment income, of 54 percent. The corporation pays out all of its after tax earnings as non-eligible dividends, resulting in a dividend to Mr. Monroe of $46,000. Ignore any refund of Part I tax paid.

13-51. The calculations comparing the investment income if it was received directly (Case A) and if it was earned through a corporation (Case B), are as follows:

**Case A - Investment Income Received Directly**

| | |
|---|---|
| Investment Income - Direct Receipt | $100,000 |
| Personal Tax At 49 Percent | ( 49,000) |
| After Tax Cash Retained Without Corporation | $ 51,000 |

**Case B - Investment Income Flowed Through Corporation**
**Assume No Refundable Part I Tax**

| | |
|---|---|
| Corporate Investment Income | $100,000 |
| Corporate Tax At 54 Percent (Includes The ART) | ( 54,000) |
| Non-Eligible Dividends Paid To Mr. Monroe | $ 46,000 |
| Non-Eligible Dividends Received | $ 46,000 |
| Gross Up Of 15 Percent | 6,900 |
| Personal Taxable Income | $ 52,900 |
| Personal Tax Rate | 49% |
| Tax Payable Before Dividend Tax Credit | $ 25,921 |
| Dividend Tax Credit [(9/13 + 4/13)(Gross Up)] | ( 6,900) |
| Personal Tax Payable With Corporation | $ 19,021 |
| Non-Eligible Dividends Received | $ 46,000 |
| Personal Tax Payable | ( 19,021) |
| After Tax Cash Retained With Corporation | $ 26,979 |

**Savings - Direct Receipt**

| | |
|---|---|
| Income Received Directly | $ 51,000 |
| Income Flowed Through Corporation | ( 26,979) |
| Net Savings On Direct Receipt | $ 24,021 |

13-52. The results show that, in the absence of the refundable component of Part I tax, interest income flowed through a corporation is subject to an effective tax rate of over 73 percent [($100,000 - $26,979) ÷ $100,000]. This is significantly higher than the 49 percent rate that is applicable to the direct receipt of the investment income, an outcome that would represent a major failure in the government's attempt to achieve integration.

13-53. Before leaving this example you should note that, with the inclusion of the ART on investment income, there is no deferral advantage associated with using a corporation in this example. The corporate taxes alone are $54,000, well in excess of the $49,000 that would be paid if Mr. Monroe had received the income directly.

## Solution To Problem One: Refundable Portion Of Part I Tax

### *Basic Concepts*

13-54. The preceding example makes it clear that taxes on investment income earned by a CCPC and flowed through to its shareholders are potentially much higher than would be the case if the shareholders received the income directly. This major imperfection in the system of integration results from a federal/provincial tax rate on the investment income of CCPCs that is over 50 percent.

13-55. In those cases where the income is retained in the corporation, this is an equitable arrangement in that this high rate discourages the use of a CCPC to temporarily shelter passive income from a portion of the taxes that would be assessed on the direct receipt of the income

by the individual. However, when the investment income is flowed through a CCPC and paid as dividends, the result is not consistent with the government's desire to tax CCPCs under the integration view of corporate taxation.

13-56. As noted previously, the government could have dealt with this problem by reducing the corporate tax rate on the investment income of CCPCs. However, this would have allowed the owners of CCPCs to defer personal taxes on this income by leaving the investment income in the corporation. To avoid this, the refundable tax approach is used.

13-57. Under this approach, the investment income of Canadian controlled private corporations is taxed at the usual high rates, including the ART on investment income. However, when the corporation distributes its after tax income in the form of dividends, a part of this tax is refunded. Under ITA 129(1), the refund is based on the amount of dividends paid by the corporation, with the refund being equal to 38-1/3 percent of dividends paid.

## Concepts Illustrated

13-58. For integration to work perfectly on non-eligible dividend payments, the overall corporate tax rate has to equal 13.04 percent (see Paragraph 13-16). In order to give you a better understanding of how the concepts associated with the refund of Part I tax work, we will use an example based on a pre-dividend refund tax rate that will provide a 13.04 percent tax rate after the refund has contributed to the total dividend. While we will not go through the calculation of this rate, the required rate is 46.375 percent, including the 10-2/3 percent ART. You should note that this rate is lower than any of the relevant combined federal/provincial rates that are currently available.

13-59. With the initial corporate tax rate at 46.375 percent, a refund is necessary to reduce the rate to the required 13.04 percent. The rate that is specified in ITA 129(1) is 38-1/3 percent of the total dividends paid. As we will discuss later, this refund is limited by the corporation's balance in its Refundable Dividend Tax On Hand account.

13-60. The following example, involving perfect integration, will illustrate the rates that we have just presented.

> **EXAMPLE** Ms. Banardi has investments that generate interest income of $100,000 per year. You have been asked to advise her as to whether there would be any benefits associated with transferring these investments to her wholly owned Canadian controlled private corporation. Ms. Banardi is personally subject to a combined federal/provincial tax rate of 49 percent. The dividend tax credit on non-eligible dividends in her province of residence is equal to 4/13 of the gross up. Her corporation would be taxed on this income at a combined federal/provincial rate of 46.375 percent, including the ART on investment income.
>
> **Note** In the calculations that follow, we have ignored some small rounding issues in order to avoid extending the required rates to more decimal places. This in no way defeats the objective of illustrating the conceptual basis for the Part I refundable tax.

13-61. The calculations comparing the after tax investment income if it was earned in a corporation and if it was received directly, are as follows:

**After Tax Retention - Use Of A Corporation**

| | |
|---|---|
| Corporate Investment Income | $100,000 |
| Corporate Tax At 46.375 Percent (Includes The ART) | ( 46,375) |
| After Tax Income | $ 53,625 |
| Dividend Refund (See Analysis) | 33,335 |
| Non-Eligible Dividends Paid To Ms. Banardi | $ 86,960 |

**ANALYSIS** In this somewhat academic example of the dividend refund mechanism, we assume that all of the corporation's after tax income will be paid out as dividends. Given this, a bit of algebra is needed to determine the total dividend, and in the process, the amount of the refund. Specifically, we need to solve the following simple equation:

X = $53,625 + [(38-1/3%)(X)]
X - [(38-1/3%)(X)] = $53,625
[(61-2/3%)(X)] = $53,625
X = $86,960

Where X = The total dividend, including the refund.

This provides a dividend refund of $33,335 ($86,960 - $53,625), an amount that is equal to 38-1/3 percent of $86,960.

In this example, we have provided a complete illustration of the conversion of available after tax income to a dividend that includes a refund equal to 38-1/3 percent of the total dividend. In future examples, we will use a condensed version of this process to do a direct calculation of the amount of the refund. The formula for the refund is as follows:

Refund = [(After Tax Funds Available ÷ .61667) - After Tax Funds Available]

Applying this to the current example gives the same result that was achieved by the more detailed calculation:

$33,335 = [($53,625 ÷ .61667) - $53,625]

Note that, at this point, the total corporate tax paid is equal to $13,040 ($100,000 - $86,960). This reflects the 13.04 percent rate ($13,040 ÷ $100,000) that is required for perfect integration.

The assumption that all after tax income will be paid out as dividends is not consistent with the real world approach in which the amount of the dividend is determined by a variety of factors (e.g., availability of cash or alternative investment opportunities) and very rarely, if ever, equals the after tax income plus the dividend refund.

Calculation of the after tax amounts retained follows:

| | |
|---|---|
| Non-Eligible Dividends Received | $ 86,960 |
| Gross Up Of 15 Percent | 13,040 |
| Personal Taxable Income | $100,000 |
| Personal Tax Rate | 49% |
| Tax Payable Before Dividend Tax Credit | $ 49,000 |
| Dividend Tax Credit [(9/13 + 4/13)(Gross Up)] | ( 13,040) |
| Personal Tax Payable With Corporation | $ 35,960 |

| | |
|---|---|
| Non-Eligible Dividends Received | $ 86,960 |
| Personal Tax Payable | ( 35,960) |
| After Tax Cash Retained With Corporation | $ 51,000 |

**After Tax Retention - Direct Receipt**

| | |
|---|---|
| Investment Income - Direct Receipt | $100,000 |
| Personal Tax At 49 Percent | ( 49,000) |
| After Tax Cash Retained Without Corporation | $ 51,000 |

13-62. While this example provides equal amounts of after tax cash, without regard to whether the income is flowed through a corporation or received directly, it is not a realistic example. All of the combined federal/provincial rates on the investment income of CCPCs are higher than the 46.375 percent rate used in our example. In addition, as we shall see in the next section of this Chapter, the amount of the refund is limited by the balance in the Refundable Dividend Tax On Hand (RDTOH). We have not taken that into consideration in this example. If we had, the dividend refund in this example would be limited to $30,677 [(30-2/3%)($100,000)].

## Use Of Other Rates In Refundable Part I Tax Example

13-63. In this example, we will use a corporate tax rate of 54-2/3 percent. This will illustrate that, when realistic corporate tax rates are used, using a CCPC to hold assets earning investment income will result in a lower after tax return than holding the investments directly.

> **EXAMPLE** Mr. Leoni has investments that generate interest income of $100,000 per year. He has over $250,000 in other income and is subject to a combined federal/provincial tax rate of 51 percent. The provincial dividend tax credit for non-eligible dividends is equal to 4/13 of the gross up. Mr. Leoni is the sole shareholder of a CCPC and is considering the transfer of these investments to his corporation. His corporation would be taxed on this income at a combined federal/provincial rate of 54-2/3 percent, including the ART on investment income (38% - 10% + 10-2/3% + 16%).

13-64. The calculations comparing the after tax investment income if it was earned through a corporation and if it was received directly, are as follows:

**After Tax Retention - Use Of A Corporation**

| | |
|---|---|
| Corporate Investment Income | $100,000 |
| Corporate Tax At 54-2/3 Percent (Includes The ART) | ( 54,667) |
| After Tax Income | $ 45,333 |
| Dividend Refund [($45,333 ÷ .61667) - $45,333] | 28,180 |
| Non-Eligible Dividends Paid To Mr. Leoni | $ 73,513 |
| | |
| Non-Eligible Dividends Received | $ 73,513 |
| Gross Up Of 15 Percent | 11,027 |
| Personal Taxable Income | $ 84,540 |
| Personal Tax Rate | 51% |
| Tax Payable Before Dividend Tax Credit | $ 43,115 |
| Dividend Tax Credit [(9/13 + 4/13)($11,027)] | ( 11,027) |
| Personal Tax Payable With Corporation | $ 32,088 |
| | |
| Non-Eligible Dividends Received | $ 73,513 |
| Personal Tax Payable | ( 32,088) |
| After Tax Cash Retained With Corporation | $ 41,425 |

**After Tax Retention - Direct Receipt**

| | |
|---|---|
| Investment Income - Direct Receipt | $100,000 |
| Personal Tax At 51 Percent | ( 51,000) |
| After Tax Cash Retained Without Corporation | $ 49,000 |

13-65. There are two things that should be noted here. First, when a 54-2/3 percent corporate tax rate is used, the taxes of $54,667 at the corporate level are significantly higher than the $51,000 that would have been paid if Mr. Leoni had received the income directly. While

there are some combinations of provincial corporate and provincial individual tax rates that would provide for some deferral of taxes at the corporate level, that is clearly not the case with the rates used here.

13-66. With respect to the after tax flow through of investment income, using a corporation is clearly not a good idea. Mr. Leoni has $7,575 ($49,000 - $41,425) less after tax cash, as compared to the amount he would have retained on direct receipt of the $100,000 income. While this difference is particularly large when a 54-2/3 percent corporate tax rate is used, the basic result would be the same when any of the other available corporate tax rates are used. As a result, using a corporation would almost always produce less after tax cash.

### Exercise Thirteen - 4

**Subject:** Flow Through Of Investment Income

Ms. Shelly Nicastro has investments that generate interest income of $100,000 per year. Due to her employment income, she is in the top tax bracket, with a combined federal/provincial rate of 51 percent. She is considering the transfer of these investments to her CCPC which would be subject to a tax rate on investment income of 52 percent (including the ART). The dividend tax credit for non-eligible dividends in her province is equal to 30 percent of the gross up. Any dividends paid by the CCPC out of investment income will be non-eligible. Advise her as to whether there would be any tax benefits associated with this transfer.

**SOLUTION available in print and online Study Guide.**

# Refundable Part IV Tax On Dividends Received

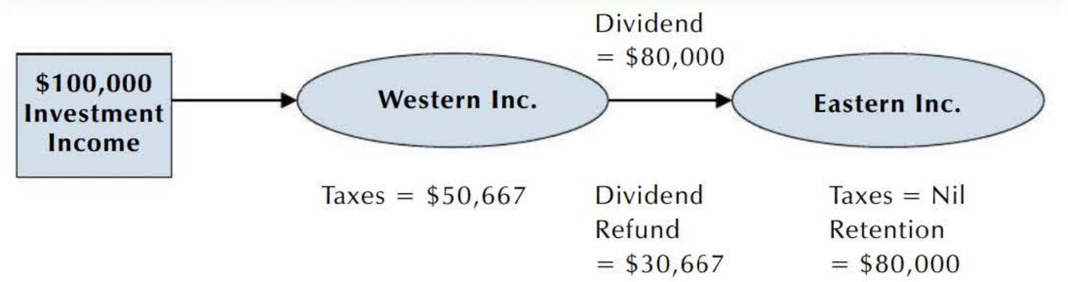
## Problem Two: Use Of Multi-Level Affiliations To Defer Taxes On Investment Income

13-67. In the preceding section, we demonstrated how refund procedures applicable to Part I tax payable are used to lower the overall rate of taxation on the investment income of a CCPC, while at the same time preventing the use of a corporation to defer a portion of the overall taxation on such income. While varying provincial tax rates on corporations and individuals prevent these procedures from providing perfect results, they appear to produce results that come close to achieving the goal of integration of personal and corporate taxes.

13-68. The situation becomes more complex when a group of connected companies is involved. The refundable tax procedures that were previously described are not effective in preventing tax deferral in this case. As a result, there is a need for additional procedures.

**EXAMPLE** Eastern Inc. has a 100 percent owned subsidiary, Western Ltd. Both Companies are Canadian controlled private corporations and have a December 31 year end. During the current year, Western has income of $100,000, made up entirely of interest and taxable capital gains. Assume that the combined federal/provincial tax rate for both Companies is 50-2/3 percent, including the ART. Western pays out all of its after tax income in dividends to Eastern Inc. This situation is illustrated in Figure 13-4 (following page).

**Figure 13 - 4**
**Example Of Taxation On Investment Income In A Connected Group**



**ANALYSIS** On receipt of the $100,000 of investment income, Western would pay taxes of $50,667 [($100,000)(50-2/3%)]. However, when the remaining $49,333 is paid out in dividends, a dividend refund of $30,667 (38-1/3% of the $80,000 total dividend) becomes available, resulting in a total dividend of $80,000 as shown in the following calculation:

| | |
|---|---|
| Investment Income Of Western | $100,000 |
| Corporate Tax At 50-2/3 Percent (Includes The ART) | ( 50,667) |
| Income Before Dividends | $ 49,333 |
| Dividend Refund [($49,333 ÷ .61667) - $49,333] | 30,667 |
| Dividends Paid To Eastern | $ 80,000 |

As the dividends from Western will be received tax free by Eastern, they will have after tax retention of $80,000. Unless Eastern pays out taxable dividends to its individual shareholders, no additional Part I tax will be assessed. This means that, in the absence of additional procedures, there could be a significant deferral of taxes on investment income resulting from the use of two related corporations.

## Solution To Problem Two: Refundable Part IV Tax

### *Corporations Subject To Part IV Tax*

13-69. To eliminate this potential flaw in integration, a Part IV tax is assessed on dividends received by a private corporation from certain other types of corporations. Note that this tax is assessed without regard to whether or not the private corporation is Canadian controlled.

13-70. In general, only private corporations are liable for Part IV tax. However, there remains the possibility that a company that is controlled largely for the benefit of an individual, or a related group of individuals, might use a small issue of shares to the public in order to avoid this tax. Such corporations are referred to as "subject corporations" and they are defined in ITA 186(3) as follows:

> **Subject Corporation** means a corporation (other than a private corporation) resident in Canada and controlled, whether because of a beneficial interest in one or more trusts or otherwise, by or for the benefit of an individual (other than a trust) or a related group of individuals (other than trusts).

13-71. ITA 186(1) indicates that, for purposes of Part IV tax, subject corporations will be treated as private corporations. This means that both private corporations, as well as those public corporations that fall within the definition of subject corporations, will be liable for the payment of Part IV tax. In this Chapter, any subsequent references to private corporations should be considered to include subject corporations.

### Rates

13-72. The Part IV rate is assessed at a rate of 38-1/3 percent. It is applicable to portfolio dividends as well as some dividends from connected corporations (both of these terms will be subsequently explained). The rate at which this tax is refunded is the same as the rate for refunds of Part I tax. Both refunds are at a rate of 38-1/3 percent of the total dividend.

### Applicable Dividends

13-73. The Part IV tax is only applicable to certain types of dividends received by private corporations. Specifically, Part IV tax is payable on dividends received by private corporations in the following circumstances:

- A dividend is received from an unconnected company that is deductible in the calculation of the recipient's Taxable Income. While the *Income Tax Act* refers to such dividends as "assessable dividends", it is a common practice to refer to such dividends as "portfolio dividends", a practice we will follow in the remainder of this text.
- The dividend is received from a connected company that, as a result of making the dividend payment, received a dividend refund.

13-74. Each of these types of dividends will be given attention in the material which follows.

## Part IV Tax On Portfolio Dividends Received

### Portfolio Dividends And Connected Corporations Defined

13-75. A portfolio dividend is defined as a dividend received by a private corporation from a corporation to which it is not connected, and that is deductible in the determination of the private corporation's Taxable Income. As with many *Income Tax Act* terms, the definition of a portfolio dividend includes another term which requires definition. This term is "connected corporation" and the definition is found in ITA 186(4). Under this definition, a connected corporation is either:

- a controlled corporation, where control represents ownership of more than 50 percent of the voting shares by any combination of the other corporation and persons with whom it does not deal at arm's length, or
- a corporation in which the other corporation owns more than 10 percent of the voting shares, and more than 10 percent of the fair market value of all of the issued shares of the corporation.

13-76. Given the definition of connected corporation, a 10 percent shareholding test is generally used to determine whether the dividends received are portfolio dividends or dividends from a connected corporation.

> **EXAMPLE** A dividend is received on an investment made by a private company in 500 shares of a large publicly traded company that has 15 million shares outstanding.
>
> **ANALYSIS** The 500 shares would be significantly less than 10 percent of the total shares outstanding and would not constitute control of the company. As a consequence, the dividends would be considered portfolio dividends and the Part IV tax would be applicable.

### Portfolio Dividends And Integration

13-77. The tax policy issue with respect to portfolio dividends relates to integration. If such dividends are received by an individual, they are normally subject to taxation. For example, assume that an individual receives $100,000 in dividends. This individual is subject to a combined federal/provincial marginal rate of 45 percent and lives in a province with a dividend tax credit equal to 5/11 of the eligible dividend gross up and 4/13 of the non-eligible dividend gross up. The resulting Tax Payable would be calculated as follows:

| | Eligible Dividends | Non-Eligible Dividends |
|---|---|---|
| Dividends Received | $100,000 | $100,000 |
| Gross Up Of 38 or 15 Percent | 38,000 | 15,000 |
| Taxable Income | $138,000 | $115,000 |
| Personal Tax Rate | 45% | 45% |
| Tax Payable Before Dividend Tax Credit | $ 62,100 | $ 51,750 |
| Dividend Tax Credit: | | |
| [(6/11 + 5/11)(Gross Up)] | ( 38,000) | |
| [(9/13 + 4/13)(Gross Up)] | | ( 15,000) |
| Personal Tax Payable | $ 24,100 | $ 36,750 |

13-78. As an alternative, consider what would happen if the same $100,000 in dividends had been received by a corporation. Under the general rules for intercorporate dividends, the $100,000 would be deductible in the calculation of the corporation's Taxable Income, resulting in no Part I tax at the corporate level. While tax will ultimately be paid when the corporation distributes this income to its shareholders, there is a potential for significant deferral of taxes until such time as this corporation distributes the income as dividends.

13-79. In order to correct this flaw in the corporate tax integration system, Part IV tax is applied as follows:

> **Part IV Tax - Portfolio Dividends** When a private corporation receives a dividend on shares that are being held as a portfolio investment, the recipient company is liable for a Part IV tax of 38-1/3 percent of the dividends received. This Part IV tax is refundable, on the basis of 38-1/3 percent of dividends paid, when such dividends are passed on to the shareholders of the recipient corporation.

13-80. We can see the reasoning behind the rate of this tax by referring back to the preceding example in Paragraph 13-76. You will notice that the effective tax rate on the eligible dividends received by the individual is 24.1 percent ($24,100 ÷ $100,000). By charging a Part IV tax of 38-1/3 percent at the corporate level, the tax paid by the corporation is in excess of the 24.1 percent effective tax rate that would apply to eligible dividends received by an individual with a tax rate of 45 percent. This makes it unattractive to use a private corporation as a shelter to defer the payment of taxes on dividend income. Again, however, by making the tax refundable, it allows the dividends to flow through the recipient corporation without assessing an unreasonable level of taxation on the income flowed through a corporation.

## Dividends From A Connected Corporation

### *The Investment Income Problem*

13-81. It is the intent of the government to allow a Canadian controlled private corporation to be used to defer taxes on active business income. Earning such income entitles the corporation to the use of the small business deduction and this, in most situations, provides a rate of corporate taxation that will effectively defer taxes on income left in the corporation. To the extent that a connected corporation is paying dividends out of such income, there will be no dividend refund and no Part IV tax to be paid by the recipient corporation. This maintains the tax deferral on active business income as it moves between corporations.

13-82. However, when the connected corporation is a private company (whether or not it is Canadian controlled) and the dividends are paid out of investment income, a problem arises. This problem was illustrated by the example presented in Paragraph 13-68.

13-83. In that example, Western paid an $80,000 dividend to Eastern, a payment that included a $30,667 refund of taxes previously paid by Western. Under the general rules for dividends, the $80,000 dividend paid by Western would be included in the calculation of

Eastern's Net Income For Tax Purposes and deducted in the determination of its Taxable Income, with the net result that no Part I taxes would be paid on the $80,000. This would, in effect, allow retention of 80 percent of the investment income within the corporate group, a result that is contrary to the general concept of integration.

### The Solution

13-84. In order to correct this situation, a second application of Part IV tax is as follows:

> **Part IV Tax - Connected Companies** When a private corporation receives dividends from a connected private corporation that has received a dividend refund under ITA 129(1) as a result of paying the dividends, the recipient company is liable for a Part IV tax equal to its share of the refund received by the paying corporation. If the dividend paid is eligible for a full 38-1/3 percent of the dividend paid, the Part IV tax can also be expressed as 38-1/3 percent of the dividends received.
>
> However, the payor corporation may be earning both active business income and investment income. In such situations, if dividends reflect a distribution of both types of income, the dividend refund will not be at the full 38-1/3 percent rate. (See the Paragraph 13-92 example.) This is why the Part IV tax on dividends received from a connected corporation is expressed in terms of the recipient's share of the refund received by the paying corporation, not in terms of a specific rate.
>
> As was the case with the Part IV tax on portfolio dividends, this Part IV tax is refundable on the basis of 38-1/3 percent of dividends paid by the assessed corporation.

### Example Of Connected Corporation Dividends

13-85. Returning to the example presented in Paragraph 13-68, you will recall that Western has $100,000 in investment income and pays maximum dividends of $80,000 to Eastern. When the Part IV tax is taken into consideration, the tax consequences for the two companies are as follows:

| | |
|---|---|
| Investment Income Received By Western | $100,000 |
| Corporate Tax At 50-2/3 Percent (Including The ART) | ( 50,667) |
| Income Before Dividends | $ 49,333 |
| **Dividend Refund [($49,333 ÷ .61667) - $49,333]** | **30,667** |
| Dividends Paid To Eastern | $ 80,000 |

| | |
|---|---|
| Investment Income (Dividends Received From Western) | $80,000 |
| **Part IV Tax Payable (100% Of Western's Refund*)** | **( 30,667)** |
| Income Retained By Eastern | $49,333 |

*Because all of Western's income was from investments, Western's dividend refund is the full 38-1/3 percent of dividends paid. This means that Eastern's Part IV tax can also be calculated as 38-1/3 percent of the $80,000 in dividends received from Western.

13-86. As this simple example shows, after the application of the Part IV tax, the amount retained in Eastern is the same $49,333 that was retained in Western. This retention reflects a tax rate on the amount retained within the corporate group of 50-2/3 percent [($100,000 - $49,333) ÷ $100,000], about the same rate that would be paid by an individual taxpayer in the maximum federal/provincial tax bracket on the direct receipt of the $100,000 in investment income. Clearly, the application of Part IV tax has served to maintain integration in situations involving connected companies.

13-87. If Eastern decides to distribute the retained income to its shareholders, the results would be as follows:

| | |
|---|---|
| Income Retained By Eastern | $49,333 |
| **Dividend Refund [($49,333 ÷ .61667) - $49,333]** | **30,667** |
| Non-Eligible Dividend To Shareholders | $80,000 |

13-88. In effect, the $100,000 of investment income has passed through two corporations and into the hands of individual shareholders, subject to corporate taxes of only 20 percent. This has been accomplished, despite the fact that the initial level of corporate taxation was sufficiently high to discourage allocating investment income to a multi-level corporate structure.

13-89. Note, however, the effective corporate tax rate in this example is only 20 percent. It is for this reason that the Aggregate Investment Income of a CCPC is subtracted in the determination of Full Rate Taxable Income.

### Applicability

13-90. We would remind you again that the Part IV tax on dividends from a connected company is only applicable when the paying corporation has received a dividend refund. This means that dividends paid out of a corporation's Aggregate Investment Income or paid out of portfolio dividends received will be subject to Part IV tax. If the paying corporation was earning only active business income, no refund would be available when this after tax income was paid out as dividends. As a consequence, no Part IV tax would be assessed on the corporation receiving the dividend.

13-91. This result is consistent with the goals of integration in that, when a corporation is earning active business income that is taxed at the low small business rate, tax deferral is permitted on income that is retained in the corporation, and not paid out as dividends.

## Dividends Paid Out Of Mixed Income Of A Connected Corporation

13-92. In many cases, a corporation will be earning both investment income and active business income. This will result in a situation, unlike the example previously presented, where some part of the dividends paid by the corporation will be eligible for a refund, and the remainder will not. In this type of situation, the Part IV tax will not be equal to 38-1/3 percent of the dividends received. An example will make this point clear:

**EXAMPLE** Lower Ltd. declares and pays a dividend of $45,000. As a result of paying this dividend, the Company receives a dividend refund equal to $9,000 or 20 percent of the dividend. Upper Inc. owns 60 percent of the outstanding shares of Lower Ltd. and receives dividends of $27,000.

**ANALYSIS** In this case, the dividend refund is clearly less than 38-1/3 percent of the dividends paid, indicating that Lower's income is made up of a combination of investment income and other income. In this more realistic situation, the Part IV Tax Payable by Upper will be based on Upper's 60 percent share of the $9,000 dividend refund of Lower that resulted from paying the dividend. Upper's Part IV tax would be $5,400 [(60%)($9,000)].

### Exercise Thirteen - 5

**Subject:** Part IV Tax

Opal Ltd., a Canadian controlled private corporation, received the following amounts of dividends during the year ending December 31, 2019:

| | |
|---|---|
| Dividends On Various Portfolio Investments | $14,000 |
| Dividends From Emerald Inc. [(100%)($41,500)] | 41,500 |
| Dividends From Ruby Inc. [(30%)($60,000)] | 18,000 |

Opal Ltd. owns 100 percent of the voting shares of Emerald Inc. and 30 percent of the voting shares of Ruby Inc. The fair market value of the Ruby Inc. shares is equal to 30 percent of the fair market value of all Ruby Inc. shares. As a result of paying the $60,000 dividend, Ruby Inc. received a dividend refund of $15,000. Emerald Inc. received no dividend refund for its dividend payment.

Determine the amount of Part IV Tax Payable by Opal Ltd. as a result of receiving these dividends.

**SOLUTION available in print and online Study Guide.**

## Other Part IV Tax Considerations

13-93. The preceding material has dealt with the basic features of the Part IV tax on dividends received by private corporations. There are a few additional points to be made. First, you should note what kinds of dividends are not subject to Part IV tax. For a private or a subject company, the only dividends, besides capital dividends, that will not be subject to Part IV tax are those received from a connected corporation that does not get a dividend refund as a result of paying the dividend.

13-94. A second point is that ITA 186(1)(c) and (d) allows a corporation to use unabsorbed non-capital losses to reduce any Part IV tax. The Part IV tax otherwise payable can be reduced by 38-1/3 percent of any non-capital or farm losses claimed for this purpose. However, if this option is chosen, the corporation has effectively used a possible permanent reduction in future taxes to acquire a reduction of Tax Payable that could otherwise ultimately be refunded. This would only make sense in situations where the non-capital loss carry forward was about to expire, or where the company did not expect to have Taxable Income in the carry forward period. With the non-capital loss carry forward period set at 20 years, this is unlikely to be a very useful strategy.

# Designation Of Eligible Dividends

## Basic Concepts

### The Problem

13-95. We have previously discussed the importance of the distinction between eligible and non-eligible dividends (see Paragraph 13-13). Given the significant difference in the taxation of the two types of dividends, tax planners will clearly have an incentive to maximize the amount of dividends that can be designated as eligible.

13-96. We have also noted that, because of the availability of the small business deduction, most dividends declared by CCPCs will be non-eligible and most dividends declared by public companies will be designated as eligible.

13-97. Given this, it would be very convenient to have a rule that says that all taxable dividends paid by non-CCPCs are eligible dividends, while all dividends paid by CCPCs are non-eligible. Unfortunately, this simple dichotomy does not work. This reflects the fact that:

- some CCPCs may have a portion of their income taxed at full rates (e.g., active business income in excess of the annual business limit of $500,000), and
- some public companies may have a portion of their income taxed at favourable rates (e.g., a CCPC that goes public with a retained earnings balance that contains amounts that benefitted from the small business deduction).

### The Solution

13-98. To deal with the problem, a system is required that recognizes the need for different procedures to be applied to CCPCs vs. non-CCPCs. In simplified terms, the system that has been developed is as follows:

**CCPCs** It is assumed that, in general, dividends paid by CCPCs are non-eligible. However, to track components of their income that have been taxed at full corporate rates, CCPCs have a notional account referred to as a General Rate Income Pool (GRIP). The balance in this account provides a basis for paying eligible dividends. Note, however, as will be discussed later in this Chapter, the ability to obtain a refund on eligible dividends is limited by the balance in the corporation's Eligible Refundable Dividend Tax On Hand (Eligible RDTOH).

**Non-CCPCs** In general, non-CCPCs are comprised of public companies and private companies that are not Canadian controlled. For these companies, it is assumed that, in general, dividends paid are eligible. However, to track components of their income that have been taxed at low rates, they have to use a notional account referred to as a Low Rate Income Pool (LRIP). The balance in this account must be reduced to nil by the payment of non-eligible dividends prior to the payment of eligible dividends.

## CCPCs And Their GRIP

### Default Treatment

13-99. While individual CCPCs may have some amount of full rate taxable income, most of the income earned by such corporations will benefit either from the small business deduction or the refund procedures that we have discussed. Given this, the majority of dividends paid by most CCPCs will be non-eligible. For these corporations, the default assumption is that their dividends will be so classified.

13-100. However, it is still necessary to deal with the fact that, to the extent that a CCPC has full rate taxable income or has received eligible dividends, its dividends should benefit from the eligible dividend procedures. The mechanism to provide for this is the General Rate Income Pool (GRIP).

### General Rate Income Pool (GRIP)

13-101. The General Rate Income Pool is a notional account that is designed to track amounts of a CCPC's income that qualify as a basis for paying eligible dividends. As noted, the default treatment for CCPC dividends is to classify them as non-eligible. However, to the extent that there is a balance in the GRIP account of the corporation, CCPC dividends paid can be designated as eligible.

13-102. The GRIP balance is defined in ITA 89(1). It is a very complex definition that consists of an A component and a B component. The content of the B component involves such things as loss carry overs and other future events that may influence the current year. The application of this component goes beyond the scope of this text and will be given no consideration in any of our material. The A component is defined as follows (also available at the front of this text in "Rates And Other Data"):

$$\mathbf{A = C + D + E + F - G}\text{, where}$$

**C** is the CCPC's GRIP at the end of the preceding taxation year.

**D** is 72 percent of the CCPC's adjusted taxable income for the year.
Adjusted Taxable Income is regular Taxable Income, reduced by the amount eligible for the small business deduction and the lesser of the CCPC's Aggregate Investment Income and its Taxable Income for the year.

**E** is the amount of eligible dividends received by the CCPC during the year.

**F** involves a group of technical additions related to becoming a CCPC, amalgamations, and wind-ups.

**G** is the amount of eligible dividends paid during the ***preceding*** year, less the amount of any Excessive Eligible Dividend Designation (EEDD) made during the preceding year (see Paragraph 13-109).

13-103. Several comments on this formula are relevant at this point:

- The D component calculates a Taxable Income that is adjusted to eliminate the types of income for which CCPCs receive favourable tax treatment. As dividends are paid out of after tax funds, the residual income is multiplied by 72 percent, reflecting a notional federal/provincial tax rate of 28 percent.
- If a CCPC receives eligible dividends, the addition in E allows these dividends to retain that status on their flow through to the shareholders of the CCPC.
- Note that the balance is reduced, not by eligible dividends paid in the current year, but by eligible dividends paid in the preceding year.

13-104. A simple example will illustrate these provisions:

**EXAMPLE** Norgrave Ltd., a CCPC, had no GRIP balance at the end of 2017. During 2018, the Company received eligible dividends of $46,600 and designated $25,000 of its dividends paid as eligible. At the end of 2018, Norgrave has a GRIP of $46,600.

For 2019, Norgrave has Taxable Income of $225,000. This amount includes Aggregate Investment Income of $55,000. In addition, the Company receives eligible dividends during the year of $50,000.

In determining 2019 Tax Payable, the Company has a small business deduction of $28,500 [(19%)($150,000)]. During 2019, Norgrave pays dividends of $40,000, with $20,000 of this amount being designated as eligible.

**ANALYSIS** The 2019 ending balance in GRIP will be calculated as follows:

| | | |
|---|---|---|
| C - GRIP Balance At End Of 2018 | | $46,600 |
| D - Taxable Income | $225,000 | |
| Amount Eligible For The Small Business Deduction | ( 150,000) | |
| Aggregate Investment Income (Less Than Taxable Income) | ( 55,000) | |
| Adjusted Taxable Income | $ 20,000 | |
| Rate | 72% | 14,400 |
| E - Eligible Dividends Received | | 50,000 |
| G - Eligible Dividends Designated in 2018 | | ( 25,000) |
| GRIP At End Of 2019 | | $86,000 |

The eligible dividends paid during 2019 will be deducted from the GRIP in 2020.

## Exercise Thirteen - 6

**Subject:** GRIP Balance

Lanson Inc., a CCPC, had no GRIP balance at its year end on December 31, 2017. During 2018, the Company received eligible dividends of $35,000 and designated all of its $25,000 in dividends paid as eligible. At the end of 2018, Lanson has a GRIP of $35,000.

For 2019, Lanson has Taxable Income of $960,000. This amount includes net taxable capital gains of $65,000, mortgage interest received of $23,000, and a net capital loss carry forward deduction of $14,000. In addition, the Company receives eligible dividends during the year of $85,000. In determining 2019 Tax Payable, the Company has a small business deduction of $42,750. During 2019, Lanson pays dividends of $78,000, with $42,000 of this amount being designated as eligible. Determine the Company's GRIP balance at the end of 2019.

**SOLUTION available in print and online Study Guide.**

## Non-CCPCs And Their LRIP

### *Low Rate Income Pool (LRIP)*

13-105. For non-CCPCs, their income will generally be taxed at full corporate rates. This means that, in general, their dividends can be designated as eligible. However, in some situations, a non-CCPC may have balances that have not been taxed at full corporate rates. This could include amounts of income retained by a CCPC before it became a public company, as well as non-eligible dividends received from a CCPC.

13-106. Such balances will be allocated to a notional account referred to as a Low Rate Income Pool (LRIP). This account, defined in ITA 89(1), is similar to the GRIP account in that it is used to track certain types of income. However, the two accounts serve different purposes:

- The GRIP account is used to track balances that can be used by a CCPC as the basis for designating eligible dividends. To the extent that a GRIP balance is present, CCPC dividends can be designated as eligible until such time as the balance is exhausted. Note, however, the presence of a GRIP balance does not require that dividends be designated as eligible. Designation as eligible is at the discretion of the corporation.
- The LRIP account is used to track balances that have not been subject to full corporate tax rates. When an LRIP balance is present, any dividends paid by the corporation will be considered non-eligible. Stated alternatively, a corporation with a positive LRIP balance cannot designate any of its dividends as eligible until the LRIP balance is exhausted. In this situation, the corporation has no discretion.

13-107. The definition of the LRIP balance, as found in ITA 89(1) is as follows:

**(A + B + C + D + E + F) - (G + H)**, where

**A** is the non-CCPCs LRIP at the end of the preceding year.
**B** is the amount of non-eligible dividends received by the non-CCPC from a corporation resident in Canada.
**C** is a group of technical additions related to corporate reorganizations.
**D** is an adjustment for a non-CCPC that was a CCPC in some preceding year.
**E** is an adjustment for a non-CCPC that was a credit union in some preceding year.
**F** is an adjustment for a non-CCPC that was an investment company in some preceding year.

**G** is the amount of taxable dividends, other than eligible dividends, paid by the non-CCPC during the year.

**H** is the amount of any EEDD made by the non-CCPC during the year.

13-108. A simple example will serve to illustrate this definition.

**EXAMPLE** At the end of 2018, Ovamp Ltd. has an LRIP balance of $450,000. During 2019, the Company receives non-eligible dividends from a CCPC in the amount of $225,000. During 2019, the Company pays dividends of $360,000.

**ANALYSIS** Given the presence of a positive LRIP balance in excess of the total dividends paid, none of the Ovamp dividends could be designated eligible.

## Part III.1 Tax On Excessive Eligible Dividend Designations

### *Calculation*

13-109. The enhanced dividend tax credit procedures are available on any dividend that the paying corporation has designated as eligible. This raises the possibility that a corporation might designate a dividend as eligible under circumstances where such a designation is not appropriate (e.g., a CCPC designating a dividend as eligible when it has no balance in its GRIP at the end of the year). To discourage this, the government has a Part III.1 tax on what is referred to as an Excessive Eligible Dividend Designation (EEDD).

13-110. If the EEDD is inadvertent, the Part III.1 tax is equal to 20 percent of the excess amount. In these circumstances, Part III.1 provides for an election that will allow the taxpayer to effectively undo the designation.

13-111. If the CRA concludes that the EEDD reflects an attempt to artificially manipulate either a GRIP or an LRIP, the Part III.1 tax rate goes to 30 percent. In addition, there are two other consequences:

- The tax applies to the entire dividend, not just the EEDD.
- No election is available to undo the excessive election.

13-112. In order to appropriately track all dividend payments, any resident Canadian corporation that pays a taxable dividend is required to file a return for the year under Part III.1.

13-113. ITA 89(1) defines EEDD differently for CCPCs and non-CCPCs. These definitions will be considered separately in the following material.

## EEDD For A CCPC

13-114. If a CCPC designates an amount of eligible dividends that is in excess of its GRIP at the end of the year, it will be considered an EEDD and be subject to Part III.1 tax.

> **EXAMPLE** At its December 31, 2018 year end, Sandem Inc., a CCPC, has a GRIP of \$45,000. It paid no dividends in 2018. During 2019, the Company pays dividends of \$100,000, of which \$60,000 are designated as eligible. There are no additions to the Company's GRIP during 2019.
>
> **ANALYSIS** The Company has an EEDD of \$15,000 (\$60,000 - \$45,000). Provided the CRA believes that this was an inadvertent result, this amount will be subject to a Part III.1 tax of 20 percent on the excess of \$15,000. There is also the possibility of electing to have the EEDD treated as a non-eligible dividend.
>
> If the CRA concludes that the EEDD was a deliberate attempt to manipulate the Company's GRIP, an additional 10 percent is added to the Part III.1 tax. In addition, the applicable 30 percent tax is assessed on the entire eligible amount of \$60,000, not just the \$15,000 EEDD amount and no election is available to undo the excessive election.

## EEDD For A Non-CCPC

13-115. In somewhat simplified terms, an EEDD for a non-CCPC is equal to the lesser of its eligible dividends paid and its LRIP at the time the dividend is paid. For example, if a non-CCPC paid an eligible dividend of \$50,000 at a point in time that its LRIP was equal to \$40,000, the EEDD would be \$40,000. Note that, unlike the situation with EEDDs for CCPCs, where the amount is based on the end of year balance of the GRIP, the EEDD for a non-CCPC is based on the balance of the LRIP at the point in time when the eligible dividend is paid.

13-116. A simple example will illustrate these provisions:

> **EXAMPLE** Victor Ltd., a Canadian public company, receives \$42,000 in non-eligible dividends from a CCPC on June 15, 2019. Its LRIP has a balance of nil prior to this. On September 23, 2019, Victor pays dividends of \$100,000, with \$30,000 of this amount being designated as eligible.
>
> **ANALYSIS** As at September 23, 2019, the balance in the LRIP would be \$42,000. The lesser of this amount and the eligible dividend would be \$30,000 and this would be the amount of the EEDD.
>
> This result seems somewhat counter-intuitive in that a non-eligible dividend was paid in an amount sufficient to eliminate the LRIP. However, the legislation is clear that the LRIP is measured at a particular point in time and, if an eligible dividend is paid when there is a positive balance in this account, it creates an EEDD. We would note that this situation could have been avoided had the non-eligible dividend been paid before, even by one day, the payment of the eligible dividend.

Provided there were no further dividend transactions, the LRIP balance at the end of the year would be nil as the payment of $70,000 in non-eligible dividends would have eliminated the $42,000 balance created by the non-eligible dividends received.

With respect to the Part III.1 tax, a tax of 20 percent would normally be assessed on the EEDD of $30,000. However, if the CRA concludes that a deliberate attempt to manipulate the LRIP was involved, the tax rate will be increased to 30 percent.

## A Final Word On Eligible Dividends

13-117. You should be aware that the preceding is a fairly simplified version of the provisions related to eligible dividends and their designation. The complete legislation is far more complex, dealing with a number of transitional situations, changes in a corporation's classification, as well as problems associated with corporate reorganizations. However, we feel that this version of the material is appropriate for an introductory text in taxation.

# Refundable Dividend Tax On Hand (RDTOH)

## Background

### *Pre-2019*

13-118. As will be discussed in the material which follows, the RDTOH is an account that is used to track refundable taxes paid during the year. The balance is reduced by refunds claimed in the previous year, resulting in a balance that can be refunded when dividends are paid to shareholders.

13-119. Prior to 2019, each private corporation had a single RDTOH account. All refundable taxes, both Part I and Part IV were added to this account. The resulting balance then provided a limit on the amount of dividend refund that could be claimed. As will be discussed later in this section, the dividend refund was limited to the lesser of:

- 38-1/3 percent of taxable dividends paid; and
- the balance in the RDTOH.

13-120. As was noted in the previous section of this Chapter, the amount of dividends that could be designated by a CCPC as eligible is limited to the balance in the corporation's GRIP account. (Note that private companies that are not Canadian controlled are not able to have a GRIP account.) Prior to 2019, any balance that was in the corporation's single RDTOH was available for a dividend refund. The entire balance could be used for a dividend refund on either eligible or non-eligible dividends paid.

### *2019 And Subsequent Years*

13-121. As has been noted, the government believes that private corporations have an unfair advantage in their ability to accumulate large portfolios of passive investments using income that has been retained after being taxed at low small business rates. Given this concern, legislation has been put in place that will make this process less attractive.

13-122. We introduced the first of these legislative provisions in Chapter 12. As discussed in that Chapter, CCPCs that have ADJUSTED Aggregate Investment Income for the previous year in excess of $50,000 will see their annual business limit for the small business deduction ground down, with the full amount of the limit disappearing when ADJUSTED Aggregate Investment Income for the previous year reaches $150,000. As noted in Chapter 12, the Department Of Finance has indicated their belief that only about 3 percent of the companies claiming the small business deduction will be affected.

13-123. A second, much more pervasive measure, is directed towards limiting the amount of dividend refunds that can be paid on dividends designated as eligible. This involves dividing the RDTOH account into two separate balances. We will refer to these two balances as the Eligible RDTOH and the Non-Eligible RDTOH. When dividends are designated as eligible, a dividend refund is only available to the extent of the balance in the corporation's

Eligible RDTOH. This means that, if dividends are designated as eligible when there is no balance in the corporation's Eligible RDTOH, no dividend refund is available. Stated alternatively, if a corporation maximizes the amount of dividends that the GRIP balance would allow to be designated as eligible, they may not be able to access all of the refundable taxes they have paid.

13-124. What this means is that, in order to access all of the refundable taxes paid, a corporation may have to pay non-eligible dividends, even in situations where a GRIP balance would allow the designation of eligible dividends. This is very important in that individual tax rates are significantly higher on non-eligible dividends than is the case with eligible dividends. While the amount varies from province to province, the average difference is about 8 percentage points. Despite the favourable taxation of eligible dividends, this change will clearly discourage the use of eligible dividends in situations where the designation results in a less than maximum dividend refund.

13-125. To implement this new regime, a transitional provision is required. This provision is required in order to divide the existing single RDTOH balances into eligible and non-eligible components. Prior to providing definitions of the content of the new eligible RDTOH and non-eligible RDTOH accounts, we will present the procedures that are used in this transitional provision.

## Transitional Provision

13-126. At December 31, 2018, most private corporations will have a single RDTOH balance. In addition, many of these private corporations who are CCPCs will have a GRIP balance. The goal of the relevant transitional provision is to divide the single RDTOH balance into eligible (if any) and non-eligible components.

> **BYRD/CHEN NOTE** Note that our discussion of this transitional provision and the related examples will be based on corporations with a December 31 year end. The use of other taxation years significantly complicates the application of this provision and, in our opinion, is not appropriate for an introductory text such as this.

13-127. Under ITA 129(5), the January 1, 2019 Eligible RDTOH is defined as the lesser of:

- The January 1, 2019 balance of the single RDTOH account. Note that this balance is the December 31, 2018 balance, reduced by the dividend refund for 2018.
- 38-1/3 percent of the January 1, 2019 GRIP balance. Similar to the RDTOH balance, this balance is the December 31, 2018 balance, reduced by eligible dividends designated in 2018. This amount reflects the dividend refund that would be available if the maximum designation of eligible dividends were to be made.

13-128. Any excess of the single RDTOH account over 38-1/3 percent of the GRIP balance will become the transitional Non-Eligible RDTOH. In the absence of a GRIP balance, the transitional Eligible RDTOH will be nil.

**EXAMPLE** Canotek Ltd. is a CCPC. On December 31, 2018, the balance in its RDTOH account is $156,000, while the balance in its GRIP account is $240,000. During 2018, the corporation claimed a dividend refund of $62,000 and designated eligible dividends of $126,000.

**ANALYSIS** The Eligible RDTOH would be the lesser of:

- $94,000 ($156,000 - $62,000); and
- $43,700 [(38-1/3%)($240,000 - $126,000)].

Based on this, the Eligible RDTOH would be $43,700, leaving $50,300 ($94,000 - $43,700) as the transitional Non-Eligible RDTOH.

## Exercise Thirteen - 7

**Subject:** RDTOH Transitional Provision

Brok Ltd. is a CCPC that uses December 31 as its taxation year end. On December 31, 2018, the corporation had an RDTOH balance of $153,333. Its dividend refund for 2018 was $76,666. Determine the January 1, 2019 transitional amounts for the Eligible RDTOH and the Non-Eligible RDTOH based on the information in each of the following independent cases.

**Case 1** On December 31, 2018, Brok has no GRIP balance.

**Case 2** On December 31, 2018, Brok has a GRIP balance of $300,000. During 2018, the corporation designated $200,000 of dividends paid as eligible.

**Case 3** On December 31, 2018, Brok has a GRIP balance of $500,000. During 2018, the corporation designated $200,000 of dividends paid as eligible.

**SOLUTION available in print and online Study Guide.**

13-129. Immediately subsequent to the application of this transitional rule, the Eligible RDTOH balance will be equal to, or less than, 38-1/3 percent of the GRIP balance. While this ensures that a dividend refund will be available to the extent of any eligible dividends that are supported by the corporation's GRIP balance present at the time of transition, there is no further connection between the determination of the GRIP balance and the Eligible RDTOH balance.

13-130. In the transition year and in subsequent years, it is unlikely that the Eligible RDTOH will continue to be equal to 38-1/3 percent of the GRIP balance. If the Eligible RDTOH falls below 38-1/3 percent of the GRIP balance, the new rules do not prevent the designation of eligible dividends. In fact, the new rules do not alter the determination of the GRIP balance. However, if the Eligible RDTOH balance is less than 38-1/3 percent of the GRIP balance, the full 38-1/3 percent dividend refund will not be available on all, or part of, the dividends designated as eligible.

## Refundable Portion Of Part I Tax Payable

### *The Problem*

13-131. When we define both the eligible and non-eligible RDTOH accounts, we will have to add the amount of both Part I and Part IV taxes that are eligible for a refund. While there are issues with respect to which RDTOH account will be allocated the Part IV tax, there is no question as to the total addition. It is simply the amount of Part IV tax paid for the year.

13-132. The situation is more complex with the Part I tax in that only a part of the amount paid is refundable. In simplified terms, only the Part I tax that is related to Aggregate Investment Income is eligible for a refund. However, the Tax Payable on this income can be reduced by deductions in the determination of Taxable Income (e.g., charitable contributions) or by credits against Tax Payable (e.g., foreign tax credits). Given this, it is necessary to take the amounts of Taxable Income and Tax Payable into consideration when determining the refundable portion of Part I tax. This is accomplished in the ITA 129(4) definition of Non-Eligible RDTOH. This definition places constraints on the refundable amount by indicating that it will be the least of three amounts:

- ITA 129(4)(a)(i) An amount based on Aggregate Investment Income.
- ITA 129(4)(a)(ii) An amount based on Taxable Income.
- ITA 129(4)(a)(iii) An amount based on Tax Payable.

13-133. We will give detailed attention to each of these constraints in the Paragraphs that follow.

### Investment Income Constraint - ITA 129(4)(a)(i)

13-134. The basic amount of Part I tax that should be considered refundable is based on the amount of Aggregate Investment Income for the year:

**ITA 129(4)(a)(i)** the amount determined by the formula

**A - B**, where

**A** is 30-2/3 percent of the corporation's Aggregate Investment Income for the year, and

**B** is the amount, if any, by which the foreign non-business income tax credit exceeds 8 percent of its foreign investment income for the year.

13-135. Aggregate Investment Income is as defined in ITA 129(4). As indicated previously, Aggregate Investment Income is the sum of:

- Net taxable capital gains for the year, reduced by any net capital loss carry overs deducted during the year.
- Income from property, reduced by any property losses. Dividends that are deductible in computing the corporation's Taxable Income are excluded.

13-136. These amounts do not include interest or rents that are incidental to the corporation's efforts to produce active business income. As noted in Chapter 12, these amounts would be considered active business income. Note, however, the definition does include both Canadian and foreign sources of the types of income listed.

13-137. If the corporation has no foreign source investment income, the ITA 129(4)(a)(i) amount is simply 30-2/3 percent of Aggregate Investment Income. The RDTOH legislation is based on the assumption that the federal/provincial rate on investment income, before any dividend refund, is 50-2/3 percent. This assumption is within the range of current combined federal/provincial rates on the investment income of private companies.

13-138. With respect to foreign non-business income, the RDTOH legislation is based on the assumption that the Canadian tax rate on this foreign income is 38-2/3 percent (38% - 10% + 10-2/3%). Reflecting this assumption, the B component in the ITA 129(4)(a)(i) formula subtracts any amount of foreign tax credit that is in excess of 8 percent of foreign investment income for the year.

13-139. The basic idea here is that a foreign tax credit of 8 percent will reduce the Canadian taxes paid to 30-2/3 percent (38-2/3% - 8% = 30-2/3 percent, the rate applicable to the refund). If the foreign tax credit exceeds 8 percent of the foreign investment income, the Canadian taxes paid would be less than the potential refund of 30-2/3 percent. In other words, without the 8 percent subtraction, the Canadian government would be providing a refund that is larger than the amount of Canadian tax paid on the foreign investment income.

**EXAMPLE** A CCPC earns $50,000 in foreign investment income. The government in the foreign jurisdiction withholds 15 percent of this amount and, as a consequence, the company receives a foreign non-business tax credit of $7,500.

**ANALYSIS** At the assumed rate of 38-2/3 percent, Canadian tax on this income would be $11,833 [(38-2/3%)($50,000) - $7,500]. This results in a Canadian tax rate on this income of only 23.7 percent ($11,833 ÷ $50,000). Without some type of adjustment, the refundable taxes on this $50,000 of income would be at a rate of 30-2/3% and would equal $15,333 [(30-2/3%)($50,000)], $3,500 more than the $11,833 in Canadian taxes that would be paid. This is clearly not appropriate.

To correct this situation, the excess of the foreign non-business income tax credit over 8 percent of the foreign investment income is subtracted from the 30-2/3 percent refund on the foreign investment income. The 8 percent reflects the difference between the notional rate of 38-2/3 percent and the refund rate of 30-2/3 percent.

In our example, the calculations would be as follows:

| | | |
|---|---|---|
| 30-2/3 Percent Of Foreign Investment Income | | $15,333 |
| Deduct Excess Of: | | |
| Foreign Non-Business Tax Credit | ($7,500) | |
| Over 8% Of Foreign Investment Income [(8%)($50,000)] | 4,000 | ( 3,500) |
| **ITA 129(4)(a)(i)** | | **$11,833** |

This procedure has, in effect, reduced the amount of the refund to $11,833. As calculated at the beginning of this analysis, this is equal to the notional amount of Canadian taxes paid on the foreign investment income.

### Taxable Income Constraint - ITA 129(4)(a)(ii)

13-140. A further problem with respect to determining the refundable portion of Part I tax payable is that the corporation's Taxable Income may include amounts that are not taxed at full corporate rates (e.g., amounts eligible for the small business deduction). Further, Taxable Income may be reduced by such items as non-capital loss carry overs to a level that is less than the amount of investment income on which ITA 129(4)(a)(i) would provide a refund. To deal with this, the refundable portion of the Part I tax is limited as follows:

**ITA 129(4)(a)(ii)** 30-2/3 percent of the amount, if any, by which the corporation's taxable income for the year exceeds the total of:

**A** the amount eligible for the small business deduction;
**B** (100 ÷ 38-2/3) of the tax credit for foreign non-business income; and
**C** 4 times the tax credit for foreign business income.

13-141. Component B is designed to remove foreign investment income that is not taxed because of the foreign non-business tax credit. The elimination is based on the assumption that it is taxed at a notional rate of 38-2/3 percent (38-2/3 ÷ 100). In similar fashion, Component C is designed to remove foreign business income that is not taxed because of the foreign business income tax credit. The elimination here is based on the assumption that this type of income is taxed at a notional rate of 25 percent (1 ÷ 4). The factor of 4 in Component C is actually the result of a more complex calculation. See Chapter 12, Paragraph 12-91 for details of this calculation explained in the context of the small business deduction formula.

### Tax Payable Constraint - ITA 129(4)(a)(iii)

13-142. A final issue here relates to the fact that the dividend refund could exceed the corporation's actual Tax Payable for the year. This could happen if, for example, the company had large amounts of tax credits for scientific research and experimental development. To deal with this issue, the refundable portion of Part I tax is limited as follows:

**ITA 129(4)(a)(iii)** the corporation's federal tax for the year payable under this Part (Part I).

### Formula For Part I Tax Addition To RDTOH

13-143. To summarize, the addition to the RDTOH for Part I tax (also available in the front of this text under "Rates And Other Data") is the least of:

**ITA 129(4)(a)(i)** 30-2/3 percent of Aggregate Investment Income, reduced by the excess, if any, of foreign non-business income tax credits over 8 percent of foreign investment income.

**ITA 129(4)(a)(ii)** 30-2/3 percent of the amount, if any, by which Taxable Income exceeds the sum of:

- the amount eligible for the small business deduction,
- (100 ÷ 38-2/3) of the foreign non-business tax credit, and
- 4 times the foreign business tax credit.

**ITA 129(4)(a)(iii)** Part I tax payable.

## Exercise Thirteen - 8

**Subject:** Refundable Part I Tax

Debut Inc. is a Canadian controlled private corporation. During the taxation year ending December 31, 2019, Debut Inc. has the following amounts of property income:

| | |
|---|---|
| Dividends From Portfolio Investments | $22,000 |
| Foreign Non-Business Income (Net Of 5 Percent Withholding) | 14,250 |
| Capital Gains | 38,250 |
| Net Rental Income | 6,500 |
| Interest Income On Ten Year Bond | 9,200 |

The Company's Net Income For Tax Purposes is $121,825. The only deductions in the calculation of Taxable Income are the dividends on portfolio investments and a net capital loss carry forward of $9,000 [(1/2)($18,000)]. A $9,500 small business deduction and a foreign tax credit of $750 served to reduce Tax Payable. Assume that the Company's Part I Tax Payable has been correctly determined to be $19,536. Determine the refundable amount of Part I tax for 2019.

**SOLUTION available in print and online Study Guide.**

## RDTOH Balances Defined

### *Eligible RDTOH Defined*

13-144. The definition for the Eligible RDTOH account is found in ITA 129(4). In somewhat simplified terms, this definition is as follows:

**BEGINNING BALANCE** For 2019, the calculation would begin with the transitional amount that we have previously discussed (Paragraph 13-126). For subsequent years, it would begin with the balance in the Eligible RDTOH at the end of the previous taxation year.

**ADDITIONS** In somewhat simplified terms, two items would be added to this beginning balance:

- Part IV taxes paid on eligible dividends from non-connected taxable Canadian corporations. These are commonly referred to as portfolio dividends.
- Part IV taxes paid on eligible dividends from connected corporations to the extent that such dividends included a refund from the paying corporation's Eligible RDTOH.

**DEDUCTION** Deducted from this total would be any dividend refund claimed from the Eligible RDTOH account in the previous taxation year. For 2019, this deduction is reflected in the transitional RDTOH balance and will not be deducted again.

13-145. It is important to note what is missing here. Prior to 2019, Part I refundable taxes were included in the single RDTOH account and could be used for a dividend refund on eligible dividends. This is no longer the situation.

13-146. As we shall see in our discussion of the Non-Eligible RDTOH account, all of the Part I refundable taxes are added to the Non-Eligible RDTOH account. This means that they can only be refunded through the payment of non-eligible dividends. We would remind you that Shareholders who are individuals pay considerably higher rates of tax on non-eligible dividends when compared to eligible dividends. This represents a significant change in tax policy.

### *Non-Eligible RDTOH Defined*

13-147. The definition of the Non-Eligible RDTOH account is also found in the ITA 129(4). Again, in somewhat simplified terms, it is as follows:

**BEGINNING BALANCE** As was the case with the Eligible RDTOH, for 2019, the beginning balance of the Non-Eligible RDTOH is the transitional amount that we have previously discussed. For subsequent years, it would begin with the balance in the Non-Eligible RDTOH at the end of the previous taxation year.

**ADDITIONS** There are three items that are added to the Non-Eligible RDTOH beginning balance:

- All of the Part I refundable tax for the year, determined as per the calculations discussed beginning at Paragraph 13-130.
- Part IV taxes paid on non-eligible dividends from connected corporations to the extent that such dividends included a refund from the paying corporation's Non-Eligible RDTOH.
- Part IV taxes paid on non-eligible dividends from non-connected taxable Canadian corporations. The situations where this would be applicable would be rare.

**DEDUCTION** Deducted from this total would be any dividend refund claimed from the Non-Eligible RDTOH account in the previous taxation year. For 2019, this deduction is reflected in the transitional RDTOH and will not be deducted again.

13-148. As you can see in the preceding paragraph, all of the Part I refundable taxes are added to the Non-Eligible RDTOH. This means that these taxes can only be recovered through the payment of non-eligible dividends. In contrast to the results when there was only a single RDTOH account, Part I refundable taxes cannot be recovered on the payment of eligible dividends.

### An Important Difference

13-149. While this cannot be explained fully until we look at the legislative provision for dividend refunds, there is a significant difference in the use of the two RDTOH accounts. With respect to eligible dividends, a refund is only available to the extent that there is a balance in the Eligible RDTOH. No part of the Non-Eligible RDTOH can be used for a refund related to eligible dividends.

13-150. The situation is different with respect to non-eligible dividends. While refunds on these dividends must first come out of the Non-Eligible RDTOH, if the 38-1/3 percent of the non-eligible dividends exceed the balance in that account, the Eligible RDTOH can be accessed to bring the total refund up to the required 38-1/3 percent of dividends paid.

13-151. As will be illustrated in the next section of this Chapter, corporations may be faced with a choice between maximizing the amount of eligible dividends (more favourably taxed for individuals) and recovering all of the refundable taxes that have been paid. While shareholders receiving eligible dividends pay about 8 percentage points less in taxes than on the receipt of non-eligible dividends, giving up the dividend refund on such dividends would be even more costly to the dividend paying corporation.

### Losses Used To Reduce Part IV Taxes

13-152. We have noted the possibility that Part IV taxes paid could be used to reduce non-capital and farm losses. To the extent that they are used for this purpose, they are not added to either RDTOH balance. This raises the question of how to allocate any remaining balance that is available. ITA 129(4.1) and (4.2), provide guidance on this allocation process. We do not believe that this is a common enough transaction to warrant coverage in a general text such as this.

## The Dividend Refund

### Dividend Refund On Eligible Dividends

13-153. When a CCPC declares dividends, an amount can be designated as an eligible dividend to the extent there is a balance in the corporation's GRIP account. The refund on these eligible dividends will then be the lesser of:

- 38-1/3% of the total of all eligible dividends paid by it in the year; and
- the end of year balance in the corporation's Eligible RDTOH.

13-154. A simple example will serve to illustrate this determination:

**EXAMPLE** Divor Ltd. is a CCPC with a December 31 year end. In 2019, after applying the required transitional provision, the corporation has an Eligible RDTOH of $38,333 (38-1/3 percent of its $100,000 GRIP balance). The transitional allocation to the Non-Eligible RDTOH is $76,667 [the balance in its single RDTOH account was $115,000 ($38,333 + $76,667)]. During 2019, the corporation pays dividends of $70,000, all of which are designated as eligible.

**ANALYSIS** As the GRIP balance is $100,000, there is no problem with designating all of the $70,000 in dividends as eligible. The refund is $26,833, the lesser of:

- $26,833 [(38-1/3%)($70,000)]; and
- $38,333, the balance in the Eligible RDTOH account at the end of the year.

The lesser figure would be $26,833, leaving $11,500 ($38,333 - $26,833) in the Eligible RDTOH account after the dividend refund has been subtracted in the following year. There would also be a $30,000 ($100,000 - $70,000) balance in the GRIP account after the 2019 eligible dividends paid have been subtracted in the following year.

### *Dividend Refund On Non-Eligible Dividends*

13-155. If the amount of dividends paid during the year exceed the amount that is designated as eligible, the excess will be a non-eligible dividend. The refund here consists of two components. The purpose of Component 2 is to allow access to the Eligible RDTOH for dividend refunds on the payment of non-eligible dividends if there is no balance left in the Non-Eligible RDTOH.

**Component 1** The lesser of:

- 38-1/3% of the total of all non-eligible dividends paid by it in the year; and
- the end of year balance in the corporation's Non-Eligible RDTOH.

**Component 2** If 38-1/3% of the non-eligible dividends paid in the year exceeds the balance in the Non-Eligible RDTOH, this Component 2 is the lesser of:

- the amount of the excess; and
- any balance that remains in the Eligible RDTOH after subtracting the dividend refund on eligible dividends designated.

If there is no excess, this Component is nil.

13-156. An example will serve to illustrate this calculation.

**EXAMPLE** At the beginning of 2019, Lexy Ltd. has a GRIP balance (ending 2018 balance, less eligible dividends designated in 2018) of $300,000. The pre-transition balance in Lexy's RDTOH account was $191,667 (ending 2018 balance, less the 2018 refund). To recover the full amount of this balance will require dividends of $500,000 [$191,667 = (38-1/3%)($500,000)].

The transitional balance in the Eligible RDTOH is $115,000 [(38-1/3%)($300,000)] and the transitional balance in the Non-Eligible RDTOH is $76,667 ($191,667 - $115,000). There were no additions to either balance during 2019, or to the corporation's GRIP balance.

During 2019, Lexy paid dividends of $500,000, with $300,000 of this amount being designated as eligible.

**ANALYSIS** The dividend refund on the $300,000 of eligible dividends is $115,000. This is equal to 38-1/3 percent of the $300,000 of eligible dividends paid and the balance in the Eligible RDTOH.

The dividend refund on the non-eligible dividends is $76,667. This is equal to 38-1/3 percent of the $200,000 ($500,000 - $300,000) of non-eligible dividends paid and the balance in the Non-Eligible RDTOH. As there is no excess of 38-1/3 percent of the non-eligible dividends paid over the end of year balance in the Non-Eligible RDTOH, Component 2 is equal to nil.

### Exercise Thirteen - 9

**Subject:** Dividend Refund

Alesia Ltd. is a Canadian controlled private corporation with a taxation year that ends on December 31. Prior to the application of the transitional rule, the balance in the corporation's single RDTOH account was $230,000 (ending 2018 balance, less the 2018 refund). The balance in the GRIP account was $350,000 (ending 2018 balance, less eligible dividends designated in 2018).

Based on these totals the transitional Eligible RDTOH would be $134,167 [(38-1/3%)($350,000)] and the balance in the transitional Non-Eligible RDTOH would be $95,833 ($230,000 - $134,167).

During 2019, there were no additions to either RDTOH account. During 2019, the corporation paid dividends of $600,000. Only $200,00 of these dividends were designated as eligible.

Determine the amount of the dividend refund on the payment of (1) the eligible dividends and (2) the non-eligible dividends.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problem Thirteen-2, 3, 4, and 5 at this point.**

## Economic Impact Of Changes

### *The Impact Illustrated*

13-157. The 2019 transition results in an Eligible RDTOH that is equal to 38-1/3 percent of the GRIP balance. Because of this, it is difficult to illustrate the impact of these changes that can arise in subsequent years. As a result, we will use an example based on 2020 amounts.

**EXAMPLE** The following information relates to Sarco Inc., a CCPC with a December 31 year end:

| | |
|---|---:|
| • December 31, 2020 GRIP | $1,000,000 |
| • December 31, 2020 Eligible RDTOH | 76,667 |
| • December 31, 2020 Non-Eligible RDTOH | 306,667 |

The combined RDTOH is $383,334 ($76,667 + $306,667). To recover the full amount of refundable taxes that have been paid, a dividend of $1,000,000 must be paid ($383,334 ÷ 38-1/3%). Determine the tax consequences related to each of the following alternatives.

**Alternative 1** Sarco pays a dividend of $1,000,000, with the entire amount being designated as eligible. Non-eligible dividends would be nil.

**Alternative 2** Sarco pays a dividend of $1,000,000, with none of the amount being designated as eligible, i.e., eligible dividends would be nil.

**Alternative 3** Sarco pays a dividend of $1,000,000, with $200,000 of the total paid designated as eligible.

**ANALYSIS ALTERNATIVE 1** $1,000,000 is the maximum amount that can be designated as eligible. If this approach is used, the GRIP balance will be eliminated. However, the refund will only be $76,667, the balance in the Eligible RDTOH. In the absence of non-eligible dividends, Sarco will not have access to the Non-Eligible RDTOH as a source for a dividend refund.

**ANALYSIS ALTERNATIVE 2** Unlike the situation with Alternative 1, where the Non-Eligible RDTOH could not be used for a refund on eligible dividends, the refund legislation allows access to the Eligible RDTOH, despite the fact that no eligible dividends were paid. Specifically, in this case, the refund on the non-eligible dividends would be calculated as follows:

- **Component 1** This amount is $306,667, the lesser of $383,333 [(38-1/3%)($1,000,000)] and $306,667, the balance in the Non-Eligible RDTOH.
- **Component 2** This amount is $76,666, the excess of 38-1/3 percent of the non-eligible dividends paid over the balance in the Non-Eligible RDTOH ($383,333 - $306,667).

This provides a total refund of $383,333 ($306,667 + $76,666), the full amount of the refundable taxes paid.

**ANALYSIS ALTERNATIVE 3** The dividend refund on the eligible dividends would be $76,667. This amount is 38-1/3 percent of the $200,000 in eligible dividends paid and the balance in the Eligible RDTOH. The refund on the non-eligible dividends paid would be $306,667. This amount is 38-1/3 percent of the $800,000 in non-eligible dividends paid and the balance in the Non-Eligible RDTOH. As in Alternative 2, the total refund is $383,333 (with a $1 rounding error).

**SUMMARY** These results can be summarized as follows:

| | Case 1 | Case 2 | Case 3 |
|---|---|---|---|
| Eligible Dividends Paid | $1,000,000 | Nil | $200,000 |
| Non-Eligible Dividends Paid | Nil | $1,000,000 | 800,000 |
| Total Dividend Refund | 76,667 | 383,333 | 383,333 |
| January 1, 2021: | | | |
| GRIP Balance | Nil | 1,000,000 | 800,000 |
| Eligible RDTOH | Nil | Nil | Nil |
| Non-Eligible RDTOH | 306,667 | Nil | Nil |

13-158. What this example illustrates is that there may be situations where none of the refund alternatives is completely satisfactory. Alternative 1 maximizes the amount of dividends designated as eligible, a very desirable result from the point of view of the shareholders. However, it leaves unrecovered refundable taxes of $306,667. Without this refund, the corporate taxes on the pre-dividend income would be around 50 percent. When this is combined with the taxes on the dividend distribution paid by individual shareholders, the overall tax rate could exceed 75 percent.

13-159. Alternative 2 has the advantage of recovering all of the refundable taxes. However, shareholders will be taxed on non-eligible dividends only, rather than on the more favourably taxed eligible dividends.

13-160. Alternative 3 improves on Alternative 2 in that, while recovering all of the refundable taxes paid, some of the dividends paid have been designated as eligible. While this is likely the best of the three alternatives, it still leaves an $800,000 balance in the GRIP balance, with no balance in the Eligible RDTOH to provide for a refund on any future dividends designated as eligible.

13-161. You should note that this would not have been a problem under the old pre-2019 RDTOH system. With a single RDTOH balance, the full $1,000,000 of dividends could have been designated as eligible, while still recovering all of the refundable taxes paid.

### Conclusion

13-162. A variety of other results are possible, depending on the relationships that exist between the GRIP balance, the Eligible RDTOH balance, and the Non-Eligible RDTOH. However, the preceding example is sufficient to make it clear that the 2019 changes have made it less desirable to use a CCPC to accumulate passive investments.

## Example Of RDTOH Calculations

13-163. The following simplified example illustrates the refundable tax calculations. In the separate Study Guide which accompanies this text, there is a completed corporate tax return in Chapter 13 which includes an additional illustration of the RDTOH account.

**EXAMPLE** Fortune Ltd. is a Canadian controlled private corporation. Based on the formula in ITR 402(3), 90 percent of the Company's income is earned in a province. The following information is available for the year ending December 31, 2019:

| | |
|---|---|
| Canadian Source Investment Income | |
| (Includes $25,000 In Taxable Capital Gains) | $100,000 |
| Gross Foreign Non-Business Income (15 Percent Withheld) | 20,000 |
| Gross Foreign Business Income (15 Percent Withheld) | 10,000 |
| Active Business Income (No Associated Companies) | 150,000 |
| Portfolio Dividends Received | 30,000 |
| Net Income For Tax Purposes | $310,000 |
| Portfolio Dividends | ( 30,000) |
| Net Capital Loss Carry Forward Deducted | ( 15,000) |
| Taxable Income | $265,000 |

| | |
|---|---|
| RDTOH - December 31, 2018 | $30,000 |
| Dividend Refund For 2018 | 7,000 |
| Taxable Dividends Paid During 2019 | 60,000 |
| GRIP - December 31, 2018 | 20,000 |
| Eligible Dividends Designated in 2018 | 8,000 |
| 2018 Taxable Capital Employed in Canada (TCEC) | 2,400,000 |
| 2018 ADJUSTED Aggregate Investment Income | 32,000 |

**ANALYSIS** Reflecting the fact that the 2018 TCEC was less than $10 million and the 2018 ADJUSTED Aggregate Investment Income was less than $50,000, there would be no grind of the annual business limit for the small business deduction.

After subtracting the dividend refund for 2018, the opening RDTOH balance would be $23,000 ($30,000 - $7,000). The transitional rules must be applied to this balance in order to divide it between eligible and non-eligible amounts.

The January 1, 2019 GRIP balance is $12,000 ($20,000 - $8,000).

Based on this, the transitional Eligible RDTOH would be $4,600, the lesser of:

- The Opening RDTOH Balance = $23,000
- [(38-1/3%)(Opening GRIP Balance)] = [(38-1/3%)($12,000)] = $4,600

This calculation would leave $18,400 ($23,000 - $4,600) for the transitional Non-Eligible RDTOH balance.

The Part I Tax Payable would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($265,000)] | $100,700 |
| Federal Tax Abatement [(10%)(90%)($265,000)] | ( 23,850) |
| Small Business Deduction (Note 1) | ( 28,500) |
| ART (Note 2) | 11,200 |
| General Rate Reduction (Note 3) | ( 1,300) |
| Foreign Non-Business Tax Credit (Note 1) | ( 3,000) |
| Foreign Business Tax Credit (Note 1) | ( 1,500) |
| Part I Tax Payable | $ 53,750 |

**Note 1** In order to simplify the calculation of the small business deduction, the foreign tax credits are assumed to be equal to the amounts withheld (15 percent). Additional calculations would be required to support this conclusion.

The small business deduction would be equal to 19 percent of the least of:

| | |
|---|---|
| 1. Active Business Income | $150,000 |
| 2. Taxable Income | $265,000 |
| Deduct: | |
| [(100/28)($3,000 Foreign Non-Business Tax Credit)] | ( 10,714) |
| [(4)($1,500 Foreign Business Tax Credit)] | ( 6,000) |
| Adjusted Taxable Income | $248,286 |
| 3. Annual Business Limit | $500,000 |

The small business deduction is $28,500 [(19%)($150,000)].

**Note 2** The Additional Refundable Tax (ART) is equal to 10-2/3 percent of the lesser of:

- Aggregate Investment Income, calculated as follows:

| | |
|---|---|
| Canadian Source Investment Income | $100,000 |
| Gross Foreign Non-Business Income | 20,000 |
| Net Capital Loss Carry Forward Deducted | ( 15,000) |
| Aggregate Investment Income | $105,000 |

- An amount calculated as follows:

| | |
|---|---|
| Taxable Income | $265,000 |
| Amount Eligible For the Small Business Deduction | ( 150,000) |
| Balance | $115,000 |

This results in an ART equal to $11,200 [(10-2/3%)($105,000)].

**Note 3** The general rate reduction would be calculated as follows:

| | |
|---|---|
| Taxable Income | $265,000 |
| Amount Eligible For Small Business Deduction (Note 1) | ( 150,000) |
| Aggregate Investment Income | ( 105,000) |
| Full Rate Taxable Income (= Foreign Business Income) | $ 10,000 |
| Rate | 13% |
| General Rate Reduction | $ 1,300 |

13-164. Based on the preceding information, the refundable portion of Part I tax would be the least of the following three amounts:

| | | |
|---|---|---|
| 30-2/3% Of Aggregate Investment Income [(30-2/3%)($105,000)] | | $ 32,200 |
| Deduct Excess Of: | | |
| Foreign Non-Business Tax Credit | ($3,000) | |
| Over 8% Of Foreign Investment Income [(8%)($20,000)] | 1,600 | ( 1,400) |
| **Amount Under ITA 129(4)(a)(i)** | | **$ 30,800** |
| Taxable Income | | $265,000 |
| Deduct: | | |
| Amount Eligible For Small Business Deduction | ($150,000) | |
| [(100 ÷ 38-2/3)($3,000 Foreign Non-Business Tax Credit)] | ( 7,759) | |
| [(4)($1,500 Foreign Business Tax Credit)] | ( 6,000) | ( 163,759) |
| Total | | $101,241 |
| Rate | | 30-2/3% |
| **Amount Under ITA 129(4)(a)(ii)** | | **$ 31,047** |
| **Amount Under ITA 129(4)(a)(iii)** = Part I Tax Payable | | **$ 53,750** |

The refundable portion of Part I tax is equal to $30,800, which is the least of the preceding three amounts.

13-165. The Part IV tax would be $11,500, 38-1/3 percent of the $30,000 in portfolio dividends received.

13-166. The ending balance in the Eligible RDTOH would be calculated as follows:

| | |
|---|---|
| Transitional Balance | $ 4,600 |
| Part IV Tax On Portfolio Dividends | 11,500 |
| December 31, 2019 Eligible RDTOH | $16,100 |

13-167. The ending balance in the Non-Eligible RDTOH would be calculated as follows:

| | |
|---|---|
| Transitional Balance | $18,400 |
| Part I Refundable Tax | 30,800 |
| December 31, 2019 Non-Eligible RDTOH | $49,200 |

13-168. The ending GRIP balance would be calculated as follows:

| | |
|---|---|
| Opening Balance | $12,000 |
| Portfolio Dividends Received | 30,000 |
| December 31, 2019 GRIP Balance | $42,000 |

13-169. Of the total dividends paid of $60,000, the amount that can be designated as eligible is limited to the GRIP balance of $42,000. The refund on these dividends is the lesser of:

- $16,100 [(38-1/3%)($42,000)]; and
- $16,100, the ending balance in the Eligible RDTOH.

13-170. If the maximum designation is made, $42,000 would be subtracted from the ending 2019 GRIP in 2020. Similarly, the $16,100 refund would be subtracted from the ending 2019 Eligible RDTOH in 2020.

13-171. With $42,000 of the dividends designated as eligible, the remaining $18,000 ($60,000 - $42,000) will be non-eligible. On these dividends, the refund will be the lesser of:

- $6,900 [(38-1/3%)($18,000)]; and
- $49,200, the ending balance in the Non-Eligible RDTOH.

13-172. The $6,900 would be subtracted from the ending 2019 Non-Eligible RDTOH in 2020.

13-173. The total refund is $23,000 ($16,100 + $4,900). Note that this is equal to 38-1/3 percent of the $60,000 in total dividends paid.

13-174. Given the receding calculations, Fortune's total federal Tax Payable is as follows:

| | |
|---|---|
| Part I Tax Payable | $53,750 |
| Part IV Tax Payable | 11,500 |
| Dividend Refund | ( 23,000) |
| Federal Tax Payable | $42,250 |

## Working Through Large Corporate Tax Problems

13-175. At this point we have completed our general coverage of Taxable Income and Tax Payable for corporations. As we are sure you are aware, there are a great many concepts and procedures involved in this process. While we have illustrated the concepts and procedures in individual examples, we have not provided a comprehensive example that encompasses all of these items.

13-176. You will find, however, that several of the Self Study and Assignment Problems involve fairly comprehensive calculations of corporate Taxable Income and Tax Payable. Given the complexity of these problems, it is useful to have a systematic approach to dealing with this type of problem. To fill that need, we would suggest you approach the required calculations in the following order (we are assuming that only federal taxes are being calculated as this is generally the case with the problem material in this text):

- Net Income For Tax Purposes. Depending on the problem, this may require converting an accounting Net Income figure into the required tax figure.
- Taxable Income. This would include making deductions for charitable donations, dividends from taxable Canadian corporations, and loss carry overs.
- Basic federal Part I Tax Payable at the 38 percent rate.
- Federal tax abatement. If there is foreign business income, this may require a calculation of the amounts that are to be allocated to Canadian provinces.
- If the corporation is a CCPC:
    - Determine Taxable Capital Employed in Canada (TCEC) and ADJUSTED Aggregate Investment Income **for the previous year**.
    - Small business deduction (without consideration of the general rate reduction or the ART in the foreign income tax credit constraints).
    - Aggregate investment income.
    - Additional refundable tax on investment income (ART). Note that this is an addition to Part I Tax Payable, not a deduction.
- Manufacturing and processing profits deduction (without consideration of the general rate reduction in the foreign income tax credit constraints).
- General rate reduction.
- Foreign non-business income tax credit.
- Foreign business income tax credit.
- If the corporation is a CCPC:
    - Refundable portion of Part I tax.
    - the GRIP balance.

- If the corporation is a CCPC or other private corporation:
  - Part IV tax payable.
  - Balance in the Eligible and Non-Eligible refundable dividend tax on hand accounts.
  - Dividend refund on eligible dividends and non-eligible dividends.

**We suggest you work Self Study Problems Thirteen-6, 7, 8, and 9 at this point.**

**Additional Supplementary Self Study Problems Are Available Online.**

# Key Terms Used In This Chapter

13-177. The following is a list of the key terms used in this Chapter. These terms, and their meanings, are compiled in the Glossary located at the back of the Study Guide.

Additional Refundable Tax On Investment Income (ART)
ADJUSTED Aggregate Investment Income
Aggregate Investment Income
ART
Canadian Controlled Private Corporation
CCPC
Connected Corporation
Dividend Gross Up
Dividend Tax Credit
Dividends
Eligible Dividends
Eligible RDTOH
Excessive Eligible Dividend Designation (EEDD)
General Rate Income Pool (GRIP)
Integration
Low Rate Income Pool (LRIP)
Non-Eligible RDTOH
Over Integration
Part IV Tax
Portfolio Dividend
Private Corporation
Public Corporation
RDTOH
Refundable Dividend Tax On Hand
Refundable Part I Tax
Subject Corporation
Under Integration

## Sample Corporate Tax Return For Chapter 13

The Sample Tax Return for this Chapter can be found in the print and online Study Guide.

## Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 13:

- 9 Self Study problems,
- 4 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

## Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### *Assignment Problem Thirteen - 1*

***(Integration Example)***

Assume the following with respect to the shareholder of a CCPC who is an individual.

- The corporation's business income for the year is $225,000.
- Any dividends paid are non-eligible dividends.
- The individual's marginal federal tax rate is 29 percent and his marginal provincial tax rate is 16 percent.
- The provincial dividend tax credit on non-eligible dividends is equal to 35 percent of the gross up.
- The combined federal and provincial corporate tax rate on business income is 13.0435 percent.

**Required**: Indicate, using these assumptions, whether integration is working perfectly. If your answer is no, briefly explain why this is the case.

### Assignment Problem Thirteen - 2

#### (Part I and Part IV Refundable Taxes)

Burton Investments Ltd. is a Canadian controlled private corporation that sells office supplies. It owns 52 percent of the outstanding shares of Puligny Inc. On December 15, 2019, Puligny Inc. declared and paid a dividend of $122,000, of which Burton Investments Ltd. received $63,440 (52 percent). None of this dividend was designated as eligible by Puligny. As a result of paying the $122,000 dividend, Puligny Inc. received a dividend refund in the amount of $12,500.

Other 2019 income that was reported by Burton Investments consisted of the following amounts:

| | |
|---|---|
| Capital Gain | $18,000 |
| Eligible Dividends From Bank Of Montreal Shares | 13,480 |
| Interest | 1,150 |

The capital gain was on the sale of land that had been used as an auxiliary parking lot, but was no longer needed.

Burton's office supply business is seasonal and, as a consequence, temporary cash balances must be set aside for the purchase of inventories during the busy parts of the year. All of the $1,150 in interest was earned on such temporary cash balances.

At the end of 2018, the Company's Refundable Dividend Tax On Hand balance was $22,346. The 2018 dividend refund was $7,920. The corporation did not have a GRIP balance on December 31, 2018.

The Company's Taxable Income for the year ending December 31, 2019 was $62,800. No foreign income was included in this total. Assume the Part I Tax Payable for the year ending December 31, 2019 was correctly calculated as $12,560. Because of its association with Puligny Inc., its share of the annual business limit on income eligible for the small business deduction is $40,000. Burton's active business income is more than its share of the annual business limit.

Burton Investments paid taxable dividends of $22,500 in 2019. It is the policy of the corporation to designate dividends as eligible only to the extent that a dividend refund will be available on their payment.

For 2018, Burton and Puligny had combined ADJUSTED Aggregate Investment Income of $23,000. Their combined Taxable Capital Employed In Canada was $1,600,000 for 2018.

**Required:**

A. Determine the transitional balances for Burton's Eligible RDTOH and its Non-Eligible RDTOH.

B. Determine the refundable portion of Burton's Part I Tax Payable for 2019.

C. Determine Burton's Part IV Tax Payable for 2019.

D. Determine the December 31, 2019 balances in Burton's Eligible RDTOH and its Non-Eligible RDTOH.

E. Determine Burton's 2019 dividend refund, providing separate amounts for refunds on eligible dividends and refunds on non-eligible dividends.

### Assignment Problem Thirteen - 3

#### (Transitional RDTOH Balances)

Matco Ltd. is a CCPC that uses December 31 as its taxation year end. On December 31, 2018, the corporation had an RDTOH balance of $57,500. Its dividend refund for 2018 was $7,667. Determine the January 1, 2019 transitional amounts for the Eligible RDTOH and the Non-Eligible RDTOH based on the information in each of the following independent cases.

**Case 1** On December 31, 2018, Matco has no GRIP balance.

**Case 2** On December 31, 2018, Matco has a GRIP balance of $175,000. During 2018, the corporation designated $150,000 of dividends paid as eligible.

**Case 3** On December 31, 2018, Matco has a GRIP balance of $390,000. During 2018, the corporation designated $120,000 of dividends paid as eligible.

## Assignment Problem Thirteen - 4

### (Dividend Refund)

#### Case 1

Ho Trading Company is a Canadian controlled private corporation with a December 31 year end. On December 31, 2019, it had the following balances in its accounts:

| | |
|---|---|
| GRIP | $150,000 |
| Eligible RDTOH | 38,333 |
| Non-Eligible RDTOH | 76,667 |

During the year, the corporation paid taxable dividends of $250,000. The corporation would like to maximize the amount of this dividend that is designated as eligible.

Determine the amounts for the corporation's 2019 dividend refund on eligible dividends paid and the corporation's 2019 dividend refund on non-eligible dividends paid.

#### Case 2

Amadeus Ltd. is a Canadian controlled private corporation with a December 31 year end. On December 31, 2019, it had the following balances in its accounts:

| | |
|---|---|
| GRIP | $400,000 |
| Eligible RDTOH | 95,833 |
| Non-Eligible RDTOH | 134,167 |

During the year, the corporation paid taxable dividends of $500,000. It is the policy of the corporation to designate dividends as eligible, only to the extent that a refund is available.

Determine the amounts for the corporation's 2019 dividend refund on eligible dividends paid and the corporation's 2019 dividend refund on non-eligible dividends paid.

## Assignment Problem Thirteen - 5

### (Part I And Part IV Refundable Taxes, GRIP)

Radco Inc. is a Canadian controlled private corporation with a December 31 year end. The various components of its Net Income For Tax Purposes are as follows:

| | |
|---|---|
| • Active Business Income (Note 1) | $823,462 |
| • Taxable Capital Gains | 161,576 |
| • Canadian Source Interest From Long-Term Investments | 71,345 |
| • Dividends (Note 2) | 614,292 |

**Note 1** As determined under ITR 5200, $624,560 of this total qualified as M&P profits. As these amounts are allocated to a province which has a special rate for M&P profits, the company calculates the federal M&P deduction.

**Note 2** The total dividend figure is made up of the following amounts:

| | |
|---|---|
| Eligible Dividends From Canadian Public Companies | $123,470 |
| Non-Eligible Dividends From Nad Ltd. (Note 3) | 279,217 |
| Non-Eligible Dividends From Jad Ltd. (Note 3) | 211,605 |
| Total Dividends | $614,292 |

**Note 3** Radco owns 100 percent of the shares of Nad Ltd. As a result of paying this dividend, Nad Ltd. received a dividend refund of $57,236 from its non-eligible RDTOH. Radco owns 40 percent of Jad Ltd. Jad Ltd. did not receive a dividend refund as a result of paying these dividends.

**Additional Information**

1. On September 12, 2019, Radco paid taxable dividends to its shareholders totaling $186,780. It is the policy of the company to designate dividends as eligible only to the extent that their payment will result in a dividend refund.
2. At the beginning of 2019, Radco has a net capital loss carry forward $172,400 [(1/2)($344,800)]. In addition, there is a non-capital loss carry forward of $18,263. The Company would like to deduct as much as possible of these carry forwards during 2019.
3. Radco is associated with both Nad Ltd. and Jad Ltd. The Companies have agreed that Nad and Jad will each receive $150,000 of the small business deduction's annual business limit. The remaining $200,000 is allocated to Radco.
4. For 2018, Radco and its associated companies had combined ADJUSTED Aggregate Investment Income of $41,600. Their Taxable Capital Employed In Canada totaled $8,672,000 for 2018.
5. At December 31, 2018, Radco had a RDTOH balance of $19,742 and a GRIP balance of $32,476. During 2018, the Company paid taxable dividends of $30,000, $12,000 of which were designated as eligible. As a result of paying the dividends, Radco received a dividend refund of $11,500 [(38-1/%)($30,000)].
6. Using the formula found in ITR402(3), 90 percent of Radco's Taxable Income has been allocated to the provinces.

**Required:** Show all of the calculations used to provide the following required information, including those for which the result is nil.

For Radco Inc.'s 2019 taxation year, calculate the following items:

A. Part I Tax Payable.
B. The refundable portion of Part I Tax Payable.
C. Part IV Tax Payable.
D. The balance in the GRIP account on December 31, 2019.
E. The balance in the Eligible RDTOH and the balance in the Non-Eligible RDTOH on December 31, 2019.
F. The dividend refund, if any, showing separately the amount related to eligible dividends and the amount related to non-eligible dividends.
G. Total federal Tax Payable (net of any dividend refund).

## *Assignment Problem Thirteen - 6*

### *(Comprehensive Corporate Tax Payable With CCA)*

Oland Ltd. is a Canadian controlled private corporation with a December 31 year end. For the year ending December 31, 2019, the Income Statement of the Company, prepared in accordance with generally accepted accounting principles, is as follows:

| | | |
|---|---|---|
| Revenues | | $1,625,986 |
| Expenses: | | |
| Cost Of Goods Sold | ($776,257) | |
| Selling And Administrative Costs | ( 394,672) | |
| Amortization Expense | ( 125,489) | |
| Charitable Donations | ( 27,000) | ( 1,323,418) |
| Operating Income | | $ 302,568 |
| Gain On Sale Of Property | $153,600 | |
| Loss On Sale Of Vehicles | ( 55,000) | |
| Gain On Sale Of Investments | 11,000 | |
| Dividends Received (See Note) | 123,400 | 233,000 |
| Net Income Before Taxes | | $ 535,568 |

**Note** The components of the dividends received are as follows:

| | |
|---|---|
| Eligible Dividends From Canadian Public Companies | $ 62,300 |
| Non-Eligible Dividends From 80 Percent Owned Subsidiary (The Subsidiary Received A Dividend Refund Of $15,000 From Its Non-Eligible RDTOH) | 48,000 |
| Non-Eligible Dividends From Wholly Owned Subsidiary (No Dividend Refund) | 13,100 |
| Total Dividends Received | $123,400 |

Oland is associated with both of these companies. The two subsidiaries have each been allocated $125,000 of the small business deduction's annual business limit. The remaining $250,000 has been allocated to Oland.

**Other Information:**

1. Selling And Administrative Costs include $22,490 in business meals and entertainment.
2. Selling And Administrative Costs includes interest on late income tax instalments of $1,240 and on late municipal tax payments of $625.
3. Selling And Administrative Costs includes bond discount amortization of $3,850.
4. During 2019, Oland Ltd. acquired a competing business at a price that included goodwill of $110,400. For accounting purposes, there is no impairment or write-down of the goodwill in 2019.
5. Selling And Administrative Costs include membership fees for several employees in a local golf and country club. These fees total $7,285.
6. As the Company expects to issue more shares during 2019, it made a number of amendments to its articles of incorporation and included the legal costs in Selling And Administrative Costs. These costs totalled $11,482.
7. On January 1, 2019, the Company had the following UCC balances:

| | |
|---|---|
| Class 1 | $582,652 |
| Class 8 | 575,267 |
| Class 10 | 75,348 |
| Class 13 | 88,600 |
| Class 14.1 | Nil |

The Class 1 balance relates to a single real property acquired in 2000 at a cost of $750,000. It is estimated that the value of the land at this time was $50,000. On February 1, 2019, this property is sold for $850,000. It is estimated that, at this time, the value of the land has increased to $80,000. In the accounting records, this real property was carried at $696,400, $646,400 for the building and $50,000 for the land.

The old building is replaced on February 15, 2019 with a new building acquired at a cost of $923,000 of which $86,000 is allocated to land. As the building is used more than 90 percent for non-residential purposes, it qualifies for the special 6 percent CCA rate. In order to use this rate, the building is put into a separate CCA class. No elections are made with respect to the replacement of the building.

During 2019, Class 8 assets were acquired at a cost of $226,000. Class 8 assets with a capital cost of $185,000 were sold for $210,000. These Class 8 assets were paintings by Canadian artists and each was sold for an amount in excess of its cost. The accountant had not amortized them for accounting purposes as he could not determine an estimated useful life. Class 8 contains a large number of assets at the end of 2019.

As the Company has decided to lease all of its vehicles in the future, all of the assets in Class 10 are sold during the year. The capital cost of these assets was $142,000 and the proceeds of disposition amounted to $43,000. The net book value of these assets was $98,000.

The Class 13 balance relates to a single lease that commenced on January 1, 2014. The lease has an initial term of seven years, with two successive options to renew for three years each. At the inception of the lease, the Company spent $110,000 on leasehold improvements. On January 1, 2016, an additional $44,800 was spent on further improvements.

8. It is Oland's policy to deduct maximum amounts of CCA.
9. During 2019, Oland spends $18,500 landscaping the grounds of its new building. For accounting purposes this was treated as an asset. However, the Company will not amortize this balance as it believes the work has an unlimited life.
10. Investments were sold during the year for $126,000. The adjusted cost base of these investments was $115,000.
11. On December 31, 2018, the Company had a balance in its Refundable Dividend Tax On Hand account of $52,460. The Company claimed a dividend refund of $12,800 in its 2018 corporate tax return.
12. At the end of 2018, Oland has a GRIP balance of $162,345. During 2018, the Company designated $12,350 of its dividends paid as eligible.
13. During 2019, Oland paid $42,300 in dividends. Of this total, $26,300 were designated as eligible.
14. At the beginning of 2019, Oland had a $23,000 net capital loss carry forward [(1/2)($46,000)]. It also had a non-capital loss carry forward of $36,400. The Company would like to deduct as much as possible of these two carry overs during 2019.
15. All of Oland's Taxable Income will be allocated to a province.
16. It has been determined that Oland has $300,289 of active business income. Of this total, $43,000 results from manufacturing and processing activity. Because of special rates in the province in which it operates, Oland makes a separate calculation of the manufacturing and processing deduction.
17. For 2018, Oland and its associated companies had combined ADJUSTED Aggregate Investment Income of $48,900. Their Taxable Capital Employed In Canada totalled $8,900,000 for 2018.

**Required**: Show all of the calculations used to provide the following required information, including those for which the result is nil.

A. Determine Oland's minimum Net Income For Tax Purposes and Taxable Income for the year ending December 31, 2019. Include in your solution the January 1, 2020 UCC balance for each CCA class.

B. Determine Oland's Part I Tax Payable for the year ending December 31, 2019.

C. Determine the refundable portion of Oland's Part I Tax Payable for 2019.

D. Determine Oland's Part IV Tax Payable for the 2019.

E. Determine the December 31, 2019 balance in Oland's GRIP.

F. Determine the December 31, 2019 balances in Oland's Eligible RDTOH and Non-Eligible RDTOH.

G. Determine Oland's dividend refund for 2019, separately identifying the refund related to eligible dividends and the refund related to non-eligible dividends.

H. Determine Oland's net federal Tax Payable for 2019.

### *Assignment Problem Thirteen - 7*

***(Comprehensive Corporate Tax Payable)***

Fancom Inc. is an Alberta corporation that qualifies as a Canadian controlled private company. For the taxation year ending December 31, 2019, the components of its Net Income For Tax Purposes and Taxable Income are as follows:

| | |
|---|---:|
| Active Business Income (Note 1) | $328,000 |
| Gross Foreign Business Income (Note 2) | 40,800 |
| Gross Foreign Non-Business Income (Note 2) | 31,200 |
| Interest On Long-Term Investments | 49,900 |
| Taxable Capital Gains (Note 3) | 16,500 |
| Eligible Dividends Received On Portfolio Investment | 21,000 |
| **Net Income For Tax Purposes** | **$487,400** |
| Eligible Dividends Received | ( 21,000) |
| Charitable Contributions | ( 86,400) |
| Net Capital Loss Carry Forward Deducted | ( 13,900) |
| Non-Capital Loss Carry Forward Deducted | ( 263,000) |
| **Taxable Income** | **$103,100** |

**Note 1** As determined by the *Income Tax Regulations*, $152,000 of this active business income was manufacturing and processing profits. As these amounts are allocated to a province which has a special rate for M&P profits, the company calculates the federal M&P deduction.

**Note 2** Foreign jurisdictions withheld $6,120 (15%) from the foreign business income and $7,800 (25%) from the foreign non-business income.

**Note 3** The $6,500 is one-half of a capital gain of $33,000. The gain resulted from a disposition of passive investments.

**Other Information:**

1. During the year ending December 31, 2019, Fancom used its existing cash resources to pay taxable dividends of $223,200. Of this total, $49,300 were designated as eligible.
2. As of December 31, 2018, Fancom Inc. has a GRIP of $49,360. During 2018, the Company designated $8,700 of its dividends paid as eligible.
3. As of December 31, 2018, the balance in Fancom's RDTOH account was $27,400. A dividend refund of $13,400 was claimed in the 2018 corporate tax return.
4. For 2018, Fancom's ADJUSTED Aggregate Investment Income was $36,450. Its Taxable Capital Employed In Canada was $4,652,300 for 2018.

5. As determined by the *Income Tax Regulations*, 85 percent of Fancom's Taxable Income can be allocated to a Canadian province.
6. Assume that the foreign business and non-business tax credits are equal to the foreign taxes withheld.

**Required:** Show all of the calculations used to provide the following required information, including those for which the result is nil.

A. Determine Fancom's Part I Tax Payable for the year ending December 31, 2019.

B. Determine the refundable portion of Fancom's Part I Tax Payable for 2019.

C. Determine Fancom's Part IV Tax Payable for the 2019.

D. Determine the December 31, 2019 balance in Fancom's GRIP.

E. Determine the December 31, 2019 balances in Fancom's Eligible RDTOH and Non-Eligible RDTOH.

F. Determine Fancom's dividend refund for 2019, separately identifying the refund related to eligible dividends and the refund related to non-eligible dividends.

## Assignment Problem Thirteen - 8

### (Comprehensive Corporate Tax Payable)

Ferris Ltd. is a Canadian controlled private corporation. For the year ending December 31, 2019, its accounting Net Income Before Taxes, as determined under generally accepted accounting principles, was $600,600. Other information for the 2019 fiscal year follows.

1. The Company's amortization expense was $711,200. Maximum deductible CCA for the year was $946,000. It is the Company's policy to always deduct maximum available CCA.
2. The Company's revenues included foreign source non-business income of $22,100 (Canadian dollars). This was the amount that was received after the withholding of $3,900 (15 percent of the gross amount) by the foreign tax authorities.
3. Ferris sold depreciable assets for $582,000. These assets had an original cost of $510,000 and a net book value of $435,000. They were Class 8 assets and, at the beginning of 2019, the UCC balance in this class was $442,000. No Class 8 assets were purchased during the year. The Company has numerous assets left in this class at the end of the year.
4. During the year, the Company had the following amounts of Canadian source investment income:

| | |
|---|---|
| Interest On Long-Term Investments | $31,600 |
| Taxable Capital Gains On Sale Of Depreciable Assets | 36,000 |
| Eligible Dividends On Bank of Nova Scotia Shares | 14,200 |

5. During the year, the Company begins selling a product on which they provide a 10 year warranty. At the end of the year, they established a warranty reserve of $25,000 to reflect the expected costs of providing warranty services. No costs were incurred in 2019.
6. The Company spent $66,400 on business meals and entertainment.
7. It has been determined that Ferris has active business income of $277,100 for the year. Included in this amount were manufacturing and processing profits, as determined by the *Income Tax Regulations*, of $188,300.
8. During the year ending December 31, 2019, the Company used its existing cash resources to pay taxable dividends of $274,000. It is the policy of the corporation to only designate dividends as eligible to the extent that they will have a refund available.

9. As of December 31, 2018, Ferris Ltd. has a GRIP of $26,500. During 2018, the Company designated all of the $8,100 in taxable dividends paid as eligible.
10. As of December 31, 2018, the balance in Ferris's RDTOH account was $21,700. A dividend refund of $2,700 was claimed in the 2018 corporate tax return.
11. The Company has available a non-capital loss carry forward of $267,300 and a net capital loss carry forward of $24,800 [(1/2)($49,600)]. Management has indicated that they would like to deduct as much of these amounts as possible in the 2019 tax return.
12. For 2018, Ferris had ADJUSTED Aggregate Investment Income of $41,300. Its Taxable Capital Employed In Canada was $3,641,000.

**Required:** Show all of the calculations used to provide the following required information, including those for which the result is nil.

A. Calculate Ferris's minimum Net Income For Tax Purposes and Taxable Income for the year ending December 31, 2019.

B. Assume the foreign non-business tax credit is equal to the foreign tax withheld. Calculate Ferris's Part I Tax Payable for the year ending December 31, 2019. As the corporation operates in a province that has a reduced rate for M&P activity, a separate calculation of the federal M&P deduction is required.

C. Calculate the refundable portion of Ferris's Part I Tax Payable for 2019

D. Calculate Ferris's Part IV Tax Payable for the year ending December 31, 2019.

E. Determine the December 31, 2019 balance in Ferris's GRIP account.

F. Determine the December 31, 2019 balances in the Eligible RDTOH and the Non-Eligible RDTOH.

G. Calculate Ferris's dividend refund for the year ending December 31, 2019.

H. Do not assume the foreign non-business tax credit is equal to the foreign tax withheld, but assume that any excess of foreign tax withheld over the federal foreign tax credit will be applied against the provincial tax liability. Using the amounts calculated in Part B, compare your results under this new scenario with the Part B calculation of Part I Tax Payable. As part of your solution, provide a detailed calculation of the small business deduction, the ITA 123.3 refundable tax (ART) and the foreign tax credit available to Ferris for the year ending December 31, 2019.

I. Assume that any excess of foreign tax withheld over the federal foreign tax credit cannot be applied against the provincial tax liability. Comment on any tax planning issues that should be reviewed because of this change in assumption.

### Assignment Problem Thirteen - 9

#### (Comprehensive Tax Payable)

Industco Inc. is a Canadian controlled private corporation. It uses a taxation year that ends on December 31. It keeps its records in accordance with generally accepted accounting principles. For the year ending December 31, 2019, the Company's condensed Income Statement, is as follows:

| | | |
|---|---|---|
| Operating Revenues In Canada | | $2,937,500 |
| Operating Expenses In Canada | | ( 1,905,000) |
| Operating Income In Canada | | $1,032,500 |
| Other Income Items: | | |
| Eligible Portfolio Dividends | $ 52,000 | |
| Foreign Non-Business Income (Net Of 15 Percent Withholding) | 25,500 | |
| Foreign Business Income (Net Of 10 Percent Withholding) | 45,000 | |
| Canadian Source Interest | 26,000 | |
| Gain On Sale Of Class 8 Assets | 225,000 | 373,500 |
| Accounting Income Before Taxes | | $1,406,000 |

Other information related to operating expenses follows.

**Amortization And CCA** The operating income figure was reduced by a charge for amortization of $623,000.

At the beginning of 2019, the Company has a balance in Class 1 of $1,000,000. The only asset in the Class is the Company's headquarters building. The Company has owned this building since 2001.

In general, other property is leased. However, in February, 2019, a policy change results in the acquisition of a new building at a cost of $650,000, of which $125,000 is allocated to the land on which the building is situated. The building is used 100 percent for non-residential purposes and is allocated to a separate Class 1. One-half of the non-residential use is for manufacturing and processing.

The January 1, 2019 balance in Class 8 was $4,200,000. During 2019, there were additions to this class in the total amount of $700,000. Also, Class 8 assets with a cost of $400,000 were sold for proceeds of $550,000. The net book value of these assets in the accounting records was $325,000. There were numerous assets remaining in the class at the end of the 2019 taxation year.

At the beginning of 2019, the UCC in Class 10 was $800,000, reflecting the Company's fleet of trucks. As the Company is changing to a policy of leasing its trucks, all of these trucks were sold during the year for $687,000. The capital cost of the trucks was $1,200,000 and their net book value in the accounting records was equal to the sale proceeds of $687,000.

**Landscaping** The Company spent $95,000 on landscaping for its main office building. This amount was recorded as an asset in the accounting records and, because the work has an unlimited life, no amortization was recorded on this asset.

**Advertising** The Company spent $17,000 on advertisements in *Fortune* Magazine, a U.S. based publication. Over 90 percent of the magazine's non-advertising content is original editorial content. The advertisements were designed to promote sales in Canadian cities located on the U.S. border.

**Travel And Entertainment** Included in the travel costs deducted in 2019 was $12,000 for airline tickets and $41,400 for business meals and entertainment.

The Company paid, and deducted for accounting purposes, a $2,500 initiation fee for a corporate membership in the Highland Golf And Country Club.

**Taxes On Vacant Land** The Company paid, and deducted, property taxes of $15,000 on vacant land that is being held for possible future expansion of its headquarters site.

**Other Information**

1. Industco Inc. declared and paid taxable dividends of $83,000 during 2019. It is the policy of the corporation to only designate dividends as eligible to the extent that their payment will result in a dividend refund.
2. It has been determined that 92 percent of Industco's Taxable Income can be allocated to a province.
3. The December 31, 2018 balance in Industco's Refundable Dividend Tax On Hand account was $111,000. The dividend refund for the year ending December 31, 2018 was $33,000.
4. At the end of 2018, Industco Inc. has a GRIP balance of $298,000. During 2018, the company designated $64,000 of its dividends paid as eligible.
5. Industco Inc. is associated with two other Canadian controlled private corporations. Industco has been allocated $125,000 of the annual business limit.
6. Assume that the foreign tax credits for the foreign non-business and foreign business income are equal to the amounts withheld.
7. Industco's Canadian active business income is equal to its net business income for tax purposes. One-half of this Canadian active business income results from manufacturing and processing activity.
8. At the beginning of 2019, Industco has a net capital loss carry forward of $42,000 and a non-capital loss carry forward $18,000. The Company intends to deduct the maximum amount of these carry forwards during 2019.
9. For 2018, the ADJUSTED Aggregate Investment Income of Industco and its associated companies is $31,600. Their Taxable Capital Employed In Canada was $6,420,000.

**Required:** Determine the following amounts. You should show all of the calculations required to provide these amounts, even when the result of the calculations is nil.

A. Industco's Net Income For Tax Purposes and Taxable Income for the year ending December 31, 2019. As the Company's active business income is based on its net business income for tax purposes, a separate calculation of this component of Net Income For Tax Purposes is required.

B. Industco's Part I Tax Payable for the year ending December 31, 2019. As the corporation operates in a province that has a reduced tax rate for manufacturing and processing activity, a separate calculation of the federal M&P deduction is required.

C. The refundable portion of Industco's Part I Tax Payable for 2019.

D. Industco's Part IV Tax Payable for 2019.

E. Industco's GRIP balance on December 31, 2019.

F. The balances in Industco's Eligible RDTOH and Non-Eligible RDTOH on Decembert 31, 2019.

G. Industco's dividend refund for 2019, showing separately the amount related to eligible dividends and the amount related to non-eligible dividends.

# CHAPTER 14

# Other Issues In Corporate Taxation

## Introduction

14-1. Chapters 12 and 13 dealt with basic issues associated with the determination of Taxable Income and Tax Payable for a corporation. Specifically, Chapter 12 described the basic adjustments associated with converting Net Income For Tax Purposes to corporate Taxable Income. This was followed by consideration of how this Taxable Income is allocated to specific provinces for the determination of provincial Tax Payable. With respect to Tax Payable, Chapter 12 dealt with the rates applicable to corporations, the small business deduction, the M&P deduction, foreign tax credits, and the general rate reduction. Included is material on the annual business limit grinds related to Taxable Capital Employed In Canada and ADJUSTED Aggregate Investment Income.

14-2. After a fairly detailed discussion of the concept of integration, Chapter 13 focused on the taxation of investment income earned by Canadian controlled and other private corporations. Coverage includes the Additional Refundable Tax (ART) on investment income, refundable Part I and Part IV taxes, the designation of eligible dividends, dividend refunds, and both the Eligible RDTOH and the Non-Eligible RDTOH accounts.

14-3. In presenting the material in Chapters 12 and 13, we focused on what we view as basic issues, skipping over some of the more technical considerations related to the determination of corporate Taxable Income and corporate Tax Payable. This was done in the belief that avoiding the more technical aspects would enhance your understanding of the basic procedures associated with these determinations.

14-4. In this Chapter 14, we are turning our attention to these technical issues. In this Chapter we will provide coverage of:

- the acquisition of control rules;
- the associated company rules;
- investment tax credits;
- tax basis shareholders' equity; and
- distributions of corporate surplus, including capital dividends and deemed dividends.

# Acquisition Of Control Rules

## Economic Background

14-5. Over a period of years, some corporations may experience sufficiently large losses that they have no hope of recovering their economic health. While they may have accumulated large amounts of net capital or non-capital loss carry forwards, they have no real prospect of being able to use these amounts. Such companies can become attractive takeover targets for profitable corporations, provided they can structure their business to make use of the tax benefits associated with these losses. For example, if a profitable company can acquire a company for $100,000 that has $1,000,000 in loss carry forwards that can be utilized in the future, it is clearly a bargain for the purchaser. Further, if the acquiree cannot make use of the losses, receiving the $100,000 may be a better alternative than declaring bankruptcy.

14-6. This situation is of concern to the government in that there are billions of dollars of such benefits available in the economy at any point in time. If access to these benefits was relatively trouble-free, the cost to the government could be enormous. As a consequence, the government has enacted legislation which significantly restricts the use of loss carry forwards in situations where there has been an acquisition of control.

## Acquisition Of Control Legislation

14-7. ITA 111(4) through 111(5.5) contain rules that are applicable when there has been an acquisition of control by a person or group of persons. IT-302R3, which deals with the losses of a corporation, indicates that control requires ownership of shares that carry with them the right to elect a majority of the board of directors.

14-8A. An acquisition of control most commonly occurs when a majority shareholder sells his shares to an arm's length person. However, it can also occur through the redemption of shares. For example, if Ms. A owns 75 percent of AB Ltd. and Ms. B, an unrelated person, owns the other 25 percent, there would be an acquisition of control by Ms. B if AB Ltd. was to redeem all of Ms. A's shares.

14-8B. In recent years, several new anti-avoidance rules designed to address loss trading among trusts (ITA 251.2) and using de facto control to avoid the acquisition of control rules (ITA 256.1). The complexity of these rules is beyond the scope of this general text. We would also notes that the *Income Tax Act* now refers to acquisition of control situations as "loss restriction events".

## Deemed Year End

14-9. To prevent losses from being used prior to the end of the taxation year in which the acquisition of control took place, ITA 249(4) requires that the corporation have a deemed year end on the day preceding an acquisition of control.

14-10. If the acquisition of control occurs prior to the corporation's normal year end, a short fiscal period will be created. For example, if the corporation's normal year end was December 31, and the acquisition of control took place on February 1, 2019, the deemed year end would create a fiscal year with only one month (January 1, 2019 through January 31, 2019). Further, if the corporation retains its old year end after the acquisition of control, there will be a second short fiscal year that runs from February 1, 2019 through December 31, 2019.

14-11. Note, however, ITA 249(4) allows the corporation to change its year end when there is an acquisition of control. This means that the corporation could have avoided a second short fiscal period by establishing January 31 as the new year end. This means that the first fiscal year after the acquisition of control will end on January 31, 2020.

14-12. The extra year end is of importance in that the non-capital losses that may be available after the acquisition of control are time limited. In our example, the deemed year end creates, in effect, an extra year end that shortens the period during which time-limited losses can be used. However, with a 20 year carry forward period for non-capital losses, this is unlikely to be an important consideration.

14-13. Other implications of such short fiscal periods include the need to base CCA calculations on a fraction of the year, the need to prorate the annual business limit for the small business deduction, as well as the usual year end procedures such as inclusions of reserves.

### *Restrictions On The Use Of Charitable Donations*

14-14. ITA 110.1(1.2) places two restrictions on the deduction of charitable donations:

- Undeducted amounts that are present at the time of the acquisition of control cannot be carried forward to taxation years subsequent to that date.
- No deduction is available on a gift made subsequent to the acquisition of control if the gifted property was acquired prior to the acquisition date in anticipation of the acquisition of control.

14-15. An example of the latter restriction would be a situation where an individual, who does not have sufficient tax payable to use a credit on the donation of a particular property, transfers that property to a corporation he controls, with the expectation that he will sell the shares in the corporation and the corporation will make the donation and take the deduction.

## Restrictions On The Use Of Losses

### *General Rules*

14-16. The acquisition of control rules apply to any losses that have not been deducted at the deemed year end. This would include losses that have been carried forward from prior years, as well as any additional losses that accrue in the taxation year which is created by the deemed year end.

14-17. As will be explained later, the losses in this deemed taxation year may be increased by provisions that require the recognition of unrealized losses on capital assets. They can also be reduced by gains resulting from an election to have one or more deemed dispositions.

### *Capital Losses*

14-18. The acquisition of control rules are particularly harsh in their treatment of net capital losses. ITA 111(4)(a) indicates that any net capital losses that are present at the deemed year end are simply lost. They cannot be carried forward to future years and, as a consequence, they will be of no benefit to the corporation subsequent to the acquisition of control. Note that this would include any unused Allowable Business Investment Losses that are present at the deemed year end.

14-19. In addition, if there are capital gains in the three years before the deemed year end, ITA 111(4)(b) prevents net capital losses from years subsequent to the deemed year end from being carried back to those years.

### *Non-Capital Losses*

14-20. While non-capital losses can be carried forward, they too are subject to restrictions. These restrictions, found in ITA 111(5), are that:

- after the acquisition of control has taken place, the corporation must continue to carry on the business in which the loss occurred;
- there must be a reasonable expectation of profit in that business; and
- the losses can only be applied against future income generated by the same, or a similar business.

14-21. A brief example can be used to illustrate these provisions:

> **EXAMPLE** Bostox Ltd. operates two separate lines of business, manufacturing cameras and the sale of specialty food products. During the year ending December 31, 2018, the camera business experienced a loss for tax purposes of $5 million, while the food specialty products operation had business income for tax purposes of nil. The $5 million loss could not be carried back and, as a result, it became a loss carry forward. On January 1, 2019, Bostox Ltd. is acquired by another company. During the year ending December 31, 2019, the camera business lost an additional $1 million, while the food products business earned $7 million.

**ANALYSIS** If there was no acquisition of control, both the current 2019 loss of $1 million and the $5 million loss carry forward resulting from the camera business could be deducted against the income of the specialty food products business. This would have resulted in a 2019 Taxable Income of $1 million ($7 million profit on food products, offset by a current loss of $1 million on cameras and a non-capital loss carry forward of $5 million).

However, with the acquisition of control at the beginning of 2019, the loss carry forward can only be used against profits produced by the camera business. This means that none of the loss carry forward can be deducted in 2019, but the $1 million 2019 camera business loss can be netted against the $7 million food products income, resulting in a 2019 Taxable Income of $6 million. The $5 million loss carry forward will still be available, but can only be applied against future camera business income.

## Exercise Fourteen - 1

**Subject:** Acquisition Of Control

India Inc. operates two separate lines of business, one of which sells fountain pens, while the other provides professional accounting services. In its first year of operations ending on December 31, 2018, the pen business had a loss of $192,000, and the accounting business had income of $57,000, resulting in a Net Income For Tax Purposes and Taxable Income of nil. This leaves a non-capital loss carry forward of $135,000. For the taxation year ending December 31, 2019, the pen business had income of $42,000, and the accounting business had income of $247,000, resulting in a Net Income For Tax Purposes of $289,000.

Determine the minimum Taxable Income for 2019 assuming (1) that there was no acquisition of control in either year and (2) that there was an acquisition of control on January 1, 2019. The Company has no deductions from Net Income For Tax Purposes other than possible loss carry forwards from 2018.

**SOLUTION available in print and online Study Guide.**

## Unrecognized Losses At Deemed Year End

### *The Problem*

14-22. As previously indicated, the acquisition of control restrictions apply to losses that accrue in the taxation year that has been created by the deemed year end. As there has been a deemed year end, there may be a loss from normal operations for the fiscal period that has ended. In addition, there may be losses resulting from actual dispositions of capital assets during the period.

14-23. However, the acquisition of control rules are also concerned with accrued losses that have not been recognized at the deemed year end. The problem is that, if such accrued losses are realized after that time, they will not be subject to the acquisition of control restrictions.

**EXAMPLE** A corporation owned a parcel of land with an adjusted cost base of $200,000 and a fair market value of $150,000. If the land was to be disposed of subsequent to the acquisition of control, the result would be a deductible capital loss. This could be viewed as a way of avoiding the restrictions imposed by the acquisition of control rules.

### *Special Rules*

14-24. In recognition of this problem, the acquisition of control rules require a number of special procedures at the deemed year end. They are as follows:

**Non-Depreciable Capital Property** ITA 111(4)(c) requires that non-depreciable capital property be written down to its fair market value, if that value is below its adjusted cost base. ITA 111(4)(d) requires that the amount of the write-down be treated as a capital loss. The new lower value becomes the adjusted cost base of the property. The resulting allowable capital loss can be applied against available taxable capital gains, or carried back. However, if it is not used at the deemed year end, or in the three year carry back period, it is lost forever.

**Depreciable Capital Property** ITA 111(5.1) requires that depreciable capital property be written down to its fair market value, if that value is below the UCC. The write-down amount is treated as CCA to be deducted in the deemed taxation year. This will reduce the income for that period and, in some cases, create or increase the loss for that year. For capital gains purposes, the property will retain the original capital cost.

**Accounts Receivable** ITA 111(5.3) does not permit the deduction of a reserve for doubtful accounts under ITA 20(1)(l). Rather, amounts must be written off as specific bad debts on the basis of the largest possible amount. If a doubtful account is not written off at the time an acquisition of control occurs, no deduction is available if the account subsequently becomes uncollectible. This procedure will generally result in a larger deduction and will reduce income, increase a loss, or create a loss in the deemed taxation year.

### Exercise Fourteen - 2

**Subject:** Write-Downs At Deemed Year End

On November 15 of the current year, Parkat Ltd. acquires control of Sparkat Ltd. On November 14, Sparkat Ltd. has the following assets:

- Land with an adjusted cost base of $293,000 and a fair market value of $215,000.
- Class 8 depreciable assets with a capital cost of $416,000, a UCC balance of $276,000 and a fair market value of $184,000.

Indicate the tax consequences of the procedures that will be applied to these assets in the deemed year end that results from the acquisition of control.

**SOLUTION available in print and online Study Guide.**

## Deemed Disposition Election

### *The Problem*

14-25. The requirement that non-depreciable capital property be written down to fair market value at the deemed year end is particularly onerous in that the resulting capital losses may simply disappear. To offset the harshness of this requirement, ITA 111(4)(e) allows the corporation to elect, at the time of the deemed year end, to have a deemed disposition/reacquisition of any depreciable or non-depreciable capital property on which there is an accrued gain or recapture of CCA. This election can be used to trigger capital gains that will offset either unused losses of the current period or unused loss carry forwards from earlier periods.

14-26. The election can also be used to trigger recapture which can absorb non-capital losses from the current or previous years. This is a less important application in most situations as non-capital losses do not disappear at the deemed year end. However, as noted in Paragraph 14-20, there are restrictions on the use of such losses after the deemed year end. Given this, it may be desirable to minimize non-capital loss carry forwards when an acquisition of control occurs.

### Procedures

14-27. The elected value, which will serve as the deemed proceeds of disposition, cannot exceed the fair market value of the asset at the time of the deemed disposition. The minimum value for the election is the adjusted cost base or capital cost of the property. The elected value can be any amount between this minimum and maximum. This means that, in the case of property on which CCA has been taken, any election that will create a capital gain will also create recapture of CCA.

14-28. If the corporation has net capital losses and there are non-depreciable properties with accrued gains, this election is clearly desirable in that it will generate capital gains, which can be used to offset the net capital losses that would disappear as a result of the acquisition of control.

14-29. The situation is less clear cut when the gains are on depreciable capital property. While the deemed disposition will create the needed capital gains, it will generally result in recapture of CCA. This may or may not be a desirable situation.

### Example

14-30. The following example will illustrate the procedures associated with the ITA 111(4)(e) deemed disposition election:

> **EXAMPLE** Burkey Ltd. has a December 31 year end. On June 1, 2019, a new investor acquires control of the Company. While its basic operations have been profitable for many years, it has a net capital loss carry forward of $200,000 [(1/2)($400,000)]. On May 31, 2019, the Company has non-depreciable capital assets with a fair market value of $800,000 and an adjusted cost base of $500,000. Its depreciable capital assets have a fair market value of $1,200,000, a capital cost of $1,100,000, and a UCC of $600,000.
>
> **ANALYSIS** The ITA 111(4)(e) election is clearly desirable with respect to the non-depreciable capital property. It generates a taxable capital gain of $150,000 [(1/2)($800,000 - $500,000)]. Deducting a $150,000 carry forward against this 2019 gain will use up $150,000 of the net capital loss. This will leave an unused amount of $50,000 ($200,000 - $150,000).
>
> Using the ITA 111(4)(e) election on the depreciable capital property will create a $50,000 [(1/2)($1,200,000 - $1,100,000)] taxable capital gain. Deducting a $50,000 loss carry forward against this amount will use up the remaining $50,000 of the net capital loss balance. However, the election will also create recaptured CCA of $500,000 ($1,100,000 - $600,000), an amount on which it appears that tax would have to be currently paid. Given that, in the absence of this election, taxation on the recapture could be deferred indefinitely, the election may not be desirable with respect to the depreciable capital property. One other factor that should be considered is that the election would result in increased CCA in the future.

### Adjusted Cost Base After Election

14-31. In addition to serving as the deemed proceeds of disposition, the elected value also becomes the adjusted cost base or capital cost of the asset on which the election was made. If the elections were made at fair market value on both properties in the preceding example, the new adjusted cost base of the non-depreciable assets would be $800,000, while the capital cost of the depreciable assets would be $1,200,000.

14-32. However, if the $1,200,000 value was allowed to be used for CCA purposes, the Company would be able to deduct 100 percent of the $100,000 difference between the $1,200,000 elected value and the old capital cost of $1,100,000, despite the fact that they have, in effect, paid tax on only one-half of this amount.

14-33. To prevent this from happening, ITA 13(7)(f) specifies that, when an election is made under ITA 111(4)(e), the new capital cost of the property for CCA purposes only, is equal to the original capital cost of the asset, plus one-half of the excess of the elected value over the

asset's original capital cost. In the example in Paragraph 14-30, this value would be \$1,150,000 [\$1,100,000 + (1/2)(\$1,200,000 - \$1,100,000)]. You might recall that other paragraphs in ITA 13(7) contain the same rule for both non-arm's length transfers of depreciable property and for some changes in use.

14-34. Future CCA would be based on this \$1,150,000 figure and, in addition, if the assets were sold for more than \$1,150,000, the \$1,150,000 would be subtracted from the UCC to determine any recapture. However, any future capital gain would be based on the new adjusted cost base of \$1,200,000.

## Exercise Fourteen - 3

**Subject:** Election On Acquisition Of Control

Means Ltd. has a December 31 year end. On May 1, 2019, all of the Company's shares are acquired by a new owner. For the period January 1, 2019 through April 30, 2019, the Company has an operating loss of \$45,000. On April 30, 2019, the Company has available a net capital loss carry forward of \$110,000 [(1/2)(\$220,000)]. Also at that time, the Company has the following assets:

| Asset Type | Adjusted Cost Base Or Capital Cost | UCC | Fair Market Value |
|---|---|---|---|
| Non-Depreciable | \$500,000 | N/A | \$650,000 |
| Depreciable | 400,000 | 350,000 | 500,000 |

Advise the Company with respect to the most appropriate elections to be made prior to the acquisition of control and explain your results.

**We suggest you work Self Study Problems Fourteen-1 and 2 at this point.**

# Associated Companies

## The Problem

14-35. In the absence of special rules, it would be very easy to avoid the annual limit that applies to the small business deduction. This could be accomplished by dividing a single corporation's activities between two separate corporations, thereby doubling up on the annual business limit of \$500,000. However, as was noted in Chapter 12, the *Act* makes this more difficult by requiring that associated companies share their annual business limit.

14-36. For example, assume that Mr. Robards owns all of the outstanding voting shares of both the Mark Company and the Grand Company. These two Companies would be considered to be associated and, as a consequence, would have to share the \$500,000 annual business limit. As was indicated in Chapter 12, they can elect to allocate the annual limit in any proportion they wish, provided the total does not exceed \$500,000. If the Mark Company has active business income and the Grand Company does not, it would be most advantageous to allocate the entire annual limit to the Mark Company, so that it could claim the maximum small business deduction.

14-37. The preceding example is very clear cut and results in an allocation of the small business deduction that reflects the goals of the relevant legislation. However, with a deduction that can be worth \$95,000 [(19%)(\$500,000)] per year in federal tax alone, there is a significant incentive to develop arrangements that will avoid the intent of the legislation. Correspondingly, there is a need to have legislation that is sophisticated enough to frustrate these arrangements. As a consequence, the identification of associated companies can be very complex.

# Definitions

## Related Persons

14-38. ITA 251 provides definitions of related persons. The legislation for identifying associated companies makes much use of these definitions. Given this, working with the associated companies rules requires an understanding of the related persons rules. Note, however, you are dealing with two different concepts. ITA 251 deals with all classes of related taxpayers, while ITA 256 deals only with corporations. Further, even with corporations, the terms related and associated have different meanings.

14-39. The more important of the related persons definitions are as follows:

**ITA 251(2)(a) - Related Persons** With respect to individuals, Paragraph (a) notes that individuals are related if they are connected by blood relationship, marriage, common-law partnership, or adoption. Various other Subsections in ITA 251 and 252 elaborate on this statement to point out that all of the following individuals would be "related" to the taxpayer:

- Parents and grandparents, as well as parents and grandparents of the taxpayer's spouse or common-law partner.
- The taxpayer's spouse or common-law partner, as well as the spouse or common-law partner's siblings and their spouses and common-law partners.
- Siblings of the taxpayer, as well as spouses or common-law partners of the taxpayer's siblings.
- Children, including those that are adopted, or born outside of marriage. Also included here would be spouses and common-law partners of children and children of the taxpayer's spouse or common-law partner.

**ITA 251(2)(b)** indicates that a corporation is related to:

- a person who controls it, if it is controlled by one person;
- a person who is a member of a related group that controls it; or
- any person related to a person who controls it or who is related to a member of a related group that controls it.

**ITA 251(2)(c)** indicates that two corporations are related if:

- they are controlled by the same person or group of persons;
- each of the corporations is controlled by one person and the person who controls one of the corporations is related to the person who controls the other corporation;
- one of the corporations is controlled by one person and that person is related to any member of a related group that controls the other corporation;
- one of the corporations is controlled by one person and that person is related to each member of an unrelated group that controls the other corporation;
- any member of a related group that controls one of the corporations is related to each member of an unrelated group that controls the other corporation; or
- each member of an unrelated group that controls one of the corporations is related to at least one member of an unrelated group that controls the other corporation.

## Associated Companies

14-40. The definitions that relate directly to identification of associated companies are found in the ITA 256. The more important of these are as follows:

**ITA 256(1.1) - Specified Class, Shares Of** In simplified terms, this definition refers to non-voting shares that have a fixed dividend rate and redemption amount. Such shares are commonly referred to as preferred shares.

**ITA 256(1.2)(a) - Definition Of Group** For purposes of defining associated companies, a group is two or more persons, each of whom owns shares in the corporation in question. A related group involves a group of persons, each member of which is related to every other member. ITA 251(4) notes that a related group is a group of

persons, each member of which is related to every other member. An unrelated group is any group, other than a related group.

**ITA 256(1.2)(c) - Control** The definition of associated corporations also involves the concept of control. For purposes of determining association, a corporation is deemed to be controlled by another corporation, a person, or a group of persons, if the corporation, person, or group of persons owns either:

- shares (common and/or preferred) of capital stock with a fair market value of more than 50 percent of all issued and outstanding shares of capital stock; or
- common shares with a fair market value of more than 50 percent of all issued and outstanding common shares.

This definition is based on legal control. Control can also be "Control In Fact" as described in ITA 256(5.1) or control through other corporations as described in ITA 256(6.1) and 256(6.2).

**Deeming Rules** The most relevant deeming rules can be described as follows:

- **ITA 256(1.2)(d) - Holding Companies** This provision indicates that where shares of a corporation are held by another corporation, a shareholder of the holding corporation is deemed to own the shares of the held corporation in proportion to his interest in the holding corporation. Similar provisions apply to shares held by partnerships and trusts. Note, however, if a holding corporation holds a controlling interest in an investee, the holding corporation is considered to control all of the shares held by that investee.
- **ITA 256(1.3) - Children Under 18** This provision requires that shares of a corporation owned by a child under the age of 18 be deemed to be owned by a parent of the child for the purpose of determining whether the corporation is associated with any other corporation that is controlled by that parent or a group that includes that parent.
- **ITA 256(1.4) - Rights And Options** This provision requires that rights to acquire shares be treated as though they were exercised for purposes of determining associated companies. This Subsection also indicates that, where a person has a right to require a shareholder to redeem, cancel, or acquire its own shares, for purposes of determining association, the corporation is deemed to have carried out the redemption, cancellation, or acquisition.
- **ITA 256(1.5) - Person Related To Himself, Herself, Or Itself** This provision indicates that, where a person owns shares in two or more corporations, the person shall as shareholder of one of the corporations be deemed to be related to himself, herself or itself as shareholder of each of the other corporations.

**ITA 256(2) - Association Through A Third Corporation** This provision indicates that two corporations, both of which are associated with a third corporation, are deemed to be associated with each other. This Subsection also includes an election that can mitigate this rule. The third corporation can elect to not be associated with the other two corporations. A consequence of this is that the third corporation's annual business limit will be set at nil. However, the election will allow the other two corporations to be exempt from the association rules under ITA 256(2).

14-41. Given these definitions and rules, we are now in a position to look at the definition of associated companies as it is found in ITA 256(1).

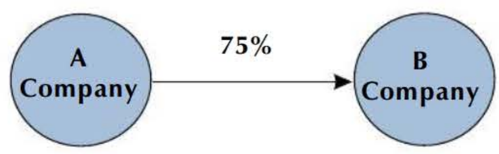
## Examples - Associated Corporation Rules

14-42. The preceding definitions are essential to the understanding of the associated corporation rules found in ITA 256(1). This Subsection contains five Paragraphs designated (a) through (e), with each Paragraph describing a relationship involving association. These five Paragraphs will be given individual attention in the material that follows.

14-43. The first of these paragraphs indicates that one corporation is associated with another in a taxation year if, at any time in the year;

> **ITA 256(1)(a)** one of the corporations controlled, directly or indirectly in any manner whatever, the other.

**Figure 14 - 1 [ITA 256(1)(a)]**

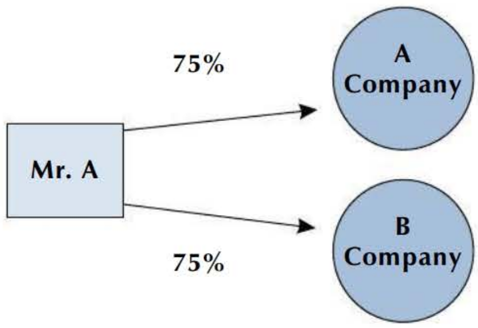


14-44. This type of association can be illustrated by the situation shown in Figure 14-1 in which A Company owns 75 percent of the outstanding voting shares of B Company. In this situation, Company A and Company B are associated by virtue of ITA 256(1)(a).

14-45. The second Paragraph in ITA 256(1) indicates that one corporation is associated with another in a taxation year if, at any time in the year;

> **ITA 256(1)(b)** both of the corporations were controlled, directly or indirectly in any manner whatever, by the same person or group of persons.

**Figure 14 - 2 [ITA 256(1)(b)]**

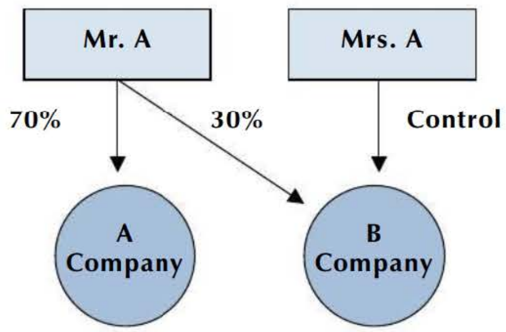


14-46. This type of association can be illustrated by the situation shown in Figure 14-2. In this situation, Mr. A owns 75 percent of the voting shares of both A Company and B Company. As a consequence, these two Companies are associated by virtue of ITA 256(1)(b), in that they are both controlled by the same person.

14-47. The third Paragraph in ITA 256(1) indicates that one corporation is associated with another in a taxation year if, at any time in the year;

> **ITA 256(1)(c)** each of the corporations was controlled, directly or indirectly in any manner whatever, by a person and the person who so controlled one of the corporations was related to the person who so controlled the other and either of those persons owned, in respect of each corporation, not less than 25 percent of the issued shares of any class, other than a specified class, of the capital stock thereof.

**Figure 14-3 [ITA 256(1)(c)]**

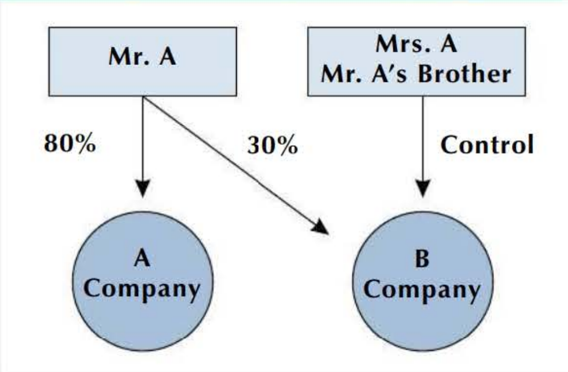


14-48. This type of association can be illustrated by the situation shown in Figure 14-3. In this situation, Mr. A owns 70 percent of the voting shares of A Company and his spouse, Mrs. A, owns 70 percent of the voting shares of B Company. In addition, Mr. A owns not less than 25 percent of the shares of B Company. Provided that the B Company shares owned by Mr. A are not of a specified class, Companies A and B are associated under ITA 256(1)(c). As the required cross ownership can be in either direction, the two Companies would also be associated if the cross ownership was by Mrs. A in A Company.

14-49. The fourth Paragraph in ITA 256(1) indicates that one corporation is associated with another in a taxation year if, at any time in the year;

**ITA 256(1)(d)** One of the corporations was controlled, directly or indirectly in any manner whatever, by a person and that person was related to each member of a group of persons that so controlled the other corporation, and that person owned, in respect of the other corporation, not less than 25 percent of the issued shares of any class, other than a specified class, of the capital stock thereof.

**Figure 14-4 [ITA 256(1)(d)]**

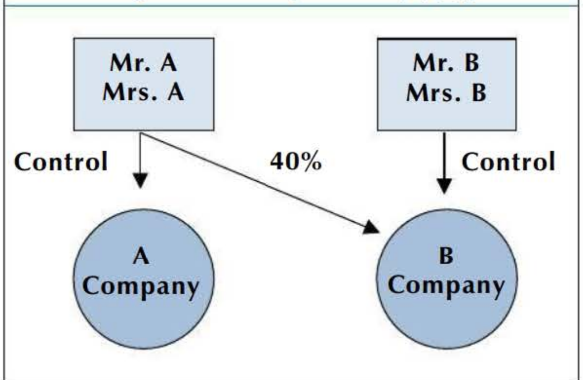


14-50. This type of association can be illustrated by the situation in Figure 14-4. In this situation, Mr. A owns 80 percent of the voting shares of A Company, while Mrs. A and Mr. A's brother each own 35 percent (70 percent in total) of the voting shares of B Company. This means that Mr. A is related to each member of a group that controls B Company. Mr. A also has the required cross ownership, in that he owns 30 percent of the shares of B Company. Provided that the shares of B Company owned by Mr. A are not of a specified class, A Company and B Company are associated by virtue of ITA 256(1)(d). Note that, under ITA 256(1)(d), the cross ownership has to be by Mr. A in B Company. If the cross ownership was in the other direction (e.g., Mrs. A owns 30 percent of A Company), the two Companies would not be associated under ITA 256(1)(d).

14-51. The final Paragraph in ITA 256(1) indicates that one corporation is associated with another in a taxation year if, at any time in the year;

**ITA 256(1)(e)** Each of the corporations was controlled, directly or indirectly in any manner whatever, by a related group and each of the members of one of the related groups was related to all of the members of the other related group, and one or more persons who were members of both related groups, either alone or together, owned, in respect of each corporation, not less than 25 percent of the issued shares of any class, other than a specified class, of the capital stock thereof.

**Figure 14-5 [ITA 256(1)(e)]**



14-52. This type of association can be illustrated by the situation in Figure 14-5. Mr. and Mrs. A are a related group that control A Company, and Mr. and Mrs. B are a related group that control B Company. If we assume that Mrs. B is Mr. A's sister, then each member of one related group is related to all of the members of the other related group. Mr. and Mrs. A each own 50 percent of the voting shares of A Company, Mr. and Mrs. B each own 30 percent of the voting shares of B Company. Mr. A owns the remaining 40 percent of the voting shares of B Company. In this situation, A Company and B Company are associated under ITA 256(1)(e). Once again, Mr. A's cross ownership has to be shares other than those of a specified class. However, if A Company shares were available, the cross ownership could be in the other direction (e.g., Mrs. B owns not less than 25 percent of A Company).

**Exercise Fourteen - 4**

**Subject:** Associated Companies

The Top Company owns 65 percent of the shares of Middle Company, as well as 10 percent of the shares of Bottom Company. Middle Company owns 35 percent of the shares of Bottom Company. Mr. Top, who owns all of the shares of Top Company, also owns 5 percent of the shares of Bottom Company and has options in those shares that would, if exercised, increase his ownership by another 10 percent. Mr. Top's 12 year old son owns 15 percent of the Bottom Company shares. Indicate which of these Companies are associated, citing the relevant provisions of the *Income Tax Act*.

# Investment Tax Credits

## Background

14-53. In terms of directing economic incentives to specific regions or types of activities, investment tax credits are a very effective tax policy tool. They can be used to provide tax reductions that are very specifically targeted (e.g., scientific research expenditures). In addition, by making some of them refundable, they can even provide benefits for enterprises with no Tax Payable.

14-54. Despite their advantages in terms of targeting benefits, the use of investment tax credits has declined over the last 10 to 20 years. At one time, they were applicable to large classes of assets in broadly defined regions of Canada. At present, their use is confined to specific targeted areas. The ones that we will discuss in this Chapter are credits for salaries of eligible apprentices, current expenditures for scientific research, and the cost of qualified property.

## Procedures

14-55. Investment tax credits are tax incentives that are available to Canadian taxpayers who are earning business income or undertaking scientific research and experimental development. With some exceptions, they are available on the same terms for corporations as they are for individuals.

14-56. In general terms, the procedures for investment tax credits, which are contained in ITA 127(5) through ITA 127.1(4), allow the taxpayer to deduct a specified percentage of the cost of certain types of current and capital expenditures from federal Tax Payable. The credits provide for a direct reduction in the amount of tax that is payable.

14-57. When capital expenditures are involved, the amount of the investment tax credit must be removed from the capital cost of the asset, so that only the net capital cost is deductible through capital cost allowances (CCA). The legislation is such that the deduction from capital cost occurs in the taxation year following the year in which credit is claimed.

14-58. The capital cost must also be reduced by any government or non-government assistance received or receivable for the property, such as grants or subsidies. However, the reduction for these other types of assistance is made in the year in which the assistance is received or receivable.

14-59. When the investment tax credits are earned by making deductible current expenditures, the credits will be added to income in the following year.

14-60. In effect, the tax mechanism that is involved with investment tax credits is that the enterprise gives up $1 of current or future tax deductions, in return for a $1 reduction in the

amount of Tax Payable. This is clearly beneficial in that the cost of losing a $1 deduction is only $1 multiplied by the company's tax rate, a figure that could be below $0.15. By contrast, $1 of reduced tax payable is a cash flow savings of $1.

## Eligible Expenditures

14-61. To provide a general picture of the applicability of investment tax credits, brief descriptions are provided of expenditures that qualify for these credits:

**Salaries And Wages Of An Eligible Apprentice** An eligible apprentice is defined in ITA 127(9) and can be described as follows:

> **Eligible apprentice** means an individual who is employed in Canada in a prescribed trade (a trade currently listed as a "Red Seal Trade") in the first two years of their apprenticeship contract. This contract must be registered with a federal, provincial or territorial government under an apprenticeship program designed to certify or license individuals in the trade.

**Qualified Property** is defined in ITA 127(9) with further elaboration provided in ITR 4600 and 4601. As presented in this material, qualified property must be newly acquired primarily for use in Canada, and it must be available for use in specified activities. These activities include manufacturing and processing, logging, farming or fishing, and storing grain.

**Qualified Scientific Research And Experimental Development (SR&ED) Expenditures** includes current expenditures for basic or applied research, and for the development of new products and processes. (Capital expenditures do not qualify for SR&ED credits.) The rules related to SR&ED expenditures are extremely complex and the application of these rules goes beyond the scope of this introductory text. As a result, we provide only very limited coverage of this topic and do not include coverage of what qualifies as SR&ED expenditures.

## Rates

### *General*

14-62. Current rates for the investment tax credits that we have described are as follows:

| Type Of Expenditure | Rate |
|---|---|
| Salaries And Wages Of Eligible Apprentices | |
| (Limited To The First $20,000 Of Salaries And Wages For Each Apprentice) | 10% |
| Qualified Property | |
| In Atlantic Provinces And Gaspe Peninsula | 10% |
| Prescribed Offshore Regions (East Coast) | 10% |
| Rest Of Canada | Nil |
| Scientific Research And Experimental Development | |
| Incurred By Any Taxpayer | 15% |
| Incurred By CCPCs (See Paragraph 14-63) | 35% |

## Exercise Fourteen - 5

**Subject:** Investment Tax Credit Procedures

During 2019, Colus Inc. pays salaries to five eligible apprentices totalling $125,000 ($25,000 per apprentice). In addition, it acquires $3,000,000 in Class 53 assets on which a 10 percent investment tax credit is available. Describe the 2019 and 2020 tax consequences associated with making these expenditures and claiming the related investment tax credits. Include in your solution the CCA for 2019 and 2020.

**SOLUTION available in print and online Study Guide.**

### *Special Rate On SR&ED Expenditures By CCPCs*

14-63. With respect to the 35 percent rate for SR&ED expenditures, this overall rate results from providing an additional 20 percent for some expenditures made by a corporation that is a CCPC throughout a taxation year under ITA 127(10.1). Special provisions are available on up to $3 million in qualifying expenditures.

14-64. Prior to the March 19, 2019 federal budget, the $3 million limit could be reduced if the preceding year's Taxable Income was in excess of $500,000, and/or if the preceding year's Taxable Capital Employed In Canada was greater than $10 million. The 2019 budget eliminated the Taxable Income constraint. For taxation years that end after March 18, 2019, the ITA 127(10.2) limitation is as follows:

**Annual Expenditure Limit** = [$3,000,000][($40,000,000 – **A**) ÷ $40,000,000]

where **A** is

(a) nil, if the corporation's Taxable Capital Employed In Canada, along with the Taxable Capital Employed In Canada of any associated companies, is less than $10 million for the immediately preceding year.

(b) in any other case, the lesser of $40 million and the amount by which the corporation's Taxable Capital Employed In Canada, along with the Taxable Capital Employed In Canada of any associated companies, exceeds $10 million.

14-65. If a CCPC and its associated companies has previous year Taxable Capital Employed In Canada of less than $10 million, the limit on which the 35 percent investment tax credit will be applicable is $3 million. If the CCPC's Taxable Capital Employed In Canada for the preceding year exceeds $10 million, the limit will be reduced by $3 for every $40 of the excess. It will be completely eliminated when the Taxable Capital Employed In Canada for the preceding year reaches $50 million as shown in the following calculation:

$$[\$3 \text{ Million}]\left[\frac{\$40 \text{ Million} - (\$50 \text{ Million} - \$10 \text{ Million})}{\$40 \text{ Million}}\right] = \text{Nil}$$

## Exercise Fourteen - 6

**Subject:** SR&ED Credits For CCPCs

Anfax has been a CCPC since it began operations and has a taxation year ending on December 31. It has no associated companies. Its Taxable Capital Employed In Canada equaled $12,500,000 for 2018 and $11,500,000 for 2019.

Determine its annual SR & ED expenditure limit for 2019.

**SOLUTION available in print and online Study Guide.**

## Refundable Investment Tax Credits

### *General Rules - 40 Percent Refund*

14-66. A problem with tax credits is that, in general, they have value only when the taxpayer has a tax liability. To deal with this problem, some tax credits are "refundable". What this means is that, when a taxpayer has earned a tax credit and does not have sufficient Tax Payable to use it in full, the government will pay ("refund") all or part of the unused amount to the taxpayer. We have encountered this type of situation previously for individuals with respect to the refundable medical expense supplement tax credit (see Chapter 4).

14-67. A refund can be made for up to 40 percent of the investment tax credits earned by a taxpayer, provided the taxpayer is:

- an individual;
- a "qualifying corporation", which is a Canadian controlled private corporation throughout the year with Taxable Income in the previous year, less an adjustment for Taxable Capital Employed In Canada (which is the same as the one illustrated in Paragraph 14-65), that is $500,000 or less before loss carry backs; or
- a trust where each beneficiary is an individual or a qualifying corporation.

14-68. This means that if an individual had $1,000,000 in SR&ED current expenditures, he would be eligible for a $150,000 [(15%)($1,000,000)] investment tax credit. If the individual did not have sufficient Tax Payable in the current year or the three previous years to use this credit, there would be a refund (payment) of up to $60,000 [(40%)($150,000)].

### *Additional Refund - 100 Percent Refund*

14-69. In the case of a qualifying corporation, additional amounts are refundable. To the extent that current SR&ED expenditures are eligible for the 35 percent investment tax credit, the resulting credit is eligible for a 100 percent refund. This means that a qualifying corporation that spends $3,000,000 on current SR&ED expenditures is eligible for a refund payment of up to $1,050,000 [(35%)($3,000,000)] from the government (qualifying corporations are described in Paragraph 14-67).

14-70. The 100 percent refund is only available on the first $3,000,000 of expenditures that qualify for the 35 percent investment tax credit. We would remind you that capital expenditures do not qualify for SR&ED credits.

## Carry Overs Of Investment Tax Credits

14-71. Under the definition of investment tax credit in ITA 127(9), unused investment tax credits may be carried back for up to 3 years and forward for 20 years. A taxpayer is required to claim all other available tax credits before calculating and claiming the investment tax credit for the year. Also, a taxpayer must reduce, to the fullest extent possible, federal Tax Payable for the current year before using investment tax credits to reduce previous years' federal Tax Payable.

### Exercise Fourteen - 7

**Subject:** Refundable Investment Tax Credits

Sci-Tech Inc. has made a number of expenditures that qualify for investment tax credits. They have invested $123,000 in Qualified Property in Nova Scotia. In addition, they have $1,200,000 in current expenditures for scientific research and experimental development. The Company is a Canadian controlled private corporation and, for the previous taxation year, has Taxable Income of $176,000 and Taxable Capital Employed In Canada of $6,000,000. The Company has no Tax Payable for the current year or the three previous years.

Determine the amount of the refund that Sci-Tech will receive as a result of earning these investment tax credits and any available carry forwards. Include in your answer any other tax consequences of these investment tax credits.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problem Fourteen-5 at this point.**

### Effect Of Acquisition Of Control On Investment Tax Credits

14-72. As was the case with companies having accumulated loss carry forwards, the government is concerned about the large amount of unused investment tax credits that are being carried forward in the tax records of Canadian corporations. The carry forwards reflect the fact that these corporations have experienced losses and, as a consequence, have not had a tax liability to which the non-refundable credits could be applied.

14-73. While the government does not object to these credits being used against Tax Payable resulting from improved profitability for the corporations that have experienced losses, there is concern that these loss corporations will be acquired by profitable corporations in order to make use of these credits. As a consequence, there are acquisition of control rules that apply to the carry forward of investment tax credits.

14-74. These rules are found in ITA 127(9.1) and (9.2). Their effect was described in the cancelled IT-151R5, Scientific Research and Experimental Development Expenditures as follows:

> If control of a corporation has been acquired ... subsection 127(9) may apply to restrict the availability of the corporation's investment tax credits. In general, these provisions limit the application of investment tax credits to the tax on the income from a particular business carried on by the corporation before the acquisition of control or any other business substantially all the income of which is from the sale, leasing, rental, or development of properties or the rendering of services similar to those of the particular business carried on by the corporation before the acquisition of control.

14-75. As you can see, the effect of these provisions is to treat investment tax credits in a manner similar to the treatment of non-capital loss carry forwards when there is an acquisition of control.

## Tax Basis Shareholders' Equity

### Shareholders' Equity Under GAAP

14-76. In this Chapter, we will be considering various distributions to shareholders. In order to comprehend this material, some understanding of the tax basis components of shareholders' equity is required.

14-77. You should be familiar with the components of Shareholders' Equity as they appear in a Balance Sheet prepared using generally accepted accounting principles (GAAP). The two basic components of the total balance disclosed are:

> **Contributed Capital** This is the amount that has been paid by investors in return for shares issued. In jurisdictions where par value shares can still be used, this balance may be divided into par value amounts and an excess over par amount, commonly designated contributed surplus.
>
> **Earned Capital (Retained Earnings)** This component reflects amounts that have been earned by the corporation and retained in the business. While this balance is sometimes referred to as earned surplus, the more common designation is retained earnings. In some situations, part of this balance may be designated as reserves.

14-78. This segregation into contributed and earned capital is based on the general legal requirement that dividends cannot be paid out of contributed capital. By using this disclosure, investors are informed as to the legal basis for payment of dividends by the corporation. However, this legal basis may not be supported by the cash resources that would be needed to, in fact, pay cash dividends.

### Paid Up Capital (Tax Basis Contributed Capital)

14-79. ITA 89(1) defines paid up capital, normally referred to as "PUC". This Subsection indicates that the amount should be calculated without reference to the *Income Tax Act*,

telling us that PUC should be based on legal stated capital as determined under the legislation governing the particular corporation (*Canada Business Corporations Act* or relevant provincial legislation). As contributed capital under GAAP is also based on legal stated capital, the initial PUC for shares issued will generally be equal to contributed capital under GAAP. However, as will be discussed in this and subsequent Chapters, there will be adjustments to PUC that have no equivalent adjustment under GAAP.

14-80. PUC is applied on an average per share basis to each class of shares. This means, for example, that if a corporation issues 100,000 shares to one individual at $10 per share and, at a later point in time, issues an additional 100,000 shares of the same class to a different individual at $15 per share, the per share PUC will be $12.50 for all of the shares of that class. Stated alternatively, all shares of a particular class will have the same per share PUC value.

14-81. Note the difference between the PUC value per share and the adjusted cost base (ACB) of a share. The ACB of a share is the average cost of the shares held by a particular shareholder. In the example in Paragraph 14-80, the taxpayer acquiring the first issue has an adjusted cost base of $10 per share, while the purchaser of the second issue has an adjusted cost base of $15 per share.

14-82. The importance of PUC lies in the fact that it is a capital contribution and does not reflect accumulated earnings of the corporation. Because of this, it can be distributed to shareholders as a return of capital (subject to any restrictions imposed by corporate law), without tax consequences for either the corporation, or the shareholder. This may not be the case, however, when capital distributions are made to shareholders of public corporations.

### Exercise Fourteen - 8

**Subject:** Determination Of PUC And Adjusted Cost Base

Halide Ltd. has one class of shares. The Company issued its first 100,000 shares at a price of $1.10 each. Two years later, an additional 50,000 shares were issued for $1.35 per share. During the current year, a further 30,000 shares were issued for $1.82 per share. One of the investors in the Company acquired 2,400 shares of the first group of shares issued, and an additional 3,850 shares from the most recent issue. Determine the adjusted cost base per share, as well as the total PUC of this investor's shares.

**SOLUTION available in print and online Study Guide.**

## Tax Basis Retained Earnings

### *Amount*

14-83. The situation with respect to Retained Earnings is much more complex. To begin, we will be dealing with a different total for tax purposes. As you are aware, there are significant differences between accounting Net Income and Net Income For Tax Purposes.

14-84. While the accounting literature defines accounting/tax differences as temporary differences with reference to Balance Sheet accounts (e.g., the difference between the Net Book Value and the UCC of a depreciable asset), most of these Balance Sheet differences are created by Income Statement differences (e.g., the difference between Amortization Expense and CCA). As a result, total Retained Earnings as determined under GAAP will, in most cases, be a significantly different number than the corresponding tax figure.

14-85. A further point here relates to terminology. In general, the term Retained Earnings has replaced Earned Surplus in accounting literature and in published financial statements. However, the term surplus is still alive and well in tax work. As evidence, we would note that the *Income Tax Act* contains only 5 references to Retained Earnings, in contrast to 44 references to Surplus.

### Basic Components

14-86. Moving beyond the differences in the total amount, we encounter further problems in relating tax and GAAP figures. Under GAAP, Retained Earnings is often a single homogeneous balance. While some companies still segregate parts of this balance into reserves, such components have no formal meaning beyond assisting with disclosure.

14-87. In contrast, the corresponding tax balance has four components, each with a well defined role in tax work. The four components are as follows:

- Capital Dividend Account (private companies only)
- Post-1971 Undistributed Surplus
- Pre-1972 Undistributed Surplus (no longer covered in this text)
- Pre-1972 Capital Surplus On Hand (no longer covered in this text)

14-88. The Capital Dividend Account is only available to private companies. It is discussed in detail in this Chapter beginning at Paragraph 14-92.

14-89. "Post-1971 Undistributed Surplus" tracks the earnings retained after 1971 that do not have any special tax status.

14-90. In Chapter 8 we noted that, prior to 1972, capital gains were not subject to tax in Canada. The 1972 introduction of capital gains taxation resulted in the need to have a complex set of transitional rules to avoid taxation of gains accrued prior to that date. Although at one time these rules were very important, with the passage of time this is no longer the case.

14-91. "Pre-1972 Undistributed Surplus" is simply earnings that accrued prior to 1972 that are retained in the corporation. The "Pre-1972 Capital Surplus On Hand" tracks capital gains and losses that accrued prior to 1972, but were realized after 1971. Such transactions are no longer of sufficient importance to warrant coverage in a general text such as this.

## Capital Dividend Account (CDA)

### Objective

14-92. The objective of the Capital Dividend Account (CDA) is to track items that can be distributed on a tax free basis to the shareholders of the corporation. While a number of different items can be included in this account, the reason for its use can best be understood in the context of capital gains.

> **EXAMPLE** During 2016, Uval Ltd. acquires land at a cost of $150,000. During 2019, the land is sold for $190,000, resulting in a capital gain of $40,000 ($190,000 - $150,000).
>
> **ANALYSIS** It is the intent of tax legislation to assess tax on only one-half of capital gains. This means that Uval will have a taxable capital gain of $20,000 [(1/2)($40,000)]. However, the remaining $20,000 is still being held by the corporation. While the goal of tax legislation is not to have taxes assessed on this balance, in the absence of some special provision, its distribution would be subject to tax in the hands of the recipient shareholders.

14-93. The CDA provides the required relief in this situation. The untaxed balance of $20,000 will be added to the CDA. This balance can then be used to pay a capital dividend, a special type of dividend that can be distributed tax free to the shareholders of the corporation. Such dividends will be discussed in more detail at a later point in this chapter.

14-94. While this analysis would appear to be relevant to all types of corporations, only private corporations can have a CDA. Note, however, the use of this account is available to private corporations, without regard to whether they are Canadian controlled.

### Procedures

14-95. As indicated in the preceding section, there are a number of different items that can be allocated to the capital dividend account. The complete definition of these items is found

in ITA 89(1) and is very complex. Without becoming involved in some of the more complex issues found in that Subsection, the basic components of the CDA are as follows:

**Capital Dividends Received** Capital dividends received from other corporations are added to the CDA. This preserves the tax free status of non-taxable amounts that pass through more than one corporation.

**Capital Gains** The non-taxable portion of realized net capital gains are accumulated in the CDA account, with this balance being reduced by the non-deductible portion of realized capital losses (this would include 100 percent of the gain on publicly traded shares that have been gifted to a registered Canadian charity).

Note that this component of the CDA cannot become negative and reduce the aggregate amount of the other CDA components, like capital dividends received.

**EXAMPLE** In 2014, a resident private corporation realizes a capital loss of $15,000, the non-deductible portion of which is $7,500. In 2016, it realizes a capital gain of $10,000, the non-taxable portion of which is $5,000. In 2019, it receives a capital dividend of $1,000.

**ANALYSIS** While the net of the capital gains component of the CDA is a negative amount of $2,500, the balance of this component in the CDA would be nil. The overall balance in the CDA is $1,000 (the capital dividend received).

**Life Insurance Proceeds** Life insurance proceeds received by the corporation are added to the account, net of the adjusted cost base of the policy. This can be an important addition when the company insures the life of one or more of its shareholders. This is a common procedure in owner-managed businesses, where life insurance proceeds are sometimes used to finance the buyout of the shares from the estate of a deceased shareholder.

**Capital Dividends Paid** The account is reduced by capital dividends paid. As will be discussed in Paragraph 14-111, an ITA 83(2) election is required.

## Exercise Fourteen - 9

**Subject:** Capital Dividend Account

The following transactions involve the Knerd Corporation's capital dividend account:

- In 2017, they sold land with an adjusted cost base of $86,000, for cash of $108,000.
- During the year ending December 31, 2018, the Company received a capital dividend of $8,200.
- On July 15, 2019, they sold goodwill for proceeds of $43,000. The goodwill had been internally developed and was not reflected in the Company's records. On January 1, 2019, there was a nil balance in the Company's Class 14.1 UCC.
- On October 31, 2019, the Company paid an ITA 83(2) capital dividend of $16,000. The appropriate election was made.

Determine the balance in the capital dividend account at December 31, 2019.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problems Fourteen-6 and 7 at this point.**

# Distributions Of Corporate Surplus

## Introduction

14-96. Corporate surplus, generally referred to by accountants as Retained Earnings, forms the basis for various distributions to shareholders of a corporation. This happens most commonly through the cash dividends that are paid by most Canadian companies. Less commonly, we encounter stock dividends and dividends in kind (distributions of corporate assets other than cash).

14-97. These fairly routine types of dividends were given coverage in Chapter 7 in our material on property income. However, they will be reviewed at this point as an introduction to the various types of deemed dividends that are under consideration here. We will also give further attention to ITA 83(2) capital dividends.

14-98. In addition to these various types of actual dividends, several types of deemed dividends can occur. The specific types of deemed dividends that will be covered in this section of Chapter 14 are as follows:

- ITA 84(1) Deemed Dividend on Increase of PUC
- ITA 84(2) Deemed Dividend on Winding Up or Reorganization of a Business
- ITA 84(3) Deemed Dividend on Redemption, Acquisition, or Cancellation of Shares
- ITA 84(4) and (4.1) Deemed Dividend on Reduction of PUC

14-99. With the exception of capital dividends, all of the dividends considered here are subject to taxes when they are actually received or deemed to be received by an individual. This means that, provided they are received from a taxable Canadian corporation, they will generally be subject to the dividend gross up and tax credit procedures. In those situations where they are designated as such by the payor, they will be treated as eligible dividends.

14-100. When such dividends are received by a corporation, rather than by an individual, there will be no gross up of the amount, nor any credit against corporate tax payable. The recipient corporation will include only the amount received in their Net Income For Tax Purposes. Further, this amount will generally be deducted in the determination of Taxable Income.

## Regular Cash Dividends

14-101. Regular cash dividends are paid out of a corporation's unrestricted surplus balances. The payment of cash dividends serves to reduce these balances. Unlike the payment of interest on debt, the payment of cash dividends does not create a tax deduction for the corporation. In effect, they are paid out of after tax funds.

14-102. If cash dividends are received by an individual or a trust, they are subject to the usual gross up and tax credit procedures. In contrast, if they are paid to another corporation, they are included in the corporation's Net Income For Tax Purposes, but deducted in the determination of the corporation's Taxable Income.

14-103. A further point here relates to the accounting treatment of dividends on certain types of preferred shares. IAS 32, *Financial Instruments - Presentation*, recommends that shares which require mandatory redemption by the issuer be classified as liabilities. Consistent with this, the dividend payments on these shares must be disclosed as interest, resulting in the amount of the distribution being deducted in the determination of accounting net income.

14-104. To date, this treatment has not been recognized by the CRA. From a tax point of view, the dividends paid on preferred shares with mandatory redemption provisions will be given the same treatment as any other dividend. This means that, even if the GAAP based financial statements of the enterprise present preferred dividends as interest expense, they will not be deductible to the paying corporation. This difference will require adjustment in converting accounting income to a corporation's Net Income For Tax Purposes.

## Stock Dividends

14-105. From an accounting perspective, a stock dividend is a pro rata distribution of new shares to the existing shareholder group of the corporation, normally accompanied by a capitalization of Retained Earnings equal to the fair market value of the shares issued.

**EXAMPLE** Jessica Rabin owns 100 shares of Fergis Ltd. She acquired these shares several years ago for $2,500 ($25 per share). On January 1, 2019, the Shareholders' Equity of Fergis Ltd. is as follows:

| | |
|---|---|
| No Par Common Stock (1,000,000 Shares) | $ 7,500,000 |
| Retained Earnings | 12,500,000 |
| Total Shareholders' Equity | $20,000,000 |

On December 31, 2019, the publicly traded shares of Fergis have a fair market value of $30 per share. On this date, the Company declares a 10 percent stock dividend (100,000 shares). This dividend is not designated as eligible.

**ANALYSIS - Fergis Ltd.** At the time of the stock dividend, Fergis would transfer an amount equal to the $3,000,000 [($30)(10%)(1,000,000)] fair market value of these shares from Retained Earnings to the contributed capital account. Subsequent to this transfer, the Shareholders' Equity of Fergis would be as follows:

| | |
|---|---|
| No Par Common Stock (1,100,000 Shares) | $10,500,000 |
| Retained Earnings ($12,500,000 - $3,000,000) | 9,500,000 |
| Total Shareholders' Equity | $20,000,000 |

From a tax point of view, the $3,000,000 increase in contributed capital would generally be an increase in PUC, reflecting an increase in the amount that could be distributed to the shareholders of the company on a tax free basis.

**ANALYSIS - Jessica Rabin** As a result of the stock dividend, she will receive 10 shares [(10%)(100)] of stock worth $300 [(10)($30)]. This dividend will be taxable to the extent that it reflects an increase in PUC. Provided the increase in the Fergis Ltd. PUC is equal to the $3,000,000 increase in Contributed Capital (the usual case), Jessica will have a dividend of $300 [($3,000,000)(100 ÷ 1,000,000)]. This non-eligible dividend will be grossed up to a taxable amount of $345 [($300)(115%)].

With respect to the adjusted cost base of the new shares, ITA 52(3) will deem her to have acquired 10 additional shares at a cost of $300. With this addition, the average per share adjusted cost base would be $25.45 [($2,500 + $300) ÷ 110].

**Note On PUC** In most accounting and tax texts, the usual procedure is to transfer an amount equal to the fair market value of the dividend shares issued to Retained Earnings. However, this may not be the case. In some provinces, the amount of legal stated capital to be assigned to the dividend shares is discretionary. If the assigned amount is a value that is lower than fair market value, the corresponding transfer to PUC will be lower. This results in a lower taxable value for the stock dividend and a smaller addition to the adjusted cost base of the shares.

14-106. These stock dividend rules create an unfortunate situation for the taxpayer. An individual receiving stock dividends will require a cash outflow (taxes on the dividend received) with no corresponding cash inflows (the dividends are not received in cash). This approach to the taxation of stock dividends serves to significantly discourage their use in Canada, particularly in the case of large publicly traded companies.

14-107. As noted, however, it is possible for a company to issue shares with a legal stated capital and a PUC that is less than fair market value. When this is the case, the negative tax effect that was described in the preceding paragraph can be reduced.

## Exercise Fourteen - 10

**Subject:** Stock Dividends

On June 30, 2019, the Shareholders' Equity of Sturgis Inc. is as follows:

| | |
|---|---|
| Common Stock (23,400 Shares Outstanding) | $351,000 |
| Retained Earnings | 462,000 |
| Total Shareholders' Equity | $813,000 |

On this date, the Company declares a 5 percent stock dividend. This dividend is not designated as eligible. At this time, the shares are trading at $25 per share. The Company increases its PUC by the fair market value of the new shares issued.

Jean Tessier is holding 1,000 of the Sturgis shares which he acquired several years ago at a cost of $18 per share. Determine the effect of this transaction on Jean's 2019 Net Income For Tax Purposes and 2019 federal Tax Payable. In addition, determine the adjusted cost base per share of his Sturgis Inc. holding.

**SOLUTION available in print and online Study Guide.**

## Dividends In Kind

14-108. While somewhat unusual, corporations do sometimes declare dividends that are payable in assets other than cash, or the corporation's own shares. An example of this might be a situation in which a corporation has a major holding of another corporation's shares and wishes to dispose of them. If the block is large, sale on the open market could significantly depress the proceeds received. A possible alternative is to distribute the shares on a pro rata basis to the corporation's existing shareholders.

14-109. From the point of view of the corporation, the dividend is treated as a disposition of the distributed property. Under ITA 52(2), the proceeds of disposition will be deemed to be the fair market value of the property distributed. Depending on the type of property, this could result in a capital gain, capital loss, recapture or terminal loss for the corporation.

14-110. Also under ITA 52(2), the shareholders are deemed to have acquired the assets at their fair market value. This amount is considered to be a taxable dividend subject to the usual gross up and tax credit procedures for eligible and non-eligible dividends.

**EXAMPLE** Hold Ltd. owns shares in Bold Inc. These shares have an adjusted cost base of $800,000 and a fair market value of $3,500,000. Hold Ltd. decides to distribute the Bold Inc. shares as a dividend in kind to its shareholders, all of whom are individuals.

**ANALYSIS** The tax consequences of this dividend are as follows:

- Based on deemed proceeds of $3,500,000, Hold Ltd. will have a taxable capital gain of $1,350,000 [(1/2)($3,500,000 - $800,000)].
- Hold Ltd. will have declared a dividend of $3,500,000.
- The shareholders will have received a taxable dividend of $3,500,000, subject to either the eligible or non-eligible dividend gross up and tax credit procedures.
- The adjusted cost base of the Bold Inc. shares to the Hold Ltd. shareholders will be $3,500,000.

## Exercise Fourteen - 11

**Subject:** Dividends In Kind

Sandrine Cloutier owns 15 percent of the 500,000 outstanding shares of Cloutier Ltd. Cloutier Ltd. owns 150,000 shares of Botan Inc. The Botan Inc. shares were acquired at a cost of $42 per share and have a current fair market value of $51 per share. On June 30, 2019, Cloutier Ltd. declares a non-eligible dividend involving the distribution of all of the Botan shares on a pro rata basis to its existing shareholders.

Determine the effect of the payment of this dividend on Cloutier Ltd.'s 2019 Net Income For Tax Purposes. In addition, determine the effect of the payment of this dividend on Sandrine Cloutier's 2019 Net Income For Tax Purposes and 2019 federal Tax Payable.

**SOLUTION available in print and online Study Guide.**

## Capital Dividends Under ITA 83(2)

14-111. As we have previously indicated, the balance in the capital dividend account reflects amounts that can be distributed on a tax free basis to the shareholders of the private corporation. However, this tax free status does not happen automatically. When a corporation makes a distribution, an amount not in excess of the balance in the capital dividend account can be designated as a capital dividend. This is accomplished through an election under ITA 83(2), using Form T2054. Note that, provided there is a balance in the capital dividend account, this election can be made both for regular and for deemed dividends.

14-112. Distributing a capital dividend reduces the balance in the capital dividend account. It will be received by the taxpayer, whether the taxpayer is a corporation, a trust or an individual, on a tax free basis with no reduction in the adjusted cost base of their shares. You will also recall that, if the recipient of the capital dividend is a private corporation, the amount of the dividend will be added to the recipient corporation's capital dividend account.

14-113. If an election is made to pay a capital dividend in excess of the balance in the capital dividend account, a tax equal to 60 percent of the excess will be assessed under ITA 184(2) of the *Income Tax Act*. This will not affect the tax free nature of the dividend to the recipient.

14-114. In some circumstances, an excess election can occur inadvertently. For example, the non-taxable portion of a capital gain may be added to the capital dividend account and, at a subsequent point in time, a reassessment will cause the capital gain to be recharacterized as business, rather than capital. This in turn means that the capital dividend account will be reduced through the reassessment process. If this happens, ITA 184(3) and 184(4) contain provisions that allow for a revision of the election in order to avoid the 60 percent penalty.

14-115. As a final point, the fact that capital dividends are not taxable dividends means that they are not subject to the dividend gross up and tax credit procedures. In turn, this means that they cannot be classified as either eligible or non-eligible dividends under any circumstances.

## Deemed Dividends Under ITA 84(1) - Increase In PUC

### General Rules

14-116. ITA 84(1) dividends involve a situation where there has been an increase in the corporation's PUC, accompanied by a smaller increase in the net assets of the corporation. This would include situations where the increase in PUC is accompanied by no increase in the net assets of the corporation.

14-117. The most common example of this type of deemed dividend would involve situations where a corporation issues shares to settle a debt obligation that has a carrying value that is smaller than the fair market value of the shares.

**EXAMPLE** A corporation issues shares with a PUC of $500,000 to a creditor, in settlement of debt with a carrying value of $450,000. Because of a decline in interest rates since the debt was issued, the $500,000 reflects the market value of the debt.

**ANALYSIS** This transaction would result in an ITA 84(1) deemed dividend of $50,000 ($500,000 - $450,000).

14-118. The reason for treating this $50,000 as a form of income to the shareholders is that it represents an increase in the amount that can be distributed to them on a tax free basis. As a group, their economic position has clearly been improved as a result of this transaction.

14-119. It is important to note that, because the extra $50,000 in PUC will be allocated to all of the shareholders of the particular class, a corresponding treatment will be given to the deemed dividend. That is, the $50,000 dividend will be allocated on a pro rata basis to all of the shareholders of the class, not just the new shareholder who acquired his shares by giving up $450,000 in debt securities.

14-120. In order to provide equity in this situation, the amount assessed as a dividend will be added to the adjusted cost base of the shares. For the new shareholder, his share of the $50,000 ITA 84(1) deemed dividend is added to the adjusted cost base of the shares that were issued to him, resulting in an adjusted cost base for these shares of $450,000 plus his share of the deemed dividend. Note that this will not be the PUC of these shares, since PUC is calculated as an average value for all of the outstanding shares on a class by class basis.

**EXAMPLE** Lantin Inc. has 250,000 shares outstanding at the beginning of the current year. These shares were sold for $12 each, resulting in a PUC of $3,000,000. Jeanne Moreau owns 25,000 of these shares which she acquired at the time of their issue for $12 each.

During the current year, the company issues 50,000 new shares with a market value of $750,000 ($15 per share) in order to retire debt with a carrying value of $675,000.

Shortly after the 50,000 new shares were issued, Ms. Moreau sells her 25,000 shares for $450,000 ($18 per share).

**ANALYSIS** The ITA 84(1) deemed dividend will be calculated as follows:

| | |
|---|---|
| PUC Of New Shares [(50,000)($15)] | $750,000 |
| Increase In Net Assets (Carrying Value Of Debt Retired) | ( 675,000) |
| ITA 84(1) Deemed Dividend | $ 75,000 |

This would be allocated to all of the outstanding shares in the amount of $0.25 ($75,000 ÷ 300,000) per share. This would be a taxable dividend, subject to either the eligible or non-eligible dividend gross up and tax credit procedures.

With respect to Ms. Moreau's holding, this $0.25 per share dividend would increase her per share adjusted cost base to $12.25 ($12.00 + $0.25). Given this, the tax consequences of her sale would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [(25,000)($18)] | $450,000 |
| Adjusted Cost Base [(25,000)($12.25)] | ( 306,250) |
| Capital Gain | $143,750 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 71,875 |

## Exercise Fourteen - 12

**Subject:** ITA 84(1) Deemed Dividends

At the beginning of the current year, Unilev Inc. has 126,000 shares of common stock outstanding. The shares were originally issued at $10.50 per share for total proceeds of $1,323,000, with this amount constituting the PUC. During the current year, a creditor holding $450,000 of the Company's debt agrees to accept 40,000 newly issued common shares of the Company in exchange for settlement of the debt obligation. At the time of this exchange, the shares are trading at $12.70 per share.

Subsequent to the exchange, Mr. Uni, who had purchased 5,000 Unilev Inc. shares at the time of their original issue, sells the shares for $13.42 per share.

Describe the tax consequence(s) to all of the shareholders of Unilev Inc. as a result of the exchange of debt for common shares. In addition, describe the tax consequences to Mr. Uni resulting from the sale of his Unilev Inc. shares.

**SOLUTION available in print and online Study Guide.**

### *Excluded Transactions*

14-121. There are a number of transactions involving increases in PUC that are specifically excluded from the ITA 84(1) deemed dividend treatment. The most important of these are:

- **Stock Dividends** While there will be an increase in PUC in excess of the increase in net assets when a stock dividend is declared, such dividends are not considered to be an ITA 84(1) deemed dividend. Rather, they are taxed under ITA 82(1) as regular dividends. From the point of view of the recipient of the dividend, this distinction is of no consequence.
- **Shifts Between Classes** When the PUC of one class of shares is decreased and, at the same time, the PUC of a different class is increased by a corresponding amount, there is no ITA 84(1) deemed dividend.
- **Conversion Of Contributed Surplus** In situations where the consideration received for shares issued is in excess of the amount added to PUC, for tax purposes a contributed surplus balance is created. This contributed surplus balance can generally be converted to PUC, without the increase in PUC being treated as a deemed dividend under ITA 84(1).

## Deemed Dividends Under ITA 84(2) - On Winding-Up

14-122. When there is a winding-up of a Canadian corporation under the provisions of ITA 88(2), the corporate assets will be sold and the liabilities, including taxes on the various types of income created by the sale of the assets, will be paid. The remaining cash will then be distributed to the shareholders of the corporation. Subsequent to this distribution, the shares of the corporation will be canceled. This process is covered in detail in Chapter 17.

14-123. In this Chapter, we would note that ITA 84(2) indicates that the excess of the fair market value of the amount distributed over the PUC of the shares that are canceled is considered to be a deemed dividend. While ITA 84(2) defines this entire amount as a deemed dividend, some components of this total are, in effect, redefined under ITA 88(2)(b). Specifically, ITA 88(2)(b) indicates that the ITA 84(2) dividend will be dealt with as follows:

**Capital Dividend** To the extent that the corporation has a balance in its capital dividend account, ITA 88(2)(b) indicates that this amount of the distribution will be considered a separate dividend, which will be received on a tax free basis under ITA 83(2). As was noted in our discussion of capital dividends, this treatment will only apply if an appropriate election is made.

**Distribution Of Pre-1972 Capital Surplus On Hand** As mentioned previously in this Chapter, the importance of Pre-1972 Capital Surplus On Hand has diminished greatly over time and is no longer of importance to most users of a general text such as this. However we would point out here that if the corporation has pre-1972 Capital Surplus On Hand, the distribution of this amount will be deemed not to be a dividend.

**Taxable Dividend** Any remaining distribution will be treated as a taxable dividend under ITA 84(2), subject to either the eligible or non-eligible dividend gross up and tax credit procedures.

14-124. To illustrate these provisions, consider the following:

**EXAMPLE** After selling its assets and paying all of its liabilities, a corporation has cash of $1,200,000 available for distribution to its only shareholder. The PUC of the company's shares is $100,000 and this is also their adjusted cost base. The balance in the capital dividend account is $175,000. The company makes the appropriate election to have the distribution of the $175,000 treated as a capital dividend under ITA 83(2).

**ANALYSIS** The analysis of the $1,200,000 distribution would be as follows:

| | |
|---|---|
| Cash Distributed | $1,200,000 |
| PUC Of Shares | ( 100,000) |
| ITA 84(2) Deemed Dividend | $1,100,000 |
| ITA 83(2) Capital Dividend | ( 175,000) |
| ITA 88(2)(b) Taxable Dividend | $ 925,000 |

Depending on whether or not the $925,000 wind-up dividend, or some portion of it, is designated as eligible, it would be subject to either the eligible or non-eligible dividend gross up and tax credit procedures.

14-125. From the point of view of the shareholder, there has been a disposition of his shares, an event that requires the determination of a capital gain or loss. In the absence of a mitigating provision, this capital gain or loss would be calculated using the $1,200,000 as the proceeds of disposition, an approach that would double count $1,100,000 of this amount as both a deemed dividend and a capital gain or loss.

14-126. Fortunately, this problem is resolved by the ITA 54 definition of "proceeds of disposition". This definition indicates that, to the extent that an amount received is considered to be a deemed dividend under ITA 84(2), it is excluded from the proceeds of disposition. This means that the capital gain on the disposition of the shares in the example would be calculated as follows:

| | |
|---|---|
| Cash Distributed | $1,200,000 |
| Less: ITA 84(2) Deemed Dividend | ( 1,100,000) |
| ITA 54 Proceeds Of Disposition | $ 100,000 |
| Adjusted Cost Base | ( 100,000) |
| Capital Gain | Nil |

## Exercise Fourteen - 13

**Subject:** ITA 84(2) Deemed Dividends

After selling its assets and paying all of its liabilities, a corporation has cash of $2,350,000 available for distribution to its only shareholder. The corporation was established 20 years ago with an investment of $250,000. This figure is both the PUC and the adjusted cost base of the shares. The balance in the capital dividend account is $340,000 and the company makes the appropriate election to have the distribution

of this amount be treated as a capital dividend under ITA 83(2). What are the tax consequences of distributing the $2,350,000 to the corporation's only shareholder?

**SOLUTION available in print and online Study Guide.**

## Deemed Dividends Under ITA 84(3) - On Redemption, Acquisition, Or Cancellation Of Shares

14-127. An ITA 84(3) deemed dividend occurs most commonly when a corporation redeems some of its outstanding shares. Such dividends can also occur when the corporation acquires or cancels some of its outstanding shares. To the extent that the redemption amount paid by the corporation exceeds the PUC of the shares redeemed, a deemed dividend is assessed under ITA 84(3).

14-128. For the corporation, this is a distribution of their unrestricted surplus balance. From the point of view of the person receiving the redemption proceeds, the deemed dividend component of the proceeds will be treated as an ordinary taxable dividend, subject to either the eligible or non-eligible dividend gross up and tax credit procedures.

14-129. However, there is a problem here. As a redemption of shares is also a disposition of the redeemed shares, the proceeds of redemption will also be used as the proceeds of disposition. As was the case with the ITA 84(2) deemed dividends on winding up, this creates the possibility that some amount of the proceeds will be double counted as both a deemed dividend and a capital gain.

14-130. The solution to this problem is similar to the one we described in our discussion of ITA 84(2) deemed dividends. The ITA 54 definition of proceeds of disposition excludes any amounts received that are deemed to be ITA 84(3) dividends.

**EXAMPLE** Mr. Jonas owns all of the preferred shares of Jonas Ltd. They were issued with a PUC of $75,000. However, their adjusted cost base to Mr. Jonas is $25,000. They are redeemed by the corporation for $200,000.

**ANALYSIS** The analysis of this transaction is as follows:

| | |
|---|---|
| Cash Distributed | $200,000 |
| PUC Of Shares Redeemed | ( 75,000) |
| ITA 84(3) Deemed Dividend | $125,000 |

This deemed dividend would be subject to either the eligible or non-eligible dividend gross up and tax credit procedures.

The capital gain on the disposition would be calculated as follows:

| | |
|---|---|
| Proceeds Of Redemption | $200,000 |
| Less: ITA 84(3) Deemed Dividend | ( 125,000) |
| ITA 54 Proceeds Of Disposition | $ 75,000 |
| Adjusted Cost Base | ( 25,000) |
| Capital Gain (PUC - ACB) | $ 50,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 25,000 |

We would note that, in situations where the PUC and adjusted cost base are equal, these calculations will result in no capital gain or loss. If the PUC exceeds the adjusted cost base, the result will be a capital gain. Alternatively, if the PUC is less than the adjusted cost base, a capital loss will result from the disposition. Note that, if the individual shareholder receiving redemption proceeds is affiliated with the corporation, any capital loss arising on the disposition will be disallowed.

## Exercise Fourteen - 14

**Subject:** ITA 84(3) Deemed Dividends

When first incorporated, Tandy Ltd. issued 233,000 common shares in return for $1,922,250 in cash ($8.25 per share). All of the shares were issued to Ms. Jessy Tandy, the founder of the Company. Except for 15,000 shares, she is still holding all of the originally issued shares. The 15,000 shares were sold to Ms. Tandy's brother, Jesuiah, for $7.90 per share, the estimated market value of the shares at that time. Because of ongoing difficulties between the two siblings, Ms. Tandy has arranged for Tandy Ltd. to redeem all of her brother's shares at a price of $11.75 per share during the current year. Any dividends resulting from the redemption will be non-eligible. Determine the tax consequences of this redemption to Ms. Tandy and Jesuiah.

**SOLUTION available in print and online Study Guide.**

## Deemed Dividends Under ITA 84(4) And ITA 84(4.1)

14-131. This type of dividend is not as common as the other deemed dividends we have discussed. It arises when a corporation resident in Canada distributes a part of its invested capital to its shareholders, without redeeming or canceling any of its shares. It might occur, for example, if a corporation divested itself of a major division and did not wish to reinvest the proceeds from the sale in other corporate assets. In this type of situation, the proceeds may be distributed to shareholders. Such distributions are commonly referred to as liquidating dividends.

14-132. In order to make all, or part, of the distribution tax free, it is usually accompanied by a reduction in PUC. For a non-public company, if the reduction in PUC is equal to the amount distributed, no ITA 84(1) dividend arises. However, if the distribution exceeds the PUC reduction, an ITA 84(4) deemed dividend is created. Note that ITA 84(4.1) contains a different set of rules for public companies. Under these alternative rules, a deemed dividend can arise, even if the distribution does not exceed the PUC reduction.

**EXAMPLE** Jong Ltd., a CCPC, has shares with a PUC of $5,000,000 and a nil balance in its capital dividend account. As it has disposed of a major division for cash, it will distribute $1,000,000 to its shareholders. In order to limit the tax effects of this distribution, the PUC of the shares will be reduced by $700,000.

**ANALYSIS** Under ITA 84(4), $700,000 of the total distribution will be a tax free distribution of PUC. The remaining $300,000 is treated as a deemed dividend, subject to the usual gross up and tax credit procedures. The adjusted cost base of the shares would be reduced by $700,000, the amount of the tax free distribution to shareholders. However, there would be no reduction in the adjusted cost base for the $300,000 distribution as it would be subject to tax as a deemed dividend.

14-133. ITA 84(4.1) provides a different rule that overrides ITA 84(4) in the case of public companies. For these companies, if a payment is made to shareholders in conjunction with a reduction of PUC that is not part of a reorganization of the corporation's business or its capital, and there is no redemption, acquisition, or cancellation of shares, the entire distribution is generally treated as a deemed dividend. Note that ITA 84(3) would be applicable if there was a redemption, acquisition, or cancellation of shares.

14-134. With respect to our example, this means that, if Jong Ltd. is a public company, the entire $1,000,000 distribution will be considered to be a deemed dividend under ITA 84(4.1). As the $1,000,000 amount will be subject to tax, the adjusted cost base of the shares will not be reduced by this distribution.

14-135. There is an exception to this general rule for public corporations. If the payment can reasonably be considered to be derived from a transaction that is outside the ordinary

course of business for the corporation, it can be considered a tax free return of capital to the extent that it is accompanied by a PUC reduction.

14-136. An example of this would be where the company disposes of a business unit of the corporation and does not wish to reinvest the proceeds in some other line of business activity. The distribution would have to be made within 24 months of the occurrence of the non-ordinary transaction and the exception would only apply to the first such payment made. If there is more than one payment, the second and any subsequent payments would come under the general ITA 84(4.1) deemed dividend rule.

**Exercise Fourteen - 15**

**Subject**: ITA 84(4) Deemed Dividends

Mr. Jondo owns all of the outstanding shares of Jondo Ltd., a CCPC. The shares have a PUC of $450,000 and an adjusted cost base of $625,000. Because it has recently consolidated its operations, Jondo Ltd. pays a liquidating dividend of $330,000, accompanied by a PUC reduction of $225,000. What are the tax consequences of this distribution to Mr. Jondo?

# Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 14:

- 8 Self Study problems,
- 5 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

# Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### Assignment Problem Fourteen - 1

**(Acquisition Of Control Rules - Losses)**

For many years, Janice Virtue had been a professor of Business Ethics in the Faculty of Business at a major Canadian university. In 2017, while continuing to teach one section of Business Ethics, she established Virtue Ltd. (VL) in order to market her numerous publications and online courses involving the application of ethical principles to business situations.

While the company experienced a net operating loss of $128,000 in the fiscal period ending December 31, 2017, VL experienced rapidly increasing sales during 2018. Because Janice believed the improvement was indicative of the success to come, VL moved to larger premises which were purchased for $423,000. Of this total, $100,000 related to the land, with the remaining $323,000 allocated to the building. Because the building was to be used exclusively for non-residential purposes, it was allocated to a separate Class 1. In selling the previous premises in 2018, VL experienced an allowable capital loss on the land of $36,000. The building was sold at its UCC value.

The Net Income For Tax Purposes of VL for the year ending December 31, 2018, after deducting CCA on the Class 1 building, was $16,000. VL realized no capital gains during the year.

In early 2019, a joint CRA/RCMP operation found that Janice was the mastermind and guiding force behind a network of illegal aliens working throughout Canada. They were selling stolen weapons and preparing thousands of tax returns with large fictitious charitable donations. The fee for the tax return preparation was always paid for in cash which was not reported to the CRA.

Various charges were laid and, while Janice remains free on bail, a court date has been set for September.

By May, 2019, Janice's lawyer indicated that it is likely that she will be convicted on multiple charges and will spend a significant amount of time in prison. She has also been advised by her employer that her contract to teach Business Ethics will not be renewed in the fall.

Given these circumstances, Janice decides to sell her VL shares. She finds a corporate buyer who is willing to acquire the shares on June 1, 2019. This buyer, Peerzon Books, is a large publicly traded Canadian company. The VL assets include the copyrights to all of her publications. While sales of these publications have fallen off precipitously in 2019, Peerzon believes its crack marketing team will be able to put the proper spin on Janice's life experiences and sales will take off.

As this acquisition of control resulted in a deemed year end, VL prepared an Income Statement for the period January 1, 2019 through May 31, 2019. This short fiscal period statement showed an additional business loss of $34,000 for this period. There were, however, no further capital losses.

On May 31, 2019, the values of the Company's assets were as follows:

| Asset | Cost | UCC | Fair Market Value |
|---|---|---|---|
| Temporary Investments | $ 32,000 | N/A | $ 7,000 |
| Accounts Receivable | 123,000 | N/A | 110,000 |
| Land | 100,000 | N/A | 115,000 |
| Building | 323,000 | $313,310 | 352,000 |
| Equipment | 46,000 | 33,120 | 5,000 |
| Vehicles (Class 10) | 36,000 | 21,420 | 25,000 |
| Copyrights | Nil | Nil | 42,000 |

VL will make all possible elections to minimize any net capital and non-capital loss balances.

Shortly after taking over VL, Peerzon Books decided that some of the extra space in VL's facilities could be used for manufacturing electronic reading devices. VL's income (loss) from the two separate businesses for the period June 1 through December 31, 2019, and for the 2020 taxation year was as follows:

| Business | June 1 to Dec. 31, 2019 | 2020 Year |
|---|---|---|
| Electronic Reading Devices | $123,000 | ($ 26,000) |
| Janice's Publications | ( 53,000) | 185,000 |

**Required:**

A. Determine the amount of the non-capital loss balance that will be carried forward after the acquisition of control by Peerzon Books, and calculate the amount of the net capital losses that will be lost as a result of this change in ownership, if any.

B. Indicate the maximum amount of the non-capital loss carry forward that can be used during the period June 1 through December 31, 2019, and the amount remaining at December 31, 2019.

C. Indicate the maximum amount of the non-capital loss carry forward that can be used during 2020, and the amount remaining at December 31, 2020.

### Assignment Problem Fourteen - 2

***(Acquisition Of Control Rules)***

Boudin Inc. was incorporated 10 years ago in New Brunswick. At its formation, all of the shares were issued to Andre Boudin. The Company's business involved the distribution of health food products throughout the Maritime provinces. The Company's taxation year ends on December 31.

The Company operated successfully for a number of years. However, late in 2016, a local newspaper found that many of the claims made by the products that they distributed were either misleading or false. Widespread publication of this information resulted in a steep decline in the sales of Boudin Inc.

Because of this the Company had an operating loss of $42,000 in 2017 and $123,000 in 2018. In addition, there was a 2018 allowable capital loss of $32,000 on the disposal of some temporary investments.

In early 2019, seeing no real hope for a return to profitable operations, Mr. Boudin begins a search for a buyer for his Company's shares. On May 1, 2019, all of the shares are sold to Healthy Bites Ltd., a manufacturer of health food products. This Company hopes to be able to revive the fortunes of Boudin Inc.

For the period January 1, 2019 through April 30, 2019, Boudin Inc. experienced a business loss of $48,000. This figure includes a write-down of inventories to their fair market values on April 30, 2019, and a deduction for uncollectible receivables, calculated as per the provisions of ITA 111(5.3). It does not include any taxable capital gains, allowable capital losses, Allowable Business Investment Losses, or property losses.

On April 30, 2019, Boudin Inc.'s assets had the following values:

| Asset | Cost | UCC | Fair Market Value |
|---|---|---|---|
| Long-Term Investments* | $ 47,000 | N/A | $ 82,000 |
| Land | 207,000 | N/A | 305,000 |
| Building | 465,000 | $360,000 | 485,000 |
| Equipment | 350,000 | 190,000 | 150,000 |

*Healthy Bites intends to sell these investments as soon as possible.

**Required:**

A. Indicate the amount of any non-capital and net capital loss carry forwards that would remain after the May 1, 2019 acquisition of control, using the assumption that Healthy Bites Ltd. elects to have a deemed disposition of all eligible assets at their fair market values.

B. If Healthy Bites Ltd. decides to only use the election(s) required to eliminate those losses that would expire at the acquisition of control, indicate the assets on which the elections should be made, and the amounts that should be elected.

C. Advise Healthy Bits Ltd. as to which course of action (Part A or B) they should take.

### *Assignment Problem Fourteen - 3*

***(Associated Companies)***

The following situations are **independent** of each other. All of the corporations involved are Canadian controlled private corporations and have only one class of shares.

A. Barton Ltd. owns 51 percent of the shares of Norton Inc.

B. Thomas Boulding owns 60 percent of the shares of Boulding Ltd. and 70 percent of the shares of Boulding Inc.

C. Mary Cunningham and Brenda Parton each own 50 percent of the shares of Elm Ltd. In addition, they each own 50 percent of the shares of Maple Inc. Mary and Brenda are not related.

D. Alice Fielding owns 100 percent of the shares of Fielding Inc. and 40 percent of the shares of Lawson Ltd. Betty Falcon owns 100 percent of the shares of Falcon Inc. and 40 percent of the shares of Lawson Ltd. Alice is the sister of Betty's husband. The remaining 20 percent of the shares of Lawson Ltd. are owned by unrelated parties.

E. Michael Forbes owns 70 percent of the shares of Forbes Ltd. and 30 percent of the shares of Malcom Inc. Forbes Ltd. also owns 30 percent of the shares of Malcom Inc.

F. Richard Barnes, Susan Firth, and Terry Anson each own one-third of the shares of Rastau Ltd. In addition, Richard and Susan each own 50 percent of the shares of Sucrol Inc.

**Required:** For each of the preceding situations, indicate whether the corporations are associated and explain your conclusion with reference to the *Income Tax Act*. In order to assist you in answering this question, we have provided you with the content of ITA 256(1).

**ITA 256(1) Associated corporations** — For the purposes of this Act, one corporation is associated with another in a taxation year if, at any time in the year,

(a) one of the corporations controlled, directly or indirectly in any manner whatever, the other;
(b) both of the corporations were controlled, directly or indirectly in any manner whatever, by the same person or group of persons;
(c) each of the corporations was controlled, directly or indirectly in any manner whatever, by a person and the person who so controlled one of the corporations was related to the person who so controlled the other, and either of those persons owned, in respect of each corporation, not less than 25% of the issued shares of any class, other than a specified class, of the capital stock thereof;
(d) one of the corporations was controlled, directly or indirectly in any manner whatever, by a person and that person was related to each member of a group of persons that so controlled the other corporation, and that person owned, in respect of the other corporation, not less than 25% of the issued shares of any class, other than a specified class, of the capital stock thereof; or
(e) each of the corporations was controlled, directly or indirectly in any manner whatever, by a related group and each of the members of one of the related groups was related to all of the members of the other related group, and one or more persons who were members of both related groups, either alone or together, owned, in respect of each corporation, not less than 25% of the issued shares of any class, other than a specified class, of the capital stock thereof.

## Assignment Problem Fourteen - 4

### *(Associated Companies)*

Each of the following is an **independent** Case involving the ownership of voting shares of Canadian controlled private corporations. All of the corporations have taxation years that end on December 31 and have only one class of shares.

A. Mr. Bond owns 55 percent of Sarnen Inc. Sarnen Inc. owns 40 percent of Barxo Ltd. Mr. Bond also owns 14 percent of Hax Ltd., which in turn owns 54 percent of the shares of Barxo Ltd. Mr. Bond's 10 year old daughter owns 6 percent of the shares of Barxo Ltd.

B. Mr. Jones, Mr. Knight, and Mr. Long are three unrelated individuals.

- Mr. Jones owns 50 percent of the shares of Anix Inc. and 25 percent of the shares of Brex Ltd.
- Mr. Knight owns 50 percent of the shares of Brex Ltd.
- Mr. Long owns 50 percent of the shares of Anix Inc. and 25 percent of the shares of Brex Ltd.

C. Sam Scully owns 60 percent of Scully Inc. His sister, Susan Wilson, owns 80 percent of Wilson Ltd. and 30 percent of Scully Inc. Sam Scully also owns 10 percent of Wilson Ltd.

D. Joan and Sarah Lartch are sisters. Joan owns 100 percent of the shares of JL Inc. and 31 percent of the shares of Meadow Ltd. Her sister Sarah owns 60 percent of the shares of SL Inc., with the remaining 40 percent of the shares held by her mother. Sarah also owns 39 percent of the shares of Meadow Ltd. The remaining shares of Meadow Ltd. are held by an unrelated party.

E. John and May Carp each own 30 percent of the shares of Jomay Inc. Serge and Beth Carp each own 45 percent of the shares of Besa Ltd. John and Serge Carp are brothers. Beth Carp owns 40 percent of the shares of Jomay Inc. and May Carp owns 10 percent of the shares of Besa Ltd.

**Required:** For each of the preceding Cases, determine whether the corporations are associated. Support your conclusions with references to specific provisions of ITA 256. In order to assist you in answering this question, we have provided you with the content of ITA 256(1).

**ITA 256(1) Associated corporations** — For the purposes of this Act, one corporation is associated with another in a taxation year if, at any time in the year,

(a) one of the corporations controlled, directly or indirectly in any manner whatever, the other;
(b) both of the corporations were controlled, directly or indirectly in any manner whatever, by the same person or group of persons;
(c) each of the corporations was controlled, directly or indirectly in any manner whatever, by a person and the person who so controlled one of the corporations was related to the person who so controlled the other, and either of those persons owned, in respect of each corporation, not less than 25% of the issued shares of any class, other than a specified class, of the capital stock thereof;
(d) one of the corporations was controlled, directly or indirectly in any manner whatever, by a person and that person was related to each member of a group of persons that so controlled the other corporation, and that person owned, in respect of the other corporation, not less than 25% of the issued shares of any class, other than a specified class, of the capital stock thereof; or

(e) each of the corporations was controlled, directly or indirectly in any manner whatever, by a related group and each of the members of one of the related groups was related to all of the members of the other related group, and one or more persons who were members of both related groups, either alone or together, owned, in respect of each corporation, not less than 25% of the issued shares of any class, other than a specified class, of the capital stock thereof.

### Assignment Problem Fourteen - 5

(Investment Tax Credits)
The following three independent cases involve the tax procedures associated with various types of investment tax credits.

#### Case A

In 2018, Baron Inc. employed 22 eligible apprentices. The total amount paid to these individuals is $458,000. Ten of the apprentices are paid $17,000 for the year, with the remaining twelve each being paid $24,000.

In addition, on December 15, 2018, the Company acquires $850,000 in Class 10 assets on which a 10 percent investment tax credit is available.

**Required:** Describe the 2018 and 2019 tax consequences associated with making these expenditures and claiming the related investment tax credits. Include in your solution the CCA for 2018 and 2019.

### Case B

Since its incorporation several years ago, Aria Inc. has been a Canadian controlled private corporation. Selected information for the taxation years 2018 and 2019 is as follows:

| | 2018 | 2019 |
|---|---|---|
| Taxable Income | $ 425,000 | $ 511,000 |
| Taxable Capital Employed In Canada | 10,800,000 | 11,200,000 |

**Required:** Determine Aria's SR&ED annual expenditure limit for the 2019 taxation year.

### Case C

Sylman Ltd. has qualified as a Canadian controlled private company since its incorporation. During 2018 it had Taxable Income of $17,000. The corresponding figure for 2019 is $4,000. The Company has no Tax Payable for the taxation year ending December 31, 2019, or for any of the three preceding years.

Despite its very low income figures, the Company has Taxable Capital Employed in Canada for 2018 of $14,700,000. The corresponding figure for 2019 is $14,482,000.

During 2019, the Company has made a number of expenditures that qualify for investment tax credits:

- $106,000 for qualified expenditures in the Atlantic Provinces.
- $2,700,000 in current expenditures for SR&ED.

**Required:** Determine the amount of the refund that Sylman Ltd. will receive as a result of earning these investment tax credits and any available carry forwards. Include in your answer any other tax consequences of these investment tax credits.

## Assignment Problem Fourteen - 6

### (Capital Dividend Account)

Since its incorporation in 2008, Park Inc. has qualified as a Canadian controlled private corporation. During the period since incorporation and until December 31, 2019, the Company has had the following transactions that might involve the capital dividend account.

1. In 2010, the Company sold a depreciable asset with a capital cost of $225,000. It was the last asset in its class and the balance in the Class at the time of the sale was $129,600. The proceeds from the sale were $275,000. No assets were added to the Class during 2010.
2. In 2012, the Company received a capital dividend of $46,000.
3. In 2013, the Company received life insurance proceeds, net of the adjusted cost base of the policy, in the amount of $27,500.
4. In 2014, the Company paid a capital dividend of $38,000 and eligible dividends of $19,000. The required election was made.
5. In 2014, the Company sold a parcel of land for $100,000. The adjusted cost base of this land was $145,000.
6. In January 2019, Park acquired all of the shares of a small incorporated business at a cost of $850,000. This total cost was allocated as follows:

| | |
|---|---|
| Non-Depreciable Assets | $150,000 |
| Depreciable Assets (See Note) | 500,000 |
| Goodwill | 200,000 |
| Total Cost | $850,000 |

**Note** The capital cost of the non-depreciable assets to the acquired business was $100,000. The capital cost of the depreciable assets was $450,000 and their UCC was $375,000. The goodwill was internally generated and was not reflected on the books of the acquired business. Park does not use a rollover provision to transfer the assets.

While Park intended to integrate this business into its other operations, they received an unsolicited offer to purchase the shares of this business for $965,000. Finding this offer too attractive to resist, it was accepted and the business was sold on October 1, 2019. On January 1, 2019, Park had no UCC balance in Class 14.1. The total proceeds were allocated as follows:

| | |
|---|---:|
| Non-Depreciable Assets | $175,000 |
| Depreciable Assets | 550,000 |
| Goodwill | 240,000 |
| Total Proceeds | $965,000 |

7. In 2019, the Company received a capital dividend of $17,800. They paid a capital dividend of $21,600 and eligible dividends of $8,000. The required election was made.

**Required:** Determine the balance in the Company's capital dividend account as of December 31, 2019.

## *Assignment Problem Fourteen - 7*
### *(Corporate Surplus Distributions)*

Groman Ltd. is a Canadian controlled private corporation whose shareholders are all individuals. On December 31 of the current year, the Company's condensed Balance Sheet is as follows:

| | | |
|---|---:|---:|
| Total Assets | | $62,000 |
| | | |
| Liabilities | | $22,000 |
| Shareholders' Equity: | | |
| 500 Preferred Shares (Paid Up Capital) | $11,000 | |
| 600 Common Shares (Paid Up Capital) | 15,600 | |
| Retained Earnings | 13,400 | 40,000 |
| Total Equities | | $62,000 |

Any dividends paid or deemed to be paid by Groman Ltd. would be non-eligible.

**Required:** Discuss the tax consequences of each of the following **independent** transactions. Tax consequences would include the increase or decrease in the individual shareholder's Taxable Income, any change in the adjusted cost base and/or PUC of any shares that are still in the hands of the individual shareholder after the described transaction(s), and any federal dividend tax credits that result from the described transaction(s).

A. (i) A long-term debtholder has agreed to convert $10,000 of his debt to 500 Preferred Shares, with a Paid Up Capital (PUC) of $11,000. This conversion does not qualify for the ITA 51 rollover that is described in Chapter 17 of the text.

(ii) After the conversion described in A(i), a different shareholder, with 250 Preferred Shares, sold them for $5,500 in an arm's length transaction. His shares cost $4,100 a number of years ago.

B. The Company declared and distributed a 5 percent stock dividend on the Common Shares. An addition of $780 was made to Paid Up Capital, with Retained Earnings reduced accordingly.

C. In return for assets with a fair market value of $17,500, the Company issued a demand note for $12,000 and 250 fully paid Preferred Shares having a per share Paid Up Capital equal to those currently outstanding.

D. An investor owns 100 of the Common Shares. They were purchased at a price of $15 per share. The Company redeems these shares at a price of $32 per share.

# Tax Software Assignment Problem

### *Tax Software Assignment Problem Fourteen - 1*

RadionFaux Industries Ltd. (RIL) is a Canadian controlled private corporation, located at 123 ABC Street in Ottawa, Ontario K4E 1A1. Its Ontario Corporation tax account number is 1234567. Its phone number is (613) 111-1111. It was incorporated on February 24, 1990 in Ottawa.

The government's Crown Copyright no longer permits us to use fake Business Numbers in software problems. To reduce the number of ProFile's error messages because of this, enter NR (for not registered) in the Business Number field.

The Company has 1,000 shares of common stock issued and outstanding, all of which are held by Margaret Ottawa (SIN 527-000-301).

Ms. Ottawa, the president and director of the Company, is the person who should be contacted with respect to matters concerning the Company's books and records. She is the authorized person as well as the signing officer.

RIL is a retailer of pet supplies. All of its sales occur within Canada. It has net assets of $235,000 on December 31, 2018. This includes a few investments that Ms. Ottawa inherited from her father two years earlier.

RIL owns all of the 500 common shares of OttawaFaux Inc., which holds most of the investments Ms. Ottawa inherited from her father. The common shares have a book value of $1,200,000. OttawaFaux Inc. has the same location and phone number as RadionFaux Industries Ltd. OttawaFaux Inc. has a December 31 fiscal year end. Enter NR (for not registered) in the Business Number field for OttawaFaux Inc.

OttawaFaux Inc. is also involved in earning active business income through the breeding and sale of championship dogs. It has total assets of $2,000,000 and total revenues for 2018 of $200,000. Its Taxable Capital Employed In Canada was $350,000 as at December 31, 2017, and $365,000 as at December 31, 2018.

The following information applied to RIL:

| | |
|---|---|
| Taxable Capital Employed In Canada - 2017 | $328,000 |
| Taxable Capital Employed In Canada - 2018 | 411,000 |
| Total Assets As At December 31, 2018 | 750,000 |
| RDTOH As At December 31, 2017 | 5,200 |
| Dividends Declared And Paid During 2017 | Nil |
| GRIP Balance As At December 31, 2017 | 11,750 |
| Capital Dividend Account As At December 31, 2017 | 6,000 |

RIL does not use International Financial Reporting Standards (IFRS). For the taxation year ending December 31, 2018, RIL's Income Statement, before any deduction for income taxes, was as follows:

| | |
|---|---|
| Sales Revenues | $580,000 |
| Interest On Long-Term Debt | 27,500 |
| Interest Received On Foreign Bank Account (Note 1) | 18,000 |
| Eligible Dividends On Royal Bank Shares | 17,500 |
| Non-Eligible Dividends From OttawaFaux Inc. (Note 2) | 42,000 |
| Gain On Sale Of Shares (Note 3) | 27,000 |
| Total Revenues | $712,000 |
| Cost Of Goods Sold | $208,000 |
| Amortization Expense | 122,000 |
| Other Operating Expenses | 147,000 |
| Total Expenses (Excluding Taxes) | $477,000 |
| Net Income (Before Taxes) | $235,000 |

**Note 1** This interest is net of $2,000 in taxes withheld in Ireland.

**Note 2** As a result of paying this $42,000 in dividends to RIL, OttawaFaux Inc. received a dividend refund of $14,000.

**Note 3** On March 23, 2018, RIL sold 2,700 shares of Canadian Imperial Bank of Commerce. The common shares had cost $118,800 on June 6, 2015 and were sold for net proceeds of $145,800.

**Other Information**:

1. Expenses include a deduction for charitable donations to the Ottawa Civic Hospital in the amount of $5,000.
2. RIL's Expenses include penalties of $3,500 resulting from a judgment in the Tax Court Of Canada.
3. RIL reimbursed Ms. Ottawa $34,000 for business meals and entertainment for clients and suppliers during the year.
4. During the year, RIL incurred $20,000 in landscaping costs. For accounting purposes these are being treated as a capital asset, to be amortized using the straight-line method over 10 years. The related amortization is included in the Amortization Expense shown on the Income Statement.
5. The opening UCC balances were $246,000 for Class 1, $135,000 for Class 8 and $90,000 for Class 10. The only fixed asset disposition during the year was the sale of a delivery truck. The truck had cost $35,000 and was sold for its net book value of $12,000. The only fixed asset acquisition was $52,000 in office furniture on April 1, 2018.
6. During 2018, RIL paid taxable dividends of $92,000. Of these dividends, $25,000 was designated as eligible. On September 1, 2018, RIL also elects to pay the maximum capital dividend allowable.
7. RIL allocates $60,000 of the annual business limit to OttawaFaux Inc. This is $5,000 more than OttawaFaux Inc. can utilize in 2018, but RIL cannot use the excess.
8. RIL paid quarterly income tax instalments of $8,000 each on the 20th of March, June, September and December during 2018.
9. RIL has a website describing the products it carries, but no income is generated from the website.

**Required**: Prepare the federal corporate tax return for RIL for the 2017 taxation year using the ProFile T2 corporate software program. On the ProFile schedule titled "Info", the Filing question "Complete return from GIFI?" is answered Yes by default, click No. Ignore the GIFI requirements except as follows:

*Tax Software Assignment Problem*

On GIFI Schedule 125:

- Input the total revenues less the Gain On Sale Of Shares ($685,000) on the line "Total Sales Of Goods And Services" (Code 8000).
- Choose "Realized gains / losses on sale of investments" (Code 8211) from the drop down menu under Code 8089 and input the Gain On Sale Of Shares.
- Choose "Purchases / cost of materials" (Code 8320) from the drop down menu under Cost of Sales and input the Cost of Goods Sold.
- Choose "Amortization of tangible assets" (Code 8670) from the drop down menu under Operating Expenses and input the amortization expense.
- Choose "Other expenses" (Code 9270) from the drop down menu under Operating Expenses and Other Operating Expenses.

On GIFI Schedule 100:

- Input the Net Income figure as "Cash and deposits" (Code 1000) in order to make the total assets equal to the total liabilities and equity.

Although this will not properly complete the GIFI statements, it will eliminate the warning messages that would otherwise be generated when the Net Income figure and Amortization Expense are input on Schedule 1. These GIFI entries will have no effect on the calculations in the tax return.

In addition, to prevent audit warnings, S141, "Notes Checklist", has to be completed. Assume there are no notes to the financial statements and answer "No" to any other relevant questions.

# CHAPTER 15

# Corporate Taxation And Management Decisions

## The Decision To Incorporate

### Basic Tax Considerations

#### *Deferral And Reduction*

15-1. One of the more important decisions facing the owner of a business is deciding whether or not the business should be incorporated. There are, of course, a number of non-tax considerations involved in this decision and these factors will be reviewed in this Chapter. At this point, however, we are concerned with the influence of corporate taxation on this decision.

15-2. The decision to incorporate, from both a legal and a tax point of view, has the effect of separating the business from its owners. This means that, in order for incorporated business income to be made available to the owner, it must go through two levels of taxation. First, the amount of Tax Payable applicable to the corporation will be determined. Then, when any after tax amounts are distributed to the owner, additional personal taxes will be payable on the amounts received.

15-3. This dual system of taxation may or may not be advantageous to the owner of the business. In terms of the types of tax advantage that can result from an individual incorporating business income, there are two possibilities:

> **Tax Reduction** In some situations, the total taxes that would be paid at the combined corporate and personal level will be less when the business is incorporated than would be the case if the individual had earned the business income directly as an individual proprietor.
>
> **Tax Deferral** As was noted in Paragraph 15-2, getting income from its source through a corporation and into the hands of a shareholder involves two levels of taxation. If the shareholder does not require all available income for his personal needs, after tax funds can be left in the corporation, resulting in a postponement of the second level of taxation. If the rate at which the corporation is taxed is lower than the rate at which the individual would be taxed on the direct receipt of the income, the use of a corporation provides tax deferral.

15-4. As you probably discerned while proceeding through the earlier chapters on corporate taxation, whether the presence of a corporation will provide a deferral or reduction of taxes depends on both the type of corporation and the type of income that is being earned by that business entity. An additional important factor, as will be discussed in this Chapter, is the province in which the individual and the corporation pay income taxes.

15-5. This means that there is no one answer to the question of whether incorporation will provide tax reduction and/or tax deferral. Because of this, we will devote a major section of this Chapter to examining the various possible combinations of income types and corporate classifications in order to provide you with a general understanding of the availability of these two tax features. This material begins in Paragraph 15-12.

### Using Imperfections In The Integration System

15-6. We have previously noted that the integration provisions that are contained in Canadian tax legislation are based on the assumption that certain corporate and personal tax rates prevail. Even at the federal level, actual corporate tax rates vary from the notional rates required for effective integration.

15-7. In addition, there are significant variations in the corporate tax rates used by the provinces. This means that it is unlikely that the combined federal/provincial rate in any given province will be equal to the notional combined rates assumed in the integration model. As it may be possible to use incorporation to take advantage of these imperfections in the integration system, it is important for you to understand how the imperfections can influence the decision to incorporate. We will provide a section which deals with this issue, beginning in Paragraph 15-58.

### Income Splitting

15-8. Even in situations where the use of a corporation neither reduces, nor defers significant amounts of taxes for a single individual, incorporation may be attractive to a family or other related group of individuals. In a typical family situation, it is fairly common to find some individuals earning amounts far in excess of the amount required to put them in the maximum personal tax bracket while, at the same time, other members of the group have incomes that leave them in a lower bracket or free of taxes altogether.

15-9. As was discussed in Chapter 1, if some method can be found to redistribute the aggregate family or group income from high income to low income individuals, the tax savings can be significant. While we did not discuss this in Chapter 1, using a corporation can be one of the most effective approaches to achieving income splitting goals. Given this, we will provide a section which deals with this possibility beginning in Paragraph 15-89. You should note, however, that the Tax On Split Income (TOSI) makes using a private corporation for income splitting much more difficult. (See coverage in Chapter 11.)

## Other Advantages And Disadvantages

### Advantages

15-10. Other advantages that are normally associated with the use of a corporation are as follows:

**Limited Liability** Because a corporation is a separate legal entity, the shareholders' liability to creditors is limited to the amount that they have invested. That is, creditors of the corporation can look only to the assets of the corporation for satisfaction of their claims. However, for smaller corporations, obtaining significant amounts of financing will almost always require the owners to provide personal guarantees on any loans, making this advantage somewhat illusory for this type of company. Note, however, limited liability may still be important for a smaller corporation if it is exposed to significant product or environmental claims.

**Lifetime Capital Gains Deduction** Individuals who dispose of the shares of a qualified small business corporation are eligible to claim the lifetime capital gains

deduction ($866,912 for 2019). To qualify, a business must be a Canadian controlled private corporation with substantially all of the fair market value of its assets (at least 90 percent) used in an active business carried on primarily in Canada (at least 50 percent) at the time of disposition. In addition, no one other than the seller, or related persons, can own the shares during the 24 months preceding the sale. During this 24 month period, more than 50 percent of the fair market value of the assets must have been used in active business carried on primarily in Canada. For a more complete discussion of this provision, see Chapter 11.

**Flexibility On Timing, Type And Distribution Of Income** In the case of a corporation with a single shareholder, the owner can determine when his compensation will be paid and the form that it will take (e.g., salary vs. dividends). As mentioned previously, he may also be able to use the corporate form to split income with family members.

**Foreign Taxes** Foreign estate taxes can often be avoided by placing foreign property in a Canadian corporation.

**Estate Planning** A corporation can be used in estate planning, particularly with respect to freezing the asset values of an estate (see Chapter 19).

### *Disadvantages*

15-11. Disadvantages that are normally associated with incorporation include the following:

**Use Of Losses** An individual can deduct business and unrestricted farm losses against any other source of income, including employment and property income. If the business or farm is incorporated, such losses can only be deducted against past or future corporate income. The corporation's losses belong to the corporation and cannot be used to offset income earned by the individual shareholder. This is of particular importance to operations that are just getting started as they will frequently experience significant losses in their formative years.

**Tax Credits** A corporation is not eligible for personal tax credits, such as the basic personal, tuition fee, age, pension, and disability tax credits.

**Charitable Donations** Charitable donations provide the basis for a tax credit for individuals, largely at 29 or 33 percent at the federal level. In contrast, they are a deduction in calculating Taxable Income for a corporation. In general, this deduction will not be as valuable as the tax credit that an individual would receive for donations.

**Additional Maintenance Costs** The legal, accounting, and other costs associated with maintaining a business operation will be significantly higher in the case of a corporation (e.g., the cost of filing a corporate tax return on an annual basis).

**Winding Up Procedures** The complications associated with the termination of an incorporated business will be greater than would usually be the case with a proprietorship or partnership. In addition, there may be adverse tax effects on winding up.

**We suggest you work Self Study Problems Fifteen-1 and 2 at this point.**

# Tax Reduction And Deferral

## Approach

15-12. As we have noted, whether the use of a corporation will result in a reduction or deferral of taxes will depend on the type of income being earned, as well as the type of corporation. In this section, we will examine this issue by using a basic example to consider this issue in the following situations:

- A public corporation.
- A CCPC earning active business income that is eligible for the small business deduction, and business and property income that is not eligible for the small business deduction.
- A CCPC earning investment income (net taxable capital gains and other property income, excluding dividends).
- A CCPC earning both eligible and non-eligible dividend income.

15-13. These cases should serve to provide you with a good understanding of the ability of incorporation to provide either tax reductions or tax deferral for an individual taxpayer under current rates of corporation taxation.

15-14. To assist you in understanding this material (which is covered in detail in Chapter 13), we remind you that eligible dividends include:

- Designated dividends paid by CCPCs with a positive General Rate Income Pool (GRIP) at the end of the taxation year in which the dividend is paid.
- Designated dividends paid by non-CCPCs that do not have a positive Low Rate Income Pool (LRIP) balance at the time the dividend is paid.

## Basic Example

### Data On The Individual Taxpayer

15-15. In order to consider the various results that can be achieved by incorporating a source of income, we will use a simple example in which an individual, Mr. Renaud, has access to $100,000 in income that he can either receive directly or channel through a corporation. We will assume that, before any consideration of this additional $100,000, Mr. Renaud has sufficient Taxable Income to place him in the maximum federal tax bracket of 33 percent (amounts over $210,371 for 2019). The Tax Payable on his other income is sufficient to absorb all of his personal and other tax credits.

15-16. To illustrate the effects of incorporating different types of income, several cases will be presented with varying assumptions as to the source of this income and the type of corporation that will be established. However, before turning to these cases, we will give consideration to the various personal and corporate tax rates that will be used.

### Personal Tax Rates And Tax Payable

15-17. In these examples, we will assume that Mr. Renaud lives in a province where the maximum provincial tax rate on individuals is 18 percent. As all of Mr. Renaud's additional income will be subject to this maximum rate, his combined federal/provincial marginal rate will be 51 (33 + 18) percent. The 18 percent provincial rate that we are using is approximately the 2019 average for the nine provinces other than Quebec, which has a different tax system. However, it is significantly below the maximum rate of 21 percent.

15-18. This 51 percent rate is applicable to the direct receipt of income. This means that, if Mr. Renaud receives the $100,000 in income without channeling it through a corporation, taxes of $51,000 will be paid and $49,000 will be retained.

15-19. If the income is channeled through a corporation, the situation becomes more complex. Taxes must be paid at the corporate level, leaving only part of the total income available for distribution to shareholders. When this after tax amount is distributed to the shareholders, the amount of dividends received must be grossed up, with this amount providing a basis for a credit against Tax Payable. The amounts involved will depend on whether the dividends are non-eligible (e.g., paid by a CCPC out of income that has benefited from the small business deduction), or eligible (e.g. paid by a non-CCPC out of fully taxed income):

**Non-Eligible Dividends** These dividends are grossed up by 15 percent and benefit from a federal dividend tax credit of 9/13 of the gross up. We will assume that Mr. Renaud lives in a province where the dividend tax credit on non-eligible dividends is 20 percent of the dividend gross up. This is approximately the 2019 average for the nine provinces excluding Quebec.

**Eligible Dividends** These dividends are grossed up by 38 percent and benefit from a federal dividend tax credit of 6/11 of the gross up. We will assume that Mr. Renaud lives in a province where the dividend tax credit on eligible dividends is 36 percent of the dividend gross up. This is approximately the 2019 average for the nine provinces excluding Quebec.

15-20. Using these gross up and tax credit amounts, the rates applicable to Mr. Renaud on eligible and non-eligible dividends can be calculated as follows:

| Personal Tax On Dividends | Non-Eligible Dividends | Eligible Dividends |
|---|---|---|
| Provincial Dividend Tax Credit | 20.0% | 36.0% |
| Dividends Received | 100.0% | 100.0% |
| Gross Up | 15.0% | 38.0% |
| Taxable Dividends | 115.0% | 138.0% |
| Times The Combined Federal/Provincial Tax Rate | 51.0% | 51.0% |
| Equals: Combined Federal/Provincial Tax Rate On Dividends Received | 58.7% | 70.4% |
| Less: Dividend Tax Credit [(9/13 + 20%)(15%)] | ( 13.4%) | |
| Less: Dividend Tax Credit [(6/11 + 36%)(38%)] | | ( 34.4%) |
| Effective Personal Tax Rate On Dividends Received | 45.3% | 36.0% |

15-21. For use in our examples, we will round the non-eligible rate to 45 percent. For eligible dividends, we will use 36 percent.

## Corporate Tax Rates

15-22. In making the required calculations, we will use the corporate federal tax rates that apply for the 2019 calendar year. With respect to provincial rates, we will use 2.5 percent for income eligible for the small business deduction and 13.5 percent for other income. Both of these rates are close to the average rates applicable in the nine provinces excluding Quebec. When these provincial rates are added to the corresponding federal rates, the combined rates are 11.5 percent (9% + 2.5%) for income eligible for the small business deduction and 28.5 percent (15% + 13.5%) for other income. The following table provides the rates that will be used in our examples:

| | |
|---|---|
| General Part I Tax Rate | 38% |
| Federal Tax Abatement | 10% |
| General Rate Reduction (GRR) | 13% |
| Refundable Tax On Investment Income Of A CCPC (ART) | 10-2/3% |
| Federal Small Business Deduction | 19% |
| Provincial Tax Rates | |
| Income Eligible For Federal Small Business Deduction | 2.5% |
| Income Not Eligible For Federal Small Business Deduction | 13.5% |
| Refundable Portion Of Part I Tax On Investment Income | 30-2/3% |
| Refundable Part IV Tax | 38-1/3% |

15-23. Note that the general rate reduction is not applicable to income that benefits from either the small business deduction or the M&P deduction. In addition, it is not applicable to

aggregate investment income of a CCPC which attracts the 10-2/3 percent Additional Refundable Tax (see Chapter 13)).

15-24. We will apply this basic information, in a number of different situations, in order to examine the question of whether the incorporation of $100,000 in income will serve to either reduce or defer taxes for an individual taxpayer.

## Public Corporation

### M&P Deduction

15-25. As discussed in Chapter 12, both the M&P deduction and the GRR are at the same rate. As these two provisions cannot be used simultaneously, the effective federal tax rate will not be altered by the use of the M&P deduction. Given this, we will not give separate attention to situations where a public corporation is earning income that is eligible for the M&P deduction. Keep in mind, however, that companies will continue to make the M&P calculation in those provinces where there is a favourable provincial rate for this type of income.

### General Results

15-26. With only $100,000 of income, there is no possibility that Mr. Renaud would be in a position to establish a public company. However, this case does serve to illustrate a simple calculation of corporate taxes. In addition, this same tax calculation would apply to a CCPC on amounts of active business income in excess of the CCPC's allocated annual business limit.

15-27. As discussed in Chapter 13, dividends paid by non-CCPCs, a category that includes public companies, will generally be designated as eligible. There will be situations, however, where a public corporation has an LRIP. While this raises the possibility that at least some of the dividends paid by such a company would be non-eligible, we do not feel that this situation is of sufficient importance that an illustration of the tax reduction and deferral results is warranted. It should be fairly obvious to you that for non-eligible dividends, the tax reduction results would be significantly worse than those illustrated in the following calculations.

| **Public Corporation** | |
|---|---|
| Federal Tax [(38%)($100,000)] | $38,000 |
| Federal Tax Abatement [(10%)($100,000)] | ( 10,000) |
| General Rate Reduction [(13%)($100,000)] | ( 13,000) |
| Federal Tax Payable | $15,000 |
| Provincial Tax Payable [(13.5%)($100,000)] | 13,500 |
| Corporate Tax Payable | $28,500 |
| | |
| Corporate Business Income | $100,000 |
| Corporate Tax Payable | ( 28,500) |
| Maximum Eligible Dividend Payable | $ 71,500 |
| Personal Tax On Eligible Dividends [(36%)($71,500)] | ( 25,740) |
| Income Retained By The Individual | $ 45,760 |
| | |
| After Tax Retention - With Corporation | $ 45,760 |
| After Tax Retention - Without Corporation | ( 49,000) |
| Advantage (Disadvantage) With Corporation | ($ 3,240) |

### Analysis

15-28. If the $100,000 had been received directly, $49,000 [($100,000)(1 - .51)] would be retained, an amount greater than the $45,760 that is retained when the $100,000 is flowed through a public corporation. In terms of total taxes, incorporation is clearly not desirable.

15-29. However, there is a deferral of tax on income that is left within the corporation. Taxes at the corporate level are $28,500, significantly less than the $51,000 that would be paid on the direct receipt of income. There is some question as to whether this amount of deferral would justify the payment of an additional $3,240 in taxes.

15-30. More to the point is that, in real world terms, deferral is not an issue for shareholders of publicly traded companies. In the case of private corporations with a single shareholder or a small shareholder group, these individuals can control the extent to which their corporation distributes resources. If they do not have an immediate need for funds, tax deferral can be achieved by leaving resources in their corporation.

15-31. This is not the case with large publicly traded companies. Their dividend decisions are based on a large number of factors, including corporate cash needs and the maximization of share values. The cash flow needs of individual shareholders would rarely be at the top of this list.

## Integration And Eligible Dividends

15-32. The preceding example is based on the public corporation paying eligible dividends. The government's stated goal in bringing in the eligible dividends legislation was to improve integration by lowering the total corporate and personal taxes paid on income flowed through a public company. The calculations in Paragraph 15-27 make it clear that, at current corporate tax rates, this stated goal has not been achieved.

15-33. As discussed in Chapter 7, the gross up and tax credit procedures on eligible dividends are based on a notional corporate tax rate of 27.54 percent. As the combined federal/provincial rates for 2019 average 28.5 percent, which is close to the required rate for integration to be effective, corporate tax rates are not the main problem.

15-34. The problem is with the dividend tax credit rates. Effective integration requires the combined federal/provincial tax credit to be equal to the gross up. This means that, given the federal rate of 6/11, the provincial dividend tax credit would have to be 5/11 or 45.5 percent. In actual fact, most of the provincial dividend tax credit rates are below this level, ranging from a low of 19.6 percent to a high of 50.8 percent. The average, however, at 36.2 is well below the required 45.5 percent.

### Exercise Fifteen - 1

**Subject**: Eligible Dividends And Integration

Ms. Jennifer Ashley is the owner of a number of successful CCPCs. For 2019, she has sufficient income that any additional personal income will be taxed at a combined federal/provincial rate of 45 percent. She lives in a province where the provincial tax credit on eligible dividends is equal to 47.1 percent of the gross up. Ms. Ashley has made an investment in a business venture that she anticipates will generate $100,000 of active business income during the coming year. If she retains personal ownership of this investment, she will retain $55,000 [($100,000)(1 - 45%)] after taxes. If she transfers this investment to a new private corporation, it would not be allocated any amount of the small business deduction and its income would be taxed at a combined federal/provincial rate of 26.5 percent (15% + 11.5%). She has asked your advice as to whether she should retain the investment personally, or transfer it to a new corporation. Provide the information required by Ms. Ashley.

**SOLUTION available in print and online Study Guide.**

## CCPC - Active Business Income

### General Results

15-35. A CCPC can be subject to two different tax rates on its active business income. A low rate is available on up to $500,000 of income that is eligible for the small business deduction, with a higher tax rate assessed on income that is not eligible for this valuable deduction. With respect to the provinces, there is a similar dual rate system. In addition, we will have to take into consideration the fact that dividends that have been paid out of income that has benefited from the small business deduction cannot be designated as eligible dividends.

15-36. We will continue to use the Mr. Renaud example from Paragraph 15-15 to illustrate the tax consequences of applying these two rates. While using the basic data from this example, we will consider two different cases:

**Case One** In Case One, we will assume that the corporate income is eligible for the small business deduction. This means that dividends that are received by Mr. Renaud will be non-eligible and subject to tax at a rate of 45 percent (see Paragraph 15-21).

**Case Two** In Case Two, we will assume that none of the corporate income is eligible for the small business deduction (the full amount has been allocated to an associated corporation). This means that the dividends that are received by Mr. Renaud can be designated as eligible and subject to tax at a rate of 36 percent. You will note that the results in this case are identical to those for a public corporation (see Paragraph 15-27).

| Active Business Income Of CCPC | Case One SBD Deduction | Case Two No SBD |
|---|---|---|
| Federal Tax [(38%)($100,000)] | $ 38,000 | $ 38,000 |
| Federal Tax Abatement [(10%)($100,000)] | ( 10,000) | ( 10,000) |
| Small Business Deduction [(19%)($100,000)] | ( 19,000) | N/A |
| General Rate Reduction [(13%)($100,000)] | N/A | ( 13,000) |
| Federal Tax Payable | $ 9,000 | $ 15,000 |
| Provincial Tax Payable: | | |
| At 2.5 Percent | 2,500 | N/A |
| At 13.5 Percent | N/A | 13,500 |
| Corporate Tax Payable | $ 11,500 | $ 28,500 |
| | | |
| Corporate Business Income | $100,000 | $100,000 |
| Corporate Tax Payable | ( 11,500) | ( 28,500) |
| Maximum Dividend Payable | $ 88,500 | $ 71,500 |
| Personal Tax At 45 Percent (Non-Eligible) | ( 39,825) | N/A |
| Personal Tax At 36 Percent (Eligible) | N/A | ( 25,740) |
| Income Retained By The Individual | $ 48,675 | $ 45,760 |
| | | |
| After Tax Retention - With Corporation | $ 48,675 | $ 45,760 |
| After Tax Retention - Without Corporation | ( 49,000) | ( 49,000) |
| Advantage (Disadvantage) With Corporation | ($ 325) | ($ 3,240) |

### Analysis

15-37. As can be seen in the preceding table, there is a disadvantage for income flowed through a corporation, even when that income is eligible for the small business deduction. In the absence of the small business deduction, the corporate choice results in a $3,240 disadvantage. Note that this is identical to the results found in our analysis of public corporation taxation (see Paragraph 15-27).

15-38. In both cases the use of a corporation results in deferral of taxes. In the small business deduction case the corporate taxes are only $11,500, as compared to $51,000 when the

income is received directly. When this significant amount of deferral is combined with the small tax disadvantage associated with this alternative, using the corporate route when the small business deduction is available seems advantageous. Note, however, the benefit of the deferral can only be achieved if the funds are left in the corporation.

15-39. The situation is less clear when the small business deduction is not available. As corporate taxes are only $28,500, well below the $51,000 that would be paid on direct receipt of income, there is significant deferral. However, the price that is paid for this is $3,240 in extra taxes to be paid when the income is distributed by the corporation. If Mr. Renaud is in a position to leave the funds in the corporation for some length of time, it seems likely that he would find this to be a worthwhile trade off.

15-40. A further point related to tax deferral is sometimes overlooked. Any income that is left in the corporation should not be left idle. If it is not needed in the principal activities, it is likely that it will be invested in assets that will produce investment income. If this income is taxed as investment income, the result will be prepayment of taxes at the corporate level. This will be illustrated in a later example when we look at the taxation of investment income received by a Canadian controlled private corporation.

## Exercise Fifteen - 2

**Subject:** Incorporation Of Active Business Income

Keith Slater has an unincorporated business that he anticipates will have active business income of $126,000 for the taxation year ending December 31, 2019. He has employment income in excess of $300,000, with additional amounts subject to a provincial tax rate of 16 percent. The provincial dividend tax credit is equal to 27 percent of the dividend gross up for non-eligible dividends. Also in his province of residence, the corporate tax rate is 3 percent on income eligible for the small business deduction and 12 percent on other income. Mr. Slater has asked your advice as to whether he should incorporate this business. Advise him with respect to any tax deferral that could be available on income left in the corporation and on any tax savings that could be available if all of the income is paid out as dividends.

**SOLUTION available in print and online Study Guide.**

### *"Bonusing Down" Active Business Income*

15-41. A traditional tax planning technique for owners of CCPCs that have active business income in excess of their annual business limit is to "bonus down". As our example has shown, income that is eligible for the small business deduction benefits from significant tax deferral, and only a small tax cost. In contrast, if a CCPC's Taxable Income does not benefit from the small business deduction, a tax cost is incurred. As shown in Paragraph 15-36, the after tax retention on $100,000 of income that is not eligible for the small business deduction is $3,240 less than if the income is received directly.

15-42. When it is likely that a CCPC will have Taxable Income in excess of its annual business limit ($500,000 if there are no associated companies and no applicable grinds), the simple solution is for the owner of the CCPC to pay himself sufficient additional salary that the corporation's Taxable Income will be reduced to the amount of income that is eligible for the small business deduction.

> **EXAMPLE** In our example, if Mr. Renaud had a CCPC with active business income of $600,000, paying additional salary of $100,000 would result in after tax retention of $49,000 on receipt of this salary. This is, of course, $3,240 higher than the $45,760 that would be paid if the $100,000 ($600,000 - $500,000) that is not eligible for the small business deduction was taxed at the corporate level, with the residual amount being paid to Mr. Renaud as eligible dividends.

15-43. Tax practitioners sometimes find it difficult to convince some individuals that bonusing down is a good idea. The problem is that bonusing down involves paying taxes out of the owner-manager's personal funds. It is not uncommon to encounter individuals who, even in situations where there is a clear cut tax advantage to using this procedure, will simply refuse to make the required salary payments. While this is usually not a rational decision, it appears to reflect a greater level of comfort for an owner-manager when he does not have to pay the taxes directly out of his personal assets.

### Electing Out Of The Small Business Deduction

15-44. ITA 89(11) allows a CCPC to make an election not to be a CCPC. A related provision, ITA 89(12), allows a corporation to revoke the ITA 89(11) election and return to being a CCPC. Note that the use of either of these provisions creates a deemed year end. In some circumstances, this may have adverse tax consequences (e.g., shortened loss carry forward periods).

15-45. The good news is that making this election will allow the corporation to designate its dividends as eligible. The bad news is that it will lose the small business deduction. While there may be some situations where this election may be useful, the fact that it appears to have a significant tax cost would suggest that its application would be rare.

## CCPC - Investment Income Other Than Dividends

15-46. As was discussed in Chapter 13, the aggregate investment income of a CCPC is taxed at full corporate rates. Neither the small business deduction nor the general rate reduction is available to offset these rates. In addition, there is an additional refundable tax under ITA 123.3 (the ART) equal to 10-2/3 percent of investment income.

15-47. To offset this high level of taxation, a dividend refund is available at a rate of 38-1/3 percent of dividends paid. Note, however, investment income that is eligible for a refund does not add to the corporation's GRIP balance. This means that it does not contribute to the corporation's ability to pay eligible dividends.

15-48. Continuing our Mr. Renaud example from Paragraph 15-15, if Mr. Renaud incorporates, as it is greater than $50,000, his $100,000 in investment income would likely result in a grind of his small business limit. However, as his corporation would have no other income, this would not be relevant in this example. Given this, his after tax retention on $100,000 of investment income received by a CCPC, compared to the direct receipt of investment income, would be as follows:

| **Investment Income Of CCPC** | |
|---|---|
| Federal Tax [(38%)($100,000)] | $ 38,000 |
| Additional Refundable Tax [(10-2/3%)($100,000)] | 10,667 |
| Federal Tax Abatement [(10%)($100,000)] | ( 10,000) |
| Federal Tax Payable | $ 38,667 |
| Provincial Tax Payable [(13.5%)($100,000)] | 13,500 |
| Corporate Tax Payable | $ 52,167 |
| | |
| Non-Eligible RDTOH Balance [(30-2/3%)($100,000)] | $ 30,667 |
| | |
| Corporate Investment Income | $100,000 |
| Corporate Tax Payable | ( 52,167) |
| Net Corporate Income Before Dividend Refund | $ 47,833 |
| Dividend Refund (See Note) | 29,734 |
| Maximum Dividend Payable | $ 77,567 |
| Personal Tax On Non-Eligible Dividends At 45 Percent | ( 34,905) |
| Income Retained By The Individual | $ 42,662 |

| | |
|---|---|
| After Tax Retention - With Corporation | $ 42,662 |
| After Tax Retention - Without Corporation | ( 49,000) |
| Advantage (Disadvantage) With Corporation | ($ 6,338) |

**Note** The dividend refund is the lesser of the balance in the Non-Eligible RDTOH account ($30,667) and 38-1/3 percent of taxable dividends paid. The available cash of $47,833 would support a dividend of $77,567 ($47,833 ÷ .61667), which includes a potential dividend refund of $29,734 [(38-1/3%)($77,567)]. This is less than the balance in the Non-Eligible RDTOH so a dividend refund of $29,734 is available which leaves a Non-Eligible RDTOH balance of $933.

15-49. As the corporate taxes of $52,167 exceed $51,000 that would be paid on direct receipt of the $100,000, there is no deferral of taxes through the use of a corporation. When this fact is combined with the $6,338 reduction in after tax retention, it is clear that the use of a corporation in this situation would be a bad idea.

## Exercise Fifteen - 3

**Subject:** Incorporation Of Interest Income

David Slater has investments that he anticipates will earn interest income of $126,000 for the year ending December 31, 2019. He has employment income in excess of $300,000, with additional amounts subject to a provincial tax rate of 18 percent. The provincial dividend tax credit is equal to 27 percent of the dividend gross up for non-eligible dividends. Also in his province of residence, the corporate tax rate is 3 percent on income eligible for the small business deduction and 12 percent on other income. Mr. Slater has asked your advice as to whether he should transfer these investments to a corporation in which he would own all of the shares. Advise him with respect to any tax deferral that could be available on income left in the corporation and on any tax savings that could be available if all of the income is paid out as dividends.

**SOLUTION available in print and online Study Guide.**

## CCPC - Dividend Income

### *Possible Sources Of Dividend Income*

15-50. A CCPC can only designate dividends as eligible to the extent that it has a balance in its GRIP. Dividend receipts that increase this balance enable the CCPC to designate its dividends as eligible. In general, dividends received by a CCPC will be subject to Part IV tax. The exception to this is if the dividend is received from a connected company that did not claim a dividend refund as a result of paying the dividend. Dividend income effects for a CCPC can be summarized as follows:

**Eligible Dividends** Any dividends received (portfolio or connected company) that have been designated eligible will be added to the CCPC's GRIP balance. Non-eligible dividends have no effect on the CCPC's GRIP balance.

**Portfolio Dividends** These dividends will be subject to Part IV tax regardless of whether they are eligible or non-eligible.

**Connected Company Dividends** These dividends can be eligible or non-eligible and may be subject to Part IV tax depending on:

- If a dividend refund results from the dividend payment, the dividends will be subject to Part IV tax. The fact that there is a dividend refund generally means that the connected company had investment income.
- If no dividend refund results from the dividend payment, the dividends will not be subject to Part IV tax. The fact that there is no dividend refund generally means that the connected company had income that benefitted from the small business deduction.

## *Analysis*

15-51. Recalling that Mr. Renaud would pay taxes on:

- eligible dividends received at a rate of 36 percent (see Paragraph 15-21), his after tax retention on the direct receipt of $100,000 of these dividends would be $64,000 [($100,000)(1 - .36)], and
- non-eligible dividends received at a rate of 45 percent (see Paragraph 15-21), his after tax retention on the direct receipt of $100,000 of these dividends would be $55,000 [($100,000)(1 - .45)].

A comparison of this retention with the after tax results from using a corporation, assuming the connected company paid non-eligible dividends, would be as follows:

| **Dividend Income Of CCPC** | Eligible Portfolio Dividends | Non-Eligible Portfolio Dividends | Connected With Refund | Connected No Refund |
|---|---|---|---|---|
| Corporate Dividend Income | $100,000 | $100,000 | $100,000 | $100,000 |
| Part IV Tax Payable At 38-1/3% | ( 38,333) | ( 38,333) | ( 38,333) | N/A |
| Net Corporate Income Before Dividend Refund | $ 61,667 | $ 61,667 | $ 61,667 | $100,000 |
| Dividend Refund At 38-1/3% | 38,333 | 38,333 | 38,333 | N/A |
| Maximum Dividend Payable | $100,000 | $100,000 | $100,000 | $100,000 |
| Personal Tax On: | | | | |
| Eligible Dividends At 36% | ( 36,000) | | | |
| Non-Eligible Dividends At 45% | N/A | ( 45,000) | ( 45,000) | ( 45,000) |
| Income Retained By Individual | $ 64,000 | $ 55,000 | $ 55,000 | $ 55,000 |

| | | | | |
|---|---|---|---|---|
| After Tax Retention: | | | | |
| With Corporation | $ 64,000 | $ 55,000 | $ 55,000 | $ 55,000 |
| Without Corporation | ( 64,000) | ( 55,000) | ( 55,000) | ( 55,000) |
| Advantage (Disadvantage) | Nil | Nil | Nil | Nil |

15-52. In all cases, the dividends that can flow through to the investor total the full $100,000 that was received by the corporation. As a result, the total Tax Payable on dividends is the same whether the investment is held personally or in a corporation.

15-53. The Part IV tax does, however, influence the conclusions on tax deferral. If the dividends are subject to Part IV tax, this 38-1/3 percent tax is higher than the 36 percent tax rate on eligible dividends received by Mr. Renaud, and less than the 45 percent tax rate applicable to non-eligible dividends. As a result, there is a prepayment of taxes on eligible dividends that are flowed through a corporation.

15-54. The situation is different in the absence of a Part IV tax in that no taxes will be assessed on dividends received at the corporate level. This, of course, provides for a significant deferral of Tax Payable on dividends not subject to Part IV tax.

## Conclusions On Tax Reductions And Deferrals

15-55. The results from the preceding cases can be summarized as follows:

| | Corporate Taxes Before Dividend Refund | After Tax Retention On Flow Through |
|---|---|---|
| Public Corporation ($100,000 Of Income) (Paragraph 15-27): | $28,500 | $45,760 |
| CCPC ($100,000 Of Active Business Income): | | |
| Eligible For SBD (Paragraph 15-36) | $11,500 | $48,675 |
| Not Eligible For SBD (Paragraph 15-36) | 28,500 | 45,760 |
| CCPC ($100,000 Of Interest Income): | | |
| Investment Income (Paragraph 15-48) | $52,167 | $42,662 |
| CCPC ($100,000 Of Dividend Income): | | |
| Eligible Portfolio Dividends (Paragraph 15-51) | $38,333 | $64,000 |
| Non-Eligible Portfolio Dividends (Paragraph 15-51) | 38,333 | 55,000 |
| Connected With Refund (Paragraph 15-51) | 38,333 | 55,000 |
| Connected No Refund (Paragraph 15-51) | Nil | 55,000 |

15-56. The conclusions reached can be summarized as follows:

**Tax Reduction Available** As illustrated previously, Mr. Renaud is subject to taxes on the direct receipt of income, other than dividends, at a rate of 51 percent, while his rate on the direct receipt of dividends is 36 percent (eligible) or 45 percent (non-eligible). This means that his after tax retention resulting from the direct receipt of income would be:

- $49,000 On $100,000 Of Business Or Interest Income
- $64,000 On $100,000 Of Eligible Dividend Income
- $55,000 On $100,000 Of Non-Eligible Dividend Income

Comparing these amounts to those in the preceding table, there is no case where there is a reduction in taxes through the use of a corporation. The least unfavourable scenario is where a CCPC is earning active business income. In this case, the tax cost of $325 is relatively small.

When a public company is involved, the use of a corporation results in the payment of $3,240 more taxes and correspondingly less retention ($45,760 vs. $49,000). The same $3,240 shortfall results when a CCPC is earning active business income that is not eligible for the small business deduction. The situation is even worse for investment income earned by a CCPC. The shortfall here is $6,338 ($42,662 vs. $49,000).

In the case of dividend income received by a CCPC, the after tax results are the same whether the income is received directly or flowed through a corporation.

**Tax Deferral Available** Tax deferral occurs when income is not distributed to shareholders and taxes paid at the corporate level are less than those that would be paid if the income was received directly by the shareholder. On direct receipt of relevant amounts, Mr. Renaud would pay the following amounts in income tax:

- $51,000 On $100,000 Of Business Or Interest Income
- $36,000 On $100,000 Of Eligible Dividend Income
- $45,000 On $100,000 Of Non-Eligible Dividend Income

Comparing these amounts to the corporate tax amounts in the preceding table, we find that there is tax deferral in some, but not all cases.

There is deferral in the case of public companies, with taxes on business or interest income of only $28,500 at the corporate level.

The worst case scenario is when a CCPC earns interest income. Corporate taxes are $52,167, as compared to $51,000 on direct receipt of income.

In the cases where Part IV tax is applicable, the $38,333 that would be required when that tax is assessed, is larger than the $36,000 that would be paid on the direct receipt of eligible dividends, but smaller than the $45,000 that would be paid on the direct receipt of non-eligible dividends.

The most significant amounts of deferral are available to a CCPC earning active business income eligible for the small business deduction, or dividend income that is not subject to Part IV tax. In the case of income eligible for the small business deduction, taxes at the corporate level are $11,500, $39,500 less than the $51,000 that would have been paid on the direct receipt of this income.

Even if a CCPC has active business income that is not eligible for the small business deduction, taxes on $100,000 of this additional income would only be $28,500, $22,500 less than the $51,000 payable on direct receipt of this amount of income.

There is also deferral in the case of dividend income when it is not subject to Part IV tax. However, for dividends to not be subject to Part IV tax, they must be received from a connected corporation that did not receive a dividend refund as a result of their payment. This would generally involve payment from a CCPC earning business income. This means that deferral would have been available at the level of the paying corporation, without the use of an additional corporation to receive the dividends.

15-57. These conclusions are based on assumed provincial personal and corporate tax rates as outlined previously. While the rates we have used are within the range of current actual rates, the use of other rates will produce different results. As these differences can be important, we will give some attention to this issue in the next section of this Chapter.

## Exercise Fifteen - 4

**Subject:** Incorporation Of Interest And Dividend Income

One of your clients has asked your advice on whether he should transfer a group of investments to a new Canadian controlled private corporation that can be established to hold them. He anticipates that the transferred investments will have the following amounts of income during the 2019 taxation year:

| | |
|---|---|
| Eligible Dividends On Portfolio Investments | $46,000 |
| Non-Eligible Dividends From 100 Percent Owned Subsidiary | |
| (A Dividend Refund Of $29,000 Will Be Received by The Payor) | 87,000 |
| Interest Income | 32,000 |

Although he has employment income of over $250,000, your client needs all of the income that is produced by these investments as he has newborn quintuplets. On additional amounts of income, your client is subject to a provincial tax rate of 18 percent. The provincial dividend tax credit is equal to 5/11 of the dividend gross up for eligible dividends and 4/13 of the dividend gross up on non-eligible dividends. The corporation will be subject to a provincial tax rate of 2.5 percent on income eligible for the small business deduction and 12 percent on other income. The corporation will make the maximum eligible dividend designation. Provide the requested advice and explain your conclusions.

**SOLUTION available in print and online Study Guide.**

## Exercise Fifteen - 5

**Subject:** Incorporation Of Capital Gains

One of your clients has asked your advice on whether she should transfer a group of investments to a new corporation that can be established to hold them. The corporation will be a Canadian controlled private corporation and she anticipates that, during the coming year, the market value of these investments will increase by $92,000. No other income will be generated by the investments.

For the year ending December 31, 2019, your client has employment income in excess of $250,000 and will sell these investments by the end of the year to finance her trip across Canada by bicycle. None of these investments are eligible for the lifetime capital gains deduction. The corporation will be subject to a provincial tax rate of 3.5 percent on income eligible for the small business deduction and 12 percent on other income. On additional personal income, your client is subject to a provincial tax rate of 16 percent. The provincial dividend tax credit is equal to 4/13 of the dividend gross up for non-eligible dividends.

Provide the requested advice, including an explanation of your conclusions.

# Provincial Taxes And Integration

## Introduction

15-58. We have presented a number of different cases dealing with the question of whether it is better, both in terms of tax reduction and tax deferral, for an individual to receive income directly or, alternatively, channel that income through a corporation. In doing so, we have given consideration to both the type of income being earned, and whether the corporation is eligible for the small business deduction on the income.

15-59. The conclusions that we reached were presented in Paragraph 15-56. We found that, while there were several cases the use of a corporation provided some degree of tax deferral, there were no scenarios that provided a reduction in taxes.

15-60. It is important to note, however, that all of our conclusions were based on calculations that used average provincial tax rates. As discussed in other Chapters of this text, there are wide variations in all of these provincial amounts. Further, these variations can provide results that are different than those summarized in Paragraphs 15-55 and 15-56. For example, if a province legislates a tax free period of time for corporations that operate within its jurisdiction, this will make the use of a corporation more attractive in that province.

15-61. This section will be concerned with how variations in provincial tax rates can influence the decision to incorporate. In doing so, we will not attempt to delineate every possible combination of rates and type of income. With 10 provinces and 3 territories, several different types of income, and various corporate, individual and dividend tax credit rates to consider, there are literally hundreds of possible combinations. Given this, our goal will be to help you understand how changes in each of the provincial rates will act to influence conclusions on the use of a corporation for tax deferral or tax reduction purposes.

## Tax Deferral

15-62. The analysis of using a corporation to provide tax deferral is very straightforward. If the combined federal/provincial tax rate on corporations is less than the combined federal/provincial tax rate on individuals, the use of a corporation provides for deferral. Some examples of this analysis are as follows:

> **Alberta CCPC Earning Active Business Income** The combined federal/provincial tax rate on the corporation would be 11 percent. For an Alberta resident individual in the maximum tax bracket, the combined federal/provincial rate would be 48 percent. In this case, the use of a corporation would clearly provide deferral.
>
> **Manitoba CCPC Earning Investment Income** The combined federal/provincial tax rate on the corporation would be 50.7 percent. For a Manitoba resident individual in the maximum tax bracket, the combined federal/provincial rate would be 50.4 percent. In this case, there would also be an insignificant amount of deferral.
>
> **British Columbia Public Corporation (or CCPC Earning Over $500,000 In Active Business Income)** The combined federal/provincial tax rate on the corporation or income would be 27 percent. For a British Columbia resident individual in the maximum tax bracket, the combined federal/provincial rate would be 49.8 percent. In this case, the use of a corporation would clearly provide deferral.

15-63. We would remind you not to look at the deferral issue in isolation from other considerations. If the income will be distributed out of the corporation in the future, both tax deferral and tax reduction must be considered. If all of the income will be distributed immediately, tax deferral is irrelevant.

## Tax Reduction

### *Introduction*

15-64. The question of whether a corporation can be used to reduce tax involves a more complex analysis. In looking at the after tax retention when income is received directly, only the combined federal/provincial tax rate on individuals is relevant. However, in looking at after tax retention of income that is flowed through a corporation, three factors must be considered:

1. The combined federal/provincial tax rate on individuals.
2. The combined federal/provincial tax rate on corporations.
3. The combined federal/provincial dividend tax credit.

15-65. As we will demonstrate in the next section, the first of these factors is not influential in this analysis. For any given combination of corporate tax rates and dividend tax credit rates, the conclusion on whether a corporation can be used to reduce taxes will be the same, without regard to the tax rate on individuals.

15-66. The real determinate here is the relationship between the combined corporate tax rate and the combined dividend tax credit. As our later analysis will show, if the combined dividend tax credit exceeds the combined corporate taxes paid, the use of a corporation will reduce taxes. Alternatively, if the credit is less than the corporate taxes, direct receipt of income will be preferable.

### *Provincial Rates On Individuals*

15-67. Maximum combined federal/provincial tax rates on individuals range from a low of 47.5 percent in Saskatchewan to a high of 54 percent in Nova Scotia. Note, however, variations in the combined rate influence both the direct receipt of income and the amounts that are flowed through a corporation. That is, a high tax rate on individuals will reduce after tax retention on both the direct receipt of income, as well as on the after tax retention of income flowed through a corporation. Correspondingly, a low tax rate on individuals will increase both types of after tax retention.

15-68. What this means is that, for any specific combination of corporate tax rate and dividend tax credit rate, the tax rate applicable to individuals will not alter the conclusion on whether the use of a corporation will serve to reduce taxes. While the amount of the advantage or disadvantage associated with the use of a corporation will vary with the tax rate on individuals, the conclusion on the ability of a corporation to reduce taxes will not. This is illustrated by the following example.

**EXAMPLE** A CCPC has $100,000 of active business income that will be taxed at a combined federal/provincial rate of 11.5 percent (9.0% + 2.5%). The provincial dividend tax credit on non-eligible dividends is equal to 4/13 of the gross up. We will consider two cases, the first based on the assumption that Niko Parma is taxed at a combined federal/provincial rate of 48 percent (33% federal, plus 15% provincial), the second based on the assumption that Nela Parma is taxed at a combined federal/provincial rate of 54 percent (33% federal, plus 21% provincial).

**ANALYSIS** If the individuals received the $100,000 directly, Niko's after tax retention would be $52,000 [($100,000)(1 - .48)] and Nela's would be $46,000 [($100,000)(1 - .54)]. The after retention if the income is flowed through a corporation would be as follows:

| Comparison - Rates For Individuals | Niko (48%) | Nela (54%) |
|---|---|---|
| Corporate Income | $100,000 | $100,000 |
| Corporate Taxes At 11.5 Percent | ( 11,500) | ( 11,500) |
| Available For Dividends | $ 88,500 | $ 88,500 |
| | | |
| Non-Eligible Dividends Received | $ 88,500 | $ 88,500 |
| Gross Up (15%) | 13,275 | 13,275 |
| Taxable Dividends | $101,775 | $101,775 |
| Individual Tax Rate | 48% | 54% |
| Taxes Before Dividend Tax Credit | $ 48,852 | $ 54,959 |
| Dividend Tax Credit (Equal Gross Up) | ( 13,275) | ( 13,275) |
| Individual Taxes | $ 35,577 | $ 41,684 |
| | | |
| Dividends Received | $ 88,500 | $ 88,500 |
| Individual Taxes | ( 35,577) | ( 41,684) |
| After Tax Retention With Corporation | $ 52,923 | $ 46,816 |
| | | |
| After Tax Retention With Corporation | $ 52,923 | $ 46,816 |
| Direct Receipt After Tax Retention | ( 52,000) | ( 46,000) |
| Advantage With Corporation | $ 923 | $ 816 |

15-69. Despite using individual tax rates that vary significantly, the result is the same for both Niko and Nela. The use of a corporation provides tax reduction for both individuals. As an average corporate rate was used in this example, the saving is fairly modest. Note that the conclusion on tax reduction would be the same if a lower or higher corporate tax rate were used. However, the amount would be larger (lower rate) or smaller (higher rate).

### *Provincial Dividend Tax Credit And Provincial Corporate Tax Rates*

15-70. As can be seen in the preceding example, the major determinate of whether the use of a corporation will provide tax reduction is the relationship between the combined federal and provincial taxes paid at the corporate level, and the combined federal/provincial dividend tax credit. As the federal components of these values do not vary, the provincial rates become the determining factor.

15-71. The rules here can be stated fairly simply:

**Favourable To Incorporation** If the combined federal/provincial dividend tax credit exceeds the combined taxes paid at the corporate level, the use of a corporation will reduce taxes and provide a higher level of after tax retention. This is sometimes referred to as over integration.

**Unfavourable To Incorporation** If the combined federal/provincial dividend tax credit is less than the combined taxes paid at the corporate level, the use of a corporation will increase taxes and reduce the amount of after tax retention. This is sometimes referred to as under integration.

## Examples - Effects Of Provincial Rates On Integration

### Data

15-72. The range of values in the 9 provinces, excluding Quebec, for provincial corporate tax rates and provincial dividend tax credit rates are as follows:

**Corporate Tax Rates** The provincial rates for public companies (which would also apply to CCPCs whose active business income is not eligible for the small business deduction) range from 11.5 percent to 16 percent. When these are combined with the federal rate of 15 percent, the combined rates range from 26.5 percent to 31 percent.

The provincial rates for CCPCs earning income eligible for the small business deduction range from zero percent to 6 percent. When these are combined with the federal rate of 9 percent, the combined rates range from 9 percent to 15 percent.

**Dividend Tax Credit Rates** The provincial rates for eligible dividends range from 19.6 percent of the gross up to 50.8 percent of the gross up. When combined with the federal rate of 6/11 (54.5%) of the gross up, the combined rates range from 74.1 percent of the gross up to 105.3 percent of the gross up.

The provincial rates on non-eligible dividends range from 6 percent of the gross up to 25.8 percent. When combined with the federal rate of 9/13 (69.2%) of the gross up, the combined rates range from 75.2 percent to 95 percent of the gross up.

15-73. The following two examples illustrate the effects of provincial corporate tax rates and provincial dividend tax credit rates on the after tax retention for individuals. They both use the following information:

**EXAMPLE** The company has $100,000 in business income. The shareholders will be taxed at a combined federal/provincial rate of 45 percent. If the $100,000 of income is received directly by the individuals, they will retain $55,000 [($100,000)(1 - .45)].

### *Public Company Paying Eligible Dividends*

15-74. Dealing first with public companies that are paying eligible dividends, we will consider the following three alternative cases:

**Perfect Integration** For a public company paying eligible dividends, perfect integration occurs when the combined federal/provincial tax rate on corporations is 27.53623 percent (for this example, we have rounded this to 27.536) and the dividend tax credit is equal to one (6/11 + 5/11).

**Worst Case** Here we will use a combination of the highest corporate tax rate (31%) and the lowest dividend tax credit rate (74.1%).

**Best Case** Here we will use a combination of the lowest corporate tax rate (26.5%) and the highest dividend tax credit rate (105.3%).

**ANALYSIS** If the income is flowed through a corporation, the after tax retention under the three cases described would be as follows:

| Public Company Eligible Dividends | Perfect Integration | Worst Case (31%/74.1%) | Best Case (26.5%/105.3%) |
|---|---|---|---|
| Corporate Income | $100,000 | $100,000 | $100,000 |
| Corporate Taxes: | | | |
| At 27.536 Percent | ( 27,536) | | |
| At 31 Percent (Worst) | | ( 31,000) | |
| At 26.5 Percent (Best) | | | ( 26,500) |
| Available For Dividends | $ 72,464 | $ 69,000 | $ 73,500 |
| | | | |
| Eligible Dividends Received | $ 72,464 | $ 69,000 | $ 73,500 |
| Gross Up (38%) | 27,536 | 26,220 | 27,930 |
| Taxable Dividends | $100,000 | $ 95,220 | $101,430 |
| Individual Tax Rate | 45% | 45% | 45% |
| Taxes Before Dividend Tax Credit | $ 45,000 | $ 42,849 | $ 45,644 |
| Dividend Tax Credit: | | | |
| [($27,536)(1)] | ( 27,536) | | |
| [($26,220)(74.1%)] (Worst) | | ( 19,429) | |
| [($27,930)(105.3%)] (Best) | N/A | | ( 29,410) |
| Individual Taxes | $ 17,464 | $ 23,420 | $ 16,234 |
| | | | |
| Eligible Dividends Received | $72,464 | $69,000 | $73,500 |
| Individual Taxes | ( 17,464) | ( 23,420) | ( 16,234) |
| After Tax Retention With Corporation | $55,000 | $45,580 | $57,266 |
| | | | |
| After Tax Retention With Corporation | $55,000 | $45,580 | $57,266 |
| Direct Receipt After Tax Retention | ( 55,000) | ( 55,000) | ( 55,000) |
| Advantage (Disadvantage) | Nil | ($ 9,420) | $ 2,266 |

**ANALYSIS - Continued** This example clearly illustrates the influence of varying provincial rates for corporate taxes and dividend tax credits. The results range from a $9,420 reduction in after tax retention with the use of a corporation, to a $2,266 increase in after tax retention with the use of a corporation. Considering that only $100,000 of income was involved, this represents a significant difference in the results achieved through using a corporation.

## CCPC Paying Non-Eligible Dividends

15-75. This example calculates the after tax retention of non-eligible dividends paid by a CCPC. We will consider the following three alternative cases:

**Perfect Integration** As you may recall from earlier examples in the text, for a CCPC paying non-eligible dividends, perfect integration occurs when the combined federal/provincial tax rate on corporations is 13.043 percent and the dividend tax credit is equal to one (9/13 + 4/13).

**Worst Case** Here we will use a combination of the highest corporate tax rate (15%) and the lowest dividend tax credit rate (75.2%).

**Best Case** Here we will use a combination of the lowest corporate tax rate (9%) and the highest dividend tax credit rate (95%).

| CCPC - Non-Eligible Dividends | Perfect Integration | Worst Case (15%/75.2%) | Best Case (9%/95%) |
|---|---|---|---|
| Corporate Income | $100,000 | $100,000 | $100,000 |
| Corporate Taxes: | | | |
| At 13.043 Percent | ( 13,043) | | |
| At 15 Percent (Worst) | | ( 15,000) | |
| At 9 Percent (Best) | | | ( 9,000) |
| Available For Dividends | $ 86,957 | $ 85,000 | $ 91,000 |
| | | | |
| Non-Eligible Dividends Received | $ 86,957 | $ 85,000 | $ 91,000 |
| Gross Up (15%) | 13,043 | 12,750 | 13,650 |
| Taxable Dividends | $100,000 | $ 97,750 | $104,650 |
| Individual Tax Rate | 45% | 45% | 45% |
| Taxes Before Dividend Tax Credit | $ 45,000 | $ 43,988 | $ 47,093 |
| Dividend Tax Credit: | | | |
| [($13,043)(1)] | ( 13,043) | | |
| [($12,750)(75.2%)] (Worst) | | ( 9,588) | |
| [($13,650)(95.0%)] (Best) | N/A | | ( 12,968) |
| Individual Taxes | $ 31,957 | $ 34,400 | $ 34,125 |
| | | | |
| Non-Eligible Dividends Received | $86,957 | $85,000 | $91,000 |
| Individual Taxes | ( 31,957) | ( 34,400) | ( 34,125) |
| After Tax Retention With Corporation | $55,000 | $50,600 | $56,875 |
| | | | |
| After Tax Retention With Corporation | $55,000 | $50,600 | $56,875 |
| Direct Receipt After Tax Retention | ( 55,000) | ( 55,000) | ( 55,000) |
| Advantage (Disadvantage) | Nil | ($ 4,400) | $ 1,875 |

**ANALYSIS** The results for the best and worst cases for both eligible and non-eligible dividends can be compared as follows:

| Advantage (Disadvantage) Of Using A Corporation | Eligible Dividends | Non-Eligible Dividends |
|---|---|---|
| Worst Case | ($9,420) | ($4,400) |
| Best Case | 2,266 | $1,875 |

In both cases the results are skewed towards the disadvantage side. That is, the worst case scenario has a larger negative result than the positive result that comes from the application of the best combination of corporate tax rates and dividend tax credits. This would suggest that, on the average, the effect of provincial variations in corporate tax rates and dividend tax credits do not result in a reduction in taxes when compared to the direct receipt of income.

## Summary: Tax Deferral And Tax Reduction

15-76. The preceding examples make it clear that the province in which the corporation and the individual is taxed (which may not be the same province) is a significant factor in deciding whether the use of a corporation will be advantageous. Depending on the type of corporation and the type of income, whether tax deferral is possible depends heavily on the province in which the income is taxed. In a similar fashion, the applicable combination of corporate tax rate and dividend tax credit will determine whether the use of a corporation will serve to reduce taxes.

**We suggest you work Self Study Problem Fifteen-5 at this point.**

# Tax Free Dividends

## Tax Rates On Dividends

15-77. In this Chapter we are concerned with owner-managed businesses and these will typically be CCPCs. In most cases, the bulk of their income will either be active business income that benefits from the small business deduction or, alternatively, investment income that qualifies the corporation for a refund of taxes paid. While such corporations may have a positive GRIP account that will allow them to pay eligible dividends, most of their dividends will be non-eligible. Given this, our analysis will focus on non-eligible dividends that are subject to the gross up of 15 percent.

15-78. For an individual in the 33 percent federal tax bracket, subject to an 18 percent provincial tax rate on Taxable Income, and living in a province where the dividend tax credit is equal to 4/13 of the gross up on non-eligible dividends and 5/11 on eligible dividends, the combined federal/provincial rate is:

- 43.7% on non-eligible dividends received [(33% + 18%)(115%) - (9/13+ 4/13)(15%)],
- 32.4% on eligible dividends received [(33% + 18%)(138%) - (6/11 + 5/11)(38%)], and
- 25.5% on capital gains [(33% + 18%)(1/2)].

15-79. The rate on non-eligible dividends is well above that applicable to eligible dividends and capital gains. However, it is well below the maximum 51 percent rate (33% + 18%) that would be applicable to most other types of income. In addition to the fact that dividends are taxed at favourable rates, the structure of the dividend tax credit system is such that a substantial amount of dividends can be received without incurring any taxation. This very desirable result will be explained and illustrated in this section on tax free dividends.

## Use Of Tax Credits

### *Credits In General*

15-80. For 2019, every individual has a personal credit against federal Tax Payable based on $12,069 multiplied by the 15 percent rate applicable to the lowest federal tax bracket. This means that the first $12,069 of an individual's income can be received tax free.

15-81. Extending this analysis, it can be said that, for most types of income, the amount that can be received tax free is limited to the total tax credit base amounts available to the individual. That is, for every dollar of tax credit amount, one dollar of income can be received on a tax free basis. There are two exceptions to this:

**Dividends** An individual with only the basic personal credit of $1,810 [(15%)($12,069)] can receive tax free dividends slightly more than double the $12,069 base for this credit. More specifically, such an individual can receive $26,364 in non-eligible dividends without incurring any liability for federal tax. (See the calculations in Paragraph 15-86.) Note that, depending on the amount of the provincial dividend tax credit, this amount may or may not be totally free of provincial tax.

**Charitable Donations** The tax credit on amounts of charitable donations over $200 is based on 29 or 33 percent, rather than the 15 percent applicable to other credit amounts. Since the 33 percent rate is applicable if income is taxed at 33 percent, we will only consider the credit rate of 29 percent in this analysis. This means that a dollar of charitable donations in excess of $200 will allow an individual in the lowest tax bracket to receive $1.93 in tax free income. More specifically, a $1 contribution in excess of $200 is eligible for a tax credit of $0.29. This $0.29 would eliminate $0.29 of tax payable, the amount of tax that an individual in the lowest bracket would pay on $1.93 of income [(15%)($1.93) = $0.29]. This is unlikely to be an important exception in that it would be unusual for someone in the 15 percent federal tax bracket to be making significant charitable donations.

### Special Rules For Dividends

15-82. How can an individual receive such a large amount of dividends without paying federal tax? The answer lies in the dividend gross up and tax credit mechanism. For an individual in the lowest tax bracket, the increase in tax associated with one dollar of non-eligible dividends received compared to one dollar of interest income can be calculated as follows:

| Tax Increase Per $1 | Dividend | Interest |
|---|---|---|
| Cash Received | $1.0000 | $1.0000 |
| Gross Up At 15 Percent | .1500 | N/A |
| Taxable Income | $1.1500 | $1.0000 |
| | | |
| Federal Tax Payable At 15 Percent | $0.1725 | $0.1500 |
| Federal Dividend Tax Credit [(9/13)($0.15)] | ( 0.1038) | N/A |
| Increase In Federal Tax Payable | $0.0687 | $0.1500 |

15-83. For each dollar of non-eligible dividends received, an individual must add a taxable dividend of $1.15 ($1 + $0.15 gross up) to Taxable Income. For individuals in the lowest federal tax bracket, the federal tax on this amount will be $0.1725 [($1.15)(15%)]. However, there will be a federal credit against this tax payable equal to 9/13 of the gross up, or $0.1038 [(9/13)($0.15)]. This means that there is only a $0.0687 increase in federal tax for each one dollar increase in non-eligible dividends. This is in contrast to an increase in federal tax of $0.15 for each one dollar increase in interest income (i.e., a 15 percent rate of increase). As the preceding calculations demonstrate, dividend income uses up an individual's available tax credits at a much lower rate than most other types of income, i.e., a 6.87 percent rate.

15-84. For example, one dollar of interest income will use up one dollar [($1.00)($.15 ÷ $.15)] of an individual's personal tax credit base of $12,069. In contrast, one dollar of non-eligible dividends received will use up only $0.458 of this base [($1.00)($.0687 ÷ $.15)]. This means that, in comparison with other types of income, a much larger amount of dividends can be received before an individual's tax credits are absorbed and taxes will have to be paid.

15-85. The amount of dividends that can be received tax free by an individual with no other source of income is a function of the total amount of personal tax credits available and can, in fact, become a fairly large amount.

## Tax Free Amounts For 2019

15-86. For 2019, ignoring possible tax credits other than the basic personal and spousal, the amount of non-eligible dividends that can be received free of federal tax by a single individual, and by an individual with a dependent spouse (or eligible dependant) with no other source of income is calculated in the table which follows. Note that, in the dependent spouse case, the grossed up amount of the dividends exceeds $47,630, the top of the 15 percent federal tax bracket. This means that some of this dividend will be taxed at a higher federal rate of 20.5 percent.

| | Single Individual | Dependent Spouse |
|---|---|---|
| Non-Eligible Dividends Received | $26,364 | $47,301 |
| Gross Up Of 15 Percent | 3,955 | 7,095 |
| Taxable Income | $30,319 | $54,396 |
| Taxed At 15% | ( 30,319) | ( 47,630) |
| Taxed At 20.5% | $ Nil | $ 6,766 |
| Federal Tax At 15% | $4,548 | $ 7,145 |
| Federal Tax At 20.5% | Nil | 1,387 |
| Dividend Tax Credit (9/13 Of Gross Up) | ( 2,738) | ( 4,912) |
| Basic Personal Credit [(15%)($12,069)] | ( 1,810) | ( 1,810) |
| Spousal Credit [(15%)($12,069)] | N/A | ( 1,810) |
| Federal Tax Payable | Nil | Nil |

**Note** While this is not relevant to our analysis in this section, you might wish to note that, with respect to eligible dividends, the tax free amount for a single individual would be $58,566, and $75,758 for an individual with a dependent spouse.

15-87. There may or may not be provincial tax payable on the amounts in the preceding table. A number of provincial factors would have to be considered. These include the provincial tax rates, the provincial tax brackets, the provincial personal tax credit amounts and the provincial dividend tax credit rates.

15-88. The alternative minimum tax is not a factor in determining the amount of non-eligible dividends that can be received on a tax free basis. As the dividend tax credit is not available in the calculation of the alternative minimum tax payable, the dividend gross up is deducted in the calculation of adjusted taxable income for alternative minimum tax purposes. Given this, the $40,000 basic exemption that is provided by the alternative minimum tax legislation, combined with the $12,069 basic personal tax credit (plus the $12,069 spousal credit in the dependent spouse example), would serve to eliminate the alternative minimum tax on the tax free non-eligible dividends calculated in Paragraph 15-86. However, alternative minimum tax may be a consideration when a large amount of eligible dividends are involved. See Chapter 11 for our coverage of alternative minimum tax.

# Income Splitting

## Basic Concept

15-89. In Chapter 1 we provided a very simple example of income splitting. As illustrated in that example, if an individual can find a way to share a large block of income with related parties in lower tax brackets, the result can be a significant reduction in taxes, not just in the current year, but on an ongoing basis.

15-90. While the examples presented earlier in this Chapter suggested that there are limits on an individual's ability to reduce or defer taxes through the use of a corporation, these examples did not take into consideration that a corporation could be used to effectively implement income splitting. This possibility is further enhanced by the fact that, as discussed in the preceding section, individuals without other sources of income can receive substantial amounts of dividends without paying any taxes at the federal level.

15-91. Note, however, income splitting only works when the Tax On Split Income (TOSI) does not apply to the recipient of the split income. The 2018 extension of the TOSI to related adults has made it much more difficult to effectively use a corporation in an income splitting strategy.

**We suggest you work Self Study Problem Fifteen-6 at this point.**

# Shareholder Benefits Including Loans

## The Owner-Manager Environment

15-92. Much of the material in this Chapter deals with owner managed corporations. These are typically CCPCs with either a single shareholder or a small group of shareholders. When there is a shareholder group, the group often consists of members of a single family.

15-93. Unlike the situation with publicly traded companies, in this environment the owner-manager is subject to few constraints on the use of the corporate assets. In effect, he is in a position to provide significant benefits to himself and other related individuals.

15-94. This situation is complicated by the fact that some things that might be considered benefits are, in fact, necessary to the operation of the business. For example, the owner-manager may need an automobile to use in carrying out the business of the corporation. If he provides himself with a $30,000 Honda, this cost would appear to be a legitimate business expense. However, if he provides himself with a $450,000 Bentley, there is some question as to whether calling on clients really requires this type of vehicle.

15-95. As was discussed in earlier Chapters, the CRA deals with potential abuses in the area of corporate ownership and leasing of vehicles by:

- restricting the corporation's ability to deduct the costs of owning or leasing vehicles; and
- assessing taxable benefits for personal use of corporate vehicles.

15-96. Another problem area is travel costs. Most owner-managers have legitimate reasons to travel on matters related to corporate business. However, there is always the temptation of trying to find some business reason for spending a week in a luxury resort in Phoenix. In fact, there is a thriving industry that encourages such behaviour. It is not difficult to find a 30 minute seminar on human resource management that is conveniently conducted just before the ski lifts open at Whistler.

15-97. Unlike the situation with automobiles, there are no provisions that deal specifically with travel costs. Such costs are only subject to the general constraint that requires a business purpose for their incurrence. In addition, they must be reasonable in the circumstances. Not surprisingly, there are frequent disputes in this area.

## Shareholder Benefits Other Than Loans

15-98. ITA 15(1) deals with situations where a corporation has provided a benefit to a shareholder that does not appear to have a business purpose. Examples of this type of situation would include:

- a corporation providing a shareholder with a jet for personal use;
- a corporation building a swimming pool at a shareholder's personal residence; or
- a corporation selling assets to a shareholder at prices that are substantially below fair market value.

15-99. When any of these events occur, the shareholder is required to include the value of these benefits or appropriations in his income. Such amounts will not be considered dividends and, as a consequence, they will not be eligible for the dividend tax credit.

15-100. A further point here is that, when an amount is included in a shareholder's income under ITA 15(1), IT-432R2 indicates that the corporation is not allowed to deduct the amount that has been included in the shareholder's income.

> **EXAMPLE** A corporation provides a shareholder with a $10,000 holiday trip to Italy.
>
> **ANALYSIS** ITA 15(1) requires the inclusion of the $10,000 cost of the trip in the shareholder's income. Despite the fact that this amount is being taxed in the hands of the shareholder, the corporation would not be able to deduct the cost of the trip.

15-101. It would seem clear, given this non-deductibility, that corporations should avoid providing benefits that will be assessed to shareholders under ITA 15(1).

## Shareholder Loans

### General Rule

15-102. ITA 15(2) is applicable when a corporation makes a loan to a shareholder or an individual connected to, or affiliated with, a shareholder. Under ITA 15(2.1), persons are connected for this purpose if they do not deal with each other at arm's length. When such loans are made, this general rule requires that the full principal amount of the loan be included in the Net Income For Tax Purposes of the recipient of the loan (the shareholder or the person connected to the shareholder) in the taxation year in which the loan is made.

15-103. This general rule applies without regard to the amount of interest paid on the loan. Note, however, in periods subsequent to the inclusion of the principal amount of the loan in the income of the shareholder, there is no imputed interest benefit, even in cases where the loan is on an interest free basis.

15-104. Under this general rule, the granting of the loan to a shareholder has the same tax consequences as the payment of an equivalent amount of salary to the shareholder. However, there are two important differences:

- Taxes paid on salary cannot normally be recovered by repaying the salary. In contrast, when all or part of a shareholder loan that has been included in the taxpayer's income under ITA 15(2) is repaid, the amount of the repayment can be deducted from Net Income For Tax Purposes under ITA 20(1)(j).
- Unlike salary payments, the corporation cannot deduct the loan even when the shareholder must include the loan in income. If the shareholder is going to be taxed on the principal of a loan, it is generally preferable for the corporation to pay salary, rather than to extend a loan.

### Exceptions To The General Rule

15-105. There are three exceptions to this general rule that are available to shareholders, without regard to whether or not they are also employees of the corporation. They can be described as follows:

**Non-Resident Persons** ITA 15(2.2) indicates that the general rule does not apply to indebtedness between non-resident persons. This means that, if both the corporation and the shareholder receiving the loan were non-residents, the principal amount of any loan would not have to be included in income.

**Loans In Ordinary Course Of Business** ITA 15(2.3) indicates that the general rule does not apply when the loan is in the ordinary course of the corporation's business. Included in this exception would be such situations as a customer, who is also a shareholder, taking advantage of an on-going promotion by a furniture store that provides interest free loans to purchase furniture. In addition, ITA 15(2.3) notes that this would apply to loans made by a corporation that is in the business of making loans. This covers situations where, for example, an individual happens to be a shareholder of the bank that provides him with a personal loan.

**Repayment Within One Year** ITA 15(2.6) indicates that the general rule does not apply when the loan is repaid within one year after the end of the taxation year of the lender or creditor in which the loan was made, or the indebtedness arose. If, for example, a corporation with a June 30 year end extended a $100,000 loan to a shareholder on January 1, 2019, the $100,000 would not have to be included in income if it is repaid, in full, by June 30, 2020. Any part of the balance that is unpaid on that date would, in fact, have to be included in the taxpayer's 2019 income.

A further point with respect to this exception is that IT-119R4 indicates that this exception is not available when the repayment is part of a series of loans and repayments. The primary evidence of this type of situation would be a repayment near the end of a corporate taxation year, followed by a loan for a similar amount early in the following corporate taxation year.

15-106. Additional exceptions to the general rule requiring the principal of shareholder loans to be included in income involve situations where the shareholder is also an employee of the corporation making the loan. These exceptions are found in ITA 15(2.4) and can be described as follows:

**Not Specified Employee** ITA 15(2.4)(a) indicates that loans made to a shareholder, who is an employee, are not subject to the general rule if the shareholder is not a specified employee. This exception applies without regard to the purpose of the loan. A specified employee is one who, at any time of the year, owns 10 percent or more of any class of the shares of the corporation, or who does not deal at arm's length with the corporation. For example, an arm's length employee who owns less than 1 percent of the shares purchased through stock options.

**Dwelling Loans** ITA 15(2.4)(b) indicates that loans made to a shareholder, who is an employee, or the spouse or common-law partner of the employee, to acquire a dwelling to live in are not subject to the general rule.

**Stock Acquisition Loans** ITA 15(2.4)(c) indicates that loans made to a shareholder, who is an employee, to acquire shares in the lending corporation or a corporation related to the lending corporation, are not subject to the general rule.

**Motor Vehicle Loans** ITA 15(2.4)(d) indicates that loans made to a shareholder, who is an employee, to acquire a motor vehicle to be used in employment duties, are not subject to the general rule.

15-107. In order for these exceptions to apply, the following conditions must be met:

- the loan must be made to the individual because he is an employee, not because he is a shareholder [ITA 15(2.4)(e)]; and
- at the time the loan is made, bona fide arrangements must be made to repay the loan within a reasonable period of time [ITA 15(2.4)(f)].

15-108. The first of these conditions can create significant problems for owner-managers of private corporations wishing to obtain loans from their corporations. In order to avoid having the principal amount of the loan included in Net Income For Tax Purposes, the owner-manager must demonstrate that he received the loan because of his role as an employee.

15-109. In order to do this, the owner-manager will likely have to make similar loans available to all employees with duties similar to those of the owner-manager. That is, if the company gives the owner-manager a $100,000, low interest loan to purchase a residence, such loans would have to be made available to all employees with duties similar to those of the owner-manager. If this is not the case, the CRA is likely to conclude that the owner-manager received the loan because of his role as a shareholder.

15-110. A further problem would arise if, as would not be uncommon in owner-managed situations, there are no other senior employees of the business, or no other employees at all. It is not clear in this case whether the owner-manager would be able to demonstrate that he received a loan in his capacity as an employee. However, the CRA will look at the loan practices of other similar corporations as an approach to making this determination.

### Imputed Interest Benefit

15-111. It was previously noted that, if the principal amount of a shareholder loan is included in the taxpayer's income, there is no imputed interest benefit related to a low rate or interest free loan. However, if the loan is exempted from the general inclusion in income rule by one of the exceptions described in Paragraphs 15-105 and 15-106, ITA 80.4(2) is applicable and a benefit may be assessed. The analogous benefit for employees, which was discussed in Chapter 3, is assessed under ITA 80.4(1).

**EXAMPLE** On July 1, 2019, Andros Ltd., a CCPC with a taxation year that ends on December 31, extends a $100,000 loan to its only shareholder, George Andros. The loan is interest free and, because it will be repaid in January, 2020, the $100,000 principal amount does not have to be included in his income. Assume the prescribed rate throughout 2019 is 2 percent.

**ANALYSIS** For 2019, Mr. Andros will be assessed a taxable benefit under ITA 80.4(2) equal to $1,000 [(2% - Nil)($100,000)(6/12)]. In the examples in IT-421R2, "Benefits To Individuals, Corporations, And Shareholders From Loans Or Debt", interest is calculated on the basis of the number of months the loan is outstanding. While not illustrated, calculations could also be based on the number of days the loan is outstanding. We would remind you that, if the loan proceeds are invested in income producing assets, the imputed interest that is assessed on the loan will be deductible.

15-112. In the fairly common situation where the shareholder also works as an employee of the business, the benefit may be assessed under either ITA 80.4(1) or ITA 80.4(2). If the benefit is assessed under ITA 80.4(1), it will be classified as employment income. In contrast, if it is assessed under ITA 80.4(2), it will be considered property income. There are additional differences when the loan is made to assist an employee/shareholder with the purchase of a home.

15-113. In the case of a home purchase loan, for the first five years the loan is outstanding, the benefit assessed to an employee under ITA 80.4(1) will use a rate no higher than the prescribed rate that prevailed when the loan was made. Should the rate go down, the employee is entitled to use the lower prescribed rate for the benefit calculation (see Chapter 3 for examples of this procedure). Alternatively, in the case of a home purchase loan to a shareholder, the ITA 80.4(2) benefit must be calculated using the actual quarterly prescribed rates that prevail over the term of the loan.

## Exercise Fifteen - 6

**Subject:** Shareholder Loans - Car Purchase

Ms. Martha Rourke is an employee of Rourke Inc., a large private company in which her husband owns 70 percent of the outstanding shares. Ms. Rourke owns the remaining 30 percent of the shares. On July 1, 2019, she receives a $50,000 interest free loan that will be used to purchase an automobile to be used in her employment duties. The loan is to be repaid on June 30, 2023. Assume the prescribed rate for all of 2019 is 2 percent. What are the tax implications of this loan for Ms. Rourke in 2019?

## Exercise Fifteen - 7

**Subject:** Shareholder Loans - Term Outstanding

On June 1, 2019, Generic Inc. loans $162,000 to its principal shareholder, Ms. Jan Fisk, in order to finance her gambling debts. Generic Inc. has a taxation year that ends on June 30. The loan is interest free. Assume that, during all periods, the relevant prescribed rate is 2 percent. What are the tax consequences to Ms. Fisk if the loan is repaid (1) on January 1, 2020 and (2) on December 31, 2020?

**SOLUTIONS available in print and online Study Guide.**

## Exercise Fifteen - 8

**Subject:** Shareholder Loans - Home Purchase

On November, 1, 2019, Hasid Ltd. loans Mr. Aaron Hasid, the CEO and principal shareholder of the Company, $123,000 in order to assist in his purchase of a principal residence. The Company has a taxation year that ends on December 31. The loan does not bear interest and, during all periods, assume that the relevant prescribed rate is 2 percent. The loan is to be repaid in four equal annual instalments, the first occurring on October 31, 2020. What are the tax consequences of this loan to Mr. Hasid? State any assumptions that you have made in providing your answer.

**SOLUTIONS available in print and online Study Guide.**

# Management Compensation

## General Principles

### *Salary As The Bench Mark*

15-114. The most obvious and straightforward way to compensate managers is to pay salaries. Provided they are reasonable, the amounts are a deductible expense to the corporation. At the same time, they are fully taxable to the recipient, rendering such payments neutral in terms of tax planning. For large publicly traded corporations, where the managers are not the principal owners of the business, salary is the usual starting point in negotiating management compensation. However, for some high income executives, stock based compensation may be of greater importance than salary.

15-115. Even with a public corporation, however, the tax effects of various methods of compensation should not be ignored. By paying salaries, a corporation receives a deduction from Taxable Income in the year of accrual, while the recipient employee receives an equal addition to Taxable Income in the year of payment.

15-116. Any form of compensation that creates an excess of the corporation's deductions over the employee's inclusions creates an aggregate tax savings. In addition, any form of compensation that is deductible to the corporation prior to inclusion in the income of the employee involves tax deferral. These considerations can allow for improved after tax benefits to the employee or, alternatively, a lower after tax cost to the corporation.

### *Tax Effective Alternatives*

15-117. Some simple examples of compensation features that can be used to defer or reduce the payment of taxes are as follows:

- **Registered Pension Plans** Within prescribed limits, a corporation can deduct contributions to Registered Pension Plans in the year of contribution. These contributions will not become taxable to the employee until they are received as a pension benefit, resulting in an effective tax deferral arrangement. In addition to tax effectiveness, such plans can promote loyalty and reduce employee turnover.
- **Deferred Profit Sharing Plans** In a fashion similar to Registered Pension Plans, amounts that are currently deductible to the corporation are deferred with respect to inclusion in the employee's Taxable Income. As with registered pension plans, these plans can also promote loyalty and reduce employee turnover.
- **Provision Of Private Health Care Plans** The premiums paid by the corporation for such benefits as dental plans can be deducted in full by the corporation and will not be

considered a taxable benefit to the employee.

- **Stock Options** Stock options provide employees with an incentive to improve the performance of the enterprise. In addition, for CCPCs, taxation of any benefits resulting from the options is deferred until they are exercised or sold (for a full discussion of the deferral of stock option benefits, see Chapter 3). Further, the value of the employment benefit received is enhanced by the fact that, in general, one-half of the amount can be deducted in the calculation of Taxable Income.

  From the point of view of the corporation, evaluation of stock option compensation is more complex. Discouraging the use of options is the fact that no tax deduction is available for the granting of options. However, IFRS 2, *Share-Based Payment*, requires that the estimated value of options be charged to expense for accounting purposes when they are granted, despite the fact that the cost of issuing stock options is not deductible for tax purposes.

15-118. Changes in tax legislation over the years have served to restrict the tax benefits associated with employee compensation. Perhaps most importantly, the rules related to taxable benefits on employer provided automobiles can be quite unfavourable, in some cases resulting in a taxable benefit that exceeds the value derived from having use of the vehicle. The rules related to employee fringe benefits and employee stock options were covered in Chapter 3. Chapter 10 contained coverage of deferred compensation plans and this Chapter 15 included coverage of shareholder loans.

## Salary Vs. Dividends

15-119. For large public corporations, there is little point in considering the tax benefits related to salary/dividend trade-offs. The dividend policy of public corporations is normally based on considerations that extend well beyond the compensation that is provided to the management group of the company.

15-120. In situations where the manager of the business is also an owner, such an individual is in a position to receive compensation in the form of either salary or dividends. If there are no other owners involved in the decision, the choice is completely at the discretion of the owner-manager and tax factors will generally be an important consideration in making this decision. The choice between compensation in the form of salary or in the form of dividends, the salary vs. dividend decision, is the subject of the remainder of this Chapter.

# Salary Vs. Dividends For The Owner - Manager

## The Basic Trade-Off

### *Example - Data*

15-121. To illustrate the basic trade-off that is involved in salary vs. dividend decisions, assume that Ms. Olney owns all of the shares of a corporation that has $100,000 in Taxable Income, and that she has sufficient property income from other sources to place her in the 51 percent federal/provincial tax bracket (33% federal rate plus 18% provincial rate).

15-122. If the full $100,000 of corporate income is paid to Ms. Olney in the form of salary, it can be deducted by the corporation and will reduce the corporation's Taxable Income to nil. This means that no Part I taxes will be paid at the corporate level. However, the $100,000 will be taxed at Ms. Olney's marginal rate of 51 percent. This means that she will pay tax of $51,000 and be left with after tax funds of $49,000.

15-123. If no salary is paid to Ms. Olney, corporate taxes will be assessed and any remaining amount, after adjustments for any refundable taxes, will be paid in dividends. This amount will be subject to personal tax and the resulting after tax cash flow to her can be determined. These amounts, which are dependent on the type of corporation and the type of income earned, were calculated earlier in this Chapter. The results of those calculations were summarized in Paragraph 15-55. You may wish to refer to this summary as you work through the remainder of this Chapter.

### Analysis Of The Example

15-124. In looking at the question of whether or not to incorporate an income source, we looked at the possibilities for both tax deferral and tax reduction through the use of a corporation. In salary vs. dividend decisions, we are not concerned with deferral. The question we need to answer here is:

> "What is the most tax effective way to have a corporation provide its owner-manager with a required amount of after tax income?"

15-125. There is, of course, no deferral available on amounts that are to be removed from the corporation.

15-126. In comparing Ms. Olney's $49,000 retained with the various results listed in Paragraph 15-55, in all cases flowing business or property income through a corporation resulted in lower after tax retention. Even in the case of a CCPC earning income that is eligible for the small business deduction, the after tax retention was $48,675, which is lower than the $49,000 that would be retained through direct receipt of the $100,000.

15-127. This would suggest that, in general, salary should be used. However, the preceding analysis is based on a number of assumptions with respect to provincial tax rates on personal and corporate income. In addition, other factors such as RRSP contributions, CPP contributions and payroll tax costs have been ignored. These factors will be considered in the following material.

## Other Considerations

### Provincial Tax Rates And Credits

15-128. The results that were presented in Paragraph 15-55 assumed a provincial tax rate on individuals of 18 percent, a provincial dividend tax credit on non-eligible dividends equal to 20 percent of the gross up, and provincial rates on corporations for income eligible for the small business deduction and other types of income of 2.5 and 13.5 percent, respectively. While these numbers are fairly representative, they are not the only possible rates.

15-129. In assessing the importance of these differences, you should recognize that the payment of salaries is analogous to the direct receipt of income. That is, if a corporation has $100,000 in income and pays this entire amount in salaries, there will be no corporate Tax Payable. Further, the taxes paid by the individual on the salary will be similar to the taxes that would be paid if the income were received directly. This means that the comparison of salary payments with dividends involves the same type of analysis as the comparison of the after tax retention from the direct receipt of income with the after tax retention resulting from channeling income through a corporation.

15-130. Given this, we can discuss the effect of varying provincial tax rates on the salary vs. dividend decision by using the conclusions reached in the comparison of the direct receipt vs. flow through decisions. Direct receipt vs. flow through decisions were considered in Paragraphs 15-58 through 15-76. Applying that analysis to salary vs. dividend decisions, the following statements can be made:

> **Tax Rates For Individuals** In the analysis contained in Paragraphs 15-67 through 15-69, we noted that higher tax rates on individuals made the use of a corporation more attractive from the point of view of deferring taxes on income retained within the corporation. Here, however, we are concerned only with amounts that will be distributed, either in the form of dividends or in the form of salary and, as a consequence, tax deferral is not an issue. This means that the level of individual tax rates is not a major issue in this type of decision. This point is illustrated with the example found in Paragraph 15-68.
>
> **Dividend Tax Credit And Corporate Tax Rates** For integration to work, the combined federal/provincial dividend tax credit must be equal to the combined corporate taxes paid.

- **Eligible Dividends** For eligible dividends subject to a 38 percent gross up, this would require a combined corporate tax rate of 27.54 percent and a dividend tax credit equal to the gross up. This in turn would require a provincial corporate tax rate of 12.54 percent [27.54 - (38 - 10 - 13)] and a provincial dividend tax credit of 5/11 of the gross up (1.0 - 6/11).
- **Non-Eligible Dividends** For non-eligible dividends (the type usually paid by a CCPC) subject to a 15 percent gross up, this would require a combined corporate tax rate of 13.043 percent and a dividend tax credit equal to the gross up. This requires a provincial corporate tax rate of 4.043 percent [13.043 - (38 - 10 - 19)] and a provincial dividend tax credit equal to 4/13 of the gross up (1.0 - 9/13).

The examples in Paragraphs 15-74 and 15-75 illustrate the results of applying the current range of values for corporate tax rates and dividend tax credit rates in all of the Canadian provinces. While these examples were designed to illustrate the desirability of using a corporation, they can also be used to evaluate salary vs. dividend decisions. As noted, paying salary is, from a tax point of view, the equivalent of direct receipt of income.

Analyzing these examples in the context of salary/dividend decisions, it is clear that, in situations where the dividend tax credit exceeds the corporate taxes paid, paying dividends will result in lower taxes than would be the case with paying salary. Similarly, when the dividend tax credit is less than the corporate taxes paid, the payment of salary, all other things being equal, will result in lower taxes.

### *Dividend Benefit - Income Splitting*

15-131. When a corporation is used for income splitting purposes, amounts may be distributed to individuals with little or no other source of income. As was noted in Paragraph 15-86, $26,364 in non-eligible dividends can be paid to such an individual without any federal tax liability being incurred. The fact that this is a much larger amount than can be distributed tax free in any other form clearly favours the use of dividends for distributions of corporate assets in these circumstances.

15-132. A constraint on this approach is the Tax On Split Income (TOSI). If TOSI is applicable, amounts received by a specified individual will have all of this income subject to tax at the maximum federal rate of 33 percent. This will often make it difficult to implement an income splitting strategy involving corporate dividends.

### *Dividend Benefit - CNIL Reduction*

15-133. An individual's Cumulative Net Investment Loss (CNIL) is the cumulative amount by which investment expenses exceed investment income since 1987 (see Chapter 11 for an explanation of this amount, as well as the general provisions of the lifetime capital gains deduction). An individual's ability to make a deduction under the provisions of the lifetime capital gains deduction is reduced, on a dollar-for-dollar basis, by the balance in the CNIL account. This means that, if an individual contemplates selling shares of a qualified small business corporation, or an interest in a qualified farm or fishing property, sensible tax planning would suggest the elimination of any CNIL balance.

15-134. For an individual whose income is provided by his owner-managed corporation, dividends can assist with this problem. The receipt of dividends reduces the CNIL by $1.15 for each $1.00 of non-eligible dividends received. In contrast, salary payments leave this balance unchanged. Another possibility, if the corporation has an amount owing to the shareholder, is to pay interest to the shareholder on the balance outstanding. This interest would also decrease any CNIL.

### *Salary Benefit - Earned Income For RRSP And CPP*

15-135. One of the most attractive features of the Canadian income tax system is the fact that individuals can make deductible contributions to RRSPs. Not only are the contributions deductible at the time that they are made, once inside the plan they enjoy the tremendous

benefits associated with tax free compounding over, what may be, a period of many years. Most individuals will want to take advantage of these provisions.

15-136. Dividends do not constitute Earned Income for the purposes of determining the maximum RRSP contributions, nor do they count as pensionable earnings on which CPP contributions can be based. As a result, if the owner-manager has no other source of Earned Income (e.g., employment income from a source other than his corporation), it will be necessary for the corporation to pay salary if the individual wishes to make RRSP and CPP contributions.

15-137. The maximum for CPP pensionable earnings for 2019 is $57,400. In order to be eligible for the maximum CPP payments at retirement, salary of at least the maximum pensionable earnings for the year should be paid. With the 2020 RRSP limit at $27,230, if the owner-manager has no other source of Earned Income, a 2019 salary of at least $151,278 will be required to make the maximum RRSP contribution for 2020 [(18%)($151,278) = $27,230]. Note that RRSP deduction room can be carried forward, but there is no equivalent carry forward for the CPP program.

### Salary Benefit - Earned Income For Child Care Costs

15-138. If an individual is in a position to deduct child care costs, they are limited to two-thirds of earned income. Salary payments would add to this limit while dividends would not. For a detailed discussion of the deductibility of child care costs, see Chapter 9.

### Salary Benefit - Corporate Tax Savings Carry Over

15-139. In a particular year, an owner-manager may wish to withdraw amounts in excess of the earnings of the corporation. If this happens, there will be no current tax savings associated with the payment of salaries, a fact that would tend to make the payment of such amounts less attractive.

15-140. However, payment of salaries in this situation would serve to create a loss carry over and, if we assume that the loss carry over can be used in some past or future year, the corporate tax savings associated with the payment of salaries would not be lost. The savings, however, will be deferred in the case of a carry forward and this means that, to properly evaluate the payment of salaries in this situation, consideration would have to be given to the time value of money.

### Salary Cost (Possible) - Provincial Payroll Taxes

15-141. With respect to provincial payroll taxes, five provinces and two territories assess such taxes. A summary of the various rates are as follows:

**British Columbia** (Employer Health Tax) No tax on the first $500,000 of payroll. Excess is taxed at up to 1.95 percent with the maximum rate of 1.95 percent applied to total payroll of $1.5 million or more.

**Ontario** (Employer Health Tax) No tax on the first $490,000 of payroll. Excess is taxed at up to 1.95 percent with the maximum rate of 1.95 percent applied to total payroll of over $5 million.

**Manitoba** (Health And Post-Secondary Education Levy) No tax on the first $1.25 million of payroll. Excess is taxed at rates between 2.15 to 4.3 percent.

**Newfoundland/Labrador** (Health And Post-Secondary Education Levy) No tax on the first $1.3 million of payroll. Excess is taxed at a rate of 2 percent.

**Quebec** (Health Services Fund) Quebec also has a complex system which includes exemptions for certain employers. When applicable the tax rate ranges from 1.25 percent to 4.26 percent of payroll.

**Territories** (Payroll Tax) Nunavut and the Northwest Territories tax all payroll at a rate of 2 percent. This tax is employee paid, unlike the employer paid preceding payroll taxes listed. There is no payroll tax in the Yukon.

## Salary Costs - CPP And EI

15-142. In our example from Paragraph 15-121, we ignored the fact that salaries cannot be paid without contributions being made to the CPP. In addition, some provinces levy a payroll tax on salaries and wages as described in the preceding paragraph. These costs can constitute a significant reduction in the after tax cash flow associated with the payment of salaries.

15-143. With respect to CPP contributions, 2019 employee contributions are based on 5.1 percent of $57,400 (maximum pensionable earnings), less a basic exemption of $3,500. This results in a maximum employee contribution for 2019 of $2,749. The employer is required to withhold and remit this contribution from salary paid and contribute an amount that is equal to the employee's contribution. This brings the total CPP cost of paying salaries of $57,400 or more to $5,498.

15-144. As covered in Chapter 4, if an individual pays more CPP contributions than is required, perhaps because he has changed employers, he is refunded the excess through his tax return. Form PD24, Application for a Refund of Overdeducted CPP Contributions or EI Premiums, provides a way for employers who have made excess contributions for an employee to recover the excess.

15-145. If an owner-manager owns more than 40 percent of the voting shares of the corporation, he cannot participate in the Employment Insurance (EI) program. While generally not relevant in the situations covered here, an employee's maximum EI premium for 2019 is 1.62 percent of $53,100 (maximum insurable earnings), with no exemption, an amount of $860. The employer must contribute 1.4 times the employee's premium, an amount of $1,204. This results in a total cost of $2,064 for an employee with maximum insurable earnings in excess of $53,100.

## Salary Benefit - CPP And Canada Employment Tax Credits

15-146. While CPP is an added cost of choosing the salary alternative, the payment of these costs provides a benefit to the individual in the form of future CPP benefit payments, as well as a benefit from the CPP tax credit. You will recall from Chapter 4 that this credit is equal to 15 percent of amounts paid by the employee. This provides a maximum credit of $412 on the payment of the 2019 maximum CPP of $2,749. Note that this would not be a consideration if the individual has other sources of income which required the payment of maximum CPP.

15-147. A further benefit of paying salary is the Canada employment credit of $183 [(15%)($1,222)] for 2019. Unless the individual has other sources of employment income in excess of the base amount for this credit, the Canada Employment credit is only available on the payment of salary by the corporation.

## Example Extended

15-148. Returning to our example of Ms. Olney from Paragraph 15-121, as the owner of 100 percent of the shares of the corporation, she is not eligible to participate in the EI program. In addition, assume the province in which she lives assesses a 2 percent payroll tax to finance its health care program and provides a provincial credit for CPP contributions at a 6 percent rate. Her corporation is a Canadian controlled private corporation and all of its $100,000 in income is eligible for the small business deduction. Given this income and the costs associated with paying salary, the maximum salary that could be paid to Ms. Olney would be $95,496, a figure that would result in no corporate Tax Payable.

| | |
|---|---|
| Pre-Tax Corporate Income | $100,000 |
| Employer's CPP Contribution | ( 2,749) |
| Gross Salary [($100,000 - $2,749) ÷ 1.02] | ( 95,344) |
| Payroll Tax [(2%)($95,344)] | ( 1,907) |
| Corporate Taxable Income | Nil |

15-149. If $95,344 is paid to Ms. Olney as salary, her personal taxes are as follows:

| | |
|---|---|
| Combined Tax Before Credits [(33% + 18%)($95,344)] | $48,625 |
| Credit For Employee's CPP Contribution | |
| [(15% + 6%)($2,749)]* | ( 577) |
| Canada Employment Credit [(15%)($1,222)] | ( 183) |
| Personal Tax Payable | $47,865 |

*We have assumed that Ms. Olney has sufficient property income to place her in the maximum federal tax bracket. This income would absorb other tax credits and, as a consequence, only the CPP and Canada employment credits that result from the payment of salary are included in this analysis.

15-150. With this amount of taxes payable, Ms. Olney's after tax retention would be calculated as follows:

| | |
|---|---|
| Salary Received | $95,344 |
| Employee's CPP Contribution - Maximum | ( 2,749) |
| Personal Tax Payable | ( 47,865) |
| After Tax Cash Retained | $44,730 |

15-151. This more realistic result provides considerably less cash than the $49,000 [($100,000)(1 - 0.51)] that was left when CPP, payroll taxes and the Canada Employment credit are ignored. Note, however, while they would not be easy to quantify, the payment of CPP does provide the owner/manager with future benefits. Using the numbers in Paragraph 15-55, this makes payment of salary, if these additional factors are considered, less desirable than dividends paid out of:

- income eligible for the small business deduction (retention was $48,675),
- business income ineligible for the small business deduction (retention was $45,760).

## Exercise Fifteen - 9

**Subject:** Salary And Dividend Compensation

For the year ending December 31, 2019, Broadmoor Inc., a Canadian controlled private corporation has Taxable Income, before consideration of dividends or salary paid to its sole shareholder, of $550,000. All of this income is from active business activities. The cash balance of the Company, prior to any payments on the current year's taxes, is also equal to this amount. The Company makes the maximum eligible dividend designation each year. Its only shareholder, Ms. Sarah Broad, has no income other than dividends or salary paid by the corporation and has combined federal/provincial personal tax credits of $5,000.

In her province of residence, assume:

- the corporate tax rate is 3 percent on income eligible for the small business deduction and 14 percent on other income
- her combined federal/provincial Tax Payable totals $75,000 on the first $210,371 with additional amounts of income taxed at a combined federal/provincial rate of 51 percent
- the dividend tax credit is 30 percent of the gross up for all dividends
- there is no payroll tax

Determine the amount of after tax cash that Ms. Broad will retain if (1) the maximum salary is paid by the corporation out of the available cash of $550,000 and (2) the maximum amount of eligible and non-eligible dividends are paid. Ignore the required CPP contributions and the Canada employment tax credit.

**SOLUTION available in print and online Study Guide.**

### Use Of Tax Credits

15-152. Our example in this section has involved an individual with other sources of income that placed her in the maximum federal tax bracket. This amount of income would generally be sufficient to absorb any tax credits available to the individual. However, there may be situations where a salary vs. dividend decision is being made with respect to an individual with no other source of income. This would be a fairly common situation when a corporation is being used for income splitting purposes, or for a corporation with only a limited amount of income to distribute.

15-153. If the individual has no other source of income and provincial tax rates favour the use of dividends, there may be a problem with the full use of available tax credits. We noted earlier in this Chapter that dividend payments use up tax credits at a much lower rate than other types of income, such as salary. If only limited amounts of income are being distributed, the use of dividends may leave a portion of the individual's tax credits unused. When this is the case, some combination of salary and dividends may provide the optimum solution.

15-154. A further potential complication stems from the fact that provincial tax credits can only be deducted against the provincial tax liability and federal tax credits can only be deducted against the federal tax liability. In our examples and problems we have not taken this into consideration and have given a single figure for combined federal/provincial tax credits.

15-155. In the real world, it would be possible to have a situation where an individual would have to pay some federal tax in order to use up all of their provincial tax credits, or alternatively, pay some provincial tax in order to use up all of their federal tax credits. Given this text's focus on federal income taxes, no further attention will be given to this complication of the issue.

15-156. The following example illustrates the salary vs. dividend issue when the full utilization of tax credits is a consideration.

> **EXAMPLE** Mr. Eric Swenson is the sole shareholder of Swenson Sweets, a Canadian controlled private corporation. The Company has a December 31 year end and, for 2019, it has Taxable Income, before consideration of salary or dividends to Mr. Swenson, of $29,500, all of which results from active business activities. This amount is available in cash, prior to the payment of any salary or dividends. Mr. Swenson has combined federal/provincial personal tax credits of $3,920.
>
> The corporation operates in a province with a corporate tax rate on active business income of a CCPC of 3 percent and no payroll taxes. The provincial tax rate on personal income is 10 percent of the first $47,630 of Taxable Income, with a provincial dividend tax credit on non-eligible dividends that is equal to 4/13 of the gross up. In solving this problem, we will ignore CPP contributions and the Canada employment tax credit.

15-157. If the full $29,500 is paid out in salary, corporate Taxable Income would be nil and there would be no corporate tax payable. Mr. Swenson's after tax cash retention would be as follows:

| | | |
|---|---|---|
| Salary Received | | $29,500 |
| Personal Tax Payable | | |
| Personal Taxes At 25% (15% + 10%) | ($7,375) | |
| Personal Tax Credits (Given) | 3,920 | ( 3,455) |
| After Tax Cash Retained (All Salary) | | $26,045 |

15-158. As dividends are not tax deductible, corporate tax must be paid prior to any dividend distribution. The combined federal/provincial tax rate would be 12 percent (38% - 10% - 19% + 3%) resulting in corporate taxes of $3,540 [(12%)($29,500)]. This means that the maximum dividend that can be paid will be $25,960 ($29,500 - $3,540). The after tax retention in this case is as follows:

| | |
|---|---|
| Non-Eligible Dividends Received | $25,960 |
| Gross Up Of 15% | 3,894 |
| Taxable Dividends | $29,854 |
| Personal Tax Rate | 25% |
| Personal Tax Payable Before Tax Credits | $ 7,464 |
| Personal Tax Credits (Given) | ( 3,920) |
| Dividend Tax Credit [(9/13 + 4/13)($3,894)] | ( 3,894) |
| Tax Payable ($350 In Unused Credits) | Nil |

| | |
|---|---|
| Non-Eligible Dividends Received | $25,960 |
| Personal Taxes (See Paragraph 15-86 - No Taxes Would Be Paid On This Amount) | Nil |
| After Tax Cash Retained (All Dividends) | $25,960 |

15-159. While the low federal/provincial tax rate on corporations suggests that dividends should be the best alternative, the preceding results do not confirm this view. The problem is that dividend income absorbs available tax credits at a much lower rate than other types of income. The fact that the all dividend solution leaves $350 of unused tax credits suggests that a better solution might be to pay a lesser amount of dividends, plus sufficient salary to absorb these unused credits.

15-160. To investigate this possibility, we need to determine the salary/dividend mix that will fully utilize all of Mr. Swenson's credits. To begin, consider what would happen when we add a $1,000 salary payment to the all dividends case. As the salary will be fully deductible, the after tax cost of making this payment is $880 [($1,000)(1.0 - 0.12)]. As a result, in this type of situation, where the goal is to distribute all of the available corporate income, dividends will only have to be reduced by this $880 per $1,000 of salary increase.

15-161. The resulting increase in taxes payable can be calculated as follows:

| | |
|---|---|
| Increase In Salary | $1,000.00 |
| Decrease In Dividends | ( 880.00) |
| Decrease In Dividend Gross Up [(15%)($880)] | ( 132.00) |
| Decrease In Taxable Income | ($ 12.00) |
| Personal Tax Rate | 25% |
| Decrease In Tax Payable Before Dividend Tax Credit | ($ 3.00) |
| Decrease In Dividend Tax Credit = Increase In Tax Payable [(9/13 + 4/13)($132)] | 132.00 |
| Net Increase In Personal Tax Payable | $ 129.00 |

15-162. This analysis demonstrates that each $1,000 increase in salary results in an increase in personal Tax Payable of $129. Alternatively, this can be stated as an increase in personal Tax Payable of $0.129 for every dollar of increase in salary. This means that to utilize Mr. Swenson's $350 in unused tax credits, he will have to receive salary of $2,713 ($350 ÷ 0.129). This results in the following amount being available for dividends:

| | |
|---|---|
| Corporate Taxable Income Pre-Salary | $29,500 |
| Salary | ( 2,713) |
| Corporate Taxable Income | $26,787 |
| Corporate Tax At 12% | ( 3,214) |
| Available For Dividends | $23,573 |

15-163. When this dividend is paid out to Mr. Swenson, his after tax retention is as follows:

| | |
|---|---|
| Non-Eligible Dividends Received | $23,573 |
| Gross Up Of 15% | 3,536 |
| Taxable Dividends | $27,109 |
| Salary | 2,713 |
| Taxable Income | $29,822 |
| Personal Tax Rate | 25% |
| Personal Tax Payable Before Tax Credits | $ 7,456 |
| Personal Tax Credits (Given) | ( 3,920) |
| Dividend Tax Credit [(9/13 + 4/13)($3,536)] | ( 3,536) |
| Personal Tax Payable (Salary And Dividends) | Nil |

| Comparison | All Salary | All Dividends | Salary And Dividends |
|---|---|---|---|
| Non-Eligible Dividends Received | N/A | $25,960 | $23,573 |
| Salary Received | $29,500 | N/A | 2,713 |
| Personal Tax Payable | ( 3,455) | Nil | Nil |
| After Tax Cash Retained | $26,045 | $25,960 | $26,286 |

15-164. As shown in the preceding calculations, this mix of salary and dividends is such that it utilizes all of Mr. Swenson's tax credits and leaves Tax Payable of nil. This results in a solution that not only improves on the $25,960 that was retained in the all dividend scenario, it also improves on the $26,045 that was retained in the all salary case. It would appear to be the optimum solution for this example where only tax effects are considered.

## *Optimizing A Limited Payment Of Cash*

15-165. A similar analysis could be done if the corporation had limited cash. Assume that, while the corporation in the example (Paragraph 15-156) had Taxable Income of $29,500, it had only $16,000 in cash. To determine the maximum salary that can be paid (X), it is necessary to solve the following equation:

$$X = \$16,000 - [(12\%)(\$29,500 - X)]$$

$$X - 0.12X = [(\$16,000 - (12\%)(\$29,500) = \$14,159$$

15-166. Based on this amount of salary, the amount of after tax cash retained would be calculated as follows:

| | | |
|---|---|---|
| Corporate Cash Before Taxes | | $16,000 |
| Corporate Taxes [(12%)($29,500 - $14,159)] | | ( 1,841) |
| Corporate Cash Available For Salary | | $14,159 |

| | | |
|---|---|---|
| Salary Received | | $14,159 |
| Personal Tax Payable: | | |
| Personal Tax On Salary [(25%)(14,159)] | ($3,540) | |
| Personal Tax Credits (Given) | 3,920 | Nil |
| After Tax Cash Retained ($380 In Unused Credits) | | $14,159 |

15-167. Alternatively, if maximum dividends are paid, the amount of after tax cash retained would be calculated as follows:

| | |
|---|---|
| Corporate Cash Before Taxes | $16,000 |
| Corporate Taxes [(12%)($29,500)] | ( 3,540) |
| Corporate Cash Available For Dividends | $12,460 |
| | |
| Non-Eligible Dividend Received | $12,460 |
| Personal Taxes (See Paragraph 15-86 - No Taxes Would Be Paid) | Nil |
| After Tax Cash Retained | $12,460 |

15-168. It is clear that the salary approach results in a considerably larger after tax retention than the dividend approach. This result would be expected given that the corporate cash was insufficient to utilize the personal tax credits in either approach.

## Exercise Fifteen - 10

**Subject:** Salary vs. Dividends

For the year ending December 31, 2019, Mortell Inc., a Canadian controlled private corporation, has Taxable Income, before consideration of dividends or salary paid to its sole shareholder, of $198,000. The Company's cash balance is over $200,000. It is subject to a combined federal/provincial tax rate of 12 percent. Ms. Mortell, the Company's only shareholder, has employment income of $150,000 and, under normal circumstances, does not make withdrawals from the corporation. However, she needs an additional $30,000 in cash to create the home theatre of her dreams. Ms. Mortell's combined federal/provincial tax rate on additional income is 45 percent. She lives in a province where the provincial dividend tax credit is equal to 25 percent of the dividend gross up for non-eligible dividends. She has asked your advice as to whether the payment of salary or, alternatively, the payment of non-eligible dividends, would have the lowest tax cost. Provide the requested advice.

## Exercise Fifteen - 11

**Subject:** Salary vs. Dividends - Limited Corporate Cash

For the year ending December 31, 2019, Fargo Ltd. has Taxable Income, before consideration of dividends or salary paid to its sole shareholder, of $21,500. The Company's cash balance, prior to the payment of any taxes for the year is $18,500. The Company's Taxable Income is subject to a combined federal/provincial tax rate of 12 percent. There is no payroll tax in this province.

Mr. Fargo, the Company's president and sole shareholder, is 71 years of age and has no other source of income (he is not eligible for OAS). He has combined federal/provincial personal tax credits of $3,950 and lives in a province that has a personal tax rate on the first $47,630 of Taxable Income equal to 10 percent. The provincial dividend tax credit is 30 percent of the gross up for non-eligible dividends.

Mr. Fargo would like to remove all of the cash from the corporation and has asked your advice as to whether it would be better to take it out in the form of all non-eligible dividends or all salary. As Mr. Fargo is over 70 years old, no CPP contributions are required. Ignore the Canada employment tax credit. Provide the requested advice.

**SOLUTIONS available in print and online Study Guide.**

## Conclusion

15-169. As the preceding discussion makes clear, the salary vs. dividend decision is complex. Determination of the total tax consequences of the two alternatives does not necessarily resolve the issue. In addition to important factors already discussed in the chapter such as income splitting and bonusing down, consideration should be given to:

- the administrative costs related to withholding and remitting income tax and CPP premiums when salary is paid
- the ability to defer personal taxation to the subsequent calendar year if the payment of salary is deferred and the corporation's year end is within 180 days of December 31
- the effect of the gross up on dividends if the OAS clawback is relevant
- if the owner-manager is applying for a mortgage or loan, it will be more advantageous to have a history of salary received rather than dividends received

15-170. The preceding material does not give you a comprehensive approach to solving these problems on a quantitative basis. In actual fact, there are problems here that are probably not subject to quantitative solutions. For example, whether or not an individual feels a need for retirement income involves many subjective considerations. With an issue such as this, a tax advisor can only outline the various possible outcomes.

# Key Terms Used In This Chapter

15-171. The following is a list of the key terms used in this Chapter. These terms, and their meanings, are compiled in the Glossary located at the back of the Study Guide.

| | |
|---|---|
| Active Business Income | Low Rate Income Pool (LRIP) |
| Aggregate Investment Income | Manufacturing And Processing Profits Deduction (M&P Deduction) |
| Annual Business Limit | Over Integration |
| Bonusing Down | Private Corporation |
| Canadian Controlled Private Corporation | Public Corporation |
| Charitable Donations Tax Credit | Specified Employee |
| Eligible Dividends | Tax Avoidance |
| Estate Planning | Tax Deferral |
| General Rate Income Pool (GRIP) | Tax Planning |
| Income Splitting | Taxable Benefit |
| Integration | TOSI (Tax On Split Income) |
| Lifetime Capital Gains Deduction | Under Integration |
| Limited Liability | |

# Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 15:

- 11 Self Study problems,
- 5 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

# Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### *Assignment Problem Fifteen - 1*

***(Advantages Of Incorporation)***

Philip Caron is in his mid-fifties and he is married with two teen aged children. For over fifteen years, he has worked as an unincorporated welder. The business is currently netting approximately $250,000 per year. In recent years, Mr. Caron has been using about half of the business earnings for personal living expenses.

In the last five years, he has been refining a fork lift which can be attached to half-ton trucks. He has a product which is selling well with few malfunctions and he is in the process of patenting the design. As a result, his welding business is now predominantly manufacturing these fork lift units.

Some of his welding equipment is old and he is faced with the need to replace it. Also, he needs to acquire larger welders and pipe benders to mass manufacture the fork lift. The business expansion will require substantial capital investment for which external financing will be required.

**Required:** Briefly discuss whether Mr. Caron should incorporate his business.

### *Assignment Problem Fifteen - 2*

***(Example Of Integration)***

One of your long-standing clients, Mr. Carson Jones, has operated a successful unincorporated business for 10 years. This business is something of a sideline for him in that he has employment and investment income of over $250,000 per year. Further, these latter sources of income are more than adequate to meet his personal needs and absorb all of his available tax credits.

However, he has an intense dislike for paying taxes, particularly since the government has increased the top federal tax rate to a near obscene (in his opinion) 33 percent. When this maximum federal rate is combined with the top rate of 20 percent in his province, the result is an overall rate of 53 percent.

Given this, he is looking for ways to save taxes. One approach that he would like to consider is transferring the income from his business, as well as a group of publicly traded securities, to a new corporation. The new corporation would be named Carjon Ltd.

He has asked your advice on this approach and, to assist you in providing this advice, he has provided you with the following relevant data:

| | |
|---|---|
| Taxable Income of business (Active Business Income) | $115,000 |
| Eligible portfolio dividends | 133,000 |
| Federal corporate tax rate after federal abatement | 28% |
| Federal Small Business Deduction | 19% |
| General Rate Reduction | 13% |
| Provincial rate on Active Business Income of CCPCs | 2% |
| Provincial dividend tax credits on: | |
| Eligible dividends | 40% of dividend gross up |
| Non-eligible dividends | 23% of dividend gross up |

**Required:**

A. Assume no corporation is used and the income is received directly. Calculate Carson's personal Tax Payable, showing separately the Tax Payable on the active business income and the dividends.

B. Assume the income and dividends are received by Carjon Ltd. Calculate corporate Tax Payable, after tax income available for distribution, and personal taxes that would be payable on the distribution. Your calculations should show separately the Tax Payable on the active business income and any eligible or non-eligible dividends.

C. Compare the Tax Payable with and without the use of Carjon Ltd. and explain why the Tax Payable amounts are different. Advise Carson as to whether he should make the proposed transfers to a new corporation.

### *Assignment Problem Fifteen - 3*

#### *(Flow Through Of Interest Income)*

As an employee of a public company, Maxine Ashley has an annual salary of $155,000.

After years of purchasing losing tickets, Maxine wins $500,000 in the provincial lottery. As her employment income is more than adequate for her current needs, she plans to invest all of these winnings in a debt security for the year ending December 31, 2019. The security pays annual interest at a rate of 5 percent.

The following information is applicable to the province in which Maxine is a resident:

- The provincial marginal tax rate for Maxine is 13 percent.
- The provincial dividend tax credit on non-eligible dividends is 28 percent of the gross up.
- The provincial tax rate on the investment income of CCPCs is 12 percent.

Other than the interest earned on her investment in the debt security, Maxine has no other source of investment income.

**Required:** Prepare calculations that will compare the after tax retention of income that will accrue to Maxine for 2019 if:

A. The investment is owned by her as an individual.

B. The investment is owned by a CCPC in which she is the sole shareholder, and which pays out all available income in dividends.

### Assignment Problem Fifteen - 4

#### (Flow Through Of Dividend Income)

As an employee of a public company, Thomas Nance has an annual salary of $300,000.

After years of purchasing losing tickets, Thomas wins $650,000 in the provincial lottery. As his employment income is more than adequate for his current needs, he plans to invest all of these winnings in public company preferred shares for the year ending December 31, 2019. These securities pay eligible dividends of 6 percent each year.

The following information is applicable to the province in which Thomas is a resident:

- The provincial marginal tax rate for Thomas is 19 percent.
- The provincial dividend tax credit on eligible dividends is 22 percent of the gross up.
- The provincial tax rate on the investment income of CCPCs is 11 percent.

Other than the preferred share dividends, Thomas has no other source of investment income.

**Required:** Prepare calculations that will compare the after tax retention of income that will accrue to Thomas in 2019 if:

A. The investment is owned by him as an individual.

B. The investment is owned by a CCPC in which he is the sole shareholder, and which pays out all available income in eligible dividends.

### Assignment Problem Fifteen - 5

#### (Incorporation Of Investment Income)

The following information provides tax information for the province in which Jason Tegue lives for 2019:

- The combined federal and provincial corporate tax rate on the investment income of CCPCs is 50-2/3 percent (including the ART).
- The provincial dividend tax credit on eligible dividends is equal to 40 percent of the gross up on these dividends.
- The provincial dividend tax credit on non-eligible dividends is equal to 30 percent of the gross up on these dividends.
- Provincial tax payable on an individual's first $95,259 of Taxable Income is $12,817. Amounts in excess of this are subject to provincial tax at a rate of 17.4 percent.

Jason owns the following investments, and anticipates the following Canadian source income for 2019:

| | Value At 31/12/2018 | Type Of Income | Expected Income For 2019 |
|---|---|---|---|
| Powor Corp Bonds | $ 78,000 | Interest | $ 8,600 |
| Larch Company Shares | 312,000 | Dividends | 17,400 |
| Inbridge Inc. Shares | 36,000 | Capital Gains | 6,200 |
| Calgary Dominion Bank Shares | 38,000 | Dividends | 3,600 |
| Calgary Dominion Bank Shares | | Capital Gains | 2,800 |
| Totals | $464,000 | N/A | $38,600 |

Jason only invests in the shares and debt of large, publicly traded companies. He does not own more than 1 percent of the shares or debt in any of these corporations. All of the dividends received were designated as eligible by the paying corporation.

In 2019, in addition to the above investment income, Jason expects to earn $92,000 in employment income. He has combined federal/provincial personal tax credits of $3,491. The total adjusted cost base for his investments is $450,000.

Jason asks you whether it is financially more attractive for him to have his investments owned by a corporation or to own them directly, as he currently does. Assume that he and his investments will generate the anticipated amounts of income.

Jason's lifestyle requires him to use all available income. As a consequence, he would like you to assume that, if the investments are transferred to his corporation, the corporation will pay out all available funds as dividends.

**Required:** Provide an appropriate analysis for Jason Tegue.

### Assignment Problem Fifteen - 6

#### (Partner As Individual Or Corporation)

Having worked as an individual management consultant, Mellisa Fox has enjoyed a great deal of success. Her effectiveness has generated a fairly long list of potential clients who would like to use her services. Recognizing the opportunities involved in this situation, Mellisa has decided to join Consulting Unlimited (CU) as a fourth partner.

Her entrance into the partnership will be effective January 1, 2019. She is giving consideration to three different approaches, the first two of which require the establishment of a new Canadian controlled private corporation (CCPC) in which she will be the sole shareholder. If she adopts one of these alternatives, the other partners in CU have agreed to allocate 25 percent ($125,000) of the small business deduction annual limit to her corporation.

**Alternative 1** Her new corporation will pay corporate tax on its full share of the partnership income, with the after tax funds being paid to Mellisa as dividends.

**Alternative 2** Mellisa will receive sufficient salary from her corporation to reduce the corporation's income to its $125,000 share of the annual business limit. Corporate taxes will be paid on the remaining Taxable Income.

**Alternative 3** Mellisa will join the partnership as an individual. Her share of the partnership income will be taxed as business income.

Mellisa lives in a province where the provincial tax payable on the first $210,371 of Taxable Income is $22,150, with additional amounts being taxed at a provincial rate of 18 percent. In this province, the provincial dividend tax credit is equal to 40 percent of the gross up for eligible dividends and 30 percent of the gross up for non-eligible dividends. Mellisa's tax credits for 2019 total $4,241.

If she forms a new corporation it would be subject to a combined federal/provincial tax rate on income eligible for the small business deduction of 12.5 percent. The rate on other active business income would be 27 percent.

During the CU's taxation year ending December 31, 2019, it is expected to have Taxable Income of $930,000. All of this income will be active business income and Mellisa or her corporation will be entitled to 25 percent of the total.

Because she has no other source of income, she requires all of the income that is generated by her participation in CU.

**Required:** Calculate the after tax personal retention of Mellisa's share of the partnership income for each of the three approaches. Ignore CPP considerations and the Canada employment tax credit in your calculations. Which approach would you recommend? Briefly explain why this alternative is the best and any other factors she should consider.

### Assignment Problem Fifteen - 7

#### (Shareholder Loans)

Borsa Ltd. is a Canadian controlled private corporation with a taxation year that ends on December 31. All of the Company's shares are owned by Derek Borsa. In addition to being the sole shareholder of the Company, Derek works on a full time basis in the business.

Having grown up in a relatively poor working class family, Derek has always exhibited a strong sense of social responsibility. This is reflected in the policies of his Company which provides a generous package of benefits to its employees. Included in these benefits is the provision of interest free loans to employees who have at least 12 months service. Specifically, the Company will provide an interest free loan:

- of up to $150,000 to assist an employee in acquiring a residence. The principal amount of the loan must be repaid the earlier of 5 years from the day the loan was granted and the last day of employment.
- of up to $25,000 to assist an employee in acquiring an automobile to be used in employment related activities. The principal amount of the loan must be repaid the earlier of 3 years from the day the loan was granted and the last day of employment.

Derek borrows from the Company on a regular basis for various reasons. During the year ending December 31, 2019, Derek received loan proceeds from the Company as follows:

1. On February 1, Derek borrows $50,000 to cover a medical procedure on his shoulders in the United States. Derek would have had to wait over 18 months to have this procedure done in Canada while suffering a great deal of pain. As he feels Borsa Ltd. benefits from his increased productivity after the procedure, the loan is interest free and will be repaid on September 30, 2020.
2. On April 1, Derek borrows $15,000 from the company to finance a week at a luxurious resort in British Columbia to please his new wife. The loan will be repaid on December 31, 2019. Because he does not want to appear to his employees to be taking advantage of company funds, he decides that he should pay interest at the market rate for such loans. Assume the relevant rate is currently 5 percent.
3. On June 1, Derek borrows $150,000 in order to purchase a new residence. The loan is interest free. The loan will be repaid in two annual instalments of $75,000, on February 28, 2020 and 2021.
4. On August 1, Derek borrows $50,000 in order to complete the renovations and landscaping of his new residence. The loan is interest free and will be repaid on July 31, 2021.
5. On November 1, to fulfill a lifelong dream, he borrows $212,000 from the Company to purchase a Mercedes S Class sedan. As it will be used purely for personal activities, he does not qualify for the $25,000 interest free loan. The loan bears interest at an annual rate of 1 percent and will be repaid on May 1, 2022.

All repayments and interest payments are made as scheduled. In all of the years under consideration, assume the relevant prescribed rate is 2 percent.

**Required:**

A. Indicate the tax consequences that will accrue to Derek as a result of receiving these loans. Briefly explain your conclusions for each loan for the years it is outstanding. Base your interest calculations on the number of months the loans are outstanding.

B. Identify any tax planning issues that are associated with these loans.

### Assignment Problem Fifteen - 8

#### (Bonusing Down)

Donat Ltd. is a Canadian controlled private corporation (CCPC) that anticipates that its Taxable Income for the taxation year ending December 31, 2019 will be $625,000. All of the Corporation's shares are owned by Martin Donat. The anticipated income figure of $625,000 is after the deduction of a $275,000 salary payment to Martin. He plans to maintain his salary at $275,000 for the next 5 years.

All of Donat Ltd. income, both in the current and in previous years, is the result of active business income. However, this is the first year that its Taxable Income has exceeded the annual business limit for the small business deduction. It has no balance in its GRIP account at the beginning of 2019.

Martin has read an article written by a financial expert which states that when the Taxable Income of a CCPC exceeds $500,000 you must "bonus down" to prevent double taxation.

He does not need any additional funds for his personal living costs currently, but plans to build his dream home in 2023. That year, he will require substantial cash for the home's construction.

In Martin's province of residence, assume:

- for 2019 that provincial corporate tax rates are 13 percent on active business income in excess of the small business deduction and 2.5 percent on active business income eligible for the small business deduction.
- for 2019 to 2023 any Taxable Income in excess of Martin's $275,000 salary will be taxed at 33 percent federally and 19 percent provincially
- for 2023 the dividend gross up will be 38 percent for eligible dividends and 15 percent for non-eligible dividends
- for 2023 the federal dividend tax credit will be 6/11 of the gross up for eligible dividends and 9/13 of the gross up for non-eligible dividends
- for 2023 the provincial dividend tax credit will be 36 percent of the gross up for eligible dividends and 20 percent of the gross up for non-eligible dividends

**Required:** As Martin's tax consultant would you advise him to bonus down by paying himself additional salary of $125,000 in 2019? Justify your conclusion.

### Assignment Problem Fifteen - 9

#### (Salary Vs. Dividends - Required Amount)

Lara Collins is the sole shareholder of Collins Inc., a Canadian controlled private corporation. It uses a December 31 taxation year.

All of its income qualifies for the small business deduction. This income is allocated to a province where the provincial rate on this type of income is 3 percent.

Lara needs an additional $30,000 in cash in order to create a much needed woman cave in her basement. Collins Inc. has sufficient cash to pay either additional salary or additional dividends in order to provide the required funds. The Company has no balance in its GRIP account.

Lara's 2019 Taxable Income, before consideration of any additional payment from Collins Inc., is $98,000. This includes salary of $75,000 from Collins Inc. In the province where she is resident, the provincial tax rate on Taxable Income over $95,259 is 12 percent. The dividend tax credit for non-eligible dividends in this province is 30 percent of the dividend gross up.

**Required:** Determine the amount that would be required in the way of salary and in the way of dividends, in order to provide Lara with the required after tax funds of $30,000. Which alternative would have the lowest tax cost to Lara and her corporation?

### Assignment Problem Fifteen - 10

#### (Salary Vs. Dividends - Required Amount)

Simon Fahrquest is the sole shareholder of Dawg Ltd., a very successful business that was incorporated a number of years ago. The Company has always qualified as a CCPC and uses a December 31 year end.

Simon has never been particularly fond of people, but has always loved dogs, particularly those of mixed breed. While he has no family, he currently owns 12 dogs, none of which are purebred.

While Dawg Ltd. has always been very profitable, Simon has chosen to live modestly in a dog friendly residential property that he has owned for many years. Each year, he estimates the amount of cash that he will need for his living expenses which vary year to year and looks to his corporation to provide the needed cash.

Since after meeting Simon's financial needs, Dawg Ltd. always has cash that isn't required for operations, it donates at least $100,000 per year to the Society For The Prevention Of Cruelty To Animals (SPCA), a registered charity. The donations specify that the funds must be used for the protection, maintenance, and placement of mixed breed dogs.

For 2019, Simon estimates that he will need $50,000 in after tax cash to meet his personal needs. He expects Dawg Ltd. will have Taxable Income of $350,000 before any payments to him, all of which will qualify for the small business deduction. The provincial tax rate on such income is 3 percent.

In Simon's province of residence, the provincial taxes on the first $47,630 of Taxable Income total $4,528. Additional income will be taxed at a provincial rate of 12 percent. Also in this province, the provincial dividend tax credit for non-eligible dividends is equal to 32 percent of the dividend gross up.

For the 2019 taxation year, Simon estimates that his personal tax credits will total $3,260.

**Required:**

A. Determine the tax cost of providing Simon with the required $50,000 in after tax cash using only salary payments.

B. Determine the tax cost of providing Simon with the required $50,000 in after tax cash using only dividend payments.

C. Given the information in this problem, do you believe that better results could be achieved with a combination of salary and dividends? Would your answer be different if Simon's personal tax credits totalled $10,000 instead of $3,260? Calculations are not required in answering this Part C.

D. Simon would like to increase his donations to the SPCA and has asked your advice on the most tax advantageous way to do this. What factors should be considered when analyzing this issue?

Ignore CPP contributions and the Canada employment credit in your solution.

### Assignment Problem Fifteen - 11

#### (Salary Vs. Dividends - Optimum Mix)

Robert Lorca is the only shareholder of Rolorc Ltd., a Canadian controlled private company with a taxation year that ends on December 31. His only source of income is either dividends or salary provided by Rolorc. For 2019, because of extensive medial costs, he has available tax credits of $9,500.

While Rolorc's 2019 taxable income before any salary or dividend payments is $185,000, large capital expenditures has left the Company with only $89,000 in cash that is available for distribution.

Relevant information with respect to Robert's province of residence is as follows:

- In order to simplify calculations, assume that all of Robert's Taxable Income will be taxed at a combined federal/provincial rate of 24 percent.
- The provincial dividend tax credit is equal to 33 percent of the gross up on non-eligible dividends.
- All of the company's activities are confined to a province in which the applicable corporate rate of taxation is 3 percent on income eligible for the small business deduction. The province does not levy a payroll tax.

**Required:** Ignore the required CPP contributions and the Canada employment tax credit when answering Parts A to D in this problem.

A. Determine the after tax amount of cash that Robert will retain if all of the Company's cash is used to pay taxes and salary.

B. Determine the after tax amount of cash that Robert will retain if the Company pays the maximum possible dividend.

C. Can Robert improve his after tax cash retention by using a combination of salary and dividends? Explain your conclusion.

D. If your answer to Part C is positive, determine the combination of salary and/or dividends that will produce the maximum after tax cash retention for Robert. Calculate the amount of this after tax cash retention.

# CHAPTER 16

# Rollovers Under Section 85

## Rollovers Under Section 85

### Introduction

16-1. Chapter 15 gave detailed consideration to the question of whether it would be advantageous to establish a corporation in order to reduce, defer, or redistribute the amount of Tax Payable. If the results of this analysis favour the use of a corporation, Section 85 of the *Act* provides an attractive basis for the transfer of property to the new corporation.

16-2. The problem that is involved with such a transfer is that the assets may have been owned by the transferor for some period of time. In these circumstances, it is possible that their fair market values may be well in excess of their adjusted cost base and/or their undepreciated capital cost. As a transfer by a taxpayer to a corporation would be considered a disposition by that taxpayer, the incorporation of an existing business could result in a need to include both capital gains and recapture in the transferor's Taxable Income. In a typical situation, where the owner of an operating business decides to transfer all of its assets to a newly formed corporation, the resulting tax liability could be significant.

> **EXAMPLE** Joanne Browski has an unincorporated business that is using assets with a fair market value of $572,000. The tax values for these assets total $225,000. Ms. Browski would like to transfer these assets to a corporation and continue her operations in that legal form (note, that while we have treated the group of assets like a single asset in order to simplify this example, in actual practice, each asset would have to be treated individually).
>
> **ANALYSIS** Under the general tax rules, asset dispositions must be recorded at fair market value. If this applied to Ms. Browski's transfer, the amount of taxation would be significant and could be a deterrent to the incorporation of her business.

16-3. Section 85 of the *Income Tax Act* is designed to provide relief in this type of situation. In somewhat simplified terms, it permits Ms. Browski's property to be transferred to a corporation on either a tax free basis, or with a level of taxation that is determined at her discretion. As noted in earlier Chapters, such transactions are referred to in tax work as rollovers.

16-4. Of the rollovers that are available, the content of Section 85 provide for one of the most important and widely used. In this Chapter we will provide detailed coverage of the application of this Section. Other rollovers involving corporations will be given coverage in Chapter 17.

# General Rules For The Transfer

## Transferor And Transferee

### Transferors

16-5. As indicated in the introduction, we are concerned here with transfers of property to a corporation at a value that can be elected by the transferor and the corporation. There are several possibilities with respect to the identity of the transferor:

- The transferor may be an **individual** who wishes to incorporate his proprietorship.
- The transferor may be a **corporation** that wishes to transfer some of its assets to a different corporation.
- The transferor may be a **trust** that wishes to transfer some of its assets to a corporation.
- The transferor may be a **partner** who wishes to incorporate his partnership interest.

16-6. ITA 85(1) refers to taxpayers and this subsection covers the rules related to transferors who are individuals, corporations, and trusts. As partnerships are not "taxpayers" for income tax purposes, a separate ITA 85(2) provides for the transfer of partnership assets to a corporation.

### Transferees

16-7. With respect to transferees, Section 85 requires that they be taxable Canadian corporations. A "Canadian corporation" is defined in ITA 89(1) as a corporation that is currently resident in Canada and that was either incorporated in Canada, or has been a resident continuously since June 18, 1971. ITA 89(1) also defines a "taxable Canadian corporation" as a Canadian corporation that was not, by virtue of a statutory provision, exempt from taxation under Part I of the *Income Tax Act*.

## Eligible Property

16-8. Only "eligible property", the components of which are defined in ITA 85(1.1), can be transferred under Section 85. The major items listed in the Subsection include:

- both depreciable and non-depreciable capital property, generally not including real property owned by non-residents;
- Canadian resource properties;
- foreign resource properties;
- inventories, other than inventories of real property; and
- real property owned by a non-resident person and used in the year in a business carried on by that person in Canada.

16-9. The general exclusion of real property owned by non-residents reflects the fact that this type of property is Taxable Canadian Property and gains on its disposition are subject to Canadian taxes, without regard to the residency of the seller. The exclusion is designed to prevent a non-resident who owns Canadian real estate from being able to transfer the property on a tax free basis to a corporation, and subsequently selling the shares in the corporation on a tax free basis. As explained in Chapter 20, gains on such dispositions are typically exempted from Canadian tax by international tax treaties.

16-10. The second exclusion from assets eligible for the Section 85 rollover would be Canadian resident owned real property that constitutes an inventory. That is, if a group of real property assets is being actively traded, rather than being held for their income producing ability, they are not eligible for a tax free rollover under ITA 85.

16-11. This latter exclusion of inventories of real property can be a particularly troublesome provision due to the fact that, in practice, some taxpayers may not be certain as to the status of their real estate holdings. If a taxpayer was to go through the Section 85 rollover procedures and then, after the fact, find that the transferred real estate holdings were considered inventory by the CRA, the tax consequences would be very severe. In this type of situation, it would be advisable to delay the transfer to the corporation until such time as any uncertainty regarding the status of the real estate could be clearly established.

## Consideration To Transferor

16-12. In return for the property transferred to the corporation, the corporation may provide various types of consideration to the transferor. The one requirement that is specified in ITA 85(1) is that some part of this consideration must consist of shares of the transferee corporation.

16-13. The shares issued may be either preferred, common, or some combination of the two types. Further, the requirement for share consideration to be used can be satisfied by the issuance of as little as one share to the transferor. For reasons that will become evident later in this Chapter, the usual Section 85 transaction involves the use of a combination of shares and non-share consideration (e.g. cash or debt securities). In this context, the non-share consideration is usually referred to as the "boot".

16-14. A further point here is that, without regard to the values that are elected for the exchange, the fair market value of the consideration provided to the transferor should be equal to the total fair market value of the assets transferred to the corporation. As will be discussed later in this Chapter, if these amounts are not equal, the difference may be viewed as a benefit to the transferor, or a gift to a related party.

## Making The Election

16-15. Both the transferor and the transferee corporation must elect to have the Section 85 provisions apply. This joint election is accomplished by filing Form T2057 (transfers from individuals, trusts, and corporations) or T2058 (transfers from partnerships), on or before the earliest of the dates on which the normal tax returns are due for the two taxpayers.

16-16. A late election may be filed for up to three years after this date and, with the permission of the CRA, a late election will be accepted after the end of this three year period. Whenever there is a late election, a penalty of one-quarter of 1 percent of any capital gain or other income will be assessed for each month beyond the normal filing date. The maximum penalty is $100 per month to a maximum of $8,000.

16-17. In making the election, it is crucial that the taxpayer list all of the properties that are to be covered. If a property is omitted from the forms, the normal rules associated with dispositions will apply. This could result in the need to recognize capital gains, recapture, or business income on the transfer, an outcome that might require needless payment of taxes.

## Establishing The Transfer Price

### *Importance*

16-18. One of the most significant features of ITA 85 is that it provides for the transfer of various properties to a corporation at values that are jointly elected by the transferor and transferee. Careful consideration must be given to the election of an appropriate transfer price in that, in general, this elected value establishes three important values. These are:

**Transferor** The deemed proceeds of disposition for the property given up.

**Transferor** The adjusted cost base or capital cost of the consideration received from the corporation.

**Transferee** The tax cost of the property received by the corporation (adjusted cost base, capital cost, or UCC).

16-19. As will be discussed at a later point in this Chapter, the elected value is also influential in determining the PUC of the newly issued shares.

### *Basic Rules*

16-20. While there are a number of complications associated with establishing transfer prices, the basic rules are very straightforward. The elected values cannot exceed fair market values and cannot be less than the adjusted cost base of non-depreciable assets, or the UCC of depreciable assets. As we will see in the next section, the floor elected value is also limited by the boot, or non-share consideration, received.

**EXAMPLE** Mr. Thompson owns non-depreciable capital assets with a fair market value of $750,000 and an adjusted cost base of $500,000. On the transfer of these assets to a corporation, he will receive consideration with a fair market value of $750,000. However, under the provisions of ITA 85, the elected value can be any value between a floor of $500,000 and a ceiling of $750,000.

**ANALYSIS** In most situations, the transferor wishes to avoid recognizing income on the transfer and, in order to do this, the elected value will be the floor of $500,000. The election of this value will have the following tax consequences for the transferor and the transferee:

- The $500,000 will be the proceeds of disposition to the transferor. As this is equal to his adjusted cost base for the assets, there will be no capital gain on the transfer.
- The adjusted cost base to the corporation will be $500,000. This means that, if the corporation were to sell the assets immediately for their fair market value of $750,000, a capital gain of $250,000 ($750,000 - $500,000) would have to be recognized. This reflects the fact that the gain on the assets at the time of transfer was only deferred, not eliminated, by the use of the ITA 85 rollover.
- While we have not specified the type of consideration that will be received by the transferor, the election of $500,000 as the transfer price means that the adjusted cost base of the consideration will be this amount. This will be less than the $750,000 fair market value of the consideration.

16-21. You should note that this scenario raises the possibility of double taxation on the $250,000 gain. The adjusted cost base of the property transferred and the consideration received by the transferor is $500,000. If the corporation sells the assets for their fair market value of $750,000, there will be a $250,000 gain at the corporate level. If the consideration received by the transferor is in the form of shares, a sale of these shares at their fair market value of $750,000 would result in the $250,000 gain being taxed a second time at the individual level. This would suggest that, if either the assets transferred, or the consideration received by the transferor are to be sold, the election should be made at the fair market value of $750,000.

### Non-Share Consideration (Boot)

16-22. The term, "boot", is commonly used to refer to non-share consideration given to the transferor in an ITA 85 rollover. It would include cash paid to the transferor and new debt of the transferee corporation issued to the transferor. In those cases where an existing business is being transferred under these provisions, boot would include the assumption by the transferee corporation of any debt of the existing business that is being transferred.

16-23. Other types of non-share consideration (e.g., capital assets) could be used in an ITA 85 rollover and, if this was the case, the term boot would still be appropriate. However, in almost all situations, boot is restricted to cash, new debt issued by the transferee corporation, or existing debt of the transferor assumed by the transferee corporation.

16-24. Boot is of considerable significance in that, if the rollover is properly structured, it constitutes an amount of cash or cash equivalent that will be received by the transferor on a tax free basis. Because of this, the other basic rule on establishing a transfer price is that the elected amount cannot be less than the value of the non-share consideration provided to the transferor.

16-25. The example that was presented in Paragraph 16-20 involved non-depreciable capital assets with an adjusted cost base of $500,000 and a fair market value of $750,000. With respect to the consideration received by Mr. Thompson, assume that it is as follows:

| | |
|---|---|
| Cash | $600,000 |
| Shares Of Transferee Corporation | 150,000 |
| Total (Equals Fair Market Value Of Assets Transferred) | $750,000 |

16-26. Because the elected value cannot be below the value of the non-share consideration, the minimum elected value would be $600,000. If $600,000 was the elected value, it would result in the following tax consequences:

- The proceeds of disposition to the transferor would be $600,000, resulting in a taxable capital gain of $50,000 [(1/2)($600,000 - $500,000)].
- The adjusted cost base of the assets for the corporation would be the transfer price of $600,000. This means that if the corporation sells the assets for their fair market value of $750,000, the capital gain would be $150,000.
- The adjusted cost base of the consideration received by the transferor would be $600,000. As will be discussed at a later point, all of this amount must be allocated to the non-share consideration, leaving the share consideration with a nil adjusted cost base.

### *The Usual Scenario*

16-27. As illustrated in the preceding example, if the boot exceeds the tax values (adjusted cost base or UCC) of the assets transferred, the result is some form of Taxable Income. As one of the usual goals in using ITA 85 is to avoid a tax liability on the transfer of assets, the normal procedure is to set the transfer price at an amount equal to the tax values of the assets and to restrict the use of boot to this value. In the example presented, this would mean using $500,000 as the elected value and paying or issuing non-share consideration in this same amount.

16-28. In addition, the fair market value of the consideration received by the transferor must be equal to the fair market value of the assets transferred to the corporation. In the example presented in Paragraph 16-20, this value is $750,000. This means that if the maximum non-share consideration of $500,000 is used, shares must be issued with a fair market value of $250,000.

16-29. If we apply this scenario to the example presented in Paragraph 16-20, the results would be as follows:

- As the proceeds of disposition would be $500,000, no capital gain would arise on the transfer to the corporation.
- The adjusted cost base to the corporation of the assets acquired will be $500,000.
- The adjusted cost base of the non-share consideration to the transferor would be $500,000. This means that the adjusted cost base of the share consideration would be nil.

16-30. There are a number of complications associated with rollovers under ITA 85 and they will be the subject of much of the remainder of this Chapter. However, the great majority of these transactions will follow the pattern illustrated in the preceding simple example.

# Transfer Prices - Detailed Rules

## Rules Applicable To All Assets

16-31. There are a number of rules in ITA 85 that apply to all types of property. To begin, ITA 85(1)(a) establishes that the amount elected by the taxpayer and corporation shall be deemed to be the taxpayer's proceeds of disposition, as well as the cost of the property to the corporation.

16-32. A further general rule is as follows:

> **ITA 85(1)(b)** Subject to Paragraph 85(1)(c), where the amount that the taxpayer and corporation have agreed on in their election in respect of the property is less than the fair market value, at the time of the disposition, of the consideration therefor (other than any shares of the capital stock of the corporation or a right to receive any such shares) received by the taxpayer, the amount so agreed on shall, irrespective of the amount actually so agreed on by them, be deemed to be an amount equal to that fair market value;

16-33. This establishes that the elected value cannot be less than the boot ("consideration other than shares of stock of the corporation").

16-34. Finally, a further provision limits the elected value to the fair market value of the property transferred:

> **ITA 85(1)(c)** Where the amount that the taxpayer and the corporation have agreed on in their election in respect of the property is greater than the fair market value, at the time of the disposition, of the property so disposed of, the amount so agreed on shall, irrespective of the amount actually so agreed on, be deemed to be an amount equal to that fair market value;

16-35. These general rules apply to all assets transferred, thereby establishing a range for the election. This range can be outlined as follows:

**Ceiling Value** Fair market value of the assets transferred to the corporation.

**Floor Value** The floor value will be equal to the greater of:

- the fair market value of the non-share consideration (boot) given to the transferor in return for the assets transferred; and
- the tax values (adjusted cost base or UCC) of the assets transferred.

16-36. The application of the term, "tax values", in the preceding outline of the rules will vary with the type of asset involved. Attention will be given to these differences in the material which follows.

## Accounts Receivable

16-37. As was discussed in Chapter 6, when accounts receivable are transferred in conjunction with all of the other assets of a business, under the usual rules, the disposition will be treated as a capital transaction, with any resulting loss being only one-half deductible. Further, as the transferee has not included these amounts in income, no deduction can be made for bad debts. If the transferee collects less than the transfer amount, the difference must be treated as a capital loss and again, only one-half of this loss will be deductible.

16-38. To avoid these results, the usual procedure is to use a joint election under ITA 22. This election allows any loss to be treated as a fully deductible business loss and permits the transferee to deduct bad debts after the transfer. You may recall that this election was discussed in Chapter 6. If you do not recall the application of ITA 22, you should review this material now as this election will be commonly used in the problem material in this Chapter.

16-39. While accounts receivable can be transferred under ITA 85, taxpayers are not permitted to elect under both ITA 85 and ITA 22. In general, it will be to the advantage of the taxpayer to make the ITA 22 election and, as a result, accounts receivable will usually not be one of the assets listed in the ITA 85 election.

16-40. Note, however, this does not prevent these assets from being transferred. Using the ITA 22 joint election, they can be transferred at fair market value, with any resulting loss being fully deductible to the transferor. The corporation will have to include the difference between the face value and the price paid in income, but any difference between the face value and the amounts collected will be 100 percent deductible.

## Inventories And Non-Depreciable Capital Property

16-41. Unlike the situation with accounts receivable, when inventories are disposed of in conjunction with the sale of a business, any difference between fair market value and cost is automatically treated as business income or loss, not as a capital gain or loss. This is specifically provided for in ITA 23, with no election being required to bring this provision into effect.

16-42. Non-depreciable capital property of a business would include land, temporary investments, and long-term investments. As capital property is involved, any gain or loss on their disposition would be treated as a capital gain or loss.

16-43. In making the election here, the highest value will be the fair market value of the

assets transferred to the corporation. The minimum election cannot be below the amount of the boot received by the transferor. However, a further floor limit is specified for the inventories and non-depreciable capital property in ITA 85(1)(c.1) to ensure that artificial losses cannot be created. This limit is the lesser of the fair market value of the property and its tax cost. For non-depreciable capital assets, the tax cost would be the adjusted cost base of the property. For inventory, tax cost would be either cost or market, depending on how the inventory balance is carried for tax purposes.

16-44. Putting these limits together means that the minimum elected value for the floor, as specified in ITA 85(1)(e.3), will be the greater of:

A. The fair market value of the boot (the general floor for all assets); and

B. The lesser of:
  - the tax cost of the property; and
  - the fair market value of the property.

16-45. These rules can be illustrated using the three examples that follow:

| | Example One | Example Two | Example Three |
|---|---|---|---|
| Fair Market Value Of Property | $15,000 | $10,000 | $20,000 |
| Adjusted Cost Base | 12,000 | 12,000 | 14,000 |
| Fair Market Value Of The Boot | 5,000 | 5,000 | 17,000 |

16-46. In Example One, the maximum transfer value is the fair market value of $15,000 and the minimum value is the cost of $12,000. The normal election value would be $12,000. Also note that up to $12,000 of boot, an additional $7,000, could have been taken out without changing the minimum election, or creating immediate tax consequences.

16-47. In Example Two, the $10,000 fair market value is both the floor and the ceiling. If the property is inventories, this required election will result in a fully deductible business loss of $2,000 ($12,000 - $10,000). Alternatively, if the election was made on non-depreciable capital property, the result would be an allowable capital loss of $1,000 [(1/2)($12,000 - $10,000)]. As explained beginning in Paragraph 16-50, this capital loss would be disallowed.

16-48. In Example Three, the maximum value is again the fair market value. While the $14,000 cost is lower than the $20,000 fair market value, it is also lower than the boot. This means that, in this example, the minimum value that can be elected is the boot of $17,000. If this property is inventory, this election will result in fully taxable business income of $3,000 ($17,000 - $14,000). If the election was made on non-depreciable capital property, the result will be a taxable capital gain of $1,500 [(1/2)($17,000 - $14,000)].

16-49. If the goal is to structure the rollover to avoid any gain on the transfer of assets, Example Three will not accomplish this objective. In order to avoid a gain, the usual procedure is to limit the non-share consideration to the minimum elected value as otherwise determined, or $14,000 in Example Three.

## Exercise Sixteen - 1

**Subject:** Elected Value For Non-Depreciable Property

Jean Doan's unincorporated business has inventories with a fair market value of $125,000 and a tax cost of $140,000. In addition, he owns land with a fair market value of $350,000 and a tax cost of $110,000. He intends to transfer these assets to a new corporation, taking back $125,000 in cash for the inventories. For the land, he receives $150,000 in cash and $200,000 in securities. If he uses ITA 85 for the transfer, what is the possible range of values that can be elected for the two properties? Assume he elects the lowest possible value in each case. What are the tax consequences for Mr. Doan?

**SOLUTION available in print and online Study Guide.**

## Non-Depreciable Capital Property - Disallowed Capital Losses

### General Rules

16-50. The special rules described in the following material apply only to non-depreciable capital assets. They do not apply to either inventories or depreciable capital assets as it is not possible to have capital losses on these types of assets.

16-51. While we are discussing these rules in the material related to Section 85 rollovers, you should note that they are applicable to transfers to affiliated persons, without regard to whether Section 85 is being used. The discussion is located here because, when a non-depreciable capital asset is transferred under ITA 85, the recognition of a loss may be unavoidable because of the rules limiting the elected values. This was the case in Example Two in Paragraph 16-45.

16-52. The basic rule applicable to these situations is found in ITA 40(2)(g), which indicates that a taxpayer's loss, to the extent that it is a "superficial loss", is deemed to be nil. As with many other concepts related to capital assets, the definition of "superficial loss" is found in ITA 54:

> **"superficial loss"** of a taxpayer means the taxpayer's loss from the disposition of a particular property where
>
> (a) during the period that begins 30 days before and ends 30 days after the disposition, the taxpayer or a person affiliated with the taxpayer acquires a property (in this definition referred to as the "substituted property") that is, or is identical to, the particular property, and
>
> (b) at the end of that period, the taxpayer or a person affiliated with the taxpayer owns or had a right to acquire the substituted property.

16-53. Read together, these provisions deem to be nil any capital loss arising on a transfer to an affiliated person. While the allocation of the loss will depend on whether the transferor is an individual, a trust or a corporation, the denial of the loss is applicable to all taxpayers. The actual allocation of the denied loss will be dealt with after our discussion of affiliated persons.

### Affiliated Persons

16-54. The term "affiliated person" is defined in ITA 251.1(1) as follows:

A. An individual is affiliated to another individual only if that individual is his spouse or common-law partner.

B. A corporation is affiliated with:
   1. a person who controls the corporation;
   2. each member of an affiliated group of persons who controls the corporation; and
   3. the spouse or common-law partner of a person listed in (1) or (2).

C. Two corporations are affiliated if:
   1. each corporation is controlled by a person, and the person by whom one corporation is controlled is affiliated with the person by whom the other corporation is controlled;
   2. one corporation is controlled by a person, the other corporation is controlled by a group of persons, and each member of that group is affiliated with that person; or
   3. each corporation is controlled by a group of persons, and each member of each group is affiliated with at least one member of the other group.

16-55. ITA 251.1(3) contains definitions that are required in the application of these rules. The two that are of importance here are:

> **Affiliated group of persons** means a group of persons each member of which is affiliated with every other member.
>
> **Controlled** means controlled, directly or indirectly, in any manner whatever. This definition refers to both legal control and de facto control, which does not necessarily require majority ownership of all shares.]

16-56. As was previously noted, if a capital loss arises on a transfer to an affiliated person, it is deemed to be nil. This rule applies to all taxpayers, including individuals, trusts, and corporations. In contrast to the normal use of the term, for purposes of the affiliated person rules, the term "person" includes partnerships. You should also note that, for transfers involving ITA 85, the transferee and the transferor will almost always be affiliated (e.g., the transferor will typically control the transferee corporation).

### Allocation Of Disallowed Capital Loss

16-57. When the transferor is an individual, the disallowed loss is allocated to the adjusted cost base of the transferred property. This requirement is dictated by ITA 53(1)(f), which describes adjustments to the cost base of a transferred property.

> **EXAMPLE - Individual** Ms. Hannah Howard, the sole shareholder of HH Ltd., transfers land with an adjusted cost base of $50,000 and a fair market value of $40,000, to HH Ltd. The transfer is made under Section 85 at an elected value of $40,000.
>
> **ANALYSIS** The $10,000 loss ($40,000 - $50,000) on the transfer is disallowed. As the transferor is an individual, the loss will be allocated to the adjusted cost base of the land in the tax records of HH Ltd. This means that the adjusted cost base to HH Ltd. will be the same $50,000 ($40,000, plus the $10,000 loss) that was the adjusted cost base to Ms. Howard.

16-58. When the transferor is a corporation, trust, or partnership, the allocation of the disallowed loss is covered under ITA 40(3.4). In effect, this provision keeps the loss in the tax records of the transferor, to be recognized when one of the following events occurs:

- the transferee disposes of the property to a non-affiliated person (includes deemed dispositions);
- if the transferor is a corporation,
  - it is subject to an acquisition of control; or
  - it is subject to an ITA 88(2) winding up.

> **EXAMPLE - Not An Individual** HC Ltd. transfers land with an adjusted cost base of $50,000 and a fair market value of $40,000 to HCSub, a corporation controlled by HC Ltd., i.e., an affiliated person. Two years later, HCSub sells the land for $35,000 to a non-affiliated person.
>
> **ANALYSIS** The $10,000 ($40,000 - $50,000) loss on the transfer to HCSub will be disallowed at the time of the transfer. However, when the land is sold by HCSub for $35,000, HC Ltd. will recognize the disallowed loss of $10,000 ($50,000 - $40,000). In addition, HCSub will recognize a $5,000 ($40,000 - $35,000) loss at the time of sale. The result is a total loss for the two companies of $15,000 ($50,000 - $35,000).

### Tax Planning

16-59. To the extent that the asset with the unrealized loss is necessary to the continued operations of the business, for example land on which the enterprise's factory is located, it makes no difference whether it is transferred under the provisions of ITA 85 or outside the election. In either case, the loss will be disallowed at the time of the transfer.

16-60. If an asset is not essential to the operations of the corporation, a preferable course of action may be to sell it to a non-affiliated person. This will permit the immediate recognition of any loss on its disposition. However, if the asset is an integral part of the operations of the transferor this is not a viable alternative.

16-61. The other basic point here is, that if the asset in question has an unrealized loss, there is no reason to elect to transfer it under Section 85. The objective that the taxpayer is attempting to achieve in using Section 85 is to defer the taxation of income. When losses are involved on particular assets, including those assets in the Section 85 rollover complicates the election without contributing to the taxpayer's desired goals.

## Depreciable Property

### General Rules

16-62. As with other assets, the ceiling for the election is the fair market value of the asset and the general floor is the fair market value of the non-share consideration received by the transferor. However, as was the case with inventories and non-depreciable capital property, a further lower limit is specified in the *Income Tax Act*.

16-63. ITA 85(1)(e) indicates that for depreciable property, the lower limit is the least of the UCC for the class, the fair market value of each individual property, and the cost of each individual property. This means that the overall lower limit for the election, as specified in ITA 85(1)(e.3), is the greater of:

A. The fair market value of the boot (general floor for all assets), and

B. The least of:

- the balance of the UCC for the class;
- the cost to the taxpayer of each individual property; and
- the fair market value of each individual property.

### Examples - Elected Values

16-64. These rules can be illustrated by the following two examples, each involving the transfer of the only asset in a CCA class:

| | Example One | Example Two |
|---|---|---|
| Fair Market Value Of The Property | $50,000 | $18,000 |
| UCC Of Class (Last Asset In Class) | 20,000 | 20,000 |
| Cost Of The Property | 27,000 | 30,000 |
| Fair Market Value Of The Boot | 15,000 | 15,000 |

**Example One Analysis** In Example One, the range of the election would extend from the UCC of $20,000 as the floor to the fair market value of $50,000. Note that any election in between the UCC of $20,000 and the cost of $27,000 would result in recapture of CCA. The normal election here would be the UCC of $20,000, which results in the transferor not recognizing a capital gain or recapture of CCA. In addition, the transferor would usually take out $20,000 in boot. In Example One, $5,000 more boot could be taken out without creating immediate tax consequences.

**Example Two Analysis** In Example Two, using the limits specified in ITA 85(1)(e.3) the ceiling value and the floor value would be the $18,000 fair market value of the property. With the ceiling and floor at the same value, the general rules would indicate that only this $18,000 value could be elected. In Example Two, $3,000 more boot could be taken out without creating immediate tax consequences. Since the transfer of the property removes the last asset in this CCA class, the fact that the elected value is below the UCC suggests a terminal loss. However, as will be discussed beginning in Paragraph 16-70, ITA 85 does not apply to this transfer and this terminal loss will be disallowed.

### Example - Order Of Disposition

16-65. An additional problem arises in the case of depreciable assets in situations where a number of different assets that belong to the same CCA class are being transferred at the same time. This problem can be illustrated by the following example:

**EXAMPLE** An individual owns two assets in a particular CCA class and the UCC for that class is $28,000. Data on the two assets is as follows:

| | Asset One | Asset Two |
|---|---|---|
| Cost Of Asset | $15,000 | $30,000 |
| Fair Market Value | 20,000 | 25,000 |

16-66. The problem here is that the wording of the transfer price rules for depreciable assets requires the floor to be based on the least of the cost of each individual asset, fair market value of each individual asset, but UCC for the class as a whole. This determination has to be made with respect to each asset in the class, with the resulting figures summed for purposes of the election floor.

16-67. This means that, if the general rules were applied, the floor values would be $15,000 for Asset One, plus $25,000 for Asset Two. This reflects the fact that both of these individual values are less than the $28,000 UCC for the class. However, if these values are elected, a total of $40,000 would be subtracted from the class. Since the UCC balance for the class is only $28,000, this would result in recapture of $12,000.

16-68. To alleviate this problem, ITA 85(1)(e.1) allows an assumption that the properties are transferred one at a time. This means that for the transfer of Asset One, if the floor value of $15,000 was elected (this assumes that the non-share consideration provided to the transferor does not exceed this amount), this $15,000 would be subtracted from the UCC of $28,000.

16-69. The resulting UCC balance would be $13,000, and when the depreciable asset rules are applied to Asset Two, this UCC balance of $13,000 would become the floor. If the taxpayer again elected to use the floor value, the $13,000 would be deducted from the UCC and this would reduce the UCC balance to nil without triggering recaptured CCA.

## Exercise Sixteen - 2

**Subject:** Elected Value For Depreciable Property

Eric Li has two depreciable assets - a Class 1 building and a Class 10 vehicle. The assets are to be transferred to a corporation using ITA 85. Relevant information on the assets is as follows:

| | Class 1 | Class 10 |
|---|---|---|
| Fair Market Value Of The Property | $475,000 | $12,000 |
| UCC Of Class (Last Asset In Class) | 150,000 | 8,000 |
| Cost Of The Property | 220,000 | 28,000 |
| Fair Market Value Of The Boot | 250,000 | 10,000 |

What is the possible range of values that can be elected for the two properties? Assume he elects the lowest possible value in each case. What are the tax consequences for Mr. Li?

**SOLUTION available in print and online Study Guide.**

## Depreciable Property - Disallowed Terminal Losses

### *General Rules*

16-70. In Paragraph 16-64, we noted that the terminal loss resulting from the required election on the asset in Example Two will be disallowed. More specifically, if a depreciable property with a fair market value that is less than its UCC is transferred by a person (individual, trust, or corporation) or a partnership to an affiliated person (see Paragraph 16-54), ITA 13(21.2) indicates that:

**Figure 16 - 1**
**Summary Of Section 85 Transfer Price Rules**

| | Inventory And Non-Depreciable Assets | Depreciable Assets |
|---|---|---|
| Ceiling (FMV Of Asset) | X | X |
| Floor - Greater Of: | | |
| A. FMV Of Boot | X | X |
| B. Least Of: | | |
| Tax Cost Of Asset | X | — |
| Cost Of Asset (Not Tax Cost) | — | X |
| FMV Of Asset | X | X |
| UCC Balance | — | X |

- ITA 85 does not apply;
- the proceeds of the disposition are deemed to be the UCC amount, thereby disallowing the terminal loss; and
- the transferee's capital cost for the property is deemed to be the transferor's capital cost, with the excess of that amount over the UCC of the asset deemed to be CCA deducted in previous periods.

16-71. In Example Two from Paragraph 16-64, the property had a capital cost of $30,000, a UCC for the class of $20,000, and a fair market value of $18,000. As the $18,000 fair market value was less than the $20,000 UCC of the class, this means that ITA 85 does not apply to this transfer. In addition, ITA 13(21.2) would disallow this loss on any transfer to an affiliated person by deeming the proceeds of disposition to be equal to the UCC.

16-72. If, however, the property is sold to the corporation for its fair market value, the property will have a deemed capital cost to the transferee of $30,000 and a UCC value of $18,000. The $2,000 disallowed loss will be deemed to be a depreciable property that is owned by the transferor. It will be allocated to the same class as the transferred property for CCA purposes and will be subject to the usual CCA procedures. However, it will be kept in a separate class so that any unamortized amount can be recognized when one of the following events occurs:

- the transferee disposes of the property to a non-affiliated person (includes deemed dispositions);
- the use of the property is changed from income earning to non-income earning;
- if the transferor is a corporation,
    - it is subject to an acquisition of control; or
    - it is subject to an ITA 88(2) winding up.

### *Tax Planning*

16-73. As was noted in our discussion of capital losses on transfers of non-depreciable capital property, Section 85 is normally used in order to defer the taxation of various types of income. If there is a terminal loss present on a depreciable property, ITA 85 cannot be used. This means that, if the asset is necessary to the continued operations of the business, it will be sold to the corporation at fair market value, with any terminal loss on the transaction being disallowed by ITA 13(21.2). If the asset is not necessary to the continued operations of the business, it would be preferable to sell it to a non-affiliated person.

## Summary Of Transfer Price Rules

16-74. Figure 16-1 provides a summary of the transfer price rules that have been discussed in this section.

**We suggest you work Self Study Problems Sixteen-1 and 2 at this point.**

# Allocation Of The Elected Value

## Consideration Received By The Transferor (Shareholder)

16-75. As noted previously, the elected value for the assets transferred is used to establish the adjusted cost base of all consideration received by the transferor. The rules for allocating this total to the various types of consideration that may be used are found in ITA 85(1)(f), (g), and (h). They involve a sequential process that can be outlined as follows:

| | |
|---|---|
| Elected Value (Total Adjusted Cost Base Of All Consideration) | $xxx |
| Less: Adjusted Cost Base Of Non-Share Consideration (Fair Market Value) | ( xxx) |
| Adjusted Cost Base Of All Shares Issued (Usually Nil) | $xxx |
| Less: Adjusted Cost Base Of Preferred Stock Issued (Usually Nil, But Limited To Fair Market Value) | ( xxx) |
| Adjusted Cost Base Of Common Stock Issued (A Residual - Usually Nil) | $xxx |

**EXAMPLE** In transferring his proprietorship assets to a new corporation, Jason Browning elects a value of $972,000 for the assets transferred. As the fair market value of these assets is $1,650,000, he receives the following consideration:

- Cash of $220,000.
- Preferred shares of the new corporation with a fair market value of $345,000.
- Common shares of the new corporation with a fair market value of $1,085,000.

**ANALYSIS** The $972,000 elected value would be allocated as follows:

| | |
|---|---|
| Elected Value (Total Adjusted Cost Base Of All Consideration) | $972,000 |
| Less: Adjusted Cost Base Of Non-Share Consideration (Fair Market Value) | ( 220,000) |
| Adjusted Cost Base Of All Shares Issued (Usually Nil) | $752,000 |
| Less: Adjusted Cost Base Of Preferred Stock Issued (Usually Nil, But Limited To Fair Market Value) | ( 345,000) |
| Adjusted Cost Base Of Common Stock Issued (A Residual - Usually Nil) | $407,000 |

16-76. The preceding example has been designed to illustrate the allocation of the elected value to all three types of consideration. However, in the usual ITA 85 scenario, minimum asset values will normally be elected in order to avoid the recognition of income on the transfer. Boot will then be taken out in an amount equal to these minimum values. This means that in the usual situation, non-share consideration will be equal to the elected value and, in terms of the preceding allocation process, both preferred and common shares will have an adjusted cost base of nil.

### Exercise Sixteen - 3

**Subject:** Transfers Under Section 85 - ACB Of Consideration

Using ITA 85, Mrs. Jennifer Lee transfers non-depreciable capital property to a corporation at an elected value of $62,000. The property has an adjusted cost base of $62,000 and a fair market value of $176,000. As consideration, she receives a note for $51,000, preferred shares with a fair market value of $53,000, and common shares with a fair market value of $72,000. Indicate the adjusted cost base of the individual items of consideration received by Mrs. Lee.

**SOLUTION available in print and online Study Guide.**

## Assets Acquired By The Corporation

### General Rules

16-77. With respect to the assets acquired by the transferee corporation, the basic rules are as follows:

**Non-Depreciable Property** The elected transfer price becomes the tax cost of these assets to the corporation.

**Depreciable Property** Where the transferor's capital cost exceeds the elected value for the property, ITA 85(5) requires that the capital cost to the transferee be equal to the amount that was the capital cost to the transferor. In most cases, the elected value will be equal to the transferor's UCC. ITA 85(5) requires that the difference between these two values be treated as deemed CCA. To illustrate this, consider the following asset:

| | |
|---|---:|
| Cost | $100,000 |
| UCC | 67,000 |
| Fair Market Value | 105,000 |
| Non-Share Consideration | 67,000 |
| Elected Value | 67,000 |

The capital cost of the asset to the transferee will be $100,000, there will be deemed CCA taken of $33,000, and future CCA will be based on the elected value of $67,000. The reason for requiring the transferee to retain the transferor's capital cost is to avoid having the transferor convert potential recaptured CCA into a capital gain, only one-half of which would be taxed.

You should also note that, in the usual situation where the transferor is not dealing at arm's length with the transferee corporation, the half year rules do not apply to the calculation of CCA by the transferee. This is the case as long as the transferor has owned the asset for at least 364 days before the end of the taxation year of the transferee in which the property was acquired, and used it as a capital property to earn business or property income.

16-78. What these rules mean is that, in cases where the election has been made at an amount equal to the transferor's tax cost, the transferee corporation essentially assumes the tax position of the transferor.

### Capital Gains On Transfers Of Depreciable Property

16-79. The objective of using ITA 85(1) is usually to avoid tax consequences when assets are transferred to a corporation. This means that, in general, the elected values will be equal to the transferor's tax values (adjusted cost base or UCC).

16-80. There are, however, circumstances in which the transferor may wish to generate a capital gain through the transfer of assets to a corporation. An example of this might be an individual who has large losses in the current year, or who has unused net capital or non-capital loss carry forwards that he wishes to claim.

16-81. This creates a problem with respect to depreciable assets in that, under the general ITA 85 rules, the elected value becomes the basis for calculating future CCA amounts. An election on a depreciable asset at a value in excess of the capital cost would result in a capital gain, only one-half of which would be taxable. Under the usual disposition rules, this same excess would become part of the UCC, the basis for calculating fully deductible amounts of CCA. The following example will illustrate this problem.

**EXAMPLE** Jan Harding plans to transfer a depreciable asset to a Canadian controlled private corporation in which she is the only shareholder. The relevant values are as follows:

| | |
|---|---|
| Cost | $ 80,000 |
| Fair Market Value | 120,000 |
| UCC | 75,000 |
| Elected Value | 120,000 |

**ANALYSIS** The election at $120,000 would create the following amounts of income:

| | |
|---|---|
| Recaptured CCA ($80,000 - $75,000) | $ 5,000 |
| Taxable Capital Gain [(1/2)($120,000 - $80,000)] | 20,000 |
| Total Income | $25,000 |

In the absence of a special rule, the cost and UCC of this asset to the corporation would be $120,000. This value would create $45,000 more CCA for the corporation than would have been available to the transferor ($120,000 - $75,000). This has been accomplished through an increase in the transferor's Taxable Income of only $25,000, clearly not an equitable situation from the point of view of the government.

16-82. ITA 13(7)(e) acts to correct this situation. You may recall that this provision was discussed in some detail in Chapter 9. It is a general provision that applies to all non-arm's length transfers of depreciable assets, including those where ITA 85(1) has been used.

16-83. When such transfers occur, ITA 13(7)(e) limits the capital cost of the asset for CCA purposes to the transferor's cost, plus one-half of any capital gain that results from the transfer. As applied to the example in Paragraph 16-81, the capital cost to the transferee under ITA 13(7)(e) for CCA, recapture and terminal loss purposes only, would be as follows:

| | | |
|---|---|---|
| Transferor's Cost | | $ 80,000 |
| Elected Transfer Price | $120,000 | |
| Transferor's Cost | ( 80,000) | |
| Capital Gain | $ 40,000 | |
| Taxable Portion | 1/2 | 20,000 |
| Capital Cost To The Transferee For CCA Purposes | | $100,000 |

16-84. Based on this capital cost, the increase in the CCA base to the corporation is only $25,000 ($100,000 - $75,000), the same amount the transferor recognized as income as a result of the transfer. Note, however, that for future capital gains calculations, the capital cost of the asset to the transferee is the elected value of $120,000.

# Paid Up Capital (PUC) Of Shares Issued

## General Rules

16-85. Establishing the Paid Up Capital (PUC) of the shares received is important as it represents an amount that can be distributed to the shareholders as a tax free return of capital. In general, the amount of PUC for tax purposes is equal to the amount attributed to the shares under the appropriate corporate laws (legal stated capital).

16-86. While there are some complications in those provinces that still permit the issuance of par value shares, the legal stated capital of a corporation is generally based on the fair market value of the consideration received in return for issued shares. In the case of shares issued in an ITA 85 rollover, this amount would be equal to the fair market value of the assets transferred.

16-87. In the usual ITA 85 scenario, in order to defer taxation on the asset transfer, assets that have increased in value will be transferred at elected values that are below their respective fair market values. Again, in the usual ITA 85 scenario, the elected values will be equal to the non-share consideration, leaving the adjusted cost base of the shares issued at nil. At this point, the PUC of the shares, which is based on the fair market value of the assets transferred, will exceed the adjusted cost base of the assets by the amount of the deferred gains. If PUC

was left at this value, it would provide the investor with an opportunity to distribute the deferred gains on a tax free basis. To prevent this from happening a PUC reduction is required.

## Paid Up Capital Reduction

16-88. The need for a PUC reduction, as well as the procedure for calculating the reduction can be illustrated using the following example

> **EXAMPLE** A non-depreciable capital asset with a fair market value of $200,000 and an adjusted cost base of $150,000 is transferred under ITA 85 using an elected value of $150,000.
>
> While the usual ITA application would have the transferor receiving non-share consideration of $150,000, in order to better illustrate the mechanics of the PUC reduction, we will assume that the consideration consists of cash of $120,000 and shares with a legal stated capital of $80,000.

16-89. If the asset had been sold to an arm's length party, the vendor would have had an immediate capital gain of $50,000 ($200,000 - $150,000). As is the intent of the legislation, these amounts of income are deferred when Section 85 is used properly. The problem is that, if the $80,000 legal stated capital of the shares issued is used as their PUC, this amount can be withdrawn from the corporation on a tax free basis. This would mean the potential capital gain could permanently escape taxation.

16-90. Given this problem, ITA 85(2.1) requires that the PUC of issued shares be reduced by an amount equal to the total increase in legal stated capital, less any excess of the elected value over non-share consideration given. Continuing with our example, a summary of the facts and the resulting PUC reduction would be as follows:

Asset: Fair market value = $200,000, Adjusted cost base = $150,000

Consideration: Cash = $120,000, Legal stated capital of shares = $80,000

Elected Value (Total amount that can be withdrawn tax free) = $150,000

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $80,000 |
| Less Excess, If Any, Of: | | |
| Total Elected Value | ($150,000) | |
| Over The Non-Share Consideration | 120,000 | ( 30,000) |
| Reduction In Paid Up Capital (PUC) | | $50,000 |
| | | |
| PUC Of Shares ($80,000 - $50,000) | | $30,000 |

16-91. It is easy to see the conceptual basis for this reduction. The amount of PUC that can be removed by the transferor on a tax free basis is reduced to $30,000, the same amount ($150,000 - $120,000) of consideration he could have received on a tax free basis at the time of the transfer. If the shares were redeemed at their fair market value of $80,000, there would be an ITA 84(3) deemed dividend of $50,000 ($80,000, less a PUC of $30,000). While the taxation of the two amounts is different, this deemed dividend is the same amount as the capital gain that would have resulted from an arm's length sale of the asset. If the non-share consideration had been equal to the elected value of $150,000 (the usual ITA 85 scenario), the PUC would be reduced to nil {$80,000 PUC - [$80,000 - ($150,000 - $150,000)]}.

16-92. A further tax policy problem, which is not resolved by the PUC reduction, relates to the lifetime capital gains deduction. If the asset in the Paragraph 16-88 example is transferred to a corporation at an elected value of $150,000, this would be the adjusted cost base of the shares. If the shares were later sold for their fair market value of $200,000, the result would be a $50,000 capital gain which could be eligible for the lifetime capital gains deduction if they met the requirements. In effect, the use of the ITA 85(1) rollover could result in the complete elimination of tax on the $50,000 capital gain that was present on the asset prior to its transfer.

## More Than One Class Of Shares

16-93. In most Section 85 rollovers, the ITA 85(2.1) formula will reduce the PUC of all shares issued to nil. This reflects the fact that the non-share consideration taken will equal the elected value, resulting in the PUC reduction being equal to the increase in legal stated capital. If this is the case, having more than one class of shares does not create any difficulties.

16-94. If, however, the non-share consideration is less than the elected value, the PUC reduction must be allocated to the various classes of shares. You will recall that, when we allocated the adjusted cost base, it was a sequential process (see Paragraph 16-75). The total adjusted cost base (i.e., the elected value) was allocated first to non-share consideration, then to preferred shares to the extent of their fair market value, and finally to the common shares if a residual remained.

16-95. This is not the case with the PUC reduction. The formula in ITA 85(2.1) is such that the reduction is allocated to different classes of shares on the basis of their relative fair market values.

**EXAMPLE** Joan Creek transfers non-depreciable capital assets with a fair market value of $1,600,000 to a corporation under the provisions of ITA 85(1). The elected value is equal to the $900,000 cost of the assets and, as consideration, she receives cash of $600,000, redeemable preferred shares with a fair market value of $250,000, and common shares with a fair market value of $750,000.

**ANALYSIS** The total adjusted cost base for the consideration would be allocated as follows:

| | |
|---|---|
| Elected Value (Total Adjusted Cost Base Of All Consideration) | $900,000 |
| Non-Share Consideration (Fair Market Value) | ( 600,000) |
| Adjusted Cost Base Of All Shares Issued | $300,000 |
| Less: Adjusted Cost Base Of Preferred Stock Issued (Limited To Fair Market Value) | ( 250,000) |
| Adjusted Cost Base Of Common Stock Issued (Residual) | $ 50,000 |

The PUC reduction would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital ($250,000 + $750,000) | | $1,000,000 |
| Less Excess, If Any, Of: | | |
| Total Elected Value | ($900,000) | |
| Over The Non-Share Consideration | 600,000 | ( 300,000) |
| Reduction In PUC | | $ 700,000 |

The PUC of the two classes of shares, reduced by a pro rata allocation of the $700,000 PUC reduction on the basis of relative fair market value, would be as follows:

$$\text{PUC Of Preferred Stock}\left[\$250{,}000-\left(\frac{\$250{,}000}{\$1{,}000{,}000}\right)(\$700{,}000)\right]=\underline{\underline{\$75{,}000}}$$

$$\text{PUC Of Common Stock}\left[\$750{,}000-\left(\frac{\$750{,}000}{\$1{,}000{,}000}\right)(\$700{,}000)\right]=\underline{\underline{\$225{,}000}}$$

16-96. Note that the total PUC of the two classes is equal to $300,000 ($75,000 + $225,000). As you would expect, this is equal to the total adjusted cost base of the two classes ($250,000 + $50,000) as well as the difference between the elected value of $900,000 and the non-share consideration of $600,000. The fact that the individual amounts are different reflects the difference between the sequential allocation process for the adjusted cost base amount and the pro rata allocation of the PUC reduction.

## Exercise Sixteen - 4

**Subject:** Transfers Under Section 85 - PUC Reduction

Using ITA 85, Mr. Rob McCleen transfers non-depreciable capital property to a corporation at an elected value of $114,000. The property has an adjusted cost base of $114,000 and a fair market value of $234,000. As consideration he receives a note for $83,000, preferred shares with a fair market value and legal stated capital of $97,000, and common shares with a fair market value and legal stated capital of $54,000. Indicate the adjusted cost base and the PUC of the preferred and common shares that were issued to Mr. McCleen.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problem Sixteen-3 at this point.**

# Comprehensive Example - Section 85 Rollovers

## Basic Information

16-97. John Martin has been operating an unincorporated business. On January 1, 2019, the tax costs (UCC or adjusted cost base) and fair market values for its assets and liabilities are as follows:

| | Tax Value | Fair Market Value |
|---|---|---|
| Cash | $ 20,000 | $ 20,000 |
| Accounts Receivable | 50,000 | 49,000 |
| Inventories | 100,000 | 105,000 |
| Prepaid Expenses | 10,000 | 10,000 |
| Land | 50,000 | 70,000 |
| Building (Capital Cost = $150,000) | 110,000 | 140,000 |
| Equipment (Capital Cost = $70,000) | 40,000 | 35,000 |
| Goodwill | Nil | 50,000 |
| Total Assets | $380,000 | $479,000 |
| Liabilities | $100,000 | $100,000 |

## Excluded Assets

16-98. The rollover would involve a new corporation, the Martin Company, assuming all of Mr. Martin's liabilities and acquiring all of his business assets except the following:

| Excluded Asset | Tax Value | Fair Market Value |
|---|---|---|
| Cash | $ 20,000 | $ 20,000 |
| Accounts Receivable | 50,000 | 49,000 |
| Prepaid Expenses | 10,000 | 10,000 |
| Equipment | 40,000 | 35,000 |
| Total Values For Excluded Assets | $120,000 | $114,000 |

16-99. With respect to the Cash and Prepaid Expenses, they are not eligible assets as described under ITA 85(1.1) and cannot be transferred under this rollover provision. However, as their fair market values are equal to their tax values, this is of no consequence.

16-100. The Accounts Receivable could be transferred under ITA 85. However, the $1,000 ($50,000 - $49,000) loss would have to be treated as a capital loss, which would be disallowed as a superficial loss by ITA 40(2)(g). Further, any additional bad debts incurred by the corporation would also have to be treated as capital losses.

16-101. The alternative is a joint election under ITA 22. This allows the $1,000 current loss to be treated as a fully deductible business loss. While the corporation will have to include this $1,000 in income, it will then be able to deduct the full amount of any additional bad debts. Taxpayers are not permitted to simultaneously use both the ITA 22 and the ITA 85 elections for their accounts receivable so we have excluded it from the ITA 85 election.

16-102. With respect to the equipment, its fair market value is less than the UCC for the class. In this case, ITA 13(21.2) indicates that ITA 85 does not apply and the proceeds of disposition are deemed to be the UCC amount of $40,000 thereby disallowing the terminal loss. There will be no tax consequences associated with the transfer and the corporation will retain the Mr. Martin's original capital cost of $70,000 with the difference between the capital cost and the UCC considered deemed CCA. While a terminal loss could have been recognized if the property had been transferred to an arm's length taxpayer, it would have been disallowed in this case because Mr. Martin's corporation is an affiliated person.

## Implementing The Election

16-103. Mr. Martin is interested in deferring all of the capital gains that are present on his assets and, as a consequence, he elects tax values for most of the assets that are to be transferred under ITA 85. The one exception to this is goodwill, which is transferred at a value of $1 to ensure that it is listed in the election. In Mr. Martin's proprietorship's tax records, the proceeds of $1 will be subtracted from Class 14.1, leaving a negative balance in that Class. If there are no additions to this Class prior to the end of 2019, this amount will be treated as recapture and included in Mr. Martin's income. The $1 will also be added to Class 14.1, restoring the balance to nil. In Martin Company's records, the $1 will be added to Class 14.1.

16-104. Mr. Martin's total elected value of $260,001 is calculated as follows:

| | |
|---|---:|
| Tax Values Of Total Assets | $380,000 |
| Tax Value Of Excluded Assets (Paragraph 16-98) | ( 120,000) |
| Nominal Value To Goodwill | 1 |
| Total Elected Value | $260,001 |

16-105. With respect to the consideration to be given to Mr. Martin, it must equal the fair market value of the assets transferred. This amount would be $365,000 ($479,000 total, less the $114,000 fair market value of the excluded assets listed in Paragraph 16-98).

16-106. The normal procedure would be to take back non-share consideration, in this example debt, with a fair market value equal to the elected value of $260,001, along with shares with a fair market value equal to the $104,999 ($365,000 - $260,001) excess of the fair market values of the assets transferred over their elected values. The $260,001 in debt consideration is made up of $100,000 in debt of the existing business that has been assumed by the corporation, plus $160,001 in new debt issued by the corporation.

16-107. The ITA 85(1) election is made on an asset-by-asset basis, requiring both an elected value and specified consideration (which must include some shares) for each asset transferred. In the schedule which follows, non-share consideration is allocated to each asset up to a maximum of its elected value, with share consideration allocated to the asset to reflect the excess of the fair market value of the asset over its elected value. For example, the fair market value of the inventories is $105,000. Reflecting the fact that the elected value for this asset is its tax value of $100,000, $100,000 of non-share consideration is allocated to this asset. The $5,000 in share consideration allocated to this asset is based on the excess of its fair market value over the elected value.

| | | Consideration At Fair Market Value | |
|---|---|---|---|
| | Elected Value | Non-Share | Share |
| Inventories | $100,000 | $100,000 | $ 5,000 |
| Land | 50,000 | 50,000 | 20,000 |
| Building (Capital Cost = $150,000) | 110,000 | 110,000 | 30,000 |
| Goodwill | 1 | 1 | 49,999 |
| Total Assets | $260,001 | $260,001 | $104,999 |

16-108. In this example, the total non-share consideration is equal to the total elected value. If it were less (it cannot be more as the non-share consideration is the general floor for the values to be elected), the amount of non-share consideration allocated to some assets would be less than the full elected value.

16-109. From the point of view of the corporation, the elected values would become the tax values to be used in subsequent periods of operation. The adjusted cost base of the shares that were issued to Mr. Martin would be determined as follows:

| | |
|---|---|
| Total Elected Value | $260,001 |
| Non-Share Consideration | ( 260,001) |
| Adjusted Cost Base Of Shares | Nil |

16-110. The initial PUC of these shares would be their legal stated capital, an amount equal to their fair market value of $104,999. However, there would be an ITA 85(2.1) reduction in this balance as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $104,999 |
| Less Excess, If Any, Of: | | |
| Total Elected Value | ($260,001) | |
| Over The Non-Share Consideration | 260,001 | Nil |
| Reduction In PUC | | $104,999 |

16-111. At this point, both the adjusted cost base and the PUC of the shares are nil ($104,999 PUC - $104,999 PUC reduction). If they were redeemed at their $104,999 fair market value, Mr. Martin would have to recognize an ITA 84(3) deemed dividend of $104,999. This deemed dividend would reduce the proceeds of disposition for capital gains purposes to nil, resulting in no capital gain on the redemption.

16-112. Alternatively, if he were to sell the shares at their fair market value, the result would be a capital gain of $104,999. Unlike the redemption scenario which would result in the deferred gain being taxed as a dividend, a sale of shares could completely avoid taxation on the deferred gain. This would happen if the gain resulting from the sale of shares fully qualified for the lifetime capital gains deduction.

## Exercise Sixteen - 5

**Subject:** Transfers Under Section 85 - Tax Consequences

Jasmine Wiens has operated her alternative medicine pharmacy as an unincorporated business for a number of years. The tangible assets of this business have a fair market value of $850,000 and a tax cost of $275,000. In addition to the tangible assets, because the business has been extremely profitable, Jasmine estimates that it has goodwill of $300,000, resulting in a total value for the business of $1,150,000. The total liabilities of the business amount to $83,000. As she no longer needs all of the income that the business is producing, she would like to transfer the business to a new

corporation and, in order to defer taxation, she would like to use the provisions of ITA 85(1) for the transfer.

On January 20, 2019, she will make the transfer at an elected value of $275,000. The corporation will assume the $83,000 in business liabilities and, in addition, issue a note payable to Ms. Wiens in the amount of $17,000. Other consideration will be made up of redeemable preferred shares with a fair market value of $125,000 and common shares with a fair market value of $925,000. Any dividends paid by the corporation will be non-eligible. Determine the following:

1. The adjusted cost base of each type of consideration received by Ms. Wiens.
2. The paid up capital of each type of share issued by the new corporation.
3. The tax consequences to Ms. Wiens of the new preferred shares being redeemed at their fair market value immediately.

# Gift To Related Party - Section 85

## General Rules

16-113. If the transferor of the assets is the only shareholder of the transferee corporation, the indirect gift rules in ITA 85(1)(e.2) are not applicable. However, Section 85 rollovers are often used for income splitting purposes, and this usually means that other members of the transferor's family will be involved as shareholders in the transferee corporation. The indirect gift rules are designed to ensure that, while other family members will be permitted to share in the future growth and income of the corporation, they are not permitted to receive a portion of the current values of the transferred assets in the form of a gift.

16-114. ITA 85(1)(e.2) is applicable if the fair market value of the transferred property exceeds the greater of:

1. the fair market value of all consideration received from the corporation; and
2. the amount elected for the transfer;

and it is reasonable to regard that excess as a gift made by the taxpayer for the benefit of any related shareholder. In any situation where a party related to the transferor is a shareholder of the transferee corporation, it would be reasonable to regard the excess as a gift.

16-115. If ITA 85(1)(e.2) is applicable, the tax consequence is that, except for purposes of determining the adjusted cost base of any shares provided to the transferor, the gift amount will be added to the elected value for the transfer to create a deemed elected value. As this deemed elected value becomes the deemed proceeds of disposition for the transferor and the deemed adjusted cost base of the property to the transferee corporation, this will usually result in a capital gain and/or business income on the rollover.

16-116. A less direct consequence is that the fair market value of the shares held by the related person will be increased by the amount of the gift. As there will be no corresponding increase in the related person's adjusted cost base, the sale of these shares will result in a taxable capital gain.

## Example

16-117. The following example will serve to illustrate the application of ITA 85(1)(e.2).

**EXAMPLE** Mr. Pohl owns a non-depreciable capital property with an adjusted cost base of $30,000. He estimated its fair market value was $130,000. A new

corporation is formed with all of the common shares being issued to Mr. Pohl's adult son for $1,000 in cash. Using the provisions of ITA 85(1), Mr. Pohl then transfers his non-depreciable property to the corporation at an elected value of $30,000.

The corporation issues a $30,000 note payable and preferred shares with a fair market value and a legal stated capital of $100,000 to Mr. Pohl. By taking back $130,000 ($30,000 + $100,000) in total consideration, Mr. Pohl is filing the election on the basis that the fair market value of the non-depreciable property is also $130,000 and there is no capital gain on this transaction. However, on review, the CRA reassesses him on the basis that the actual fair market value of the property is $180,000. Mr. Pohl, after a heated exchange with his accountant, agrees to accept this value.

16-118. Based on the reassessed value, the fair market value of the property transferred exceeds the fair market value of the consideration received as shown in the following calculation:

| | |
|---|---|
| Fair Market Value Of Property Transferred (Reassessed Value) | $180,000 |
| Less The Greater Of: | |
| • FMV Of Consideration Received = $130,000 | |
| • Elected Amount = $30,000 | ( 130,000) |
| Excess (Gift) | $ 50,000 |

16-119. As Mr. Pohl's son is the only common shareholder of the new corporation, it would be reasonable to regard this $50,000 as a gift to his son. This would make ITA 85(1)(e.2) applicable to this transaction and Mr. Pohl would have a taxable capital gain determined as follows:

| | |
|---|---|
| Deemed Elected Value = Deemed Proceeds Of Disposition | |
| ($30,000 + $50,000 Gift) | $80,000 |
| Adjusted Cost Base | ( 30,000) |
| Capital Gain | $50,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $25,000 |

16-120. Any CRA reassessment of the fair market values will involve specific assets. In this example, only one non-depreciable asset is involved and this means that the result will be a capital gain on that asset. If depreciable assets or inventories were involved, there could also be recapture or business income.

16-121. We noted in Paragraph 16-115 that the ITA 85(1)(e.2) deemed elected value does not apply in determining the adjusted cost base of the shares received by the transferor. Given this, the adjusted cost base of Mr. Pohl's preferred shares would be calculated as follows:

| | |
|---|---|
| Elected Value (Original) | $30,000 |
| Non-Share Consideration | ( 30,000) |
| Adjusted Cost Base Of Preferred Shares | Nil |

16-122. Note, however, the deemed elected value does apply to the cost figure that is used in the following PUC reduction calculation under ITA 85(2.1). This would be relevant if there was a share redemption.

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $100,000 |
| Less The Excess, If Any, Of: | | |
| Deemed Elected Value | ($80,000) | |
| Over The Non-Share Consideration | 30,000 | ( 50,000) |
| PUC Reduction | | $ 50,000 |
| PUC Of Shares ($100,000 - $50,000) | | $ 50,000 |

16-123. The other relevant fact here is that the transferee corporation, in addition to the $1,000 invested by Mr. Pohl's son, has an asset with a fair market value of $180,000. Given this, the fair market value of the son's shares would be $51,000 ($181,000 - $30,000 - $100,000). As there has been no change in the adjusted cost base of the son's shares, a subsequent sale of the shares would result in a capital gain of $50,000 ($51,000 - $1,000).

16-124. The actual and potential gains resulting from the application of ITA 85(1)(e.2) to this transaction are as follows:

| | |
|---|---|
| Actual Capital Gain On Transfer | $ 50,000 |
| Potential Gain On Mr. Pohl's Preferred Shares ($100,000 - Nil) | 100,000 |
| Potential Gain On Son's Common Shares ($51,000 - $1,000) | 50,000 |
| Total Gain | $200,000 |

16-125. If Mr. Pohl had simply sold his property, the total gain would have been only $150,000 ($180,000 - $30,000), $50,000 less than the total gain in the preceding table. In effect, the $50,000 amount of the gift will be subject to double taxation.

16-126. This example illustrates the importance of taking great care in establishing the fair market value of the property being transferred. A failure to do so can result in the double taxation that is illustrated here.

16-127. Once that fair market value has been established, the transferor should take back a non-growth security such as preferred shares for the difference between the fair market value of the property and its tax value. Common shares can then be issued to the other family members at a nominal value. While the initial value of these shares will be nominal, it will be these shares that will have growth in value in the future.

## Exercise Sixteen - 6

**Subject:** Gift To Related Party - Section 85

Janice Bellows establishes a new CCPC, arranging to have all of its common shares issued to her adult daughter for cash of $1,000. Ms. Bellows then transfers, using ITA 85, non-depreciable capital property with an adjusted cost base of $50,000 and an estimated fair market value of $65,000. The transfer is made at an elected value of $50,000. As consideration for this property, the corporation gives Ms. Bellows a note for $50,000 and preferred stock with a fair market value and a legal stated capital of $15,000.

A CRA reassessment of this transaction determines that the actual fair market value of the property transferred is $110,000. Ms. Bellows reluctantly accepts this value. After the reassessment, Ms. Bellows and her daughter sell their shares for their fair market value.

Taking into consideration the reassessment, describe the tax consequences of these transactions for both Ms. Bellows and her daughter. How would these tax consequences differ if Ms. Bellows had simply sold the non-depreciable capital property for its post-reassessment value of $110,000?

**SOLUTION available in print and online Study Guide.**

# Excess Consideration - Section 85

## Introduction

16-128. In the previous section we considered the tax consequences of the transferor receiving consideration that is less than the fair market value of the property transferred. In this section we are concerned with the opposite case. Here we are concerned with situations in which the value of the consideration received exceeds the value of the assets transferred. When this is the case, the result will be a taxable benefit assessed to the transferor under ITA 15(1). Note that ITA 15(1), which is discussed in detail in Chapter 15, is a provision that covers a broad variety of transactions that can create taxable benefits to the recipient shareholder.

16-129. In situations where ITA 85 is used to roll assets into an existing corporation that has assets other than those transferred in, share consideration or a combination of share consideration can result in an excess consideration situation. However, if the transfer is to a new corporation with no other shareholders, an ITA 15(1) benefit can only arise if the non-share consideration exceeds the value of the assets transferred. This reflects the fact that any shares issued, when combined with the value of the non-share consideration, cannot have a value in excess of the fair market value of the assets transferred to the new corporation.

> **EXAMPLE** An asset with a fair market value of $100,000 is transferred to a new corporation using ITA 85(1). The transferor receives $100,000 in non-share consideration as well as preferred shares. (To use Section 85, at least one share must be issued by the transferee.)
>
> **ANALYSIS** As the $100,000 in non-share consideration is equal to the fair market value of the assets transferred, the shares can only have a nominal value. Given this, they cannot create an excess consideration situation. Note that on transfers to a new corporation, if the non-share consideration is equal to, or greater than, the fair market value of the assets transferred, the shares that will be issued will have both an adjusted cost base and a PUC of nil.
>
> In order to simplify our coverage of this fairly minor topic of excess consideration, we will limit our examples and problems to situations involving transfers to new corporations where the fair market value of the non-share consideration exceeds the fair market value of the assets transferred.

16-130. Excess consideration situations do not usually involve a deliberate attempt by the taxpayer to receive an inappropriate amount of consideration. Rather the typical scenario involves the taxpayer filing an ITA 85 election using an estimated fair value for the assets transferred, with the CRA later reassessing based on a lower value for the assets. This is illustrated in the example in the next section.

## Shareholder Benefit - ITA 15(1)

16-131. The following example illustrates a situation in which the use of ITA 85(1) results in a taxable benefit to the transferor.

> **EXAMPLE** In 2018, Ms. Sally Swit transfers non-depreciable capital property to a new corporation in which she owns 100 percent of the shares using ITA 85(1). The property has an adjusted cost base of $65,000 and she believes it has a fair market value of $200,000. She takes back debt with a fair market value of $200,000 and preferred shares with a nominal value. In her 2018 tax return, she shows a taxable capital gain of $67,500 [(1/2)($200,000 - $65,000)].
>
> In 2019, the CRA reassesses on the basis that the fair market value of the property was only $150,000 at the time of the transfer. Ms. Swit accepts this reassessed value and does not file an objection.
>
> **ANALYSIS** Based on the original estimated fair market value for the property transferred, there was no excess consideration. However, with the reassessment value of $150,000 there is an excess, resulting in the following ITA 15(1) benefit:

| | |
|---|---|
| Fair Market Value Of Consideration | $200,000 |
| Reassessed Fair Market Value Of The Property | ( 150,000) |
| ITA 15(1) Shareholder Benefit | $ 50,000 |

With the value of the property transferred reassessed to $150,000, the elected value cannot exceed this amount. Based on this, there would be a revised taxable capital gain on the transfer, calculated as follows:

| | |
|---|---|
| Elected Value Of Property After Reassessment | $150,000 |
| Adjusted Cost Base | ( 65,000) |
| Capital Gain | $ 85,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain On Property After Reassessment | $ 42,500 |

The reassessment increases 2018 Net Income For Tax Purposes from $67,500 to $92,500 ($50,000 + $42,500), an increase of $25,000 as shown in the following:

| | |
|---|---|
| Taxable Capital Gain After Reassessment | $ 42,500 |
| Shareholder Benefit After Reassessment | 50,000 |
| Reversal Of Reported Taxable Capital Gain | ( 67,500) |
| Total Addition To Net Income For Tax Purposes | $ 25,000 |

The reason for this increase is that $50,000 of the capital gain, only one-half of which would be taxed, was converted to a 100 percent taxable shareholder benefit of $50,000. Because a $50,000 benefit will be included in Ms. Swit's income as a result of a property acquisition, ITA 52(1) requires that this amount be added to the adjusted cost base of the non-share consideration. Given this, the adjusted cost base of the non-share consideration would be as follows:

| | |
|---|---|
| Elected Value | $150,000 |
| ITA 15(1) Shareholder Benefit | 50,000 |
| Adjusted Cost Base Of Non-Share Consideration | $200,000 |

As explained in Paragraph 16-129, both the adjusted cost base and the PUC of the preferred shares issued is nil.

## Exercise Sixteen - 7

**Subject:** Benefit To Transferor (Excess Consideration) - Section 85

In 2018, Mr. Larry Custer uses ITA 85 to transfer non-depreciable capital property to a new CCPC in which he owns 100 percent of the shares. The adjusted cost base of the property is $123,000 and he believes that its fair market value is $270,000. In consideration for this property, Mr. Custer receives a note for $270,000 and preferred shares with a nominal value.

In 2019, Mr. Custer is reassessed on the basis that the fair market value of the transferred property was only $217,000. He accepts the reassessment without objection.

Describe the tax consequences of the transfer and the reassessment. Indicate the adjusted cost base of the consideration, and the adjusted cost base and the PUC of the preferred shares after the reassessment.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problem Sixteen-9 at this point.**

# Dividend Stripping — ITA 84.1

## Background

### The General Concept

16-132. The term dividend stripping is applied to two types of situations, depending on when the relevant shares were issued by the corporation. In simple terms, both scenarios involve an individual who is attempting to remove assets from a corporation on a tax free basis.

16-133. Attaining this goal can be accomplished if the individual was willing to give up control by selling his shares to an arm's length party. However, when this is not the case and the individual retains control, the dividend stripping rules will often prevent the tax free removal of assets.

16-134. One approach to removing assets from a corporation while still retaining control would be to pay dividends. However, dividends will be taxed in the hands of the recipient and, being a rational individual, the owner of the corporation would prefer to receive the assets on a tax free basis.

16-135. Currently, the usual approach to accomplishing the goal of removing funds from a controlled corporation on a tax free basis is to convert what is, in effect, a dividend payment into a capital gain that would be eligible for the lifetime capital gains deduction. This is the origin of the term "dividend stripping". ITA 84.1 is a provision that is intended to thwart such efforts.

### Pre-1972 Shares

16-136. At an earlier point in time, the most important application of ITA 84.1 was to prevent the conversion of pre-1972 earnings into a pre-1972 capital gain. As we noted in Chapter 8, prior to 1972, capital gains were not subject to tax in Canada. Given this, such a conversion could have resulted in the tax free receipt of a considerable amount of assets. While such situations still arise, they are not of sufficient importance to cover in a general text such as this. As a consequence, the application of ITA 84.1 in this type of situation will not receive further attention.

### Qualified Small Business Corporation Shares

16-137. The most important current application of the dividend stripping rules from ITA 84.1 involves shares of a qualified small business corporation. The capital gains on dispositions of such shares are eligible for the lifetime capital gains deduction. This means that, if an individual can remove the retained earnings of such a corporation in the form of a capital gain, a very large amount of income can be received on a tax free basis. In general, ITA 84.1 serves to make such conversions difficult. The text and problems in this section will focus on this application of the dividend stripping rules that are found in ITA 84.1.

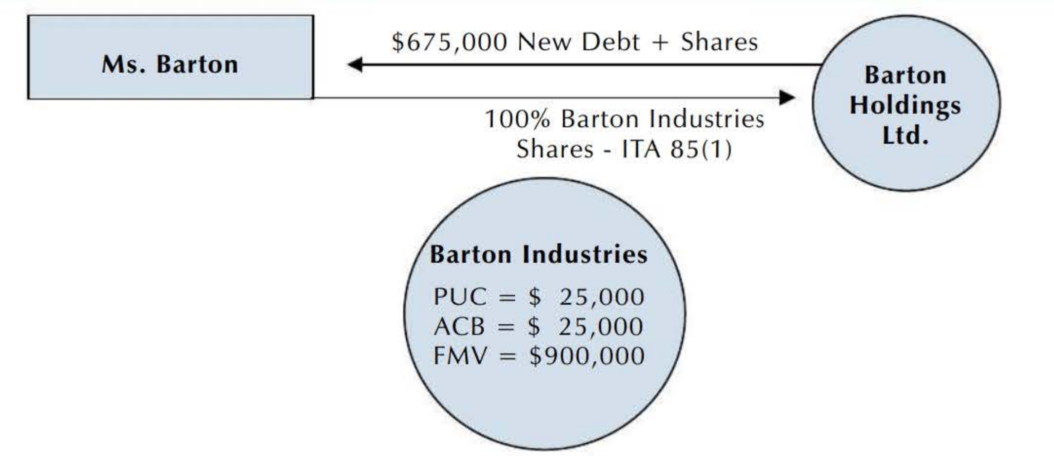
## Applicability Of ITA 84.1

16-138. ITA 84.1(1) specifies the conditions under which the dividend stripping rules become applicable. These conditions are as follows:

- there is a disposition by a resident Canadian taxpayer (other than a corporation) of shares of a resident Canadian corporation (the subject corporation);
- the taxpayer held the shares as capital property (i.e., the shares were held to produce income, not for resale at a profit);
- the disposition is made to a corporation with which the taxpayer does not deal at arm's length; and
- the subject corporation must be connected with the purchaser corporation after the disposition of shares (i.e., the purchaser corporation must control the subject corporation or own more than 10 percent of the voting shares and 10 percent of the fair market value of all shares).

16-139. When these conditions are present, the provisions of ITA 84.1 will generally serve to eliminate the individual's ability to achieve their dividend stripping goals.

**Figure 16 - 2**
**Application Of ITA 84.1 To Post-1971 Shares**



## Dividend Stripping Example

### *Basic Example*

16-140. A simple example will serve to illustrate the application of ITA 84.1 to post-1971 shares. As shown in Figure 16-2, Ms. Barton is the only shareholder of Barton Industries (BI), a Canadian controlled private corporation. The Company was established in 1986 with an investment of $25,000 on the part of Ms. Barton. There has been no additional investment in the Company and, as a consequence, $25,000 is the adjusted cost base of her shares as well as their PUC. The shares have a fair market value of $900,000. Because of her previous use of the lifetime capital gains deduction, Ms. Baron's available balance for the year is limited to $650,000. The shares of BI are qualified small business corporation shares. The Company has no opening balance in its GRIP account.

16-141. Ms. Barton could, of course, make use of her lifetime capital gains deduction by selling the BI shares to an arm's length party and realizing a capital gain of $875,000 ($900,000 - $25,000). However, this approach would result in tax payable as the capital gain of $875,000 exceeds the $650,000 deduction that she has available. In addition, and perhaps more importantly, she would lose control of BI.

16-142. Given these considerations, she chooses to transfer the BI shares to a new company, Barton Holdings Ltd. (BHL), using the provisions of ITA 85(1). Ms. Barton uses an elected value for the transfer of $675,000, in order to limit her capital gain to $650,000 ($675,000 - $25,000). She takes back $675,000 in new debt of BHL, along with the common shares of the new Company. These shares have a fair market value of $225,000 ($900,000 - $675,000) and an adjusted cost base of nil.

16-143. Through this procedure, Ms. Barton appears to have realized the required $650,000 of the accrued capital gain on the BI shares and, at the same time, retained control of the Company. However, Ms. Barton:

- is an individual, resident in Canada;
- held the shares as capital property;
- has made a disposition of shares to a corporation with which she does not deal at arm's length; and
- has created connected corporations subsequent to the transaction since BHL owns all of the shares of BI.

16-144. Given these facts, the dividend stripping provisions of ITA 84.1 would be applicable to this transaction.

## *ITA 84.1 Procedures*

16-145. The ITA 84.1 procedures begin with a reduction in the PUC of any shares of the subject corporation that are received by Ms. Barton. Note that, when both ITA 85 and ITA 84.1 are involved, the PUC reduction rules specified in ITA 84.1(1)(a) must be used. They would apply as follows in this situation.

| | | |
|---|---|---|
| Increase In Legal Stated Capital Of BHL Shares | | $225,000 |
| Less Excess, If Any, Of: | | |
| PUC Of Barton Industries Shares (Note One) | ($ 25,000) | |
| Over The Non-Share Consideration | 675,000 | Nil |
| ITA 84.1(1)(a) PUC Reduction (Note Two) | | $225,000 |

**Note One** This amount is technically the greater of the PUC of the subject shares and their adjusted cost base. In this example, the two amounts are equal.

**Note Two** In those cases where the boot is equal to or exceeds the greater of the PUC and the adjusted cost base of the subject corporation shares, the PUC reduction will be 100 percent of the PUC of the new shares.

16-146. This would leave the PUC of the new shares at nil ($225,000 - $225,000). Given this, the ITA 84.1(1)(b) deemed dividend would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital Of BHL Shares | | $225,000 |
| Non-Share Consideration | | 675,000 |
| Total | | $900,000 |
| Less The Sum Of: | | |
| The Greater Of The PUC And ACB Of Barton Industries (Subject) Shares | ($ 25,000) | |
| PUC Reduction Under ITA 84.1(1)(a) | ( 225,000) | ( 250,000) |
| ITA 84.1(1)(b) Deemed Dividend (Non-Eligible) | | $650,000 |

16-147. The results from Ms. Barton's disposition of her BI shares would be as follows:

| | |
|---|---|
| Elected Proceeds Of Disposition | $675,000 |
| ITA 84.1(1)(b) Deemed Dividend (See Note) | ( 650,000) |
| ITA 54 Deemed Proceeds Of Disposition | $ 25,000 |
| Adjusted Cost Base Of Barton Industries Shares | ( 25,000) |
| Capital Gain | Nil |

**Note** The definition of proceeds of disposition in ITA 54 indicates that it does not include any amount that is deemed by ITA 84.1(1) to be a dividend. In the absence of this exclusion, the deemed dividend could be taxed a second time as part of a taxable capital gain.

16-148. As the preceding example makes clear, the effect of ITA 84.1 in this situation is to convert the $650,000 capital gain on the BI shares into an ITA 84.1 deemed dividend. This means that Ms. Barton will not be able to make use of her lifetime capital gains deduction and that she will be subject to taxation on the deemed dividend. ITA 84.1 has clearly served to make this type of transaction unattractive.

16-149. As a final point, you should note that Ms. Barton could have achieved her goal of triggering a capital gain for purposes of the lifetime capital gains deduction. Her problem was that she also wanted to remove the gain in the form of non-share consideration. If, as an alternative, she had elected the same transfer price of $675,000, but limited the non-share consideration to the $25,000 PUC amount, she would have had her $650,000 capital gain without creating an ITA 84.1 deemed dividend. Note, however, that she does not have the $650,000 in cash. She would be holding shares with a value of $650,000 and an adjusted cost

base of nil. In order to have the cash and take advantage of the lifetime capital gains deduction, she would have to sell the shares to an arms' length party and lose control of the corporation.

## Exercise Sixteen - 8

**Subject:** Dividend Stripping

Miss Sarah Cole owns 100 percent of the outstanding shares of Cole Inc., a qualified small business corporation. The shares have a PUC and an adjusted cost base of $125,000 and a fair market value of $767,000. The Company has no balance in its GRIP account. On February 1, 2019, Miss Cole uses ITA 85(1) to transfer these shares to Sarah's Holdings Ltd., at an elected value of $767,000. As consideration, she receives a note for $450,000 and preferred shares with a fair market value and a legal stated capital of $317,000. Miss Cole owns all of the shares of Sarah's Holdings Ltd. and has never made use of her lifetime capital gains deduction. What are the tax consequences of this transaction to Miss Cole?

**SOLUTION available in print and online Study Guide.**

# Capital Gains Stripping — ITA 55(2)

## The Problem

16-150. A problem similar to that involved in dividend stripping arises when a corporation owns shares in a different corporation. If there is an accrued capital gain on these shares, a disposition of the shares will result in the recognition of that gain. Further, corporations are not eligible to use the lifetime capital gains deduction. This means that a disposition of the shares of the investee corporation for a gain will result in an increase in Taxable Income for the selling corporation.

16-151. While capital gains are subject to corporate income taxes, dividends received from taxable Canadian corporations can escape corporate taxes. This means that, if the investor corporation can devise some method of disposing of its investment so that the accrued gain can be received in the form of dividends rather than as a taxable capital gain, the payment of corporate taxes can be avoided.

16-152. In the absence of an anti-avoidance provision, this could be accomplished in a variety of ways. To illustrate this, assume the following:

- The Investee Company is a wholly owned subsidiary of the Investor Company.
- There is an accrued capital gain on the Investee Company shares.
- There is an arm's length purchaser who is prepared to buy the Investee Company shares at their fair market value.

16-153. There are several approaches that could be used in an attempt to convert the accrued capital gain into dividends that could be received by the Investor Company on a tax free basis. The two approaches that we will consider here can be described as follows:

- **Approach One** ITA 85(1) could be used to roll the Investee Company shares to a purchaser corporation at an elected value equal to the adjusted cost base of the Investee Company shares, resulting in no increase in Taxable Income for the Investor Company. As consideration, the purchaser corporation would issue preferred shares that are redeemable at the fair market value of the Investee Company shares. When the preferred shares are redeemed, the result will be an ITA 84(3) deemed dividend which can be received by the Investor Company on a tax free basis. Once again, it

would appear that the Investor Company has disposed of the Investee Company shares without any increase in Taxable Income or Tax Payable.

- **Approach Two** The Investee Company could assume debt equal to the accrued gain on its shares. This Company would then, using the borrowed funds, pay a dividend equal to the accrued gain. This would reduce the fair market value of the Investee Company shares by the amount of the accrued gain, leaving the Investee Company shares with a fair market value equal to their adjusted cost base. They could then be sold with no tax consequences. As the dividend would be received by the Investee Company on a tax free basis, it would appear that the Investor Company has disposed of the Investee Company shares without any increase in Taxable Income or Tax Payable.

16-154. Such procedures are referred to as capital gains stripping, reflecting the fact that it is an attempt to "strip" out a capital gain in the form of a non-taxable, intercorporate dividend. ITA 55(2) is an anti-avoidance provision designed to prevent such conversions of capital gains to dividends by a corporation disposing of an investment in shares.

## Application Of ITA 55(2)

### *Conditions For ITA 55(2) To Apply*

16-155. In somewhat simplified terms, the provisions of ITA 55(2) act to prevent capital gains stripping when the following conditions are present:

- An Investor Company receives dividends that are deductible in the determination of its Taxable Income as part of a transaction, or series of transactions, involving a disposition of Investee Company shares owned by the Investor Company.
- It is determined that one of the purposes of the dividend was to significantly reduce the capital gain on Investee Company shares which would have been included in the Net Income For Tax Purposes of the Investor Company, in the absence of the dividend.
- The disposition of the Investee Company shares was to an arm's length party. While we will not illustrate this in our coverage of this subject, ITA 55(2) would also be applicable if there was a significant increase in an arm's length party's interest in either the Investor Company or the Investee Company.

### *Application Of ITA 55(2)*

16-156. If the conditions specified in Paragraph 16-155 are present, the following rules apply to the dividend:

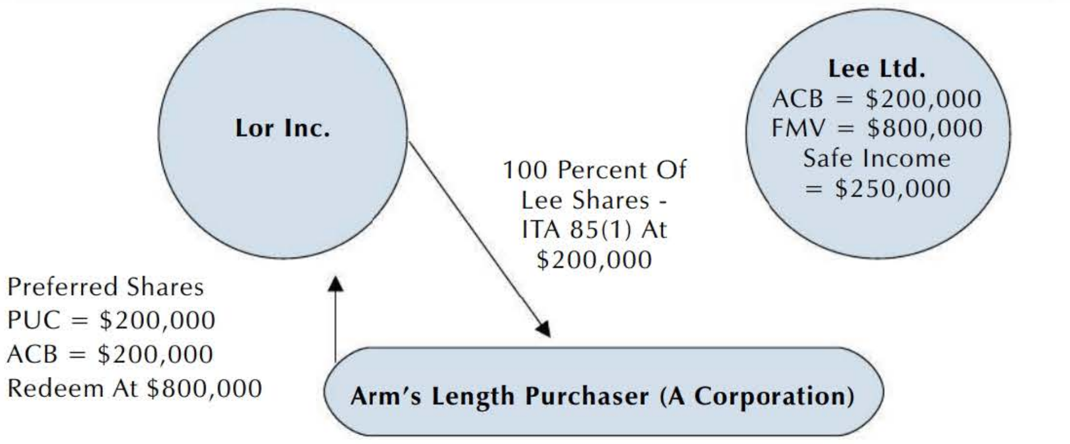
**ITA 55(2)(a)** This provision indicates that the dividend received by the Investor Company will be deemed not to be a dividend except to the extent that the Company has a Safe Income balance (see following description). To the extent that a Safe Income balance is available, the dividend will retain its status as a dividend.

In simplified terms, Safe Income is income that has accrued after 1971 or, if the acquisition of the shares was after that date, after the date on which the shares were acquired. We would note that recent amendments to ITA 55 have made the computation of safe income considerably more complex. Coverage of these complications goes beyond the scope of this introductory text.

Note that this provision only serves to remove the dividend status from the payment received by the Investor Company. It does not indicate the tax status of the payment subsequent to its removal from the dividend category. This is accomplished using ITA 55(2)(b) or ITA 55(2)(c).

**ITA 55(2)(b)** If shares are cancelled, an ITA 84(2) dividend can arise. Similarly, if shares are redeemed, an ITA 84(3) dividend can arise. If the conditions for the application of ITA 55(2) are present, ITA 55(2)(a) deems all or part of the dividend to not be

**Figure 16 - 3**
**Application Of ITA 55(2) - Example One (Approach One)**



a dividend and ITA 55(2)(b) deems the disallowed portion of the payment to be proceeds of disposition, except to the extent that it is otherwise included in computing such proceeds.

**ITA 55(2)(c)** If the conditions for the application of ITA 55 are present and ITA 55(2)(b) does not apply, the portion of the payment that is deemed not to be a dividend by ITA 55(2)(a) is deemed to be a capital gain of the Investor Company.

## Capital Gains Stripping - Example One

16-157. This first example depicts Approach One that is described in Paragraph 16-153. It is diagramed in Figure 16-3.

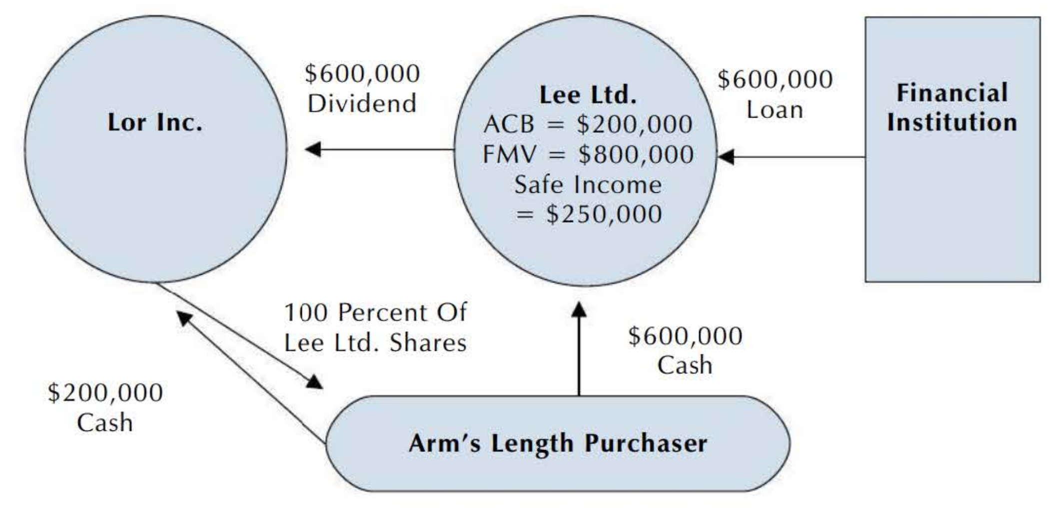
16-158. In this example, ITA 85(1) is used to roll the Lee Ltd. shares into the purchaser corporation at an elected value equal to the $200,000 adjusted cost base of the shares. As consideration for the shares, Lor Inc. takes back $800,000 in redeemable preferred shares. These shares have a PUC and an adjusted cost base of $200,000.

16-159. As you may recall from Chapter 14, a redemption is also a disposition. This requires the calculation of both a proceeds of redemption and a proceeds of disposition. Such transactions can result in an ITA 84(3) dividend, a capital gain, or both. The relevant calculations in this example are as follows:

| | |
|---|---|
| Proceeds Of Redemption | $800,000 |
| PUC Of Shares | ( 200,000) |
| ITA 84(3) Deemed Dividend [Absence Of ITA 55(2)] | $600,000 |
| Proceeds Of Disposition | $800,000 |
| Less The ITA 84(3) Dividend | ( 600,000) |
| Adjusted Proceeds Of Disposition | $200,000 |
| Adjusted Cost Base | ( 200,000) |
| Capital Gain [Absence Of ITA 55(2)] | Nil |

16-160. In the absence of ITA 55(2), the ITA 84(3) dividend would be deducted in determining Lor's Taxable Income and Lor would have succeeded in disposing of the Lee shares for $800,000, without incurring any taxation. The provisions of ITA 55(2) will act to prevent this result from being realized.

**Figure 16 - 4**
**Application Of ITA 55(2) - Example Two (Approach Two)**



16-161. ITA 55(2)(a) will deem any dividend that is not from Safe Income to not be a dividend. In this example, that amount would be $350,000 ($600,000 - $250,000). While $250,000 would retain its status as an ITA 84(3) dividend, under ITA 55(2)(b), the $350,000 would be deemed to be proceeds of disposition. As a result, the tax consequence to Lor would be calculated as follows:

| | |
|---|---|
| Adjusted Proceeds Of Disposition (See Calculation In Paragraph 16-159) | $200,000 |
| Deemed Proceeds Of Disposition - ITA 55(2)(b) | 350,000 |
| Total Proceeds Of Disposition | $550,000 |
| Adjusted Cost Base | ( 200,000) |
| Capital Gain | $350,000 |

16-162. As can be seen in the preceding calculation, ITA 55(2) has served to convert $350,000 of the ITA 84(3) dividend into a capital gain of $350,000. The $250,000 dividend from Safe Income can be deducted under ITA 112 in the determination of Lor's Taxable Income, resulting in no tax cost.

## Capital Gains Stripping - Example Two

16-163. This second example depicts Approach Two that is described in Paragraph 16-153. It involves the same two Companies that were used in Example One. The only difference is in the approach that they use in attempting to convert the capital gain into a tax free dividend. It is diagramed in Figure 16-4.

16-164. In this example, Lor Inc. owns 100 percent of the shares of Lee Ltd. The shares have a fair market value of $800,000, an adjusted cost base of $200,000, and a potential capital gain of $600,000. Lee Ltd. has safe income of $250,000. An arm's length purchaser is willing to pay $800,000 for these shares. In order to implement this sale, Lor Inc. arranges the following:

- Lee Ltd. borrows $600,000 from a financial institution.
- The borrowed funds are used to pay a $600,000 tax free dividend to Lor Inc. This reduces the fair market value of Lee Ltd. to $200,000 ($800,000 - $600,000).

- Lor Inc. sells the shares to the arm's length purchaser for $200,000 in cash. As this is the adjusted cost base of the shares, there will be no capital gain.
- The arm's length purchaser invests $600,000 in Lee Ltd., with the funds being used to retire the $600,000 loan.

16-165. In the absence of ITA 55(2), Lor Inc. would have managed to dispose of its interest in Lee Ltd. in a series of transactions for $800,000 ($200,000 received directly from the purchaser and $600,000 of tax-free dividends financed indirectly by the purchaser), without the recognition of a capital gain. However, ITA 55(2) will prevent this from happening.

16-166. Under ITA 55(2)(a), the portion of the $600,000 dividend that is not from Safe Income will be deemed not to be a dividend to Lor Inc., the dividend recipient. Under ITA 55(2)(c), this portion of the dividend will treated as a capital gain on the disposition of capital property. This result is shown in the following calculation:

| | |
|---|---|
| Dividends Received | $600,000 |
| Dividend Attributable To Safe Income - Retains Status As A Dividend | ( 250,000) |
| Amount Deemed By ITA 55(2)(a) To Not Be A Dividend And By ITA 55(2)(c) To Be A Capital Gain | $350,000 |

16-167. As was the result in Example One, ITA 55(2) has served to convert the portion of the dividend not paid from Safe Income into a capital gain, which will be taxed. The $250,000 portion of the dividend attributable to Safe Income will retain its status as a dividend and can be deducted in the determination of Lor's Taxable Income.

## Exercise Sixteen - 9

**Subject:** Capital Gains Stripping

Markem Ltd. owns 100 percent of the outstanding common shares of Larkin Ltd. The shares of Larkin have an adjusted cost base of $75,000 and a fair market value of $840,000. Included in its Retained Earnings balance is $225,000 of income that has been earned since its acquisition by Markem Ltd. Markem Ltd. would like to sell its shares in Larkin Ltd. In order to implement this sale, Markem Ltd. has instructed Larkin Ltd. to borrow $750,000 from its bank, and use all of these funds to pay a dividend on the shares held by Markem Ltd. The shares are then sold to Mr. J. Leaner for $90,000. Mr. Leaner is not related to Markem Ltd. or Larkin Ltd. What are the tax consequences to Markem Ltd. of these transactions?

# Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 16:

- 11 Self Study problems,
- 6 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

# Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### *Assignment Problem Sixteen - 1*

***(Transfers To A Corporation Vs. Direct Sale)***

For a number of years, Brett Manson has owned an apartment building in the city of London, Ontario. Information on its acquisition is as follows:

| | |
|---|---|
| Acquisition Cost | $1,355,000 |
| Estimated Cost Of The Land | ( 462,000) |
| Estimated Cost Of The Building | $ 893,000 |

At the beginning of the current year, values related to the property are as follows:

| | |
|---|---|
| Estimated Fair Market Value Of Property | $1,610,000 |
| Estimated Fair Market Value Of Land | ( 574,000) |
| Estimated Fair Market Value Of The Building | $1,036,000 |
| UCC Of The Building | $ 685,022 |

At this time, Brett transfers the property to a corporation using a Section 85 rollover. The value elected for the transfer is $1,147,022 ($462,000 + $685,022). The only consideration received by Brett is common shares in the new corporation.

Later in the year, all of the common shares are sold to Jason Border, an arm's length party, for $1,610,000.

**Required:**

A. Describe the tax consequences for Brett of using Section 85 and selling the common shares.

B. How do these results compare with the tax consequences of simply selling the building directly to Jason Border for $1,610,000?

## Assignment Problem Sixteen - 2

### (Section 85 Rollovers - Short Cases)

The following **independent** cases involve transfers of assets under ITA 85.

**Case One** Depreciable assets with a fair market value of $183,400 are transferred to a corporation in exchange for non-share consideration of $140,000, preferred shares with a fair market value of $22,000 and common shares with a fair market value of $21,400. The assets had a capital cost of $130,000. They were the only assets in their Class and the UCC balance in the Class was $59,904.

**Case Two** Inventories of merchandise are transferred to a corporation in exchange for $93,000 in non-share consideration and $27,000 in common stock (fair market value and legal stated capital). The inventories have a cost of $87,000 and a fair market value of $120,000.

**Case Three** Land is transferred to a corporation in exchange for $72,000 in non-share consideration and $751,000 in common stock (fair market value and legal stated capital). The land cost $617,000 and has a current fair market value of $823,000.

**Required**: For each of the three Cases provide the following information:

A. The minimum and maximum transfer prices that could be elected under the provisions of ITA 85.

B. Assuming the minimum value is elected, the amount of capital gain or business income to be included in the income of the transferor.

C. Again assuming that the minimum transfer value is elected, determine the adjusted cost base and PUC of the preferred and common stock consideration. Your answer should include the determination of any shareholder benefit under ITA 15(1) or deemed dividend under ITA 84(1) that will arise on the transfer, or explain why there is no benefit or deemed dividends.

## Assignment Problem Sixteen - 3

### (ACB Of Consideration And PUC)

Lily Haring has owned a depreciable property for a number of years. The property had an original capital cost of $623,000. It is the only asset in its Class and, at the present time, the UCC for the Class equals $229,663. The current fair market value of the asset is $946,000.

Lily would like to transfer this asset to a new corporation, using the provisions of Section 85(1). She is considering the following alternative consideration packages, all of which total $946,000:

**Package One** Lily will take back debt with a fair market value of $229,663, along with common shares with a fair market value of $716,337.

**Package Two** Lily will take back debt with a fair market value of $100,000, preferred shares with a fair market value of $100,000, and common shares with a fair market value of $746,000.

**Package Three** Lily will take back debt with a fair market value of $700,000 and preferred shares with a fair market value of $246,000.

**Required:** For each of the three packages, determine:

- The minimum transfer value that Lily can elect and the amount and type of income that will result from electing this value.
- The adjusted cost base of each of the items of consideration received by Lily.
- The Paid Up Capital for the preferred and/or common shares issued.

### Assignment Problem Sixteen - 4

#### (ITA 85 Transfer Of Depreciable Asset)

During the current year, Mr. Rob Banting transfers a depreciable capital property to a new corporation. Rob owns all of the shares in the new corporation and it will have a December 31 year end.

The depreciable asset was purchased several years ago for $343,000. The asset has a current fair market value of $420,000. At the time of transfer, it is the only asset in its Class and, prior to the transfer, the balance in the Class was $213,790.

Rob has been carrying forward a $52,000 capital loss on a stock sale. In order to absorb this loss, he elects to transfer the property at a value of $395,000.

As consideration, Rob takes back a note for $175,000, preferred shares with a fair market value of $90,000, and common shares with a fair market value of $155,000.

**Required:** Describe the income tax implications resulting from this transaction. Your answer should include both current tax implications, and the determination of values that will have future tax implications.

### Assignment Problem Sixteen - 5

#### (Short Cases With Gift And Shareholder Benefit)

Peter Kowalski owns a rental property that was acquired years ago at a cost of $1,200,000. At the time, he estimated the value of the land to be $200,000 and the value of the building to be $1,000,000.

Peter estimates that the current value of the property is $1,500,000, with $300,000 of this amount being allocated to the land and $1,200,000 of this amount allocated to the building. As of this date, the UCC of the building is $460,800.

Peter has decided to transfer this property to a corporation using the provisions of Section 85. He is considering three possible scenarios. Consider each of the three scenarios as completely independent.

> **Scenario 1** Peter transfers the property to a new corporation in which he will be the sole shareholder. He has a net capital loss carryforward of $50,000. As he has no other assets with accumulated capital gains, he would like the transfer of the rental property to create a $100,000 capital gain against which he can apply his capital loss. To accomplish this, he elects a transfer value of $300,000 for the land. The elected value for the building will be $460,800. As consideration, he will receive a note payable for $760,800, and preferred shares with a legal stated capital and redemption value of $739,200.

> **Scenario 2** Peter transfers the property to a new corporation in which he will be the sole shareholder. The land is transferred at an elected value of $200,000 and the building is transferred at an elected value of $460,800. As consideration he will receive a note payable for $660,800, and preferred shares with a fair market value (their redemption value) of $939,200. The legal stated capital of the preferred shares will be $839,200.

> **Scenario 3** Peter's daughter, Stella, establishes a new corporation with an investment of $10,000 of her own money for the corporation's common shares. Peter transfers the rental property to this corporation with an elected value of $200,000 for the land and $460,800 for the building. As he would like to provide financial assistance for his daughter, in his election he claims that the fair market value of the land is $200,000, hoping that the CRA will not look at the fact that this value is too low. Based on this, he only takes back $1,400,000 in consideration, a note payable for $400,000 and preferred shares with a legal stated capital and a redemption value of $1,000,000.

On review, the CRA discovers the undervaluation and reassesses Peter on the basis that the land actually had a fair market value of $300,000. Peter does not object to this reassessment.

**Required:** For each of the preceding scenarios, determine for Mr. Kowalski:

- The tax consequences of the transfer for him.
- The tax cost of the land and building in the hands of the corporation.
- The adjusted cost base of the shares issued to him by the corporation.
- The PUC of the shares issued to him by the corporation.

In your solution for Scenario 3, include the effects of the CRA reassessment.

## *Assignment Problem Sixteen - 6*

### *(ITA 85 Transfer With Sale/Redemption Of Shares)*

Three years ago, Connie Bright acquired a commercial property consisting of land and a building at a total cost of $1,475,000. At the acquisition date, an appraisal concluded that the respective values for the two components of the property were $300,000 for the land and $1,175,000 for the building. The acquisition was facilitated by a $550,000 mortgage on the property.

During 2017 and 2018, she operated the property as a proprietorship with good success, realizing a substantial profit in each year. Given this, she would like to transfer the property to a corporation as of January 1, 2019. On that date, the relevant facts about the property are as follows:

| | Land | Building |
|---|---|---|
| Fair Market Value | $475,000 | $1,300,000 |
| Adjusted Cost Base/Capital Cost | 300,000 | 1,175,000 |
| UCC | N/A | 1,071,365 |
| Mortgage Balance | N/A | 525,000 |

Connie will elect a transfer value for the land of $475,000. The corresponding figure for the building will be $1,100,000.

The corporation will assume the $525,000 mortgage on the building and, in addition, will issue a note to Connie for $1,050,000. The corporation will also issue common shares to Connie with a fair market value of $200,000 and legal stated capital of $200,000.

The new corporation does not have a balance in its General Rate Income Pool (GRIP) account in any of the years under consideration.

**Required:**

A. What are the tax consequences of making this transfer at the elected value of $1,575,000 ($475,000 + $1,100,000)? Your answer should include amounts to be included in Connie's income as a result of the transfer, as well as the corporation's tax values for the assets.

B. Compute the adjusted cost base of each component of the consideration that Connie has received from the corporation.

C. Compute the PUC of the corporation's newly issued common shares.

D. What amounts would be included in Connie's Net Income For Tax Purposes if, during 2019, she sells her common shares for $400,000?

E. What amounts would be included in Connie's Net Income For Tax Purposes if, during 2019, the corporation redeems her common shares for $400,000?

### Assignment Problem Sixteen - 7

#### (Transfers To A Corporation And Sale/Redemption Of Shares)

For a number of years, Martin Flex has owned land with a building situated on it. He has operated several different businesses from this venue.

The cost of the property for Martin was $2,800,000, with $525,000 of this amount being allocated to land and the $2,275,000 balance allocated to the building. In order to assist with the purchase of this property, Martin acquired a $1,000,000 mortgage.

He is in the process of starting a new business and would like to use the provisions of ITA 85(1) to transfer the property to a new corporation, Flexor Inc. The new corporation will have a December 31 year end.

The transfer will take place on January 1, 2019. At that time, information on the property is as follows:

| | |
|---|---|
| • Fair Market Value Of The Land | $ 720,000 |
| • Fair Market Value Of The Building | 2,600,000 |
| • UCC Of The Building | 1,893,618 |
| • Mortgage Balance | 872,000 |

In implementing the ITA 85(1) rollover, Martin will elect a value of $525,000 for the land and $1,975,000 for the building. The corporation will assume the $872,000 balance on the mortgage and will issue new debt to Martin in the amount of $1,128,000. Martin will also receive common shares with a fair market value of $1,320,000.

This total consideration of $3,320,000 ($872,000 + $1,128,000 + $1,320,000) is equal to the $3,320,000 ($720,000 + $2,600,000) fair market value of the land and building.

There are no additions to Flexor Inc.'s General Rate Income Pool during 2019.

**Required:**

A. What are the tax consequences of making this transfer at the elected value of $2,500,000 ($525,000 + $1,975,000)? Your answer should include amounts to be included in Martin's income as a result of the transfer, as well as the corporation's tax values for the assets.

B. Compute the adjusted cost base of each component of the consideration that Martin has received from the corporation.

C. Compute the PUC of the corporation's newly issued common shares.

D. What amounts would be included in Martin's Net Income For Tax Purposes if, during 2019, he sells his common shares for $1,320,000?

E. What amounts would be included in Martin's Net Income For Tax Purposes if, during 2019, the corporation redeems his common shares for $1,320,000?

### Assignment Problem Sixteen - 8

#### (Transfers To A Corporation And Share Redemption)

Ms. Martha Fleck owns an unincorporated business that she operates out of leased premises. In order to simplify record keeping, her general accounting information is the same as that which she uses for tax purposes. On December 31, 2018, the business has the following assets and liabilities.

| | Tax Value | Fair Market Value |
|---|---|---|
| Accounts Receivable | $132,000 | $ 127,500 |
| Inventory | 261,000 | 312,000 |
| Equipment (Cost = $420,000) | 351,000 | 475,500 |
| Goodwill | Nil | 525,000 |
| Total Assets | $744,000 | $1,440,000 |
| Liabilities | ( 142,500) | ( 142,500) |
| Net Assets | $601,500 | $1,297,500 |

All of the assets of the unincorporated business will be transferred to Rollex Inc., a new corporation established for the purpose of this transfer. The Accounts Receivable have a face value of $132,000 and will be transferred using the ITA 22 joint election.

The remaining assets will be transferred under the provisions of ITA 85(1). The total consideration received by Ms. Fleck will have a value of $1,312,500 ($1,440,000 - $127,500), the fair market value of the assets other than Accounts Receivable. The consideration is made up of new debt of $112,500, assumption of the old debt of $142,500, preferred stock with a fair market value of $337,500, and common stock with a fair market value of $720,000.

The new corporation does not have a balance in its General Rate Income Pool (GRIP) account in any of the years under consideration.

Ms. Fleck wishes to incorporate her business in a manner that minimizes or eliminates any tax effects resulting from the transaction.

**Required:** Ignore the lifetime capital gains deduction in your solution.

A. Do you agree with the decision to transfer the accounts receivable using ITA 22? Explain your conclusion and determine the tax consequences of this decision.

B. Given that Ms. Fleck wishes to minimize or eliminate current taxes, indicate the values that should be elected for each of the assets to be transferred.

C. Determine the adjusted cost base of the debt, preferred shares, and common shares that would be received by Ms. Fleck on the rollover.

D. Determine the Paid Up Capital of the common stock and preferred stock that were issued by the new corporation to Ms. Fleck.

E. Determine the tax consequences to Ms. Fleck if the preferred and common shares that she received in the rollover were immediately redeemed in January, 2019 by the new corporation at fair market values.

### Assignment Problem Sixteen - 9

#### (Gift To Related Party - Section 85)

Ms. Martine Renaud has operated an unincorporated business for over 25 years. The business has been very successful and, on January 1, 2019, its assets and liabilities have tax values and estimated fair market values as follows:

| | Tax Value | Fair Market Value |
|---|---|---|
| Accounts Receivable (No Reserve Taken) | $ 60,000 | $ 57,000 |
| Inventories | 825,000 | 840,000 |
| Depreciable Assets - CCA Class 8 (Note One) | 1,725,000 | 1,780,000 |
| Land | 923,000 | 1,450,000 |
| Building (Note Two) | 1,760,000 | 2,436,000 |
| Total Assets | $5,293,000 | $6,563,000 |
| Liabilities | ( 430,000) | ( 430,000) |
| Net Assets (Owner's Equity) | $4,863,000 | $6,133,000 |

**Note One** The capital cost of the assets in Class 8 total $1,960,000.

**Note Two** The capital cost of the Building is $3,600,000.

Ms. Renaud has two daughters, Alma aged 26 and Amanda aged 28. Currently, they are both unemployed but, thanks to Ms. Renaud's generosity over the years, they both have significant assets and a comfortable lifestyle.

Ms. Renaud would like to transfer the future growth in her business to her daughters. To accomplish this, in December, 2018, she arranges for them to establish a new corporation through the investment of $10,000 each. Each daughter receives 100 common shares. The new corporation is named Almand Inc. and at this point, the corporation has no assets other than the $20,000 invested by the two daughters.

On January 1, 2019, Ms. Renaud transfers all of the assets of her unincorporated business to Almand Inc. The Accounts Receivable are transferred to the corporation using the ITA 22 joint election. The remaining assets are transferred under the provisions of ITA 85(1). The business does not have goodwill.

Ms. Renaud transfers the assets at an elected value of $5,233,000 ($5,293,000 - $60,000), the total tax value of the assets other than Accounts Receivable. Almand Inc. assumes all of the $430,000 in liabilities of Ms. Renaud's unincorporated business and issues new debt to her in the amount of $1,570,000.

In addition, she receives redeemable preferred shares with a fair market value and legal stated capital of $4,506,000, a total of $6,506,000.

The CRA issues a reassessment related to the rollover transaction in November, 2019. It is based on a fair market value for the land of $1,850,000, $400,000 more than Ms. Renaud's estimate of $1,450,000. Ms. Renaud does not file an objection to the reassessment as her father, a retired appraiser, has advised her she would ultimately lose after paying outrageous accounting fees.

**Required:** Ignore the lifetime capital gains deduction in your solution.

A. Taking into consideration the effect of the reassessment, determine the tax consequences to Ms. Renaud that result from the transfer of her business assets to Almand Inc. Your answer should include amounts to be included in Ms. Renaud's income as a result of the transfer and the reassessment, as well as the adjusted cost base and PUC of her preferred shares.

B. Determine the tax consequence to Ms. Renaud if Almand Inc. redeems her preferred shares for $4,506,000 immediately after the reassessment.

C. Alma finds that she cannot tolerate being a 50 percent shareholder in a corporation with her sister. She sells her Almand Inc. shares to an arm's length party for $275,000 immediately after the reassessment. Determine the tax consequences of this sale for Alma.

### Assignment Problem Sixteen - 10

**(Excess Consideration)**

For the last 10 years, Matthew Garnet has operated Garnet Enterprises as a sole proprietorship. As he no longer needs all of the income that is produced by the business, he would like to transfer the business to Garnet Ltd., a corporation in which he holds 100 percent of the outstanding common shares. This corporation has a December 31 year end.

The transfer takes place on January 1, 2018. Mr. Garnet uses ITA 85(1) to transfer any tangible assets with fair market values in excess of their tax values (adjusted cost base or UCC). These assets, and their relevant values on the date of transfer are as follows:

| | Tax Value | Estimated Fair Market Value |
|---|---|---|
| Depreciable Assets - CCA Class 8 (Note One) | \$ 72,000 | \$ 106,500 |
| Land | 127,500 | 247,500 |
| Building (Note Two) | 414,000 | 748,000 |
| Net Assets (Owner's Equity) | \$613,500 | \$1,102,000 |

**Note One** The capital cost of the assets in Class 8 is \$106,500.

**Note Two** The capital cost of the Building is \$567,000.

As consideration, Mr. Garnet will receive a note for \$1,102,000 and preferred shares with a nominal value. His elected value will be \$1,102,000, the fair market value of the non-share consideration. The elected value for the individual assets transferred will be their estimated fair market values.

In 2019, Matthew is reassessed on the basis that the building's fair market value is only \$648,000. He accepts the reassessment without objection. The CRA accepts the estimated values for the land and the Class 8 assets, resulting in a total fair market value of \$1,002,000 (\$106,500 + \$247,500 + \$648,000).

**Required:**

A. Calculate the effect on Mr. Garnet's Net Income For Tax Purposes that will result from his transfer of the Garnet Enterprises' assets to Garnet Ltd. in 2018.

B. Describe the tax consequences of the reassessment. Include in your answer the adjusted cost base of the consideration, and the adjusted cost base and the PUC of the preferred shares after the reassessment.

C. Indicate the tax values that will be recorded for the assets that are transferred to Garnet Ltd. under ITA 85(1) after the reassessment.

### Assignment Problem Sixteen - 11

**(Dividend Stripping)**

A number of years ago, Sheila Hicks established a new corporation, Hicks Ltd., with an investment of \$250,000. In return for this investment, she received 12,500 common shares in the new corporation. As Sheila, a Canadian resident, is the only shareholder, Hicks qualifies as a Canadian controlled private corporation.

The corporation has a December 31 year end.

Both the adjusted cost base and the PUC of the Hicks common shares is equal to Sheila's investment of \$250,000. There have been no changes in the number of shares issued and outstanding since Hicks Ltd. was incorporated.

As the business has enjoyed great success since its inception, it is estimated that the current value of Sheila's shares is $3,200,000. As she has more than enough resources to live comfortably for the rest of her life, she would like to freeze the current value of the Hicks Ltd.'s shares and have any future increases in the Company's value accrue to her 35 year old son, Brandon Hicks.

To accomplish this goal, she will have Brandon incorporate a new company, Brandon Inc. and acquire all of its common shares with a nominal amount of his own money.

Once Brandon Inc. is incorporated in February, 2019, she will use the provisions of ITA 85(1) to transfer all of her Hicks Ltd. shares to that Company. As Hicks Ltd. is a qualified small business corporation, she would like to structure the rollover in a manner that would utilize her remaining lifetime capital gains deduction.

While she has used this tax benefit in the past, for 2019, she has an unused balance of $426,000. In order to accomplish this goal, she plans to make the transfer at an elected value of $676,000 ($250,000 + $426,000), taking back an interest bearing note with a fair market value of $676,000, and retractable preferred shares with a fair market value and a PUC of $2,524,000.

Neither of the Companies would have a balance in their General Rate Income Pool (GRIP) account in any of the years under consideration.

**Required:**

A. Explain the tax consequences of the proposed ITA 85(1) transfer of the Hicks Ltd. shares to Brandon Inc.

B. While still accomplishing the goal of freezing her estate, indicate how Sheila could alter the rollover transaction in a manner that would reduce or eliminate the Tax Payable required under her proposed structure. Determine the tax implications that would result from this new approach.

C. As an alternative approach to using her lifetime capital gains deduction, Sheila proposes selling 2,641 Hicks Ltd. common shares to Brandon Inc. for cash. The shares would be sold for their current fair market value and this would produce, in the absence of ITA 84.1, a capital gain of just over $426,000. Explain the tax consequences of this proposed transaction.

Show all calculations required to support your answers.

### *Assignment Problem Sixteen - 12*

***(Dividend Stripping)***

Daryl Foster has operated Foster's Fasteners Inc. for the last 15 years. It is a Canadian controlled private corporation that is involved in the sale of luxury hardware items. His original investment when the Company was established was $780,000. Daryl is the only shareholder and the $780,000 is both the adjusted cost base and the PUC of his shares.

As the Company has been very profitable since its inception, its shares have a current fair market value of $6,200,000.

As Daryl is nearing retirement age, he would like to extract a significant amount of funds from his corporation without incurring a great deal of taxation. He has discussed this matter with Thornton Brockton, his self-trained accountant of many years. While Thornton has never implemented such a strategy, he indicates that he has heard of a procedure called a Section 85 rollover that will allow Daryl to transfer his shares to a new corporation using an elected value that will create a capital gain of $600,000. As this is the amount of Daryl's unused lifetime capital gains deduction, Thornton advises Daryl that he can receive the original cost of his shares, plus a $600,000 capital gain on a tax free basis.

Using Section 85, Daryl will transfer all of the shares of Foster's Fasteners to Foster Investments, a new Company in which Daryl will hold all of the shares. The elected value for the transfer will be $1,380,000.

In return, Daryl will receive a non-interest bearing note for $1,380,000, plus Foster Investment shares with a redemption value of $4,820,000. Given the cash resources of Foster's Fasteners, this Company's shares should be able to pay sufficient dividends to Foster Investments to allow the payment of the note within one or two years.

Neither of the Companies have a balance in their General Rate Income Pool (GRIP) account in any of the years under consideration.

**Required:**

A. In the absence of ITA 84.1, indicate the tax consequences of the transfer of the shares of Foster's Fasteners to Foster Investments.

B. Determine whether ITA 84.1 would be applicable in this case. Assuming that ITA 84.1 is applicable, calculate the deemed dividend that would arise on this transfer. In addition, indicate the net economic effect that would result from this transfer combined with a redemption of the Foster Investments shares at their fair market value of $4,820,000.

## Assignment Problem Sixteen - 13

### (Capital Gains Strips)

From its original incorporation, Doldem Inc. has always been a Canadian controlled private corporation. For the last 5 years, it has owned 100 percent of the outstanding shares of Darco Ltd. Darco is also a Canadian controlled private corporation. The shares were acquired at a cost of $1,650,000. This is also the PUC of the Darco shares.

The Darco shares have been a very successful investment for Doldem Inc. Reflecting this, it is estimated that their fair market value on January 1, 2019 is $4,700,000. During the period during which Doldem has held the Darco shares, the subsidiary has accumulated safe income of $893,000.

Doldem does not have a balance in its RDTOH account. Neither company has a General Rate Income Pool (GRIP) balance.

**Required:** Indicate the amount, and type, of income that would accrue to Doldem Inc. in both of the following **independent** situations:

A. Darco Ltd. obtains a bank loan in the amount of $3,050,000 and uses all of the acquired funds to pay a dividend to Doldem Inc. Subsequent to the receipt of this dividend, Doldem Inc. sells the Darco shares to Ms. Laraz, an arm's length party, for $1,650,000.

B. Using ITA 85(1), Doldem transfers the Darco shares to Laraz Ltd., an unrelated corporation. The elected value is $1,650,000. In return for the Darco shares, Doldem receives Laraz Ltd. preferred stock with a PUC of $1,650,000 and a redemption value of $4,700,000. Immediately after the transfer, Laraz Ltd. redeems the preferred stock for $4,700,000.

# CHAPTER 17

# Other Rollovers And Sale Of An Incorporated Business

## Introduction

17-1. The preceding Chapter gave detailed consideration to the Section 85 rollover provisions, which provide for a tax deferred transfer of property to a corporation. In addition, Chapter 9 dealt with rollovers involving transfers to a spouse and transfers of farm property to children. There are a number of other rollover provisions in the *Act* that will be discussed in this Chapter.

17-2. These additional rollover provisions cover share for share exchanges among corporations, share exchanges in the process of the reorganization of a corporation, amalgamations of existing corporations, the winding-up of a 90 percent or more owned subsidiary, and conversions of debt to shares. The winding-up of a Canadian corporation that is not a 90 percent owned subsidiary is also covered. This latter transaction does not involve a rollover, but is dealt with in the same Section of the *Income Tax Act* as the winding-up of a 90 percent or more owned subsidiary.

## Share For Share Exchanges - ITA 85.1

### Background

17-3. ITA 85.1 provides for a rollover in which a shareholder (vendor) exchanges his shares for shares of an acquiring corporation (purchaser). When there are many diverse shareholders, a share for share exchange is easier to accomplish than a Section 85 rollover, because there is no need for each shareholder to file an election. Further, the provisions of ITA 85.1 apply automatically, unless the vendor includes any gain or loss on the transaction in his income tax return. Given these features, an ITA 85.1 exchange is an important arrangement in business combination transactions.

### General Rules

17-4. The general rules for this rollover apply automatically unless the vendor opts to include a gain or loss from the transaction in their income tax return. These general rules are as follows:

**ITA 85.1(1)(a)** The vendor (acquiree) is deemed to have:

(i) disposed of the exchanged shares for proceeds of disposition equal to their adjusted cost base.
(ii) acquired the shares of the purchaser at a cost to the vendor equal to the adjusted cost base to the vendor of the exchanged shares immediately before the exchange.

**ITA 85.1(1)(b)** The cost to the purchaser (acquirer) of each of the acquired shares is deemed to be the lesser of:

(i) its fair market value immediately before the exchange, and
(ii) its paid-up capital immediately before the exchange.

**ITA 85.1(2.1)** The PUC of the purchaser shares that have been issued to the vendor is limited to the PUC of the shares given up by the vendor.

17-5. You should note that the ITA 85.1(1)(b) provision may be problematical for the purchaser in situations where the adjusted cost base of the vendor's shares exceeds their PUC. If the shares are later sold by the purchaser, that excess of the adjusted cost base over the PUC will be subject to tax as a capital gain since the purchaser's adjusted cost base will be equal to the PUC. This would suggest that, in situations where the adjusted cost base of the shares exceeds their PUC, it might be better to use ITA 85(1) for the transfer.

## Conditions For The Application Of ITA 85.1

17-6. The conditions required for this rollover to be applicable are found in ITA 85.1(1) and (2). To begin, the vendor's shares must be held as capital property. Additional conditions for the applicability of the rollover are as follows:

**ITA 85.1(2)(a)** The vendor and purchaser must be dealing with each other at arm's length.

**ITA 85.1(2)(b)** The vendor, or persons with whom he does not deal at arm's length, cannot control the purchaser immediately after the exchange. Likewise, they cannot own shares having a fair market value in excess of 50 percent of the total fair market value of the purchasing corporation's outstanding shares.

**ITA 85.1(2)(c)** The vendor and purchaser cannot have filed an election under ITA 85(1) with respect to the exchanged shares.

**ITA 85.1(2)(d)** The vendor must not have received any consideration, other than shares of the purchaser, in return for the shares given up in the exchange.

17-7. You should note that this last condition under ITA 85.1(2)(d) does not prevent the vendor from selling additional shares to the purchaser for non-share consideration.

## Example

### *Application Of ITA 85.1*

17-8. A brief example will serve to illustrate the basic provisions of ITA 85.1:

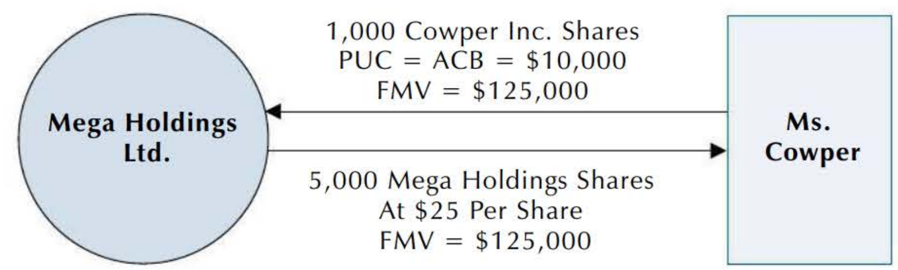
**EXAMPLE** Ms. Cowper is the sole shareholder of Cowper Inc., owning a total of 1,000 shares with a Paid Up Capital (PUC) and an adjusted cost base of $10,000. The shares of Cowper Inc. have a current fair market value of $125,000.

Mega Holdings Ltd. acquires these shares in return for 5,000 of its common shares. The Mega Holdings shares are currently trading at $25 per share, resulting in a total value for the 5,000 shares of $125,000.

**ANALYSIS** The information in the example is presented graphically in Figure 17-1.

In the absence of the share for share exchange provisions in ITA 85.1, Ms. Cowper would have a capital gain of $115,000 ($125,000 - $10,000). However, under the rollover provisions of ITA 85.1, the following results apply:

**Figure 17 - 1**
**ITA 85.1 Example**



- Ms. Cowper is deemed to have disposed of her shares for an amount equal to the $10,000 adjusted cost base of the Cowper Inc. shares. This means that there is no capital gain on the disposition. [ITA 85.1(1)(a)(i)]
- Ms. Cowper is deemed to have acquired the shares in Mega Holdings Ltd. at a cost equal to the adjusted cost base of the Cowper Inc. shares, or $10,000. [ITA 85.1(1)(a)(ii)]
- The adjusted cost base of the Cowper shares acquired by Mega Holding Ltd. is deemed to be equal to $10,000, the lesser of their fair market value of $125,000, and their PUC of $10,000 [ITA 85.1(1)(b)]. You should note that this limit applies, even in situations where the vendor opted to forego the rollover under ITA 85.1 by including the gain in income (see Paragraph 17-9).
- The PUC of the Mega Holding Ltd. shares that have been issued to Ms. Cowper is limited to the $10,000 PUC of the Cowper shares that have been given up. [ITA 85.1(2.1)]

### *Opting Out Of ITA 85.1*

17-9. As we have noted, ITA 85.1 applies automatically unless the vendor opts out in their income tax return. In this example, Ms. Cowper could opt out of ITA 85.1 by including the taxable capital gain of $57,500 [(1/2)($125,000 - $10,000)] in her income tax return. Note that, unlike the situation when ITA 85(1) is used in a rollover, there is no flexibility on the transfer value. With respect to the shares that are exchanged, opting out requires that 100 percent of the capital gain on the exchanged shares be included in income. This could be a problem if, for example, Ms. Cowper only wanted to recognize part of the gain on her shares.

17-10. There are two possible solutions to this problem. The transfer of Ms. Cowper's shares could be made using the provisions of ITA 85(1). This would allow the use of an elected value that would limit the amount of gain that would be recognized.

17-11. An alternative, perhaps simpler solution, would be to sell a portion of her shares to Mega Holdings for cash. This would allow the recognition of the desired amount of capital gain. The remaining shares could then be exchanged on a tax free basis under ITA 85.1.

## Exercise Seventeen - 1

**Subject:** Share For Share Exchange

Ms. Aly Alee is the sole shareholder of Aayee Ltd., a Canadian controlled private corporation that is not a qualified small business corporation. The corporation was established several years ago by Ms. Alee with an investment of $450,000. It has identifiable net assets with a fair market value of $2,200,000. The shares of her company are acquired by a large publicly traded company, Global Outreach Inc., through the

issuance of 50,000 new shares. At the time of this business combination, the Global Outreach Inc. shares are trading at $49 per share. Indicate the tax consequences of this transaction to both Ms. Alee and Global Outreach Inc.

**SOLUTION available in print and online Study Guide.**

### ITA 85.1 In Practice

17-12. We have illustrated ITA 85.1 using an example that involves a large public company acquiring a corporation with a single shareholder. This is not the usual application of ITA 85.1. ITA 85.1 was designed to be used in situations where a public company acquires a widely held corporation with a large number of shareholders.

17-13. As noted in Paragraph 17-3, Section 85 can be used as an alternative to Section 85.1. However, in situations where the acquiree has a large number of shareholders, this approach would require the filing of numerous, in some cases hundreds, of separate Section 85 elections. The use of Section 85.1 avoids this by making its application automatic, unless the acquiree includes any gain or loss in income. This is a much more efficient procedure in most business combination situations.

**We suggest you work Self Study Problems Seventeen-1 and 2 at this point.**

# Exchange Of Shares In A Reorganization - ITA 86

**BYRD/CHEN NOTE** ITA 86 has been widely used in the implementation of estate freezes, a procedure used to transfer the future growth in a private corporation to the spouses, children, or other parties related to the principal shareholder of a CCPC. The 2018 expansion of the applicability of the Tax On Split Income (TOSI) has made this a much more difficult procedure to implement effectively. When the TOSI is applicable, both dividends and capital gains received as a result of this procedure will be subject to taxation at the maximum federal rate, removing most or all of the incentive for undertaking an estate freeze.

More specifically, the TOSI will always be applicable to income received by children under 18. In addition, it will be generally applicable to other related individuals unless the income they receive is an Excluded Amount. If they are 18 or over and actively involved in the business, the income can escape the TOSI as the corporation may be an Excluded Business. If they are 25 or over and own at least 10 percent of the CCPC's outstanding shares in terms of both fair market value and voting rights, the income can escape the TOSI as their holding will be viewed as Excluded Shares. See Chapter 11 for a more detailed discussion of these concepts.

There are other applications of ITA 86, a common one being transfers of ownership to a key employee or group of employees. In general, these other procedures will not result in the application of the TOSI.

In our coverage of ITA 86, we will assume that the TOSI is not applicable. To make this more realistic we will avoid applications involving minor children and non-voting shares. However, it is important that you recognize that the use of the Section 86 in estate freezes is limited by the possible application of the TOSI.

## Application Of ITA 86(1)

### Basic Procedure

17-14. ITA 86(1) applies when there has been a reorganization involving an exchange of shares within a single corporation. In the usual application, a shareholder of a corporation exchanges shares held in at least one class of existing shares, for authorized shares in the same company, or for authorized shares in the same company combined with non-share

consideration (note that the authorized shares must be of a different class than the existing shares). In effect, there is a redemption of the taxpayer's current shareholding, combined with an acquisition of a new shareholding. As long as non-share consideration is within acceptable limits, ITA 86(1) allows this transaction to take place without tax consequences to the taxpayer whose shares are being redeemed.

### Use In Estate Freeze

17-15. One of the most common applications of ITA 86(1) is in an estate freeze, where an owner of a business wishes to pass on the future growth of the business to adult family members who have been actively engaged in the business.

> **EXAMPLE** A father holds all of the outstanding common shares of a corporation. These shares have a fair market value in excess of their adjusted cost base and, as a consequence, their sale or redemption would normally result in a deemed dividend and/or a capital gain or capital loss. Further, if the father continues to hold the shares, future growth in the corporation will accrue to him.

> **ANALYSIS** To avoid this situation, the father will exchange his common shares for newly issued preferred shares of the corporation. The preferred shares will have a fixed redemption value equal to the fair market value of the common shares given up. The fact that their value is fixed will serve to freeze the value of the father's interest in the corporation. If the father wishes to retain control of the corporation, the preferred shares can be structured to provide voting rights sufficient to achieve this objective. Common shares will then be issued to a spouse, a child, or some other related person.

17-16. As the preferred shares held by the father reflect the full fair market value of the company, the new common shares can be issued to the related person at a fairly nominal value. However, any future growth in the value of the company will accrue to these common shares. ITA 86(1) provides for the father's exchange of shares to take place on a rollover or tax free basis (see Chapter 19 for a more detailed discussion of estate freezes). Note that the ITA 86 rollover differs from the ITA 85(1) rollover in that there are no elected amounts and no election form to be filed.

## Conditions For The Reorganization

### General Conditions

17-17. For the provisions of ITA 86(1) to apply, several conditions must be met.

> **Shares Must Be Capital Property** First, the original owner's shares must be capital property to the owner. They cannot be part of an inventory of securities that is being held for trading purposes.

> **All Shares Held By Transferor In A Particular Class** A second condition is that the transaction must result in an exchange of all of the outstanding shares of a particular class that are owned by the transferor. For example, all Class A common shares that are owned by the transferor must be exchanged for some other type of share. Note that there is no requirement that Class A common shares that are held by other shareholders be exchanged as part of the transaction. Further, it is not necessary that other classes of shares owned by the transferor be exchanged for new shares.

> **Reorganization Of Capital** A third condition is that the share exchange must be integral to a reorganization of the capital of the corporation. This will often require that the articles of incorporation be amended to authorize any new class of shares.

> **Transferor Must Receive Shares** A final condition is that the transferor must receive shares of the capital stock of the corporation. While this does not preclude the transferor from receiving non-share consideration, such non-share consideration should not exceed the adjusted cost base or the PUC of the shares transferred. If it does, the excess will have to be taken into income as a deemed dividend and either a taxable capital gain or an allowable capital loss.

### Establishing Market Value For Preferred Shares

17-18. In the more common applications of ITA 86(1), the new shares received by the transferor will usually be preferred shares. These shares must be designed in such a fashion as to clearly establish their fair market value. If this is not the case, a subsequent dispute with the CRA could result in some of the benefits of using ITA 86(1) being lost. Adding the following characteristics to the preferred shares will serve to establish a defensible fair market value:

- The preferred shares must be redeemable at the option of the shareholder. The CRA rigorously enforces this requirement to protect the fair market value of the preferred shares.
- The preferred shares should be entitled to a dividend at a reasonable rate. Without a reasonable dividend entitlement to the original shareholder, the incoming shareholders could benefit by receiving a disproportionate share of the corporation's future profits. However, there is no requirement for the entitlement to be cumulative.
- The corporation must guarantee that dividends will not be paid on any other class of shares, if the payment would result in the corporation having insufficient net assets to redeem the preferred shares at their specified redemption price.
- The preferred shares must become cumulative if the fair market value of the net assets of the corporation falls below the redemption value of the preferred shares, or if the corporation is unable to redeem the shares on a call for redemption.
- The preferred shares may or may not have normal voting rights. However, they should carry votes on any matter regarding the rights attached to the preferred shares.
- The preferred shares should have preference on liquidation of the corporation. While the very nature of preferred shares tends to guarantee preference, the CRA requires additional assurance that the normal provisions for such shares will not be avoided.

## Procedures

### General Rules

17-19. As noted previously, an ITA 86(1) reorganization involves a redemption (disposition) of a given shareholder's holding of a particular class of shares (old shares, hereafter). In return, the shareholder acquires shares of a different class (new shares, hereafter) and, in some reorganizations, non-share consideration. ITA 86(1) specifies a number of rules that apply in such a reorganization of capital. These are as follows:

**Non-Share Consideration** ITA 86(1)(a) indicates that the cost to the shareholder of this consideration is deemed to be its fair market value.

**Cost Of New Shares** ITA 86(1)(b) indicates that the cost of the new shares to the shareholder is equal to the cost of the old shares, less any non-share consideration received.

**Proceeds Of Redemption For Old Shares** Because there is a redemption of shares, there is the possibility of an ITA 84(3) deemed dividend. ITA 84(3)(a) defines such dividends as the excess of the "amount paid" over the PUC of the shares being redeemed. This "amount paid" clearly includes any non-share consideration and, when shares are included in the redemption payment, ITA 84(5)(d) indicates that their value is based on any increase in PUC resulting from the issuance of these shares. Putting this together leads to the conclusion that the total proceeds for the redemption will be equal to the non-share consideration plus the PUC of any new shares issued. Note that, in the usual ITA 86(1) scenario, the PUC of the new shares will often be reduced by a PUC reduction under ITA 86(2.1)(a). (See Paragraph 17-20.)

**Proceeds Of Disposition For Old Shares** As the redemption of the old shares is a type of disposition, there is also the possibility of a capital gain or loss. For the purposes of determining the capital gain or loss on this disposition, ITA 86(1)(c) defines the proceeds of disposition for the old shares as being equal to the cost of the new shares (the cost of the old shares, less non-share consideration), plus any non-share consideration received by the taxpayer.

In our general discussion of ITA 84(3) redemptions in Chapter 14, we discuss the possibility that the combination of redemption procedures and disposition procedures could result in the double counting of all or part of any gain on the transaction. As we noted there, this possibility is eliminated by the fact that the ITA 54 definition of proceeds of disposition excludes ITA 84(3) dividends.

### PUC Reduction Calculation

17-20. As noted in the preceding rules, a PUC reduction may be required on the new shares. This is specified in ITA 86(2.1)(a). This reduction is calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital Of New Shares | | $xx,xxx |
| Less The Excess, If Any, Of: | | |
| PUC Of Old Shares | ($x,xxx) | |
| Over The Non-Share Consideration | x,xxx | ( x,xxx) |
| ITA 86(2.1)(a) PUC Reduction | | $xx,xxx |

17-21. In reviewing this PUC reduction formula, note that where the non-share consideration is equal to, or greater than the PUC of the old shares, the amount subtracted from the increase in the legal stated capital of the new shares will be nil. This means that the PUC reduction will be equal to the increase in legal stated capital for the new shares. In common sense terms, if the shareholder takes back the full amount of the old PUC in the form of non-share consideration, the PUC of the new shares will be nil.

17-22. As was the case with rollovers to a corporation under Section 85, if the PUC reduction applies to more than one class of shares, it will generally be allocated to the individual classes on the basis of the relative fair market value of each class.

## Example Using ITA 86(1) In An Estate Freeze

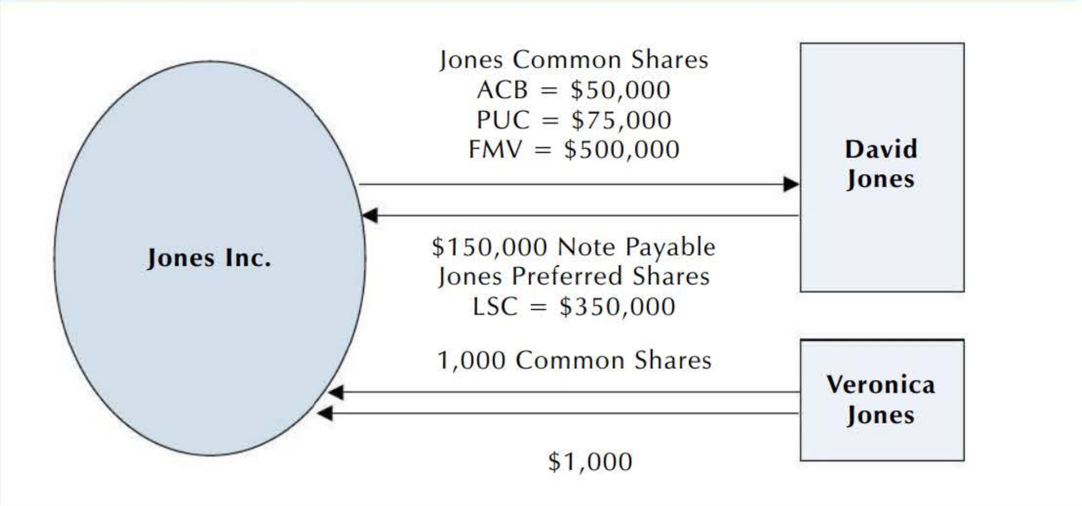
### Basic Data

17-23. An example will serve to illustrate the ITA 86(1) procedures. You might note that the example illustrates the manner in which an ITA 86(1) reorganization of capital can be used to freeze the value of an individual's estate. The example is illustrated graphically in Figure 17-2 (following page).

**EXAMPLE** Mr. David Jones owns all of the outstanding shares of Jones Inc. These common shares have an adjusted cost base of $50,000 and a paid up capital of $75,000. Because of the successful operations of the Company, the current fair market value of these common shares is $500,000.

Mr. Jones would like to have future growth in the value of the corporation accrue to his daughter, Ms. Veronica Jones. Veronica is 30 years old and has been actively and substantially involved in the business for over 5 years. To accomplish this, Mr. Jones exchanges his common shares for a $150,000 note payable from the corporation and preferred shares with a fair market value and a legal stated capital of $350,000. Common shares are purchased by Veronica Jones for $1,000. These are the only Jones Inc. common shares outstanding subsequent to these transactions.

**Figure 17 - 2 ITA 86(1) Example**



## PUC Reduction

17-24. The first step in applying the ITA 86(1) rules in this situation would be to calculate the required PUC reduction and the resulting PUC value for the preferred shares. As the non-share consideration of $150,000 exceeds the $75,000 PUC of the shares given up, we would expect the PUC reduction formula to reduce the PUC of the preferred shares to nil. The following calculations support this expected result:

| | | |
|---|---|---|
| Cost Of Non-Share Consideration (Note Payable) | | $150,000 |
| | | |
| Legal Stated Capital Of Preferred Shares | | $350,000 |
| Less The Excess, If Any, Of: | | |
| PUC Of Shares Given Up | ($ 75,000) | |
| Over The Non-Share Consideration | 150,000 | Nil |
| ITA 86(2.1)(a) PUC Reduction | | $350,000 |
| | | |
| Legal Stated Capital Of Preferred Shares | | $350,000 |
| ITA 86(2.1)(a) PUC Reduction | | ( 350,000) |
| PUC Of Preferred Shares | | Nil |

## Other Calculations

17-25. Other required values can be calculated as follows:

| | |
|---|---|
| Adjusted Cost Base Of Shares Given Up | $ 50,000 |
| Non-Share Consideration | ( 150,000) |
| Adjusted Cost Base Of Preferred Shares | Nil |
| | |
| PUC Of Preferred Shares | Nil |
| Plus Non-Share Consideration | $150,000 |
| Proceeds Of Redemption - ITA 84(5)(d) | $150,000 |
| PUC Of Shares Given Up | ( 75,000) |
| ITA 84(3) Deemed Dividend | $ 75,000 |

| | |
|---|---|
| Adjusted Cost Base Of Preferred Shares | Nil |
| Plus Non-Share Consideration | $150,000 |
| Proceeds Of Disposition - ITA 86(1)(c) | $150,000 |
| Less ITA 84(3) Deemed Dividend | ( 75,000) |
| Adjusted Proceeds Of Disposition | $ 75,000 |
| Adjusted Cost Base Of Shares Given Up | ( 50,000) |
| Capital Gain | $ 25,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 12,500 |

### Economic Analysis

17-26. The shares held by David's daughter, Veronica, will have an adjusted cost base and a PUC of $1,000 and this will also be their initial fair market value. However, if the corporation prospers, all future increases in its value will accrue to her. In other words, by exchanging his common shares for non-growth preferred shares, Mr. Jones has frozen the value of his interest in Jones Inc.

17-27. In reviewing this example, you should note that Mr. Jones' potential gain has not disappeared. If he had simply sold his shares without the reorganization, he would have realized a gain of $450,000 ($500,000 - $50,000). As a result of the reorganization, he has recognized $100,000 ($75,000 dividend + $25,000 capital gain). This gain reflects the excess of the $150,000 non-share consideration received by Mr. Jones, over the $50,000 adjusted cost base of the original shares.

17-28. This reorganization has left an unrecognized gain of $350,000 ($500,000 - $150,000). This gain will remain unrecognized until such time as Mr. Jones' holding of preferred shares is either redeemed or sold for its fair market value of $350,000. As these shares have a PUC of nil, a subsequent redemption would result in an ITA 84(3) deemed dividend of $350,000. As the adjusted cost base of the shares is also nil, a subsequent sale of the shares would result in a capital gain of $350,000, the taxable amount of which would be one-half, or $175,000.

17-29. A final point here is that this example does not represent a typical ITA 86(1) estate freeze. While it does accomplish the goal of transferring future growth in the corporation to a related party, the approach used has resulted in current Tax Payable for Mr. Jones. This could have been avoided by limiting the non-share consideration to $50,000, the lesser of the $75,000 PUC and the $50,000 adjusted cost base of the old shares. It is this approach that would be used in a typical ITA 86(1) transaction.

### Exercise Seventeen - 2

**Subject:** Exchange Of Shares In Reorganization (ACB = PUC = Boot)

Mr. Sam Samson is the sole shareholder of Samdoo Ltd. It is a Canadian controlled private corporation and its common shares have a fair market value of $2,300,000, an adjusted cost base (ACB) of $1,000,000, and a paid up capital (PUC) of $1,000,000. At this time, Samdoo Ltd. has no balance in its GRIP account. Mr. Samson exchanges all of his Samdoo Ltd. shares for cash of $1,000,000 and preferred shares that are redeemable for $1,300,000. Determine the ACB and the PUC of the redeemable preferred shares. Indicate the amount, and type, of any income that will result from this transaction.

**SOLUTION available in print and online Study Guide.**

## Exercise Seventeen - 3

**Subject:** Exchange Of Shares In Reorganization (ACB > PUC, PUC = Boot)

Mr. Sam Samson is the sole shareholder of Samdoo Ltd. It is a Canadian controlled private corporation and its common shares have a fair market value of $2,300,000, an adjusted cost base (ACB) of $1,250,000, and a paid up capital (PUC) of $1,000,000. At this time, Samdoo Ltd. has no balance in its GRIP account. Mr. Samson exchanges all of his Samdoo Ltd. shares for cash of $1,000,000 and preferred shares that are redeemable for $1,300,000. Determine the ACB and the PUC of the redeemable preferred shares. Indicate the amount, and type, of any income that will result from this transaction.

## Exercise Seventeen - 4

**Subject:** Exchange Of Shares In Reorganization (ACB > Boot > PUC)

Mr. Sam Samson is the sole shareholder of Samdoo Ltd. It is a Canadian controlled private corporation and its common shares have a fair market value of $2,300,000, an adjusted cost base (ACB) of $1,250,000, and a paid up capital (PUC) of $1,000,000. At this time, Samdoo Ltd. has no balance in its GRIP account. Mr. Samson exchanges all of his Samdoo Ltd. shares for cash of $1,200,000 and preferred shares that are redeemable for $1,100,000. Determine the ACB and the PUC of the redeemable preferred shares. Indicate the amount, and type, of any income that will result from this transaction.

## Gift To Related Person - ITA 86(2)

### Background

17-30. ITA 86(2) contains a rule designed to prevent a taxpayer from using the reorganization of capital rollover provision to confer a benefit on a related person. This rule is applicable whenever the fair market value of the old shares exceeds the sum of the fair market value of the new shares and the fair market value of the non-share consideration received, and it is reasonable to regard all, or part, of this excess as a gift to a related person. You might wish to note that this provision is similar to the provision that is applicable when the use of an ITA 85(1) rollover involves a gift to a related person (see Chapter 16).

17-31. In situations where ITA 86(2) applies, the rules for the reorganization of share capital are as follows:

**Proceeds Of Disposition** Under ITA 86(2)(c), the proceeds of the disposition for capital gains purposes on the old shares will be equal to the lesser of:

- the non-share consideration, ***plus the gift***; and
- the fair market value of the old shares.

This compares to the proceeds of disposition under ITA 86(1)(c), which is equal to the cost of the new shares, plus any non-share consideration.

**Capital Losses** Under ITA 86(2)(d), any capital loss resulting from the disposition of the old shares will be deemed to be nil.

**Cost Of New Shares** Under ITA 86(2)(e), the cost to the taxpayer of the new shares will be equal to:

- the cost of the old shares; less
- the sum of the non-share consideration, ***plus the gift***.

This compares to a cost for the new shares under ITA 86(1)(b) equal to the cost of the old shares, less any non-share consideration.

17-32. To illustrate these procedures, we will modify the example in Paragraph 17-23 by decreasing the amount of consideration received to create a $100,000 gift. The revised example is as follows:

**EXAMPLE** Mr. David Jones owns all of the outstanding shares of Jones Inc. These common shares have an adjusted cost base of $50,000 and a paid up capital of $75,000. Because of the successful operations of the Company, the current fair market value of these common shares is $500,000.

Mr. Jones would like to have future growth in the value of the corporation accrue to his daughter, Ms. Veronica Jones. Veronica is 30 years old and has been actively and substantially involved in the business for over 5 years. To accomplish this, Mr. Jones exchanges his common shares for a $150,000 note payable from the corporation and preferred shares with a fair market value and a legal stated capital of $250,000. Common shares are purchased by Veronica Jones for $1,000. These are the only Jones Inc. common shares outstanding subsequent to these transactions.

## Calculation Of Gift

17-33. The gift involved in this approach is calculated as follows:

| | | |
|---|---|---|
| Fair Market Value Of Shares Given Up | | $500,000 |
| Less Fair Market Value Of Consideration: | | |
| Non-Share Consideration | ($150,000) | |
| Fair Market Value Of Preferred Shares | ( 250,000) | ( 400,000) |
| Gift | | $100,000 |

17-34. As his daughter is the only holder of common shares, this $100,000 gift would accrue to her. As she is clearly a related person, ITA 86(2) would be applicable.

## PUC Reduction

17-35. The PUC reduction and PUC of the preferred shares is calculated as follows:

| | | |
|---|---|---|
| Cost Of Non-Share Consideration (Note Payable) | | $150,000 |
| | | |
| Legal Stated Capital Of Preferred Shares | | $250,000 |
| Less The Excess, If Any, Of: | | |
| PUC Of Shares Given Up | ($ 75,000) | |
| Over The Non-Share Consideration | 150,000 | Nil |
| ITA 86(2.1)(a) PUC Reduction | | $250,000 |
| | | |
| Legal Stated Capital Of Preferred Shares | | $250,000 |
| ITA 86(2.1)(a) PUC Reduction | | ( 250,000) |
| PUC Of Preferred Shares | | Nil |

### Other Calculations

17-36. The remaining calculations that would be required under ITA 86(2) are as follows:

| | | |
|---|---|---|
| Adjusted Cost Base Of Common Shares Given Up | | $ 50,000 |
| Less: | | |
| Non-Share Consideration | ($150,000) | |
| Gift (See Paragraph 17-33) | ( 100,000) | ( 250,000) |
| Adjusted Cost Base Of Preferred Shares | | Nil |

| | |
|---|---|
| PUC Of Preferred Shares | Nil |
| Plus Non-Share Consideration | $150,000 |
| Proceeds Of Redemption - ITA 84(5)(d) | $150,000 |
| PUC Of Common Shares Given Up | ( 75,000) |
| ITA 84(3) Deemed Dividend | $ 75,000 |

| | |
|---|---|
| Proceeds Of Disposition Under ITA 86(2)(c) - Lesser Of: | |
| • Fair Market Value Of Shares Given Up = $500,000 | |
| • Non-Share Consideration Plus Gift ($150,000 + $100,000) = $250,000 | $250,000 |
| Less ITA 84(3) Deemed Dividend | ( 75,000) |
| Adjusted Proceeds Of Disposition - ITA 54 | $175,000 |
| Adjusted Cost Base Of Common Shares Given Up | ( 50,000) |
| Capital Gain | $125,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 62,500 |

17-37. At the time of the reorganization, the potential gain on David's shares was $450,000 ($500,000 - $50,000). In the original version of this example (Paragraph 17-25), a gain of $100,000 was recognized ($75,000 + $25,000) at the time of the reorganization, leaving $350,000 of the gain deferred until David's preferred shares are redeemed or sold (the shares had a fair market value of $350,000, with both their PUC and adjusted cost base equal to nil).

17-38. In this version of the example, the gain that is recognized at the time of the reorganization is $200,000 ($75,000 + $125,000), $100,000 larger than in the original version of the example. This reflects the fact that the amount of the gift was added to the ITA 86(2)(c) proceeds of disposition, resulting in a capital gain that is $100,000 larger. It is important to note, however, the total gain, current and deferred, is unchanged at $450,000. While the current gain is increased to $200,000, the deferred amount is reduced to $250,000 (the preferred shares have a fair market value of $250,000, with both their PUC and adjusted cost base equal to nil). While the gift resulted in current taxation which could have been deferred, it did not involve a penalty in the form of additional taxation.

17-39. ITA 86(2) does, however, involve a penalty to his daughter Veronica. The new common shares issued to Veronica will have a fair market value equal to $101,000, the $1,000 she paid plus the $100,000 gift. The $100,000 additional value will not be reflected in the adjusted cost base of her shares and, as a consequence, this amount will be taxed when she disposes of the shares.

17-40. In effect, the granting of the benefit has increased the amount that will be subject to taxation in the hands of Veronica by the $100,000 amount of the gift, without reducing Mr. Jones' total current and deferred income on the shares. This makes it clear that ITA 86 reorganizations should be structured in a manner that avoids such benefits being granted.

**Exercise Seventeen - 5**

**Subject:** Gift To A Related Party - ITA 86(2)

Janrev Inc. is a Canadian controlled private corporation. Its shares have a fair market value of $1,600,000 and a paid up capital (PUC) of $250,000. Ms. Jan Reviser owns 80 percent of the shares. Her shares have an adjusted cost base of $200,000. The remaining 20 percent of the shares are held by her 19 year old daughter and they have an adjusted cost base of $50,000. On May 1, 2019, Ms. Reviser exchanges all of her Janrev Inc. shares for cash of $300,000 and preferred shares that are redeemable for $800,000. At this time, Janrev has no balance in its GRIP account. Indicate the amount, and type, of any income that will result from this transaction.

**SOLUTION available in print and online Study Guide.**

## Using ITA 86(1) - Tax Planning Considerations

### *General Usage*

17-41. The major advantages of using ITA 86(1), as compared to using ITA 85(1), can be described as follows:

- An ITA 86(1) share reorganization may be simpler to implement than a Section 85 roll-over as it does not require the use of a second corporation.
- The corporate law steps are easier, only requiring shares to be exchanged, and possibly new share classes to be formed.
- The use of ITA 86(1) does not require an election to be filed with the CRA.

17-42. The disadvantages associated with using ITA 86(1) are as follows:

- When only a single corporation is used, it is difficult to segregate investment income from active business income.
- A single corporation exposes all of the assets to any operating risk, and limited liability protection is reduced.
- In an ITA 86(1) reorganization, all of the taxpayer's shares of a particular class have to be exchanged. This can be a problem if the original shareholder wishes to retain some of the common or growth shares.
- ITA 86 does not provide the range of elected values that is available Under ITA 85(1).

17-43. It is usually possible to get around the last disadvantage by re-issuing common shares to the original shareholder after the reorganization is completed.

### *Use In Key Employee Successions*

17-44. In addition to its use in estate freezes, an exchange of shares can be very effective when arranging for gradual succession to a key employee. For example, consider a situation where an employee has little personal equity, but has a good work record with the company and excellent owner-manager potential.

17-45. An ITA 86(1) reorganization could be used to convert common shares owned by the existing shareholder into preferred shares. The employee could then purchase the common shares over some agreed upon succession period. The annual investments in common shares would likely be modest, as most of the company's value would be reflected in the preferred shares, making the investments feasible for the incoming shareholder. The original owner could continue to be involved in the business throughout the succession years.

17-46. Eventually, when the original owner is ready to sell the common shares, the incoming shareholder will have the benefit of several years of management experience, and should be able to obtain funding to acquire the preferred shares from the original owner.

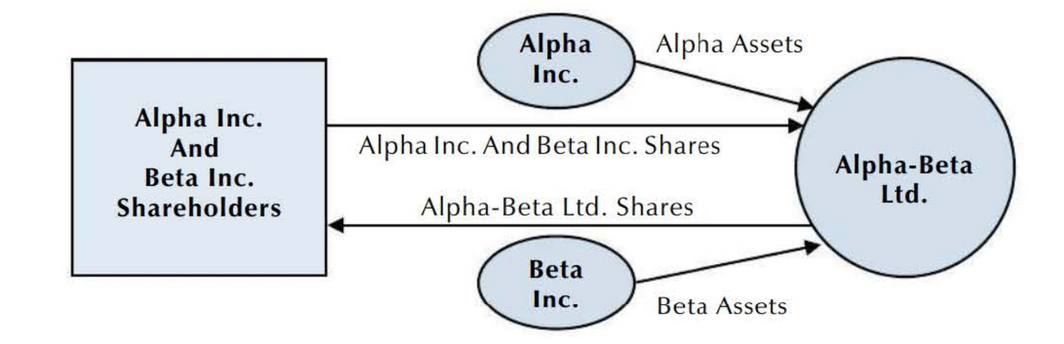
**Figure 17 - 3**
**ITA 87 Amalgamation Example**



# Amalgamations - ITA 87

## The Nature Of An Amalgamation

17-47. ITA 87 provides for a tax deferred rollover in situations where there is an amalgamation of corporations. This may involve two independent corporations wishing to merge and continue their business affairs on a combined basis. Alternatively, associated or related corporations may amalgamate to pursue common corporate goals.

17-48. If the two corporations want to transfer their assets to a new corporation on a tax free basis, the rollover provisions of ITA 87 would apply. The following simple example will illustrate this kind of situation (illustrated in Figure 17-3):

> **EXAMPLE** The shareholders of Alpha Inc. have shares with an adjusted cost base of $1,000,000 and a fair market value of $5,000,000, while the shareholders of Beta Inc. have shares with an adjusted cost base of $1,700,000 and a fair market value of $5,000,000. All of the assets and liabilities (except intercompany balances) of Alpha Inc. and Beta Inc. are transferred to a new Company, Alpha-Beta Ltd. The shareholders of Alpha Inc. and Beta Inc. exchange their shares for shares in Alpha-Beta Ltd.

17-49. In the absence of a rollover provision, the exchange of shares would be viewed as a disposition of the Alpha Inc. shares and the Beta Inc. shares, combined with an acquisition of the Alpha-Beta Ltd. shares. The fact that the share dispositions could result in taxable capital gains and the asset transfers could result in taxable capital gains and recapture, could serve to discourage the combination of the two companies.

17-50. Fortunately, ITA 87 contains rollover provisions for both the transfer of assets to the amalgamated corporation and for the exchange of shares. The conditions necessary for this rollover to apply are as follows:

- All of the predecessor corporations must be taxable Canadian corporations.
- All shareholders of the predecessor corporations must receive shares of the amalgamated corporation due to the amalgamation.
- All of the assets and liabilities of the predecessor corporations, other than intercompany balances, must be transferred to the amalgamated corporation in the amalgamation.
- A formal amalgamation procedure, supported by the relevant corporate legislation is required. The transfer cannot simply be a normal purchase of property, or involve the distribution of assets on the winding-up of a corporation.

## Position Of The Amalgamated Company

17-51. The tax values for the amalgamated corporation's assets will simply be the sum of the tax values of the assets that were present in the records of the predecessor corporations. In addition, all types of loss carry forwards (capital, non-capital, and farm) of the predecessor corporations flow through and become available to the amalgamated corporation.

17-52. The predecessor corporations will be deemed to have a taxation year that ends immediately before the amalgamation and, in most situations, this will result in an extra taxation year that will count towards the expiration of losses with a limited carry forward period. The amalgamated corporation is deemed to have been formed on the date of the amalgamation and may choose any year end it wishes. We would also note that, while this may not be consistent with corporate law, the *Income Tax Act* treats the amalgamated company as a brand new company and the predecessor companies as if they have come to an end.

17-53. With respect to assets, reserves, loss carry forwards, and other tax accounts of the predecessor companies, ITA 87 provides rollover provisions as follows:

**Rollover Provisions In ITA 87 Amalgamations**

| Item | Rollover Effect |
|---|---|
| Inventories | At Cost |
| Depreciable Capital Property | At UCC |
| Non-Depreciable Capital Property | At ACB |
| Reserves | Flowed Through |
| Non-Capital Losses | Flowed Through |
| Net Capital Losses | Flowed Through |
| Restricted Farm Losses | Flowed Through |
| General Rate Income Pool (GRIP) (See Note 1) | Flowed Through |
| Low Rate Income Pool (LRIP) (See Note 2) | Flowed Through |
| Capital Dividend Account (See Note 3) | Flowed Through |
| Refundable Dividend Tax On Hand (See Note 3) | Flowed Through |

**Note 1** If a CCPC is formed as the result of an amalgamation, ITA 89(5) may be applicable. In situations where a predecessor corporation was a CCPC, this subsection provides for the flow through of its GRIP account to the amalgamated company. Where the predecessor was a non-CCPC, a notional GRIP is calculated and flows through to the amalgamated company.

**Note 2** If a non-CCPC is formed as the result of an amalgamation, ITA 89(9) may be applicable. In situations where a predecessor corporation was a non-CCPC, this subsection provides for the flow through of its LRIP account to the amalgamated company. Where the predecessor was a CCPC, a notional LRIP is calculated and flowed through.

**Note 3** The amalgamated company is treated as a public company if, prior to the amalgamation, any of the predecessor companies was a public company. If this is the case, the amalgamated company will no longer have access to any capital dividend accounts, or refundable dividend tax on hand accounts of the predecessor companies.

17-54. As can be seen in the preceding table, ITA 87 basically provides for a summing of the relevant tax values of the assets of the two companies that are amalgamating. The amalgamated corporation will be liable for taxes on future recapture and capital gains on the same basis as the predecessor corporations.

17-55. With respect to loss carry forwards, the limitations that were discussed in Chapter 14 are applicable if there is an acquisition of control. As noted, the deemed year end of the predecessor corporations will count as one year in any carry forward period. However, losses carried forward may qualify for deduction in the first taxation year of the amalgamated company.

## Position Of The Shareholders

17-56. The shareholders of the predecessor corporations are deemed to dispose of their shares for proceeds equal to the adjusted cost base of the shares, and they are deemed to acquire the shares of the amalgamated company at the same value. For these general provisions to apply, ITA 87(4) specifies the following conditions:

- The shareholders must not receive any consideration other than shares in the amalgamated company.
- The original shares must be capital property of the shareholders.
- The amalgamation must not result in a deemed gift to a person related to the shareholders.

## Vertical Amalgamations

17-57. In situations where there is a desire to combine a parent and its subsidiary, a choice of rollovers may be available. The alternative to ITA 87, "Amalgamations", is the use of ITA 88(1), "Winding-Up". However, ITA 88(1) is only applicable to situations where the parent company owns 90 percent or more of the shares of each class of capital stock of a subsidiary. In contrast, ITA 87 can be used without regard to the percentage of ownership.

## Asset Bump-Ups

17-58. You may recall from an advanced financial accounting course that the cost of acquiring a subsidiary will usually exceed both the carrying values and the sum of the fair values of the acquired identifiable assets.

> **EXAMPLE** Placor Inc. acquires 100 percent of the outstanding voting shares of Lacee Ltd. at a cost of $1,000,000. At this time the net identifiable assets of Lacee had carrying values of $700,000 and tax values of $650,000. The fair value of these assets totaled $900,000.

17-59. The excess of the $1,000,000 investment cost over the tax values total of $650,000 creates a problem when there is an amalgamation involving either ITA 87 or ITA 88(1). Both of these provisions transfer assets to the amalgamated company at tax values. In the absence of a special legislative provision, the $350,000 excess of the investment cost over tax values of the assets will be lost.

17-60. Fortunately, there is a provision that provides a limited amount of relief from this adverse tax consequence. As will be discussed in our coverage of winding-up (Paragraph 17-82), ITA 88(1) provides for a "bump-up" in certain asset values to reflect the parent company's excess of its investment cost over the subsidiary's tax values.

17-61. ITA 87 provides for the same bump-up under ITA 87(11) by referring to the ITA 88(1) provision. However, there is a difference. Under ITA 88(1), the bump-up is available in situations where the parent owns 90 percent or more of the issued shares. Under ITA 87(11), the bump-up is only available when the parent owns 100 percent of the subsidiary's issued shares. Note that no bump-up is available under either provision when the ownership percentage is less than 90 percent.

## Non-Tax Considerations

17-62. While a statutory amalgamation does not involve a new company, there are likely to be significant legal complications. Each of the predecessor companies will have contracts with employees, suppliers, and customers. While they are still legally in force, modifications may be required to make the terms more compatible throughout the organization. There may also be problems with creditors. In fact, it is not uncommon for debt covenants to have a provision requiring the approval of debt holders before an amalgamation can take place. These factors may add considerable complexity to the amalgamation process.

## Amalgamations - Tax Planning Considerations

17-63. A Section 87 amalgamation offers a number of opportunities for tax planning. Some of the possibilities include:

- The utilization of loss carry forward amounts that the predecessor corporation(s) might not be able to absorb. Note, however, that if there is an acquisition of control, the usual restrictions on the use of loss carry forwards apply.
- With respect to acquisitions of control in the amalgamation process, we would note that, if the two predecessor corporations are related, an amalgamation will not result in an acquisition of control. However, if they are not related and the shareholders of one of the predecessor companies owns the majority of the voting shares in the amalgamated company, that company will be considered to have acquired control of the other predecessor company prior to the amalgamation.
- Current year losses of one predecessor corporation can effectively be utilized against Taxable Income of the other. Note, however, that corporate law in Canada does not generally allow a corporation to amalgamate if its financial health is in question. For example, a company that is insolvent is not allowed to amalgamate with another company.
- Bringing together a profitable and an unprofitable corporation may allow for a faster write-off of capital assets (through CCA) than would otherwise be possible by the unprofitable predecessor corporation.
- The amalgamation may provide for an increase in the amount of the manufacturing and processing profits tax deduction.

17-64. The timing of an amalgamation can be an important tax planning issue. As the amalgamation transaction results in a deemed year end, the company may have a short fiscal year for purposes of calculating CCA. In addition, outstanding reserves may have to be brought into income sooner, and the short fiscal period will count as a full year in the eligible loss carry forward years.

17-65. For income tax instalments there is a look through provision. While the amalgamated company does not have a previous tax year on which to base instalment payments of income tax, prepayments continue to be required based on the instalment history of the predecessor corporations.

### Exercise Seventeen - 6

**Subject: ITA 87 Amalgamations**

During its taxation year ending December 31, 2018, Downer Ltd. incurs a non-capital loss of $93,000 and a net capital loss of $150,000. Neither loss can be carried back. On January 1, 2019, using the provisions of ITA 87, the Company is amalgamated with Upton Inc., an unrelated company that also has a December 31 year end. The combined company is named Amalgo Inc. and it elects to use a December 31 year end. The terms of the amalgamation give 20,000 Amalgo Inc. shares to the Downer Ltd. shareholders and 150,000 Amalgo Inc. shares to the Upton Inc. shareholders. Amalgo Inc. was established with only one class of shares. This means that all of the newly issued shares are identical. During the year ending December 31, 2019, Amalgo Inc. has Net Income For Tax Purposes of $1,200,000, including over $300,000 in taxable capital gains. During its 2019 taxation year, will Amalgo Inc. be able to deduct the losses incurred by Downer Ltd. prior to the amalgamation? Explain your conclusion.

**SOLUTION available in print and online Study Guide.**

# Winding-Up Of A 90 Percent Owned Subsidiary

## The Nature Of A Winding-Up

### *Winding-Up Of Corporations In General*

17-66. IT-126R2 states that a corporation is considered to have been "wound up" where:

(a) it has followed the procedures for winding-up and dissolution provided by the appropriate federal or provincial companies *Act* or winding-up *Act*, or

(b) it has carried out a winding-up, other than by means of the statutory procedures contemplated in (a) above, and has been dissolved under the provisions of its incorporating statute.

17-67. In general, a winding-up operation requires that all outstanding creditor claims be satisfied and that all corporate property be distributed to the shareholders before the winding-up is undertaken. IT-126R2 also notes that, where there is substantial evidence that dissolution procedures will be completed within a short period of time, Section 88(1) can be used prior to the completion of the wind-up. Note, however, that losses cannot be accessed until the actual wind-up takes place.

17-68. A winding-up may be undertaken for several reasons. As with amalgamations, a winding-up allows for the losses of a subsidiary to be carried over to the parent corporation. Winding-ups are also undertaken to simplify an organizational structure, or when a subsidiary is ceasing its business operations.

### *90 Percent Owned Subsidiary*

17-69. The two major Subsections of ITA 88 can be described as follows:

**ITA 88(1)** This Subsection is a rollover provision, providing for the tax free combination of the assets of a 90 percent or more owned subsidiary with those of its parent.

**ITA 88(2)** This Subsection deals with the general winding-up of corporations, other than those to which ITA 88(1) is applicable. It is not a rollover provision.

17-70. At this point we are concerned only with the provisions contained in ITA 88(1). The content of ITA 88(2) will be considered beginning in Paragraph 17-94.

17-71. To use the ITA 88(1) rollover, the parent corporation must own at least 90 percent of each class of the subsidiary's shares. Therefore, not all winding-ups of subsidiaries qualify for the treatment described in ITA 88(1). A winding-up involving a subsidiary where a parent corporation has control, but owns less than 90 percent of the issued shares, would be implemented under the provisions of ITA 88(2). This provision would not allow for a tax free transfer of assets.

17-72. If the parent has the required 90 percent or more ownership, it is permitted to exchange the subsidiary's shares for the assets of the subsidiary on a tax deferred basis. This transaction is very similar to an amalgamation, as it allows the assets of the two companies to be combined without recognizing any accrued capital gains or recaptured CCA on the transfers required to effect the combination. Note that this rollover provision only applies to ITA 88(1) transactions. It does not apply when an ITA 88(2) wind-up takes place.

17-73. As with other rollovers, there are two components to a winding-up transaction. The first is the acquisition of the subsidiary's assets by the parent and the second is the deemed disposition of the subsidiary's shares by the parent. We will now turn our attention to these components.

## Acquisition Of Assets

### General Rules

17-74. In an ITA 88(1) winding-up, the subsidiary is deemed to have disposed of its assets and the parent is deemed to have acquired the assets on the following basis:

- A cost of nil in the case of Canadian or foreign resource property.
- The "cost amount" to the subsidiary in the case of other property. Cost amount is defined in ITA 248(1) as UCC for depreciable property and adjusted cost base for non-depreciable capital property.

### GRIP Balances

17-75. ITA 89(6) applies to situations in which a CCPC has wound up a subsidiary under ITA 88(1). If the subsidiary was also a CCPC, this provision provides for a flow through of the subsidiary's GRIP balance to the GRIP balance of the parent company.

17-76. A second, much more complex provision in ITA 89(6), applies when the subsidiary is a non-CCPC. This provision attempts to measure what the subsidiary's GRIP would have been at the end of its last taxation year had it been a CCPC at that time. This amount will also be included in the parent company's GRIP.

### LRIP Balances

17-77. ITA 89(10) applies when a non-CCPC has wound up a subsidiary under ITA 88(1). If the subsidiary was also a non-CCPC, this provision provides for a flow through of the subsidiary's LRIP balance to the LRIP balance of the parent company.

17-78. Once again, a second and much more complex provision applies when the subsidiary is a CCPC. This provision attempts to measure what the subsidiary's LRIP would have been at the end of its last taxation year had it been a non-CCPC at that time. This amount will also be transferred to the parent company's LRIP.

### Deferral Of Loss Carry Forwards

17-79. As indicated previously, an ITA 88(1) winding up is very similar to an amalgamation. There is, however, one important difference between an amalgamation under ITA 87 and the winding-up of a subsidiary under ITA 88(1) and this involves loss carry forwards.

17-80. As is generally the case under ITA 87, non-capital losses and net capital losses of the subsidiary will be available to the parent company when ITA 88(1) is used. However, under ITA 88(1.1), they will not become available until the first taxation year of the parent that begins after the date that the winding-up period commences.

> **EXAMPLE** If a parent's fiscal year begins on February 1 and the winding-up commences on February 15, 2019, the losses of the subsidiary will not be available to the parent until its fiscal year beginning February 1, 2020.

17-81. In those situations where the subsidiary has a different year end than the parent, subsidiary losses are deemed to have occurred in the parent's fiscal year that includes the subsidiary's year end.

> **EXAMPLE** A parent has a June 30 year end, while its subsidiary has a September 30 year end. A winding-up commences on August 15, 2019 and is completed by August 31, 2019. The subsidiary has a non-capital loss for the period that is terminated on August 31, 2019 by the winding-up.
>
> **ANALYSIS** The loss will be deemed to have occurred in the parent's year ending June 30, 2020. This would suggest that the loss would not expire until the parent's year ending June 30, 2040. However, ITA 88(1.1)(b) limits the carry forward period to the period that would have been available to the subsidiary if it had not been wound up. This means that, in actual fact, the loss expires on June 30, 2039. The losses of the subsidiary are not available to the parent until its fiscal year beginning on July 1, 2020.

## Exercise Seventeen - 7

**Subject:** Losses In A Winding-Up

Park Inc. has a September 15 year end, while its 100 percent owned subsidiary, Side Ltd., has an October 31 year end. There is a winding-up of Side Ltd., using the roll-over provision found in ITA 88(1), on June 30, 2019. Side Ltd. has a non-capital loss of $50,000 for the period November 1, 2018 to June 30, 2019. What is the earliest taxation year in which the $50,000 loss can be deducted? If it is not deducted then, in what taxation year will it expire?

**SOLUTION available in print and online Study Guide.**

### Asset Bump-Up

17-82. As we pointed out in our discussion of amalgamations, ITA 88(1) provides for a transfer of all or part of the excess of the purchase price of a 90 percent or more owned subsidiary's shares over the tax values of the subsidiary's assets. As noted, this bump-up is also available under ITA 87 when the parent owns 100 percent of the subsidiary. Under either of these provisions, the amount of this bump-up in tax values is limited by two amounts:

1. The basic amount of the bump-up is found in ITA 88(1)(d)(i) and (i.1). This amount is the excess of the adjusted cost base of the subsidiary shares held by the parent, over the sum of:
   - the tax values of the subsidiary's net assets at the time of the winding-up; and
   - dividends paid by the subsidiary to the parent since the time of the acquisition (including capital dividends).
2. ITA 88(1)(d)(ii) further limits the amount that can be recognized to the excess of the fair market value of the subsidiary's non-depreciable capital property over their tax values at the time the parent acquired control of the subsidiary.

17-83. The following example will illustrate these procedures:

**EXAMPLE** On December 31, 2009, ParentCo acquires 100 percent of the outstanding shares of SubCo for $5,000,000. At that time, the only non-depreciable capital property owned by SubCo was land with a fair market value of $2,000,000 and a cost of $1,000,000. Between December 31, 2009 and December 31, 2019, SubCo pays dividends of $150,000 to ParentCo. On December 31, 2019, when the tax values of SubCo's assets total $4,200,000, SubCo is absorbed in a Section 88(1) winding-up.

**ANALYSIS** The amount of the available asset bump-up will be the lesser of the two amounts described in Paragraph 17-82:

| | | |
|---|---|---|
| Adjusted Cost Base Of SubCo Shares | | $5,000,000 |
| Tax Values Of SubCo Assets At Winding-Up | ($4,200,000) | |
| Dividends Paid By SubCo Since Its Acquisition | ( 150,000) | ( 4,350,000) |
| Excess | | $ 650,000 |

| | |
|---|---|
| Fair Market Value Of Land At Acquisition | $2,000,000 |
| Cost Of Land At Acquisition | ( 1,000,000) |
| Excess | $1,000,000 |

17-84. In this situation, the write-up of the land is restricted to the lower figure of $650,000. As a result, the subsidiary is deemed to have disposed of the land for $1,000,000 with no gain or loss. However, the parent is deemed to have acquired the same land for $1,650,000.

## Exercise Seventeen - 8

**Subject:** Winding-Up Of A 90 Percent Or More Owned Subsidiary

On January 1, 2015, Procul Ltd. acquired 100 percent of the outstanding shares of Lorne Inc. at a cost of $1,200,000. At this point in time, the fair market value of Lorne's identifiable net assets was $850,000, including $270,000 for the Land. The tax values of the net assets at that time totalled $410,000.

On December 31, 2019, there is a winding-up of Lorne Inc. under the provisions of ITA 88(1). Lorne Inc. has paid no dividends since its acquisition by Procul Ltd. On December 31, 2019, the condensed Balance Sheet of Lorne Inc. is as follows:

| | |
|---|---:|
| Cash | $120,000 |
| Land - At Cost (Purchased In 2011) | 140,000 |
| Depreciable Assets - At UCC (Purchased In 2011) | 240,000 |
| Total Assets | $500,000 |
| | |
| Liabilities | $ 75,000 |
| Shareholders' Equity | 425,000 |
| Total Equities | $500,000 |

Determine the tax values that will be recorded for Lorne Inc.'s assets after they have been incorporated into the records of Procul Ltd.

**SOLUTION available in print and online Study Guide.**

## Disposition Of Shares

17-85. The disposition of shares component of the winding-up is straightforward. In general, the parent is deemed to have disposed of its shares of the subsidiary for proceeds equal to the adjusted cost base of the shares. As an example, assume the parent had paid $4,000,000 for the subsidiary's shares. This amount would also be the deemed proceeds of the disposition and there would be no capital gain.

17-86. An exception to this general rule will arise if the tax values of the subsidiary's net assets transferred and the paid up capital of the subsidiary's shares is more than the amount paid for the shares by the parent. In this case, the deemed proceeds of disposition will be the lesser of the paid up capital and the tax values of the net assets transferred. As a result, a capital gain can arise in these situations.

**EXAMPLE** Prawn Ltd. owns 100 percent of the outstanding shares of Shrimp Inc. The cost of these shares was $4,000,000. This subsidiary is being wound up under the provisions of ITA 88(1). At the time of the winding-up, the tax values of the subsidiary's net assets total $4,800,000 and the PUC of the subsidiary's shares is $4,500,000.

**ANALYSIS** Given these facts, the exception applies and the deemed proceeds of disposition would be the greater of the $4,000,000 cost of the shares and $4,500,000. This latter figure is the lesser of the $4,800,000 tax value of the subsidiary's net assets and the $4,500,000 PUC of the subsidiary's shares. This gives proceeds of disposition of $4,500,000 and a capital gain of $500,000 ($4,500,000 - $4,000,000). It is expected that such gains situations would be fairly rare and, because the proceeds are defined using cost except when it is less than the alternative values, there is no possibility of a capital loss.

**Figure 17 - 4**
**Comparison Of Amalgamation Under ITA 87 And Winding-Up Under ITA 88(1)**

| Factor | Amalgamation - ITA 87 | Winding-Up Of 90% Owned Subsidiary - ITA 88(1) |
|---|---|---|
| Valuation of assets | Tax values of assets of predecessor corporations carried forward to amalgamated company. | Tax values of subsidiary's assets carried forward to parent. |
| Recognition of some of the excess of investment cost over tax values | Recognition only if 100% owned subsidiary. If 100% owned, same treatment as ITA 88(1). | Write-up allowed if excess is associated with values of non-depreciable capital property. |
| Capital cost allowances | Claim in last year of predecessor and first year of amalgamated corporation. | No claim by subsidiary in year of winding-up, but available to parent in year of winding-up. |
| Loss carry forwards | Carried forward. However, their use may be limited if the amalgamation results in an acquisition of control. | Carried forward, but only available to parent beginning in taxation year after winding-up. |
| Year end | Deemed year end before amalgamation, counts one year for loss carry forwards. | Year end of parent corporation continued. Subsidiary has a terminal year end that counts as one taxation year. |

## Tax Planning Considerations - Amalgamation Vs. Winding-Up

17-87. Figure 17-4 contains a comparison of the features of an amalgamation under ITA 87 and the winding-up of a subsidiary that is at least 90 percent owned under ITA 88(1). A discussion of several of the items follows.

17-88. A significant consideration in deciding between an amalgamation under ITA 87 and a winding-up under ITA 88(1) is the ability to recognize all or part of the excess of investment cost over tax values. In the case of an ITA 87 amalgamation, recognition is possible only in cases involving a parent and a 100 percent owned subsidiary. Under ITA 88(1), recognition can occur as long as the parent owns 90 percent or more of each class of the subsidiary's issued shares.

17-89. Under either provision, it is possible that substantial tax values will disappear in the transaction. This would suggest that, when the adjusted cost base of the parent's investment is significantly greater than the tax values of the subsidiary's net assets, it may be better to continue to operate the subsidiary as a separate legal entity.

17-90. Under the amalgamation procedures, the predecessor corporations will have a deemed year end, which will count towards the expiry of time limited non-capital loss carry forwards. However, subject to the acquisition of control rules, the amalgamated company will be able to use the losses immediately.

17-91. In contrast, the parent company that is using ITA 88(1) to absorb a 90 percent owned subsidiary will have its usual year end. However, it will not be able to use subsidiary loss carry forwards until the first taxation year beginning subsequent to the winding-up. In addition, the wind-up will count as an additional year in the expiry of time limited loss carry forwards. The analysis of this situation may be complicated by differing year ends for the two corporations.

17-92. In considering CCA claims, ITA 87 creates a deemed year end for both predecessor corporations, requiring them to take pro rata CCA claims for what will normally be a short fiscal period. Under the ITA 88(1) procedures, the subsidiary disposes of its assets prior to its year end and, as a consequence, there will be no claim for CCA in the subsidiary's final year. However, CCA may be claimed on these assets by the parent company, subsequent to their being acquired under the winding-up procedures.

17-93. If the subsidiary is not 100 percent owned, ITA 88(1) cannot be used unless the minority shareholder group is at arm's length with the parent company. If the minority shareholders are at arm's length and ITA 88(1) can be used to transfer the assets belonging to the controlling interest, an application of this Subsection will generally have tax consequences for the non-controlling interest. A winding-up will require reporting of capital gains and recaptured CCA on property distributed by the subsidiary to the minority shareholders. Further, any liquidating dividend paid to the minority shareholders will be a taxable dividend.

**We suggest you work Self Study Problem Seventeen-6 at this point.**

# Winding-Up Of A Canadian Corporation

## The Nature Of The Transaction

### *Wind-Up (Liquidation) Vs. Rollover*

17-94. The winding-up procedures for a Canadian corporation, as described in ITA 88(2), are applicable where a corporation is being liquidated. If, for example, owners of a corporation decide that the business is no longer viable, winding-up procedures can be used in the disposition of the corporation's assets and the distribution of the resulting proceeds to the shareholders.

17-95. In distinguishing the winding-up of a 90 percent or more owned subsidiary from a liquidating winding-up, you should note that the liquidation of a business has quite different objectives. In the case of the winding-up of a 90 percent or more owned subsidiary, we are usually not disposing of the business but, rather, are transferring its assets to a different legal entity that is controlled by the same investor or group of investors that previously had indirect control of its operations. This explains why a rollover is available on the winding-up of a 90 percent or more owned subsidiary, and no equivalent provision is available for the winding-up when a liquidation is under way.

### *Distributions To Shareholders*

17-96. While a winding-up can be implemented by distributing corporate assets directly to the shareholders, it is generally simpler for the corporation to liquidate its assets, pay off its creditors, pay any taxes that are applicable at the corporate level, and distribute the after tax proceeds to the shareholders.

17-97. The distribution to shareholders becomes a fairly complex issue when a corporation is liquidated, as the proceeds available for distribution will consist of a combination of capital being returned, earnings that can be distributed on a tax free basis, and earnings that can only be distributed in the form of taxable dividends. A further complication is that there may be a combination of eligible and non-eligible dividends.

### *Disposition Of An Incorporated Business*

17-98. Later in this Chapter we will discuss the transfer of an incorporated business to a different group of owners. This can be accomplished through a sale of shares or, alternatively, through a sale of the corporation's assets. If the sale of assets is the more advantageous approach, the provisions of ITA 88(2) apply. That is, the sale of assets will be followed by a winding-up, with the after tax proceeds of the winding-up being distributed to the shareholders. While the business itself will continue to operate, the assets will now be on the books of a different legal entity.

# Example

## Basic Data

17-99. The ITA 88(2) procedures will be illustrated in the following example.

**EXAMPLE** The Marker Company, a Canadian controlled private corporation, has been in operation for 20 years. It has a December 31 year end. On January 1, 2019, the following Balance Sheet, based on tax values, has been prepared in contemplation of liquidating the Company:

**The Marker Company**
**Balance Sheet - As At January 1, 2019 (Tax Values)**

| | |
|---|---|
| Accounts Receivable (Net Realizable Value) | $ 12,000 |
| Refundable Dividend Tax On Hand | 8,000 |
| Land - At Cost (Note One) | 250,000 |
| Building - At UCC (Note Two) | 195,000 |
| Total Assets | $465,000 |
| Liabilities | Nil |
| Common Stock - No Par (Note Three) | $ 10,000 |
| Retained Earnings (Note Three) | 455,000 |
| Total Equities | $465,000 |

**Note One** The current fair market value of the Land is $300,000.

**Note Two** The cost of the Building was $320,000. Its current fair market value is $350,000.

**Note Three** The paid up capital and adjusted cost base of the common shares is $10,000. The Retained Earnings includes $75,000 in the capital dividend account. The Company's GRIP balance is nil.

The assets of the Company are sold for their fair market values which total $662,000 ($12,000 + $300,000 + $350,000). The Company has no other income for the taxation year. The provincial corporate tax rates are 2.5 percent on income eligible for the small business deduction and 14 percent on other corporate income. No reserves were deducted in 2018.

## Cash Available For Distribution

17-100. At the corporate level, the proceeds from the disposition of the individual assets and the related tax effects are as follows:

| Asset | Proceeds | Taxable Capital Gain | Active Business Income |
|---|---|---|---|
| Accounts Receivable | $ 12,000 | Nil | Nil |
| Land | 300,000 | $25,000 | Nil |
| Building | 350,000 | 15,000 | $125,000 |
| Totals | $662,000 | $40,000 | $125,000 |

The Tax Payable on Marker's Taxable Income of $165,000 ($40,000 + $125,000) would be calculated as follows:

| | |
|---|---|
| Federal Tax On Active Business Income [(38% - 10% - 19%)($125,000)] | $11,250 |
| Federal Tax On Investment Income [(38% - 10% + 10-2/3%)($40,000)] | 15,467 |
| Part I Tax Payable | $26,717 |
| Provincial Tax On Active Business Income [(2.5%)($125,000)] | 3,125 |
| Provincial Tax On Investment Income [(14%)($40,000)] | 5,600 |
| Total Corporate Tax Payable | $35,442 |

17-101. Under the transitional rules for segregating a corporation's January 1, 2019 RDTOH into eligible and non-eligible components, the amount to be allocated to the Eligible RDTOH account would be the lesser of:

- The January 1, 2019 balance in the single RDTOH account; and
- 38-1/3 percent of the January 1, 2019 GRIP balance.

17-102. As the January 1, 2019 GRIP balance is nil, none of the $8,000 RDTOH balance would be allocated to Eligible RDTOH. It would all go to Non-Eligible RDTOH.

17-103. The only 2019 addition to an RDTOH balance would be the refundable portion of Part I Tax Payable. This amount would be the least of:

| | |
|---|---|
| • 30-2/3% Of Investment Income [(30-2/3%)($40,000)] | $12,267 |
| • 30-2/3% Of Taxable Income, Less Amount Eligible For Small Business Deduction [(30-2/3%)($165,000 - $125,000)] | $12,267 |
| • Part I Tax Payable | $26,717 |

17-104. This amount would also be allocated to the Non-Eligible RDTOH, resulting in the following balance in that account:

| | |
|---|---|
| Transitional Allocation | $ 8,000 |
| Part I Refundable Tax | 12,267 |
| Non-Eligible RDTOH | $20,267 |

17-105. The after tax amount of cash that is available for distribution to shareholders is calculated as follows:

| | |
|---|---|
| Gross Proceeds | $662,000 |
| Corporate Tax Payable | ( 35,442) |
| Non-Eligible RDTOH* | 20,267 |
| Available For Distribution | $646,825 |

*Given the size of the gross proceeds, the balance in the Non-Eligible RDTOH is clearly going to be less than 38-1/3 percent of the dividends that will be declared.

### Distribution To Shareholders

17-106. The balance in the capital dividend account can be distributed to the shareholders as a tax free capital dividend. This balance is calculated as follows:

| | |
|---|---|
| Balance Before Dispositions (Balance Sheet Note Three) | $ 75,000 |
| Disposition Of Land | 25,000 |
| Disposition Of Building | 15,000 |
| Capital Dividend Account - Ending Balance | $115,000 |

17-107. Prior to the sale of assets, the Company's GRIP balance was nil. As all of the income resulting from the sale of assets was either investment income or eligible for the small business deduction, there would be no addition to the GRIP account resulting from the sale of assets. This means that all dividends paid that are subject to tax would be non-eligible. The non-eligible taxable dividend component of the total distribution to the shareholders is calculated as follows:

| | |
|---|---|
| Total Distribution | $646,825 |
| Paid Up Capital | ( 10,000) |
| ITA 84(2) Deemed Dividend On Winding-Up* | $636,825 |
| Capital Dividend Account (Balance In Account) | ( 115,000) |
| Non-Eligible Dividend Subject To Tax | $521,825 |

*As explained in Chapter 14, in a winding up, when the total distribution to shareholders exceeds the PUC of the shares being canceled, the excess is an ITA 84(2) deemed dividend. This deemed dividend is treated first as a capital dividend, if the appropriate election is filed. Any excess is treated as an eligible or non-eligible taxable dividend.

17-108. Treatment of the $115,000 as a capital dividend is conditional on the appropriate election being made under ITA 83(2). The remaining taxable non-eligible dividend will be grossed up to $600,099 [(115%)($521,825)]. The dividend will provide a federal dividend tax credit of $54,190 [(9/13)(15%)($521,825)].

17-109. In the ITA 54 definition of "proceeds of disposition", Paragraph j indicates that amounts that are deemed to be a dividend under ITA 84(2) are not included in this amount. As a consequence, in determining the capital gain resulting from the distribution to the shareholders, the ITA 84(2) dividend will be subtracted as follows:

| | |
|---|---|
| Total Distribution to Shareholders | $646,825 |
| ITA 84(2) Deemed Dividend | ( 636,825) |
| Deemed Proceeds Of Disposition | $ 10,000 |
| Adjusted Cost Base Of Shares | ( 10,000) |
| Capital Gain | Nil |

### Exercise Seventeen - 9

**Subject:** Winding-Up Of A Canadian Corporation

Windown Inc. is a Canadian controlled private company. After disposing of all of its assets and paying all of its liabilities, including Tax Payable resulting from the asset dispositions, the Company is left with cash of $865,000. The PUC of the Company's shares is equal to their adjusted cost base, an amount of $88,000. After the sale of assets, the Company has combined eligible and non-eligible RDTOH accounts of $47,000, a capital dividend account balance of $26,000, and a GRIP of nil. Determine the tax consequences to the shareholders associated with making the maximum distribution of cash to shareholders on the winding-up of Windown Inc. on June 1, 2019. Assume that appropriate elections will be made to minimize the taxes that will be paid by the shareholders.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problem Seventeen-7 at this point.**

# Convertible Properties

## Application

17-110. There is one more rollover that you should be familiar with. ITA 51 contains a provision that permits a holder of shares or debt of a corporation to exchange those securities for shares of that corporation on a tax free basis. For this rollover provision to apply, the following two conditions must be met:

- The exchange must not involve any consideration other than the securities that are being exchanged.
- The exchange must not be part of a reorganization of capital or a rollover of property by shareholders to a corporation under ITA 85 or ITA 86.

17-111. In practical terms, this provision is designed to accommodate a tax deferred conversion of debt or preferred shares of a corporation into preferred or common shares of the same corporation.

**EXAMPLE** An investor acquires convertible bonds with a par value of $10,000 at a price equal to par value. The bonds are convertible into 50 shares of the issuing company's common stock and, at the time of purchase, this common stock is trading at $18 per share (the conversion value of the bonds is $9,000). The bonds are converted when the common shares are trading at $22 per share.

**ANALYSIS** The conversion of the bonds is a disposition and, in the absence of a special provision, the tax consequences would be as follows:

| | |
|---|---|
| Proceeds Of Disposition [(50)($22)] | $11,000 |
| Adjusted Cost Base | ( 10,000) |
| Capital Gain | $1,000 |

17-112. The ITA serves to provide relief in this type of situation. ITA 51(1)(c), deems such exchanges not to be a disposition. Given this deeming provision, no gain will be recognized.

17-113. Going with this provision, ITA 51(1)(d) deems the cost of the acquired shares to be equal to the cost of the shares or debt given up. In effect, ITA 51 allows convertible securities to be converted with no immediate tax consequences. No gain or loss is recorded and the adjusted cost base of investors' securities remains unchanged.

## Other Considerations

17-114. A conversion provision can assist corporations seeking to add an equity kicker to enhance the marketability of their debt or preferred shares. In addition, conversion arrangements can be used to facilitate income splitting within a corporation. Different classes of shares can be used to allow the redistribution of income and, with the ability to convert different classes of shares on a tax deferred basis, an additional element of flexibility is introduced into such arrangements.

17-115. ITA 51.1 contains a similar provision to cover situations under which bondholders of a particular company are allowed to convert their holdings into a different debt security of that company. Here again, there is a tax deferred rollover with the adjusted cost base of the old bond holding becoming the creditor's adjusted cost base for the new debt security.

17-116. We would call your attention to the fact that the accounting rules on debt that is convertible into common or preferred shares require that the proceeds from its issuance be divided between the amount paid by investors for the liability component of the financial instrument and the amount paid for the equity option (see IAS 32, *Financial Instruments: Presentation*). This important issue has not, at this point in time, been given recognition in tax legislation. For tax purposes, the full amount received for convertible debt must be allocated to the debt component of the security.

# Sale Of An Incorporated Business

## Alternatives

17-117. Assume that you are the sole shareholder of an incorporated business and that you have decided to dispose of your company. If the business has a value that extends beyond your personal services, it should be possible to arrange a sale of the business. In approaching the problem of selling an incorporated business, you are usually confronted with the following three alternatives:

- Sale of the individual assets of the corporation, on a piecemeal basis.
- Sale of the total net assets of the corporation, including any unrecorded intangibles such as goodwill.
- Sale of the shares of the corporation.

17-118. In the next section, consideration will be given to the advantages and disadvantages, as well as to the tax effects that are associated with each of these alternatives. However, before turning our attention to these alternatives, some attention must be given to the tax treatment of restrictive covenants.

## Restrictive Covenants (a.k.a. Non-Competition Agreements)

### *General Rules*

17-119. Restrictive covenants are arrangements under which a taxpayer agrees to have his ability to provide goods or services restricted in one or more ways. Such agreements may relate to particular products or services (e.g., the taxpayer will not provide audit services) and may refer to specific geographic areas (e.g., the taxpayer will not provide audit services in the greater Calgary area). They may or may not be limited in terms of time. It is not uncommon, particularly in the case of owner-managed businesses, for the purchaser to require the seller to sign a restrictive covenant.

17-120. ITA 56.4(2) requires that, in general, 100 percent of payments made to a taxpayer for agreeing to a restrictive covenant be included in income as an "other source" under subdivision d. Fortunately for taxpayers, ITA 56.4(3) contains three important exceptions to this general rule.

### *Exceptions To 100 Percent Income Inclusion*

17-121. These exceptions are as follows:

**ITA 56.4(3)(a) - Employment Income** In cases where the payment relates to past employment with the payor, the receipt will be treated by the recipient as employment income. While 100 percent of the amount would still be subject to tax, classification as employment income would mean that it does not have to be included in the recipient's income until it is received (employment income is on a cash basis). When this exception is applicable, ITA 56.4(4)(a) allows the payor to treat the payment as wages paid or payable.

**ITA 56.4(3)(b) - Class 14.1** Provided the payor and recipient file a joint election, the restrictive covenant payment can be treated as an acquisition of a Class 14.1 asset by the payor, and as Class 14.1 proceeds of disposition by the recipient.

From the point of view of the payor, this is an unfavourable treatment. Instead of being a fully deductible expense, the payment is added to Class 14.1 where it will only be deductible on a 5 percent declining balance basis.

However, from the point of view of the recipient, this is a very favourable approach. As the intangible asset that is reflected in the restrictive covenant payment will normally have a capital cost of nil, the entire proceeds of disposition will be treated as a capital gain, only one-half of which will be taxable. In the absence of this treatment, the full amount of the restrictive covenant payment would be taxable to the recipient.

**ITA 56.4(3)(c) - Sale Of An Eligible Interest** An eligible interest is an interest in shares in a corporation that carries on business, or in a partnership that carries on business. In a situation where a restrictive covenant is sold in conjunction with an eligible interest, the amount received can be added to the proceeds of disposition. As was the case with the ITA 56.4(3)(b) exception, the payor and the recipient must file a joint election for this exception to apply. When this exception is applicable, ITA 56.4(4)(c) requires the purchaser to treat the payment as a cost of the purchase.

If this addition creates or increases a capital gain, only one-half of this amount will be subject to tax. Note that the application of this provision is more complex when there is more than one restrictive covenant involved in the sale of a single eligible interest.

17-122. The first of these exceptions, treatment of the restrictive covenant payment as employment income, is not relevant to the material in this Chapter. However, the other two exceptions are very significant when a business is being sold and will be given further attention in our discussion of the alternative ways in which a business can be sold.

## Sale Of Individual Assets

### General Procedures

17-123. Disposing of a business via a piece-by-piece sale of individual assets would only occur in certain situations. These could be described as follows:

- The business has not been successful in producing an adequate rate of return on the assets invested. In such situations, the most reasonable course of action may be the sale of individual assets.
- Some owner-managed businesses have income producing activities that are so closely tied to the skills of the owner/manager that the sale of the business independent of those skills would not be feasible.

17-124. This type of disposition would only be appropriate in limited circumstances. Given that the circumstances associated with the particular business will dictate whether this approach will be used, there is no need to devote any attention to the advantages or disadvantages of this alternative.

### Restrictive Covenants - Sale Of Individual Assets

17-125. In the situations that are involved here, it is unlikely that a restrictive covenant will be used. However, if this was to occur, treatment of the amount involved as an acquisition/disposition of a Class 14.1 asset would be possible. This treatment will be discussed in the next section dealing with the sale of total assets as a going concern.

## Sale Of Assets As A Going Concern

### General Procedures

17-126. In contrast to a liquidation, where the assets are sold on an individual basis, the purchaser in this situation would acquire the corporation's assets as a going concern and, in so doing, would acquire any goodwill or other intangible assets that might be associated with the enterprise.

17-127. As was the case with the piece by piece sale of individual assets in a liquidation, the sale of all assets as a going concern may result in a combination of business income, capital gains, recapture, and terminal losses.

17-128. In both types of asset sales, you should note that there are really two transactions involved. The first transaction involves the sale of assets and the payment of liabilities at the corporate level. Included in this process will be the determination of any tax liability resulting from the sale of the assets. At this point, the corporate assets would consist entirely of the after tax proceeds resulting from the disposition of the tangible and other assets of the corporation. In most situations, the owner will choose to distribute these assets and wind up the corporation.

17-129. This distribution of the after tax proceeds of the sale of corporate assets is the second transaction and, in general, it will involve income tax effects for the recipient shareholders. Given this two transaction process, a complete analysis of the alternatives of selling the assets of the business versus disposing of the shares will require dealing with both taxation on the corporation as a result of disposing of the assets, and personal taxation as a result of distributing the after tax proceeds of this sale.

17-130. In dealing with the sale of corporate assets, an understanding of the tax effects associated with such dispositions is required. These effects can be outlined as follows:

**Cash** In most circumstances, the cash of the business will be retained in the business. If it is "sold", there will be no tax consequences associated with its disposition.

**Accounts Receivable** In the absence of any special election, the sale of accounts receivable as a component of the sale of a business will be treated as a capital transaction. This means that any difference between the face value and the consideration received will be treated as a capital loss, only one-half of which will be deductible.

However, ITA 22 provides for a joint election to treat the sale of receivables as an income transaction. This allows the purchaser to treat any difference between the amount paid for the receivables and the amount actually collected as a bad debt expense. A more detailed description of this election is presented in Chapter 6.

**Inventories** Even when inventories are sold as part of the sale of a business, any difference between the sales price and the vendor's cost will be treated as ordinary business income. This is provided for in ITA 23 and, unlike the situation with the ITA 22 treatment of receivables, no election is required. For the purchaser, the transfer price becomes the tax cost that will eventually be allocated to cost of goods sold.

**Prepayments** The *Income Tax Act* does not recognize prepayments as an asset. This means that some amounts that are treated as prepayments in the accounting records have, for tax purposes, been deducted as expenses. As a result of this, when such balances are sold for their fair market value, the proceeds will be included in income.

**Non-Depreciable Capital Assets** The most common non-depreciable capital assets of a business are land and investments. Depending on the amount of consideration received for these assets, the transferor will have a capital gain or loss. With respect to capital losses, they can only be deducted from capital gains.

If some of the consideration being paid for these assets is deferred, the corporation can use capital gains reserves to defer part of the applicable taxation. However, the use of this technique would require continuing the corporation through the deferral period and this may not be in keeping with the objectives of the vendor.

For the purchaser, the adjusted cost base of non-depreciable capital assets will be the purchase price, which presumably is the fair market value.

**Depreciable Assets** The disposition of a depreciable asset can result in recapture, a terminal loss, or some combination of recapture and a capital gain. Unlike capital gains, recapture and terminal losses will be subject to 100 percent inclusion in, or deduction from, active business income and will be included in income eligible for the small business deduction.

As was the case with non-depreciable capital assets, if some of the consideration for these assets is not received immediately, reserves can be used to defer the taxation of capital gains.

For the purchaser, the capital cost of depreciable assets will be the purchase price, which presumably is the fair market value.

**Goodwill** If goodwill is present, some amount of the consideration received for the going concern will be allocated to goodwill. Any allocated amount will be treated as proceeds of disposition for a Class 14.1 asset. As the capital cost of goodwill will most commonly be nil, when the lesser of the proceeds of disposition and the capital cost of the goodwill is subtracted from any Class 14.1 balance, it commonly results in the entire proceeds of disposition allocated to goodwill being treated as a capital gain.

The purchaser of the going concern will add the allocated cost of the goodwill to Class 14.1 where it will be subject to CCA on a 5 percent declining balance basis. The AccII provisions are applicable to this Class.

## Restrictive Covenants - Sale Of Total Assets

17-131. Restrictive covenants may take one of two different forms when there is a sale of the total assets of the corporation. If it is anticipated that the corporation will continue in business, the agreement can be between the purchaser of the assets and the corporation. In contrast, if the corporation is to be liquidated, the agreement will likely be between the purchaser and the former owner(s) of the shares. It is also possible that the purchaser will require both the corporation and the former shareholders to sign a restrictive covenant.

17-132. This election is available only between the purchaser and the business (corporation or proprietorship). It could not be between the purchaser and the shareholders of the relevant corporation. This approach is conditional on the parties being prepared to make the required joint election.

17-133. If the election is made, the consideration given for the restrictive covenant will be treated as the proceeds of disposition of a Class 14.1 asset. As previously discussed, in most situations, this will result in the amount being treated as a capital gain.

17-134. If the payment is eligible for the joint election and the election is made, the purchaser will treat the payment for the restrictive covenant as the acquisition cost of a Class 14.1 asset. However, if the payment is not eligible, or if no joint election is filed, ITA 56.4 provides no specific guidance for the purchaser.

17-135. This means that the purchaser will have to apply basic principles from other Sections of the *Income Tax Act*. Without regard to the fact that the vendor will be taxed on the full amount of the payment under ITA 56.4(2), the purchaser's treatment may involve a deduction of the full amount of the payment, or an addition of the payment to one or more assets. The specific treatment by the purchaser will depend on the nature of the payment as determined under general tax principles.

## Sale Of Shares

### General Procedures

17-136. In terms of accounting, legal, and tax considerations, this is the simplest way to sell a business. The calculation of the gain on the sale only requires the adjusted cost base of the shares to be subtracted from the proceeds received from their disposition. Any resulting difference will be a capital gain or loss, and will be subject to the usual treatment accorded to share dispositions.

17-137. In preparing for the sale of shares, a corporation will declare tax-free capital dividends to the extent of its capital dividend account and taxable dividends for any additional amount which will generate a dividend refund if there is an RDTOH balance.

### Lifetime Capital Gains Deduction

17-138. If the corporation is a "qualified small business corporation" as defined in ITA 110.6(1), the disposition of shares may qualify for the lifetime capital gains deduction. The conditions associated with the designation "qualified small business corporation" are discussed in Chapter 11. Note here, however, that this deduction is only available on the sale of shares by an individual. If the shares are sold by a corporation, this valuable deduction is not available.

### Restrictive Covenants - Sale Of Shares

17-139. In cases where a business disposition involves a sale of shares, any restrictive covenant that is required will involve an agreement between the purchaser of the shares and the vendor of the shares. In this situation the exception under ITA 56.4(3)(c) (see Paragraph 17-121) becomes important. The sale of shares would be a disposition of an eligible interest and this would allow the taxpayer receiving payment for the restrictive covenant to include it as part of the proceeds of disposition. As such, it would serve to create or increase a capital gain on the sale, only one-half of which would be taxable.

17-140. Note that this treatment requires the vendor and purchaser to file a joint election and, if they fail to do so, the vendor will have to include the full amount of the payment in income when it is received or becomes receivable. If the election is filed, the purchaser will include the payment in the cost of his purchase. If the election is not filed, the treatment by the purchaser will require the application of general tax principles.

## Evaluation Of Alternatives

### Advantages Of Selling Shares

17-141. Generally speaking, the vendor of a business will favour selling shares over selling assets. Factors favouring this alternative are as follows:

- The sale of shares offers the simplicity of a single transaction. In contrast, in a sale of assets, the vendor must deal with the legal and tax consequences arising at the corporate level. In addition, the vendor must steer the corporation through a winding-up procedure and deal with the personal tax consequences of these procedures. The greater complexity will require additional personal efforts on the part of the vendor. Also, the legal and accounting fees associated with these transactions are likely to be significant.
- Any income produced by the sale of shares will usually be reported as capital gains. At worst, only one-half of such gains are taxable. At best, the taxable gains may be reduced or eliminated through the use of the lifetime capital gains deduction. If assets are sold by the corporation, some of the resulting income could be recaptured CCA, which must be included in income in full. In addition, if capital gains arise on the sale of assets, they will be treated as investment income to the corporation and will not be eligible for the small business deduction.
- If the enterprise has an unused non-capital loss carry forward, it will still be available to the enterprise if shares are sold. Any non-capital loss carry forwards are, of course, subject to the acquisition of control rules, requiring that they be applied against income earned in the same business in which the losses were incurred. However, if the sale of assets alternative is chosen, such loss carry forward balances will be completely unavailable to the purchaser.
- When a payment for a restrictive covenant is a component of the sale of shares, the vendor may be able to treat the amount received as an addition to his proceeds of disposition, rather than an amount that has to be fully included in income. This treatment is conditional on the vendor and purchaser filing a joint election, in which case the purchaser will add the amount paid to his acquisition cost.
- A sale of assets could result in the payment of land transfer taxes that would not be applicable if shares are sold.

### Advantages Of Purchasing Assets

17-142. As just described, there are a number of advantages that can be associated with selling shares, most of them benefitting the vendor. From the point of view of the purchaser, a purchase of assets is generally more desirable than a purchase of shares. Some of the advantages of purchasing assets are as follows:

- In acquiring assets, the purchaser acquires a completely new, and usually higher, set of tax values for the assets transferred. For example, consider a depreciable asset with a capital cost of $100,000, a UCC of $40,000, and a fair market value of $400,000. If shares are acquired, the CCA deductions available to the corporation will continue to be based on $40,000 and, if the assets are subsequently disposed of, capital gains will be determined from the original capital cost of $100,000. In contrast, if the asset was purchased in an arm's length transaction for its fair market value of $400,000, this amount would be the capital cost and UCC to the purchaser. This bump-up in asset values and the availability of higher CCA claims can significantly reduce the tax liabilities of the purchaser.
- Goodwill can be recognized when assets are acquired. The CCA deductions related to Class 14.1 are not available if shares are acquired.
- In situations where the purchaser has an existing corporation, he may prefer to have that corporation acquire the assets, rather than acquiring the shares of an additional corporation and incurring the administrative costs associated with maintaining a second corporation.

- If shares are acquired, all of the assets must be acquired. In a sale of assets, redundant assets can be left out of an acquisition of assets. Note, however, if there are unwanted assets, it is fairly common for these assets to be disposed of prior to the sale of shares.
- If shares are acquired, the existing liabilities of the corporation will continue to be in place. It is possible that the purchaser can obtain financing on more favourable terms, in which case he would prefer to acquire assets.
- If shares are acquired, the purchaser may become responsible for any future tax reassessments. While this exposure could occur because the purchased corporation continues to operate, it is usually covered in the buy and sell agreement for the transaction. This agreement is normally written to protect the purchaser from future problems in this area.
- A further problem relates to potential non-tax liabilities related to product or environmental liabilities. Again, because the purchased corporation is continuing to operate, it could be responsible for such liabilities. However, this is another issue that is normally dealt with in the buy and sell agreement.
- Most of the preceding discussion has implicitly assumed that the corporation's assets have fair market values in excess of their related tax values. If this is not the case and unrealized losses are present, selling assets may be advantageous to the vendor as well as the purchaser. This is based on the fact that the vendor would prefer to have fully deductible terminal or business losses, rather than capital losses that are only one-half deductible against taxable capital gains.

### Conclusion

17-143. While each situation needs to be evaluated on the basis of the specific assets and values involved, in general, a vendor will wish to sell shares while a purchaser will wish to acquire assets. As a result, negotiations will usually involve higher prices being offered for the assets of the business than are offered for the shares of the incorporated business.

## Example

17-144. To illustrate the sale of an incorporated business, we will use the following example.

> **EXAMPLE** Mr. O'Leary owns all of the outstanding shares of O'Leary Ltd., a Canadian controlled private corporation with a December 31 year end. Mr. O'Leary has reached retirement age and wishes to dispose of the business. He has received an offer to buy the shares for $180,000 or, alternatively, the assets of the business for $200,000. All of the liabilities of the business have been settled in preparation for the sale.
>
> The cost of Mr. O'Leary's original investment was $50,000. As no additional investment has been made, this is also his adjusted cost base and paid up capital for the outstanding shares. The provincial tax rate on business income eligible for the small business deduction is 2.5 percent. The provincial rate on all other income is 14 percent. The corporation has no balance in its RDTOH account, its capital dividend account, or its GRIP account. Mr. O'Leary is subject to a combined federal/provincial rate of 46 percent on non-dividend income and 31 percent on non-eligible dividends received.
>
> Relevant information on the January 1, 2019 values for the assets of the business is as follows:

| Asset | Cost | Fair Market Value |
|---|---|---|
| Cash | $ 5,000 | $ 5,000 |
| Receivables | 10,000 | 10,000 |
| Inventories | 55,000 | 60,000 |
| Land | 20,000 | 40,000 |
| Plant And Equipment (UCC = $45,000) | 95,000 | 60,000 |
| Goodwill | Nil | 25,000 |
| Total | $185,000 | $200,000 |

## Sale Of Shares For $180,000

17-145. With respect to the sale of shares, the tax consequences are as follows:

| | |
|---|---|
| Proceeds Of Disposition | $180,000 |
| Adjusted Cost Base | ( 50,000) |
| Capital Gain | $130,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain (For Mr. O'Leary) | $ 65,000 |

17-146. The after tax results for Mr. O'Leary are as follows:

| | |
|---|---|
| Proceeds Received | $180,000 |
| Tax Payable [(46%))($65,000)] | ( 29,900) |
| Cash Retained | $150,100 |

17-147. While this might be the result, it is likely that O'Leary Ltd. is a qualified small business corporation. If this is the case, the lifetime capital gains deduction could be used to eliminate all of the taxes on this disposition of shares, resulting in Mr. O'Leary retaining the entire $180,000 proceeds. Alternative minimum tax might be applicable if the capital gain is sheltered through the lifetime capital gains deduction.

## Sale Of Assets For $200,000

17-148. The tax consequences resulting from selling the assets are calculated as follows:

| Account | | Taxable Income |
|---|---|---|
| Inventories ($60,000 - $55,000) | | $ 5,000 |
| Plant And Equipment - Recaptured CCA ($60,000 - $45,000) | | 15,000 |
| Active Business Income | | $20,000 |
| Taxable Capital Gains | | |
| Land [(1/2)($40,000 - $20,000)] | $10,000 | |
| Goodwill [(1/2)($25,000)] | 12,500 | 22,500 |
| Corporate Taxable Income | | $42,500 |

17-149. The resulting Tax Payable would be calculated as follows:

| | |
|---|---|
| Federal Tax On: | |
| Active Business Income [(38% - 10% - 19%)($20,000)] | $ 1,800 |
| Investment Income [(38% - 10% + 10-2/3%)($22,500)] | 8,700 |
| Part I Tax | $10,500 |
| Provincial Tax On Active Business Income [(2.5%)($20,000)] | 500 |
| Provincial Tax On Investment Income [(14%)($22,500)] | 3,150 |
| Total Corporate Tax Payable | $14,150 |

17-150. The GRIP and RDTOH balances at the beginning of the year are both nil. This means that the only amount available for a dividend refund would be the addition to the Non-Eligible RDTOH for the refundable portion of the Part I tax paid on the asset dispositions. This amount would be the least of:

| | |
|---|---|
| • 30-2/3% Of Investment Income [(30-2/3%)($22,500)] | $ 6,900 |
| • 30-2/3% Of Taxable Income, Less Amount Eligible For Small Business Deduction [(30-2/3%)($42,500 - $20,000)] | $ 6,900 |
| • Part I Tax Payable | $10,500 |

17-151. The allocation to the capital dividend account would be as follows:

| | |
|---|---|
| Non-Taxable Portion Of Capital Gain On: | |
| Land [(1/2)($20,000)] | $10,000 |
| Goodwill [(1/2)($25,000)] | 12,500 |
| Capital Dividend Account | $22,500 |

17-152. Given the preceding analysis of the liquidation of the corporate assets, the net cash retained by Mr. O'Leary after the distribution of corporate assets can be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition - Sale Of Assets | $200,000 |
| Corporate Tax Payable (Before Dividend Refund) | ( 14,150) |
| Dividend Refund (Note) | 6,900 |
| Funds Available for Distribution | $192,750 |
| Paid Up Capital | ( 50,000) |
| ITA 84(2) Deemed Dividend | $142,750 |
| Capital Dividend (Balance In Account - Election Required) | ( 22,500) |
| Deemed Taxable Dividend | $120,250 |
| Tax Rate (On Non-Eligible Dividends Received) | 31% |
| Personal Tax Payable On Non-Eligible Dividend | $ 37,278 |

**Note** Technically, the dividend refund is the lesser of the $6,900 balance in the Non-Eligible RDTOH account and 38-1/3 percent of taxable dividends paid. However, given the size of the distribution in this example, it is clear that $6,900 will be the lower figure.

17-153. There would be no capital gain on the distribution as shown in the following:

| | |
|---|---|
| Total Distribution | $192,750 |
| ITA 84(2) Deemed Dividend | ( 142,750) |
| Deemed Proceeds Of Disposition | $ 50,000 |
| Adjusted Cost Base Of The Shares | ( 50,000) |
| Capital Gain | Nil |

17-154. Based on the preceding calculations, Mr. O'Leary's after tax retention from the sale of assets would be calculated as follows:

| | |
|---|---|
| Amount Distributed | $192,750 |
| Tax On Deemed Dividend | ( 37,278) |
| Cash Retained | $155,472 |

17-155. This amount is larger than the $150,100 that would be retained from a sale of shares if the resulting capital gain was subject to tax. However, it is significantly smaller than the $180,000 that would be retained from a sale of shares if the lifetime capital gains deduction could be used to eliminate the entire gain on the sale.

**We suggest you work Self Study Problem Seventeen-8 at this point.**

**Additional Supplementary Self Study Problems Are Available Online.**

## Key Terms Used In This Chapter

17-156. The following is a list of the key terms used in this Chapter. These terms, and their meanings, are compiled in the Glossary located at the back of the Study Guide.

Adjusted Cost Base
Amalgamation
Business Combination
Canadian Corporation
Control (IAS 27)
Convertible Property
Corporation
Disposition
Exchange Of Shares In A Reorganization (ITA 86)
Gift
Goodwill
Legal Stated Capital
Lifetime Capital Gains Deduction
Merger
Non-Share Consideration
Paid Up Capital
Parent Company
Proceeds Of Disposition
PUC
Qualified Small Business Corporation
Recapture Of CCA
Redemption Of Shares
Reorganization Of Capital (ITA 86)
Restrictive Covenant
Rollover
Share For Share Exchange (ITA 85.1)
Small Business Corporation
Subsidiary
Taxable Canadian Corporation
Terminal Loss
Vertical Amalgamation
Winding-Up Of A 90% Owned Subsidiary
Winding-Up Of A Canadian Corporation

# Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 17:

- 8 Self Study problems,
- 5 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

# Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### Assignment Problem Seventeen - 1

**(Section 85.1 Share For Share Exchange After ITA 85 Rollover)**

In 2011, Sandy O'Brien opened a business, Sandy's Frames, that specialized in providing frames for high end paintings and drawings. From 2011 through 2014, he operated the business as a proprietorship. He did not incorporate as he needed all of the income produced by the business to cover his living expenses.

However, by 2014 his profits had increased to the point where he no longer needed all of the income produced by the business. Given this, he decided to incorporate.

His accountant advised him that he could avoid current taxation by using the provisions of ITA 85(1) to transfer his business assets to the new corporation. To facilitate this, on January 1, 2015, the following values were established for the assets of the business.

| | |
|---|---|
| Tax Values Of The Business Assets | $1,820,000 |
| Fair Market Value Of The Business Assets | $3,140,000 |

On this date, the assets are transferred to a new corporation, Frames Ltd., at an elected value of $1,820,000. As consideration, Sandy took back a note payable for $900,000, redeemable preferred shares with a fair market value of $920,000, and 6,950 common shares with a fair market value of $1,320,000. No other shares were issued during the years under consideration.

Over the next few years, the business continues to expand and prosper and, on January 1, 2019, he receives an offer from Conglomerate Inc., a large public company, for all of the common shares. Under terms of this offer, Sandy will give up all of the common shares of Frames Ltd. in return for a separate class of shares issued by Conglomerate Inc. These shares have a fair market value of $1,970,000. In addition, subsequent to the exchange transaction, Sandy's preferred shares will be redeemed for $920,000. Frames Ltd. does not have GRIP balance or an RDTOH balance at this time. Sandy and the controlling shareholders of Conglomerate Inc. deal with each other at arm's length.

While Sandy has been very successful with his business, he has made a number of very bad real estate investments. As a consequence, as of January 1, 2019, he has a $420,000 net capital loss carry forward.

Assume that Frames Ltd. does not meet the criteria for qualification as a small business corporation.

**Required:**

A. Advise Sandy with respect to the tax consequences that would arise for him from the redemption of his preferred shares and the acceptance of the offer from the public company for the exchange of shares. Your answer should consider both the application of ITA 85.1 and opting out of this provision.

B. Indicate the adjusted cost base of the Frames Inc. common shares on the books of Conglomerate Ltd.

C. Advise Sandy as to the alternative approaches that could be used to utilize his net capital loss carry forward in conjunction with the share exchange.

### *Assignment Problem Seventeen - 2*

***(ITA 85(1) and ITA 86(1) Share Exchange)***

Homer Parsons opened an unincorporated retail business in 2012. This business, known as Parsons' Paranormal Services, provides services related to helping individuals make contact with dead loved ones.

Homer quickly gains a reputation for success in such matters and, by 2015, he has opened several locations in the city and retained a number of very wealthy clients. As a result, the business is producing income far in excess of his current needs. At this time, in order to defer current taxation, Homer decides to incorporate. His accountant advises him that he can do this on tax free basis by using the provisions of ITA 85(1).

On January 1, 2015, the assets of the business have tax values (adjusted cost base or UCC) which total $1,986,000. The estimated fair market value of these assets is $2,950,000. On this date the assets are transferred to a new corporation at an elected value of $1,986,000. As consideration for the business assets, Homer takes back a note payable for $1,500,000 and common shares with a fair market value of $1,450,000. The new company, named Parsons Paranormal Inc. (PPI), will have a December 31 year end.

In its corporate form, the business continues to operate very successfully and, on January 1, 2019, the assets have tax values of $7,347,000. Their fair market value total $8,450,000.

Homer has an adult son who appears to have paranormal skills superior to his own. His name is Orpheus and, since 2015, he has become increasingly active in the business. As Homer now has sufficient resources to retire comfortably, he would like to transfer the future growth of the business to Orpheus.

To accomplish this, he is going to exchange his common shares in PPI for $5,000,000 in cash, plus redeemable preferred shares with a fair market value of $3,450,000. Subsequent to this exchange, Orpheus will acquire 200 common shares in PPI at a total cost of $20,000.

PPI does not have a GRIP balance or an RDTOH balance on January 1, 2019.

**Required**:

A. Determine the tax consequences for Homer that will result from his exchange of shares. As part of your answer, you should indicate both the adjusted cost base and the PUC of his preferred shares.

B. Determine the tax consequences for Homer that would result from the redemption of his preferred shares on February 1, 2019 for their fair market value of $3,450,000.

### Assignment Problem Seventeen - 3

**(Section 86 Reorganization With Gift)**

Lartex Inc. was incorporated in 2010 to produce cutting edge sports clothing. At this time, the Company issued 20,000 common shares for cash of $50 per share. Of these shares, 15,000 were purchased by Lara Text, with the remainder being purchased by Bentley Rolls, an arm's length individual who was her mentor.

In 2014, Bentley dies suddenly while running a marathon. Lara acquires the 5,000 shares that were purchased by Bentley Rolls from his estate for $90 per share. In order to finance the firm's rapidly expanding operations, the Company issues an additional 5,000 shares to Lara for the same $90 per share price.

Lara has a son, Lance Text, whose dream is to make Lartex a household name. Starting in 2015, he seeks out the most challenging and rigorous courses in the business program at his university. During the following two years, he excels at his courses, especially his tax courses which he considers the most interesting and rewarding. To encourage him in his studies, during 2017, when the estimated fair market value of a share was $100, Lara gives Lance a gift of 2,500 shares of Lartex Inc.

On January 1, 2019, the fair market value of the Lartex Inc. shares has increased to $120 per share. By this time, Lance has become increasingly active in helping her with the operations of Lartex Inc. Given this, she would like to transfer the future growth in Lartex Inc. to Lance using the provisions of ITA 86.

In order to implement this transfer, she exchanges her 22,500 shares of Lartex Inc. for a $500,000 note and redeemable preferred shares with a fair market value of $2,000,000. The only remaining common shares will be the 2,500 shares owned by Lance. At this time, the Company does not have a GRIP balance.

**Required:**

A. Describe the immediate tax consequences of this transaction to Lara Text, including the following:

- the amount of any gift that Lara has made to Lance;
- the PUC of the new preferred shares;
- the adjusted cost base of the new preferred shares;
- the amount of any deemed dividends arising on the exchange; and
- any capital gain or loss resulting from the exchange of the common shares.

B. Describe the tax consequences of this transaction to Lance Text.

C. Describe the tax consequences of this transaction to Lara Text that would result from the immediate redemption of her newly issued preferred shares at their fair market value of $2,000,000. Ignore the possible use of the lifetime capital gains deduction.

### Assignment Problem Seventeen - 4

#### [ITA 86(1) And 86(2)]

Sanice Ltd. was incorporated by John San in 2008 with the investment of $850,000. In return for this investment, John San received a total of 42,500 common shares of the new corporation.

Between the date of its incorporation and January 1, 2015, no new common shares are issued by Sanice. On this date, Malcolm Shelton acquires all of the outstanding shares for $1,200,000 in cash.

By January 1, 2019, the common shares of Sanice Ltd. have increased in value to $35 per share, or a total value of $1,487,500 [($35)(42,500)]. Because of continuing health problems, Malcolm would like to retire. While he has received an offer from an arm's length party to buy the Sanice Ltd. shares for $1,487,500, Malcolm would prefer to transfer both control of the Company and future increases in its value to his 42 year old daughter, Darlene Shelton.

He is planning to apply ITA 86 to an exchange of shares and is considering two alternative scenarios for implementing this exchange.

> **Scenario One** Malcolm would exchange his 42,500 common shares for cash of $850,000, plus redeemable preferred shares with a legal stated capital of $637,500 and a fair market value of $637,500.
>
> **Scenario Two** Malcolm would exchange his 42,500 common shares for cash of $850,000, plus redeemable preferred shares with a legal stated capital of $437,500 and a fair market value of $437,500.

Immediately after the exchange of shares, Malcolm will have the Company issue 250 common shares at a cost of $35 per share to Darlene who will purchase these shares with funds of her own.

Sanice Ltd. is not a qualified small business corporation. The Company has a nil balance in its General Rate Income Pool (GRIP) account for all years under consideration.

**Required**: For each of the two suggested approaches determine:

A. The amount of the gift to a related party, if any, resulting from the exchange of shares.

B. The paid up capital of the newly issued preferred shares.

C. The adjusted cost base of the newly issued preferred shares.

D. The proceeds of redemption/disposition that Malcolm received for the old common shares of Sanice Ltd.

E. The immediate tax consequences for Malcolm of the reorganization of the capital of Sanice Ltd.

F. The tax consequences for Malcolm if the new Sanice Ltd. preferred shares are immediately redeemed for their fair market value.

### Assignment Problem Seventeen - 5

#### [Section 87 vs. Section 88(1)]

Hubble Inc. owns 100 percent of the shares of Palomar Ltd. Hubble has decided that it does not want Palomar to continue as a separate legal entity. It has asked your assistance on whether to absorb Palomar into its operations using ITA 87 or, alternatively, ITA 88(1).

At the time of this decision, Palomar Ltd. has the following asset values:

| Asset | Capital Cost | Tax Value | FMV |
|---|---|---|---|
| Equipment | $ 11,000 | $ 3,300 | $ 700 |
| Land | 154,000 | 154,000 | 192,000 |
| Goodwill | Nil | Nil | 22,000 |

There are no liabilities and no tax loss carry forwards.

Hubble acquired the shares of Palomar several years ago for $231,000. At that time, the Equipment was valued at its capital cost of $11,000 and the Land was valued at $209,000, for a total of $220,000. At that time, goodwill was estimated to be $1,000.

Palomar has paid $5,000 in dividends since its acquisition by Hubble.

**Required:** Outline what the tax consequences would be if:

A. Palomar was amalgamated into Hubble Inc. using Section 87.

B. Palomar was rolled into Hubble Inc. using a Section 88(1) winding-up.

## *Assignment Problem Seventeen - 6*

### *(Section 88(1) Winding-Up)*

In 2015, Acme Ltd. purchased all of the outstanding shares of Cross Industries for cash of $1,400,000. The assets of Cross Industries at the time of the acquisition had tax values of $1,250,000, and included a piece of land that was being held as a location for a possible second manufacturing facility. This land had been acquired in 2010 for $640,000 and, at the time Acme acquired the Cross shares, it had a fair market value of $705,000.

Acme believes that the operations of Cross Industries have become so integrated with its own, that it no longer makes sense to operate Cross as a separate entity. As a consequence, they are considering the possibility of absorbing Cross using an ITA 88(1) winding-up. At January 1, 2019, the tax values of the assets of Cross Industries total $1,270,000. The Company is still holding the land for the additional manufacturing facility and it now has a fair market value of $790,000. Cross Industries has paid Acme Ltd. dividends totaling $20,000 since its acquisition.

**Required**: Explain the tax implications of the proposed winding-up from the point of view of both Acme Ltd. and Cross Industries.

## *Assignment Problem Seventeen - 7*

### *(Winding-Up Of A Corporation)*

Hextone Ltd. is a Canadian controlled private corporation (CCPC) that has operated with great success in the action video game market for more than 20 years. The Company has a December 31 year end.

The founder and driving force behind the Company's success is Dread Hextone. As he has always been a loner with severe anger management issues, he has thought it too risky to ever marry knowing the potential for spouses to be aggravating.

Dread is 54 years old. In his family, every male has died of a stroke before reaching the age of 60. He has done a calculation which compares his anticipated expenditures during his remaining expected years of life with the resources that would result from winding up Hextone Ltd. He has concluded that these resources are more than sufficient to cover his anticipated expenditures. As the success of Hextone Ltd. is largely based on Dread's personal efforts, he would not be able to sell his shares. Given this, he intends to sell the assets of the company, followed by a wind-up and distribution of the resulting cash.

The following statement of the Company's net assets as of January 1, 2019 has been prepared:

**Hextone Ltd.**
**Statement Of Net Assets**
**As At January 1, 2019**

| | Tax Values | Fair Market Values |
|---|---|---|
| Cash | $ 72,356 | $ 72,356 |
| Investments | 1,728,460 | 2,135,450 |
| Inventories | 728,645 | 782,662 |
| Land | 427,400 | 687,300 |
| Building | 736,419 | 1,265,000 |
| Total Assets | $3,693,280 | $4,942,768 |
| Liabilities | ( 353,260) | ( 353,260) |
| Net Assets | $3,340,020 | $4,589,508 |

Based on tax values, the components of the net asset value balance are as follows:

| | |
|---|---|
| Paid Up Capital | $ 850,000 |
| Capital Dividend Account | 432,470 |
| Other Income Retained | 2,057,550 |
| Total Net Asset Balance | $3,340,020 |

**Other Information:**

1. The Building had a capital cost of $1,000,000.
2. The adjusted cost base of the common shares is equal to $850,000, their paid up capital.
3. On January 1, 2019, the Company has a balance in its General Rate Income Pool (GRIP) account of $86,400.
4. All of the assets are disposed of on January 1, 2019 at their fair market values. The corporation's liabilities are also paid on this date. The after tax proceeds from the sale are distributed to Dread on January 15, 2019.
5. The provincial tax rate for the corporation on income that qualifies for the small business deduction is 3 percent. On all other income, the provincial rate is 11.5 percent.
6. The January 1, 2019 balance in the Company's RDTOH account is $362,675.
7. No dividends were paid during the previous two years.

**Required:**

A. Calculate the amount that will be available for distribution to Dread after the liquidation.

B. Determine the components of the distribution to Dread, and the amount of taxable capital gains that will accrue to him as a result of the winding-up of Hextone Ltd. Ignore the possibility that Dread might be subject to the alternative minimum tax. Assume that appropriate elections or designations will be made to minimize the taxes that will be paid by Dread.

## Assignment Problem Seventeen - 8

***(Sale Of Assets vs. Shares)***

Mr. Robert Niche is the president and only shareholder of Niche Inc., a Canadian controlled private corporation. The Company's fiscal year ends on December 31. Mr. Niche established the Company 15 years ago by investing $344,500 in cash. There have been no other shares issued since then.

Mr. Niche is considering selling the corporation and, in order to better evaluate this possibility, he has prepared a special Statement Of Assets. In this special statement, comparative disclosure is provided for the values included in his accounting records, values that are relevant for tax purposes, and fair market values. This statement is as follows:

**Niche Inc.**
**Statement Of Assets**
**As At January 1, 2019**

| | Accounting Net Book Value | Tax Value | Fair Market Value |
|---|---|---|---|
| Cash | $ 70,850 | $ 70,850 | $ 70,850 |
| Accounts Receivable | 527,800 | 527,800 | 483,925 |
| Inventories | 1,130,675 | 1,130,675 | 1,268,800 |
| Land | 261,950 | 261,950 | 526,500 |
| Building (Note One) | 699,400 | 610,025 | 2,679,300 |
| Equipment (Note Two) | 564,200 | 382,200 | 222,625 |
| Goodwill | Nil | Nil | 1,054,300 |
| Totals | $3,254,875 | $2,983,500 | $6,306,300 |

**Note One** Mr. Niche built this Building on the Land for a total cost of $1,665,300.

**Note Two** The Equipment had a cost of $1,049,750.

At the same time that this Statement Of Assets was prepared, a similar Statement Of Equities was drawn up. This latter statement contained the following accounting and tax values:

| | Accounting Book Value | Tax Value |
|---|---|---|
| Current Liabilities | $ 906,100 | $ 906,100 |
| Loan From Shareholder | 178,750 | 178,750 |
| Future Income Tax Liability | 704,600 | N/A |
| Common Stock - No Par | 344,500 | 344,500 |
| Capital Dividend Account | N/A | 213,850 |
| Other Income Retained | N/A | 1,340,300 |
| Retained Earnings | 1,120,925 | N/A |
| Totals | $3,254,875 | $2,983,500 |

In addition to the information included in the preceding statements, the following other information about the Company is relevant:

- The Company has available non-capital loss carry forwards of $107,900.
- The Company has available a net capital loss carry forward of $168,545 [(1/2)($337,090)].
- Niche Inc. is subject to a provincial tax rate of 3 percent on income that qualifies for the federal small business deduction and 14 percent on income that does not qualify for this deduction.

- On December 31, 2018, the Company has no balance in either its RDTOH account or its General Rate Income Pool (GRIP) account.
- Niche Inc. shares are not qualified small business corporation shares.

Mr. Niche has received two offers for his Company, and he plans to accept one of them on January 2, 2019. The first offer involves a cash payment of $4,560,000 in return for all of the shares of the Company. Alternatively, another investor has expressed a willingness to acquire all of the assets, including goodwill, at a price equal to their fair market values. This investor would assume all of the liabilities of the corporation and has agreed to file an ITA 22 election with respect to the Accounts Receivable. If the assets are sold, it is Mr. Niche's intention to wind up the corporation.

Mr. Niche will have over $300,000 in income from other sources and, as a consequence, any income that arises on the disposition of this business will be taxed at the maximum federal rate of 33 percent, combined with a provincial rate of 18 percent. He lives in a province where the provincial dividend tax credit on eligible dividends is 5/11 of the gross up, and on non-eligible dividends is equal to 4/13 of the gross up.

**Required:** Determine which of the two offers Mr. Niche should accept. Ignore the possibility that Mr. Niche might be subject to the alternative minimum tax. Assume that appropriate elections or designations will be made to minimize the taxes that will be paid by Mr. Niche.

## *Assignment Problem Seventeen - 9*

### *(Sale Of Assets vs. Shares)*

Mr. Nathan Naper is the president and only shareholder of Nepean Ltd., a Canadian controlled private corporation. The Company's fiscal year ends on December 31. Mr. Naper established the Company 15 years ago by investing $265,000 in cash. There have been no other shares issued since then.

Mr. Naper is considering selling the corporation and, in order to better evaluate this possibility, he has prepared a special Statement Of Assets. In this special statement, comparative disclosure is provided for the values included in his accounting records, values that are relevant for tax purposes, and fair market values. This statement is as follows:

**Nepean Ltd.**
**Statement Of Assets**
**As At January 1, 2019**

| | Accounting Net Book Value | Tax Value | Fair Market Value |
|---|---|---|---|
| Cash | $ 54,500 | $ 54,500 | $ 54,500 |
| Accounts Receivable | 406,000 | 406,000 | 372,250 |
| Inventories | 869,750 | 869,750 | 976,000 |
| Land | 201,500 | 201,500 | 405,000 |
| Building (Note One) | 538,000 | 469,250 | 2,061,000 |
| Equipment (Note Two) | 434,000 | 294,000 | 171,250 |
| Goodwill | Nil | Nil | 811,000 |
| Totals | $2,503,750 | $2,295,000 | $4,851,000 |

**Note One** Mr. Naper built this Building on the Land for a total cost of $1,281,000.

**Note Two** The Equipment had a cost of $807,500.

At the same time that this Statement Of Assets was prepared, a similar Statement Of Equities was drawn up. This latter statement contained the following accounting and tax values:

| | Accounting Book Value | Tax Value |
|---|---|---|
| Current Liabilities | $ 697,000 | $ 697,000 |
| Loan From Shareholder | 137,500 | 137,500 |
| Future Income Tax Liability | 542,000 | N/A |
| Common Stock - No Par | 265,000 | 265,000 |
| Capital Dividend Account | N/A | 164,500 |
| Other Income Retained | N/A | 1,031,000 |
| Retained Earnings | 862,250 | N/A |
| Totals | $2,503,750 | $2,295,000 |

In addition to the information included in the preceding statements, the following other information about the Company is available:

- The Company has available non-capital loss carry forwards of $83,000.
- The Company has available a net capital loss carry forward of $129,650 [(1/2)($259,300)].
- Nepean Ltd. is subject to a provincial tax rate of 3 percent on income that qualifies for the federal small business deduction and 14 percent on income that does not qualify for this deduction.
- On December 31, 2018, the Company has no balance in either its RDTOH account or its General Rate Income Pool (GRIP) account.
- Nepean Ltd. is not a qualified small business corporation.

Mr. Naper has received two offers for his Company, and he plans to accept one of them on January 2, 2019. The first offer involves a cash payment of $3,508,000 in return for all of the shares of the Company. Alternatively, another investor has expressed a willingness to acquire all of the assets, including goodwill, at a price equal to their fair market values. This investor would assume all of the liabilities of the corporation and has agreed to file an ITA 22 election with respect to the Accounts Receivable. If the assets are sold, it is Mr. Naper's intention to wind up the corporation.

Mr. Naper will have over $300,000 in income from other sources and, as a consequence, any income that arises on the disposition of this business will be taxed at the maximum federal rate of 33 percent, combined with a provincial rate of 18 percent. He lives in a province where the provincial dividend tax credit on eligible dividends is 5/11 of the gross up, and on non-eligible dividends is equal to 4/13 of the gross up.

**Required:** Determine which of the two offers Mr. Naper should accept. Ignore the possibility that Mr. Naper might be subject to the alternative minimum tax. Assume that appropriate elections or designations will be made to minimize the taxes that will be paid by Mr. Naper.

# CHAPTER 18

# Partnerships

## Introduction

### Taxable Entities In Canada

18-1. As is noted in Chapter 1, the *Income Tax Act* (ITA) is applicable to individuals (human beings), corporations, and trusts. In the case of individuals and corporations, these taxable entities have a separate legal existence. In contrast, trusts are simply arrangements for transferring property and, as such, are not separate legal entities. Partnerships are similar to trusts in that they do not have a legal existence separate from the participating partners. More to the point here is the fact that, under the provisions of the *Income Tax Act*, partnerships are generally not defined taxable entities. An exception to this is "SIFT Partnerships" which are taxable under Part IX.1 of the *Act* (see discussion at the end of this Chapter).

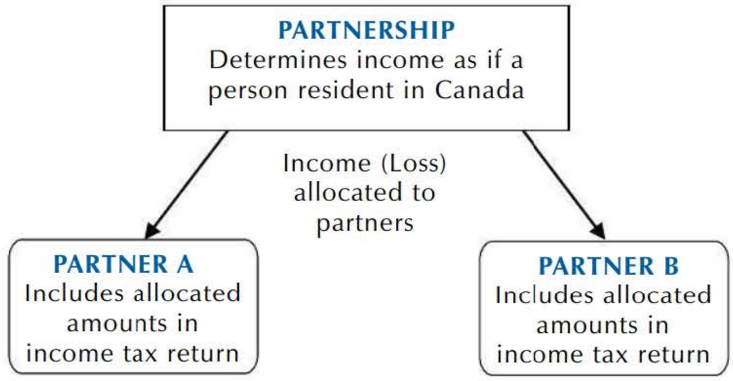
18-2. The *Income Tax Act* deals with the fact that partnerships are generally not taxable entities through the use of a deeming rule. A deeming rule is a statutory fiction that requires an item or event be given a treatment for tax purposes that is not consistent with the actual legal nature of the item or event. We have encountered several such rules in previous chapters:

- A member of the Canadian armed forces is deemed to be a resident of Canada, even if he does not set foot in the country during the year.
- A change in use is deemed to be a disposition of an asset combined with its immediate re-acquisition.
- The death of an individual results in a deemed disposition of all of his capital property.

18-3. The deeming rule that is applicable to partnerships is that, for purposes of determining the income or loss of its members, such organizations are considered to be a person resident in Canada. Note that this rule applies only for the purpose of calculating the income or loss of members. It does not make a partnership a taxable entity and there is no requirement that these organizations file a separate income tax return.

18-4. In general terms, a partnership is treated as a flow-through entity. The preceding deeming rule requires that an income figure be determined at the partnership level using the usual rules for various types of income (e.g., business income, property income, capital gains). Then the income or loss of the partnership is allocated to the taxable entities (i.e., individuals, trusts, or corporations) based on the amounts agreed to in the partnership agreement, or in equal proportions in the absence of a partnership agreement. This process is illustrated in Figure 18-1 (following page).

**Figure 18 - 1**
**Taxation Of Partnership Income**



18-5. We would note that, while partnerships are not taxable entities under the *Income Tax Act*, they are considered taxable entities for GST purposes (see Chapter 21). This means that, in contrast with the income tax situation, a partnership must file a GST return, pay any GST owing or is entitled to receive any GST refund.

## Chapter Coverage

18-6. In this Chapter we will examine the income taxation rules that are applicable to partnerships. We will begin by defining partnerships. This will be followed by an examination of the various types of partnerships, as well as other arrangements that resemble partnerships. These other arrangements include co-ownerships, joint ventures, and syndicates. Our focus will then shift to looking at the rules for calculating income for a partnership and the process of allocating this income and other amounts to partners.

18-7. Other issues that will be covered include:

- the determination of the adjusted cost base of a partnership interest;
- admitting and retiring partners;
- limited partnerships, limited partnership losses and the at-risk rules;
- the transfer of property between the partners and the partnership; and
- reorganizing a partnership as a new partnership, as a corporation, and as a sole proprietorship.

# Partnerships Defined

## The Importance Of Defining A Partnership

18-8. The general rules for determining the income tax consequences for partnerships and their members are found in Subdivision j of Division B of Part I of the *Income Tax Act*, ITA 96 through 103. However, since these rules apply specifically to partnerships, we must first determine if we are, in fact, looking at a partnership. To do this requires a definition of a partnership.

18-9. The importance of this definition is that it allows us to distinguish a partnership from other similar types of organizations such as syndicates, joint ventures, and co-ownership arrangements. This is necessary in that, unlike the situation for these other types of organizations, there is a separate calculation of the income of a partnership.

18-10. As we have noted, this calculation must be carried out using the assumption that the partnership is a separate person resident in Canada. Further, as the calculation must be used for allocating income to all of the members of the partnership, partners have no flexibility with

respect to the amounts to be included in their required tax returns. For example, a partner does not have the discretion to take an alternative amount of CCA on property owned by the partnership. Note, however, they do have discretion with respect to CCA on property that is used by the partnership, but owned by the partner (e.g., partial use of a personally owned automobile for partnership business).

18-11. In contrast, if the organization is considered to be a co-ownership, syndicate, or joint venture (see Paragraph 18-24), there is no requirement for a separate calculation of income. This provides the participants with much greater flexibility in determining the tax procedures to be used. In this case, one participant could take maximum CCA, while others take a lower amount, or even none at all.

## Basic Partnership Elements

18-12. Unfortunately, there is no specific definition of a "partnership" in the *Income Tax Act*. There are several definitions of certain types of partnerships. For example, ITA 102(1) defines a "Canadian Partnership" and ITA 197(1) defines a "SIFT Partnership". However, all of these specialized definitions presume that a partnership already exists. This leaves the question of defining a partnership unanswered.

18-13. Guidance on defining a partnership is provided in IT Folio S4-F16-C1, *What Is A Partnership?*. This Folio notes that "whether a partnership exists is a matter of fact and law". It then proceeds to discuss provincial law dealing with this issue, as well as several court cases that have bearing on this issue. What we would gather from reading through this material is that there are three basic elements that are required for an organization to be considered a partnership and these are:

1. There must be two or more persons (individuals, corporations or trusts) involved.
2. These persons must be carrying on a business in common.
3. It must be the intent of the partners to carry on a business with a view to making a profit.

18-14. Also helpful in this area, IT Folio S4-F16-C1 quotes a Supreme Court Case (Backman v. Canada, 2001 DTC 5149) which lists factors that would be viewed as providing evidence of the existence of a partnership:

- the contribution by the parties of money, property, effort, knowledge, skill or other assets to a common undertaking;
- a joint property interest in the subject matter of the adventure;
- the sharing of profits and losses;
- a mutual right of control or management of the enterprise;
- financial statements prepared as a partnership;
- bank accounts in the name of the partnership; and
- correspondence with third parties as a partnership.

18-15. The presence of a valid partnership agreement would serve to support the view that a partnership exists. Such agreements will usually include provisions that deal with many issues, including the following:

- the initial and ongoing partner contributions and ownership percentage of each partner,
- the responsibilities of each partner and the division of work between the partners,
- how income and drawings will be allocated and how much compensation is to be paid,
- signing authority on the partnership bank accounts and required approval for purchases,
- procedures for bringing in new partners, and
- procedures to deal with the withdrawal or death of a partner, or the sale of the business.

## Types Of Partnerships

### General Partnerships

18-16. A general partnership is one in which all of the partners are general partners. As defined in the *Guide For The T5013 Partnership Information Return* (T4068):

A **general partner** is a partner whose personal liability for the debts and obligations of the partnership are not limited.

18-17. Provincial partnership law provides additional guidance on the rights, duties and obligations of general partners. These include:

- Each partner is considered to act on behalf of the partnership, which means that the actions of each partner are generally binding on the other partners.
- Partners are jointly and severally liable for partnership debt and wrongful acts of other partners. This means that a partner can be liable, together with all other partners, for unpaid partnership debt and wrongful acts of other partners.
- Property contributed to the partnership or acquired with partnership funds is considered partnership property and is to be held exclusively for partnership use.
- Partners are entitled to share equally in profits and losses, unless there is an agreement to the contrary.
- Partners are not entitled to remuneration (salary or wages) or to interest on capital contributions. As is explained later in this Chapter, any remuneration or interest on capital is treated as an income allocation and is not deductible to the partnership.

18-18. When the term partnership is used without a qualifying adjective, the reference is normally to a general partnership.

### Limited Partnerships

18-19. A limited partnership is a partnership with at least one general partner (i.e., a partner whose liability is unrestricted) and one or more limited partners. To be considered a limited partnership, the partnership has to be registered as such under the appropriate provincial registry. In the absence of such registration, the partnership will be considered a general partnership.

18-20. A limited partner has the same rights, duties, and obligations as a general partner with one important difference, a limited partner is only liable for partnership debt and wrongful or negligent actions of other partners to the extent of the partner's actual and promised contributions to the partnership.

**EXAMPLE** A limited partner contributes $1,000 and agrees to contribute a further $2,000 within a certain period of time. That partner will be potentially liable for up to $3,000 of claims against the partnership.

18-21. It should be noted, however, that a limited partner will lose his limited liability protection, and therefore become a general partner, if he participates in the management of the partnership.

### Limited Liability Partnerships (LLP)

18-22. This form of partnership is only available to certain types of professionals as specified in provincial legislation. For example, in Ontario, only lawyers and chartered professional accountants are currently permitted to form such partnerships. In contrast, Alberta extends this legislation to include several other professional groups.

18-23. Unlike members of limited partnerships, members of limited liability partnerships are personally liable for most types of partnership debt. There is, however, an important exception. Members of limited liability partnerships are not personally liable for obligations arising from the wrongful or negligent action of:

- their professional partners; or
- the employees, agents or representatives of the partnership who are conducting partnership business.

**We suggest you work Self Study Problem Eighteen-1 at this point.**

# Co-Ownership, Joint Ventures, And Syndicates

## Introduction

18-24. Our major concern in this Chapter is the taxation of partnerships. However, as we have noted, there are other types of organizations that have structures similar to partnership arrangements. Co-ownership, joint ventures, and syndicates are specific types of arrangements that contain features common to partnerships. For example, each of these organizational structures requires two or more persons. This common feature is but one of several that may make it difficult to determine whether a specific arrangement is, in fact, a partnership or, alternatively, a different type of arrangement.

18-25. As was discussed in the preceding material, the ability to distinguish these arrangements from partnerships is a critical factor in determining how a given organization will be taxed. To facilitate this process, the following material will provide additional clarification as to the nature of these other types of organizations.

## Co-Ownership

18-26. Two or more persons co-own property when they share a right of ownership in the property. For income tax purposes, the most important consideration is that profits and losses are shared in partnerships, but are typically accounted for individually by joint or co-owners.

18-27. Two common forms of co-ownership are joint tenancy and tenancy in common. A joint tenancy is a form of property ownership where two or more joint tenants have ownership and possession of the same property. Individual interests are identical and the property cannot be sold or mortgaged without the consent of the other joint tenant(s). Spouses commonly own their principal residence and other properties in joint tenancy.

18-28. In a tenancy in common arrangement, tenants can sell or mortgage their interests without the consent of other tenants in common. An example of a situation where a tenancy in common might be used would be the ownership of a vacation property by three brothers.

## Joint Ventures

### *Defined*

18-29. Those of you familiar with financial reporting will recognize that some corporations are referred to as joint ventures. They are distinguished by the fact that control of the corporation is shared by two or more of the shareholders. This type of joint venture does not present any special problems in terms of tax procedures. They are subject to the same rules that are applicable to other corporate taxpayers.

18-30. Our concern here is with unincorporated joint ventures. Like partnerships, joint ventures are not defined taxable entities under the *Income Tax Act*. Further, such arrangements are not governed by provincial legislation. However, both the *Income Tax Act* and the *Excise Tax Act* refer to joint ventures, implicitly giving recognition to this form of organization.

18-31. The similarity of partnerships and joint ventures has led the CRA to make the following statement in 1988:

> Unlike partnerships, the concept of joint venture is not recognized by statute (i.e. provincial legislation). Although the Canadian courts have, in certain cases, recognized joint venture as being a business relationship that is distinct from partnership, in our experience, many so-called joint ventures are in fact partnerships... The CRA would rely on provincial partnership law in making such a determination.

18-32. This would suggest that, even if participants in a joint venture call the arrangement a joint venture, if it contains the three basic partnership elements, it will be considered a partnership for tax purposes and treated accordingly.

18-33. Despite this lack of clarity, joint ventures do appear to exist for tax purposes. Factors that have been used to distinguish this type of organization include:

- co-venturers contractually do not have the power to bind other co-venturers;
- co-venturers retain ownership of property contributed to the undertaking;
- co-venturers are not jointly and severally liable for debt of the undertaking;
- co-venturers share gross revenues, not profits; and
- while partnerships may be formed for the same purpose as a joint venture, they are usually of longer duration and involve more than a single undertaking.

### *Tax Procedures*

18-34. If an arrangement is considered to be a joint venture rather than a partnership, there will be no separate calculation of income at the organization level. The participants will be subject to the usual rules applicable to individuals or corporations. As we have noted, this will provide these taxable entities with greater flexibility on such issues as how much CCA can be taken for the current year. You should note, however, since joint ventures are not a recognized entity for tax purposes, they cannot have their own fiscal period.

## Syndicates

18-35. A syndicate is generally defined as a group of persons who have agreed to pool their money or assets for some common purpose. Because a syndicate is not a legal entity, a reference to an interest in a syndicate usually means an interest in the combined assets of the syndicate members. The Canadian courts have traditionally reserved the name "syndicate" for specialized projects that are financial in nature. An example of a syndicate would be an association of insurance companies who combine forces to underwrite substantial high-risk insurance policies.

18-36. There are no specific income tax rules that apply to syndicates. This means that, if there are any activities of the syndicate that result in assessable amounts of income, the relevant amounts will have to be allocated to the members of the syndicate.

**We suggest you work Self Study Problem Eighteen-2 at this point.**

# Partnership Income, Losses, And Tax Credits

## Introduction

18-37. The goal of partnership taxation is to apply the income tax consequences of partnership income, losses, and tax credits to the persons who are its partners. To implement this, a two stage process is involved:

> **Stage 1** Determine, at the partnership level, the various components of partnership income. This requires separate calculations for business income, property income, taxable capital gains, and allowable capital losses. For most partnerships, the most important component will be net business income.
>
> **Stage 2** Allocate the amounts that were determined in Stage 1 to the members of the partnership on the basis of the provisions of the partnership agreement.

18-38. In determining the business income component, we generally begin with the partnership's accounting figure for business income. The normal procedure is to convert this figure to Net Business Income for tax purposes. This conversion is based on a reconciliation process which is very similar to the reconciliation process that is used to determine Net Business Income For Tax Purposes (see Chapter 6). There are, however, some items that are specific to the calculation of business income for partnerships.

18-39. Following the determination of the amount of business income to be allocated to partners, separate calculations are carried out for amounts of property income, taxable capital gains, and allowable capital losses that will be allocated to the members of the partnership.

18-40. While it would be possible to calculate a Net Income For Tax Purposes for the partnership, this usually is not done. Such a figure has no real meaning for a non-taxable entity such as a partnership. Further, the calculation would serve no real purpose as the allocations to the partners are on a source-by-source basis. We would also note that there is no calculation of Taxable Income for a partnership. Again, as partnerships are not taxable entities, such a figure would have no real meaning.

## Applicable Concepts

### *Taxation Year*

18-41. ITA 96(1)(a) indicates that partnership income must be calculated as if the partnership was a separate person resident in Canada. ITA 96(1)(b) follows this by indicating that this calculation should be made as if the taxation year of the partnership were its "fiscal period". The ITA 249.1(1) definition of "fiscal period" indicates that, if any member of a partnership is an individual or a professional corporation, the partnership must have a December 31 year end. Otherwise, the only restriction is that the fiscal period cannot end more than 12 months after it begins. In effect, this means that, if all of the members of a partnership are corporations (other than professional corporations), the partnership can use any year end.

18-42. ITA 249.1(4) provides an exception to the general taxation year end rules that are described in the preceding paragraph. If the following conditions are met, the partnership can elect to use a non-calendar year as its fiscal period.

- all of the members of the partnership are individuals; and
- an election is filed with the CRA using a prescribed form (T1139) prior to the end of the partnership's first fiscal year. The complications associated with making this election are discussed in Chapter 6, Business Income.

**EXAMPLE** ABC Partnership has five corporate partners, two of which are professional corporations, and one partner who is an individual. The new partnership wants to choose a March 31 fiscal year end.

**ANALYSIS** The partnership must use a December 31 fiscal year end. The presence of both an individual and professional corporations as partners prevents the use of a non-calendar fiscal period under the ITA 249.1(1) definition. Similarly, the presence of corporations prevents the election of a non-calendar fiscal period under ITA 249.1(4).

18-43. The CRA has been concerned with the ability of a corporate member of a partnership to defer taxes because it has a different year end from the partnership. Consider a partnership that has a fiscal year ending on January 31, 2019 and a corporate member with a December 31, 2019 year end. The corporation would not have to include the partnership income earned during the year ending January 31, 2019 until it files its return for the fiscal year ending December 31, 2019, despite the fact that most of that income was earned in the corporation's year ending December 31, 2018. In effect, this provides an 11 month deferral of income recognition.

18-44. To deal with this problem, special rules are applicable in situations where a partnership has a fiscal period that ends after the taxation year end of a corporation that has a significant interest (more than 10 percent) in that partnership.

18-45. The rules would require income adjustments similar to those required for "additional business income" which is covered in Chapter 6, Business Income.

18-46. In the example from Paragraph 18-42, the legislation requires the corporation to include 334/365 of the partnership income for its year ending January 31, 2019 in its corporate tax return for the year ending December 31, 2018. This accrual would be deducted in the corporate taxation return for the year ending December 31, 2019, with a new accrual added for 334/365 of the partnership income for the year ending January 31, 2020.

## Partnership Property

18-47. In general, partners legally own a percentage interest in partnership property in co-ownership. The partnership cannot own property since it is not a legal entity. This creates a problem for income tax purposes because the partnership income tax rules require that the partnership determine its income or loss as if it were a separate person.

18-48. If the partnership does not own partnership property, then gains and losses from the disposition of such property would not be considered those of the partnership. In addition, the partnership would not be able to claim CCA. The *Income Tax Act* resolves this problem with an assumption that the partnership, for income tax purposes, is considered to own partnership property.

## Retention Of Income Characteristics

18-49. Partnerships are treated as a conduit for transferring income from an originating source into the hands of the partners. Further, it is an unfiltered conduit in that the character of various types of income is not altered as it flows to the partners. If a partnership earns dividend income, capital gains, or realizes a business loss, these sources would be received as dividend income, capital gains, or business losses in the hands of the partners.

> **EXAMPLE** Partnership Deux has two equal general partners. Aside from its business income, Deux earns $50,000 of interest income and realizes a $20,000 capital gain. None of this amount is withdrawn by the two partners. Corporation Dos has two equal shareholders. It also earns $50,000 of interest income and realizes a $20,000 capital gain. The corporation does not pay out any of this amount as dividends.
>
> **ANALYSIS - Partnership** For Partnership Deux, each partner is considered to have received $25,000 [(1/2)($50,000)] of interest income and to have realized a $5,000 taxable capital gain [($20,000)(1/2)(1/2)]. Note that the income is subject to taxation, despite the fact that none of it has been withdrawn from the partnership (see next section on Accrual Basis).
>
> **ANALYSIS - Corporation** In the case of Corporation Dos, the shareholders will not be taxed until the income is withdrawn from the corporation. The income will, however, be taxed at the corporate level on the basis of its nature (e.g., capital gains, business, or property income). When it is distributed to the shareholders, it will not retain its characteristics as capital gains, business, or property income. Rather, the entire distribution will be taxed in the hands of the shareholders as dividends.

18-50. In addition to retaining its basic character, the originating location of each source of income is retained. If, for example, a partnership earns dividends on shares of U.S. corporations, this income would be received by the partners as foreign source dividends. Not surprisingly, the related foreign tax credits would also be flowed through to the partners.

## Accrual Basis

18-51. The partnership must calculate its net business income on an accrual basis unless its partners are professionals who can elect under ITA 34 to use the billed basis of income recognition (as noted in Chapter 6, the use of the billed basis of income recognition is being phased out). On its determination, this income is then allocated to the partners. The partners include their share of this income at the time of allocation, without regard to when the funds are withdrawn from the partnership. It is the allocation, not the receipt of the funds, which creates income for the partners that is subject to tax.

18-52. In effect, this places the partners on an accrual basis for the determination of their individual business income amounts. While drawings of cash from the partnership reduce the partner's adjusted cost base, they will have no impact on the partner's Taxable Income or the amount of taxes the partner will be required to pay.

## Exercise Eighteen - 1

**Subject:** Partnership Income - Accrual Basis

During the year ending December 31, 2019, PQR Partnership has business income of $55,000, capital gains of $40,000, and receives eligible dividends of $10,000. Norm Peters has a 50 percent interest in the income of this partnership. During 2019, Norm withdraws $30,000 from the partnership. Determine the tax consequences for Mr. Peters for the 2019 taxation year.

**SOLUTION available in print and online Study Guide.**

## Calculating The Amounts To Be Allocated

### *Net Business Income*

18-53. For most partnerships, the major income source to be allocated is the partnership's Net Business Income. As we have noted, this is a reconciliation process which starts with accounting Net Income. Various items are then added or subtracted to arrive at the partnership's Net Business Income. A discussion of the major items in this reconciliation process follows.

**Salaries Or Wages To Partners (Add Back)** Partnership agreements often provide that partners be paid salaries or wages to recognize the time they devote to partnership business. Reflecting provincial partnership legislation, the CRA does not permit the deduction of such amounts in the determination of a partnership's Net Business Income.

If salaries or wages have been deducted in determining the accounting Net Income of the partnership, they must be added back in the determination of Net Business Income for tax purposes of the partnership. While this is required in determining the total Net Business Income, it does not prevent priority allocations of this total to specific partners to reflect the work they do for the partnership. If the partnership agreement calls for such salary or wages entitlements for specific partners, the specified amounts will be allocated to those partners, with only the remaining Net Business Income allocated by some formula (e.g., a 60:40 split of the residual).

A further point here relates to whether the salaries or wages are withdrawn from the partnership. The allocated amount is included in the partner's income and added to his adjusted cost base. If, as would be the usual situation, the amounts are withdrawn from the partnership, they reduce the partner's adjusted cost base, but do not influence the partner's Net Income For Tax Purposes.

**Interest On Partner Capital Contributions (Add Back)** The preceding analysis of the treatment of partner salaries is also applicable to interest on capital contributions. If the partnership agreement calls for such amounts, they cannot be deducted in the determination of the Net Business Income of the partnership.

If interest payments on partner capital contributions have been deducted in the determination of accounting Net Income, they must be added back to arrive at the partnership's total Net Business Income. If the partnership agreement indicates that such amounts be treated as a priority allocation of the partnership's total Net Business Income, they will be included in the partner's Net Income For Tax Purposes and added to his adjusted cost base. If the specified amounts are withdrawn, the withdrawal does not affect the partner's Net Income For Tax Purposes. The drawings would, however, be deducted from the partner's adjusted cost base.

**EXAMPLE - Salaries And Interest On Capital Contributions** Bob and Ray are partners who share the Net Business Income of their partnership equally after a provision has been made for their salaries and Ray's interest on his capital

contributions. For the year ending December 31, 2019, the Income Statement of the partnership, prepared in accordance with GAAP, is as follows:

| | | |
|---|---|---|
| Revenues | | $135,000 |
| Expenses: | | |
| Cost Of Sales | ($45,000) | |
| Salary To Bob | ( 30,000) | |
| Salary To Ray | ( 10,000) | |
| Interest On Ray's Capital Contributions | ( 11,000) | |
| Other Expenses | ( 10,000) | ( 106,000) |
| Accounting Income | | $ 29,000 |

**ANALYSIS** For tax purposes, the Net Business Income of the Bob And Ray Partnership would be calculated as follows:

| | |
|---|---|
| Accounting Income | $29,000 |
| Add: | |
| Salaries To Bob and Ray ($30,000 + $10,000) | 40,000 |
| Interest On Capital Contributions | 11,000 |
| Net Business Income | $80,000 |
| Allocations For Salaries And Interest On Capital Contributions ($40,000 + $11,000) | ( 51,000) |
| Residual Net Business Income (To Be Shared Equally) | $29,000 |

This amount would be allocated to the two partners as follows:

| | Bob | Ray |
|---|---|---|
| Priority Allocation For Salaries | $30,000 | $10,000 |
| Priority Allocation For Interest | N/A | 11,000 |
| Allocation Of Residual On Equal Basis [(50%)($29,000)] | 14,500 | 14,500 |
| Total Business Income Allocation | $44,500 | $35,500 |

Despite the fact that the partnership agreement may refer to salaries or wages and/or for interest on capital for the partners, from a legal point of view they are allocations of Net Business Income. Given this, the usual payroll procedures (e.g., source deductions) are not required on the salaries or wages.

**Drawings (Add Back)** Drawings by partners are not deductible expenses in the determination of any type of partnership income. As GAAP for partnerships is not clearly laid out, partnership drawings may or may not be deducted in the determination of accounting Net Income. To the extent they have been deducted in determining accounting income, they will have to be added back in the determination of the partnership's Net Business Income.

**Dividend Income (Deduct)** Dividends received will be included in the partnership's accounting Net Income figure. These amounts will be allocated to partners as a separate source of income. This is discussed in more detail starting at Paragraph 18-57. Given this, dividends must be deducted in converting the partnership's accounting Net Income to the partnership's Net Business Income.

**Charitable Donations (Add Back)** These amounts are normally deducted in the determination of a partnership's accounting Net Income. In converting this figure to Net Business Income, these amounts will have to be added back.

Donations made by a partnership that otherwise qualify as charitable donations are flowed to the partners based on their partnership agreement. Corporations are

entitled to a deduction in arriving at Taxable Income, whereas individuals are entitled to a credit against Tax Payable. Donations, and the related credit or deduction, are only allocated to those partners who are partners on the last day of the partnership's year end.

**Political Contributions (Add Back)** As political contributions are normally subtracted in the determination of accounting Net Income, these amounts will have to be added back to arrive at the partnership's Net Business Income.

Qualifying political contributions are allocated to each partner as per the partnership agreement. Similar to charitable donations, the allocation of the contributions and the related credit is dependent on being a partner on the last day of the partnership's year in which the political contribution was made.

**Personal Expenditures (Add Back)** In some situations, a partnership may pay personal expenses of one or more partners. While these amounts may be deducted as an expense for accounting purposes, they are not deductible to the partnership in determining Net Business Income. To the extent that these amounts have been deducted in the determination of accounting Net Income, they will have to be added back in the determination of the partnership's Net Business Income.

**Business Transactions With Partners (No Adjustment)** While this may not be consistent with partnership law, administrative practice of the CRA does not restrict the ability of partners to enter into legitimate business transactions with their partnerships. Examples include loans made by partners to the partnership and the renting of a partner's property to the partnership. As long as the transactions are on regular commercial terms, such transactions will be treated for tax purposes in the same manner as transactions with persons who are not partners.

In general, such transactions will not require any adjustment of the accounting Net Income to arrive at the partnership's Net Business Income.

**Capital Cost Allowance** Any CCA that is deducted on partnership property must be deducted at the partnership level. As you would expect, the half-year rule, the AccII provisions, the available for use rules, the rental property restrictions, and other depreciable property rules are all applicable when determining the amount of CCA that a partnership may claim.

You should note that this requirement removes the possibility of different partners taking different amounts of CCA. If maximum CCA is deducted at the partnership level, all partners must, in effect, deduct maximum CCA.

It is not uncommon in partnership financial statements for the amortization figures to be based on the CCA amounts used for tax purposes. If this is the case, no net adjustment is required in converting accounting Net Income to the partnership's Net Business Income. However, the normal procedure, even when the amounts involved are the same, would be to add back the amortization figures used in the accounting statements, and deduct the appropriate CCA figure.

**Amounts Related To Dispositions Of Capital Assets** Accounting Net Income will include 100 percent of the accounting gains and losses on dispositions of depreciable and non-depreciable capital assets. These amounts must be added back (losses) or deducted (gains) in the determination of the partnership's Net Business Income.

As net taxable capital gains will be allocated to the partners as a separate source of income, these amounts are not included in the calculation of the partnership's Net Business Income. This is discussed in more detail starting at Paragraph 18-55.

As you will recall from Chapter 5, a disposition of a depreciable capital asset can also result in recapture of CCA or terminal losses. If recapture occurs, it will be added to accounting Net Income in order to arrive at the partnership's Net Business Income. Similarly, terminal losses will be deducted.

**Figure 18 - 2**
**Conversion - Partnership Accounting Income**
**To Partnership Net Business Income**

**Additions To Accounting Income:**
**- Specific To Partnerships**
- Salaries of partners
- Interest on capital accounts
- Drawings of partners (if deducted)
- Personal expenditures of partners (if deducted)

**- General Business (Additions)**
- Amortization, depreciation, and depletion of tangible and intangible assets (Accounting amounts)
- Recapture of CCA
- Tax reserves deducted in the prior year
- Losses on the disposition of capital assets (Accounting amounts)
- Charitable donations
- Political contributions
- Interest and penalties on income tax assessments
- Non-deductible automobile costs
- Fifty percent of business meals and entertainment expenses
- Club dues and cost of recreational facilities
- Non-deductible reserves (Accounting amounts)
- Fines, penalties, and illegal payments

**Deductions From Accounting Income:**
**- Specific To Partnerships**
- None

**- General Business (Deductions)**
- Capital cost allowances (CCA)
- Terminal losses
- Tax reserves claimed for the current year
- Gains on the disposition of capital assets (Accounting amounts)
- Deductible warranty expenditures
- Landscaping costs
- Dividends included in accounting income
- Other property income included in accounting income

**Reserves** The use of reserves is discussed in both Chapter 6 (e.g., reserve for bad debts) and Chapter 8 (e.g., capital gains reserve). These reserves are claimed by the partnership in exactly the same manner as partners, corporations, and trusts.

In general, the amounts involved in the application of reserve procedures are the same as the related amounts for accounting purposes. For example, the amount deducted for bad debts in the accounting statements is usually the same net amount that results from the application of reserve procedures in tax returns. However, the normal procedure here in determining the partnership's Net Business Income is to remove the accounting amounts and replace these amounts with the tax figures, even when the amounts are the same.

18-54. Figure 18-2 provides a list of the more common additions and deductions that arise in the process of converting the accounting income of a partnership into Net Business Income. You will note that many of the items presented here are the same as those presented in Figure 6-3 in Chapter 6 which covers business income.

## Capital Gains And Losses

18-55. In the preceding section, we noted the need to remove any accounting gains and losses on capital asset dispositions in the determination of Net Business Income. If dispositions created recapture of CCA or terminal losses, these amounts were added or deducted in the determination of Net Business Income. However, capital gains and losses were not included.

18-56. As you would expect, capital gain and losses are allocated to the members of the partnership to be included in their tax returns. Without going into great detail, once these amounts are allocated they are subject to the same rules that would apply if the gains and losses had resulted from dispositions by the partners themselves. One-half of the net gains will be included in Net Income For Tax Purposes. On some gains the lifetime capital gains deduction may be available and some losses may qualify as Business Investment Losses. If the partner is a private corporation, there will be an addition to the capital dividend account.

## Exercise Eighteen - 2

**Subject:** Partnership Net Business Income

The JL Partnership has two partners. Partner J, because he is actively managing the partnership, receives an annual salary of $45,000. Because Partner L has contributed most of the capital for the business, he receives an interest allocation of $22,000. The partnership agreement calls for the remaining profits, and all other allocations, to be split 60 percent to J and 40 percent to L. The salary and interest amounts are deducted in the determination of accounting Net Income and withdrawn by the partners during the year.

During the taxation year ending December 31, 2019, the partnership's accounting Net Income is $262,000. Other relevant information is as follows:

- The accountant deducted amortization charges of $26,000. Maximum CCA is $42,000.
- Accounting Net Income includes a deduction for charitable donations of $2,500.
- Accounting Net Income includes a gain on the sale of land of $24,000.

Determine the amounts of Net Business Income that will be allocated to Partner J and Partner L for the year ending December 31, 2019.

**SOLUTION available in print and online Study Guide.**

### *Dividend Income*

18-57. As we have noted in the preceding section, dividends received by a partnership are removed in the determination of the partnership's Net Business Income. When they are allocated to the members of the partnership to be included in their tax returns, they retain their character as eligible, non-eligible or capital dividends. Their treatment subsequent to allocation will depend on the type of taxpayer involved and/or the type of dividend received:

- Partners who are individuals must gross up the dividends by either 38 percent (for eligible dividends) or 15 percent (for non-eligible dividends). The dividends are then eligible for the usual dividend tax credits.
- Dividends allocated to corporate partners will not be grossed up. One hundred percent of the amount allocated will be included in Net Income For Tax Purposes. To the extent the dividends are from taxable Canadian corporations, they can be deducted in the determination of the corporation's Taxable Income.
- Capital dividends received by the partnership are allocated as capital dividends to both individual and corporate partners, generally retaining their tax-free nature.

### *Foreign Source Income*

18-58. Foreign source income received by a partnership will be allocated to the partners as either business or property income. As you would expect, the amounts that will be allocated to the partners will be the pre-withholding amounts that accrued to the partnership. That is, to the extent that foreign taxes were withheld, they will be added to the amount received for purposes of allocating this income to the members of the partnership. As the pre-withholding amounts are allocated to the partners, the *Income Tax Act* allows these partners to make use of any available foreign tax credits and/or foreign tax deductions (calculation of these credits and deductions is covered in Chapters 7 and 11).

## Exercise Eighteen - 3

**Subject:** Partnership Income Allocations

TThe ST Partnership has two partners who share all types of income on an equal basis. Partner S and T are both individuals. The Partnership's accounting Net Income for the year ending December 31, 2019 is $146,000. No salaries or interest payments to partners have been included in this calculation. However, the $146,000 includes $12,000 in eligible dividends, as well as a $31,000 gain on the sale of unused land. Amortization Expense deducted is equal to maximum CCA. Determine the amounts that will be included in the Net Income For Tax Purposes of Partner S and Partner T for the year ending December 31, 2019.

**SOLUTION available in print and online Study Guide.**

### *Allocations Of Related Tax Credits*

18-59. In the preceding sections, we have covered the various types of income that will be allocated to partners and the related tax credits. The type of income and expenditures that could give rise to tax credits can be summarized as follows:

- Dividend Income - tax credit is available if the partner is an individual.
- Charitable Donations - tax credit is available if the partner is an individual.
- Foreign Source Income - tax credit is available to all partners if foreign tax is withheld.
- Political Contributions - tax credit is available to all partners, but as covered in Chapter 4, the *Canada Elections Act* bans political contributions by corporations.

## Exercise Eighteen - 4

**Subject:** Allocations To Partners - Related Tax Credits

For the year ending December 31, 2019, the MN Partnership has correctly computed its Net Business Income to be $141,000. The partnership agreement calls for all allocations to Partner M and Partner N to be on a 50:50 basis. Partner M and N are both individuals and neither partner has Taxable Income that will be taxed federally at 33 percent. In determining the Net Business Income amount, the partnership's accountant added back $3,500 in charitable donations and $1,200 in contributions to a registered political party. In addition, $4,200 in eligible dividends received were deducted. The partners have made no charitable donations or political contributions as individuals. Determine the amount of any tax credits that the partnership will allocate to Partner M and Partner N for the year ending December 31, 2019.

**SOLUTION available in print and online Study Guide.**

## Methods Of Allocation

18-60. As we have seen in the preceding sections, income amounts must be allocated on a source-by-source basis. While a partnership agreement might simply state that all types of income will be allocated on the same basis, there is nothing to prevent different allocations for different sources. For example, business income could be allocated on an equal basis, with capital gains being allocated to one specific partner.

18-61. There are many ways in which the members of a partnership may agree to allocate income or loss. These allocations may be fixed, variable, or a combination of fixed and variable elements. Factors such as the value of services provided to the partnership (a salary component), capital contributions (an interest component), and amounts of risk assumed (personal assets at risk) may be taken into consideration. Alternatively, allocations may be

based upon fixed ratios determined by the partners or, in the absence of some other agreement, the equal fixed ratios that automatically apply under partnership law.

18-62. In general, the CRA will accept any income allocation agreement that is reasonable. It is possible, however, that the agreement could be constructed in a manner that would reduce or postpone taxes (e.g., an example of this would be the allocation of all partnership losses to partners with high levels of current income). In addition, an allocation could be used for income splitting purposes (e.g., allocation of large amounts of partnership income to a low-income spouse on a basis that is not consistent with his contribution of services or capital). In either of these circumstances, the CRA can apply ITA 103(1) or (1.1) to re-allocate the income on the basis that is reasonable in the circumstances.

**We suggest you work Self Study Problems Eighteen-3 and 4 at this point.**

# The Partnership Interest

## The Concept

18-63. A person who is a member of a partnership has the right to participate in profits and losses of the partnership and the right to an interest in partnership property, usually on the dissolution of the partnership. Such rights, collectively referred to as a partnership interest, constitute property for income tax purposes much in the same manner as a share of capital stock of a corporation.

18-64. A partnership interest is generally considered a non-depreciable capital property and, as a consequence, a disposition of a partnership interest will usually result in a capital gain or loss.

18-65. In many cases, a partnership interest is acquired when a partnership is formed. Each member of the new organization will acquire an interest, usually through the contribution of an amount of capital that is specified in the partnership agreement.

18-66. Alternatively, a partnership interest can be acquired from an existing partnership. This type of transaction can take two forms:

- The interest can be acquired directly from a current partner or partners by purchasing their interest.
- The interest can be acquired directly from the partnership by transferring assets to this organization.

## Acquiring A Partnership Interest

### *New Partnership*

18-67. For founding members of a new partnership, establishment of the adjusted cost base (ACB) of the partnership interest is very straightforward. For each of the partners, the ACB of their interest will simply be the fair value of the assets contributed to the partnership. If the contributions involve non-monetary assets, appraisals may be required. This, however, is a practical complication that does not alter the basic concept that is involved.

### *Admission To Existing Partnership*

18-68. From a technical point of view, partnership law provides that a partnership terminates on a change in the composition of the members (e.g., admissions or withdrawals of partners). In the discussion that follows, we assume that a partnership is not dissolved because of a change in its members. This assumption is consistent with the tax treatment of the partnership accounts. That is, tax law does not require the admission or withdrawal of a partner to be treated as a termination of the partnership, followed by the formation of a new partnership.

18-69. In those cases where a partnership interest is purchased directly from an existing partner, the procedures are very straightforward. If a person becomes a partner by acquiring

another partner's interest, then cost will equal the purchase price. For example, if Mr. Davis acquires the one-third interest of Mr. Allan for $90,000, then both the cost to Mr. Davis and the proceeds of disposition to Mr. Allan would be $90,000.

18-70. The situation becomes more complex when the partnership interest is acquired through direct payments to more than one partner.

**EXAMPLE** An existing partnership has three equal partners, each of whom has made a capital contribution of $16,000. They would like to bring in a new equal partner, with each partner then having a 25 percent interest in the organization. The new partner, Mr. Zheng agrees to pay $30,000 to each of the existing partners for one-quarter of their one-third interest. Note that by selling one-quarter of their one-third interest, each partner retains a 25 percent interest [(75%)(1/3) = 25%].

**ANALYSIS** Mr. Zheng would have an ACB of $90,000, the consideration given up for the 25 percent interest.

Each of the original partners would have a capital gain calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition To Each Partner | $30,000 |
| ACB of Part Interest [(25%)($16,000)] | ( 4,000) |
| Capital Gain For Each Partner | $26,000 |

18-71. The capital accounts in the accounting records of the partnership and the partners' ACB will be as follows:

| | Partner 1 | Partner 2 | Partner 3 | Mr. Zheng |
|---|---|---|---|---|
| Capital Before Admitting Zheng | $16,000 | $16,000 | $16,000 | Nil |
| Adjustment For Admission Of Zheng | ( 4,000) | ( 4,000) | ( 4,000) | $12,000 |
| Ending Capital Accounts | $12,000 | $12,000 | $12,000 | $12,000 |
| ACB Of Partnership Interest | $12,000 | $12,000 | $12,000 | $90,000 |

18-72. Note that, while the accounting values for the interests of the original three partners are equal to their ACBs, this is not the case for Mr. Zheng. In contrast to his accounting value of $12,000, his ACB would be his cost of $90,000 [(3)($30,000)].

18-73. To this point, we have only considered situations where assets were given to specific partners in return for the new partner's acquired interest. There are also situations in which the new partner makes a payment directly to the partnership in return for his interest.

18-74. Returning to the example in Paragraph 18-70, if Mr. Zheng had paid the $90,000 directly to the partnership, there would be no tax consequences for the existing partners. No disposition of any part of their interest would have occurred and, as a consequence, no capital gain would be recorded and the ACBs of their interests would remain at $16,000. Mr. Zheng's interest would be recorded at $90,000 for both tax and accounting purposes.

## Exercise Eighteen - 5

**Subject:** Admission Of A Partner

Alan and Balan are equal partners in the Alban Partnership. On September 1, 2019, Alan and Balan's partnership capital account balances are $48,000 each. This is also equal to the adjusted cost base of their interests. As the result of paying $40,000 to each of Alan and Balan, Caitlan is admitted as an equal partner (1/3 interest) on September 1, 2019. Calculate the tax effects of the partner admission for Alan and Balan. In addition, determine the accounting balances for each of the partner's

capital accounts after the admission of Caitlan, as well as the adjusted cost base for each partner after the admission of Caitlan.

**SOLUTION available in print and online Study Guide.**

## Adjusted Cost Base Of The Partnership Interest

### *Basic Concept*

18-75. As we have noted, a partnership interest is viewed in tax legislation as a non-depreciable capital asset. A discussed in Chapter 8, the adjusted cost base (ACB) of a capital property is defined in ITA 54 as its cost, plus or minus the adjustments in ITA 53.

18-76. In the preceding section, we illustrated how the ACB of a partnership interest would be determined at the time a partnership interest is acquired.

18-77. Subsequent to its acquisition, the partnership interest is determined by starting with the ACB of the preceding year and adjusting it for various items. The most common adjustments are for:

- current year income allocations;
- current year Drawings; and
- current year capital contributions.

18-78. There are, however, many other possible adjustments and most of these will be covered in this section. It is important to note the importance of making these adjustments. If these adjustments were not required, any gain or loss on a subsequent sale of the partnership interest would result in these amounts becoming part of the gain or loss on the sale.

> **EXAMPLE** John Port acquires his partnership interest for \$100,000. At a later point in time, he makes an additional capital contribution of \$20,000. Subsequent to making this additional contribution, he sells his interest for \$150,000.
>
> **ANALYSIS** As we shall note in the material which follows, John will add the \$20,000 capital contribution to his adjusted cost base, resulting in a new value of \$120,000 (\$100,000 + \$20,000). Given this, the capital gain on the disposition of the interest will be \$30,000 (\$150,000 - \$120,000). If he had not made the required adjustment, the gain would have been \$50,000 (\$150,000 - \$100,000).

### *Timing Of Adjustments*

18-79. Before proceeding to a discussion of the more common adjustments to the cost base of a partnership interest, some attention must be given to the timing of these adjustments. With respect to capital contributions and drawings, the timing is very straightforward. These adjustments are made at the time of the contribution or drawing.

18-80. In contrast, those adjustments related to allocations of income or tax credits are not made during the period in which the income or tax credit arises. Rather, these adjustments to the ACB of a partnership interest are made on the first day of the following fiscal period. These procedures will be illustrated in the material that follows.

### *Adjustments For Partnership Income Components*

18-81. It would be unusual, in any given year, for the adjusted cost base of a partnership interest not to be adjusted for partnership income allocations. As this must be added on a source-by-source basis, specific sources are given separate consideration here:

> **Net Business Income** As discussed in our section on partnership income determination, accounting Net Income must be converted to the partnership's Net Business Income. This amount is allocated to each partner on the basis of the partnership agreement. The amounts so determined will be added (Net Business Income) or subtracted (Net Business Loss) to the adjusted cost base of each partner. As noted, this increase or decrease does not occur until the first day of the following fiscal period.

**EXAMPLE** Tom and Theresa begin the Double T partnership in January, 2019 and select December 31 as their year end. They each contribute $1,000 to Double T. During 2019, the partnership earns $21,000 in gross service revenue. The only expenses incurred are $6,000 in business meals and entertainment.

**ANALYSIS** Accounting Net Income for the partnership would be $15,000 ($21,000 - $6,000). However, Net Business Income would be $18,000, the $15,000 of accounting Net Income, plus $3,000, the non-deductible one-half of the expenses for business meals and entertainment. This means that each partner would be allocated $9,000 [(1/2)($18,000)] in business income, and each partnership interest would be increased by the same amount. While the income amounts would be included in the partners' 2019 tax return, the addition to the adjusted cost base would not be made until January 1, 2020.

**Capital Gains And Losses** As discussed previously, these amounts will be allocated to the partners on the basis of the partnership agreement. Once these amounts are allocated, the taxable or allowable amounts (one-half) will be included in the partner's tax returns.

Despite the fact that only one-half of these amounts will be taxable or deductible, the adjustment to the ACB of the partnership interest is for the full amount and occurs on the first day of the following fiscal period. This inclusion of the full amount provides for the non-taxable one-half of the gain to be recovered on a tax free basis if the partnership interest is sold.

**EXAMPLE** Weekday Partnership has four equal partners and a December 31 year end. Each partner contributed $1,950 when the partnership began on May 1, 2019. Weekday used the initial contributions of $7,800 to acquire two parcels of land. Both parcels were capital property and were sold in December, 2019. The sale of parcel A resulted in a capital gain of $5,300 and the sale of parcel B resulted in a capital loss of $700. There were no other transactions during the fiscal year.

**ANALYSIS** The total capital gain for each partner is $1,150 [(1/4)($5,300 – $700)]. The allocation to each partner's Net Income For Tax Purposes will be the taxable amount of $575 [(1/2)($1,150)]. However, the allocation to the partnership interest will be, as shown in the following table, the full amount of the partner's share of the capital gain.

The ACB of each partnership interest is calculated as follows:

| | | |
|---|---|---|
| ACB - May 1, 2019 to December 31, 2019 | | $1,950 |
| Net Capital Gain Allocated: | | |
| Capital Gain [(1/4)($5,300)] | $1,325 | |
| Capital Loss [(1/4)($700)] | ( 175) | 1,150 |
| ACB Of Partnership Interest - January 1, 2020 | | $3,100 |

**Dividends** As previously discussed, taxable dividends earned by a partnership retain their character (i.e., eligible, non-eligible or capital) when they are allocated to the partners. In calculating the ACB of a partnership interest, a partner's share of both capital and taxable dividends is added to the ACB of his partnership interest on the first day of the following fiscal period.

**EXAMPLE** Fred and Barney are equal partners in Stone-Works Partnership that began operations January 1, 2019. A December 31 year end was selected. Each partner initially contributed $5,000. The only income received by the partnership was $13,000 of eligible dividends, and $4,200 of capital dividends. No amounts were withdrawn from the partnership in 2019.

**ANALYSIS** Each partner is required to include one-half of the taxable dividends of $13,000, plus an additional 38 percent gross-up, in his 2019 Net Income For

Tax Purposes. This amounts to income of $8,970 [(50%)($13,000)(138%)]. In conjunction with this allocation, each partner would be eligible for a federal dividend tax credit of $1,347 [(50%)($13,000)(38%)(6/11)]. The capital dividends are not included in each partner's income as they are tax free. The ACB of Fred and Barney's interest would be as follows:

| | |
|---|---|
| ACB - January 1, 2019 to December 31, 2019 | $ 5,000 |
| Allocation Of Dividends Subject To Tax [(50%)($13,000)] | 6,500 |
| Allocation Of Capital Dividends [(50%)($4,200)] | 2,100 |
| ACB Of Partnership Interest - January 1, 2020 | $13,600 |

Two things should be noted in this calculation. First, for purposes of calculating the ACB of the partnership interests, no gross up is added to the dividends subject to tax. Second, the dividends are not added to the ACB until the first day of the year following their allocation to the partners.

### Adjustments For Capital Contributions And Drawings

18-82. These adjustments require little in the way of explanation:

- Net capital contributions are added to the adjusted cost base of the partner's interest.
- Drawings reduce the adjusted cost base of the partnership interest.

Note that bona fide loans by a partner to the partnership are not considered capital contributions. Similarly, loans from the partnership to a partner are not considered to be drawings.

**EXAMPLE** The ACB of Mr. Allan's partnership interest is $20,450 at January 1, 2019. In March, 2019, he contributes $8,200 to the partnership as a capital contribution and makes withdrawals of $2,000 in each of May, August, and November, 2019.

**ANALYSIS** The ACB of Mr. Allan's partnership interest is calculated as follows:

| | |
|---|---|
| ACB – January 1, 2019 | $20,450 |
| Capital Contributions – March 2019 | 8,200 |
| Drawings – May, August And November 2019 [($2,000)(3)] | ( 6,000) |
| ACB – December 31, 2019 | $22,650 |

### Charitable Donations and Political Contributions

18-83. Amounts donated or political contributions made by a partnership in a particular year are considered donated or contributed by each partner in proportion to that partner's profit sharing ratio. As it is the partners who enjoy the benefits of making the contributions (i.e., the deductions or tax credits), such amounts reduce the ACB of a partnership interest. Note, however, this adjustment does not occur until the first day of the following fiscal period.

**EXAMPLE** During the taxation year ending December 31, 2019, a partnership donated $7,500 to charitable organizations. The three partners, who are all individuals, each have a one-third interest in profits. All donations are eligible for the charitable donations tax credit.

**ANALYSIS** Each of the three partners would be entitled to allocations of $2,500 towards the calculation of their individual charitable donations tax credit for 2019. As a consequence of this allocation, the ACB of each of their partnership interests would be reduced by $2,500. As we have noted, this reduction does not occur until January 1, 2020.

### Negative ACB

18-84. In general, if negative adjustments to the ACB of a capital asset exceed its cost plus any positive adjustments to the ACB, the excess must be taken into income under ITA 40(3) as

a capital gain. While technically an ACB can only be positive or nil, it is common to refer to assets that have experienced such adjustments as having a negative adjusted cost base.

18-85. This creates a problem for partnership interests in that withdrawals are deducted from the ACB of the partnership interest in the year they occur, while income allocations are only recorded on the first day of the following year. As partners usually withdraw their anticipated income allocations during the year in which they accrue, negative ACBs for partnership interests would not be unusual.

18-86. Because of this problem, the *Income Tax Act* allows general partners to carry forward a negative ACB, without taking the capital gain into income. This deferral is applicable until the partner disposes of his interest, either through a sale or as the result of a deemed disposition at death.

> **EXAMPLE** During 2019, in anticipation of the 2019 allocation of partnership income, a partner draws $42,000 from the partnership. For 2019, his share of partnership income is $45,000. On January 1, 2019, his partnership interest has an ACB of $25,000.
>
> **ANALYSIS** On December 31, 2019, the ACB of this partnership interest would be nil and there would be an excess of drawings over the January 1, 2019 ACB of $17,000 ($25,000 - $42,000). In the absence of a special provision for partnership interests, $8,500 [(1/2)($17,000)] would have to be taken into the partner's income as a taxable capital gain. However, because of the special provision applicable to partnership interests, this will not be the case. Note that, on January 1, 2020, the ACB of this interest would be $28,000 ($25,000 - $42,000 + $45,000).

18-87. When the disposition results from a deemed disposition at death, there are rollover provisions that allow a continued carry forward of the negative ACB when the partnership interest is bequeathed to a spouse or common-law partner, or a trust in favour of a spouse or common-law partner.

18-88. Note that the preceding rules only apply to active general partners. In the case of limited partners (see Paragraph 18-91) or general partners who are not active in the partnership, the deferral of the gain that is implicit in carrying forward a negative ACB is not available. Such amounts must be taken into income in the year in which they occur.

## Exercise Eighteen - 6

**Subject:** ACB Of Partnership Interest

On January 1, 2019 Raymond and Robert form the RR Partnership. The partnership has a December 31 year end. The partnership agreement provides Robert with a 40 percent share of profits and losses. Robert initially contributes $12,500 and makes a further contribution of $7,200 on June 10, 2019. He withdraws $4,000 on October 31, 2019. RR Partnership has the following sources of income for 2019:

| | |
|---|---:|
| Capital Gain On Corporate Shares | $11,600 |
| Eligible Dividends Received From Canadian Corporations | 3,100 |
| Net Business Income | 46,700 |

Determine the ACB of Robert's partnership interest on December 31, 2019, and at January 1, 2020. In addition, determine the amount that would be included in Robert's 2019 Net Income For Tax Purposes as a consequence of his interest in the RR Partnership.

**SOLUTION available in print and online Study Guide.**

## Disposition Of A Partnership Interest

### *Sale To An Arm's Length Party*

18-89. If a partnership interest is sold to an arm's length party, the tax effects are very straightforward. The adjusted cost base of the partnership interest is subtracted from the proceeds resulting from its sale. If the result is positive, it is a capital gain, one-half of which will be taxed in the hands of the partner. Alternatively, if the result is negative, one-half of this amount will be an allowable capital loss which can be deducted by the partner to the extent of his current year taxable capital gains. Any unused amount can be carried over to previous and subsequent years.

### *Withdrawal From Partnership*

18-90. When a partner withdraws from a partnership, he is essentially disposing of his interest in that partnership. While this could involve using partnership assets to buy out the partner, the more normal procedure is to have one or more of the other partners purchase the interest of the withdrawing partner.

> **EXAMPLE** The QST Partnership has three partners who share all income amounts on an equal basis. The ACB of their partnership interests are as follows:
>
> | | |
> |---|---:|
> | Partner Q | $250,000 |
> | Partner S | 250,000 |
> | Partner T | 250,000 |
>
> Partner T has decided to retire and will withdraw from the partnership. In return for his interest, each of the remaining partners will pay him $175,000.
>
> **ANALYSIS** Partner T will have a taxable capital gain of $50,000 [(1/2)($175,000 + $175,000 - $250,000)]. There will no immediate tax consequences to partners Q and S. However, the ACB of each of their interests will be increased to $425,000, the original $250,000, plus the additional investment of $175,000.
>
> You might wish to note that, assuming the assets of the partnership are not revalued, the accounting values for the interests of each of the remaining partners will be $375,000 [$250,000 + (1/2)($250,000)].

# Limited Partnerships And Limited Partners

## Definitions

### *Limited Partner*

18-91. A limited partnership is one that has at least one limited partner and one general partner. As defined in most provincial legislation, a limited partner is one whose liability for the debts of the Partnership is limited to the amount of his contribution to the Partnership, and who is not permitted to participate in the management of the Partnership. A partner whose liability is limited under partnership law is considered a limited partner for income tax purposes.

18-92. While the term "limited partner" generally refers to a partner who is relieved of general responsibility for amounts in excess of his capital contribution, the definition also includes partners whose liability is limited by the presence of specific contractual arrangements. Examples of this type of situation include:

- guarantees that someone will acquire their partnership interest regardless of its value;
- provisions indicating that amounts a partner has agreed to contribute to the partnership may never have to be paid; and
- provisions that guarantee the partner that he will be reimbursed for any partnership losses, usually by the general partner.

18-93. Note that members of a limited liability partnership (see Paragraph 18-22) do not fall within the definition of a limited partner. They have limited responsibility for certain types of liabilities (e.g., liabilities arising as the result of negligent action by their professional partners). However, they continue to have unlimited liability for other partnership obligations.

## At-Risk Rules

### Basic Concept

18-94. Historically, limited partnership structures have been used to fund high-risk ventures that benefit from generous income tax incentives. These structures have been used with Canadian films, Canadian mining and exploration operations, scientific research and experimental development, real estate, and construction.

18-95. General partners entice investors with limited liability protection, combined with the advantages of significant flow through of deductible losses and other tax incentives. The general partners usually do not share in the deductions, receiving their compensation through fees that are charged to the limited partners for managing the partnership.

18-96. The at-risk rules were introduced in order to restrict the ability of certain investors in partnerships, typically limited partners, to receive tax deductions or tax credits in excess of the amount that they stand to lose on their investment. In simplified terms, the at-risk rules work to ensure that $30,000 of tax deductions are not available to a limited partner who has less than $30,000 at risk.

### The At-Risk Amount

18-97. The at-risk amount sets the annual limit on the amount of tax preferences and incentives that may flow through to limited partners. Specifically, the *Income Tax Act* provides restrictions on the allocation to limited partners of scientific research and experimental development credits, resource expenditures, investment tax credits, non-farming business losses, and property losses. Under ITA 96(2.2), the at-risk amount is calculated at the end of a partnership's fiscal period as follows:

| | | |
|---|---|---|
| ACB Of The Partnership Interest | | $xxx |
| Share Of Partnership Income (But Not Losses) For The Current Period (Current Year Income Allocation For ACB Purposes - See Paragraph 18-98) | | xxx |
| Subtotal | | $xxx |
| Less: | | |
| Amounts Owed To The Partnership | ($xxx) | |
| Other Amounts Intended To Reduce The Investment Risk | ( xxx) | ( xxx) |
| At-Risk Amount | | $xxx |

18-98. The addition of the share of partnership income (not losses) is intended to ensure that current year income allocations, which will not be added to the ACB of the partnership interest until the following fiscal year, are taken into consideration at the end of the current year. The amount that is added here is the same income allocation that will be added to the ACB. That is, it does not include the dividend gross up, nor is it adjusted downwards for the non-taxable portion of capital gains.

18-99. The at-risk amount is reduced by two amounts. The first represents the outstanding balance of any amount owing by the partner to the partnership for the acquisition of the partnership interest. This amount is subtracted as it is included in the partnership interest but, prior to its actual payment, it is not really at risk.

18-100. The second amount relates to financial incentives designed to reduce the investment risk or exposure to the limited partner. An example of this would be a promise by the general partner to acquire the partnership interest at an amount in excess of the value of the partnership interest at the option of the limited partner.

### Limited Partnership Losses

18-101. The at-risk rules limit the ability of a limited partner to utilize certain types of losses. The rules do not directly affect farm losses and capital losses since these losses carry their own restrictions. Farm losses during the current year may be limited by the restricted farm loss rules and, in addition, any carry over of such restricted farm losses can only be applied against farming income (see Chapter 6). Similarly, current year allowable capital losses are only deductible to the extent of current year taxable capital gains.

18-102. ITA 96(2.1) indicates that a partner's share of losses, other than those associated with farming or the disposition of capital assets, can be deducted to the extent of the at-risk amount. The excess is referred to as the "limited partnership loss". It is a carry forward balance that can be carried forward indefinitely and can only be claimed against future income from the partnership or increases of the at-risk amount from that same partnership. There is no carry back of limited partnership losses.

**EXAMPLE** On January 1, 2019, Jenny Johnson acquires a 10 percent limited partnership interest in Tax-Time, a partnership that provides tax preparation services. This interest cost her $15,000, with $6,000 paid in cash and the balance of $9,000 payable in 36 months, without interest. At December 31, 2019, Tax-Time determines that it has a $22,000 capital gain and an $111,000 business loss. Jenny is allocated 10 percent of these amounts.

**ANALYSIS** As a 10 percent limited partner, Jenny is allocated a portion of the business loss equal to $11,100. However, her at-risk amount restricts the business loss that Jenny may be able to use. The at-risk amount is calculated as follows:

| | | |
|---|---|---|
| ACB Of The Partnership Interest | | $15,000 |
| Share Of Partnership Income [(10%)($22,000 Capital Gain)] | | 2,200 |
| Subtotal | | $17,200 |
| Less: | | |
| Amounts Owed To The Partnership | ($9,000) | |
| Other Amounts Intended To Reduce The Investment Risk | Nil | ( 9,000) |
| At-Risk Amount – December 31, 2019 | | $ 8,200 |

For 2019, Jenny will be able to deduct her share of the total partnership loss to the extent of her $8,200 at-risk amount. This will leave a non-deductible limited partnership loss for 2019 of $2,900 ($11,100 - $8,200). In general, Jenny will be able to use the limited partnership loss in 2020 or subsequent years if her at-risk amount increases. This may occur if she makes additional contributions, is allocated additional income from the partnership in 2020, or pays the amount owed to the partnership. It should also be noted that there are special adjustments to the ACB of a limited partner's partnership interest that are beyond the scope of this material.

## Exercise Eighteen - 7

**Subject:** Limited Partnership Loss

During 2019, Stuart Jones acquires an interest in a limited partnership for $200,000. An initial $50,000 is paid immediately, with the $150,000 balance payable in eight years. The general partner has agreed to acquire Stuart's interest at any subsequent date, returning his $50,000 payment and assuming responsibility for the $150,000 payable. For 2019, the limited partnership has allocated losses of $75,000 to Stuart. How much of this loss is Stuart entitled to claim as a deduction on his 2019 tax return? Indicate the amount of his limited partnership loss at the end of 2019.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problem Eighteen-7 at this point.**

# Transfer Of Property To And From A Partnership

## Definition Of Canadian Partnership

18-103. Since the ITA treats partners as distinct from the partnership, transferring property between the partners and the partnership may have income tax consequences. Such consequences are generally dependent on the purpose of the property transfer and whether the underlying partnership meets the ITA 102 definition of a "Canadian partnership":

> **ITA 102** In this subdivision, "Canadian partnership" means a partnership all of the members of which were, at any time in respect of which the expression is relevant, resident in Canada.

18-104. Whether the partnership is a general, limited, or limited liability partnership is irrelevant to the determination of its status as a Canadian partnership. In addition, the definition does not require that the partnership be formed in Canada. For example, a U.S. based partnership with all Canadian resident members would qualify.

18-105. If the required conditions are met, the *Income Tax Act* contains rollover provisions that provide for tax deferral on such transactions. However, where the conditions are not met, the transfers will be taxed as a disposition/acquisition at fair market value.

18-106. In covering this material on property transfers, we will first look at the rules applicable to transfers of property to and from a partnership when a rollover provision is not used. This will be followed by a discussion of some of the more commonly used partnership rollover provisions.

## Transfers With No Rollover Provision

### *Transfers From Partners To The Partnership*

18-107. If a person transfers property to a partnership of which he is member, or to a partnership of which he becomes a member as a result of the transfer, ITA 97(1) deems the person to have disposed of the property at fair market value and the partnership to have acquired the property at the same amount.

18-108. In general, the fair market value of the transferred asset is added to the ACB of the transferor's partnership interest. However, this addition would be reduced by any consideration given to the contributor because of his contribution. This rule is applicable without regard to whether the partnership qualifies as a Canadian partnership.

> **EXAMPLE** Diane Jefferson is a member of CG Partnership. She is required to make an additional 2019 capital contribution to the partnership and decides to make the contribution by transferring investments that she had purchased for $10,000. At the time of the transfer, they have a fair market value of $24,000.

> **ANALYSIS** Diane will be considered to have disposed of the investments for $24,000. This will result in a $7,000 [(1/2)($24,000 - $10,000)] taxable capital gain for 2019. Diane will also be considered to have made a $24,000 capital contribution that will increase the ACB of her partnership interest by the same amount. The partnership will be considered to have acquired the investments from Diane for $24,000.

## Exercise Eighteen - 8

**Subject:** Transfers From Partner To Partnership (No Rollover)

Charles Woodward is one of four equal partners in LIU Partnership (LIU). During the current year, Charles contributes a tract of land to the partnership. Charles does not use a rollover provision to make the transfer. Charles acquired the land for $33,000 and, at the time of transfer, it is valued at $100,000. Describe the tax consequences to Charles and LIU in the following three situations:

A. No consideration is received from LIU.
B. Charles receives $25,000 in cash from LIU on the transfer.
C. Charles receives $112,000 in cash from LIU on the transfer.

**SOLUTION available in print and online Study Guide.**

### *Transfers From The Partnership To Partners*

18-109. If a partnership transfers property to a partner, ITA 98(2) deems the partnership to have disposed of the property at fair market value and the partner to have acquired the property at the same amount. There is no requirement that the partner remains a partner after the transfer and the rule is applicable without regard to whether the partnership qualifies as a Canadian partnership. This provision is typically used when a partnership is dissolved, or when partial distributions of partnership property are made in an ongoing partnership.

**EXAMPLE** Bill Davis is a 40 percent partner in the FV Partnership. The partnership owns a piece of land that has an ACB of $2,900 and transfers it to Bill in June, 2019 for no consideration. The land has a fair market value of $10,000 at this time.

**ANALYSIS** The partnership is considered to have disposed of the land for its fair market value of $10,000, resulting in a capital gain of $7,100 ($10,000 - $2,900). Bill's share of this gain is $2,840 [(40%)($7,100)]. This amount will be allocated to Bill and, as a consequence, he will report a taxable capital gain of $1,420 [(1/2)($2,840)] in his 2019 tax return. Bill will also be considered to have acquired the land for $10,000 and to have made a withdrawal from the partnership of $10,000. The ACB of his partnership interest will be reduced by the $10,000 withdrawal and increased by the $2,840 allocation of the capital gain.

## Exercise Eighteen - 9

**Subject:** Transfers From Partnership To Partners

Darlene is one of five equal partners in the DG Partnership. During the taxation year ending December 31, 2019, DG distributes some of its investments to each of the partners. The distributed investments have an adjusted cost base of $39,000 and, at the time of transfer, they have a fair market value of $94,000. Darlene receives one-fifth of these investments. At the time of this transfer, the adjusted cost base of Darlene's partnership interest is $30,000. What are the tax consequences to DG and Darlene with respect to this distribution? Your answer should include Darlene's adjusted cost base for the investments and the amount of her partnership interest on both December 31, 2019, and on January 1, 2020.

**SOLUTION available in print and online Study Guide.**

## Common Partnership Rollovers

### Transfers From Partners To The Partnership

18-110. If a person transfers property to a Canadian partnership and all members of that partnership jointly elect, then property transferred to the partnership may be transferred on a rollover basis. This means that the property can be transferred at elected values (usually tax values), rather than at the fair market values that must be used in the absence of a rollover provision. This rule applies both to persons who are existing partners, as well as to persons who become partners by contributing property to the partnership.

18-111. ITA 97(2) indicates that, for this type of transfer, the ITA 85(1) rules apply. The ITA 85(1) rules are generally applicable to transfers of property to a corporation and are discussed in detail in Chapter 16. There are, however, some differences in the application of these rules when the transfer is to a partnership. The more notable of these differences are as follows:

- Real property inventory can be transferred to a partnership, but not to a corporation.
- When a transferor takes back consideration with a value less than that of the property transferred to a corporation, it may involve a gift to a related party. In the case of transfers to a partnership, the gift portion is added to the ACB of the partnership interest. As discussed in Chapter 16, if such a transfer was made to a corporation, it would usually result in double taxation of the gifted amount.
- When a transferor receives consideration in excess of the value of the property transferred to a corporation, the excess is subject to taxation. When this happens in conjunction with a transfer of property to a partnership, the excess is generally viewed as a drawing and is not subject to taxation.

18-112. Differences between the elected amounts and consideration other than a partnership interest affect the ACB of the partnership interest.

**EXAMPLE** Janice Donovan will join the On-Off Partnership that provides interior lighting products. She plans to make an initial capital contribution of a parcel of land with an ACB of $100,000 and a fair market value of $250,000. She wishes to transfer the land at an elected value of $160,000. The existing members agree and file a joint election authorizing the transaction for $160,000. Janice has a choice between three different packages of consideration:

A. No cash.
B. Cash of $100,000.
C. Cash of $160,000.

**ANALYSIS** ITA 97(2) uses the transfer limits described within ITA 85. The basic acceptable transfer range is from the land's ACB of $100,000 to its fair market value of $250,000. While not applicable in this case, the elected value is also limited to the amount of non-partnership interest consideration received. The relevant values for the three Cases are as follows:

| Case | ACB Of Partnership Interest | Capital Gain |
|---|---:|---:|
| No Cash | $160,000 | $60,000 |
| Cash Of $100,000 | $ 60,000 | 60,000 |
| Cash Of $160,000 | Nil | 60,000 |

## Exercise Eighteen - 10

**Subject:** Transfers From Partner To Partnership (With Rollover)

Samantha Floren is one of three equal partners in the SFL Partnership. During the current year, Samantha transfers land to the partnership as a capital contribution. She had acquired the land several years ago for $156,000. At the time of transfer, it is valued at $263,000. She would like to use any available rollover provision in order to minimize her current taxes. Assuming the appropriate rollover provision is used, what are the tax consequences of this transfer?

**SOLUTION available in print and online Study Guide.**

### Partnership Property Transferred To A New Partnership

18-113. A partnership may be dissolved in a number of situations. Included would be the addition or retirement of partners in cases where the partnership agreement does not provide for the continuation of the partnership. The dissolution of a partnership is considered to be a disposition of partnership property and, in the absence of a rollover provision, would result in tax consequences to the partners. However, this treatment can be avoided if the partnership property is transferred to a new partnership.

18-114. ITA 98(6) provides automatic (i.e., no election is required) rollover treatment where all of the property of a Canadian partnership that has ceased to exist is transferred to a new Canadian partnership. A further condition is that all of the members of the new partnership must have been members of the old partnership.

18-115. While many rollover provisions provide tax free treatment by providing for a deemed disposition at the tax cost of the property, ITA 98(6) takes a different approach. This Subsection deems the old and new partnerships to be the same entity, with the result being that there is no disposition of the property and no tax consequences to the transferor. This means that the ITA 98(6) rollover involves fewer complications than would be found in most rollover applications.

18-116. It is important to note that, while all of the members of the new partnership have to have been members of the old partnership, not all of the members of the old partnership have to become members of the new partnership. This rollover is typically used when a partner retires.

18-117. The retirement of a partner usually involves distributing some of the partnership property to the retiring partner. This makes it impossible to fully comply with the requirement of ITA 98(6) that all of the property of the old partnership be transferred. This problem was resolved by IT-338R2, "Partnership Interests - Effects On Adjusted Cost Base Resulting From The Admission Or Retirement Of A Partner", which states that all of the property of the old partnership is considered to mean all the property after the settlement of a retired partner's interest. While IT-338R2 has been cancelled, it appears that the CRA continues to maintain this position.

### Partnership Property Transferred To A Sole Proprietorship

18-118. This rollover, provided for in ITA 98(5) applies automatically where a Canadian partnership ceases to exist and, within three months of the cessation date, one of the partners continues to carry on the partnership business as a sole proprietor. This rollover treatment is provided for partnership property distributed to the proprietor and, in general, ensures that there are no tax consequences associated with the disposition of that proprietor's partnership interest.

18-119. There is an exception in situations where the tax cost of partnership property received by the proprietor exceeds the ACB of his or her partnership interest. In this case, there will be a capital gain. Alternatively, if the ACB of the proprietor's partnership interest

exceeds the tax cost of partnership property received by the proprietor, the rules allow the tax cost of non-depreciable partnership property to be increased to reflect this difference. You might wish to note that this is similar to the bump that is available in amalgamations and subsidiary wind ups (see Chapter 17)

18-120. This rollover typically applies where one of the partners in a two-person partnership retires or dies, leaving the remaining person to continue the business. As a partnership must have at least two partners, there is no possibility of the partnership continuing. Note, however, that the rollover only applies to the partner who continues the business. A retiring partner will have a disposition at fair market value with the usual tax consequences associated with such a disposition.

## Partnership Property Transferred To A Corporation

18-121. The decision to convert a partnership to a corporation, or to incorporate a partnership, generally arises when a partnership that has realized losses in its initial years becomes profitable. Prior to that time, the partnership form is useful as it allows the partners to use the partnership losses to offset their income from other sources. Once the partnership has become profitable, corporate status may be preferred because of the availability of the small business deduction, the possibility of deferring taxes on income retained within the corporation, or the desire to split income with other related persons.

18-122. The process of incorporating a partnership on a tax deferred basis generally requires two rollovers, ITA 85(2) and ITA 85(3). Under ITA 85(2), eligible partnership property is transferred to a taxable Canadian corporation for either shares or a combination of shares and other consideration. The transfer takes place at elected values which can include the tax cost of the property, thereby avoiding tax consequences to the partnership. This rollover treatment is only available if the corporation and all the partners jointly elect rollover treatment.

18-123. At this point, the partnership is holding shares in the corporation and the partners are continuing to hold their partnership interests. ITA 85(3) then provides for a transfer at tax values of the partnership's holding of the corporation's shares to the partners in return for their partnership interests. This is accompanied by a wind-up of the partnership.

18-124. If the following conditions are met, the ITA 85(3) rollover treatment is automatic, with no election required:

- The partnership must have disposed of property to a taxable Canadian corporation under ITA 85(2).
- The partnership must be wound up within 60 days of the disposition of its property to the corporation.
- Immediately before the partnership is wound up, the only property it holds is money or property received from the corporation as a result of the application of ITA 85(2).

18-125. The winding-up of a partnership usually requires the distribution of all partnership property, the settlement of partnership obligations, as well as certain provincial formalities such as de-registration.

18-126. These rules are designed to provide a tax free means of incorporating a partnership. However, tax consequences may arise in two particular instances. First, ITA 85(2) only applies to "eligible property" as defined in ITA 85(1.1). The major item that would not be included in this definition would be an inventory of real property (i.e., real property held for sale rather than use). If such non-eligible property is transferred from a partnership to a corporation, the transfer will be at fair market value, resulting in the usual tax consequences.

18-127. A second situation in which the incorporation of a partnership may result in tax consequences would arise when a partner receives consideration in excess of the ACB of his partnership interest. While this may result in a capital gain, it can be avoided with the proper use of the ITA 85(3) rollover provision.

**EXAMPLE** Danielle and Christine are equal partners in the Flag Partnership. The recent success of the business has led to a decision to incorporate. The only asset Flag owns is an inventory of flags that cost $50,000, but is currently worth $200,000. The ACB of each partner's partnership interest is $34,000. The corporation will issue only common shares as consideration for the acquisition of the flag inventory.

**ANALYSIS** Danielle, Christine, and the corporation will jointly elect to transfer the inventory from the Flag Partnership at its tax cost of $50,000. Flag will be deemed to have disposed of the inventory for $50,000 and the corporation will be considered to have acquired the inventory for $50,000. No tax consequences will arise on the disposition. Flag Partnership will receive common shares of the corporation that will have an ACB and PUC of $50,000. At this point, Flag Partnership owns shares of the corporation and the corporation owns the inventory.

When the Flag Partnership distributes the shares to Danielle and Christine, the following tax consequences will arise:

- The Flag Partnership will be considered to have disposed of the shares for their tax cost of $50,000, resulting in no tax consequences.
- Each partner will be considered to have acquired the shares for an amount equal to the ACB of her partnership interest ($34,000).
- Each partner will be considered to have disposed of her partnership interest for the cost of the shares acquired from the partnership ($34,000). As a result, there is no capital gain or loss.

**We suggest you work Self Study Problem Eighteen-8 at this point.**

# Specified Investment Flow Through Partnerships

18-128. Because partnerships are not taxable entities, income is flowed through such structures without income taxes being assessed at the partnership level. As we shall see in Chapter 19, trusts are also "flow-through" entities. That is, even though trusts are taxable entities for income tax purposes, if all of their income is distributed to beneficiaries, no taxes will be paid at the trust level.

18-129. At one point in time, this flow-through feature of partnerships and trusts resulted in the conversion of a large number of business entities into publicly traded partnerships and trusts. As the government viewed this development as a significant form of tax avoidance, legislation was put in place which designated most of these publicly traded entities as specified investment flow through partnerships and trusts (SIFTs). The legislation was such that it made SIFTs sufficiently unattractive that, with the exception of real estate investment trusts, they have largely disappeared. Given this, we do not provide coverage of this subject in *Canadian Tax Principles*, except in Chapter 7, Property Income, where we have limited coverage of real estate income trusts (REITs).

**Additional Supplementary Self Study Problems Are Available Online.**

## Key Terms Used In This Chapter

18-130. The following is a list of the key terms used in this Chapter. These terms, and their meanings, are compiled in the Glossary located at the back of the Study Guide.

# Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 18:

- 8 Self Study problems,
- 4 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

# Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### *Assignment Problem Eighteen - 1*

***(Existence Of Partnership)***

Barry and Lance Booker are brothers who live in the same New Brunswick community. Barry is an accountant who specializes in advising small businesses. Lance has held various jobs in restaurants over the last few years. However, he is currently between jobs.

As a result of information he has accumulated while working with his accounting clients, Barry has started a new business involving catering services. To this end, he has acquired a building, furniture, and equipment. He has also registered the business and opened up a bank account under his own name. Barry spends a few hours each day managing the business.

As he is aware of Lance's financial difficulties, he has decided to treat his brother as a partner in this business, sharing profits on a 50:50 basis when filing their annual income tax returns. There is no formal partnership agreement.

**Required:** In the following two **independent** Cases, determine whether a partnership exists.

A. Lance's involvement with the business consists of helping Barry pick out furniture and equipment and occasionally taking messages when Barry is out of town. It appears that the business will be consistently profitable.

B. Lance does all the accounting, payroll and invoicing for the business. He also does most of the ordering and is responsible for paying the suppliers. While it is unlikely that the business will be profitable in its first year of operation, Barry expects it to experience profitability in subsequent years.

## Assignment Problem Eighteen - 2

### (Existence Of Partnership)

Mr. Poliacik joined Mr. Ewing's practice by entering into a business association with Mr. Ewing. They operated under the name " Ewing/Poliacik". Mr. Poliacik made no capital contribution on joining.

Both individuals were lawyers. Mr. Poliacik's specialty was litigation. Mr. Ewing was involved in non-litigation matters.

An agreement was signed, but it never referred to the individuals as partners or the association as a partnership. When asked why they did not refer to themselves as partners, Mr. Poliacik stated that they did not know each other well enough to accept the risks of partnership. The agreement stated that all fees billed by each individual belonged to that individual.

Both parties agreed to open a combined general and trust bank account. Both parties had signing authority on the general account, although Mr. Poliacik's authority was limited to client disbursements only. Mr. Ewing had sole signing authority on the trust account. The accounts did not indicate that they were registered to a partnership.

Mr. Poliacik's fees were to be split based on a graduated scale. The first $100,000 was to be split 50:50, then 60:40 on the next $25,000, 80:20 on the next $25,000 and 90:10 thereafter. The larger percentage went to Mr. Poliacik. In addition, Mr. Poliacik was entitled to 10 percent of fees billed by Mr. Ewing to clients introduced by Mr. Poliacik.

Mr. Ewing agreed to be 100 percent liable for office expenses and bookkeeping services. Mr. Poliacik's share of the office operating expenses was $62,500 in the first year. This amount would be adjusted in the future as the expenses increased. Mr. Poliacik was not entitled to the 10 percent finder's fee from Mr. Ewing until his share of the annual expenses had been paid.

Mr. Poliacik was responsible for making his own CPP contributions and professional insurance. He will register for GST as an individual and his personal income tax return will not include a separate calculation of partnership income.

The combined business was not registered for GST purposes. There were no filings with the law society indicating that Mr. Poliacik and Mr. Ewing were partners.

**Required**: Determine whether the business association is a partnership.

## Assignment Problem Eighteen - 3

### (Partnership Vs. Joint Venture)

Chantale Bergeron is a real estate agent who had dreamed of becoming a real estate developer for a long time. In 2016, she received a substantial inheritance and purchased a tract of land with the intention of developing a group of residential lots. She paid $1,200,000 for the land which she had secretly learned from contacts would soon be adjacent to a new highway exit.

As Chantale had spent her inheritance purchasing the land and had no track record in the development business, she had difficulty in finding financing for the required $700,000 in site servicing costs. She finally located a developer, Elise Ltd. who was willing to provide the required $700,000 on an interest free basis in return for 40 percent of the profit resulting from the sale of the lots.

By December 31, 2019, it was estimated that the land's fair market value had increased to $2,000,000 because of the opening of the highway exit. During 2020, the sites are developed, with the servicing costs coming in at the estimated $700,000. All of the lots are sold prior to December 31, 2020 for total proceeds of $3,700,000.

**Case A** On December 31, 2019, Chantale and Elise Ltd. enter into a joint venture agreement. Chantale transfers the land to Elise Ltd. At the end of 2020, Elise Ltd. provides Chantale with 60 percent of the profits resulting from the development and the sale of the lots.

**Case B** On December 31, 2019, Chantale and Elise Ltd. form a partnership to develop the lots. Chantale transfers the land to the partnership using the ITA 97(2) rollover provision to defer the gain on the transfer. The partnership agreement specifies that Chantale is entitled to all of the deferred gain on the land transfer at December 31, 2019, as well as 60 percent of the profits resulting from the sale of the lots.

**Required:**

A. Calculate the amount that will be added to Chantale's Net Income For Tax Purposes in 2019 and 2020 for Case A and Case B and compare the results.

B. Assume that the Case B approach is used. Calculate the adjusted cost base of the partnership interest for both Chantale and Elise Ltd. on December 31, 2020 and January 1, 2021.

## *Assignment Problem Eighteen - 4*

### *(Partnership Income Allocation)*

Saul and Samuel Brock are brothers and Chartered Public Accountants with significant experience in tax work. Until 2019, they have worked separately. However, they have decided that working together would produce synergies that would increase their aggregate income. Given this, as of January 1, 2019, they initiate the Brock and Brock Partnership.

Saul will be entitled to a salary of $72,000 per year, while Samuel's salary will be $48,000. In addition, Samuel will receive interest at 6 percent on his average capital balance for the year. All of these amounts were withdrawn from the partnership prior to December 31, 2019. Neither brother has Taxable Income that will be taxed federally at 33 percent in 2019.

The components of their partnership agreement dealing with income allocation are as follows:

**Business Income** After the allocation of priority amounts for salaries and interest on capital contributions, any remaining business income will be allocated 60 percent to Saul and 40 percent to Samuel.

**Capital Gains** As Samuel has contributed the majority of capital to the partnership, he will be entitled to all capital gains that are recognized by the partnership.

**Dividends** Any dividends received by the partnership will be split equally between the two partners.

For the year ending December 31, 2019, their GAAP based financial statements indicate that they had net business income of $649,522. Other information related to this result is as follows:

- Salaries to Saul and Samuel of $120,000 ($72,000 + $48,000) were deducted.
- Interest on Samuel's capital contribution of $4,800 was deducted.
- Business meals of $18,976 were deducted.
- Amortization expense of $31,632 was deducted.
- Charitable contributions of $4,520 were deducted.

**Other Information**

1. For tax purposes, the brothers intend to deduct maximum CCA for 2019. This amount has been calculated to be $38,597.
2. The partnership has 2019 gains on the sale of shares held as temporary investments in the amount of $16,164.
3. The partnership receives $10,462 in eligible dividends during 2019.
4. The charitable contributions will be allocated equally between the two brothers.

**Required:**

A. Calculate the amounts of income from the partnership that would be included in the Net Income For Tax Purposes of each of the two brothers.

B. Indicate the amount of any federal tax credits that each of the two brothers would be entitled to as a result of allocations made by the partnership at December 31, 2019.

## Assignment Problem Eighteen - 5

### (Partnership Income And ACB)

On January 1, 2019, a partnership is formed between two divorce lawyers who have, for a number of years, practiced individually. Each partner contributes $70,000.

During 2019, each partner is allocated a salary of $125,000, as well as interest on their beginning of the year capital balances at an annual rate of 5 percent. These amounts are withdrawn during the year. Any Net Business Income that remains after the priority allocations for salaries and interest will be split 50:50 by the two partners.

For the year ending December 31, 2019, their bookkeeper has prepared the following financial statements for the partnership. No amortization was deducted in preparing these statements.

**Settlements Unlimited**
**Balance Sheet**
**As At December 31, 2019**

| | |
|---|---|
| Cash | $ 45,189 |
| Accounts Receivable | 186,485 |
| Work In Progress | 232,814 |
| Furniture And Fixtures | 56,581 |
| Computer Hardware (At Cost) | 17,608 |
| Computer Applications Software (At Cost) | 13,440 |
| Total Assets | $552,117 |
| | |
| Accounts Payable | $109,872 |
| Initial Partner Capital | 140,000 |
| Income For The Period | 302,245 |
| Total Equities | $552,117 |

**Settlements Unlimited**
**Income Statement**
**For The Year Ending December 31, 2019**

| | |
|---|---|
| Revenues | $682,946 |
| Meals And Entertainment | $ 23,334 |
| Office Supplies | 12,382 |
| Partners' Salaries | 250,000 |
| Interest On Capital Contributions | 7,000 |
| Rent | 46,440 |
| Salaries | 41,545 |
| Total Expenses | $380,701 |
| Income For The Period (Accounting Values) | $302,245 |

The work in progress represents work done by the lawyers at their standard charge rate that has not been billed to clients at the year end.

**Required:**

A. The lawyers have come to you to determine the minimum amount that they must include in their 2019 tax returns as business income from the partnership.

B. Compute the ACB of each partner's partnership interest at December 31, 2019 and January 1, 2020.

Your answers should ignore GST and PST considerations.

### *Assignment Problem Eighteen - 6*

***(Partnership Income And Sale Of Partnership Interest)***

Jason and Joey Blake are brothers and lawyers. While they have worked independently for several years, on January 1, 2018, they have decided to form a partnership. On January 1, 2018, they each make a capital contribution of $350,000 in cash. Because Jason's experience is in a more lucrative area of law, he is to receive 60 percent of all partnership income, with Joey receiving the remaining 40 percent. Capital gains realized by the partnership, dividends received by the partnership and charitable donations will be shared equally.

During the partnership taxation year ending December 31, 2018, the partnership has net business income for tax purposes of $335,000. The partnership had no capital gains or losses or dividend income during 2018. The partnership made no charitable donations in 2018. During this taxation year, Jason withdrew $130,000, while Joey withdrew $102,000.

The partnership's 2019 Income Statement, prepared in accordance with generally accepted accounting principles, is as follows:

**Income Statement**
**Joey And Jason Blake Partnership**
**Year Ending December 31, 2019**

| | | |
|---|---|---|
| Revenues (Note 1) | | $823,000 |
| Operating Expenses: | | |
| Rent | ($95,000) | |
| Amortization Expense (Note 2) | ( 22,000) | |
| General Office Costs | ( 42,000) | |
| Meals And Entertainment | ( 16,000) | |
| Charitable Donations | ( 12,000) | |
| Office Salaries | ( 46,000) | ( 233,000) |
| Operating Income | | $590,000 |
| Other Income: | | |
| Gain On Sale Of Investments (Note 3) | $26,000 | |
| Eligible Dividends Received From Canadian Corporations | 22,000 | 48,000 |
| Net Income | | $638,000 |

**Note 1** The revenues in the accounting based Income Statement include $105,000 in unbilled work in progress. There was no unbilled work in progress at the end of the previous year. The brothers will use the ITA 34 election to record the partnership income on a billed basis.

**Note 2** Maximum 2019 CCA, which the partners intend to deduct, is $35,000.

**Note 3** The gain resulted from the sale of temporary investments. The investments had an adjusted cost base of $57,000 and were sold for $83,000.

During 2019, Jason had drawings of $310,000 while Joey had drawings of $242,000.

During 2019, Jason's only income was from the partnership. Other than credits related to partnership allocations, Jason's only tax credit was his basic personal credit.

On January 1, 2020, Jason sells his interest in the partnership to an arm's length individual for $643,000.

**Required:** Calculate Jason's federal Tax Payable for the year ending December 31, 2019. In addition, determine the taxable capital gain or allowable capital loss that would result from Jason's sale of his partnership interest. Ignore any CPP implications with respect to self-employment income.

## Assignment Problem Eighteen - 7

### *(Withdrawal Of A Partner)*

Tammy, Loretta, and Crystal formed a partnership on January 1, 2017. The partnership is organized to provide a variety of consulting services to a broad range of clients. Each partner makes an initial capital contribution of $270,000. The partners agree to use a December 31 year end.

The partnership agreement contains the following provisions with respect to the allocation of items to individual partners:

1. Both net business income and charitable contributions will be shared equally by the three partners.
2. Any capital gains realized by the partnership will be allocated on a 50:50 basis to Crystal and Loretta.
3. All of the eligible dividends received by the partnership will be allocated to Tammy.

During the period January 1, 2017 through December 31, 2019, the partnership operates successfully. The following information related to that period:

- The partnership earned net business income of $315,000.
- Amounts not included in the net business income figure were as follows:
  - The partnership received eligible dividends totaling $6,300.
  - The partnership realized a $24,800 capital gain.
  - The partnership made charitable donations only in 2019. The total amount involved was $9,900.
- Withdrawals from the partnership were as follows:
  - Tammy - $149,000
  - Crystal - $306,000
  - Loretta - $72,000
- Additional capital was required to expand the operations of the office and, as a consequence, each partner contributed an additional $104,000 in cash.

Near the end of 2019, after a number of heated arguments with Tammy and Crystal regarding the types of clients the partnership was servicing, Loretta decides to withdraw from the partnership effective January 1, 2020. After some negotiations, each of the other partners agree to pay her $210,000 in cash for one-half of her interest in the partnership, a total of $420,000. The payments are made on February 1, 2020. The partnership has net business income of $27,600 during January, 2020.

Loretta incurred legal and accounting fees in conjunction with this withdrawal transaction totaling $2,300.

**Required:**

A. Calculate the adjusted cost base of Loretta's partnership interest as of January 1, 2020.

B. Determine the amount of Loretta's gain or loss on the disposition of his partnership interest. Explain how this amount, and any other amounts related to the partnership, will be taxed in her hands during 2020.

C. Indicate how the adjusted cost base of each partner's interest will be affected by the withdrawal of Loretta from the partnership.

### *Assignment Problem Eighteen - 8*

***(Limited Partnership)***

On January 1, 2019, Jerry Adverse purchases a 25 percent interest in income and losses of the Precipice Enterprises Partnership for $200,000. Of this total, $120,000 is paid immediately, with the remaining $80,000 due on January 1, 2020. The partnership has a December 31 year end.

The general partner of the Precipice Enterprises Partnership has agreed to buy back Jerry's interest for $100,000, without regard to its fair market value on the buy back date. However, the agreement expires on January 1, 2021.

During the year ending December 31, 2019, the Precipice Enterprises Partnership records a net business loss of $1,200,000. Also during the year, the partnership has an $80,000 capital gain.

For the year ending December 31, 2020, the Precipice Enterprises Partnership has a further net business loss of $225,000. There are no other sources of income during this year.

Jerry does not ask the general partner to buy back his interest during the year ending December 31, 2020. As a consequence, the agreement expires on January 1, 2021.

During 2021, the Precipice Enterprises Partnership has net business income of $50,000.

Jerry has sufficient other sources of income to absorb any deductible losses generated by the partnership.

**Required:** For each of 2019, 2020 and 2021, calculate the following amounts related to Jerry's interest in the Precipice Enterprises Partnership:

- The adjusted cost base at the end of the year.
- The at-risk amount.
- The limited partnership income (loss) for the year.
- The deductible income (loss) for the year.
- The limited partnership loss carry forward at the end of the year.

### *Assignment Problem Eighteen - 9*

***(Partnership Winding-Up & Transfer To Corporation)***

The Jones, Haggard, and Twitty Partnership was formed several years ago by Conway Jones, George Haggard, and Merle Twitty. To establish the partnership, each of the individuals invested $450,000 in cash. They prepared a standard partnership agreement which indicated that all income and losses would be shared on an equal basis. The partnership has a December 31 taxation year.

On January 1, 2019, the adjusted cost base of the three partnership interests are as follows:

| | |
|---|---|
| Conway Jones | $ 880,000 |
| George Haggard | 698,000 |
| Merle Twitty | 567,000 |
| Total | $2,145,000 |

The total tax cost of the partnership assets is $2,145,000, the same amount as the adjusted cost base of the partnership interests. On January 2, 2019, the net assets of the partnership are transferred to a corporation using the provisions of ITA 85(2). The elected values are equal to the tax costs of the individual assets and liabilities.

Through the use of an appraiser, it has been established that the fair market value of the partnership is $2,925,000. Using this value, the corporation provides the following consideration to the partnership:

| | |
|---|---|
| Cash | $ 900,000 |
| Preferred Shares (At Fair Market Value) | 675,000 |
| Common Shares (At Fair Market Value) | 1,350,000 |
| Total Consideration | $2,925,000 |

The partnership will be liquidated within 60 days of the ITA 85(2) rollover and property received from the corporation by the partnership will be transferred to the three partners in accordance with ITA 85(3). Under the terms of the partnership agreement, they receive the following amounts:

| | Jones | Haggard | Twitty | Total |
|---|---|---|---|---|
| Cash | $ 465,000 | $ 283,000 | $ 152,000 | $ 900,000 |
| Preferred Shares | 225,000 | 225,000 | 225,000 | 675,000 |
| Common Shares | 450,000 | 450,000 | 450,000 | 1,350,000 |
| Total | $1,140,000 | $ 958,000 | $ 827,000 | $2,925,000 |

**Required**:

A. Determine the adjusted cost base of each of the assets received by the partners as a result of the transfer of partnership assets to the corporation.

B. Calculate the capital gain or loss for each partner resulting from the transfer of the consideration received by the partnership to the partners in return for the partnership interest.

## Assignment Problem Eighteen - 10
## (Additional Business Income)

**Note** This problem involves knowledge of "additional business income" when the election of a non-calendar fiscal period is made. This material is covered in Chapter 6 of the text.

On April 1, 2016, Craig Cardinal and Don Kvill formed a partnership to teach small craft flying lessons. They elected to use a March 31 fiscal year end, to coincide with the end of the winter aircraft maintenance program and the beginning of the summer training schedule. The two partners share equally in the profits of the partnership.

In the partnership income calculation for their 2017 tax returns, the "additional business income" was calculated to be $42,200. During the year ending March 31, 2018, the partnership earned Taxable Income of $64,000 and the partners withdrew $26,000 each.

From April 1, 2018 to March 31, 2019, the partnership earned Taxable Income of $58,000 and the partners withdrew $20,000 each.

**Required**: Determine the minimum amount of partnership income that Craig Cardinal and Don Kvill will have to include in their personal tax returns for the years 2018 and 2019.

# CHAPTER 19

# Trusts And Estate Planning

## A Note On Recent Changes

### Testamentary Trusts

#### *Pre-2016 Rules*

A testamentary trust is a trust that arises on, and as a consequence of, the death of an individual. Prior to 2016, such trusts benefitted from a number of special rules that are not available to inter vivos trusts (a trust established by an individual during their lifetime). The most important of these changes was that, unlike inter vivos trusts which have all of their income taxed at the maximum federal rate of 33 percent, testamentary trusts had their income taxed using the same system of graduated rates that is applicable to individuals.

As of January 1, 2016, the special provisions for most testamentary trusts ended. This means that, like inter vivos trusts, most testamentary trusts will have all of their income taxed at the maximum federal rate of 33 percent. The ability to take advantage of the lower rates in the tax bracket schedule was a key factor in tax planning for estates. The elimination of this benefit significantly alters the contours of the estate planning landscape.

#### *The Exception - Graduated Rate Estates*

Some relief is available in those situations where the assets in an individual's estate are not yet distributed and remain under the administration of an executor. The government has provided relief through the use of special classification of testamentary trust called a Graduated Rate Estate (GRE, hereafter). As the name implies, these entities can continue to use graduated rates for up to 36 months subsequent to an individual's death. The material which follows will define and explain the use of GREs.

### Tax On Split Income (TOSI)

Our material on the TOSI is found in Chapter 11. As was noted in that Chapter, the 2018 expansion of the applicability of these provisions has created a much more complicated environment for tax planning. We also noted that complete coverage of the TOSI legislation is beyond the scope of a general text such as this. In paper, the legislation for the TOSI stretches over 23 pages and is very complex.

In Chapter 11, which dealt with the TOSI at a basic level, we did not deal with the application of the TOSI to income that trusts provide to their beneficiaries and we will not deal with the application of the TOSI in this Chapter which provides general coverage of trusts.

While we will note situations in which the TOSI might be applicable, we will not extend our examples to provide calculations of this tax.

You should not let our approach mislead you as to the importance of the TOSI to trusts. As was the case with the just discussed changes to testamentary trusts, the expansion of the TOSI coverage has significantly altered the tax planning possibilities of using trusts with related individuals.

# Introduction

19-1. As is noted in Chapter 1, the *Income Tax Act* recognizes three groups of taxpayers: individuals, corporations, and trusts. In previous Chapters we have given detailed consideration to the determination of Taxable Income and Tax Payable for both individuals and corporations. In this Chapter, we will turn our attention to how this process works in the case of trusts.

19-2. Also in Chapter 1, we provide a brief introduction to tax planning, providing general descriptions of tax avoidance, tax deferral, and income splitting. In this Chapter we will find that trusts are one of the most powerful weapons in the tax planner's arsenal. They can provide a convenient and cost effective mechanism for splitting large amounts of property income among family members. Trusts can also be used to access the deferral and income splitting opportunities that are present in estate freeze transactions. In addition, they can play a significant role in many other tax and business planning arrangements.

19-3. While trusts remain a very powerful tax planning tool, as was noted in our introductory note regarding 2016 changes, their effectiveness in estate planning has been greatly reduced by the elimination of graduated rates for most testamentary trusts.

19-4. A further problem is that dealing with trusts requires an understanding of many legal issues that cannot be handled effectively by tax advisors alone. Further, legal advice in the area of trusts can be very expensive, with charges of $500 per hour or more being common for expert advice. When combined with an accountant's fees (which can vary greatly depending on the accountant), the costs to create and maintain a trust can be prohibitive. Since normally, the settlor (creator) of a trust doesn't personally benefit financially from creating a trust, this makes the high cost of a trust even less acceptable to the settlor.

19-5. We have previously encountered trusts in this text. In Chapter 7, which deals with property income, we indicated that most mutual funds are organized as trusts. Also in that Chapter, we noted the use of real estate investment trusts (REITs). In Chapter 10, when we considered various types of retirement savings arrangements, we noted that most of these arrangements involve the use of trusts. Registered Pension Plans, Registered Retirement Savings Plans, Registered Retirement Income Funds, and Deferred Profit Sharing Plans, all involve assets being contributed to a trust.

19-6. In this Chapter, we will not revisit the types of trusts that were considered in earlier Chapters. Rather, our focus in this Chapter will be on personal trusts that have been established by individuals as a part of a tax or estate planning scenario. This will include both trusts established during the lifetime of an individual, as well as trusts that arise as a consequence of the death of an individual. While trusts can be very important in tax planning arrangements that involve private corporations, we will not deal with this subject. The complexities involved in such arrangements go beyond the scope of this text.

19-7. In our material in this Chapter on estate planning we will give specific attention to the use of trusts. In addition, due to the importance of this subject, we will expand our coverage of estate planning to issues that go beyond the use of trusts. Particular attention will be given to general coverage of estate freeze transactions.

**Figure 19 - 1 Personal Trust Participants**

# Basic Concepts

## What Is A Trust?

### *Legal Perspective*

19-8. From a legal perspective, a personal trust is a relationship that arises when a settlor transfers property to a trustee to hold and administer for the exclusive benefit of the beneficiaries. This relationship is depicted in Figure 19-1.

19-9. The settlor is the person who sets up the trust and makes the initial transfer of property to the trustee. The trustee is the individual or institution that holds formal legal title to that property, while the beneficiaries are persons who will benefit from the property that is held by the trustee. The beneficiaries can have an interest in the income from the property, the capital value of the property, or both.

19-10. While each of these roles is separate in terms of its function in the trust arrangement, it is possible for more than one of the roles to be played by a single individual. A common example of this would be a father who is the settlor of a trust in favour of his children, but also serves as one of the trustees who holds the trust assets.

19-11. A basic feature of trust arrangements is the separation of the legal and beneficial ownership of the transferred property. Outside of trust arrangements, the legal owner of a property is normally entitled to any benefits associated with owning the property. This is not the case here. While the trustee holds legal title to the property, all of the benefits will accrue to the persons who are specified as the beneficiaries of the trust.

19-12. A trust is not, from a legal perspective, a separate entity. A trust cannot own property, cannot enter into contracts, and cannot be a defendant or plaintiff in a legal action. With respect to the transferred property, these rights and obligations belong to the trustee(s). We would note that you should not confuse trusts with a "trust company". Trust companies are, in fact, separate legal entities that are involved in the management of trusts.

19-13. Trusts are subject to provincial legislation and, as a consequence, the detailed rules will vary from province to province. One point to note, however, is that it is generally difficult to vary or revoke a trust. This is of particular importance in the case of deceased individuals. While the content of a will can be challenged by a disgruntled beneficiary and its intentions altered by a surviving spouse, this is a much more difficult process when assets are placed in a trust.

### *Tax Perspective*

19-14. Consistent with the legal perspective of trusts, the T4013 Trust Guide defines a trust as a binding obligation enforceable by law when undertaken. This definition also notes that it may be created by a person (either verbally or in writing), a court order, or by a statute.

19-15. While trusts do not exist as a legal entity separate from the trustees, income tax legislation does, in fact, treat trusts as a separate taxable entity, resulting in the need to file a separate tax return (T3) for each trust. This is established in the *Income Tax Act* as follows:

> **ITA 104(2)** A trust shall, for the purposes of this Act, and without affecting the liability of the trustee or legal representative for that person's own income tax, be deemed to be in respect of the trust property an individual, ...

19-16. This provision means that, in general, a trust will be taxed in the same manner as individuals. However, there are numerous special rules applicable to these entities. For example, most trusts cannot use the graduated rates (15 percent to 33 percent) that are available to individuals. However, each trust will have to determine a Net Income For Tax Purposes, a Taxable Income, and calculate a separate Tax Payable.

### Trusts And Estates

19-17. When an individual dies, there is a deemed disposition of all of his capital property. Property will be deemed to have been acquired at its fair market value on the date of death by various entities as per his will or, if there is no will, under the terms of provincial legislation. As discussed in Chapter 9, this deemed disposition will often have significant consequences on the calculation of Tax Payable in the final tax return of the decedent, i.e., deceased individual.

19-18. In this context, dictionaries define the term "estate" as the property of a deceased individual. This meaning is very clearly a reference to all of the property of the deceased individual and this, in effect, means that an individual can only have one estate.

19-19. In the great majority of cases, the estate property will pass to a beneficiary or beneficiaries immediately and will not require much attention from either tax advisors or lawyers. For example, Mom dies, leaving all of her property, which consists of a savings account and a principal residence, both of which are jointly held with Dad, to Dad. We do not need to give any attention to this type of situation.

19-20. However, some estates, particularly those of wealthier Canadians, can have many different types of property. This can include, publicly traded securities, shares of private companies, rental properties, business assets, and foreign investments. In such cases, there may be a considerable period of time between the date on which the individual dies and the date on which all the assets, or the proceeds from the disposition from the assets, is transferred to his beneficiaries. During this period, the estate assets, which are being administered by an executor, can produce income. When this happens, the executor of the estate will have to file a T3 return which includes this income.

19-21. As reflected in the following provision, the *Income Tax Act* has traditionally viewed the terms estate and trust as pretty much interchangeable:

> **ITA 104(1)** In this Act, a reference to a trust or estate (in this subdivision referred to as a "trust") shall, ...

19-22. As long as testamentary trusts were able to use graduated rates in determining their Tax Payable, using the two terms interchangeably did not present a problem. While deciding to tax the income of testamentary trusts in general at the maximum rate, the government also concluded that it would be appropriate to continue the use of graduated rates for income that accrues during the period of time that the estate assets have not yet been distributed.

19-23. To implement this latter goal, the government introduced the concept of a Graduated Rate Estate (GRE). While we will give more attention to this concept at a later point in this chapter, you should be aware that GREs can only be used for assets that are still held in the estate and administered by an executor prior to their distribution to beneficiaries.

## Establishing A Trust

### Three Certainties

19-24. The trusts that we are dealing with in this Chapter are established by words that are set out in a trust agreement. While some provinces allow, under limited circumstances, the use of oral trust agreements, this is rarely a wise course of action. Even if such agreements are accepted for legal purposes, the CRA tends to be skeptical of such agreements and may take the position that no trust exists.

19-25. In deciding whether or not a trust has, in fact, been created, it is important to look at what the courts have referred to as the three certainties. These can be described as follows:

**Certainty Of Intention** The person creating the trust must intend to create the trust and that intention must be clear to outside observers. This is usually accomplished by preparing a written document establishing the trust.

**Certainty Of Property** The property that is to be held in the trust must be known with certainty at the time the trust is created. This is usually accomplished by specifying the property in the trust document.

**Certainty Of Beneficiaries** The persons who will benefit from the trust property must be known with certainty at the time the trust is created. This is usually accomplished by specifying these persons in the trust document. Note that these persons must either be named as persons (e.g., Ms. Sally Phar) or be part of an identifiable class (e.g., my children). When a class designation is used, it must refer to a clearly identifiable group of persons. For example, designating "friends" as beneficiaries would not create an identifiable group.

19-26. In addition to establishing the facts required by the three certainties criteria, there must be an actual transfer of the trust property to the trustee. Until this transfer is completed, the trust does not exist.

### Importance Of Proper Documentation

19-27. Care must be taken to ensure that all of the necessary actions to create a trust have been carried out effectively. If one or more of the required elements is missing, the tax consequences can be significant. For example, if an individual attempted to establish a trust to split income with his adult children, a failure to complete all of the requirements necessary to that process could result in his being taxed on the income, rather than having it taxed in the hands of his adult children. This could result in the payment of a significant amount of additional tax.

### Exercise Nineteen - 1

**Subject:** Establishing A Trust

In each of the following Cases, an individual is attempting to establish a trust. For each of these Cases, indicate whether the attempt has been successful. Explain your conclusion.

**Case A** Jack Black sends a cheque to his sister to be used for the education of her two children.

**Case B** Jane Folsem transfers property to a trustee, specifying that the income from the property should be distributed to her friends.

**Case C** Robert Jones transfers property to a trustee, specifying that the income from the property should be distributed to his children.

**Case D** Suzanne Bush has signed an agreement that specifies that she will transfer her securities portfolio to a trustee, with the income to be distributed to her spouse.

**SOLUTION available in print and online Study Guide.**

## Returns And Payments - Trusts

19-28. Because they are considered by the government to be taxable entities, trusts must file tax returns. As discussed in Chapter 2, Procedures and Administration, the trust tax return (T3 return) must be filed within 90 days of a trust's year end. With respect to the payment of taxes, the tax payable on trust income is due no later than 90 days after a trust's year end. We also noted in Chapter 2 that, while there is a legislative requirement that most trusts make instalment payments, the CRA has waived this requirement on an administrative basis in the past. It appears that this practice will continue in the future.

19-29. With respect to penalties and interest related to late filing or late payment of taxes, the rules for trusts are the same as those that are applicable to individuals.

## Non-Tax Reasons For Using Trusts

19-30. In this Chapter we are largely concerned with the tax planning uses of trusts. However, it is important to note that trusts have non-tax uses which, in some situations, may be more important than the tax features of the particular arrangement. Some of these non-tax uses are as follows:

**Administration Of Assets** A trust can be used to separate the administration of assets from the receipt of benefits. For example, an individual with extensive investment knowledge might have assets transferred to a trust for his spouse at the time of his death. The goal here could be to provide professional management of the assets for the benefit of a spouse with only limited knowledge of investments.

**Protection From Creditors** An individual proprietor of a business might place some of his personal assets in a trust in order to protect them from claims by the creditors of the business. However, if this transfer is made when the individual is experiencing financial difficulties with his business, there are provisions in bankruptcy and other legislation which may undo the transfer.

**Privacy** If assets are bequeathed in a will, they will be subject to probate, the results of which are available to the public. This is not the case with assets that are in a trust when an individual dies.

**Avoiding Changes In Beneficiaries** If a father places assets in a trust for the benefit of his minor children, it ensures that these children will be the ultimate beneficiaries of the property. In contrast, if, as is common, his will bequeaths his assets to his wife with the intention that his children will be the ultimate beneficiaries of his property, his wife has no legal obligation to carry out this intention. This can be a particularly important issue if the surviving spouse remarries and other children become part of her family.

19-31. While there are additional examples of non-tax uses of trusts, the preceding should serve to give you some idea of the versatility of trust arrangements.

# Classification Of Trusts

## Introduction

19-32. The CRA's *Trust Guide* lists 32 different types of trusts, largely based on definitions that are included in the *Income Tax Act*. Understanding the meaning of the terms on this CRA list is complicated by the fact that some of the listed items are, in fact, a sub-classification of other items included on the list (e.g., an alter ego trust is a type of personal trust). A further roadblock to understanding the classification of trusts is that trusts are also classified in popular usage in terms of their goals or objectives. Such terms as "family trusts" and "spendthrift trusts" are commonly used, despite the fact that they have no real meaning in terms of tax legislation.

19-33. In this material, we will not provide a comprehensive classification of trusts, nor will we attempt to provide definitions for all of the terms that are applied to trusts in tax legislation and general practice. As indicated in the introduction to this Chapter, our coverage is limited to trusts that have been established by individuals as part of a tax or estate planning scenario. As all of these trusts fall within the classification of personal trusts, we will begin by considering this category.

## Personal Trusts

### *General Definition*

19-34. The *Income Tax Act* contains the following definition of a personal trust:

**ITA 248(1) Personal Trust** means

(a) a graduated rate estate, or

(b) a trust in which no beneficial interest was acquired for consideration payable directly or indirectly to
 (i) the trust, or
 (ii) any person or partnership that has made a contribution to the trust by way of transfer, assignment or other disposition of property;

19-35. The basic idea here is that a personal trust is one which was not acquired for consideration paid to the trust or to any person that has contributed to the trust. An exception is made for graduated rate estates. Prior to 2016, this exception applied to all testamentary trusts.

19-36. The importance of this inclusion for Graduated Rate Estates is that personal trusts can pay taxes on income amounts received by the trust at the trust level. The after tax amounts can then be distributed on a tax free basis to the beneficiaries of the trust.

### Testamentary Vs. Inter Vivos Trusts

19-37. All personal trusts can be classified as either testamentary or inter vivos. With respect to testamentary trusts, they are defined as follows:

**ITA 108(1) Testamentary Trust** in a taxation year means a trust that arose on and as a consequence of the death of an individual, other than ...

19-38. This same Subsection of the *Income Tax Act* provides a related definition of an inter vivos trust:

**ITA 108(1) Inter Vivos Trust** means a trust other than a testamentary trust.

19-39. Within each of these classifications, there are various subclassifications. In this Chapter, we will deal with three types of testamentary trusts and four types of inter vivos trusts. The types that we will cover are outlined in Figure 19-2:

**Figure 19 - 2 Classification Of Personal Trusts**

| Testamentary | Inter Vivos |
|---|---|
| Graduated Rate Estate | Spousal Or Common-Law Partner |
| Spousal Or Common-Law Partner | Alter Ego |
| Other Beneficiaries | Joint Spousal Or Common-Law Partner |
| | Family |

## Testamentary Trusts

### Graduated Rate Estate

19-40. As discussed in the note at the beginning of this Chapter, prior to 2016, testamentary trusts enjoyed a number of special rules which were not available to inter vivos trusts such as:

- The ability to calculate Tax Payable using the graduated rate schedule that is available to individuals, rather than having Tax Payable calculated using the maximum rate on all income.
- The ability to use a non-calendar fiscal period.
- Classification as a personal trust without regard to the circumstances in which the beneficial interest was acquired.
- Exemption from the requirement to make instalment payments.
- Use of the $40,000 exemption in calculating alternative minimum tax.
- Extended periods for refunds, reassessment, and filing of objections.
- The ability to make investment tax credits available to their beneficiaries for computing their Tax Payable.

19-41. The government concluded that these provisions were, in many situations, overly generous. Reflecting this view, as of January 1, 2016 these special rules are no longer generally available for testamentary trusts.

19-42. An exception to this is the Graduated Rate Estate (GRE). These are defined in ITA 248(1) as follows:

> **ITA 248(1) graduated rate estate**, of an individual at any time, means the estate that arose on and as a consequence of the individual's death if
>
> (a) that time is no more than 36 months after the death,
> (b) the estate is at that time a testamentary trust,
> (c) the individual's Social Insurance Number (or if the individual had not, before the death, been assigned a Social Insurance Number, such other information as is acceptable to the Minister) is provided in the estate's return of income under Part I for the taxation year that includes that time and for each of its earlier taxation years that ended after 2015,
> (d) the estate designates itself as the graduated rate estate of the individual in its return of income under Part I for its first taxation year that ends after 2015, and
> (e) no other estate designates itself as the graduated rate estate of the individual in a return of income under Part I for a taxation year that ends after 2015;

19-43. While it is not perfectly clear from this definition, a GRE is only applicable to estate assets that have not been transferred to a beneficiary, either individual beneficiaries or testamentary trust beneficiaries. Stated alternatively, only if the estate has assets that are still under the administration of an executor can it be designated as a GRE.

> **EXAMPLE 1** Gary Crotty dies on November 1, 2019. His estate (all of his property at death) consists entirely of publicly traded securities that are, under the terms of his will, immediately transferred to a spousal trust.
>
> **ANALYSIS - Example 1** No GRE can be designated in this case because none of the decedent's assets remain under the administration of his executor.

> **EXAMPLE 2** Lizabeth Jerrard dies on November 1, 2019. Her will requires that all of her estate be transferred to a spousal trust. Her estate consists of a large number of investments in real estate and CCPC shares, some of which will take considerable time to dispose of or transfer. As of December 31, 2022, some of the estate assets are still under the administration of the executor.
>
> **ANALYSIS - Example 2** The executor will be required to file a T3 for the income accruing on these assets. In the first return, which can have a year end no later than October 31, 2020, the estate can be designated a GRE. As long as the estate assets remain under the administration of the executor, this designation can be used in the T3s filed within 36 months of her death. On December 31, 2022, even if there still undistributed estate assets, there will be a deemed year end. In that return and any subsequent to that date, the estate will be taxed as an ordinary testamentary trust, with all of its income subject to the maximum 33 percent rate. Note that, if the required transfer of all assets to the spousal trust had occurred prior to November 1, 2022, the estate would have lost its GRE status at that date.

19-44. Two points are relevant here:

- Because GREs are included in the definition of a personal trust, its income can be taxed in the trust. The GRE can then distribute the after tax amounts to income beneficiaries on a tax free basis.
- If some of an estate's assets are distributed to beneficiaries, the portion that remains under the administration of an executor can be designated as a GRE.

### Spousal Or Common-Law Partner Trust

19-45. This category of trust is not defined in the *Income Tax Act*. Rather, it is a term that is used when a trust is established for a spouse or common-law partner. As shown in Figure 19-2, such trusts can either be an inter vivos trust established by a living person or, alternatively, a testamentary trust that is established when an individual dies. A spousal or common-law partner testamentary trust can never be designated a graduated rate estate.

19-46. As will be discussed when we present material on the taxation of trusts, if a trust meets certain conditions, the *Income Tax Act* allows a settlor to transfer property into a trust without incurring any taxation on the property dispositions. The relevant rollover provisions are found in ITA 73(1.01) for inter vivos trusts, and in ITA 70(6) for testamentary trusts. When these provisions are used, the resulting trust is usually referred to as a qualifying spousal or qualifying common-law partner trust.

### Other Beneficiaries

19-47. Although listed in Figure 19-2 as a type of trust, it represents a testamentary trust that is not a spousal or common-law partner trust. Common other beneficiaries would be the decedent's children or other close relatives of the decedent. Such trusts can never be designated a graduated rate estate.

## Inter Vivos Trusts

### Spousal Or Common-Law Partner Trust

19-48. As noted in Paragraph 19-45, spousal or common-law partner trusts can be established as testamentary trusts on the death of the settlor or, alternatively, as inter vivos trusts by a living individual.

### Alter Ego Trust

19-49. An alter ego trust is an inter vivos trust created by an individual who is 65 years of age or older with himself as the sole beneficiary during his lifetime. As was the case with spousal or common-law partner trusts, if certain conditions are met, the *Income Tax Act* contains a rollover provision that allows property to be transferred into or out of the trust on a tax free basis.

### Joint Spousal Or Common-Law Partner Trust

19-50. A joint spousal or joint common-law partner trust is an inter vivos trust created by an individual who is 65 years of age or older. Similar to the alter ego trust, this type of trust is created with the individual and his spouse or common-law partner as the sole beneficiaries during their lifetimes. Also similar to the alter ego trust scenario, if certain conditions are met, there is a rollover provision in the *Income Tax Act* that allows property to be transferred into the trust on a tax free basis.

### Family Trust

19-51. While the term family trust is not always used in a consistent manner, it generally refers to a trust that has been established by an individual for the benefit of family members. While a family trust could be a testamentary trust, the term is usually used in reference to an inter vivos trust. The most common goal of this type of trust is income splitting. We would note that the extension of the TOSI to related adults has placed significant constraints on using trusts for this purpose.

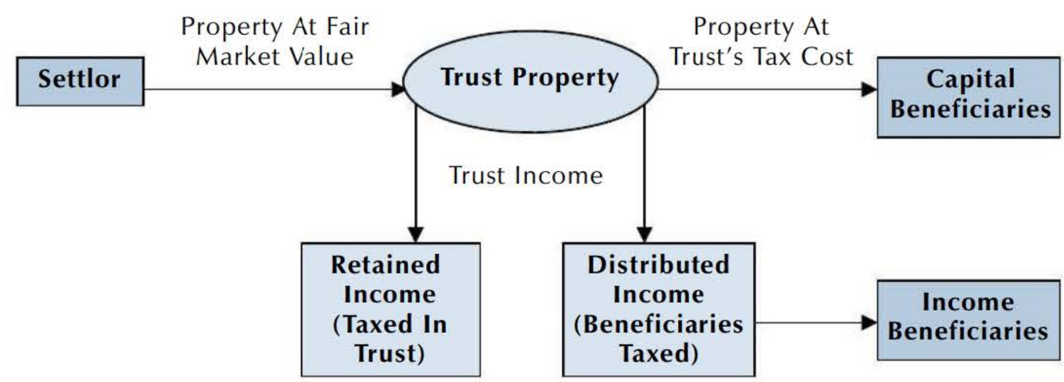
# Taxation Of Trusts

## Taxation Year

19-52. Inter vivos trusts have always been required to use the calendar year as their taxation year. In contrast, prior to 2016, testamentary trusts were allowed to use a non-calendar fiscal year. As of 2016, testamentary trusts have, in general, lost this right.

19-53. The exception to this is Graduated Rate Estates (GREs). As long as estate assets are

**Figure 19 - 3**
**Basic Taxation Model For Trusts**



under the administration of an executor and have not been distributed to beneficiaries, GREs can use a non-calendar fiscal period for up to 36 months subsequent to the decedent's date of death.

## The Basic Taxation Model

19-54. While there are many variations that depend on the particular type of trust we are dealing with, as well as complications associated with the measurement of trust Taxable Income and Tax Payable, the basic model for the taxation of trusts is as shown in Figure 19-3. There are three features of this basic model that should be noted:

**Settlor's Transfer Of Property To The Trust** When property is transferred to a trust by a settlor, it generally results in a disposition for tax purposes. In the usual situation, these dispositions are deemed to occur at fair market value, triggering various tax consequences (e.g., capital gains, recapture, or terminal losses). There are, however, some important rollover provisions for property transferred into a trust. These are discussed beginning in Paragraph 19-56.

**Transfers Of Trust Property To Beneficiaries** If trust property is transferred to a capital beneficiary, ITA 107(2) provides a rollover provision that allows the property to be transferred at the tax cost to the trust. The proceeds of disposition to the trust and the cost to the beneficiary will be equal to the tax cost that is recorded in the trust. For exceptions to this general provision, see Rollovers To Beneficiaries beginning in Paragraph 19-69.

**Income From The Trust Property** Once property has been transferred to the trust, income will begin to accrue to the trust. It is fundamental to most of the tax planning uses of trusts that income earned in the trust can be deducted by the trust from Net Income For Tax Purposes of the trust to the extent that it is either distributed to beneficiaries or they are entitled to enforce payment. We will find that in many situations, trusts will distribute all of their income, resulting in no Tax Payable at the trust level.

Any income that a trust does not distribute to beneficiaries will be taxed in the trust. Subsequent distribution of this income is on a tax free basis. At this point you should note that there is a very important difference in the calculation of Tax Payable for a testamentary trust that is designated as a graduated rate estate, and the calculation of Tax Payable for other personal trusts. As the name implies, graduated rate estates can use the schedule of graduated rates that is applicable to individuals. In contrast, most other personal trusts will have all of their income taxed at the maximum rate of 33 percent.

19-55. While it is not illustrated in Figure 19-3, there is a special anti-avoidance rule that is designed to prevent extended deferral of the potential tax on capital gains. This rule requires

a deemed disposition of capital assets after they have been held in the trust for 21 years and will be discussed in detail beginning in Paragraph 19-75.

## Exercise Nineteen - 2

**Subject**: Basic Taxation Of Trusts

On January 1, 2019, Joanne March transfers debt securities with a fair market value of $220,000 to a newly established inter vivos trust for which her 28 year old daughter, Jocelyn, is the only beneficiary. The cost of these securities to Joanne March was $200,000. During 2019, the securities earn and receive interest of $15,000, all of which is distributed to Jocelyn. On January 1, 2020, the securities are transferred to Jocelyn in satisfaction of her capital interest in the trust. At this time, the fair market value of the securities has increased to $230,000. Jocelyn sells all of the securities for $230,000 on January 5, 2020. Joanne is not a trustee of the inter vivos trust.

Indicate the tax consequences for Joanne, Jocelyn, and the trust, in each of the years 2019 and 2020.

**SOLUTION available in print and online Study Guide.**

## Rollovers To A Trust

### *Introduction*

19-56. The general taxation model for trusts requires that contributions to the trust be recorded at fair market value, often resulting in a significant tax cost for the contributor. However, as we noted in our material on the classification of trusts, spousal or common-law partner trusts, alter ego trusts, and joint spousal or common-law partner trusts can receive such transfers on a rollover basis, provided certain specific conditions are met.

19-57. In this section we are concerned with the conditions that qualify these three special types of trusts for the tax free rollover of contributions. When the trust qualifies, the rollover is accomplished by deeming the property to have been disposed of by the settlor at either its adjusted cost base (non-depreciable capital property) or its UCC (depreciable capital property), resulting in no tax consequences for the settlor at the time of transfer. The trust is deemed to have acquired the property at a value equal to the proceeds of disposition to the settlor. In the case of depreciable property, the trust retains the settlor's original capital cost for purposes of determining recapture of CCA.

19-58. We will revisit these three types of trusts in our later section on tax planning. At that point we will discuss how these trusts can be used to reduce or defer taxes.

### *Qualifying Spousal Or Qualifying Common-Law Partner Trust*

19-59. You may recall from Chapter 9 that ITA 73(1.01) contains a rollover provision that allows a living individual to transfer capital property to a spouse or common-law partner without tax consequences. ITA 70(6) provides for a similar rollover for the capital property of a deceased individual.

19-60. While we did not discuss this in Chapter 9, these rollovers apply whether the transfer is directly to the spouse or common-law partner or, alternatively, to a trust in favour of a spouse or common-law partner. However, in the case of a transfer to a trust, the trust arrangement must meet certain conditions in order to qualify for the rollover. When it meets these conditions, it is commonly referred to as a qualifying spousal or common-law partner trust.

19-61. With respect to inter vivos spousal or common-law partner trusts, the conditions for qualifying for the rollover are as follows:

**ITA 73(1.01)(c)(i)** The individual's spouse or common-law partner is entitled to receive all of the income of the trust that arises before the spouse's or common-law partner's death and no person except the spouse or common-law partner may, before the spouse's or common-law partner's death, receive or otherwise obtain the use of any of the income or capital of the trust.

19-62. A similar provision provides the rollover conditions for testamentary spousal or common-law partner trusts:

**ITA 70(6)(b)** A trust, created by the taxpayer's will, that was resident in Canada immediately after the time the property vested indefeasibly in the trust and under which

(i) the taxpayer's spouse or common-law partner is entitled to receive all of the income of the trust that arises before the spouse's or common-law partner's death, and

(ii) no person except the spouse or common-law partner may, before the spouse's or common-law partner's death, receive or otherwise obtain the use of any of the income or capital of the trust.

19-63. When these conditions are met, any property that is contributed to the trust, either by a living spouse or common-law partner, or as the result of the spouse or common-law partner's death, will be transferred at tax cost. For non-depreciable capital property, this value is the transferor's adjusted cost base. For depreciable property, the transfer is at the transferor's UCC amount. However, for purposes of determining recaptured CCA, the transferor's original capital cost is deemed to be the transferee's capital cost.

19-64. While these rollover provisions are, in general, a desirable way to avoid paying taxes on transfers to a spousal or common-law partner trust, there may be circumstances where the taxpayer would prefer a transfer at fair market value. For example, if the settlor of the trust has unused capital loss carry forwards or property that is eligible for the lifetime capital gains deduction, he might wish to trigger capital gains in order to absorb these amounts. Fortunately, the settlor has the choice of electing out of the rollover provisions. For inter vivos transfers, the election is under ITA 73(1). For testamentary transfers the election that can be made by the settlor's legal representative is under ITA 70(6.2).

## Exercise Nineteen - 3

**Subject:** Transfer To Spousal Trust

Louise died late this year, and bequeathed a group of common stocks to a qualifying spousal trust created in her will. Louise is survived by her husband who is to receive the stocks from the trust three years after her death if they have not been sold. The stocks have an adjusted cost base of $60,000 and were valued at $90,000 on the date of her death. Determine the tax consequences of the transfer, including the adjusted cost base for the stocks in the trust and in her husband's hands if they are transferred.

**SOLUTION available in print and online Study Guide.**

### *Alter Ego Trust*

19-65. An alter ego trust is an inter vivos trust established by a settlor who is 65 years of age or older at the time the trust is settled. To qualify for a tax free rollover of assets to the trust, the *Income Tax Act* specifies the following conditions:

**ITA 73(1.01)(c)(ii)** The individual is entitled to receive all of the income of the trust that arises before the individual's death and no person except the individual may, before the individual's death, receive or otherwise obtain the use of any of the income or capital of the trust.

19-66. As was the case with the spousal or common-law partner trust, an individual can elect out of this rollover, choosing to have the transfer to the trust take place at fair market value.

### *Joint Spousal Or Joint Common-Law Partner Trust*

19-67. Like an alter ego trust, a joint spousal or common-law partner trust is an inter vivos trust established by a settlor who is 65 years of age or older at the time the trust is settled. The difference in this case is that both the settlor and his spouse or common-law partner are beneficiaries of the trust. More specifically, to qualify for the tax free rollover of assets to the trust, the *Income Tax Act* specifies the following conditions:

**ITA 73(1.01)(c)(iii)** either

(A) the individual or the individual's spouse is, in combination with the other, entitled to receive all of the income of the trust that arises before the later of the death of the individual and the death of the spouse and no other person may, before the later of those deaths, receive or otherwise obtain the use of any of the income or capital of the trust, or

(B) the individual or the individual's common-law partner is, in combination with the other, entitled to receive all of the income of the trust that arises before the later of the death of the individual and the death of the common-law partner and no other person may, before the later of those deaths, receive or otherwise obtain the use of any of the income or capital of the trust.

19-68. As was the case with the alter ego trust, an individual can elect out of this rollover, choosing to have the transfer to the trust take place at fair market value.

### Exercise Nineteen - 4

**Subject:** Transfers To Trusts

An individual has common shares with a cost of $1,000 and a current fair market value of $1,600. Seven Scenarios are presented for the transfer of these shares by the settlor to a trust. For each Scenario, indicate the tax consequences to the settlor at the time of transfer, as well as the adjusted cost base of the property within the trust.

Scenario 1: Transfer to inter vivos trust for adult child.
Scenario 2: Transfer to inter vivos trust for minor child.
Scenario 3: Transfer to testamentary trust for friend.
Scenario 4: Transfer to inter vivos qualifying spousal trust.
Scenario 5: Transfer to testamentary qualifying spousal trust.
Scenario 6: Transfer to joint spousal trust.
Scenario 7: Transfer to alter ego trust.

**SOLUTION available in print and online Study Guide.**

## Rollovers To Capital Beneficiaries

### *General Rule*

19-69. As is the case with transfers by a settlor into a trust, the transfer of assets to a capital beneficiary is a disposition. However, for many trusts ITA 107(2) provides a tax free rollover for these transfers. The rollover is accomplished by deeming the property to have been disposed of by the trust at either its adjusted cost base (non-depreciable capital property) or its UCC (depreciable property).

19-70. The beneficiary is deemed to have acquired the property at a value equal to the cost amount to the trust, resulting in no tax consequences at the time of transfer to the beneficiary. In the case of depreciable property, the beneficiary retains the capital cost of the property to the trust for purposes of determining subsequent recapture of CCA.

### Exceptions

19-71. The logic of the preceding rule is based on the fact that the transfer of assets into the trust was, in terms of the beneficial interest in the assets, a transfer of the assets to the beneficiaries. Provided that tax was assessed on the transfer into the trust, it would not be equitable to assess tax again when the asset is legally transferred to the beneficiaries.

19-72. We have noted, however, that with certain types of trusts, the transfer from the settlor to the trust is not a taxable transaction. Specifically, qualifying spousal or common-law partner trusts, alter ego trusts, and joint spousal or common-law partner trusts can use a rollover provision to transfer assets into a trust. Since no tax was assessed on the transfer into these trusts, it would not seem equitable to allow the assets to be transferred to all beneficiaries on a rollover basis.

19-73. Tax legislation agrees with this view. The ITA 107(2) rollover does not apply in the following cases:

- if property is transferred out of an **alter ego** trust to anyone other than the settlor,
- if property is transferred out of a **joint spousal** or common-law partner trust to anyone other than the settlor or the spouse or common-law partner, and
- if property is transferred out of a **qualifying spousal** or common-law partner trust to anyone other than a spouse or common-law partner.

19-74. When the ITA 107(2) rollover provision does not apply, the transfer of assets from the trust to a capital beneficiary will be recorded at the fair market value of the transferred assets. This will generally result in tax consequences for the trust.

**We suggest you work Self Study Problem Nineteen-1 at this point.**

## 21 Year Deemed Disposition Rule

19-75. Trust arrangements ordinarily allow capital gains on trust assets to accumulate without tax consequences for extended periods of time. Unless the capital assets are sold or distributed by the trust, accrued gains will not attract any taxes and the assets can be left in a trust for periods that exceed the life of the individual establishing the trust.

19-76. In order to place limits on this deferral process, ITA 104(4)(b) requires that there be a deemed disposition and reacquisition of trust capital property every 21 years. The disposition is deemed to be at fair market value, resulting in the recognition of any accrued gains on the assets. In the case of depreciable assets, if the deemed proceeds are less than the original capital cost, the original value is retained for purposes of determining recapture.

19-77. This rule is generally applicable only to personal trusts and does not apply to trusts such as employee benefit plans or registered education savings plans. Further, the rules are modified in the case of qualifying spousal or common-law partner trusts, alter ego trusts, and joint spousal or common-law partner trusts.

## Other Deemed Dispositions

19-78. For qualifying spousal or common-law partner trusts, a deemed disposition occurs with the death of the spouse or common-law partner. In the case of alter ego trusts, the death of the settlor is the event that triggers a deemed disposition. Finally, with joint spousal or common-law partner trusts, the deemed disposition occurs only at the later of the death of the settlor or the death of the spouse or common-law partner.

# Net Income For Tax Purposes Of A Trust

## Basic Rules

19-79. The overriding principle in determining the Net Income For Tax Purposes of a trust results from the statement in ITA 104(2) that a trust should be treated as an individual. This means that the general rules used by individuals, as modified by trust legislation, are applicable in computing a trust's Net Income For Tax Purposes.

19-80. Capital gains and losses are realized on the disposition of capital assets. Also, in the calculation of Net Income For Tax Purposes, any taxable dividends that are not allocated to beneficiaries are grossed up as they would be for individuals. Finally, deductions are allowed for non-capital, net capital, and certain other types of loss carry overs.

19-81. There are, however, additional items that must be added or deducted in calculating the Net Income For Tax Purposes of a trust. These items can be described as follows:

**Amounts Paid Or Payable To Beneficiaries** As was noted in our description of the basic trust taxation model, a trust can deduct amounts that are paid or payable to one or more beneficiaries. This is usually the most important of the adjustments to the trust's income in that, in many cases, all of the trust's income will be allocated to beneficiaries. Because of the importance of this deduction, it will be the subject of a separate section of this Chapter beginning in Paragraph 19-93.

**Trustee's Or Executor's Fees** Any amounts paid that are related to earning trust income, or that are paid to an executor or trustee whose principal business includes the provision of such services, are deductible to the trust.

**Amounts Paid By The Trust And Allocated To The Income Of A Beneficiary** A trust can make payments to third parties to provide goods or services to beneficiaries. The CRA considers such amounts to be another way of paying income to beneficiaries and, as a consequence, such amounts are deductible to the trust and included in the income of the beneficiaries.

**Income Allocated To A Preferred Beneficiary** As will be discussed beginning in Paragraph 19-83, trusts can allocate income to a preferred beneficiary while retaining the income in the trust. While such retained income would normally be taxed in the trust, because it is being taxed in the hands of a beneficiary, it can be deducted from the income of the trust.

**Amounts Deemed Not Paid** A trust can designate amounts to be deemed not paid when they are, in fact, paid or payable to beneficiaries. This means that the trust will include these amounts in its own Net Income For Tax Purposes and the beneficiaries will be able to receive these amounts on a tax free basis. The reasons for doing this are discussed beginning in Paragraph 19-86.

**Amounts Retained For Beneficiary Under 21 Years Of Age** Provided the eventual payment is not subject to any future condition, amounts that are held in trust for a beneficiary who is under 21 at the end of the year can be deducted by the trust and taxed in the hands of the beneficiary. (See Paragraph 19-90.)

19-82. While positive amounts of all types of income can be allocated to beneficiaries, losses cannot be. If a trust has a disposition that results in a capital loss, or other activities that result in a non-capital loss, such losses must be used within the trust, either as a carry back to a previous year, or as a carry forward to a subsequent year. Note, however, that if the trust distributes capital assets with accrued losses, the fact that the transfer to a beneficiary is usually at the trust's tax cost means that such accrued losses can, in effect, be transferred to a beneficiary.

## Preferred Beneficiary Election

19-83. Normally a trust can only deduct amounts that are paid or payable to a beneficiary. An exception to this can arise if a joint election is made by a trust and a beneficiary. Under this preferred beneficiary election, the beneficiary will be taxed on amounts that remain in the trust [ITA 104(14)], and the trust can deduct these amounts [ITA 104(12)].

19-84. The preferred beneficiary election is only available if:

- the beneficiary is claiming the disability tax credit; or
- the beneficiary is 18 years of age or older, is claimed by another individual as a dependant, and does not have income that exceeds the base for the beneficiary's personal tax credit.
- In addition, the beneficiary must be the settlor of the trust, the spouse or former spouse of the settlor of the trust, or the child, grandchild, or great grandchild of the settlor of the trust, or the child, grandchild, or great grandchild of the spouse of the settlor of the trust.

19-85. This election is normally used in situations where it is desirable to have income taxed in the hands of a low income individual without actually giving that individual full access to the funds. An example of this would be a mentally disabled child with no other source of income, but lacking in the ability to deal responsibly with financial matters.

## Amounts Deemed Not Paid

19-86. Amounts paid or payable to a beneficiary are normally deducted by the trust and included in the income of the beneficiary. However, ITA 104(13.1) permits a trust to designate all or part of its income for a year as "not to have been paid" or "not to have become payable". The amounts so designated are not included in the beneficiaries' Net Income and are not deducted in computing the Net Income of the trust. As a result, the amounts are taxed in the trust and can be distributed tax free. This designation is only available to trusts that are resident in Canada throughout the taxation year and are subject to Part I tax.

19-87. Prior to 2016, when testamentary trusts had general access to graduated rates, this provision could be used advantageously when the trust had a lower marginal tax rate than the beneficiary. Except for graduated rate estates (GREs), this can no longer occur as other testamentary trusts are generally taxed at the maximum federal rate of 33 percent.

19-88. Prior to 2016, the amount deemed not paid provision could be used to avoid the instalment requirements that could be applicable to beneficiaries. While administratively the CRA no longer charges interest on late or insufficient instalments, instalments are required for all trusts other than graduated rate estates.

19-89. As previously noted, a trust cannot allocate losses to beneficiaries. This means that the only way that an unused current year trust loss can be utilized is through a carry over to another year. With many trusts, this cannot happen under normal circumstances because they are legally required to distribute all of their income to beneficiaries, resulting in a nil Net Income For Tax Purposes. A solution to this problem is to designate sufficient income as having not been paid to absorb the loss carry forward. This can satisfy the legal requirement to distribute the income, while simultaneously creating sufficient Net Income For Tax Purposes to absorb the loss carry forward. Although this feature is still available, the 2016 changes in trust legislation restrict the application of this provision so it can only be used to eliminate losses in the trust. It cannot be used to create a positive amount of income in the trust.

## Amounts Retained For A Beneficiary Under 21 Years Of Age

19-90. If benefits are actually paid to a minor beneficiary, the amounts can clearly be deducted by the trust. However, an adult settlor may decide that it would be better for the income to be held in trust until the beneficiary reaches some specified age. Provided the beneficiary has not reached 21 years of age prior to the end of the year, ITA 104(18) deems amounts that are retained to have become payable during the year. This means that the trust

will be able to deduct the amount retained and the beneficiary will be subject to taxes on it.

19-91. To qualify for this treatment, the amounts must be vested with the beneficiary and there cannot be any future condition that would prevent payment. When these amounts are eventually distributed, they will be received by the beneficiary on a tax free basis.

# Taxable Income Of A Trust

19-92. Once the Net Income For Tax Purposes of a trust is determined, calculation of Taxable Income involves the same deductions that would be available to individuals. Provided there is a positive Net Income For Tax Purposes, the trust can deduct non-capital losses of other years, net capital losses of other years, and farming and fishing losses of other years. The carry over periods for these losses that are applicable to individuals are equally applicable to trusts. Note that the ability to deduct net capital losses and restricted farm losses is dependent on having taxable capital gains or farm income included in the trust's Net Income For Tax Purposes for the current year.

### Exercise Nineteen - 5

**Subject:** Trust Net And Taxable Income

During the current year, the Jordan family trust, an inter vivos trust, has business income of $220,000. Of this amount, $50,000 is retained in the trust, with a joint election being made to have this amount taxed in the hands of a beneficiary who qualifies for the disability tax credit. This beneficiary has no other income. The remaining $170,000 is distributed to the other beneficiaries of the trust.

At the beginning of the current year, the trust had a business loss carry forward of $35,000. In order to make use of this loss, the trust designates an amount of $35,000 under ITA 104(13.1) as not having been paid during the year.

Determine the trust's Net Income For Tax Purposes and Taxable Income for the current year. Briefly explain why the trust would make the preferred beneficiary election and designate amounts not paid that were paid.

**SOLUTION available in print and online Study Guide.**

# Income Allocations To Beneficiaries

## General Rules

19-93. Since a trust is a separate taxable entity, any income that is earned by trust assets will initially accrue to the trust. As we have noted, however, any income that is allocated to a beneficiary can be deducted in the calculation of the trust's Net Income For Tax Purposes. Correspondingly, the amount deducted by the trust must generally be included in the Net Income For Tax Purposes of the relevant beneficiary. In effect, when trust income is allocated to a beneficiary, the obligation to pay taxes on that income is transferred from the trust to the beneficiary.

19-94. We have also noted that a trust can make payments to third parties for goods or services that will be provided to a beneficiary. These can include such expenses as day care, tuition, and medical fees. These amounts are deductible by the trust as allocations to beneficiaries, but will be considered income paid or payable to the beneficiaries.

19-95. For a trust to be able to deduct amounts that will be distributed to beneficiaries, the amounts must be paid or payable. While it is easy to determine whether an amount has been paid, questions often arise in determining whether or not an amount is payable to a beneficiary. ITA 104(24) provides that:

> ... an amount is deemed not to have become payable to a beneficiary in a taxation year unless it was paid in the year to the beneficiary or the beneficiary was entitled in the year to enforce payment of it.

19-96. Issuing a promissory note or a cheque payable to the beneficiary for the share of the trust income will usually fulfill the payable requirement. The CRA expands the definition of payable in IT-286R2 by stating that an amount is not considered to be payable in any of the following circumstances:

- A beneficiary can only enforce payment of an amount of income by forcing the trustee to wind up the trust.
- The beneficiary's right to income is subject to the approval of a third party.
- Payment of income is at the trustee's discretion and this provision has not been exercised.
- The beneficiary has the power to amend the trust deed and must do so to cause the income to be payable.

## Discretionary And Non-Discretionary Distributions

19-97. Both testamentary and inter vivos trusts can be set up as either discretionary or non-discretionary trusts. A discretionary trust is one in which the trustees are given the power to decide the amounts that will be allocated to each of the beneficiaries, usually on an annual basis.

19-98. In many cases, this discretionary power will apply only to annual income distributions. However, the trust could be structured to provide discretion on both income and capital distributions, or to capital distributions only. The trustees may also be given the power to control the timing of distributions to beneficiaries.

19-99. When discretionary trusts are used, it is important that only the amounts allocated to beneficiaries are considered to be paid or payable. If, for example, a trustee's exercise of discretion requires the approval of a third party, IT-286R2 would indicate that the amounts are not payable. This would result in the trust not being able to deduct the allocated amounts.

19-100. A non-discretionary trust is one in which the amounts and timing of allocations to income and capital beneficiaries are specified in the trust agreement. In some cases, the trust agreement may have a combination of discretionary and non-discretionary provisions.

## Flow Through Provisions

### General Applicability

19-101. Income that is paid out to beneficiaries through a trust is deemed to be property income unless there is a rule that says otherwise. Fortunately, there is a flow through rule that allows certain types of income paid out of a trust to retain the same tax characteristics as when it was earned in the personal trust. The most significant types of income covered by this flow through rule are capital gains, taxable dividends and capital dividends. Note that business income is not covered by the flow through rule. When business income is paid to beneficiaries, it is considered to be property income.

19-102. These flow through rules are an important feature of personal trusts in that capital gains and dividends are taxed much more favourably than other types of income. Since property income is fully taxed at an individual's regular rates, in the absence of such a flow through rule, in many instances the use of trusts would be much less attractive.

### Dividends

19-103. If either eligible or non-eligible dividends from taxable Canadian corporations are received by a trust and distributed to beneficiaries of the trust, the beneficiaries will use the same gross up and tax credit procedures that would be applicable had they received the dividends directly. At the trust level, these amounts will not be grossed up and the amount received and distributed will be deducted in the determination of the trust's Net Income.

19-104. In contrast, if either eligible or non-eligible dividends from taxable Canadian corporations are retained in the trust, the grossed up amount of these dividends will be

included in the trust's Net Income For Tax Purposes. Consistent with this, the trust will be able to deduct the appropriate dividend tax credit when it determines its Tax Payable for the year. Since capital dividends are tax free, they would have no effect on the trust's Tax Payable.

### Capital Gains

19-105. Under trust law, capital gains that are realized in the trusts are considered to be an addition to capital and, in the absence of a special provision in the trust agreement, would not be payable to income beneficiaries. However, tax legislation views one-half of capital gains as a taxable amount. As a consequence, if this amount is not paid out to beneficiaries, it will be taxed in the hands of the trust. The remaining one-half of the capital gain will become part of the trust's capital and can be paid to beneficiaries on a tax free basis at any point in time.

19-106. If the trust pays out the full amount of the capital gain, the flow through rule means that one-half of this amount will be included in the recipient's income as a taxable capital gain. The remaining one-half is received as a tax free distribution of capital.

19-107. It is important to note that the capital gains that we are discussing here are those that result from dispositions of trust property within the trust. As covered in Paragraph 19-69, if the trust distributes capital assets on which there are accrued capital gains, ITA 107(2) deems the transfer to be at the trust's tax cost resulting in no tax consequences to the trust. The accrued gains will not be subject to tax until the recipient beneficiary chooses to dispose of the assets that they have received.

### Tax On Split Income (TOSI)

19-108. As discussed in Chapter 11, as of 2018, individuals of any age may receive income that is subject to the TOSI. If the TOSI is applicable, tax will be assessed at the maximum federal rate of 33 percent on all such amounts, with the only available tax credits being the dividend tax credit and credits for foreign taxes assessed on foreign source income. We will not repeat the discussion of the applicability of TOSI in this Chapter.

19-109. However, the TOSI is very relevant in this Chapter because, if the trust earns income that would have been subject to the TOSI if it had been received directly by a beneficiary, it will also be subject to the TOSI if the trust distributes the income to that beneficiary. In other words, it will retain its character when it flows through the trust. Because of this, the income will be subject to the TOSI at 33 percent, the same rate that would be applicable to the trust.

## Exercise Nineteen - 6

**Subject:** Flow Through To Beneficiaries

During 2019, the Ho family trust received eligible dividends from publicly traded Canadian corporations in the amount of $100,000. In addition, it received non-eligible dividends from the family owned Canadian controlled private corporation in the amount of $30,000. Its only other source of income was a capital gain of $20,000 on a disposition of investments in publicly traded equity securities.

The only beneficiary of the trust is the family's 19 year old son, Bryan Ho. Bryan is actively engaged in the private corporation on a regular and continuous basis and, as a consequence, the TOSI is not applicable to the income that he receives from the trust.

During the current year, $60,000 of the eligible dividends from public companies, all of the non-eligible dividends from the family's private company, and all of the $20,000 capital gain were paid to Bryan.

Indicate the tax effects of these transactions on the Net Income For Tax Purposes for both the trust and for Bryan.

**SOLUTION available in print and online Study Guide.**

### *Business Income, CCA, Recapture, And Terminal Losses*

19-110. Under trust law, the amount of income that may be distributed to beneficiaries should be determined after providing for amortization expense calculated using methods similar to those specified under generally accepted accounting principles. While this could create a difference between a trust's accounting Net Income and its Net Income For Tax Purposes, this problem is resolved by most trustees by setting accounting amortization expense equal to maximum CCA.

19-111. Business income must be calculated at the trust level, prior to allocation to the beneficiaries. This calculation would include the CCA deduction, as well as any recapture or terminal losses that might arise during the year. As noted, the flow through rule for trusts does not cover business income. This means that any business income allocated to beneficiaries is distributed to them as property income. If this was not the case, business income flowed through a trust could create a liability for CPP and GST/HST which would complicate matters for many beneficiaries.

**Exercise Nineteen - 7**

**Subject:** CCA And Recapture On Trust Assets

The Husak family trust has only one beneficiary, Martin Husak, the 32 year old son of the settlor, Dimitri Husak. It is an inter vivos trust and its only asset is a rental property with a fair market value equal to its capital cost. The trust is required to distribute all of its income to Martin. During the year ending December 31, 2019 the property will have net rental income, before the deduction of CCA, of $32,000. Maximum CCA for the year will be $26,000.

Dimitri is considering having the trust sell the rental property at the end of 2019. If that is done, there will be recapture of CCA of $65,000. He has asked you to compare the tax consequences for both Martin and the trust if (1) the sale takes place in December, 2019 and (2) the trust continues to hold the property.

Ignore the possibility that some of the income received might be subject to the TOSI.

**SOLUTION available in print and online Study Guide.**

## Principal Residence Exemption

19-112. Prior to 2017, a residence held in a trust that was ordinarily inhabited by a beneficiary of the trust, or by a spouse or common-law partner, former spouse or common-law partner, or a child of a beneficiary, was eligible for the principal residence exemption (see Chapter 8). This is no longer the case. For years ending after 2016, only alter ego trusts, joint partner trusts, spousal or common-law partner trusts, qualified disability trusts, or a qualifying trust for a minor child will be able to use this exemption to eliminate or reduce any capital gain resulting from the sale of a residence held in the trust. If such gains arise in other types of trusts, they will be subject to the usual capital gains taxation.

# Tax Payable Of Personal Trusts

## Calculation Of Basic Amount

### *General Approach*

19-113. In keeping with the previously expressed idea that trusts are to be taxed in the same manner as individuals, the Tax Payable for a trust is calculated using the rates applicable to individuals. However, how these rates will be applied differs, depending on whether the trust is an inter vivos trust or a regular testamentary trust, or, alternatively, a graduated rate estate. These differences will be discussed in the material that follows.

### Graduated Rate Estates

19-114. As discussed previously, in the first T3 filed subsequent to an individual's death, trust assets that are still under the administration of an executor can be designated a Graduated Rate Estate. You will recall that this designation can remain in effect for up to 36 months subsequent to the death of the individual.

19-115. The major benefit resulting from this designation is that, during the period in which the designation is in effect, the trust can calculate Tax Payable using the graduated rate schedule that is applicable to individuals. As described in Chapter 4, for 2019, the federal tax rates range from 15 percent on the first $47,630 of Taxable Income to 33 percent on amounts in excess of $210,371.

### Inter Vivos Trusts And Regular Testamentary Trusts

19-116. Under ITA 122(1), all of the income of an inter vivos trust is assessed tax at the highest federal rate applicable to individuals, 33 percent.

19-117. Prior to 2016, all testamentary trusts used the same schedule of graduated rates and income brackets that was applicable to individuals. However, due to the major overhaul of taxation for testamentary trusts, beginning in 2016 testamentary trusts other than graduated rate estates and qualified disability trusts will have all of their taxable income subject to the maximum tax rate of 33 percent. This means that inter vivos trusts and regular testamentary trusts are now taxed in a similar manner.

### Multiple Testamentary Trusts

19-118. Prior to 2016, it was not uncommon for an individual to establish multiple testamentary trusts, usually on the basis of a separate trust for each beneficiary of the individual's estate. This could be very advantageous in that there could be multiple applications of the graduated rate structure. For example, if there were three different testamentary trusts, each trust could benefit from the lowest rate of 15 percent.

19-119. This tax advantage is no longer available. In general, testamentary trusts will have all of their income taxed at the maximum 33 percent federal rate. While a Graduated Rate Estate can still use graduated rates, there can only be one such trust and its life is limited to 36 months.

### Tainted Testamentary Trusts

19-120. Contributions by living persons to an existing testamentary trust can cause that trust to become tainted and lose its testamentary status. It will then be treated as an inter vivos trust. Prior to 2016, this could have had significant tax effects. Currently, the only trusts not federally taxed at 33 percent are Graduated Rate Estates. The only property that can be included in a Graduated Rate Estate is the property that was owned by the decedent at the time of death. It would not be possible to make additions to this balance.

## Other Tax Payable Considerations

### Availability Of Tax Credits

19-121. While, in principle, trusts are to be taxed in the same manner as individuals, there are obvious differences between a legally constructed entity and a living, breathing human being. These differences are reflected in the fact that trusts are not eligible for many of the tax credits that are available to individuals.

19-122. To begin, ITA 122(1.1) specifically prohibits a trust from claiming any of the credits listed under ITA 118 (personal tax credits). Further, most of the other credits listed in ITA 118.1 through 118.9 are clearly directed at individuals (e.g., a trust is not likely to have medical expenses). However, some tax credits are available to trusts, generally on the same basis as they are available to individuals. These include:

- donations and gifts (As is the case with individuals, there is a credit of 15 percent on the first $200 of donations and either 29 percent or 33 percent on additional amounts.)
- eligible and non-eligible dividend tax credits
- foreign tax credits
- investment tax credits

### Alternative Minimum Tax

19-123. As is the case with individuals, trusts are subject to the alternative minimum tax legislation. However, there is one important difference. With the exception of Graduated Rate Estates, the exemption with respect to the first $40,000 of income is not available to trusts.

### Tax Free Dividends

19-124. Because dividends use up available tax credits at a much slower pace than other types of income, individuals can receive a substantial amount of dividends on a tax free basis. As explained in Chapter 15, this only works when income is taxed at the two lowest federal rates of 15 percent and 20.5 percent. As we have indicated, both inter vivos and most testamentary trusts are taxed at 33 percent on all of their income. When this is the case, the trust cannot receive any dividends on a tax free basis.

19-125. However, Graduated Rate Estates can receive tax free dividends. For example, if such a trust has no other source of income, it can receive up to $30,319 in eligible dividends without paying any taxes.

**Exercise Nineteen - 8**

**Subject:** Tax Payable On Trust Dividends

A trust receives $100,000 in eligible dividends. This is the trust's only income for the current year. The only beneficiary of the trust is the settlor's 32 year old son. The son has no income other than that provided by the trust and no tax credits other than his basic personal credit and credits related to any trust income. Ignoring any alternative minimum tax implications, determine the Taxable Income and federal Tax Payable for both the trust and beneficiary under the following alternative assumptions:

A. The trust is a Graduated Rate Estate and it distributes all of the dividends to the beneficiary. Assume that the TOSI would not be applicable to the dividends received by the settlor's son.

B. The trust is a Graduated Rate Estate and it does not distribute any of the dividends to the beneficiary.

C. The trust is an inter vivos trust and does not distribute any of the dividends to the beneficiary.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problems Nineteen-2, 3, and 4 at this point.**

# Income Attribution - Trusts

## General Rules

19-126. We introduced the income attribution rules for individuals in Chapter 9. Briefly summarized, they are as follows:

**Transfer To A Spouse Or Common-Law Partner** Under ITA 74.1(1), if an asset is transferred to a spouse or common-law partner for consideration that is less than fair market value, any property income earned by the asset while it is held by that person, as well as any capital gain resulting from a disposition of the asset by the transferee, will be attributed back to the transferor. These rules also apply, without regard to the value of the consideration, when the transferor does not elect out of the ITA 73 rollover provision.

**Transfer To A Related Minor** Under ITA 74.1(2), if an asset is transferred to a related individual under the age of 18 for consideration that is less than fair market value, property income earned by the asset while it is held by the minor will be attributed back to the transferor until the year the individual is 18 or older. Capital gains on a subsequent sale of the asset will not be attributed back to the transferor.

We would remind you that, if the transferred property is a business, business income is not subject to the income attribution rules. Also, the rules do not apply any income that is classified as Split Income.

19-127. While we did not discuss this point in Chapter 9, these rules are equally applicable when there is a transfer to an inter vivos trust where a spouse, common-law partner, or a related minor is a beneficiary. As was the case with individuals, these rules apply to any transfer where the consideration is less than the fair market value of the asset transferred.

19-128. You should note that attribution does not occur at the time the asset is transferred to a trust in which a spouse, common-law partner, or related minor is a beneficiary. Rather, attribution occurs when income from the asset is allocated to one of these individuals. If the trust chooses to be taxed on the income before allocation, or if the income is allocated to individuals other than a spouse, common-law partner, or related minor, income will generally not be attributed to the transferor. In addition, income attribution stops at the death of the settlor.

**Exercise Nineteen - 9**

**Subject:** Income Attribution - Trusts

Last year, Trevor Carlisle transferred to a family trust, for no consideration, bonds that pay interest of $27,000 per annum. The beneficiaries of the trust are Trevor's spouse, Carmen, and their two children, Mitch (16 years old) and Rhonda (22 years old). The beneficiaries have no income other than that from the trust. The trust income and capital gains are allocated equally, and are payable to each beneficiary during the year. Total interest income earned by the trust during the year was $27,000. As well, a capital gain of $6,000 was realized on the trust's disposition of one of the bonds that Trevor transferred into the trust. Determine the Taxable Income of each beneficiary and calculate any effect the trust income will have on the Taxable Income of Trevor. How would your answer change if Trevor died on January 1 of the current year?

Ignore the possibility that some of the income received by the beneficiaries will be subject to the TOSI.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problems Nineteen-5 and 6 at this point.**

## Attribution To Settlor (Reversionary Trust)

19-129. There is a further form of income attribution that is unique to trust situations. Both income from holding the transferred property and capital gains from the disposition of the transferred property will be attributed back to the settlor if a trust meets the conditions specified in ITA 75(2).

19-130. ITA 75(2) is applicable, without regard to the identity of the beneficiaries of the trust, if any one of the following conditions is satisfied:

1. The transferred property can revert to the settlor at a later point in time. In this situation, the trust is commonly referred to as a reversionary trust.
2. The transferred property will pass to persons to be determined by the settlor at a later point in time. This requirement prevents the settlor from adding additional beneficiaries, or classes of beneficiaries, subsequent to the creation of the trust.
3. The transferred property cannot be disposed of except with the settlor's consent or in accordance with the settlor's direction.

19-131. The safest way to deal with the second condition is to not have the settlor act as a trustee. If that is not a practical alternative, it would be prudent to have at least three trustees and have majority approval of decisions. If the settlor is one of two trustees or, if decisions require unanimous approval by all trustees including the settlor, ITA 75(2) may apply.

# Purchase Or Sale Of An Interest In A Trust

## Income Interest

19-132. An income interest in a trust is the right of a beneficiary under the trust to receive all or part of the income from the trust. The purchaser of an income interest in a trust will have a cost equal to the fair market value of the consideration given for that interest. This cost can be deducted against amounts of trust income that would otherwise be included in the individual's Taxable Income. Any portion of the cost that is not deducted against income from the trust in the current year can be carried forward for deduction against allocated trust income in subsequent years. When income allocations have reduced the cost of the interest to nil, subsequent receipts of income will be fully taxable.

19-133. From the point of view of the vendor of an income interest, the proceeds of disposition will be equal to the fair market value of the consideration received. If the cost of the income interest (often nil) is different than the proceeds received, there will be a gain or loss on the disposition. As an income interest is not a capital asset, the gain or loss on its disposition will be treated as a fully taxable or deductible property income or loss.

## Capital Interest

19-134. As defined in ITA 108(1), a capital interest is all of the rights of a beneficiary of a trust, other than an income interest. As the name implies, a capital interest is a capital asset and any gain or loss on its disposition will be treated as a capital gain or loss.

19-135. When a capital interest in a trust is purchased, the adjusted cost base is equal to the fair market value of the consideration given. This amount will be reduced by future distributions of assets from the trust. As we have noted, ITA 107(2) generally provides for a tax free rollover of assets from a trust to a beneficiary.

19-136. If a beneficiary sells a capital interest in a trust, the proceeds of disposition will equal the fair market value of the consideration received. Unless the taxpayer has purchased the capital interest, its adjusted cost base will be nil. This means that the entire proceeds of disposition could be a capital gain. However, to determine the gain on a disposition of a capital interest in a trust resident in Canada, ITA 107(1)(a) defines the adjusted cost base to be the greater of:

- the adjusted cost base as usually determined, and
- the "cost amount" to the beneficiary.

19-137. ITA 108(1) defines this cost amount as the beneficiary's proportionate interest in the net assets of the trust at their carrying value to the trust. This prevents the beneficiary from being taxed on the cost amount of the trust's assets, an amount that could be received on a tax free basis as a distribution from the trust. Capital losses on capital interest dispositions are

determined in the usual manner. Since the adjusted cost base is usually nil, such losses are uncommon.

## Exercise Nineteen - 10

**Subject:** Sale Of A Capital Interest

The Jardhu family trust was established when the father transferred publicly traded securities with a cost of $120,000 and a fair market value of $250,000 into the trust. The beneficiaries of the trust are the father's two sons, Sam, aged 25 and Mehrdad, aged 27. They have an equal interest in the income and capital of the trust.

At the beginning of the current year, Mehrdad sells his capital interest in the trust to Sam. There have been no capital distributions from the trust. At the time of the sale, the fair market value of the securities in the trust is $380,000. Based on this, the transfer price for the capital interest is $190,000 [(1/2)($380,000)]. Determine the tax consequences of this transaction to each of the two brothers.

# Tax Planning

## Family Trusts

### *Defined*

19-138. As we have noted, the term family trust is not defined in the *Income Tax Act*. Rather, it is a term that is used in practice to refer to a personal trust that has been established with members of the settlor's family as beneficiaries. These trusts can either be inter vivos trusts established during the settlor's lifetime or, alternatively, testamentary trusts created when the settlor dies. The provisions of these trusts often contain a fixed arrangement for the payments to beneficiaries. However, in some cases they are established with the payments to the beneficiaries left to the discretion of the trustees.

19-139. While family trusts can be used for a variety of purposes, the most common objective of these trusts is income splitting. This process was introduced in Chapter 1, with further elaboration on the role of corporate structures in income splitting discussed in Chapter 15. In this Chapter we will give attention to income splitting in the context of family trusts. As we have noted, the expansion of the TOSI to related adults makes it much more difficult to implement effective income splitting strategies.

### *Discretionary Trusts*

19-140. As we have noted, a family trust is usually established for income splitting purposes, typically by a wealthy individual with children or other family members who are in low tax brackets. Such individuals commonly have difficulty deciding which of their family members are, and will continue to be, the most deserving. A solution to this problem is the use of a discretionary trust.

19-141. The provisions of discretionary trusts leave the amount and/or timing of payments to beneficiaries at the discretion of the trustees. This means that, if a particular beneficiary neglects his family duties on a regular basis, or appears to be profligate in his spending habits, his share of the income can be reduced, eliminated, or delayed to a later date. Tax planners like to point out that this provides the settlor with great flexibility. A less charitable view of the settlor's objectives is that this type of arrangement provides for continued control over the behaviour of family members (e.g., if a child fails to show up for family dinners, he can be reminded that his receipts from the family trust are discretionary).

19-142. It is important to note that the settlor of the trust cannot be in a position of unilateral control over the amount and timing of the discretionary distributions, particularly if he is also one of the beneficiaries. If the settlor is in a position of control, the provisions of ITA 75(2) (see Paragraph 19-130) may be applicable, resulting in all of the income being attributed back to him. The usual way to avoid this problem is to have at least three trustees, with the amount of the discretionary distributions determined by majority rule. The CRA has indicated that, for this approach to be effective, the settlor cannot be a required part of the majority.

## Income Splitting

19-143. If a family trust is set up properly, the potential tax savings from income splitting can be significant. The following table compares the federal Tax Payable on eligible dividends of $58,566 received by:

- A father who is subject to the maximum federal tax rate of 33 percent.
- His adult daughter with no other source of income. Assume that any income distributed to the daughter will not be subject to the TOSI.

19-144. The required calculations follow. Note that, given the amounts and type of income involved in this example, the application of the alternative minimum tax (AMT) reduces the amount of the tax savings to some degree.

| | Father | Daughter | AMT (Daughter) |
|---|---|---|---|
| Eligible Dividends Received | $58,566 | $58,566 | $58,566 |
| Gross Up At 38 Percent | 22,255 | 22,255 | N/A For AMT |
| Taxable Dividends/Income | $80,821 | $80,821 | $58,566 |
| Federal Tax | | | |
| [(33%)($80,821)] | $26,671 | | |
| [(15%)($47,630) + (20.5%)($33,191)] | | $13,949 | |
| [(15%)($58,566 - $40,000 Exemption)] | | | $ 2,785 |
| Federal Dividend Tax Credit | | | |
| [(6/11)($22,255)] | ( 12,139) | ( 12,139) | N/A For AMT |
| Basic Personal Credit (Note) | N/A | ( 1,810) | ( 1,810) |
| Federal Tax Payable/AMT | $14,532 | Nil | $ 975 |

**NOTE** Since the father would have other income against which he could apply his basic personal credit, it has not been taken into consideration in the preceding calculations.

19-145. This example is designed to use the maximum of tax free eligible dividends that can be paid to an individual with only the basic personal tax credit. As shown in the preceding calculations, this serves to reduce the daughter's regular Tax Payable to nil. However, AMT will be payable, resulting in a net tax savings through the use of a family trust in the amount of $13,557 ($14,532 - $975). The corresponding savings in provincial taxes would increase this amount significantly. Note that this tax savings would be available for each beneficiary if there were multiple beneficiaries. Of equal importance is the fact that this is not a one time event. These tax savings can be accomplished on an annual basis as long as the beneficiaries have no other source of income.

19-146. You should note that, in situations where the beneficiary will be subject to the TOSI, it would be difficult, if not impossible to achieve substantial or, in fact any, tax savings through the use of this tax planning vehicle.

## Exercise Nineteen - 11

**Subject:** Family Trusts

Sarah Block is holding debt securities which produce interest income of $110,000 per year. She has other sources of income in excess of $250,000. She has two children. Her daughter, Jerri, is 22 years old and currently has no income that is subject to tax. Jerri's only tax credit is the basic personal credit. Sarah's son, Mark, is 26 years old. He is married and his wife has no income of her own. Mark has annual net rental income of $48,000.

The trust will be required to distribute all of its income on an annual basis. Determine the savings in federal taxes that could be achieved by transferring the debt securities to a family trust with her two children as equal income beneficiaries.

Assume that Mark's only tax credits are the basic personal credit and the spousal credit and that none of the income received by the beneficiaries will be subject to the TOSI.

**SOLUTION available in print and online Study Guide.**

## Qualifying Spousal Or Common-Law Partner Trusts

19-147. As is discussed in Chapter 9, a rollover of assets to a spouse can be accomplished without the use of a trust. In the case of a living individual, the rollover is provided for under ITA 73(1) and (1.01), while for a deceased individual, the enabling provision is ITA 70(6). This makes it clear that a trust is not required to implement a tax free transfer of property for the benefit of a spouse. Why then are we concerned with qualifying spousal or common-law partner trusts? There are essentially two important reasons:

1. A trust can provide for the appropriate management of the transferred assets, particularly when these assets include an active business. In many cases, the spouse or common-law partner of a settlor may have no experience in the management of assets and, in such situations, the trust document can ensure that professional management is used. If the assets were simply transferred to the spouse or common-law partner, the use of such management would be left to the discretion and control of the transferee.
2. Also of importance is that the use of a trust can ensure that the assets are distributed in the manner desired by the settlor. While qualification requires that the transferred assets must "vest indefeasibly" with the spouse or common-law partner, the trust document can specify who the assets should be distributed to after the spouse or common-law partner dies. This could ensure, for example, that the assets are ultimately distributed only to the settlor's children if the spouse or common-law partner was to remarry and have additional children.

## Alter Ego Trusts

19-148. The most commonly cited reason for using an alter ego trust is that the trust property will not be included in the settlor's estate and, as a consequence, will not be subject to probate procedures (probate is a court process that proves the authenticity and validity of a will). There are a number of advantages associated with avoiding probate:

- The probate fees can be high. In Ontario, for example, they are equal to 0.5 percent on the first $50,000 of the fair market value of the estate, plus 1.5 percent of the excess, with no upper limit. On a $10 million estate these fees would total almost $150,000, a payment that can be completely eliminated with the use of an alter ego trust.

- The probate process can be time consuming. This can create difficulties for the management of an active business, as well as liquidity problems for the estate.
- When assets such as real estate are held in more than one jurisdiction (e.g., Canada and the U.S.), the probate procedures must be undertaken in multiple jurisdictions.
- Once probated, a will is in the public domain. For a nominal fee, any interested individual can obtain a copy, with the possibility that this will invade the privacy of surviving family members.

19-149. While this point has not been widely discussed in the literature that we have seen on this subject, an additional tax feature involved in establishing an alter ego trust is the possibility of establishing the trust in a low tax rate province. When there is a deemed disposition at death or on emigration, the taxation will occur in the province where the trust is resident. Given that, for 2019, the combined federal/provincial rate on individuals ranges from 47.5 in Saskatchewan, to 54 percent in Nova Scotia, this 6.5 percentage point difference makes the province of residence of the trust a significant tax planning issue.

19-150. We would also note that there is a significant non-tax reason for using an alter ego trust. From a legal point of view, it is much easier to challenge the validity of a will than it is to challenge the validity of a trust. Courts can be asked to consider moral obligations to family members in distributing the assets of an estate. With a trust, there is no will to challenge.

### Joint Spousal Or Joint Common-Law Partner Trusts

19-151. A joint spousal or joint common-law partner trust has the same tax characteristics as an alter ego trust. The basic difference is that these trusts are established to hold the combined assets of both an individual and his spouse or common-law partner. Given this, their tax planning features are largely the same as those discussed for alter ego trusts in the preceding Paragraphs.

## Estate Planning

### Non-Tax Considerations

19-152. The subject of estate planning is complex and involves considerations that go well beyond the scope of this text. In fact, appropriate planning for a large estate will often involve lawyers, investment advisors, accountants, and tax advisors. Indeed, it may even be necessary to have religious advisors or psychological counselors participate in order to deal with some of the moral or emotional issues that are involved.

19-153. The following points are among the more important non-tax considerations in planning an estate:

**Intent Of The Testator** The foremost goal of estate planning is to ensure that the wishes of the testator (a person who has died and left a will) are carried out. This will involve ensuring that the assets left by the testator are distributed at the appropriate times and to the specified beneficiaries. The primary document for ensuring that the intent of the testator is fulfilled is, of course, the will.

**Preparation Of A Final Will** The major document in the estate planning process is the final will. It should be carefully prepared to provide detailed instructions for the disposition of assets, investment decisions to be made, and the extent to which trusts will be used. An executor should be named to administer the estate, and the will should be reviewed periodically to ensure that it reflects the testator's current wishes and family status.

**Preparation Of A Living Will** Equally important to the preparation of a final will, a living will provides detailed instructions regarding investments and other personal decisions in the event of physical or mental incapacity at any point in a person's lifetime. A power of attorney is similar, except that it does not require the individual to be mentally or physically incapacitated in order to be used.

**Ensuring Liquidity** A plan should be established to provide for liquidity at the time of death. Major expenses, often including funeral expenses and income taxes, will arise at this time. Funds needed for these payments should be available, or adequate life insurance should be arranged in advance, to avoid the need for emergency sales of capital assets to raise the necessary cash.

**Simplicity** While the disposition of a large estate will rarely be simple, effective estate planning should ensure that the plan can be understood by the testator and all beneficiaries of legal age. In addition, any actions that can reduce the cost and complexity of administering the estate should be considered. This might involve disposing of investments in non-public shares, or repatriating assets that are located in foreign countries that might become subject to foreign taxation.

**Avoidance Of Family Disputes** Unfortunately, disputes among beneficiaries are a common part of estate settlement procedures. If equitable treatment of beneficiaries is a goal of the testator, efforts should be made to ensure that all beneficiaries believe that they have been treated in an equitable manner. If the testator wants to distribute assets in a fashion that could be viewed as inequitable by any of the interested parties, care should be taken to make this intention unequivocal.

**Expediting The Transition** The procedures required in the settlement of an estate should be designed to expedite the process. A long settlement period can increase uncertainties related to the value of assets, add to the complications associated with the required distribution of the assets, and prolong the frustration of the beneficiaries.

## Tax Considerations

19-154. In addition to the preceding non-tax considerations, estate planning must also consider various tax factors. Fundamental tax planning goals for all taxpayers apply equally to estate planning. Briefly, these goals involve the legal and orderly arrangement of one's affairs, before the time of a transaction or event, to reduce and defer income taxes.

19-155. In effective estate planning, the overriding income tax goals are to defer and minimize tax payments. Several important issues should be considered in dealing with this objective. These can be described as follows:

**Prior To Death** Planning should attempt to minimize taxes for the individual in the years prior to death. If the individual earns income that is not required in these years, attempts should be made to defer the payment of tax and transfer the before-tax income to the ultimate beneficiaries. The use of a discretionary trust can assist in achieving this goal.

**Year Of Death** Planning should attempt to minimize income taxes payable in the year of death. Deemed dispositions will occur at death and, in addition, amounts in certain types of deferred income plans usually must be included in the taxpayer's final return. Relief can be achieved through tax deferred rollovers to a spouse and transfers of certain types of property (e.g., farm property) to children or grandchildren. The will can also contain instructions to ensure that the maximum RRSP contribution is made to the spouse's RRSP within the deadline.

**Income Splitting** Effective planning should allow income splitting among family members who are in lower tax brackets. This can be accomplished by the appropriate splitting of income (e.g., paying salaries and wages for services rendered) and distributing property among beneficiaries throughout a taxpayer's lifetime, recognizing the limitations imposed by the TOSI.

**Foreign Jurisdictions** Planning should normally attempt to minimize taxes that will be incurred in foreign jurisdictions. This is especially true for jurisdictions with significant estate taxes as such taxes are generally not eligible for foreign tax credits or deduction in Canada. To the extent that it is consistent with the individual's investment plans and the residence of intended beneficiaries, holdings of foreign assets at

death, or distributions to beneficiaries in foreign locations, should usually be avoided by residents of Canada. Minimizing foreign investments will also simplify the administration of an estate.

**Administration Period** Planning should minimize taxes payable while the estate is being administered. Discretion provided to trustees in distributing the income of an inter vivos trust may assist in achieving this goal.

19-156. Most of the tax procedures related to these issues have already been introduced. We have discussed spouse and common-law partner rollovers in previous Chapters and the use of trusts was covered earlier in this Chapter. An important aspect of estate planning that requires additional consideration is the estate freeze. Procedures to be used in these arrangements are outlined in the material that follows.

# Estate Freeze

## Objectives Of An Estate Freeze

19-157. The objective of an estate freeze is, as the name implies, to freeze the value of the estate for tax purposes at a particular point in time. Typically, arrangements are made for all future appreciation to accrue to related parties such as a spouse, children, or grandchildren.

**EXAMPLE** Mr. Chisholm is a wealthy and successful entrepreneur who has a wife and two young children. He owns a variety of capital assets that are producing Taxable Income and appreciating in value. He has several objectives in creating his estate plan:

- During the remainder of his life, Mr. Chisholm would like to transfer all or part of his Taxable Income to a group of individuals and charities who will ultimately be the beneficiaries of his estate.
- Mr. Chisholm would like to freeze the tax values of his assets and allow future growth to accrue to the intended family members.
- Since the current fair market value of his assets exceeds their tax cost, Mr. Chisholm would like to avoid any immediate taxation resulting from a disposition of these assets with accrued gains.
- Mr. Chisholm would like the transfer of future growth in asset values to accrue so that his beneficiaries will not be subject to taxation in the year of the estate freeze, in any intervening years, or in the year of his death.
- Mr. Chisholm wants to retain the right to the current value of the property at the time of the estate freeze. In addition, he wishes to retain control of the use of the property until his death.

19-158. This example will be used as a basis for discussing a variety of techniques that can be used to freeze an estate's value. Some of these techniques will achieve all of Mr. Chisholm's goals, while others will only succeed in achieving one or two of them.

## Techniques Not Involving Rollovers

### Gifts

19-159. Mr. Chisholm can freeze the value of his estate without using rollover provisions. The most straightforward technique is to simply give property to his prospective beneficiaries. While this would accomplish the goal of transferring future growth in the estate to the beneficiaries, unless the transfer was to a spouse or common-law partner, this approach would have the serious drawback of attracting immediate taxation on any difference between the fair market value of the assets and Mr. Chisholm's tax cost.

19-160. In addition, if the person receiving the gift is a spouse or minor child, income attribution rules could apply after the gift is made. Further drawbacks are the fact that Mr.

Chisholm would lose control over the assets and that certain income received by related persons may be subject to the TOSI.

19-161. While gifts result in a loss of control, Mr. Chisholm may want to accelerate his donations to registered charities. The value of the tax credit associated with such gifts can more than offset any income arising as the result of such distributions. In particular, if a gift is made of shares listed on a designated stock exchange, the capital gains inclusion rate is reduced to nil (See Chapter 11).

### Instalment Sales

19-162. Mr. Chisholm could freeze the value of the estate by selling the assets to the intended family members on an instalment basis. Capital gains could be deferred until payment is received, but the gains would need to be reported over the next 5 years based on the capital gains reserve calculations (10 years if a farm or fishing property is involved).

19-163. To avoid income attribution and inadequate consideration problems, the sale should be made at fair market value. However, if the intended family members do not have sufficient assets to make the purchase, this may not be a feasible solution. A further problem is that Mr. Chisholm would lose control over the property.

### Establishing A Trust

19-164. An estate freeze can also be accomplished by setting up a trust in favour of one or more beneficiaries. Here again, this will transfer income and future growth from Mr. Chisholm's hands to the trust. The trust can be structured so that he retains some control over the assets in the trust.

19-165. The problem with this arrangement is that, except in the case of a qualifying spouse or common-law partner trust, a joint spousal or common-law partner trust, or an alter ego trust, there is no rollover provision that provides for tax deferred transfers of assets to a trust. As a result, if the trust is set up for beneficiaries other than Mr. Chisholm or his spouse, Mr. Chisholm will incur taxation on any capital gains accrued at the time of the transfer. As well, any dividends received from a private corporation by related beneficiaries may be subject to the TOSI, whether the shares are held directly or through a trust.

### Use Of A Holding Company

19-166. Mr. Chisholm could transfer assets to a holding company in which intended family members have a substantial equity interest, without using a rollover provision. This will freeze the value of his estate and, if the assets transferred have fair market values that are equal to or less than their adjusted cost base, it can be an effective vehicle for realizing losses. However, without the use of a rollover provision, such as that found in ITA 85, any capital gains or recapture amounts that have accrued to the time of the transfer will become subject to immediate taxation.

## Section 86 Share Exchange

### Nature Of The Exchange

19-167. Chapter 17 provided an overview of ITA 86 which applies to the exchange of shares by a shareholder in the course of a reorganization of capital. In certain situations, a share exchange constitutes the best solution to the estate freeze problem. Specifically, this rollover is most appropriate in a situation that involves an individual who is the sole owner of a successful private corporation.

19-168. By exchanging common shares for preferred shares that have equal value, the owner will, in effect, eliminate his participation in the future growth of the company. At the same time, common shares can be issued to intended family members or a discretionary family trust created for their benefit. These new shareholders can participate in the company's future income and any growth in the value of its assets.

### Example

19-169. While detailed consideration was given to ITA 86 rollovers in Chapter 17, the following simple example will serve to review these procedures.

**EXAMPLE** Over her lifetime, Mrs. Hadley has been the sole owner and driving force behind Hadley Inc., a manufacturing business located in Alberta. At the end of the current year, the condensed Balance Sheet of this Company was as follows:

**Hadley Inc.**
**Balance Sheet**

| | |
|---|---|
| Net Identifiable Assets | $10,000,000 |
| Common Stock (No Par - 1,000 Shares) | $ 2,000,000 |
| Retained Earnings | 8,000,000 |
| Total Shareholders' Equity | $10,000,000 |

On the basis of an independent appraisal, the fair market value of this business was established at $15,000,000. Mrs. Hadley has a husband and three adult children and would like them to share equally in her estate. The $2,000,000 Common Stock account is both the adjusted cost base and the PUC of her shares.

19-170. Under ITA 86, Mrs. Hadley can exchange, on a tax deferred basis, her common shares that have an adjusted cost base of $2 million (also the amount of contributed capital and PUC) for preferred shares with a redemption value of $15 million (the fair market value of the business). These preferred shares would have no participation in the future growth of the Company and, as a result, Mrs. Hadley has effectively frozen the value of her estate.

19-171. If Mrs. Hadley wishes to retain control of the Company, the preferred shares can be established as the only outstanding voting shares. While this share exchange will be free of any capital gains taxation, Mrs. Hadley's adjusted cost base and PUC for the new preferred shares remains at the former common share value of $2 million. If the preferred shares are sold for their market value of $15 million, a $13 million capital gain will result ($15 million - $2 million). Alternatively, if the shares are redeemed for $15 million by the Company, there will be a $13 million taxable dividend under ITA 84(3).

19-172. The tax cost basis for the identifiable assets owned by the Company has not been altered by the share exchange transaction.

19-173. At this point, the redemption value of Mrs. Hadley's preferred shares represents he entire fair market value of the business and, as a consequence, the value of any common shares issued will not exceed the amount contributed by the investors. This means that such shares can be issued for a nominal value, without any appearance that the purchasers are indirectly receiving a gift from Mrs. Hadley. Thus, 1,000 common shares could be issued to Mrs. Hadley's intended family members at $10 per share as follows:

| | |
|---|---|
| Spouse (250 Shares At $10) | $ 2,500 |
| Child One (250 Shares At $10) | 2,500 |
| Child Two (250 Shares At $10) | 2,500 |
| Child Three (250 Shares At $10) | 2,500 |
| Total Common Stock Contributed | $10,000 |

19-174. These common shares would benefit from the future income and growth in asset values that may be experienced by Hadley Inc.

19-175. Prior to 2018, this Section 86 rollover would have provided an ideal solution to the estate freeze problem. It did, in fact, transfer all future growth in the estate into the hands of intended beneficiaries with no immediate tax effects on the individual making the transfer. However, there is a problem in that, with the new TOSI rules in place, income received by the family members is likely to be taxed at the maximum federal rate of 33 percent.

### Rollover Provisions - Section 85 vs. Section 86

19-176. A Section 85 rollover of property to a holding corporation can also be used to implement an estate freeze. The rollover provisions of ITA 85 were given full consideration in Chapter 16, and will not be repeated here.

19-177. In comparing the use of ITA 85 and ITA 86, you should note that Section 85 can be used in a broader variety of circumstances than is the case with Section 86. More specifically, Section 86 deals only with exchanges of shares in the course of the reorganization of an existing corporation. This means that Section 86 can only be used in situations where the assets involved in the estate freeze are shares of a corporation. Section 85 would have to be used if the estate consists of other types of property.

19-178. When Section 86 can be used, it is an easier procedure to implement. Unlike Section 85, which requires a formal election to be made and either an existing corporation or the formation of a new corporation, Section 86 applies automatically once the required conditions are met. By using a Section 86 reorganization, the savings in legal and accounting fees can be significant. The many complexities involved in effecting an estate freeze using rollovers make it difficult to comment on the relative desirability of Sections 85 and 86 for estate freezes in general terms.

## SIFT Partnerships And Trusts

19-179. As was noted in Chapter 18, legislation has served to largely eliminate SIFT partnerships and trusts. Given this, we do not provide coverage of this subject in *Canadian Tax Principles*, except in Chapter 7, Property Income, where we have limited coverage of real estate income trusts (REITs).

**Additional Supplementary Self Study Problems Are Available Online.**

## Key Terms Used In This Chapter

19-180. The following is a list of the key terms used in this Chapter. These terms, and their meanings, are compiled in the Glossary located at the back of the Study Guide.

Alter Ego Trust
Beneficiary
Capital Interest (In A Trust)
Discretionary Trust
Estate
Estate Freeze
Executor
Family Trust
Graduated Rate Estate
Income Attribution
Income Interest (In A Trust)
Income Splitting
Inter Vivos Trust
Joint Spousal Or Common-Law Partner Trust
Non-Discretionary Trust
Personal Trust
Preferred Beneficiary
Preferred Beneficiary Election
Qualifying Spousal or Common-Law Partner Trust
Reorganization Of Capital (ITA 86)
Reversionary Trust
Rollover
Settlor
Split Income
Spousal Or Common-Law Partner Trust
Tax Planning
Testamentary Trust
Trust
Trustee
Twenty-One (21) Year Deemed Disposition Rule
Will

# Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 19:

- 6 Self Study problems,
- 2 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

# Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### Assignment Problem Nineteen - 1

#### (Property Transfer To And From A Trust)

Each of the following independent Cases involve transfers of property to trusts by a settlor for no consideration. Three of the Cases also involve capital distributions from trusts to capital beneficiaries.

A. A gift of non-depreciable capital property is made to a qualifying spousal inter vivos trust. The adjusted cost base of the property to the settlor was $45,700. At the time of the transfer the fair market value of the property is $51,000. At a later point in time, the property is transferred to the spouse. At this time the fair market value of the property is $49,200.

B. A gift of depreciable capital property (a rare violin) is made to an inter vivos trust in favour of the settlor's adult children. The capital cost of the violin to the settlor, a world renowned violinist was $125,000. On the date of the gift, the UCC was $72,000 and the fair market value was $155,000.

C. A transfer of a piece of vacant land is made to a qualifying spousal testamentary trust. The cost of the land for the deceased spouse was $200,000, and the fair market value on the date of the transfer to the trust is $225,500. At the time of his death, the decedent had a large net capital loss carry forward of $78,000.

D. A depreciable property is transferred to an inter vivos trust in favour of the settlor's adult children. The capital cost of the property is $17,600 and its UCC is $9,100. It is the last asset in its class. At the time of the transfer, the fair market value of the property is $5,000.

E. A gift of non-depreciable capital property is made to an inter vivos trust in favour of the settlor's adult children. The adjusted cost base of the property to the settlor was $36,900. Its fair market value on the date of the gift is $40,200. At a later point in time, when the fair market value of the property is $51,700, the property is transferred to the children.

F. A non-depreciable capital property is transferred to an alter ego trust. The cost of the capital property to the settlor was $101,500. On the date of the transfer, the estimated fair market value is $92,300. At a later point in time, when the estimated fair market value of the property has increased to $100,000, the property is transferred back to the settlor.

**Required:** For each Case indicate:

1. The tax consequences to the settlor that result from the transfer of the property to the trust assuming the transfer price is chosen to optimize the tax position of the settlor.
2. The tax value(s) for the transferred property that will be recorded by the trust.
3. In those cases where property is transferred to a beneficiary, the tax consequences to the trust and the tax value(s) that will be recorded by the beneficiary.

### Assignment Problem Nineteen - 2

**(Inter Vivos Trusts - Income Attribution)**

In the process of planning an estate freeze, Glen Marx intends to transfer a large group of publicly traded common stocks to a trust. The terms of this trust will require that, on an annual basis, 50 percent of the income of the trust be distributed to his wife, Greta Petrov, with the remaining 50 percent split equally between their son, Sergey and daughter, Anastasia. Sergey is 23 years old and has employment income of over $35,000 per year. Anastasia is 19 years old and has employment income of over $25,000 per year.

The trust's income will consist of interest, dividends, and capital gains.

The terms of the trust require that all of the trust's assets be distributed 15 years subsequent to the date on which it was established. This distribution will use the same allocation that is used for annual distributions.

**Required:**

A. Identify the type of trust that is being used.

B. How should the trust's year end date be chosen?

C. Indicate the persons that will have to include the trust's income in their Net Income For Tax Purposes. Would your answer change if Anastasia was 17 years of age? If so, explain how.

D. Explain how your answer to Part C would change if Mr. Marx forms the trust by the settlement of a nominal amount of cash. Mr. Marx then lends money to the trust to purchase the portfolio investments from him at their fair market value. Assume:
   1. the loan is an interest free loan;
   2. the trust pays interest at the prescribed rate on the loan.

E. Would the taxation of the trust income change if Mr. Marx and Mrs. Petrov were living separately because of a marriage breakdown? Explain your conclusion.

### Assignment Problem Nineteen - 3

**(Trusts And Income Splitting)**

Hannah Brood is an engineer with 2019 employment income of $235,000. In addition, she has holdings of debt securities that produce a total of $65,000 in interest during 2019.

She has a 19 year old son from her first marriage. The son's name is Harvey Rosen and he is enrolled as a freshman at a Canadian university. It is Harvey's life-long dream to be an accounting professor. Given this, he anticipates that he will be enrolled in university programs for at least 8 more years. Hannah expects that the cost of his living expenses, tuition, and books will be about $55,000 per year during this period. Harvey's father disappeared without a trace when Harvey was born and has never paid any child support.

While she has had three other marriages, she eventually found married life very dreary and is now separated from her most recent husband. However, she still loves children. To satisfy this maternal need, she arranged to have another child with sperm donated by her gay brother-in-law. This child is now a 1 year old named Carl Brood. Currently, Carl is cared for by

a nanny who is paid $17,000 per year. When Carl reaches 4 years of age, Hannah intends to send him to a private school. She anticipates that the cost of the private school will be similar to the cost of the nanny.

Hannah does not anticipate that either child will have significant income until they complete university.

Hannah would like to transfer the debt securities to a trust for her children. As her employment income is more than sufficient for her needs, she hopes to use the trust to split income both currently and in future years. She has indicated that, while she wants to support her children fully, she does not want the trust to provide them with any direct payments until they are 30 years old. Until then, she wants the trust to pay for their care, education, and other direct expenses.

**Required:** Outline how a trust might be used to split income with Hannah's children. Ignore the possibility that some of the trust's distributions might be subject to the TOSI.

## *Assignment Problem Nineteen - 4*

### *(Graduated Rate Estates - Tax Minimization)*

After a long battle with cancer, Mr. Thomas Holt died on March 3, 2018. His will specifies that all of the considerable assets in his estate are to be transferred to a testamentary trust.

Because of difficulties with locating some of Mr. Holt's assets, the transfer to a trust has not been implemented prior to December 31, 2018. Given this, the executor of his estate files a T3 tax return for the period ending December 31, 2018. This return designates Mr. Holt's estate as a Graduated Rate Estate (GRE).

Due to administrative delays of various sorts, Mr. Holt's assets remain under the administration of the executor at December 31, 2019. Because of this, the executor files a T3 return for the GRE for the year ending December 31, 2019.

The beneficiaries of the trust are Mr. Holt's wife, Renfrew Holt. She is a very successful trial lawyer with an annual income in excess of $275,000. Their 22 year old daughter Roxanne has struggled, for several years, to have a career as a folk singer. She has not enjoyed much success and, as a consequence, she has no Taxable Income for 2019.

In his will, Mr. Holt included a provision which allowed income distributions to these beneficiaries during the period that his estate is being administered by an executor. While the provision allows for distributions to either beneficiary, the timing and amounts are at the discretion of the executor.

For the year ending on December 31, 2019, the GRE had the following income receipts:

| | |
|---|---|
| Interest | $43,000 |
| Eligible Dividends Received From Canadian Corporations | 31,200 |
| Total Income | $74,200 |

**Required:**

A. With a view to minimizing total Tax Payable for the GRE and the beneficiaries, determine the amounts and type of income that should be distributed to each beneficiary for 2019.

B. Using the allocations you determined in Part A, calculate the total federal Tax Payable for the GRE and Roxanne Holt for the year ending on December 31, 2019. In addition, indicate any additional taxes that would be paid by Renfrew Holt for 2019 as the result of the GRE distributions.

Ignore the possibility that some of the trust's distributions might be subject to the TOSI.

### Assignment Problem Nineteen - 5

#### (Inter Vivos Trusts - Tax Payable)

During 2017, Valerie Larson's parents both died when their private jet was hit by a drone while circling the Toronto Island airport. As an only child, Valerie inherited a substantial estate.

Her parents had transformed the family construction business from a one man operation (her father) into a very successful online market place for quality construction services. Valerie and her two sons, Louis and Gabriel had worked for the Canadian controlled private company, Larson Services Inc. (LS) all their working lives.

Valerie decided to transfer the investments she inherited into a trust with her two sons as beneficiaries. The fiscal year of the trust ends on December 31, and Ms. Larson has no beneficial interest in either the income or capital of the trust. As the president of LS, her compensation is more than adequate for her financial needs.

Louis is aged 30, while Gabriel is 25. The terms of the trust specify that Louis is to receive 10 percent of all of the income of the trust, while Gabriel is to receive 50 percent of this income. The reason for the difference in percentages is that Louis is addicted to opioids. After the death of his grandparents, he turned to street drugs to help cope with his grief. Louis is in a long term treatment program for his addiction and he is making impressive progress.

The undistributed income is to accumulate within the trust, to be paid out to Louis when his doctors tell Valerie his addiction is under control.

The income figures for the year ending on December 31, 2019, are as follows:

| | |
|---|---:|
| Non-Eligible Dividends Received From LS | $450,000 |
| Interest Income On Corporate Bonds | 37,000 |
| Revenues From Rental Property | 205,000 |
| Cash Expenses On Rental Property | 125,350 |

During 2019, the rental property was sold. The property consisted of an apartment building and the land on which it was located, all of which was transferred into the trust when Valerie inherited it. The relevant information related to the disposition is as follows:

| | Building | Land |
|---|---:|---:|
| Proceeds Of Disposition | $3,200,000 | $728,000 |
| Undepreciated Capital Cost | 1,881,600 | N/A |
| Capital Cost/Adjusted Cost Base | 2,000,000 | 500,000 |

This is the first disposition of capital property by the trust since its establishment.

**Required:**

A. Calculate the Taxable Income of the trust for the year ending December 31, 2019. In addition, calculate the increase in Taxable Income resulting from being beneficiaries of the trust for Louis and Gabriel for the same period.

B. Calculate the federal Tax Payable for the trust, for the year ending December 31, 2019.

### Assignment Problem Nineteen - 6

#### (Graduated Rate Estates - Transfers and Tax Payable)

Rhett Buttler died on March 22, 2018. The assets in his estate are to be transferred to a testamentary trust whose beneficiaries are his wife Scarlett and their adult, transgender son/daughter Ashley.

The executor of Rhett's estate missed a curve while driving his Maserati very fast. He survived the car crash with extensive physical damage, but with minor impairment to his mind. As a consequence of the accident he was not able to fully perform his executor duties for an extended period of time. As a result, on March 21, 2020, the assets of the estate are still under his administration.

The executor had filed a T3 return for the non-calendar fiscal year ending March 21, 2019, designating the estate as a Graduated Rate Estate (GRE).

For the fiscal year ended March 21, 2020, the GRE has the following:

| | |
|---|---|
| Business Income | $50,000 |
| Interest | 7,500 |
| Non-Eligible Dividends Received From CCPC | 125,000 |
| Rent Receipts | 30,000 |
| Rental Operating Expenses | 15,000 |
| CCA On Rental Property | 5,000 |

As he had anticipated difficulties in settling his estate, Rhett's will indicated that the executor should make distributions of his estate's income until such time as the assets are transferred to the testamentary trust. All distributions are to be made on the last day of the fiscal period of the GRE, i.e., on March 21, 2020 for the second fiscal year.

Assume his will contained the following instructions:

**Alternative One** One-half of any dividend income is to be retained in the GRE. The remaining one-half of the dividend income, as well as all of the other net income is to be paid 60 percent to Scarlett and 40 percent to Ashley.

**Alternative Two** All of the GRE's income will be allocated to Scarlett and Ashley on a 60 percent and 40 percent basis.

Scarlett and Ashley have no other sources of income. They have no personal tax credits under ITA 118 other than their basic personal credit and any credits that may arise from income allocations from the GRE.

**Required:**

A. For each of the alternatives, calculate Taxable Income and federal Tax Payable for the fiscal year ending March 21, 2020 for the GRE.

B. For each of the alternatives, calculate Taxable Income and federal Tax Payable for Scarlett and Ashley for the year ending December 31, 2020.

C. Compare the amount of federal Tax Payable under each of the two alternatives and explain the difference.

Assume that the tax rates and tax brackets for 2020 are the same as those for 2019. Also, assume that none of the trust's distributions will be subject to the TOSI.

### Assignment Problem Nineteen - 7

**(Graduated Rate Estates - Transfers and Tax Payable)**

Martha Dagger was killed in a paragliding accident on March 15, 2019. Her will requires that all of the property in her estate be transferred to a testamentary trust. The beneficiaries of the trust will be her 22 year old daughter, Sharon Dagger and her 14 year old son, Morris Dagger. Because of complications related to transferring the assets to the trust, on December 31, 2019, the estate assets are still under the administration of her executor.

The executor files a T3 tax return for the fiscal period ending on December 31, 2019 designating Martha's estate as a Graduated Rate Estate (GRE). While the executor could have chosen a non-calendar taxation year, he decided to use December 31 as the year end for the GRE.

Information on the property owned by Martha at her death is as follows:

| | Tax Cost | Fair Market Value March 15, 2019 |
|---|---|---|
| Shares In Deadly Dagger Inc. (a CCPC) | $ 897,000 | $1,472,000 |
| Corporate Debt Securities | 478,000 | 456,000 |
| Rental Property | | |
| Land | 562,000 | 864,000 |
| Building (Cost = $1,740,000) | 1,390,374 | 2,476,000 |

Deadly Dagger Inc. is a qualified small business corporation. Martha has available a lifetime capital gains deduction of $250,000 [(1/2)($500,000)] and no CNIL.

Martha's will specifies that 70 percent of any income that accrues in her estate prior to the estate assets being transferred to the testamentary trust be distributed on the basis of 40 percent to Sharon and 30 percent to Morris. The remaining 30 percent will be allowed to accumulate in the GRE.

Between March 15, 2019 and December 31, 2019, the following income and expense amounts were recorded by the GRE:

| | | |
|---|---|---|
| Non-Eligible Dividends Received | | $124,000 |
| Interest On Corporate Debt Securities | | 31,650 |
| Net Rental Income: | | |
| Rental Revenues | $251,600 | |
| Rental Expenses Other Than CCA | ( 172,940) | |
| CCA Claimed | ( 55,615) | 23,045 |
| Total Income | | $178,695 |

**Required:**

A. Determine the increase in Martha's 2019 Taxable Income that will result from her death.

B. For the fiscal period ending on December 31, 2019, determine the Taxable Income for the GRE and the total Taxable Income allocated to each beneficiary.

C. Calculate the federal Tax Payable for the GRE for the fiscal period ending on December 31, 2019.

### Assignment Problem Nineteen - 8

#### (Estate Freeze)

Mr. and Mrs. Zahar own a very lucrative company, Zeus Goose Ltd. The fair market value of the common shares is $5,000,000 and they have a nominal cost base and paid up capital.

The Zahar's want to set up an estate freeze to pass on future growth of the Company to their three children, all of whom are in their twenties. Mr. and Mrs. Zahar are in their early fifties and want to continue to control the Company for many years. While they have obtained information on how a corporate reorganization can be used to effect an estate freeze, they would also like to investigate the use of trusts in their estate planning.

**Required:** Outline important issues that should be considered by Mr. and Mrs. Zahar if they are to use trusts in an estate freeze.

Ignore the possibility that some of the trust's distributions might be subject to the TOSI.

### Assignment Problem Nineteen - 9

#### (Estate Planning)

One of your clients, Daniel Loh has read several articles describing the tax advantages of charitable donations. Mr. Loh is 73 years old and has had a very successful career in business in Canada. As a consequence, he owns a wide variety of investments in publicly traded securities and private company shares, as well as real estate in Canada and Singapore. You estimate that his assets have a current value in excess of $15 million.

Due to a car accident in Singapore that disfigured him horribly and made him a recluse, he has never married and has no friends or living relatives. When he dies, he intends to leave all of his assets to a group of his favourite charities.

As he has never spent any time on estate planning, he has asked you to help him understand the issues and give him suggestions of what he should consider.

**Required:** Write a brief report providing the advice requested by your client.

# CHAPTER 20

# International Issues In Taxation

## Introduction

### Subjects Covered

20-1. This Chapter 20 is something of a potpourri of issues that are loosely related by their association with transactions and events that extend beyond Canada's borders. In some cases, we are dealing with the application of Canadian tax law to transactions and events that occur outside of Canada. In other cases, we are concerned only with the fact that individual taxable entities are moving between Canada and other jurisdictions. Some of these transactions and events relate to taxation that is associated with the laws that exist in jurisdictions outside of Canada.

20-2. In dealing with the diverse nature of the material covered, we have organized this Chapter as follows:

**Residence** While some of the material related to residence involve international issues, these issues were covered in our comprehensive coverage of residence in Chapter 1.

**Taxation Of Canadian Source Income Earned By Non-Residents** While the basic approach to the assessment of income tax in Canada is to assess tax on Canadian residents, under certain circumstances, non-residents can be required to pay Canadian income taxes. Depending on the type of income, the tax may be assessed under Part I, Part XIII, or other Parts of the *Income Tax Act*. Detailed consideration will be given to Part I and Part XIII tax as they are the most commonly applied provisions.

**Immigration And Emigration** We touched on this subject in Chapter 8 when we covered the deemed disposition of most capital assets when an individual emigrates from Canada. In this Chapter, we will consider some of the other complications associated with leaving Canada, as well as tax considerations related to immigration.

**Taxation Of Foreign Source Income Earned By Residents** This material begins by discussing the reporting requirements applicable to Canadian residents who have foreign investments. This is followed by material dealing with resident taxpayers who have the following types of income:

- foreign source employment income;
- foreign source income from unincorporated businesses;
- foreign source interest income; and
- capital gains resulting from the disposition of foreign assets.

The remainder of the chapter provides limited coverage of dividend income received by Canadian residents from non-resident entities. This would include material on foreign affiliates, controlled foreign affiliates, and foreign accrual property income (FAPI). Some of this material is extremely difficult to understand and because of this, some instructors may choose not to include it in their courses.

## The Role of International Tax Treaties

20-3. Tax treaties are entered into between countries for the purpose of facilitating cross-border trade and investment by removing income tax obstacles. For example, a Canadian resident employed in the U.S. is potentially subject to Canadian tax under the residence approach. In the absence of a treaty, he could also be subject to U.S. tax on the same income under the source approach. This would, of course, create a significant impediment to cross-border employment.

20-4. In addition to dealing with double taxation problems such as this, treaties also provide income tax certainty, prevent discrimination, ensure a proper division of cross-border revenues, and provide an information-sharing mechanism for the purposes of administration and enforcement of each country's tax laws.

20-5. In cases where there are conflicts, Canada's tax treaties generally override the *Income Tax Act*. This override occurs through legislation that implements the tax treaty, as well as specific provisions of the *Income Tax Act* that recognize the priority given to the tax treaty. For example, ITA 2(3) requires a U.S. resident to pay Canadian tax on employment income earned in Canada. The tax treaty, on the other hand, may, in specific circumstances, state that such income is only taxable in the U.S. In such cases, the inconsistency is resolved through the application of the tax treaty with the result that no Canadian tax is payable by the U.S. resident.

# Part I Tax On Non-Residents

## Introduction

### *Applicability*

20-6. As covered in Chapter 1 in our material on residence, ITA 2(1) states that Canadian taxes are payable by residents of Canada on their world wide taxable income for a taxation year. While this statement makes it clear that Canadian residents are responsible for paying Canadian income taxes, it does not address the question of whether non-residents are responsible for such taxes.

20-7. Also as mentioned in Chapter 1, ITA 2(3) specifies that non-residents are responsible for Canadian Part I tax (tax assessed on Taxable Income) on certain types of income. As listed in that subsection, non-residents are responsible for:

- income earned while carrying on a business in Canada;
- employment income earned in Canada; and
- gains and losses resulting from dispositions of Taxable Canadian Property.

20-8. In this Chapter we will give attention to the assessment of Canadian Part I tax on non-residents in situations where they have any of these three types of income. As part of this discussion, we will provide coverage of the provisions of the U.S./Canada tax treaty that relate to such situations. Coverage of other international tax treaties goes beyond the scope of this text.

20-9. You will note that ITA 2(3) covers business income, employment income, and capital gains on Taxable Canadian Property, but this subsection does not refer to property income.

Further there is no reference to pension income, management fees, or capital gains on Canadian property other than those items that are classified as Taxable Canadian Property. This means that, in general, non-residents are not responsible for paying Part I tax on these types of Canadian source income.

20-10. However, this is not the end of the story. When these other types of income are from a Canadian source and are earned by non-residents, a separate Part XIII tax is applicable. The application of this tax will be covered beginning in Paragraph 20-31.

### Filing Requirements

20-11. In those situations where a non-resident has Tax Payable under Part I, a Canadian income tax return is required (see T4058, *Non-Residents And Income Tax*). The normal filing dates for individuals and corporations are applicable in such situations. No Canadian income tax return is required if there is no Part I Tax Payable.

### Taxable Income

20-12. As some of the items that must be included in a Canadian income tax return by non-residents are exempted by various international tax treaties, such amounts can be deducted in determining Taxable Income. In addition, under ITA 115(1), non-residents will also be able to deduct Canadian employment losses, Canadian business losses, various types of loss carry overs, Canadian stock option benefits, Canadian dividends received (corporations only), and charitable donations (corporations only).

20-13. If 90 percent or more (substantially all) of the taxpayer's worldwide income is included in their Part I tax return, the other Taxable Income deductions that are available to residents, such as the lifetime capital gains deduction, become available to non-residents.

### Tax Payable

20-14. Unless the non-resident's Part I return includes 90 percent or more of their worldwide income, ITA 118.94 prohibits the use of the majority of non-refundable tax credits. However, the following credits will be available to non-resident filers who are individuals if they have any amount of Canadian source income included in their Part I return.

- EI and CPP tax credits
- charitable donations tax credit
- disability tax credit (for taxpayer only)
- tuition tax credit
- interest on Canadian student loans tax credit

## Carrying on Business in Canada

### General Rules

20-15. As we have noted, non-residents are subject to Part I tax in Canada on income from businesses carried on in Canada. The rules for calculating business income discussed in Chapter 6 are generally applicable to non-residents. However, for non-residents, ITA 253 expands the concept of a business by deeming non-residents to be carrying on a business with respect to certain activities such as:

- Producing, growing, mining, creating, manufacturing, fabricating, improving, packing, preserving, or constructing, in whole or in part, anything in Canada.
- Soliciting orders or offering anything for sale in Canada through an agent or servant, whether the contract or transaction is to be completed inside or outside Canada.
- Disposing of certain property, such as real property inventory situated in Canada, including an interest in, or option on, such real property.

20-16. These rules are intended to ensure that certain Canadian activities that are connected to the non-resident's foreign business, are potentially taxable in Canada as business income. Without these rules, it could be questionable whether the non-resident person

would be considered to be carrying on a business in Canada.

**EXAMPLE** A U.S. business sends sales representatives to Canada to solicit orders. If the sales contracts can only be finalized in the U.S., under the general rules applicable to business income, it could be argued that no business was carried on in Canada. However, ITA 253 makes it clear that the soliciting of orders in Canada is carrying on business in Canada, without regard to where the contracts are finalized.

### Canada/U.S. Tax Treaty On Business Income

20-17. The treaty allows Canada to tax the business income of U.S. residents, provided that business is operated in Canada through what is referred to as a permanent establishment.

20-18. Article V of the Canada/U.S. tax treaty defines a "permanent establishment" as a fixed place of business through which the business of a non-resident is wholly or partly carried on. The treaty provides additional clarification by adding that fixed places of business include a place of management, a branch, an office, a factory, a workshop, a mine, an oil or gas well, a quarry or other place of extraction of natural resources. Additional rules provide permanent establishment status only if certain conditions are met (e.g., most construction projects are only considered permanent establishments if they last for more than twelve months).

20-19. The treaty specifically excludes facilities from being considered a fixed place of business if they are used exclusively for certain activities. These activities include:

- use of facilities solely for storage, display, or delivery of goods;
- maintenance of a stock of goods or merchandise for storage, display, or delivery;
- maintenance of a fixed place of business solely for purchasing goods or merchandise, or for collecting information; or
- maintenance of a fixed place of business solely for the purpose of carrying on any other activity of a preparatory or auxiliary character.

20-20. The tax treaty also deems certain persons to be permanent establishments of a non-resident. Two examples of this are as follows:

- An agent who acts on behalf of a non-resident enterprise and who is authorized to conclude contracts in the name of that enterprise, is considered a permanent establishment.
- An individual who acts on behalf of a business and meets both a physical presence test (183 days or more in any 12 month period beginning or ending in the year) and a gross revenue test (that more than 50% of the gross active business revenues of the U.S. business are from services performed by that individual during the period the individual is in Canada), is considered a permanent establishment.

## Exercise Twenty - 1

**Subject:** Carrying On Business In Canada

In each of the following Cases, determine whether Jazzco, a U.S. corporation, is taxable in Canada:

**Case 1** Jazzco, a U.S. corporation, is the parent company of Bluesco, a company incorporated in Ontario. Jazzco produces and sells Jazz CDs, while Bluesco produces and sells Blues CDs. Jazzco sells CDs to Bluesco, who in turn sells them in Canada.

**Case 2** Jazzco sets up a factory in Toronto where they produce CDs for the Canadian market. The CDs are sold exclusively to an independent Canadian franchise retail outlet at a 50 percent mark-up.

**Case 3** Jazzco manufactures Jazz CDs in the U.S. Jazzco ships CDs to a warehouse located in Calgary that they have rented on a five year lease. Jazzco has employed an individual in Calgary to sell the CDs throughout western Canada. The employee,

however, is not allowed to conclude contracts without approval by the U.S. office.

**Case 4** Assume the same facts as in Case 3, except that the employee has the authority to conclude contracts on behalf of the employer.

**Case 5** Assume the same facts as in Case 3, except that the employee has an office in the warehouse premises where he solicits orders.

**SOLUTION available in print and online Study Guide.**

## Canadian Source Employment Income

### *General Rules*

20-21. As noted, under ITA 2(3), non-resident individuals are subject to Part I tax on Canadian source employment income. For this purpose, net employment income is calculated using the same rules that are applicable to residents earning Canadian source employment income. These rules were covered in Chapter 3.

20-22. In addition to this provision, ITA 115(2) deems certain non-resident individuals to be employed in Canada, even when the work is not carried on in this country. Such individuals include:

- Individuals who have become residents of another country and continue to receive employment remuneration from a resident Canadian source, provided a tax treaty exempts that remuneration from taxation in the foreign country.
- Non-resident individuals who have received signing bonuses and other similar amounts that relate to services to be performed in Canada, in situations where the resident Canadian employer is entitled to deduct the amounts in computing Canadian Income.

20-23. The basic idea behind these provisions is that, if payments are made to a non-resident that are deductible to a Canadian resident, the payments will be taxed in Canada if they are not taxed in the other country. Note, however, that employee remuneration is generally exempted from Canadian taxation if it is subject to tax by the foreign country.

### *Canada/U.S. Tax Treaty On Employment Income*

20-24. In general, a source country has the right to tax the employment income of non-residents when it is earned within its borders. This view is reflected in ITA 2(3) which assesses Part I tax on Canadian source employment income earned by non-residents. However, the Canada/U.S. tax treaty contains two special rules which create exceptions to this general approach.

**$10,000 Rule** Under this rule if, during a calendar year, a U.S. resident earns employment income in Canada that is $10,000 or less in Canadian dollars, then the income is taxable only in the U.S.

**183 Day Rule** This rule exempts Canadian source employment income from Canadian taxation, provided it is earned by a U.S. resident who was physically present in Canada for no more than 183 days during any twelve month period commencing or ending in the calendar year. This exemption is conditional on employment income not being paid by an employer with a permanent establishment in Canada who would be able to deduct the amount paid from their Canadian Income. Stated alternatively, if the employment income exceeds $10,000 and is deductible in Canada, it will be taxed in Canada, even if the employee is present in Canada for less than 183 days during the year.

20-25. It is important not to confuse the 183 day period in the treaty with the 183 day sojourner rule for determining residence. (See Chapter 1.) While the treaty rule applies to any physical presence in Canada, the sojourner rule applies to temporary visits or stays. Daily commutes to Canada from the U.S. for employment purposes would count towards the 183 days in the treaty rule, but not towards the 183 days in the sojourner rule.

## Exercise Twenty - 2

**Subject:** Non-Resident Employment In Canada

Dawn Johnson is employed by Alberta Oil Ltd. as an oil well technician in Edmonton. She has accepted a transfer to the Egyptian offices of the Company for three years beginning January 1, 2019. Dawn severs her residential ties to Canada on December 31, 2018 and takes up residence in Egypt. Alberta Oil continues to pay her salary. Although the government of Egypt would normally tax such salary, the tax treaty between Canada and Egypt exempts the salary from tax in Egypt. Is Dawn required to pay Canadian tax on the salary paid to her by Alberta Oil? Justify your conclusion.

## Exercise Twenty - 3

**Subject:** Non-Resident Employment In Canada - Canada/U.S. Tax Treaty

In each of the following Cases, determine whether the employment income is taxable in Canada:

**Case 1** David resides in the state of Washington. He accepted temporary employment as a technician with a Canadian company to do service calls in the Vancouver area for four months beginning September 1, 2019. The Canadian employer agreed to pay him $2,800 Canadian per month. David remained a non-resident of Canada throughout his Canadian employment.

**Case 2** Assume the same facts as in Case 1, except the employer was resident in Washington and did not have a permanent establishment in Canada.

**Case 3** Sandra resides in Detroit, Michigan and has commuted daily to a full-time job in Windsor, Ontario for the last three years. In 2019, she spent 238 days at her job in Canada. She works for the municipality of Windsor and earned $50,000 Canadian in employment income. Sandra is a U.S. resident throughout the year.

**SOLUTIONS available in print and online Study Guide.**

## Dispositions of Taxable Canadian Property

### *General Rules*

20-26. As we have previously noted, under ITA 2(3), non-residents are taxable on gains resulting from dispositions of Taxable Canadian Property. The general rules for dealing with capital gains and losses were covered in detail in Chapter 8. While we only considered their application to Canadian residents in that Chapter, these rules are equally applicable to non-residents.

20-27. As defined in ITA 248(1), the main categories of Taxable Canadian Property are as follows:

- Real property situated in Canada.
- Certain capital property or inventories of a business carried on in Canada.
- A share of an unlisted corporation, an interest in a partnership, or an interest in a trust if, at any time within the preceding 60 months, more than 50 percent of the fair market value of the share or interest was derived from certain properties including Canadian real property, Canadian resource properties and timber resource properties.
- A share of a listed corporation only if, at any time within the preceding 60 months, at least 25 percent of the issued shares of any class were owned by the non-resident taxpayer and/or non-arm's length persons, and more than 50 percent of the shares' fair market value was derived from certain properties including Canadian real property, Canadian resource properties and timber resource properties.

### Compliance Certificates

20-28. There are, of course, problems related to having a non-resident comply with Canadian tax rules related to dispositions of Taxable Canadian Property. To deal with this, ITA 116 requires a non-resident, who anticipates a disposal of Taxable Canadian Property, to file Form T2062, "Request by a Non-Resident of Canada for a Certificate of Compliance Related to the Disposition of Taxable Canadian Property". This form, which must be filed within 10 days of the planned disposition, must be accompanied by a payment of 25 percent of the anticipated capital gain on the disposition (some types of security are acceptable). When these conditions are met, a certificate of compliance will be issued. There is a penalty for disposing of a Taxable Canadian Property without obtaining a compliance certificate.

20-29. As Canadian tax authorities are still dealing with a non-resident, this procedure does not ensure compliance. What serves to ensure that Canadian taxes will be paid is a requirement that, if the non-resident seller does not acquire a compliance certificate, the purchaser (usually a Canadian resident) is responsible for the 25 percent payment on behalf of the non-resident. Note, however, that ITA 116(5) provides an exception to this if, after reasonable enquiry the purchaser had no reason to believe that the seller was not resident in Canada.

### Canada/U.S. Tax Treaty On Taxable Canadian Property Dispositions

20-30. While the general rule in ITA 2(3) indicates that non-residents are taxable on gains resulting from dispositions of Taxable Canadian Property, it is necessary to examine the Canada/U.S. tax treaty to see if any of its provisions override this general rule. The treaty acts to limit Canadian taxation on U.S. residents to gains arising from only the following specific types of Taxable Canadian Property:

- real property situated in Canada;
- property forming part of a permanent establishment of the non-resident in Canada; and
- investments such as shares of corporations resident in Canada and interests in partnerships and trusts where the value of those investments is primarily attributable to real property situated in Canada.

## Exercise Twenty - 4

**Subject:** Dispositions Of Taxable Canadian Property

In each of the following Cases the individual is a U.S. resident who is disposing of a property. Determine whether any gain on the disposition is taxable under Part I in Canada.

**Case 1** In 2019, Nancy Gordon disposed of shares of a widely held Canadian public company that she acquired in 2016. Nancy never owned more than one-quarter of one percent of the outstanding shares of this company. The company's assets consist entirely of real estate situated in Canada.

**Case 2** In 2014, Joe Nesbitt acquired a condo in Whistler that he rented to Canadian residents. He sold the condo in 2019 at a considerable gain. Joe never occupied the condo.

**Case 3** Assume the same facts as in Case 2, except that Joe incorporates a private corporation under British Columbia legislation solely to acquire the condo. At a later point in time, Joe sells the shares at a considerable gain.

**Case 4** Assume the same facts as in Case 3, except the corporation is created under Washington state legislation.

**We suggest you work Self Study Problem Twenty-1 at this point.**

# Part XIII Tax On Non-Residents

## Introduction

### Applicability

20-31. In the preceding section of this Chapter, we dealt with the application of Part I tax to certain specific types of income earned by non-residents. As noted in Paragraph 20-10, this leaves many other types of Canadian source income that are not subject to Part I tax in the hands of non-residents.

20-32. The Part XIII tax is designed to correct this situation. ITA 212 provides a long list of income types to which this tax is applicable. While most of the items on the list fall into the property income category, there are other items such as pension benefits. Notably absent, however, are taxable capital gains on assets other than Taxable Canadian Property. Capital gains on dispositions of other Canadian assets are not taxed in the hands of non-residents, either under Part I or Part XIII.

20-33. Three other points are relevant here:

- Part XIII tax is an alternative to Part I tax. There are no situations in which both taxes would be applied to a single income source.
- Non-residents are not required to file a Canadian tax return for income that is subject to Part XIII tax.
- In general, it is the resident payer who is responsible for withholding the Part XIII tax from payment(s) being made to the non-resident, as well as remitting the withheld amounts to the CRA. The payer is also responsible for filing an information return (NR4) indicating the amounts withheld.

20-34. As indicated, Part XIII tax applies to a long list of income types. However, in the following material, we will limit our coverage to interest, royalties, rents, dividends, and pension benefits earned or accruing to non-residents.

### The Nature Of Part XIII Tax

20-35. This is a very different type of tax than that which is assessed under Part I. Under Part I, the relevant tax rate is applied to Taxable Income, a figure that is made up of components which are calculated on a net basis. For example, interest revenues are only included after any related expenses are deducted. In contrast, the Part XIII tax is assessed on the gross amount of income received.

> **EXAMPLE** Ms. Johnson borrows $100,000 to invest in high yield bonds. During the current year, they produce interest income of $9,000, while the interest costs for the borrowing amount to $4,000.
>
> **ANALYSIS** If Ms. Johnson was a Canadian resident being taxed under Part I of the *Income Tax Act*, the applicable tax rate would be applied to $5,000 ($9,000 - $4,000). In contrast, if Ms. Johnson was a non-resident being taxed under Part XIII, the Part XIII withholding rate would be applied to the $9,000 in interest received.

### Rates

20-36. The Part XIII rate that is specified in ITA 212(1) is 25 percent for all types of income listed in ITA 212. However, this rate is rarely applied when the recipient of the income is resident in a country with which Canada has a tax treaty. All of these treaties have provisions which, while allowing the applicability of the Part XIII tax, modify the rate. This is further complicated by the fact that the rate modifications vary between the various types of income subject to the Part XIII tax.

20-37. Comprehensive treatment of the various rates that are applicable under Canada's many international tax treaties would not be appropriate in a general text such as this. However, because it would appear to be the most important of these treaties, attention will be given to the rates that are applicable under the Canada/U.S. tax treaty.

## Interest Payments

### *Part XIII Rules*

20-38. ITA 212(1)(b) assesses Part XIII tax on only two types of interest. These are as follows:

> **Participating Debt Interest** Participating debt interest is defined in ITA 212(3) as interest that is dependent on the use of property (e.g., royalties), or that is calculated by reference to revenue, cash flow, or profit. What is being described here is amounts that, while they may be called interest, are more like business income. They are not based on a principal sum and the passage of time.
>
> **Interest Paid To Non-Arm's Length Non-Residents**, unless the interest is **Fully Exempt Interest**. Fully exempt interest is defined in ITA 212(3) as interest paid or payable on certain types of government issued or guaranteed debt (e.g., debt issued by the government of Canada or a province).

20-39. Another way of stating this would be to note that Part XIII tax only applies to:

- arm's length arrangements when the interest payments are related to "participating debt", and
- non-arm's length arrangements if the interest is not fully exempt.

### *Canada/U.S. Tax Treaty On Interest Payments*

20-40. When it is established that Part XIII tax is applicable, it is then necessary to consult the relevant international tax treaty to determine whether Canada has the right to tax such amounts. For U.S. residents, the Canada/U.S. tax treaty states the following:

> **Article XI** Interest arising in a Contracting State and beneficially owned by a resident of the other Contracting State may be taxed only in that other State.

20-41. This means that, with respect to interest paid to U.S. residents, Canada does not have the right to withhold taxes under Part XIII. Residents of the U.S. are exempt from the Part XIII tax, even in the situations described in Paragraph 20-38.

## Exercise Twenty - 5

**Subject:** Interest Payments To Non-Residents

In each of the following Cases, determine whether the interest payments made to non-residents are subject to Part XIII withholding tax, and if so, at what rate.

**Case 1** Jason, a resident of a country that does not have a tax treaty with Canada, earned $3,000 in interest from a term deposit in a Canadian bank during 2019.

**Case 2** Janice, a resident of a country that does not have a tax treaty with Canada, earned interest of $1,800 on Government Of Canada bonds during 2019.

**Case 3** Julian, a resident of Ottawa, acquired a vacation property in a country that does not have a tax treaty with Canada. The property is mortgaged with a bank in the foreign country. Julian paid $12,000 in interest to the foreign bank in 2019.

**Case 4** Jasmine, a resident of Manitoba, paid $5,000 in interest on a loan from her brother, a resident of Ohio during 2019.

**SOLUTION available in print and online Study Guide.**

## Dividend Payments

### Part XIII Rules

20-42. Most types of dividends are subject to the 25 percent Part XIII tax. This includes capital dividends, despite the fact that they are not subject to tax when received by Canadian residents.

### Canada/U.S. Tax Treaty On Dividend Payments

20-43. While there is nothing in the Canada/U.S. tax treaty to prevent the application of this tax to U.S. residents, the treaty serves to reduce the applicable rate. In this case, there are two different reduced rates, depending on the percentage of the dividend paying corporation that is owned by the non-resident recipient.

> **5 Percent Rate** If the U.S. resident recipient is a corporation and owns 10 percent or more of the voting shares of the resident Canadian company that is paying the dividend, the applicable rate is only 5 percent. This 5 percent rate for inter-corporate dividends reflects a view that dividend payments between parent companies and their subsidiaries should be less heavily taxed to encourage international trade and investment.
>
> **15 Percent Rate** Other dividends paid by resident Canadian companies to shareholders who are U.S. residents are subject to the Part XIII withholding tax at a reduced rate of 15 percent.

## Royalty Payments

### Part XIII Rules

20-44. Royalties paid or credited to non-residents by a person resident in Canada are generally subject to a 25 percent Part XIII withholding tax under ITA 212(1)(d). Specifically excluded under Canadian legislation are payments for copyright use, payments made under cost-sharing arrangements where the costs are shared with non-residents, and arm's length payments made that are deductible under Part I against business income earned outside Canada.

### Canada/U.S. Tax Treaty On Royalty Payments

20-45. The Canada/U.S. tax treaty, in general, allows the imposition of Part XIII tax on royalties. However, it is at a reduced rate of 10 percent. The treaty further provides that copyright and computer software royalties are not taxable by the source country.

## Rental Income

### Part XIII Rules

20-46. The situation with rent payments is more complex. While ITA 212(1)(d) lists rents as one of the items subject to Part XIII tax, the *Income Tax Act* is designed to give priority to Part I tax over Part XIII tax. However, as we have noted in our discussion of the small business deduction, a taxpayer's rental activities may be so extensive that they can be considered a business. If this is the case, the non-resident taxpayer will be earning business income which will be subject to Part I tax in Canada. If this is the case, the taxpayer will have to file an income tax return including these amounts. However, there will then be no requirement to pay Part XIII tax on the rental revenues.

### An Important Election For Rental Income Of Non-Residents

20-47. If the non-resident is not carrying on a rental business in Canada, Part XIII tax is applicable. This creates a significant problem in that the Part XIII tax is applied to gross rental revenues, a figure that will usually be much larger than net rental income.

**EXAMPLE** Marcia Dorne, a resident of a non-treaty country, owns a rental property in Canada. The gross rent on this property is $120,000 for the year and is paid monthly at a rate of $10,000. The property is so heavily financed that net rental income, as determined by the Part I rules, is $12,000 for the year before CCA of $11,000.

**ANALYSIS** In the absence of an alternative approach, Marcia would be subject to Part XIII tax of $30,000 [(25%)($120,000)].

20-48. Fortunately, there is an alternative approach. Under ITA 216, Marcia can elect to pay taxes under Part I, rather than under Part XIII. In the preceding example, this election would result in Part I taxes being paid on the net rental income of $1,000 ($12,000 - $11,000 CCA). If Marcia had no other source of Canadian income, this $1,000 would be taxed at the lowest federal rate of 15 percent and, when combined with the 48 percent federal surtax on income not earned in a province, the total Part I tax would be $222 [(15%)($1,000)(148%)]. This is well below the $30,000 that would be assessed under Part XIII.

20-49. With respect to this election, two other points are worth noting:

- In general, this election can only be made in situations where the rental property is real property located in Canada.
- If a non-resident taxpayer makes this election, they will file a separate return including only the revenues and expenses related to their rental property. They cannot make any deductions from Net Income in the determination of Taxable Income and they cannot deduct any of the ITA 118 personal tax credits.

### Solution To The Cash Flow Problem

20-50. Unfortunately, use of the ITA 216 election to pay under Part I tax does not relieve the payer from the requirement to withhold Part XIII tax. This will, in many cases, create a significant tax flow problem for the non-resident landlord. Consider the example from Paragraph 20-47. The person paying the rent would have to withhold a total of $30,000 from the payments made to Marcia Dorne. As a result, she would have a negative cash flow of $18,000 [($120,000 - $30,000) - ($120,000 - $12,000)]. While the withheld Part XIII tax would eventually be refunded, there is a significant outflow of cash during the rental period.

20-51. Fortunately, there is a solution to this problem. A non-resident taxpayer can file Form NR6, "Undertaking to File an Income Tax Return by a Non-Resident Receiving Rent from Real Property or Receiving a Timber Royalty". If this undertaking is filed, the payer can base the required withholding on 25 percent of the estimated net rental income before the deduction of CCA. In our Paragraph 20-47 example, the Part XIII withholding would be reduced from $2,500 per month [(25%)($10,000)] to $250 per month [(25%)(1/12)($12,000)]. Any difference between this amount and the actual net rental income, including any available deduction for CCA, would be claimed when Marcia Dorne's Part I tax return is filed.

### Canada/U.S. Tax Treaty On Rental Income

20-52. The Canada/U.S. tax treaty allows the imposition of Part XIII tax to rental income. When the rental property is real property, the statutory Part XIII rate of 25 percent is applicable. However, where the rental property is something other than real property in Canada (e.g. equipment or machinery), the Canada/U.S. tax treaty reduces the Part XIII withholding rate from 25 to 10 percent.

## Exercise Twenty - 6

**Subject:** Rental Payments To Non-Residents

In each of the following Cases, determine how the rental payments made to non-residents will be taxed by Canada. In addition, indicate whether an election to pay Part I tax is available and whether the election would be desirable.

**Case 1** Rentco is a U.S. corporation with worldwide rental facilities dedicated to various equipment rentals. Rentco has offices in Saskatchewan, where it rents out farming equipment.

**Case 2** In 2016, Jack Foster, a U.S. resident, acquired a hunting and fishing lodge in northern Ontario that he rents out. In 2019, he rented the lodge to Canadian residents exclusively. Jack received $42,000 in gross rents and estimates that expenses, including CCA, totaled $14,000.

**Case 3** Assume the same facts as in Case 2, with one additional consideration. Jack acquired three motor boats in 2017, which he rented to guests of the lodge. In 2019, he received $8,000 in gross boat rents and estimates boat related expenses of $7,000.

**SOLUTION available in print and online Study Guide.**

## Pension Payments And Other Retirement Related Benefits

### *Part XIII Rules*

20-53. Amounts received by non-residents as pension or other retirement related benefits are generally subject to tax under Part XIII. This would include OAS payments, CPP payments, death benefits, certain retiring allowances, as well as payments from RRSPs, RRIFs, and DPSPs. Payments from TFSAs are not considered pension payments, but there are special rules for individuals who own TFSAs and become non-resident.

20-54. There are some exceptions under Canadian legislation that are designed to ensure that a non-resident will only be taxed on amounts that would have been taxable had the non-resident been resident in Canada at the time the benefits were earned. For example, a non-resident may receive a pension from a former Canadian employer, most of which relates to years in which the person was non-resident and worked outside Canada. Part XIII may exempt the part of the pension that relates to employment outside Canada.

### *An Important Election For Pension Income Of Non-Residents*

20-55. The non-resident recipient of Canadian pension income can elect under ITA 217 to be taxed under Part I of the *Income Tax Act*, rather than under Part XIII. Unlike the ITA 216 election for rental income, this alternative requires the reporting of all Canadian sourced income, not just Canadian pension income, but it allows non-residents to claim deductions and credits normally given to Canadian residents. More detailed information is available on the CRA website in T4145, "Electing Under Section 217 of the *Income Tax Act*".

20-56. For a low income individual, choosing to use the ITA 217 election can provide a significant advantage in that it will allow the individual to make use of some of the tax credits that are available under Part I. However, for high income individuals, the Part XIII rate is likely to be lower than the rate that would be applicable under Part I of the *Act*. In most cases, this will more than offset the loss of tax credits.

### Canada/U.S. Tax Treaty On Pension Payments And Benefits

20-57. The Canada/U.S. tax treaty permits the application of Part XIII tax to pension or other retirement related benefits paid to U.S. residents. As usual, the treaty acts to reduce the applicable Part XIII rate, in this case to 15 percent. However, this rate is only available on benefits that are periodic payments. If the benefit is a lump-sum payment (e.g., a retiring allowance), the statutory Part XIII rate of 25 percent must be used.

20-58. Payments from OAS, CPP and QPP are generally subject to Part XIII tax and eligible for the optional Part I treatment discussed in Paragraph 20-55. However, with respect to OAS and CPP payments made to a resident of the U.S., the treaty specifies that these will only be taxed in the U.S. There will be no withholding or filing requirements on these amounts.

20-59. Two other important provisions under the U.S./Canada treaty can be described as follows:

> **Contributions To Local Plans By Non-Residents** The treaty allows deductions for contributions by non-residents to "qualifying retirement plans" that are located in the other country. This means that U.S. residents who contribute to a qualifying Canadian plan can deduct their contributions from Canadian income and, alternatively, Canadian residents who contribute to a U.S. plan can deduct their contributions from U.S. income. Two points are relevant here:
>
> - For U.S. residents working in Canada, qualifying retirement plans include RPPs, DPSPs, and group RRSPs. Individual RRSPs do not qualify.
> - Deductions for contributions to Canadian plans are limited by the available RRSP contribution room.
>
> **Contributions and Accruing Benefits By Residents** The second provision relates to ongoing contributions and benefits accruing under a pension plan in the country in which the individual is resident. Contributions to such plans are deductible in the other country, but benefits accruing would not be taxable. For example, if a U.S. resident employed in Canada continued to make contributions to a U.S. plan, the U.S. contributions would be deductible against Canadian employment income. However, any pension benefits that accrued would not be taxable in Canada.

## Shareholder Loans To Non-Residents

20-60. In Chapter 15, we gave attention to the rules associated with shareholder loans. It was noted that, in general, the principal of such loans had to be included in a taxpayer's Net Income For Tax Purposes. There are a number of exceptions to this rule. However, in situations where the principal is not included, there is still a taxable benefit to the shareholder if the interest rate on the loan was less than the prescribed rate.

20-61. As non-residents are generally not required to file a Part I tax return, corporate loans to non-resident shareholders would be exempt from these rules in terms of the application of Part I tax. However, ITA 214(3)(a) indicates that if ITA 15 of the *Income Tax Act* (Benefit Conferred On Shareholder) would require an amount to be included in income, that amount will be viewed as a dividend paid to the non-resident shareholder, resulting in the application of Part XIII tax. A refund of the Part XIII tax will become available when the loan is repaid.

20-62. Such loans to non-resident shareholders escape this treatment if they are repaid within one year of the end of the taxation year in which the loan is provided. If the principal is not included in income and the interest rate on the loan is less than the prescribed rate, a benefit will be calculated in the same manner as the interest benefit on such loans when they are made to a resident shareholder. However, when a non-resident is involved, this benefit will be treated as a dividend subject to Part XIII tax.

**We suggest you work Self Study Problem Twenty-2 at this point.**

# Immigration And Emigration

## Entering Canada - Immigration

### *Deemed Disposition/Reacquisition*

20-63. The rules related to entering Canada are found in ITA 128.1(1). Paragraph (b) of this subsection indicates that, with certain exceptions, a taxpayer is deemed to have disposed of all of their property immediately before entering Canada for proceeds equal to fair market value. Paragraph (c) calls for a deemed reacquisition of the property at the same fair market value figure.

20-64. This process establishes a new cost basis for the taxpayer's property, as at the time of entering Canada. The goal here is to avoid having Canadian taxation apply to gains that accrued prior to the individual's immigration.

> **EXAMPLE** An individual enters Canada with securities that cost $100,000 and have a current fair market value of $150,000.
>
> **ANALYSIS** In the absence of the ITA 128.1(1)(b) and (c) deeming provisions, a subsequent sale of these securities for $150,000 would result in the $50,000 accrued gain being taxed in Canada, despite the fact that it accrued prior to the individual becoming a Canadian resident.

20-65. The properties that are excluded from the deemed disposition/reacquisition are listed in ITA 128.1(1)(b). In general, these are items that would already have been subject to tax in Canada if the taxpayer was a non-resident. They include:

- Taxable Canadian Property.
- Inventories and certain other capital assets of a business carried on in Canada.
- **"Excluded Right or Interest"** This concept is defined in ITA 128.1(10). The definition includes RPP balances, RRSP balances, DPSP balances, stock options, death benefits, retiring allowances, as well as other rights of individuals in trusts or other similar arrangements.

## Departures From Canada - Emigration

### *Deemed Disposition On Leaving Canada*

20-66. As was noted in Chapter 8, when a taxpayer leaves Canada, ITA 128.1(4)(b) calls for a deemed disposition of all property owned at the time of departure. The disposition is deemed to occur at fair market value (see Paragraph 20-69 for treatment under the Canada/U.S. tax treaty). If the taxpayer is an individual, certain types of property are exempted from this deemed disposition rule. The major categories of exempted property are:

- Real property situated in Canada, Canadian resource properties, and timber resource properties.
- Property of a business carried on in Canada through a permanent establishment. This would include capital property and inventories.
- Excluded rights or interests of the taxpayer as described in Paragraph 20-65.

**Exercise Twenty - 7**

**Subject:** Emigration

Ms. Gloria Martell owns publicly traded securities with an adjusted cost base of $28,000 and a fair market value of $49,000. During the current year, she permanently departs from Canada still owning the shares. What would be the tax consequences of her departure, if any, with respect to these securities?

**SOLUTION available in print and online Study Guide.**

## Exercise Twenty - 8

**Subject:** Emigration

Mr. Harrison Chrysler owns a rental property in Nanaimo, B.C. with a capital cost of $190,000 and a fair market value of $295,000. The land values included in these figures are $45,000 and $62,000, respectively. The UCC of the building is $82,600. During the current year, Mr. Chrysler permanently departs from Canada. What are the current and possible future tax consequences of his departure with respect to this rental property?

**SOLUTION available in print and online Study Guide.**

### Problems With The Current System

20-67. Taxpayer emigration is a problem area for those in charge of Canadian tax policy. To begin, Canada is significantly out of line with all of its trading partners in the manner in which it deals with the accrued capital gains of emigrants.

20-68. As an illustration of this problem, consider Mr. Poutine, who departs from Canada at a time when he owns capital assets with an adjusted cost base of $80,000 and a fair market value of $120,000. On his departure from Canada, Mr. Poutine will be deemed to have disposed of these assets at their fair market value of $120,000, resulting in an assessment for a capital gain of $40,000. In many other countries, this would not occur. Mr. Poutine would be able to remove his assets without taxation and retain an unchanged adjusted cost base.

20-69. The deemed disposition can result in double taxation as Mr. Poutine's new country of residence may consider his adjusted cost base to be the original value of $80,000. Fortunately, the Canada/U.S. tax treaty provides a fix for this situation. Under Article XIII(7), Mr. Poutine can elect to have a deemed disposition at fair market value for U.S. tax purposes as well as for Canadian tax assessment, but this fix is not available for all countries.

20-70. A further problem in this area is the ability of some taxpayers to avoid the Canadian emigration tax rules, resulting in large sums of money being removed from Canada on a tax free basis. Some types of assets can be removed tax free on the assumption that they will be subject to Canadian taxation at a later point in time. This might not happen if one of Canada's bilateral tax treaties prohibits Canadian taxation after an individual has been a non-resident for a specified period of time.

20-71. Other leakages can occur when assets are bumped up in value for foreign tax purposes, with no corresponding change in the Canadian tax base. This is essentially what happened in the Bronfman trust case, in which several billion dollars in assets were removed from Canada without being subject to Canadian income taxes on accrued gains.

### Elective Dispositions

20-72. As noted in the preceding Paragraphs, certain types of property are exempted from the deemed disposition rules. There may, however, be circumstances in which an individual wishes to override these exemptions and trigger capital gains at the time of departure. An important example of this would be farm property that qualifies for the lifetime capital gains deduction. (See Chapter 11 for details of this deduction.)

20-73. An individual may wish to trigger income or losses on the exempted property at the time of departure for other reasons. An example of this would be an emigrant who wants to realize a loss on exempt property in order to offset a gain on non-exempt property.

20-74. Such situations are provided for in ITA 128.1(4)(d), which allows an individual to elect to have a deemed disposition on certain types of properties that are exempt from the general deemed disposition rule. The properties on which the election can be made include real property situated in Canada, Canadian resource and timber resource properties, as well as property of a business carried on in Canada through a permanent establishment. Note that, if this election results in losses (capital or terminal), they can only be used to offset income resulting from other deemed dispositions. They cannot be applied against other sources of income, including capital gains from actual dispositions, for the taxation year.

## Exercise Twenty - 9

**Subject:** Emigration

Ms. Gloria Lopez owns shares in a Canadian private company with an adjusted cost base of $120,000 and a fair market value of $235,000. In addition, she owns a rental property with a fair market value of $130,000 ($30,000 of this can be attributed to the land) and a cost of $220,000 ($60,000 of this can be attributed to the land). The UCC of the building is $142,000. During the current year, Ms. Lopez permanently departs from Canada. Calculate the minimum Net Income For Tax Purposes that will result from her departure with respect to the shares and the rental property.

**SOLUTION available in print and online Study Guide.**

### *Security For Departure Tax*

20-75. The preceding deemed disposition rules can be very burdensome for an emigrating individual. If the individual has substantial amounts of property on which gains have accrued, the deemed disposition rules can result in a hefty tax bill. This is further complicated by the fact that there are no proceeds of disposition to provide funds for paying this liability.

20-76. In recognition of this problem, ITA 220(4.5) through (4.54) allow the taxpayer to provide security in lieu of paying the tax that results from the deemed dispositions. Similar provisions have been added such as ITA 220(4.6) through (4.63) for dealing with trusts distributing Taxable Canadian Property to non-residents.

20-77. ITA 220(4.5) requires the CRA to accept "adequate security". Guidance on what constitutes adequate security is as follows:

> Bank letters of guarantee, bank letters of credit, and bonds from the Government of Canada or a province or territory of Canada are considered acceptable forms of security. Other types of security may also be acceptable, such as shares in private or publicly traded corporations, certificates in precious metals, various other marketable securities, a charge or mortgage on real property, or valuable personal property.

20-78. If the taxpayer elects under ITA 220(4.5), interest does not accrue on the tax that has been deferred until the amount becomes unsecured. This will usually be at the time when there is an actual disposition of the property that was subject to the deemed disposition.

20-79. A final point here is that ITA 220(4.51) creates deemed security on an amount that is the total amount of taxes under Part I that would be payable, at the highest tax rate that applies to individuals, on Taxable Income of $50,000. This amount is one-half of a $100,000 capital gain, and the effect of this provision is to exempt emigrants from the requirement to provide security on the first $100,000 in capital gains resulting from their departure.

**We suggest you work Self Study Problem Twenty-3 at this point.**

## Unwinding A Deemed Disposition

### The Problem

20-80. A potential problem can arise when an individual departs from Canada and, at a later point in time, returns. A simple example will serve to illustrate this difficulty:

> **EXAMPLE** John Fuller emigrates from Canada on June 1, 2019. At that time, he owns shares of a private company with a fair market value of $200,000 and an adjusted cost base of $125,000. As a result of the deemed disposition/reacquisition of these shares, he has a taxable capital gain of $37,500 [(1/2)($200,000 - $125,000)]. In 2020, he returns to Canada. At the time of immigration, he still owns the shares and their fair market value has increased to $260,000.

20-81. In the absence of any special provision (and ignoring the deemed security rules discussed in Paragraph 20-75), Mr. Fuller's departure from Canada would cost him the taxes paid on the $37,500 taxable capital gain arising on the deemed disposition at emigration. On his return, the adjusted cost base of his property would be increased to $260,000 (deemed disposition/re-acquisition on immigration). However, the fact remains that his temporary absence has resulted in an out-of-pocket tax cost on the $37,500 taxable capital gain.

### The Solution

20-82. ITA 128.1(6) provides relief in this type of situation. With respect to Taxable Canadian Property such as Mr. Fuller's, ITA 128.1(6)(a) allows a returning individual to make an election with respect to property that was Taxable Canadian Property at the time of emigration. The effect of making this election is that the deemed disposition that was required under ITA 128.1(1)(b) at the time of departure, is reversed when the individual returns to Canada. As there is no real basis for establishing whether an emigrant will eventually return as an immigrant, ITA 128.1(6) has no influence on the tax consequences arising at the time of emigration.

20-83. Returning to our example from Paragraph 20-80, if this election is made, the addition to Taxable Income that was assessed when Mr. Fuller left Canada would be reversed through an amended return, resulting in a refund of the taxes paid.

20-84. As the deemed disposition at departure has been reversed, there would be no need for a disposition/reacquisition when he returns to Canada. This means that after the appropriate election and amended return are filed, Mr. Fuller would wind up in the same tax position as he was in before he departed from Canada. That is, he would own securities with an adjusted cost base of $125,000 with no net taxes paid as a result of his departure and return.

## Short-Term Residents

20-85. With the increasing presence of multi-national firms in the Canadian business environment, it has become common for executives and other employees to find themselves resident in Canada for only a small portion of their total working lives. In the absence of some special provision, the deemed disposition rules could be a significant hardship to employees who are in this position.

20-86. For example, if Ms. Eng was transferred from Hong Kong to work in Canada for three years, she could become liable on departure for capital gains taxation on all of her capital property owned at the time that she ceases to be a resident of Canada. The liability could put a severe drain on her available liquid assets and could result in taxation on personal items such as paintings and furniture (note that, in many cases, where the individual is in the country for a limited period and working for a non-resident employer, the individual would be taxed as a resident of the foreign country, and not as a resident of Canada). This would not be an equitable situation and could discourage the free movement of employees to and from Canada.

20-87. In recognition of the preceding problem, ITA 128.1(4)(b)(iv) provides an exception to the deemed disposition rules that applies to taxpayers who, during the ten years preceding departure, have been resident in Canada for a total of 60 months or less. For such taxpayers,

the deemed disposition rules do not apply to any property that was owned immediately before the taxpayer last became resident in Canada, or was acquired by inheritance or bequest during the period after he last became resident in Canada. However, the rules still apply to property acquired other than by inheritance or bequest during the period of residency.

### Exercise Twenty - 10

**Subject:** Short Term Residents

During 2016, Charles Brookings moves to Canada from the U.K. He has not previously lived in Canada. At this time his capital assets consist of shares in a U.K. company and a tract of vacant land in Canada which he had inherited. The shares have a fair market value of $250,000 and an adjusted cost base of $175,000. The land had a fair market value of $95,000 when he inherited it and a fair market value of $120,000 when he moves to Canada in 2016.

During 2017, he acquires shares of a Canadian public company for $75,000. During 2019, after finding Canada a tad uncivilized for his tastes, he moves back to the U.K. At this time, the shares in the U.K. company have a fair market value of $280,000, the shares of the Canadian company have a fair market value of $92,000 and the land has a fair market value of $130,000.

What are the tax consequences of his emigration from Canada?

**SOLUTION available in print and online Study Guide.**

# Foreign Source Income Of Canadian Residents

## Introduction

20-88. It would be a fairly easy task to write an entire book on the tax issues associated with the foreign source income of Canadian residents. One version of the draft legislation on non-resident trusts and foreign investment entities ran to nearly 900 pages in its print edition. In addition to being extensive, much of this material is extremely complex, in some cases almost beyond the understanding of mere mortals. Despite this complexity, the importance of this subject mandates that we give some attention to the issues, even in an introductory text such as this. Although some aspects of foreign source income of Canadian residents are relatively straightforward, you should be aware that this material is not an adequate resource for making important decisions in this potentially complicated area.

20-89. We will begin this section on foreign source income of residents by discussing the reporting requirements applicable to Canadian residents who have foreign investments. This will be followed by sections dealing with resident taxpayers having the following:

- foreign source employment income;
- foreign source income from unincorporated businesses;
- foreign source interest income; and
- capital gains resulting from the disposition of foreign assets.

20-90. The issues involved for taxpayers having these types of income sources are not overly complex. However, a completely different situation arises when Canadian resident taxpayers receive income from what tax legislation refers to as non-resident entities. These entities are defined as corporations, trusts, or any other type of entity that was formed, organized, last continued under, or governed under the laws of a country, or a political subdivision of a country, other than Canada. In order to simplify our presentation of this material, we will limit our coverage of this material to non-resident corporations paying dividends to Canadian resident taxpayers.

## Foreign Investment Reporting Requirements

20-91. As you are aware, residents of Canada are liable for income taxes on their worldwide income. This means, for example, that if a Canadian resident has a bank account in England, any interest earned on that account should be reported in the taxpayer's Canadian tax return.

20-92. There is little doubt that evasion of taxes on foreign income has been fairly common in the past. In an attempt to curtail tax evasion on foreign property and to amass information on foreign property owned by Canadians, the CRA requires the following:

> All Canadian resident taxpayers are required to file form T1135, *Foreign Income Verification Statement* if, at any time in the year the total cost amount (not fair market value) of all specified foreign property to the taxpayer was more than $100,000 in Canadian dollars.

20-93. The T1135 offers a simplified reporting method to taxpayers whose specified foreign property totals more than $100,000, but less than $250,000 throughout the year. Rather than having to report the complete details on the T1135, the simplified method allows a taxpayer to report a single figure for the total income from all specified foreign property, as well as for the gain (loss) from the disposition of all specified foreign property for the year. For example, the taxpayer will be able to report a single figure for the total value of non-resident securities held, rather than having to report each individual security in this category.

20-94. The T1135 form requires information on what is referred to as "specified foreign property". The more important types of specified foreign property are as follows:

- funds held outside Canada (e.g., funds in a foreign bank account);
- shares of a non-resident corporation (See Paragraph 20-97 for a streamlined option to these reporting requirements for foreign shares held in Canadian brokerage accounts);
- indebtedness owed by a non-resident;
- real property outside of Canada other than excluded property such as personal use or business use properties (See Paragraph 20-95); and
- an interest in a non-resident trust.

20-95. Some of the common items excluded from the definition of specified foreign property are as follows:

- foreign securities held in Canadian mutual funds, or inside a registered account like an RRSP, RRIF, TFSA or RESP;
- a property used or held exclusively in carrying on an active business;
- a personal use property, such as a second home; and
- a share of the capital stock or indebtedness of a foreign affiliate.

20-96. For taxpayers with less than $250,000 in specified foreign property, completing the simplified form (Part A of the T1135) is not particularly onerous. For taxpayers with specified foreign property equal to $250,000 or more, a great deal of additional information is required such as:

- the name of the entity holding or issuing the property, or a description of the foreign property;
- the relevant country code (for the country of residence of the bank, corporation, issuer or trust, or where the property is located);
- the maximum cost amount of the property during the year;
- the year end cost amount of the property;
- the amount of income or loss related to the property for the year; and
- any capital gain or loss realized on the disposition of the property during the year.

20-97. Fortunately, in many, if not most cases, relief is available. To the extent specified foreign property is held in an account with a Canadian registered securities dealer or a Canadian trust company, the only requirements related to specified foreign property are reporting country-by-country aggregate values for maximum fair market value during the year, fair

market value at the end of the year, income for the year, and gains or losses on dispositions during the year. For example, if an individual invests only in U.S. stocks and they are held with a Canadian registered securities dealer, the reporting requirements are greatly simplified. This is likely the situation for many of the individuals who are required to report their specified foreign property.

20-98. Substantial penalties can result from failure to comply with these reporting requirements. They range from $500 per month for up to 24 months if the failure to file is done knowingly to $1,000 per month for up to 24 months if there is a failure to comply with a demand to file the T1135. After 24 months, the penalty can become more severe, i.e., 5 percent of the cost of the foreign property.

### Exercise Twenty - 11

**Subject:** Foreign Investment Reporting

During 2019, Simon Taylor, a Canadian resident, has a bank account at the Bank of Scotland. The balance ranged from £4,000 to £52,000 during the year and has a balance of £41,000 on December 31, 2019. Interest on the account for the year totalled £1,000. In 2018, he made a 2 year interest free loan of £145,000 to his brother-in-law who is a resident of Scotland. No formal loan agreement was involved. Assume 1£ = $1.70 for 2018 and 2019. Describe the foreign investment reporting obligations that Simon has for 2019 and provide the information required.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problem Twenty-4 at this point.**

## Foreign Source Employment Income

### *The Problem*

20-99. Individuals who are residents of Canada are taxable on employment income regardless of where the employment duties are performed. This creates a potential problem in that an individual earning employment income in a foreign country could be subject to Canadian taxes because they have retained their status as a Canadian resident and, at the same time, be subject to taxes in the foreign country because it is the source of the employment income. Tax treaties would normally be used to resolve this potential conflict.

### *Canada/U.S. Tax Treaty - Foreign Source Employment Income*

20-100. This problem is, of course, the mirror image of the problem that arises when a U.S. resident is earning employment income while working in Canada. In our discussion of that situation (see Paragraph 20-21), we noted that, in general, the source country has the right to tax employment income. We also noted that, under the Canada/U.S. tax treaty, there were two exceptions to this rule. As applied to a situation where a Canadian resident is earning U.S. employment income, these exceptions are as follows:

**$10,000 Rule** Under this rule if, during a calendar year, a Canadian resident earns employment income in the U.S. that is $10,000 or less in U.S. dollars, then the income is taxable only in Canada.

**183 Day Rule** This rule exempts U.S. source employment income from U.S. taxation, provided it is earned by a Canadian resident who was physically present in the U.S. for no more than 183 days during any twelve month period commencing or ending in the calendar year. This exemption is conditional on employment income not being paid by an employer with a permanent establishment in the U.S. who would be able to deduct the amount paid from their U.S. Taxable Income. Stated

alternatively, if the employment income exceeds $10,000 and is deductible in the U.S., it will be taxed in the U.S., even if the employee is present in the U.S. for less than 183 days during the year.

**We suggest you work Self Study Problem Twenty-5 at this point.**

## Foreign Source Business Income (Unincorporated Sources)

### *The Problem*

20-101. The general rule that Canadian residents are taxable on their worldwide income would suggest that Canadian residents are taxable on foreign source business income. As was the case with foreign source employment income, this creates a potential problem in that a person earning business income in a foreign country could be subject to Canadian taxes because they have retained their status as a Canadian resident and, at the same time, be subject to taxes in the foreign country because it is the source of the business income.

20-102. In many cases, the potential for double taxation is dealt with through international tax treaties. If this is not the case, a Canadian resident may have some amount of taxes withheld in the foreign jurisdiction. In these circumstances, Canada uses foreign tax credits to deal with the problem. While these credits were covered in detail in Chapter 11 for individuals and Chapter 12 for corporations, a simple example where the detailed calculations would have resulted in a foreign tax credit equal to the foreign tax withheld will serve to review the general approach used:

**EXAMPLE** Ms. Johnson, a Canadian resident, is subject to a Canadian marginal tax rate of 45 percent on all of her worldwide income. During the current year, she earns foreign source business income of $1,000, from which the source country assesses and withholds taxes at a rate of 15 percent.

**ANALYSIS** The pretax amount of foreign income would be included in Taxable Income, with the foreign taxes paid by Ms. Johnson, a Canadian resident, generating a credit against Canadian Tax Payable. Applying this to the preceding example results in the following calculations:

| | |
|---|---|
| Foreign Business Income Received | $ 850 |
| Foreign Tax Withheld | 150 |
| Gross Income = Taxable Income Addition | $1,000 |
| Canadian Tax Payable [(45%)($1,000)] | $ 450 |
| Foreign Tax Credit = Foreign Tax Withheld | ( 150) |
| Net Canadian Tax Payable | $ 300 |
| Foreign Tax Withheld | 150 |
| Total Taxes Payable | $ 450 |
| After Tax Retention ($1,000 - $450) | $ 550 |
| Overall Tax Rate ($450 ÷ $1,000) | 45% |

As this simple example makes clear, this represents a very equitable solution to situations where foreign taxes are withheld on income that will be taxed again in Canada. The combined foreign and Canadian taxes total $450, exactly the same amount that would have been paid if Ms. Johnson had received the $1,000 in business income from a Canadian source.

### Canada/U.S. Tax Treaty - Foreign Source Business Income

20-103. As was discussed when we considered the Canadian business income of non-residents, the Canada/U.S. tax treaty indicates that business income will be taxed in the source country in those situations where the business is operated through a permanent establishment. Applying this here would mean that if a Canadian resident earns business income in the U.S. without having a permanent establishment in that country, it will be taxed in Canada, rather than in the U.S. Alternatively, if the business income is earned through a permanent establishment in the U.S., it will be taxed in that country. Any taxes withheld by the U.S. would be eligible for treatment as a foreign business tax credit. (See Chapters 11 and 12 for detailed coverage of this credit.)

#### Exercise Twenty - 12

**Subject:** Foreign Tax Credits

Jason Abernathy is a Canadian resident. During 2019, he earns $18,000 of business income through a permanent establishment located in the U.S. Income taxes of $1,800 were assessed and withheld at the source on that income. In calculating his foreign tax credit, his Adjusted Division B Income is equal to $100,000 and his Tax Otherwise Payable is equal to $21,000. All amounts are in Canadian dollars. Jason's marginal combined federal/provincial tax rate is 44 percent. Determine his after tax retention and overall tax rate on his foreign source business income.

**SOLUTION available in print and online Study Guide.**

## Foreign Source Interest Income

### The Problem

20-104. Resident Canadian taxpayers are taxable on interest income, generally without regard to the source. As was the case with employment income, this raises the possibility of double taxation. In most cases this issue will be resolved by an international tax treaty. If the issue is not resolved by treaty, the Canadian resident would have tax deductions and/or credits based on any foreign taxes withheld.

### Canada/U.S. Tax Treaty - Foreign Source Interest Income

20-105. As noted in Paragraph 20-40, Article XI of the Canada/U.S. tax treaty indicates that interest paid to the other jurisdiction will be taxed only in that jurisdiction. This means that U.S. residents receiving interest from a Canadian source are not subject to the Canadian Part XIII tax. Correspondingly, Canadian residents receiving interest income from a U.S. source will be subject to Part I taxes only in Canada.

## Foreign Source Capital Gains

### The Problem

20-106. The rules of the *Income Tax Act* relating to the calculation of capital gains and losses are generally applicable to residents of Canada on dispositions of property regardless of the location of that property. As was the case with foreign source employment and business income, dispositions of foreign property may result in potential taxation in both Canada and the foreign country. Again, the tax treaties would normally offer a way to resolve any conflicts.

### Canada/U.S. Tax Treaty - Foreign Source Capital Gains

20-107. In general, the Canada/U.S. tax treaty gives priority to tax to the vendor's country of residence. However, the treaty allows the U.S. to tax gains from the disposition of real property interests situated in the U.S., as well as gains on most types of property that are used in a permanent establishment through which a Canadian resident carries on business in the U.S.

## Foreign Source Dividend Income - Problems

20-108. Most foreign source investment income is taxed under the rules that are applicable to similar sources of income earned in Canada. An exception to this is dividends received from non-resident corporations.

20-109. As you are aware, dividends paid to Canadian residents by taxable Canadian corporations receive very favourable tax treatment. When such dividends are received by individuals, they are subject to the gross up and tax credit procedures, a process that significantly reduces the effective tax rate on this type of income. When the recipient shareholder is a corporation, the dividends generally escape all taxation in that they can be deducted under ITA 112(1) in the calculation of Taxable Income. Both of these provisions are designed to make up for the fact that the dividends represent an income stream that has already been subject to Canadian tax at the corporate level.

20-110. The basic problem with dividends received from a non-resident corporation is that the corporation that paid the dividends has not paid taxes in Canada. In fact, in some jurisdictions (e.g., tax havens), the corporation may not have paid any taxes whatsoever. This means that the usual reason for providing favourable treatment of dividend income is not relevant when dividends are received from a non-resident corporation.

20-111. A further problem is that the foreign source dividends do not reflect the type of income that provided for the payment of dividends by the foreign corporation. Again, as you are aware, Canadian taxes are generally assessed differently on alternative types of income. For example, a CCPC will be taxed much more heavily on property income as compared to the taxes that would be paid on active business income. To maintain fairness in the system, provisions had to be created that reflect the different sources of income that enabled the non-resident corporation to pay dividends.

20-112. In general, foreign source dividends must be included in a resident taxpayer's Net Income For Tax Purposes under ITA 90(1). When foreign source dividends are received by individuals, they do not get the benefit of the gross up and tax credit procedures. When they are received by corporations, they are not generally deductible under ITA 112(1).

20-113. While the elimination of favourable tax treatment for dividends from a foreign source provides a partial solution to the problem of dividends being paid out of corporate income that has not been taxed in Canada, two significant problems remain:

1. This procedure can result in double taxation. For example, income earned by a foreign subsidiary of a Canadian corporation could be fully taxed in the foreign jurisdiction and, in the absence of the ITA 112(1) dividend deduction, it would be taxed again in Canada.
2. Under the general rules applicable to corporations, income from a non-resident corporation will not be taxed in Canada until such time as it is distributed to Canadian residents. This means that a Canadian resident can achieve significant tax deferral by placing investments in a foreign corporation, in situations where the income from the investments is not currently needed. This is particularly attractive when the non-resident corporation is located in a jurisdiction where there is little or no taxation of investment income.

20-114. The first of these problems has been dealt with by developing the concept of a "foreign affiliate". As will be discussed in a subsequent section of this Chapter, dividends received from this type of non-resident corporation may be deductible, in whole or in part, to a recipient Canadian corporation. A partial solution to the second problem is contained in what are referred to as the Foreign Accrual Property Income (FAPI) rules. These rules apply to a subset of foreign affiliates referred to as controlled foreign affiliates.

20-115. In the following material, we will give consideration to dividends from foreign corporations that are received by:

- individuals resident in Canada;
- Canadian corporations that are not affiliated with the foreign corporation;
- Canadian corporations that are affiliated with the foreign corporation but do not control it; and
- Canadian corporations that control the foreign corporation.

20-116. We would remind you that our presentation of this material is at a very basic level and should be considered only as an overview of the topic and not as a guide for making real world decisions in this complex area.

## Foreign Source Dividends Received By Individuals

20-117. If a resident Canadian individual receives a dividend from a foreign corporation and there is no withholding of tax by the foreign jurisdiction, the amount received will be converted into Canadian dollars at the time that it is received. It would then be included in that individual's Net Income For Tax Purposes. It will not be grossed up and it will not generate a dividend tax credit.

20-118. Alternatively, if there is withholding by the foreign jurisdiction, the pre-withholding amount of the dividend will be included in the individual's Net Income For Tax Purposes. To the extent that the withholding is 15 percent or less, the individual is entitled to a foreign tax credit. Any withholding in excess of 15 percent is eligible for a deduction from Net Income For Tax Purposes.

20-119. While it would rarely be an appropriate choice, the individual would have the alternative of deducting the entire amount withheld, rather than using the eligible portion as a tax credit.

**EXAMPLE** During 2019, Martin Fingle is entitled to $25,000 in dividends from a foreign corporation in which he owns shares. The foreign jurisdiction withholds $5,000 (20%), providing a net receipt of $20,000. In addition to the dividend, Martin has Canadian source interest income of $22,000. Other than the foreign tax credit, he has other credits that total $2,200. He has no deductions from Net Income For Tax Purposes in determining Taxable Income.

**ANALYSIS** Martin's Taxable Income would be calculated as follows:

| | |
|---|---|
| Interest Income | $22,000 |
| Foreign Dividends (100%) | 25,000 |
| Excess Withholding [(20% - 15%)($25,000)] | ( 1,250) |
| Net Income For Tax Purposes And Taxable Income | $45,750 |

His Tax Payable would be calculated as follows:

| | |
|---|---|
| Tax Before Credits [(15%)($45,750)] | $ 6,863 |
| Personal Tax Credits | ( 2,200) |
| Part I Tax Payable Before Foreign Tax Credit | $ 4,663 |
| Foreign Tax Credit (See Note) | ( 2,548) |
| Federal Tax Payable | $ 2,115 |

**Note** The foreign tax credit would be the lesser of:

- Amount Withheld (Limited To 15% Of $25,000) = $3,750
- $\left[\frac{\text{Foreign Non - Business Income}}{\text{Division B Income}}\right](\text{Tax Payable}) = \left[\frac{\$25,000}{\$45,750}\right](\$4,663) = \$2,548$

20-120. While Martin could have deducted all of the withheld amount, his additional tax savings from this deduction would only be $382 [(15%)($2,548)]. This is clearly not as desirable as the $2,548 foreign tax credit alternative.

**We suggest you work Self Study Problem Twenty-6 at this point.**

## Foreign Dividends Received From Non-Affiliated Corporations

20-121. The pre-withholding amount of a dividend received by a Canadian corporation from a foreign corporation is always included in the corporation's Net Income For Tax Purposes. As a foreign affiliate is not involved, there would be no deduction in the determination of the corporation's Taxable Income.

> **EXAMPLE** Martin Fingle Inc., a Canadian public corporation, is entitled to $25,000 in dividends from a foreign corporation in which it owns less than 1 percent of the shares. The foreign jurisdiction withholds $5,000 (20%), providing a net receipt of $20,000. The corporate tax rate on this income, after the general rate reduction, will be 25 percent (38% - 13%). Assume that Martin Fingle Inc. has no other source of income during the year.
>
> **ANALYSIS** The Corporation's Taxable Income will be $25,000, the pre-withholding amount of the dividend. Tax Payable, before the application of the foreign tax credit will be $6,250 [(25%)($25,000)]. As a corporation's use of foreign non-business tax credits is not limited to 15 percent, the tax credit will be $5,000, the lesser of:
>
> - Amount Withheld (no 15% limit) = $5,000
> - $\left[\frac{\text{Foreign Non-Business Income}}{\text{Division B Income}}\right](\text{Tax Payable}) = \left[\frac{\$25{,}000}{\$25{,}000}\right](\$6{,}250) = \$6{,}250$

## Dividends Received From Non-Controlled Foreign Affiliates

### *Foreign Affiliate Defined*

20-122. A foreign affiliate of a Canadian taxpayer is defined in ITA 95(1) as a non-resident corporation in which that taxpayer has a direct or indirect equity percentage of at least 1 percent. As well, the aggregate equity percentages of the taxpayer and each person related to the taxpayer must be at least 10 percent. The ownership percentage can be established on either a direct or indirect basis, and is defined as the greatest percentage holding in any class of the non-resident corporation's capital stock.

20-123. As an example of both the direct and indirect application of this rule, consider the following example:

> **EXAMPLE** Candoo, a resident Canadian corporation, owns 70 percent of the only class of shares of Forco One, a non-resident corporation. In turn, Forco One owns 20 percent of the only class of shares of Forco Two, a second non-resident corporation.
>
> **ANALYSIS** Forco One is a foreign affiliate of Candoo because of Candoo's 70 percent direct ownership. Forco Two is also a foreign affiliate of Candoo because the indirect ownership percentage is 14 percent [(70%)(20%)].

20-124. We would also note that the ownership thresholds are applied on a shareholder by shareholder basis. A non-resident company will be a foreign affiliate of a Canadian resident, only if that resident owns directly or indirectly at least 1 percent of the shares of that non-resident company and, in addition, that resident, together with related persons, owns at least 10 percent of the shares of that non-resident company.

**EXAMPLE** Carson Ltd. and Dawson Inc., two resident Canadian companies, each own 8 percent of Belgique, a non-resident corporation. While Carson Ltd. is part of a related group that controls Belgique, Dawson Inc. is not related to any of the other shareholders of Belgique.

**ANALYSIS** Belgique would be a foreign affiliate of Carson Ltd. as Carson Ltd. owns more than 1 percent of the shares and, in addition, is part of a related group that owns more than 10 percent of the shares. Belgique would not be a foreign affiliate of Dawson Inc.

20-125. A foreign affiliate may or may not be a controlled foreign affiliate. In this section we are limiting our discussion to situations where control is not present. In the next section of this chapter, we will provide limited coverage of controlled foreign affiliates. Note that the rules discussed in this section apply to all foreign affiliates, whether or not control exists.

## Exercise Twenty - 13

**Subject** Identifying Foreign Affiliates

Canvest is a resident Canadian corporation that has three investments in the shares of non-resident corporations. For each of the investments in non-resident corporations described below, determine whether the investee is a foreign affiliate.

**Forco 1** Canvest owns 3 percent of Forco 1. A wholly-owned Canadian subsidiary of Canvest owns 8 percent of Forco 1.

**Forco 2** Canvest owns 9 percent of Forco 2. Canvest is not related to any of the other shareholders of Forco 2.

**Forco 3** Canvest owns 5 percent of Forco 3. The spouse of the shareholder who has a controlling interest in Canvest owns the other 95 percent of the shares of Forco 3.

**SOLUTION available in print and online Study Guide.**

### Dividends Received From Foreign Affiliates - Basic Concepts

20-126. We have previously noted that, in general, only dividends received from a taxable Canadian corporation can be deducted under ITA 112(1) in the determination of the Taxable Income of a resident Canadian corporation. However, ITA 113(1) provides a similar deduction for dividends received by a resident corporate shareholder from a foreign affiliate.

20-127. Unlike the fairly straightforward application of ITA 112(1), the application of ITA 113(1) is very complex in that it is applied differently depending on the country where the foreign affiliate is located and income source from which the dividend is being paid. The ITA 113(1) rules are implemented by a process in which the foreign affiliate's Surplus balances are tracked by type of income and source country. We would remind you that the term Surplus in tax work is the equivalent of the term Retained Earnings in accounting work.

20-128. While there are other types of surplus that determine the tax status of dividends from foreign affiliates, in this text we will only provide coverage of Exempt Surplus and Taxable Surplus. Coverage of other surplus balances goes beyond the scope of this introductory text.

20-129. When a dividend is paid by a foreign affiliate it is assumed to come first from any Exempt Surplus balance that is available. If there is no Exempt Surplus balance, or if the dividend is larger than the Exempt Surplus balance, the required amount will then be removed from the Taxable Surplus balance.

## Exempt Vs. Taxable Surplus

20-130. The content of these surplus balances requires the allocation of income from four different sources. They are as follows:

- active business income
- investment income (e.g., interest and rents)
- capital gains on dispositions of assets used to produce active business income
- capital gains on dispositions of assets not used to produce active business income

20-131. The situation is further complicated in that the classification of a particular type of income will depend on whether the foreign affiliate is located in country with which Canada has a tax treaty or a Tax Information Exchange Agreement (TIEA). For example, active business income is allocated to Exempt Surplus in a country where a tax treaty or TIEA is in effect. Alternatively, this type of income is allocated to Taxable Surplus in other countries.

20-132. Based on this two-way allocation, the items included in Exempt Surplus are as follows:

- For a foreign affiliate that is located in a country with which Canada has a tax treaty or a tax information exchange agreement (TIEA):
  - Active business income
  - The taxable one-half of capital gains on dispositions of property used in producing active business income.
- For all foreign affiliates, without regard to the location of the foreign affiliate:
  - The non-taxable one-half of capital gains on dispositions of all types of capital property (except shares of other foreign affiliates).

20-133. Using a similar approach, the items included in Taxable Surplus are as follows:

- For a foreign affiliate that is located in a country with which Canada does not have a tax treaty or a TIEA:
  - Active business income
  - The taxable one-half of capital gains on dispositions of property used in producing active business income.
- For all foreign affiliates, without regard to the location of the foreign affiliate:
  - The taxable one-half of capital gains on dispositions of capital property other than that used in producing active business income.
  - Investment income, which includes income from property and from non-active businesses.

## Dividends Paid From Exempt Surplus

20-134. When a dividend is paid from a foreign affiliate's Exempt Surplus, Canadian tax legislation, in effect, cedes all of the taxation of this income stream to the foreign jurisdiction. This is without regard to the level of local taxation in the foreign jurisdiction or amounts of tax withheld by that jurisdiction.

20-135. In order to apply this approach, ITA 113(1)(a) allows the full amount of the foreign affiliate dividend to be deducted in the determination of the resident corporation's Taxable Income.

> **EXAMPLE** A Canadian company receives a $90,000 dividend from a foreign affiliate. The affiliate had paid a $100,000 dividend from its exempt surplus (an after foreign taxes balance), with the foreign jurisdiction withholding $10,000 from the distribution to Canada.
>
> **ANALYSIS** The Canadian corporation will include the pre-withholding $100,000 dividend in its Net Income For Tax Purposes, and will deduct the $100,000 included amount under ITA 113(1)(a) in the determination of Taxable Income under ITA 113(1)(a). No Canadian taxes will be paid on the dividend and, consistent with this result, no foreign tax credit will be available for the $10,000 that was withheld by the foreign jurisdiction.

### Dividends Paid From Taxable Surplus

20-136. With respect to foreign affiliate dividends paid from Taxable Surplus, the goal here is to apply ITA 113(1) in a manner that attempts to have the overall level of taxation, both domestic and foreign, be the equivalent of the amount of taxes that would be paid in Canada on the same stream of income. Currently this rate is equal to 25 percent.

| | |
|---|---|
| Basic Rate (No Abatement) | 38% |
| General Rate Reduction | (13%) |
| Overall Federal Rate | 25% |

20-137. While this could have been accomplished using credits against Tax Payable, the government chose to do the required adjustments through deductions under ITA 113(1). Given the desire to apply an overall tax rate of 25 percent, tax amounts will have to be converted to income using a factor of 4 (1 ÷ 25%). Stated alternatively, every $1 of tax paid must be converted to Taxable Income of $4.

20-138. To achieve the desired overall tax rate of 25 percent, two adjustments are required:

**ITA 113(1)(b)** adjusts Taxable Income to reflect the income taxes paid in the foreign jurisdiction.

**ITA 113(1)(c)** adjusts Taxable Income to reflect taxes withheld by the foreign jurisdiction on payments to non-residents of that jurisdiction.

20-139. An example will serve to illustrate these provisions.

**EXAMPLE** Cancor, a taxable Canadian corporation, owns 50 percent of the outstanding shares of Forco, a corporation located in a country that does not have a tax treaty or a TIEA with Canada. All of Forco's income is from active business activities. During 2018, Forco pays dividends of $90,000. Of this total, $42,750 is received by Cancor, with $2,250 being withheld by the foreign jurisdiction. Forco is subject to a tax rate of 10 percent in the foreign jurisdiction.

**ANALYSIS** Dividends paid are an after tax amount. This means that the original income stream that formed the basis for the current dividend was $100,000 [$90,000 ÷ (1 - 10%)], with taxes of $10,000 being paid prior to the dividend declaration.

Given this, Cancor's share of these taxes would be $5,000 [(1/2)($10,000)]. Taking this and the $2,250 in withholding into account, to achieve an overall tax rate of 25 percent on the original $50,000 income stream would require additional Canadian taxes as follows:

| | |
|---|---|
| Required Total Tax [(25%)($50,000)] | $12,500 |
| Foreign Taxes Paid By Foreign Affiliate | ( 5,000) |
| Foreign Taxes Withheld From Dividend | ( 2,250) |
| Required Additional Canadian Tax | $ 5,250 |

As we have noted, ITA 113(1) accomplishes this result with two adjustments. The first is related to the $5,000 in foreign tax paid. The $5,000 in taxes paid reflects, at a 25 percent rate, $20,000 ($5,000 ÷ 25%) in Taxable Income. This would suggest multiplying the foreign tax paid by 4. However, this does not take into consideration the fact that income has already been reduced by $5,000 from $50,000 to $45,000 by these taxes. Given this, ITA 113(1)(b) requires that the $5,000 in foreign taxes be multiplied by a relevant factor of 3 [(1 ÷ 25%) - 1]. This deduction equals $15,000.

In applying ITA 113(1)(c), we need to adjust for the $2,250 in taxes withheld from the dividend payment. Given this, ITA 113(1)(c) requires that this amount be multiplied by 4 (1 ÷ 25%). This results in a deduction of $9,000, reflecting the amount of income that would result in the payment of $2,250 in taxes.

Putting all of this together results in the following calculation of Tax Payable:

| | |
|---|---|
| Net Income For Tax Purposes | $45,000 |
| ITA 113(1)(b) Deduction For Foreign Tax Paid | ( 15,000) |
| ITA 113(1)(c) Deduction For Foreign Tax Withheld | ( 9,000) |
| Taxable Income | $21,000 |
| Required Rate | 25% |
| Canadian Tax Payable | $ 5,250 |

This, as expected, is the same amount that we calculated in the preceding table using a more intuitive approach that is not based on the ITA 113 legislation.

## Dividends Received From Controlled Foreign Affiliates

### *Controlled Foreign Affiliate Defined*

20-140. While establishing the concept of a foreign affiliate alleviated the problem of excessive taxation on dividends received by Canadian corporations from non-resident corporations, it did not deal with the problem of using a non-resident corporation to defer Canadian taxation on property income. In order to deal with this issue, the government developed the concept of a "controlled foreign affiliate".

20-141. In somewhat simplified terms, ITA 95(1) defines a controlled foreign affiliate of a Canadian taxpayer as a foreign affiliate of that taxpayer that is:

1. controlled by the Canadian resident on the basis of his own shareholdings; or
2. controlled by the Canadian resident, together with:
   - persons (residents or non-residents) who are not at arm's length with the Canadian resident;
   - up to four Canadian residents who are not related to the taxpayer (referred to as "relevant" shareholders; and
   - any other persons (residents or non-residents) who are related to the "relevant" Canadian shareholders.

**EXAMPLE** Cantext, a Canadian public company, owns 11 percent of the voting shares of Fortext, a company located in Germany. Two other resident Canadian corporations, who are not related to Cantext, each own an additional 15 percent of the voting shares of Fortext. A French subsidiary of one of these other Canadian companies owns 20 percent of the voting shares of Fortext.

**ANALYSIS** Fortext is a foreign affiliate of Cantext since Cantext holds more than 10 percent of the voting shares of Fortext. It is a controlled foreign affiliate in that:

- Cantext owns 11 percent;
- two unrelated Canadian companies (relevant shareholders) own an additional 30 percent; and
- a company related to one of the relevant shareholders owns another 20 percent.

This gives a total holding of 61 percent, enough to provide control of Fortext. Note that Fortext is also a controlled foreign affiliate of both the other Canadian corporations.

20-142. The significance of the controlled foreign affiliate concept is that, if an investment in a non-resident corporation falls within this definition, the Canadian shareholder must recognize its foreign accrual property income (FAPI, hereafter) prior to its actual distribution. That is, the FAPI of controlled foreign affiliates must be recorded as it is earned, rather than when it is distributed in the form of dividends.

20-143. This provision is somewhat mitigated by the fact that Canadian residents are not required to report the FAPI of controlled foreign affiliates unless it exceeds $5,000. The $5,000 exemption figure recognizes that the calculation of FAPI is quite complex and should not be required when the amount of income is small. As FAPI income is taxed as it accrues, dividends subsequently paid out of such income are not taxable.

# Foreign Accrual Property Income (FAPI)

## General Rules

20-144. In simplified terms, FAPI is the passive income of a controlled foreign affiliate. FAPI includes income from property (e.g. interest, portfolio dividends), income from non-active businesses (e.g. rental income), as well as the taxable one-half of capital gains resulting from the disposition of properties that are not used in an active business. An important distinguishing feature of this type of income is that, with the exception of rental income, its source can be easily moved from one tax jurisdiction to another.

20-145. The property income definition for FAPI also includes income from a foreign investment business. This type of business is analogous to the specified investment business that is used in determining income eligible for the small business deduction (see Chapter 12).

20-146. As is the case with the specified investment business rules, a foreign affiliate would be considered to be earning active business income if it either employs more than five full time employees or the equivalent of more than five full time employees, to earn income that would normally be considered property income. This "five-employee" exception is especially important in deciding whether foreign rental income is active (exempt from the FAPI rules) or passive (subject to the FAPI rules).

## Taxation Of FAPI

20-147. As noted in Paragraph 20-142, if a taxpayer has an investment in a controlled foreign affiliate, FAPI must be accrued as it is earned by that affiliate. Note that this is a separate issue from the taxation of dividends from either controlled or other foreign affiliates. We will deal with this latter issue in the next section. Not surprisingly, we will find that if dividends are paid out of FAPI income that has been accrued by a taxpayer, the dividends will not be taxed a second time when received by that investor.

> **EXAMPLE** Paul Peterson, a Canadian resident, owns 80 percent of the shares of Tabasco Ltd., a company that is incorporated in Trinidad. During 2019, the Company has income of $100,000, all of which is earned by passive investments. No income taxes are paid on this income in Trinidad, and no dividends are paid out of this income to Mr. Peterson.
>
> **ANALYSIS** Tabasco Ltd. is clearly a controlled foreign affiliate. Further, all of its income is from passive sources. Given this, under ITA 91(1), Mr. Peterson will have to include $80,000 [(80%)($100,000)] in his Canadian Net Income For Tax Purposes for 2019.

20-148. The preceding example was simplified by the fact that Tabasco Ltd. was not subject to taxes in the foreign country. If it had been, the income of this controlled foreign affiliate would have been subject to double taxation. Fortunately, the *Income Tax Act* provides relief in the form of a deduction under ITA 91(4) that is designed to compensate for foreign taxes that have been paid on FAPI.

20-149. Note that this is a deduction against income, rather than a tax credit. As illustrated in Paragraph 20-120, a deduction against income will reduce Tax Payable only by the amount of the deduction multiplied by the tax rate. This means that its value to the taxpayer is less than the amount of foreign taxes paid and, given this, it would not be equitable to set the deduction equal to those taxes.

20-150. The ITA 91(4) deduction recognizes this difference by multiplying the foreign taxes paid on FAPI by what is referred to as a relevant tax factor (RTF, hereafter). As defined in ITA 95(1), the RTF for individuals is different than it is for corporations.

> **Canadian Resident Individual** If the investor in the controlled foreign affiliate is an individual, the RTF is 1.9. This is based on the notional assumption that the Canadian tax rate on this income would have been about 52.63 percent if the individual had received it from a Canadian source (1 ÷ 52.63% = 1.9).

**Canadian Resident Corporation** If the investor in the controlled foreign affiliate is a corporation, the RTF is 4. This RTF is based on 1, divided by a notional tax rate that would have applied if the income had been received from a Canadian source (1 ÷ 25% = 4). That rate of 25 percent is 38 percent, less the General Rate Reduction of 13 percent. Note again, that because foreign income is involved, the 10 percent federal tax abatement is not deducted.

20-151. If the controlled foreign affiliate's income is taxed in the foreign jurisdiction at the notional rate applicable to the investor, the ITA 91(4) deduction will completely eliminate the FAPI. In most cases, the foreign tax rate will be below the notional rates, resulting in some FAPI being included in income. Note, however, that the ITA 91(4) deduction cannot exceed the FAPI.

**EXAMPLE CONTINUED (Foreign Taxes Paid)** Paul Peterson, a Canadian resident, owns 80 percent of the shares of Tabasco Ltd., a company that is incorporated in Trinidad. During 2019, the Company has income of $100,000, all of which is earned by passive investments. The Company pays Trinidadian taxes at a rate of 20 percent. No dividends are paid out of this income to Mr. Peterson.

**ANALYSIS** The tax consequences to Mr. Peterson would be as follows:

| | |
|---|---|
| FAPI [(80%)($100,000)] | $80,000 |
| Deduct Lesser Of: | |
| • FAPI = $80,000 | |
| • ITA 91(4) Deduction [(1.9)(80%)(20%)($100,000)] = $30,400 | ( 30,400) |
| Addition To Net Income For Tax Purposes | $49,600 |

## Exercise Twenty - 14

**Subject:** FAPI

Forco is a wholly owned foreign subsidiary of Canco, a resident Canadian company. Forco earns $100,000 of investment income in 2019 and pays 18 percent in tax in the foreign jurisdiction. None of the after tax income is paid out as dividends. What is the effect of this information on Canco's 2019 Net Income For Tax Purposes?

**SOLUTION available in print and online Study Guide.**

### Dividends From FAPI

20-152. A final problem remains when the controlled foreign affiliate subsequently distributes the FAPI to the Canadian resident shareholders as a dividend. While these dividends must be included in income, the *Income Tax Act* provides a deduction to reflect the fact that all or a part of the dividend may have already been taxed in an earlier year as FAPI.

20-153. The deduction is provided solely through ITA 91(5) in the case of individuals and a combination of ITA 91(5) and ITA 113(1)(b) in the case of corporations. The deductions are designed to eliminate taxation on previously taxed FAPI. It is equal to the lesser of the dividends received and the FAPI previously taxed to that shareholder after the ITA 91(4) deduction. Any withholding taxes on dividends paid to corporate shareholders of foreign affiliates are eligible for a deduction under ITA 113(1)(c). (See Paragraph 20-138.)

**EXAMPLE CONTINUED (Dividend Paid)** Paul Peterson, a Canadian resident, owns 80 percent of the shares of Tabasco Ltd., a company that is incorporated in Trinidad. During 2019, the Company has income of $100,000, all of which is earned by passive investments. The Company pays Trinidadian taxes at a rate of 20 percent. Tabasco Ltd. declares and pays dividends of $40,000 in January, 2020. There is no withholding tax on this dividend.

**ANALYSIS** As shown in Paragraph 20-151, Mr. Peterson's addition to Net Income For Tax Purposes in 2019 was $49,600. The consequences of receiving the dividend in 2020 would be nil as shown in the following calculation.

| | |
|---|---|
| Foreign Source Dividend [(80%)($40,000)] | $32,000 |
| Deduct Lesser Of: | |
| • Previous FAPI After ITA 91(4) Deduction = $49,600 | |
| • Dividend Received = $32,000 | ( 32,000) |
| Addition To Net Income For Tax Purposes | Nil |

## Exercise Twenty - 15

**Subject**: Dividends From FAPI (An Extension Of Exercise Twenty - 14)

Forco is a wholly owned foreign subsidiary of Canco, a resident Canadian company. Forco earns $100,000 of investment income in 2019 and pays 18 percent in tax in the foreign jurisdiction. In 2020, Forco distributes its net after-tax FAPI of $82,000 to Canco as a dividend. Assume that there are no withholding taxes on the dividend payment. What is the effect of this information on Canco's 2020 Net Income For Tax Purposes?

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problem Twenty-7 at this point.**

**Additional Supplementary Self Study Problems Are Available Online.**

# Key Terms Used In This Chapter

20-154. The following is a list of the key terms used in this Chapter. These terms, and their meanings, are compiled in the Glossary located at the back of the Study Guide.

Business Income
Capital Gain
Controlled Foreign Affiliate
Dividends
Double Taxation
Employment Income
Exempt Surplus
Foreign Accrual Property Income (FAPI)
Foreign Affiliate
Interest Income
International Tax Treaty
(a.k.a., International Tax Convention)
International Taxation
Non-Resident
Permanent Establishment
Person
Resident
Sojourner
Tax Haven
Taxable Canadian Property
Taxable Surplus

# References

## Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 20:

- 7 Self Study problems,
- 3 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

## Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### Assignment Problem Twenty - 1

#### (Part I Tax On Non-Residents)

The following material describes six independent cases which involve U.S. citizens or U.S. companies that have some type of Canadian source income.

#### Case 1

Flager is a U.S. based manufacturing company. To facilitate Canadian sales, the company ships its product to a warehouse located in Moncton, New Brunswick. The warehouse is rented on a monthly basis, with a clause in the lease that allows cancellation on 90 days notice.

Flager has made an arrangement with Jack Martin to sell their products in the Maritime provinces. Jack works out of an office in his home. He does not have authority to conclude individual sales contracts without approval from the head office in the U.S.

#### Case 2

Flager is a U.S. based manufacturing company. To facilitate Canadian sales, the company ships its product to a warehouse located in Moncton, New Brunswick. The warehouse is rented on a monthly basis, with a clause in the lease that allows cancellation on 90 days notice.

Flager has made an arrangement with Jack Martin to sell their products in the Maritime provinces. Jack works out of a large office in the warehouse, which takes up a considerable portion of the total floor space. He has the authority to conclude individual sales contracts without approval from the U.S. head office.

#### Case 3

Genevieve Boulud is a U.S. citizen and a resident of that country. Because she speaks fluent French, her U.S. based employer transfers her to an affiliate's Montreal office for 4 months. She has employment income during this period of $36,000 US, all of which is paid by her U.S. employer.

### *Case 4*

Ruby Nash is a U.S. citizen and a resident of that country. During the current year she accepts an employment contract which requires her to work in Calgary for a period of 3 months. Her salary is $11,000 Cdn per month. The contract is with a Canadian corporation that is responsible for paying the salary.

### *Case 5*

Ada Taylor is a U.S. citizen and a resident of that country. She owns all of the shares in a U.S. based private company that was incorporated in the U.S. This corporation's only activity is buying and operating vacation rental properties in Canada. In order to support her increasingly decadent lifestyle, she sells all of the shares in this company during the current year. She realizes a gain on this sale of $250,000.

### *Case 6*

Cynthia Edwards is a U.S. citizen and a resident of that country. She is a minority shareholder of a Canadian controlled private corporation. This corporation's only activity is buying and operating rental properties in major Canadian cities. Because of her concern about the inflated prices in both Toronto and Vancouver, she sells her shares in the company during the current year. The sale results in a total gain of $785,000.

**Required:** For each case, indicate whether the non-resident would be subject to Part I Canadian income tax.

## *Assignment Problem Twenty - 2*

### *(Permanent Establishments)*

A U.S. manufacturer of furniture is considering entering the Canadian market. The company will use one of the following approaches to expand its market in Canada:

A. Direct sales to wholesalers by full-time salespeople who report to a sales office in each of three Canadian provinces. The sales offices will co-ordinate marketing and shipping of products from two warehouses located in Canada. However, formal approval of contracts will be administered in the U.S. head office.

B. The sales offices described in Part A would be independent profit centres, with regional credit managers. The two warehouses from which orders are filled will be near the sales offices.

C. Company online sales territory would be expanded to include shipping to Canada.

D. Direct sales to wholesalers by non-exclusive agents. The agents will represent other suppliers as well.

E. Direct sales to wholesalers by full-time salespeople in each of three Canadian provinces. No sales offices will be opened, and the furniture will be shipped from a warehouse in the U.S. Shipment will be made only after a customer's credit and contract are approved by the U.S. head office.

F. Selling furniture to Canadian distributors. The distributors pay the shipping costs on the furniture from the U.S. port or border crossing closest to them.

**Required**: For each market expansion approach, assess whether or not the U.S. manufacturer will be deemed to have a permanent establishment in Canada. Justify your conclusion and identify any other information required to support your position.

### Assignment Problem Twenty - 3

#### (Part XIII Tax On Non-Residents)

Each of the following independent cases involves a non-resident individual who has Canadian source income during the current year. All amounts are in Canadian dollars.

**Case A**

Martha Martin is a resident of the United States. She owns debt securities that were issued by a Canadian public company. The interest rate on the securities is determined by the level of profits earned by the company. During the current year, she receives interest of $2,460.

**Case B**

Brendan Lee is a resident of a country that does not have a tax treaty with Canada. He is the owner of a vacation property in northern Ontario that he rents to Canadian residents. His gross rents for the current year are $94,000. Expenses related to the property, including maximum CCA, are $27,000.

**Case C**

Barry Fox is a resident of a country that does not have a tax treaty with Canada. He owns debt securities issued by a Canadian company that pay interest at a rate that is determined by the profits of the company. During the current year, he receives interest of $4,680 from this investment.

**Case D**

Terence Redux is a resident of a country that does not have a tax treaty with Canada. During the current year he earns $2,685 of interest on a savings account in Canada.

**Case E**

Karl Marks is a resident of a country that does not have a tax treaty with Canada. During the current year, Karl receives $8,462 in dividends from a Canadian private company. Karl owns 20 percent of this company's voting shares.

**Required:** For each of these situations, indicate how the Canadian source income would be taxed under Canadian tax legislation. Explain your conclusion.

### Assignment Problem Twenty - 4

#### (Emigration - Tax Planning)

Harlen Holt, a resident of Nova Scotia, plans to emigrate from Canada on December 31, 2019. On that date, he will own the following assets:

**Automobile** Harlen owns a BMW 750 which cost $135,000. Its fair market value on December 31, 2019 is $52,000.

**RRSP** The December 31 balance in Harlen's RRSP is $973,000.

**Shares In Public Companies** Harlen owns a portfolio of publicly traded shares which have a total adjusted cost base of $460,000. Their fair market value on December 31, 2019 totals $535,000.

**Shares In A CCPC** Harlen is a minority shareholder of a CCPC. The CCPC owns and operates five apartment buildings. More than 80 percent of the fair market value of the shares is derived from the value of these buildings. The adjusted cost base of these shares is $287,000 and they have a December 31, 2019 fair market value of $300,000.

**Residence** This property was purchased for $430,000, including $150,000 for the land. Its fair market value on December 31, 2019 is $540,000, including $200,000 for the land.

**Cottage** This property was purchased for $345,000, including $95,000 for the land. Because a large nearby development has flooded the market with low price units, it has a fair market value on December 31, 2019 of $300,000, including a value for the land of $50,000. Harlen has rented out this property since its purchase and reported a small rental income every year. He has never taken CCA on the property.

**Savings Account** The balance in this account is $45,600.

**Required:**

A. For each of the listed assets, indicate the tax consequences, including any amounts of deferred income, that would result from Harlen's emigration from Canada. Assume that he does not make any elections at the time of his move. Ignore the lifetime capital gains deduction.

B. Under ITA 128.1(4)(d), taxpayers can elect to have a deemed disposition on certain assets where a deemed disposition is not automatic. Determine if Harlen could use this election to minimize his tax obligation at the time of his departure. If he can, calculate the amount of the reduction in Net Income For Tax Purposes that would result from the use of this election.

## Assignment Problem Twenty - 5

### (Comprehensive Review Problem - Residency Of Individuals)

**Note** This problem covers material from several other Chapters of the text.

Elaine Brock is a very successful marketing manager for a multi-national corporation based in the United States. While she has always been a Canadian resident, working out of the corporation's Toronto office, she has been offered a promotion that would require that she relocate to Tampa, Florida. As this is intended to be a permanent change, Elaine has applied for and received the documentation that will allow her to live and work in the United States. She will be moving to Tampa on July 1, 2019.

The corporation provides a $40,000 moving allowance that will be paid by the Toronto office prior to her move. While the corporation does not require documentation of this amount, Elaine estimates that she will incur $32,000 in actual moving costs.

Her common-law partner, Marion Davies, is a very popular singer and songwriter. Marion has also received documentation that will allow her to live and work in the United States. However, she is currently writing songs to complete a new album in her Toronto music studio and is not planning to join Elaine until early 2020.

The state of Florida does not assess a state income tax on its residents, largely because of the high level of tax revenues generated by Disney World. Assume that the marginal federal (U.S.) rate for Elaine would be 35 percent. This rate would only be applied to income earned in the United States.

On July 1, 2019, the date that Elaine departs for Tampa, she owns the following assets:

| Description | Date Acquired | Original Cost | Fair Market Value |
|---|---|---|---|
| Registered Retirement Savings Plan | N/A | $235,000 | $452,000 |
| Canadian Paintings* | Various | 125,000 | 232,000 |
| Condo Residence In Toronto | 2006 | 360,000 | 480,000 |
| Huntsville Cottage | 2009 | 225,000 | 175,000 |
| Automobile | 2014 | 85,000 | 62,000 |
| Sailboat | 2016 | 28,000 | 32,000 |
| Shares In Brock Inc., A CCPC | 2004 | 98,000 | 156,000 |
| Shares In Bank Of Nova Scotia | 2012 | 56,000 | 85,000 |

*None of the paintings had an adjusted cost base or a fair market value that was less than $1,000.

Elaine owns 100 percent of the real property. She has rented out the cottage since its purchase and reported a small rental income every year. She has never taken CCA on the property. The loss in value is related only to the land as the waterfront has been severely damaged by flooding. The value of the land has decreased from $130,000 at purchase to $80,000.

While Elaine intends to sell all of the other assets fairly soon, she plans on renting both the Toronto residence and Huntsville cottage for at least 3 years.

**Required**: Explain to Elaine the tax consequences of her move to the United States. Assume that:

- Elaine ceases to be a Canadian resident when she departs on July 1, 2019.
- Any additional income that Elaine earns in 2019 while a resident of Canada will be taxed in Canada at a combined federal/provincial rate of 47 percent.

In addition, advise Elaine as to any tax planning opportunities to minimize her Canadian Tax Payable for the current and future years. Ignore the lifetime capital gains deduction.

## Assignment Problem Twenty - 6

### (Foreign Investment Reporting Rules)

The following six Cases are independent. Each involves a Canadian taxpayer who does not hold any other foreign investments. All listed amounts are in Canadian dollars.

For each asset, indicate whether the foreign investment reporting rules are applicable.

1. A cottage in Woodstock, Vermont, purchased for $365,000, with a down payment of $65,000 and the assumption of a $400,000 mortgage. The cottage is used by the taxpayer and his extended family throughout the year.
2. A building in Canton, Ohio, with a cost of $1,560,000, is owned by a Canadian corporation. It is used exclusively to store the Company's products for distribution.
3. Shares in a U.S. public company with a cost of $286,000 and a current fair market value of $72,000. One-half of these shares were purchased in the taxpayer's Canadian brokerage trading account and the other half were purchased in the taxpayer's self-directed RRSP.
4. A U.S. bank account and a mortgage resulting from the sale of a rental property to a U.S. resident three years ago. The original amount of the mortgage was $135,000. However, the amount owing at the beginning of the current year is $68,000. The taxpayer's bank account in a U.S. bank has a balance of between $3,000 and $12,000 throughout the year.
5. A yacht with a cost of $1,300,000 which was purchased and is docked in San Diego, California. The yacht is used by a Vancouver taxpayer as a venue for her lavish parties.
6. A condo in Fort Meyers, Florida is purchased for $860,000. The condo is rented to Canadians for 9 months of the year and used by the taxpayer the remaining 3 months.

## Assignment Problem Twenty - 7

### (Foreign Source Investment Income And T1135)

Vickey Gateley works and resides in Niagara Falls, Ontario. A long time monarchist, she has developed a well diversified portfolio of stocks of British companies. At December 31, 2019, Ms. Gateley is holding British stocks with a cost of £800,000. She also has a British bank account with a London bank that has a balance that fluctuates between £25,000 and £50,000.

One of her boyfriends lives in Buffalo, New York. Three years ago, when she started spending many of her weekends there, she decided to purchase a condo in Buffalo. Because the building she chose had construction problems, the prices were depressed and she purchased four units for US$200,000 each. She has rented out the other three units.

During 2019, she earned the following amounts of investment income:

| | |
|---|---|
| Dividends From British Public Corporations<br>Net Of 15 Percent Withholding | £54,400 |
| Interest On Bank Account | £ 1,300 |
| Gross Rental Income From Rental Properties | US$86,000 |
| Expenses Of Operating Rental Properties | US$45,000 |

**Other Information**

1. Ms. Gateley has left the interest in her British bank account and has not transferred it to Canada.
2. Ms. Gateley believes her condo units are very undervalued. Because of her concern with respect to future recapture, she does not take CCA on her rental properties.
3. The dividends from the British corporations were paid on a quarterly basis.
4. Assume that the exchange rates throughout 2019 were £1 = $1.70 and US$1 = Cdn$1.30.

**Required:**

A. Indicate the amounts of investment income that would be included in Ms. Gateley's 2019 Net Income For Tax Purposes, as well as any tax credits that would be available to Ms. Gateley to offset this income.

B. Is Ms. Gateley required to file a T1135? If yes, what assets have to be included? The detailed reporting needed on the assets is not required.

### *Assignment Problem Twenty - 8*

### *(Foreign Source Dividends Received By An Individual)*

Matthew Fortin is a Canadian resident who lives in London, Ontario. During the year ending December 31, 2019, he has the following sources of income:

| | |
|---|---|
| Net Employment Income | $121,300 |
| Taxable Capital Gains | 11,400 |
| Dividends From Canadian Public Companies | 27,350 |
| Dividends From Foreign Companies: | |
| Country One - Saxon Ltd. (Before Withholding Of $8,000) | 40,000 |
| Country Two - Selena Ltd. (Before Withholding Of $1,800) | 18,000 |

His business and investment activities have been unsuccessful in previous years and, as a consequence, he has the following amounts available for reducing his 2019 Taxable Income:

| | |
|---|---|
| Net Capital Loss Carry Forward | $16,760 |
| Business Loss Carry Forward | 13,480 |

His only tax credits are the basic personal credit, employment related credits, and any credits related to the dividends received.

**Required:** Determine Matthew's Federal Tax Payable for the year ending December 31, 2019.

### Assignment Problem Twenty - 9

#### (Taxation Of Foreign Affiliate Dividends)

CTP is a Canadian public corporation that has acquired 15 percent of the shares of FTP, a corporation that is established in a foreign country. During the year ending December 31, 2018, FTP earns $20,000 in investment income, $70,000 from an active business and $20,000 of capital gains from the sale of investment assets.

In early 2019, FTP distributes all of its 2018 after tax income as a dividend to its shareholders. FTP has no additional income in 2019.

In both 2018 and 2019, CTP is subject to a federal tax rate of 25 percent.

The following Cases make use of the preceding information. However, the individual Cases make various additional or alternative assumptions.

**Required:** Provide the information that is requested in each of the following Cases.

**Case 1** FTP is a non-controlled foreign affiliate of CTP. Assume that it is located in a country that does not have a tax treaty or a TIEA with Canada, that this country does not assess income taxes on corporations and does not assess withholding taxes on dividend payments to non-residents. What are the tax consequences for CTP resulting from its investment in FTP during 2018 and 2019? Include the increase in Net Income For Tax Purposes and total Taxes Payable for both years in your solution.

**Case 2** Assume the same facts as in Case 1, except that FTP is a controlled foreign affiliate of CTP. How would the tax consequences for CTP differ from the tax consequences described in Case 1, for 2018 and 2019?

**Case 3** Assume the same facts as in Case 1, except that FTP is not a foreign affiliate of CTP. How would the tax consequences for CTP differ from the tax consequences described in Case 1, for 2018 and 2019?

**Case 4** Assume the same facts as in Case 1, except that FTP is located in a country that has a tax treaty with Canada. How would the tax consequences for CTP differ from the tax consequences described in Case 1, for 2018 and 2019?

**Case 5** FTP is a non-controlled foreign affiliate of CTP. Assume that FTP is located in a country that has a tax treaty with Canada, that this country assesses income taxes on active business income at a rate of 10 percent and does not assess withholding taxes on dividend payments to non-residents. The income taxes paid by FTP in the foreign country total $7,000 [(10%)($70,000)]. What are the tax consequences for CTP resulting from its investment in FTP during 2018 and 2019?

**Case 6** Assume the same facts as in Case 5, except that the foreign country levies the 10 percent income tax on all of FTP's 2018 income. This income tax would total $11,000 [(10%)($110,000)]. In addition, a further 8 percent withholding tax of $7,920 [(8%)($110,000 - $11,000)] was assessed on the dividend paid in 2019. The resulting dividend payment was $91,080 ($110,000 - $11,000 - $7,920). What are the tax consequences for CTP resulting from its investment in FTP during 2018 and 2019?

### Assignment Problem Twenty - 10

#### (Canadian Source Income - Short Cases)

#### Case A

Mr. Jack Holt is an employee of Stillwell Industries, an American manufacturing Company. During the period June 15 through December 6 of the current year, Mr. Holt worked in Canada providing technical assistance to a Canadian subsidiary of Stillwell Industries. His salary was U.S. $5,500 per month. During the period that Mr. Holt was in Canada, Stillwell Industries continued to deposit his salary into his normal U.S. bank account. Both his salary for this period and all of his related travelling expenses were billed to the Canadian subsidiary.

**Required:** Explain Mr. Holt's tax position.

#### Case B

Mr. John McQueen was for many years a resident of Ontario. On his retirement ten years ago, he returned to his native Scotland and has not since returned to Canada. However, he has retained considerable investments in Canada, as follows:

- **Common Stocks** He has a large portfolio of common stocks that are registered in the name of his Toronto broker. The broker receives all dividends and periodically sends a cheque to Mr. McQueen in Scotland.
- **Mortgage Portfolio** He has a large portfolio of second mortgages. All collections on these mortgages are made by a Toronto law firm and are deposited into a Toronto bank account in the name of Mr. McQueen.

**Required:** Who is responsible for tax withholdings under Part XIII of the *Income Tax Act*, and on which amounts must withholdings be made?

#### Case C

Hotels International is a U.S. corporation with hotel properties throughout the world. It has recently developed a property in Nova Scotia that will open during the current year. A long-term management lease has been signed with Hotel Operators Ltd., a Canadian company specializing in the management of hotels. Under the terms of the lease, Hotel Operators Ltd. will pay all of the operating expenses of the hotel and, in addition, make an annual lease payment of $1,250,000 to the American owners of the new hotel.

**Required:** Will the U.S. corporation, Hotels International, be subject to Canadian income taxes on the annual lease payment, and, if so, to what extent?

#### Case D

The Maple Company, a public company resident in Canada, has 2,400,000 shares of its no par common stock outstanding. Sixty percent of these shares are owned by its American parent, the Condor Company. The remaining shares are owned by Canadian residents. In addition to the common shares, the Condor Company holds all of an outstanding issue of Maple Company debenture bonds. Two of the five directors of the Maple Company are Canadian residents, while the remaining three are residents of the United States. During the current year, the Maple Company paid a dividend of $1 per share on its common stock and interest of $900,000 on its outstanding debenture bonds.

**Required:** Calculate the amount of Part XIII taxes to be withheld by the Maple Company with respect to the interest and dividend payments to its American parent.

# CHAPTER 21

# GST/HST

## Introduction

### Background

#### *Introduction Of The GST*

21-1. After significant controversy, a goods and services tax (GST, hereafter) was introduced in Canada on January 1, 1991. This broadly based, multi-stage transaction tax replaced the more narrowly focused federal sales tax on manufactured goods. The GST was originally introduced at a rate of 7 percent. However, this rate was reduced to 6 percent in 2006, with a further reduction to 5 percent on January 1, 2008. There have been no other GST rate changes implemented or proposed since that date.

21-2. The concept underlying this tax was that it would be applied in an even-handed manner to all goods and service transactions. However, tax policy is often more influenced by political considerations than it is by economic logic. As a result, by the time the tax was actually introduced, it was burdened by a complex web of exemptions and modifications that significantly increased the cost of compliance.

21-3. The developers of this tax also hoped that the provinces would be willing to amalgamate their provincial sales taxes with the federal GST in order to provide taxpayers with a uniform national approach to the taxation of goods and service transactions. This could have resulted in very substantial savings in both compliance costs and administrative costs. This, however, did not happen.

21-4. Only the province of Quebec showed any early signs of cooperation in this area. The provinces of Alberta, British Columbia, and Ontario initially took legal action against the federal government, claiming that the GST was unconstitutional. In 1992, Quebec introduced the Quebec Sales Tax (QST), a similar, but not identical transaction tax. As part of this process, it was agreed that both the QST and all GST collected in Quebec would be administered by the province of Quebec.

#### *Harmonized Sales Tax (HST)*

21-5. The GST situation did not change until 1997, when three of the Atlantic provinces, New Brunswick, Nova Scotia, and Newfoundland implemented a harmonized sales tax (HST, hereafter) that contained both a federal and a provincial tax component. In the harmonization process, these provinces eliminated their separate provincial sales taxes.

21-6. The harmonized sales tax is, in effect, a combination of the 5 percent GST rate and a provincial rate that varies from 8 to 10 percent. This gives overall rates of 13 to 15 percent. Since its initial introduction in New Brunswick, Nova Scotia, and Newfoundland, both Ontario and Prince Edward have become participants in the system. British Columbia joined and then, after a bitterly fought referendum, returned to a GST/PST system.

21-7. A major advantage of the HST system is that it is administered by the federal government, eliminating the need for the dual administrative system that is required in those provinces that collect both GST and PST. This does not, however, eliminate flexibility at the provincial level. This is evidenced by the differences in the provincial tax component rate, as well as by different rebates on the provincial portion of the HST for a number of items.

## The Current Situation

21-8. These developments have left Canada with a somewhat cluttered transaction tax landscape. The various arrangements are summarized in the following Figure 21-1:

**Figure 21 - 1**
**Transaction Taxes In Canada As At July 1, 2019**

| Type Of Tax | Province | Rates | Tax Administration |
|---|---|---|---|
| GST Only | Alberta | 5% + 0% | Federal |
| GST and PST | British Columbia | 5% + 7% | Federal and Provincial |
| | Manitoba: | | |
| | - to June 30, 2019 | 5% + 8% | Federal and Provincial |
| | - starting July 1, 2019 | 5% + 7% | Federal and Provincial |
| | Saskatchewan | 5% + 6% | Federal and Provincial |
| HST | New Brunswick | 15% | Federal |
| | Newfoundland | 15% | Federal |
| | Nova Scotia | 15% | Federal |
| | Ontario | 13% | Federal |
| | Prince Edward Island | 15% | Federal |
| GST and QST | Quebec | 5% + 9.975% | Provincial |

21-9. This table illustrates some of the complexity of the current situation resulting from the use of different rates and regimes applying those rates. This is further complicated by the fact that in the HST provinces, rebates of the provincial portion of the tax are provided on some items in some provinces, but not others.

21-10. It is obvious that the transaction tax situation in Canada is extremely complex due to the use of different systems ( GST only, GST plus PST, and HST), the use of different provincial rates, and the use of different provincial rebates on various classes of goods. It is not surprising that this can result in very high compliance costs for businesses.

## How This Text Deals With This Complexity

21-11. It is clearly not appropriate in a general textbook on taxation to attempt detailed coverage of the GST and HST procedures applicable in each province. It is likely that an attempt to do this would require a completely separate third volume.

21-12. The GST is applicable to all provinces either as a separate tax or as a component of HST. Fortunately, many of the provisions for the HST are identical to those for the GST. This means that, in general, the concepts and procedures involved are the same for both the GST and the HST.

21-13. Given this situation, our discussion and examples will focus on one of two scenarios:

- Situations where only the GST is applicable. Alberta is the only province where this situation applies. However, it is also applicable in the three territorial jurisdictions.
- Situations where the HST is applicable.

21-14. We will not use examples involving those provinces where both GST and PST are in effect, nor will attention be given to the unique situation in Quebec.

21-15. With the exceptions of a brief Chapter 3 discussion of the GST component of employee benefits and a limited presentation on the impact of the GST on business income, all of our material on GST is included in this Chapter. This includes consideration of the Employee And Partner GST Rebate, as well as the application of GST to the purchase and sale of capital assets. We have also included GST procedures and administration in this chapter, rather than in Chapter 2.

21-16. We view this as an extremely important subject. The great majority of businesses in Canada file GST returns. In addition, many organizations, such as charities and unincorporated businesses must file GST returns, even though they are not required to file income tax returns. Given the pervasiveness of this tax and the amounts that can be involved, it is our view that some understanding of its application is an essential component of the knowledge base of every professional accountant and businessperson.

# Transaction Tax Concepts

## General Description

21-17. While taxes like the GST and HST are often referred to as commodity taxes, the title is not appropriate as the term commodity does not include services. When both goods and services are subject to a tax, what we are really concerned with is the taxation of transactions as opposed to the taxation of income.

21-18. In both Canada and the U.S., the bulk of federal tax revenues has traditionally been generated by taxes on personal and corporate income. However, transaction taxes have been widely used in both countries at the provincial or state level. In addition, there has been a worldwide trend towards increased use of transaction taxes, with many industrialized countries now relying heavily on this type of taxation.

21-19. Some of the factors that support the increased use of transaction taxes are as follows:

- **Simplicity** Transaction taxes are easy to administer and collect. No forms are required from individuals paying the tax and, if the individual wishes to acquire a particular good or service, it is difficult to legally evade payment.
- **Incentives To Work** An often cited disadvantage of income taxes is that they can discourage individual initiative to work and invest. Transaction taxes do not have this characteristic.
- **Consistency** Transaction taxes avoid the fluctuating income and family unit problems that are associated with progressive income tax systems.
- **Keeping The Tax Revenues In Canada** While some types of income can be moved out of Canada, resulting in the related taxes being paid in a different jurisdiction, taxes on Canadian transactions remain with Canadian taxing entities.

21-20. Given these advantages for transaction taxes, why is income taxation still used? The answer to this question largely involves the question of fairness. In general, transaction taxes relate to consumption. When this is combined with the fact that lower income individuals usually spend a larger portion of their total income on consumption, transaction taxes are assessed at higher effective rates on individuals with lower incomes. Using more technical terminology, transaction taxes are usually regressive.

21-21. This is in conflict with the widely held belief that fairness requires that individuals with higher incomes should have their income taxed at higher average rates. This goal is best accomplished through the continued use of a progressive income tax system.

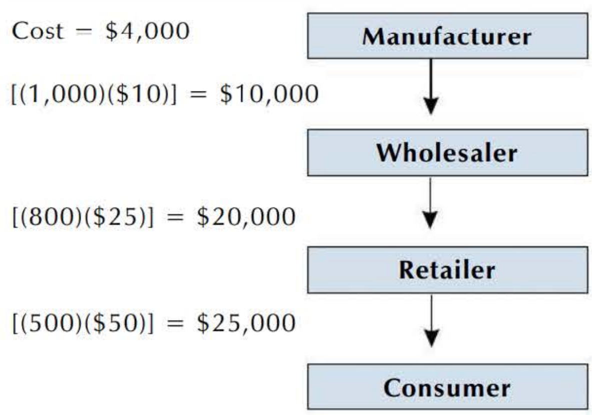
21-22. The federal government has compensated for the regressive nature of the GST by providing a GST tax credit that is available to low income individuals who file income tax returns. Similar provisions are available at the provincial level where HST is applicable.

21-23. There are a number of different ways in which transaction taxes can be applied. We believe that it is useful to understand how the Canadian system compares with the various alternatives that are in use in other jurisdictions. These alternatives will be given consideration in the next section of this Chapter.

## Example

21-24. In discussing the various approaches that can be used in the application of transaction taxes, a simple example is useful. Such an example is diagramed in Figure 21-2. As can be seen in Figure 21-2, our example involves a manufacturer who produces 1,000 units of product at a cost of $4 of raw materials per unit, a total cost of $4,000. All of the 1,000 units are sold to a wholesaler for $10 per unit. The wholesaler then sells 800 of the units to a retailer for $25 per unit. The retailer, in turn, sells 500 of the units to a consumer for $50 per unit.

**Figure 21 - 2**
**Transaction Tax Example**



## Single Stage Transaction Taxes - Retail Sales Tax

21-25. A single stage transaction tax could be applied at any level in this example. The most common type of single stage tax is applied at the consumer level. This would be the familiar retail sales tax that is collected in several Canadian provinces. For example, if the transactions depicted in Figure 21-2 took place in Manitoba, an 8 percent retail sales tax would be assessed on the $25,000 price that the retailer charged the consumer, resulting in a provincial sales tax of $2,000 being paid by the consumer.

21-26. The consumer level is probably the most appropriate level to apply a single stage transaction tax. The tax is visible and its incidence is relatively clear. In contrast, when a wholesale or manufacturer's tax is used, complications can arise when business relationships are formed that blur the lines between the manufacturing, wholesale, and retail levels. This can occur with vertical integration, and necessitates estimates or notional values for transfers between the manufacturing, wholesale, or retail levels of an organization.

## Multi-Stage Transaction Taxes - Turnover Tax

21-27. Again referring to Figure 21-2, it would be possible to impose a multi-stage transaction tax at any combination of the various levels depicted. For example, the tax could be applied at the wholesale and retail levels, without application at the manufacturing level. Alternatively, the manufacturing and wholesale levels could be taxed without application at the retail level. An extension of this taxation to all levels is sometimes referred to as a turnover tax, with transactions being taxed at all levels in the distribution chain.

21-28. The problem with such a turnover tax is that it involves the pyramiding of taxes when there is no credit for taxes paid earlier in the chain. For example, if there was a 5 percent turnover tax in place, the manufacturer in Figure 21-2 would charge the wholesaler $10.50 per unit. When the wholesaler applies his normal markup of 250 percent of cost ($25 ÷ $10), the price would be $26.25 per unit [($10.50)(2.5)]. Of this $26.25, $0.025 [($0.50)(5%)] would

represent a tax on the tax that was charged to the wholesaler by the manufacturer. If the 5 percent tax was also applied to the transfers to the retailer and to the ultimate consumer, there would be further applications of tax on previously assessed amounts of tax. Given this pyramiding problem, turnover taxes are not widely used.

## Value Added Tax (VAT)

### *Types*

21-29. VATs are multi-stage transaction taxes that can be assessed in two basic ways:

**Accounts-Based Method** In this approach, the tax is assessed on the basis of the value added at each level of the business process. It is usually based on some type of accounting based determination of income (e.g., value added).

**Invoice-Credit Method** In this approach, tax is assessed on gross sales. The taxpayer is then provided with a credit based on purchases made. No accounting based determination of income is required.

21-30. These two approaches will be illustrated in the material which follows.

### *Accounts-Based VAT*

21-31. Internationally, the most common type of VAT uses the accounts-based method. Using this method, transactions are taxed at each level in the distribution chain. Using whatever rate is established, the VAT is applied to the value added by the business to goods and services, rather than to the gross sales of the business.

21-32. If we assume a 5 percent rate of tax in the example presented in Figure 21-2, this method would require the raw materials supplier to charge tax on his sale price of $4 per unit. The manufacturer would then charge tax on the difference between the sales price of $10 per unit sold and the related input costs of $4 per unit sold. In corresponding fashion, the wholesaler would charge the 5 percent on the difference between the manufacturer's invoice of $10 per unit sold and the wholesale price of $25 per unit sold (i.e., the value added by the wholesaler). Finally, the retailer would charge the VAT on the difference between the retail price of $50 per unit sold and the wholesaler's price of $25 per unit sold. The total tax calculation is as follows:

| | |
|---|---|
| Raw Materials [(5%)(1,000)($4)] | $ 200 |
| Manufacturer To Wholesaler [(5%)(1,000)($10 - $4)] | 300 |
| Wholesaler To Retailer [(5%)(800)($25 - $10)] | 600 |
| Retailer To Consumer [(5%)(500)($50 - $25)] | 625 |
| Total Value Added Tax | $1,725 |

### *Invoice-Credit VAT*

21-33. This is the approach that is used in Canada for GST/HST calculations. Under this approach, each vendor charges tax on the full selling price. This tax is then offset by a credit for the tax that was paid on the costs incurred by the business (these are referred to as input tax credits).

21-34. Continuing to assume a 5 percent rate of tax is applied to our basic example from Figure 21-2, the invoice-credit VAT calculations would be as follows:

| | |
|---|---|
| **Raw Materials Supplier** | |
| GST Collected [(5%)(1,000)($4)] (No Input Tax Credits) | $200 |
| Net GST Payable | $200 |

| | |
|---|---|
| **Manufacturer** | |
| GST Collected [(5%)(1,000)($10)] | $500 |
| GST Paid On Costs = Input Tax Credits [(5%)(1,000)($4)] | ( 200) |
| Net GST Payable | $300 |

**Wholesaler**

| | |
|---|---|
| GST Collected [(5%)(800)($25)] | $1,000 |
| GST Paid On Costs = Input Tax Credits [(5%)(1,000)($10)] | ( 500) |
| Net GST Payable | $ 500 |

**Retailer**

| | |
|---|---|
| GST Collected [(5%)(500)($50)] | $1,250 |
| GST Paid On Costs = Input Tax Credits [(5%)(800)($25)] | ( 1,000) |
| Net GST Payable | $ 250 |

| | |
|---|---|
| Net Tax - Raw Materials Supplier | $ 200 |
| Net Tax - Manufacturer | 300 |
| Net Tax - Wholesaler | 500 |
| Net Tax - Retailer | 250 |
| Total Net Tax - All Levels | $1,250 |

## Comparison

21-35. The overall results for the two approaches is as follows:

| | |
|---|---|
| Total Tax - Accounts-Based VAT | $1,725 |
| Total Net Tax - Invoice-Credit VAT | ( 1,250) |
| Difference | $ 475 |

21-36. In this example, using the invoice-credit approach results in less tax being paid. The reason for this is that, when the invoice-credit approach is used, the enterprise receives tax credits for all purchases, without regard to whether or not the goods are sold. In this example, at both the wholesale and retail levels, purchases exceed sales. The tax credits are claimed from the government on units purchased, while the taxes collected are paid to the government on units sold. This means that enterprises benefit from having their purchases exceed their sales. In contrast, under an accounts-based VAT system, the tax to be paid is based on units sold and no benefit is received for taxes paid on units that are still on hand.

21-37. In general, if purchases and sales are equal, the tax that is assessed under an invoice-credit VAT system is similar to that assessed under an accounts-based VAT system. This can be seen at the manufacturer level in our example. In the case of the manufacturer, the units purchased and sold were equal. For this enterprise, the two VAT approaches resulted in exactly the same net tax ($300).

21-38. Given that the accounts-based VAT approach is more commonly used on a world-wide basis, there is some question as to why Canada chose to use the alternative invoice-credit approach. While background documents on the GST legislation do not provide a direct answer to this question, it would appear that the major advantage of the invoice-credit approach is that it does not rely on an accounting determination of value added. The tax is charged on all taxable goods sold, with input tax credits available for taxes paid on all expenditures for inputs used in commercial activities. The fact that there is no matching requirement avoids the controversies that can arise when various types of cost matching and allocation procedures are required.

21-39. It can also be argued that the invoice-credit approach is more equitable as it is more closely associated with actual cash flows than would be the case with an accounts-based system. The cash required to pay transaction taxes is based on purchases, without regard to when these inputs result in sales. As the invoice-credit approach provides for credits based on purchases, it can be argued that this approach is fairer to the enterprises that are involved in the production/distribution chain.

21-40. There is a further question of why the government chose to use a multi-stage tax, rather than implementing a less complex, single stage, federal sales tax at the retail level. An often cited reason is related to tighter administration and control. With the multi-stage approach, a vendor does not have to determine whether or not customers of particular goods and services are exempt because they are one or more steps away from the retail or final consumption level.

21-41. An additional reason for using a multi-stage tax is that it is applied further up the distribution chain. This, of course, means that the tax revenues accrue to the government at an earlier point in time.

**Exercise Twenty-One - 1**

**Subject:** Alternative VAT Approaches

During a taxation period, Darvin Wholesalers purchased merchandise for $233,000. Merchandise sales during this period totalled $416,000 and the cost of the merchandise sold was $264,000. Ignoring all other costs incurred by Darvin and assuming a rate of 5 percent, how much tax would be paid by Darvin under an account-based VAT system and, alternatively, under an invoice-credit VAT system?

# Liability For GST/HST

## Basic Charging Provision

21-42. The basic charging provision for GST is found in the *Excise Tax Act* (ETA). It is as follows:

> **ETA 165(1) Imposition of goods and services tax —** Subject to this Part, every recipient of a taxable supply made in Canada shall pay to Her Majesty in right of Canada tax in respect of the supply calculated at the rate of 5% on the value of the consideration for the supply. [**Byrd/Chen Note** Additional legislation changes this rate to the appropriate rate in those provinces where the HST has been adopted.]

21-43. In order to understand this charging provision, it will be necessary to give attention to the concept of supply. We will cover this in the next section of this chapter.

21-44. Note that the tax is assessed on the recipient of, rather than the provider of, taxable supplies. As we shall find in a later section of this Chapter, responsibility for collection of the tax is with the provider of the taxable supplies (the GST registrant).

## The Concept Of Supply

21-45. The term "goods and services tax" implies that it is a tax that is applied to goods and services or, more specifically, transactions that involve the provision of goods and services. The term that is used by the *Excise Tax Act* in referring to such transactions is "supply". This term is defined in the *Act* as follows:

> **ETA 123(1) Supply** means the provision of property or a service in any manner, including sale, transfer, barter, exchange, licence, rental, lease, gift or disposition.

21-46. While this definition includes most of the items that we would consider to be revenues under GAAP, it is actually a much broader term. It would include all of the following:

- the sale, rental, or transfer of goods,
- the rendering of services,
- licensing arrangements for copyrights or patents,
- the lease, sale, or other transfer of real property, and
- barter transactions or gifts.

# Supply Categories

**NOTE ON GST/HST DIFFERENCES** While the HST provinces use the same categories of supply that are used in the federal GST legislation, some fully taxable items are given point-of-sale rebates for the provincial component of the HST (e.g., Ontario provides an 8 percent point-of-sale HST rebate for children's clothing). In effect, purchasers pay only the federal GST rate of 5 percent on these items.

A full description of these differences for all of the HST provinces goes beyond the scope of this text. Given this, the examples that are described in the following discussion include items that fall into the fully taxable category under the federal GST legislation. Because of provincial rebates in the HST provinces, purchasers of some of these items will not pay the full HST rate.

## Taxable Supplies

### General Rules

21-47. The *Excise Tax Act* defines taxable supplies as follows:

**ETA 123(1) Taxable supply** means a supply that is made in the course of a commercial activity.

21-48. Expanding on this definition, commercial activity is defined in the *Excise Tax Act* as follows:

**ETA 123(1) Commercial Activity** of a person means

(a) a business carried on by the person (other than a business carried on without a reasonable expectation of profit by an individual, a personal trust or a partnership, all of the members of which are individuals), except to the extent to which the business involves the making of exempt supplies by the person,

(b) an adventure or concern of the person in the nature of trade (other than an adventure or concern engaged in without a reasonable expectation of profit by an individual, a personal trust or a partnership, all of the members of which are individuals), except to the extent to which the adventure or concern involves the making of exempt supplies by the person, [**Byrd/Chen Note** In somewhat simplified terms, an adventure or concern in the nature of trade is a one-shot business venture, as opposed to an ongoing activity.] and

(c) the making of a supply (other than an exempt supply) by the person of real property of the person, including anything done by the person in the course of or in connection with the making of the supply.

21-49. As used here, the term business has the following meaning:

**ETA 123(1) Business** includes a profession, calling, trade, manufacture or undertaking of any kind whatever, whether the activity or undertaking is engaged in for profit, and any activity engaged in on a regular or continuous basis that involves the supply of property by way of lease, licence or similar arrangement, but does not include an office or employment;

21-50. Stated in practical, every-day language, this says that if you are providing goods or services in the course of business activity, or if you selling or leasing real property, you are providing taxable supplies unless:

- the business does not have a reasonable expectation of profit (this criterion only applies to businesses run by individuals, certain partnerships, or certain trusts);
- the supplies are exempt supplies; or
- the services are employment services.

21-51. Taxable supplies fall into two categories. The first category is supplies that we will refer to as fully taxable supplies. The second category is supplies that are zero-rated.

### Fully Taxable Supplies

21-52. Fully taxable supplies are those that are taxed at the 5 percent federal GST rate or the appropriate HST rate (13 or 15 percent). Examples of fully taxable supplies include:

- transportation in Canada,
- restaurant meals and beverages,
- clothing and footwear,
- furniture,
- admissions to concerts, athletic and other events
- contractors' services,
- legal and accounting fees,
- haircuts, and
- cleaning services.

### Zero-Rated Supplies

21-53. The *Excise Tax Act* provides a list of taxable supplies that are designated as zero-rated. While these supplies are said to be taxable, they are taxed at zero percent, rather than the regular GST or HST rate.

21-54. At first glance, this concept seems a bit senseless in that there is no tax charged on either zero-rated supplies or exempt supplies. However, an important difference exists. Because zero-rated supplies are considered to be taxable supplies, the providers of such supplies can recover the GST/HST paid on business purchases as input tax credits. In contrast, providers of exempt supplies are not eligible for input tax credits (see Paragraph 21-103).

21-55. In addition, as zero-rated supplies are considered taxable at a rate of zero percent, they are included in the threshold amounts for determining the filing frequency of a registrant's GST or HST returns. This is covered beginning in Paragraph 21-134.

21-56. Common items included in the category of zero-rated supplies are as follows:

- prescription drugs,
- medical devices such as wheelchairs, eye glasses, canes, hospital beds, and artificial limbs,
- basic groceries,
- most agricultural and fishing products,
- goods and services exported from Canada, and
- foreign travel and transportation services (see following Paragraph).

21-57. Some elaboration is required for the meaning of foreign travel. Surface travel by ship, bus, or train is zero-rated when the origin or termination point is outside Canada (e.g., a train trip to the U.S. is zero-rated). Domestic surface travel is fully taxable.

21-58. In the case of air travel, the GST/HST rules can be complicated. International air travel is zero-rated only when flights are deemed to be outside of continental North America, not just outside of Canada. As an example of the possible complications, this broader definition can make Canadian air travel to and from the United States fully taxable.

## Exempt Supplies

21-59. As was the case with zero-rated supplies, the *Excise Tax Act* provides a list of supplies that are exempt from GST. Persons providing exempt supplies do not collect GST/HST and are not eligible for input tax credits for GST/HST paid on the related purchases. As we shall see when we discuss input tax credits, this means that suppliers of exempt supplies pay GST/HST

that is not refundable to them on the fully taxable goods and services required to operate their business. As a consequence, the non-recoverable GST/HST paid is a cost of doing business that is likely to be passed on to customers in the form of higher prices.

21-60. Some common items that are included in the category of exempt supplies are as follows:

- basic health care and dental services (which does not include cosmetic surgery),
- financial services provided to Canadian residents,
- sales of used residential housing and long-term residential rents (e.g., rentals for more than 30 days),
- most land sold by individuals where the land was not used in a business,
- educational courses leading to certificates or diplomas, tutoring for credit courses, and music lessons,
- child or personal care services, and
- a wide variety of services provided by charities, not-for-profit, and government organizations (see discussion under Specific Applications at Paragraph 21-188).

# Applying the GST/HST Rate

## Place Of Supply

### *The Problem*

21-61. The rate at which GST or HST will be applied varies from a low of 5 percent in a province where only the GST is applicable (e.g., Alberta), to a high of 15 percent under the HST regime (e.g., Nova Scotia). The size of this range makes the question of which rate should be applied to a particular supply of goods and services a significant issue.

21-62. A further question relates to whether the tax should be assessed on the basis of the location of the registrant providing the supply or, alternatively, the location of the recipient of the supply. Prior to 2010, the place of supply rules were mostly based on the location of the supplier. The current rules rely more heavily on where the recipient is located. This means that a supplier must be able to deal with the transaction taxes in any province his goods and services are delivered to, as well as the transaction taxes in the province where he is located.

21-63. There are, of course, many complications in the application of these rules. What follows provides only a basic overview of how these rules work.

### *Tangible Goods*

21-64. The rules for tangible goods are relatively straightforward. A GST registrant will calculate taxes on the basis of the rules that are in effect in the province where the goods are delivered. The following example illustrates the application of this approach.

> **EXAMPLE** An Ontario HST registrant sells shirts online and ships them to purchasers in Ontario, Prince Edward Island, Alberta and Quebec.
>
> **ANALYSIS** The GST/HST rate charged on the sales will vary as follows:
>
> - Ontario recipient - HST will be charged at 13 percent.
> - Prince Edward Island recipient - HST will be charged at 15 percent.
> - Alberta recipient - only GST at 5 percent will be charged.
> - Quebec recipient - only GST at 5 percent will be charged. This example makes the point that Quebec is using a separate transaction tax (QST), rather than harmonizing with the federal GST. If the Ontario registrant was a QST registrant as well, QST would also be charged on this sale. Note that Quebec consumers are required to voluntarily pay the relevant QST to Revenu Quebec on purchases shipped from outside Quebec that do not have QST charged. It is likely that this liability frequently remains unpaid as many Quebec consumers are either unaware of this requirement or, alternatively, deliberately choose to ignore it.

### Real Property

21-65. As real property cannot be moved across provincial boundaries, there are few complications in this area. The GST or HST will be assessed on the basis of the rules in effect in the province where the real property is located. For example, on a taxable sale of real property in Ontario, HST is applicable at 13 percent regardless of where the vendor resides.

### Services

21-66. This area has the most complications in terms of the place of supply rules. The basic idea is that the place of supply is the province where the services are used.

> **EXAMPLE** A professor at a Manitoba university is also a freelance editor of a widely used accounting text. He does his editing in his office in Winnipeg. His editing fees are consistently in excess of $50,000 per year. Because of this, he is a GST registrant (Manitoba does not participate in the HST program). His work is sent to the Toronto office of the publisher and cheques for his fees are issued from that office.
>
> **ANALYSIS** As the services are "used" in Ontario, the editor would bill HST at 13 percent.

## Applying The Rate

### Consideration Received

21-67. To determine the amount of GST or HST to be charged, the appropriate rate is applied to the amount of consideration received in return for the delivery of taxable supplies. In most cases, the consideration will be monetary and the amount to be recorded is obvious. If the consideration is non-monetary (e.g., a barter transaction), GST/HST is still applicable. In this case, however, an estimate will have to be made of the fair market value of the consideration received.

21-68. The amount of consideration to be used for purposes of calculating the GST/HST includes all non-refundable federal taxes, provincial taxes other than retail sales taxes, and duties and fees that are imposed on either the supplier or recipient in respect of the property or services supplied.

### Effect Of Trade-Ins

21-69. Where a good owned by an entity that is not registered for GST/HST is traded in towards the supply of a new good, GST/HST is only required to be levied on the net amount after the trade-in. These types of transactions are most often seen in the automotive business, where used cars are traded in when purchasing a newer automobile.

> **EXAMPLE** John Bailey, a resident of Alberta, is acquiring a new Volvo at a cost of $52,000. He is given a trade-in allowance of $21,000 on his old vehicle.
>
> **ANALYSIS** The applicable GST would be $1,550 [(5%)($52,000 - $21,000)].

# Collection And Remittance Of GST/HST

21-70. As you are aware, income taxes are collected from the same person on whom the tax is assessed. An individual will calculate his Tax Payable by applying the appropriate rates to his Taxable Income. This same individual is also responsible for the payment of this tax.

21-71. The situation is different with GST/HST. We noted previously that the basic GST/HST charging provision assesses the tax on the recipient of the taxable supply. However, the basic responsibility for the collection and remittance of the GST/HST falls on the provider of the taxable supply. This approach is implemented by requiring providers of taxable supplies to become GST registrants. Registration requirements are discussed in the section which follows.

21-72. As an example of this process, consider a situation where a retailer is featuring a GST holiday.

**EXAMPLE** An Alberta store advertises a GST holiday, indicating that merchandise can be purchased without paying the GST. A customer pays the marked price of $2,500 for a new freezer and no additional amount is added for GST.

**ANALYSIS** From the customer's point of view, he has not paid the GST. However, the store will have to treat the $2,500 as a GST inclusive amount. For GST purposes, the $2,500 received was made up of $2,380.95 ($2,500 ÷ 105%) for the freezer and GST of $119.05 [(5%)($2,380.95)]. The store must include the GST received of $119.05 in its GST return.

21-73. You should note that, while the vendor is responsible for the collection of GST/HST, this does not relieve the purchaser of the responsibility for payment. If a vendor fails to collect the tax, the CRA can assess the purchaser for the unremitted amount. This, however, would be a fairly rare procedure.

# Registration

## Meaning Of Person For GST/HST

21-74. For GST/HST purposes, the *Excise Tax Act* defines a person as follows:

**ETA 123(1) Person** means an individual, a partnership, a corporation, the estate of a deceased individual, a trust, or a body that is a society, union, club, association, commission or other organization of any kind.

21-75. Note that this definition is broader than the one that is included in the *Income Tax Act*. For income tax purposes, the term "person" includes only individuals, corporations, and trusts. Of importance here is the fact that the GST definition includes unincorporated businesses, partnerships, and not-for profit organizations.

## Who Must Register

### *Basic Requirement*

21-76. As we have previously indicated, the collection of GST/HST is administered through a registration requirement for providers of taxable supplies. This requirement is as follows:

**ETA 240(1)** Every person who makes a taxable supply in Canada in the course of a commercial activity engaged in by the person in Canada is required to be registered for the purposes of this Part, except where

(a) the person is a small supplier;
(b) the only commercial activity of the person is the making of supplies of real property by way of sale otherwise than in the course of a business; or
(c) the person is a non-resident person who does not carry on any business in Canada.

21-77. This requirement contains several terms and concepts that require further elaboration. We will deal with these items in the section which follows.

### *Commercial Activity - Inclusions*

21-78. ETA 240(1) requires registration only when "taxable supplies" are delivered in the course of "commercial activity". We have previously covered both of these definitions in our discussion of taxable supplies beginning in Paragraph 21-47.

21-79. In simple terms, any person who provides non-exempt goods or services, in the course of a business activity, is required to register for the GST/HST unless that person is covered by one of the exceptions listed in ETA 240(1).

### *Commercial Activity - Exclusions*

21-80. There are several activities that might be considered commercial activity in a non-GST context that are excluded in the preceding definitions. For example, the following are not considered commercial activities for GST purposes:

- business activity that is carried on by an individual without a reasonable expectation of profit
- the provision of exempt supplies (e.g., child care services)
- the provision of employment services

21-81. Registration for GST/HST is not required or permitted if a person is involved solely in an excluded activity.

## Exemption For Non-Residents

21-82. The ETA 240(1) requirement to register, in general excludes non-residents. The major exception to this would be when a non-resident person carries on business in Canada. This exception would apply, without regard to whether the business is carried on through a permanent establishment. An additional exception could arise in situations where a non-resident has registered for GST/HST on a voluntary basis.

21-83. In general, resident is defined for GST/HST purposes in the same manner that it is defined for income tax purposes. We would refer you to Chapter 1 for a discussion of the issues associated with residence determination.

## Exemption For Small Suppliers

### *Last Four Calendar Quarters Test (Cumulative)*

21-84. The ETA 240(1) registration requirement indicates that it is not applicable to "small suppliers". The idea here is that a small supplier is a person whose delivery of taxable supplies, including those of associated businesses, is less than $30,000 per year. This provision is intended to provide compliance relief for the operators of very small businesses.

21-85. The basic test for qualification as a small supplier is based on calendar year quarters (i.e., January to March, April to June, July to September, and October to December). Under this test, an entity qualifies as a small supplier in the current quarter and the month following the current quarter if the entity and its associated entities did not have cumulative taxable supplies exceeding $30,000 during the four calendar quarters preceding the current quarter.

21-86. If taxable supplies accumulate to $30,000 in any period consisting of two to four quarters (they do not have to be in the same calendar year), the entity ceases to be a small supplier at the end of the month following the quarter in which the $30,000 limit was exceeded. The deemed date of registration would be the day the first supply (sale) was made after ceasing to be a small supplier. The supplier must formally register within 29 days from the deemed registration day.

**EXAMPLE** Supplier A opened for business on January 1, 2019, and earned the following revenues from taxable supplies during the year:

| Quarter | Months | Taxable Supplies |
|---|---|---|
| One | January to March | $ 7,000 |
| Two | April to June | 8,000 |
| Three | July to September | 20,000 |
| Four | October to December | 9,000 |
| Total | | $44,000 |

**ANALYSIS** Supplier A's revenues accumulate to more than $30,000 in the third quarter of 2019 ($7,000 + $8,000 + $20,000 = $35,000). This means that Supplier A is required to collect GST/HST starting on November 1, 2019, which is one month after the end of the July to September quarter. The deemed registration day is the day of the first sale on or after November 1, 2019. Formal registration is required within 29 days of the deemed registration day.

### Calendar Quarter Test (> $30,000 In Single Quarter)

21-87. An alternative to the "last four calendar quarters" test is the “calendar quarter test”, where the $30,000 threshold is exceeded in a single calendar quarter. When a sale results in the $30,000 threshold being exceeded in a single quarter, the person is immediately deemed a registrant and must collect GST/HST on the supply (sale) that caused the limit to be exceeded, even though they are not yet registered. The supplier must formally register within 29 days from the deemed registration day.

**EXAMPLE** Supplier B started in business on January 1, 2019. The business is an art gallery and Supplier B had only two sales in 2019, one for $39,000 on May 15 and the other for $5,000 on August 28.

| Quarter | Months | Taxable Supplies |
|---|---|---|
| One | January to March | Nil |
| Two | April to June (May 15) | $39,000 |
| Three | July to September (August 28) | 5,000 |
| Four | October to December | Nil |
| Total | | $44,000 |

**ANALYSIS** Supplier B would be deemed a registrant as of the May 15 sale, reflecting the fact that this single sale pushes the sales for that quarter past the $30,000 threshold amount. Starting with that sale, GST/HST should be collected on all taxable supplies made. While Supplier B does not have to register until 29 days after the May 15th sale, the collection of GST/HST is required starting with that sale.

21-88. In reviewing the two preceding examples, note that Supplier A and Supplier B each earned taxable revenue of $44,000 in the four calendar quarters for 2019. Supplier B, however, exceeded the $30,000 threshold in Quarter Two. This results in Supplier B being deemed to be registered starting with the May 15 transaction. In contrast, Supplier A will not have to start collecting GST/HST until November 1, 2019 using the last four calendar quarters test.

## Exercise Twenty-One - 2

**Subject:** Requirement To Register

Ms. Sharon Salome and Mr. Rock Laughton begin separate businesses on April 1, 2019. The quarterly sales of taxable items for both businesses are as follows:

| Calendar Quarter | Sharon Salome | Rock Laughton |
|---|---|---|
| April To June, 2019 | $10,000 | $ 8,000 |
| July To September, 2019 | 4,000 | 13,000 |
| October To December, 2019 | 35,000 | 4,000 |
| January To March, 2020 | 40,000 | 17,000 |

At what point in time will Ms. Salome and Mr. Laughton have to begin collecting GST? At what point will they be required to register?

**SOLUTION available in print and online Study Guide.**

### Voluntary Registration

21-89. The small supplier exemption can represent an advantage to persons with limited commercial activity whose clients are consumers who cannot claim input tax credits. If the vendor is not registered, the goods or services can legally be sold without charging GST/HST which would result in savings for consumers that could be substantial.

21-90. There is, however, a disadvantage to this exemption. If a person does not register, they cannot receive input tax credits for GST/HST paid. They are effectively treated as the final consumer. This means that the business must either absorb the GST/HST paid on its costs or, alternatively, pass the GST/HST paid on purchases and expenses on to its customers in the form of higher prices.

21-91. Given this problem, voluntary registration is an alternative. Any person engaged in commercial activity in Canada can apply to be registered, even if taxable sales are less than the $30,000 small supplier threshold. In making a decision as to whether to use this option, the person must consider the value of the input tax credits that will be available. However, the person must also consider whether charging GST/HST will reduce the demand for his product or service, especially if some of the competition doesn't charge GST/HST.

### *Registrants Ineligible For The Small Supplier Exemption*

21-92. ETA 240 contains two other subsections which effectively prohibit the use of the small supplier exemption for certain types of suppliers. ETA 240(1.1) indicates that suppliers of taxi services must register, even if their revenues are less than $30,000 per year. By deeming the provision of commercial ride-sharing services (e.g., Uber) a taxi business, all of those drivers are required to register as well. ETA 240(2) requires registration of any non-resident who enters Canada for the purpose of making taxable supplies of admissions in respect of a place of amusement, a seminar, an activity or an event.

**We suggest you work Self Study Problem Twenty-One-2 at this point.**

# Input Tax Credits

## Vendors Of Fully Taxable And Zero-Rated Supplies

### *General Rules*

21-93. A GST registrant must collect and remit GST/HST on sales of fully taxable supplies. In the process of supplying these goods and services, the registrant will incur costs, some of which are likely to include GST/HST. To the extent that these costs have been incurred in commercial activity (i.e., supplying either fully taxable or zero-rated goods and services), the registrant can claim a refund of the GST/HST that has been included in these costs.

21-94. The refunds that are available to the registrant are referred to as input tax credits. As was the case with some credits against income tax payable, input tax credits can be thought of as refundable. That is, if the available input tax credits for the period exceed the GST/HST collections for the period, the registrant can claim a GST/HST refund.

21-95. As will be discussed in the sections which follow, the rules for claiming input tax credits vary, depending on whether the GST/HST was paid on current expenditures (e.g., purchases of merchandise inventories) or, alternatively, capital expenditures (e.g., buildings or equipment). In addition, the rules also vary with the type of capital expenditure on which the GST/HST was paid.

21-96. It is important to note that, in claiming input tax credits there is no matching of costs and revenues. Input tax credits on inventory purchases become available at the time of purchase, not when the goods are sold and charged to income for accounting purposes. Input tax credits on capital expenditures become available when the asset is acquired, not over the useful life of the asset.

### *Current Expenditures*

21-97. With respect to current expenditures, if all, or substantially all (generally understood in tax work to mean 90 percent or more), of a current expenditure is related to commercial activity, then all of the GST/HST that was paid can be claimed as an input tax credit. In contrast, if 10 percent or less of an expenditure is related to commercial activity, no input tax credit can be claimed. If the percentage of the current expenditure used for commercial activity is between 10 and 90 percent, the input tax credit available is calculated by multiplying the total GST/HST paid by the percentage of commercial activity usage.

## Capital Expenditures

21-98. In line with the basic idea that input tax credits are not matched against amounts of GST/HST collected on sales, the GST/HST paid on purchases of capital assets used in commercial activities is eligible for treatment as an input tax credit at the time of purchase, regardless of when the purchases are paid for, or how they are amortized.

21-99. In general, capital property for GST/HST purposes has the same meaning that is used for income tax purposes. However, for GST/HST purposes it can either be capital real property or capital personal property. In situations where a capital asset is used only partially for commercial activity, the approach used to calculate the available input tax credits will depend on the type of capital asset involved:

> **Capital Real Property (Land And Buildings)** For this type of property, the input tax credit available is in proportion to the extent to which the property is used in commercial activities. That is, if the building is used 35 percent for commercial activities, the input tax credit will be equal to 35 percent of the GST/HST paid on its acquisition. In other words, input tax credits on real property are available on a pro rata basis, with the available portion based on usage in commercial activities.
>
> As is the case with current expenditures, if commercial usage is 10 percent or less, the purchaser cannot claim any input tax credit. Alternatively, if the usage is 90 percent or more, 100 percent of the GST/HST paid can be claimed as an input tax credit.
>
> **Capital Personal Property (Capital Property Other Than Real Property)** In order for the input tax credits to be available on capital personal property, the assets must be used "primarily" in commercial activities. In tax work, "primarily" is generally understood to be more than 50 percent. If commercial usage is 50 percent or less, none of the GST/HST paid on the capital personal property's acquisition can be claimed as an input tax credit. If commercial usage is more than 50 percent, the registrant is eligible for an input tax credit equal to 100 percent of the GST/HST paid.

## Restrictions On Claiming Input Tax Credits

21-100. As noted in previous Chapters of this text, income tax legislation restricts the deductibility of certain types of business costs. For many of these items, there is a corresponding restriction on the ability of the business to claim input tax credits for GST/HST purposes. Some of the more common restrictions are as follows:

> **Passenger Vehicles** No input tax credits are available for GST/HST paid on the portion of the cost or lease payment of a passenger vehicle that is in excess of the deduction limits. For 2019, these limits are $30,000 cost and $800 monthly lease payments, excluding GST/HST and PST. Also, if the vehicle is owned by a registrant who is an individual or a partnership and the vehicle is used partly for business (less than 90 percent) and partly for personal use, the input tax credit is prorated based on the annual CCA claimed.
>
> **Club Memberships** No input tax credit is allowed for GST/HST paid on membership fees or dues in any club whose main purpose is to provide dining, recreational, or sporting facilities.
>
> **Provision Of Recreational Facilities** No input tax credits are available for the GST/HST costs of providing certain types of recreational facilities to employees, owners, or related parties.
>
> **Business Meals And Entertainment** The recovery of GST/HST on deductible meals and entertainment expenses is limited to 50 percent of the amounts paid.
>
> **Personal Or Living Expenses** Input tax credits cannot be claimed on costs associated with the personal or living expenses of any employee, owner, or related individual. An exception is available when GST/HST is collected on the provision of the item to the employee, owner, or related individual.

**Figure 21 - 3**
**Maximum Input Tax Credits**

| Taxable Purchase | Percentage Used In Commercial Activities = X% | Input Tax Credit |
|---|---|---|
| Current Expenditures* | X% ≤ 10% | Nil |
| and Capital Real Property | 10% < X% < 90% | X% |
| | X% ≥ 90% | 100% |
| Capital Personal Property | X% ≤ 50% | Nil |
| (Excluding Passenger Vehicles*) | X% > 50% | 100% |

*Special rules apply to certain items. See Paragraph 21-100.

**Reasonableness** Both the nature and value of a purchase must be reasonable in relation to the commercial activities of the registrant before an input tax credit can be claimed. This is similar to the reasonableness test that is found in the *Income Tax Act*.

21-101. Restrictions also apply to the time allowed for claiming input tax credits. For large businesses, whose sales are less than 90 percent taxable but in excess of $6 million, and listed financial institutions, the time limit is generally 2 years from the date the input tax credit was first available. For all other registrants the time limit is 4 years.

### Summary Of Rules

21-102. The rules for apportioning the maximum available input tax credits on purchases are summarized in Figure 21-3.

## Vendors Of Exempt Supplies

21-103. Vendors of exempt supplies cannot claim any GST/HST paid on purchases that relate to exempt supplies. In some situations, vendors are involved in making fully taxable or zero-rated supplies, as well as exempt supplies. Since these businesses can only recover GST/HST paid on their fully taxable or zero-rated activities, they must apportion their input tax credits on a "reasonable" basis. This applies to both current and capital expenditures that cannot be directly identified with particular exempt or taxable activities.

## Accounting vs. Income Tax vs. GST/HST

### Differences

21-104. The concept of matching is integral to the determination of business income for both accounting and income tax purposes. For GST/HST purposes, the matching concept is not relevant. GST/HST is collected when taxable supplies are provided and input tax credits are refunded when the inputs for taxable supplies are purchased. No attempt is made to match the input tax credits claimed with sales of the related taxable supplies.

21-105. Other significant differences between accounting, income tax and GST/HST procedures are as follows:

- Most accounting and income tax allocations, for example amortization or CCA, are irrelevant for GST/HST purposes. GST/HST paid on capital expenditures that are eligible for input tax credits can generally be claimed in the period in which the expenditure is made. (Differences between accounting income and income for tax purposes were discussed in Chapter 6 and would also be applicable here.)
- Many deductible expenses for income tax purposes do not affect the GST/HST payable or receivable. For example, GST/HST does not apply to employee wages, interest, property taxes, and educational services. While such costs are usually fully deductible in the calculation of Net Income For Tax Purposes, they do not require the payment of GST/HST and, as a consequence, do not generate input tax credits.

### Similarities

21-106. In contrast to these differences, there are some features that are common to GST/HST and income tax calculations. For example, GST/HST is normally collected and revenue is recognized for income tax purposes when an invoice is issued for the provision of goods or services. When the invoice is paid is not a relevant consideration for either income tax or GST/HST purposes.

21-107. Similarly, if an account receivable becomes uncollectible, an adjustment is required for both income tax and GST/HST purposes. Also, as we have noted, some of the restrictions that apply in the deductibility of certain expenses for income tax purposes (e.g., 50 percent of business meals and entertainment and certain costs of owning or leasing automobiles) are also contained in the GST/HST legislation.

### Financial Statement Presentation

21-108. This issue is covered in IAS No. 18, *Revenue*. This international accounting standard indicates that taxes that are to be refunded should not be included in reported revenues. There is no corresponding statement with respect to expenses. However, it would be logical to assume that any GST/HST paid that is eligible for an input tax credit would not be included in the reported expense. Note, however, that even though the revenues and expenses are reported net of GST/HST, the amounts due to and recoverable from the government must be included in the receivables and payables of the enterprise.

## Example One - Fully Taxable And Zero-Rated Supplies

21-109. In this example, we will assume that the company sells only fully taxable and zero-rated supplies.

**EXAMPLE** Marson Ltd. is located in the province of Alberta which does not have a provincial sales tax and does not participate in the HST system. In the following Income Statement of Marson Ltd. for the year ending December 31, 2019, all of the items are recorded net of any GST collected or paid.

| | |
|---|---|
| Sales | $9,500,000 |
| Expenses: | |
| Cost Of Goods Sold | ($6,500,000) |
| Amortization Expense | ( 900,000) |
| Salaries And Wages | ( 1,500,000) |
| Other Expenses | ( 200,000) |
| Total Expenses Excluding GST And Income Taxes | ($9,100,000) |
| Net Income Before GST And Income Taxes | $ 400,000 |

**Other Information:**

1. Of the total Sales, $6,800,000 were fully taxable supplies. The remaining $2,700,000 ($9,500,000 - $6,800,000) were zero-rated.
2. Purchases of merchandise exceeded the Cost Of Goods Sold by $2,200,000, net of GST. All of the merchandise sold and purchased involved fully taxable supplies.
3. Of the Other Expenses, 80 percent related to fully taxable supplies, while the remaining 20 percent related to zero-rated supplies.
4. During 2019, capital expenditures totaled $7,500,000, net of GST, and the amounts have not been paid. These consisted of $5,000,000 for an office building and $2,500,000 for furniture and fixtures. The office building was used 60 percent for fully taxable supplies and 40 percent for zero-rated supplies. The furniture and fixtures were used 55 percent for fully taxable supplies and 45 percent for zero-rated supplies.

**ANALYSIS** Based on this information Marson Ltd. is eligible for a GST refund calculated as follows:

| | |
|---|---|
| GST Collected [(5%)($6,800,000)] | $340,000 |
| Input Tax Credits: | |
| Purchases [(5%)($6,500,000 + $2,200,000)] | ( 435,000) |
| Amortization Expense | Nil |
| Salaries And Wages | Nil |
| Other Expenses [(5%)(80% + 20%)($200,000)] | ( 10,000) |
| Building [(5%)(60% + 40%)($5,000,000)] | ( 250,000) |
| Furniture And Fixtures [(5%)(55% + 45%)($2,500,000)] | ( 125,000) |
| GST Payable (Refund) - With Zero-Rated Supplies | ($480,000) |

21-110. You will note that, while Marson Ltd. is showing a positive Net Income for accounting purposes, the Company is eligible for a GST refund. This example clearly illustrates the fact that GST reporting is not based on the matching principle. The input tax credits are available on the entire amount of capital expenditures, without regard to whether they have been paid for or amortized for accounting purposes. In addition, input tax credits are available on all of the inventory purchases, without regard to whether the merchandise has been sold.

## Example Two - Fully Taxable And GST Exempt Supplies

21-111. In this example, we have revised the Marson Ltd. example so that the Company sells fully taxable and GST exempt supplies. The revised information is repeated here for your convenience.

**EXAMPLE** Marson Ltd. is located in the province of Alberta which does not have a provincial sales tax and does not participate in the HST system. In the following Income Statement of Marson Ltd. for the year ending December 31, 2019, all of the items are recorded net of any GST collected or paid.

| | |
|---|---|
| Sales | $9,500,000 |
| Expenses: | |
| Cost Of Goods Sold | ($6,500,000) |
| Amortization Expense | ( 900,000) |
| Salaries And Wages | ( 1,500,000) |
| Other Expenses | ( 200,000) |
| Total Expenses Excluding GST And Income Taxes | ($9,100,000) |
| Net Income Before GST And Income Taxes | $ 400,000 |

**Other Information:**

1. Of the total Sales, $6,800,000 were fully taxable supplies. The remaining $2,700,000 ($9,500,000 - $6,800,000) were GST exempt supplies.
2. Purchases of merchandise exceeded the Cost Of Goods Sold by $2,200,000, net of GST. All of the merchandise sold and purchased involved fully taxable supplies.
3. Of the Other Expenses, 80 percent related to fully taxable supplies, while the remaining 20 percent related to GST exempt supplies.
4. During 2019, capital expenditures totaled $7,500,000, net of GST, and the amounts have not been paid. These consisted of $5,000,000 for an office building and $2,500,000 for furniture and fixtures. The office building was used 60 percent for fully taxable supplies and 40 percent for GST exempt supplies. The furniture and fixtures were used 55 percent for fully taxable supplies and 45 percent for GST exempt supplies.

**ANALYSIS** Based on this revised information, the GST refund for Marson Ltd. would be calculated as follows:

| | |
|---|---|
| GST Collected [(5%)($6,800,000)] | $340,000 |
| Input Tax Credits: | |
| Purchases [(5%)($6,500,000 + $2,200,000)] | ( 435,000) |
| Amortization Expense | Nil |
| Salaries And Wages | Nil |
| Other Expenses [(5%)(80% + 0%)($200,000)] | ( 8,000) |
| Building [(5%)(60% + 0%)($5,000,000)] | ( 150,000) |
| Furniture And Fixtures [(5%)(100%)($2,500,000)] | ( 125,000) |
| GST Payable (Refund) - With GST Exempt Supplies | ($378,000) |

21-112. In this example, where some of the costs relate to the provision of exempt supplies, only 80 percent of the GST on Other Expenses is eligible for an input tax credit. Similarly, only 60 percent of the GST paid on the Building is eligible. However, because the Furniture And Fixtures were capital personal property and used primarily (more than 50 percent) for commercial activity, the full amount of the GST paid is eligible for an input tax credit, even though 45 percent of their usage was for the provision of GST exempt supplies.

## Exercise Twenty-One - 3

**Subject:** HST Calculation

All of the operations of March Ltd. are located in Ontario where the relevant HST rate is 13 percent. During the current quarter, March Ltd. has taxable sales of $1,223,000 before HST. Its cost of sales for the period was $843,000 before HST and its merchandise inventories increased by $126,000, again before HST. Salaries and wages for the period totalled $87,000, interest expense was $16,000, and amortization expense was $93,000. No capital expenditures were made during the period.

Determine the net HST payable or refund for the quarter.

## Exercise Twenty-One - 4

**Subject:** HST Calculation

Ms. Marsha Stone lives and works in Nova Scotia where the relevant HST rate is 15 percent. During the current year, she records headhunting service revenue of $224,000.

Rent for this period on her office premises totals $25,800 and she pays a clerical assistant an annual salary of $18,500. Her capital expenditures during the period are for new office furniture with a cost of $36,000 and computer hardware and software for $20,000. All amounts are before the addition of HST and the assets are used 100 percent for the provision of taxable supplies. She files her HST return on an annual basis.

Determine the net HST payable or refund for the year.

**SOLUTIONS available in print and online Study Guide.**

## Exercise Twenty-One - 5

**Subject:** Input Tax Credits On Capital Expenditures

Modam Ltd. is located in Alberta, a province which does not participate in the HST program and has no provincial sales tax. All of its operations are in that province. During its current quarter, Modam Ltd. purchases an office building and land for a total of $1,200,000 before GST. The Company spends an additional $226,000 (before GST) on office equipment. The building will be used 40 percent for taxable supplies and 60 percent for exempt supplies. The office equipment is to be allocated in the same ratio. For accounting purposes, the building will be amortized over 40 years, while the office equipment will be written off over 4 years. Determine the input tax credits that Modam Ltd. can claim as a result of these capital expenditures.

**SOLUTION available in print and online Study Guide.**

**We suggest you work Self Study Problems Twenty-One-3 and 4 at this point.**

# Relief For Small Businesses

## Quick Method Of Accounting

### *General Rules*

21-113. Eligible businesses, defined as businesses with annual GST/HST included taxable sales, including those of associated businesses, of $400,000 or less during the year, can elect to use the Quick Method of determining the net GST/HST remittance. Both fully taxable and zero-rated supplies are included in calculating the $400,000 threshold, while exempt supplies, supplies made outside of Canada, sales of capital real and personal property, and provincial sales taxes are excluded. In addition, businesses involved in legal, accounting and financial consulting services are not eligible for the Quick Method.

21-114. If the Quick Method election is filed, the registrant charges GST or HST at the normal rate on taxable sales. The major advantage of this method is that the business is not required to keep detailed records of current expenditures that are eligible for input tax credits. Note, however, that when this method is used for current expenditures, the registrant can still claim input tax credits on capital expenditures. This means that there will continue to be a need to track the input tax credits on specific capital expenditures.

21-115. In the absence of detailed records on current expenditures eligible for input tax credits, a specified percentage, the remittance rate, is applied to the GST/HST inclusive total of fully taxable sales to determine the amount of GST/HST to be remitted.

21-116. Note that the remittance rate is not an alternative GST/HST rate. It is based on an assumed relationship between revenues subject to GST/HST and costs on which input tax credits are available. For example, the Quick Method remittance rate for service providers in Alberta is 3.6 percent. The following example illustrates (without going into the algebra that is involved) that this rate is based on the assumption that, for service providers subject only to GST, eligible costs are equal to 24.4 percent of fully taxable sales.

**EXAMPLE** An Alberta GST registrant who is providing fully taxable services has taxable revenues of $50,000 in its second, third and fourth quarters. Its eligible current expenditures for these quarters are $5,000 (less than 24.4% of revenues) for quarter 2, $12,200 (equal to 24.4% of revenues) for quarter 3, and $30,000 (more than 24.4% of revenues) for quarter 4.

**ANALYSIS** The GST Payable calculated under the Quick Method is $1,890 [(3.6%)(105%)($50,000)]. The Quick Method results are the same for each quarter as the calculation is based on revenues and is not affected by the amount of current expenditures. GST Payable under the regular and Quick Method would be as follows:

| | Quarter 2 | Quarter 3 | Quarter 4 |
|---|---|---|---|
| GST On Revenues [(5%)($50,000)] | $2,500 | $2,500 | $2,500 |
| Input Tax Credits On Costs At 5% | ( 250) | ( 610) | ( 1,500) |
| GST Payable - Regular Method | $2,250 | $1,890 | $1,000 |
| GST Payable - Quick Method (Note) | ( 1,890) | ( 1,890) | ( 1,890) |
| Advantage (Disadvantage) Quick Method | $ 360 | Nil | ($ 890) |

**Note** The 1 percent credit described in Paragraph 21-121 would be claimed in the first quarter. Note that, in Quarter 3, when current expenditures are equal to the assumed 24.4 percent of fully taxable sales, the regular method and the Quick Method produce identical results. In Quarter 2, when current expenditures are below 24.4 percent, the Quick Method results in a lower amount payable. In contrast, in Quarter 4, when current expenditures exceed 24.4 percent, the Quick Method results in a higher amount payable.

More generally, when current expenditures, as a percent of fully taxable sales, are normally less than the percentage assumed in the Quick Method rate, use of the Quick Method is a desirable alternative. In contrast, when such expenditures normally exceed the assumed rate, the use of the Quick Method is not advantageous as it will result in a higher amount payable.

## Quick Method Categories

21-117. Conceptually, an equitable application of the Quick Method would require a large number of different rates in order to reflect the various cost structures that are present in different lines of business. However, this was clearly not a practical alternative, particularly since the goal of the Quick Method was simplification. Given this, the government decided to have rates for only two broad categories.

21-118. The categories to which the two rates are applied can be described as follows:

**Businesses That Resell Goods** These businesses have a lower remittance rate to reflect a higher percentage of eligible costs. In order to use these rates, the cost of goods purchased for resale (GST/HST inclusive) in the previous year must be equal to 40 percent or more of the revenue from sales of taxable supplies for that year (GST/HST inclusive). Examples of types of businesses eligible for this low rate include grocery and convenience stores, hardware stores, gas service stations, antique dealers, and clothing stores.

**Service Providers** These higher rates (double the resellers') apply to service businesses such as consultants (other than financial), hair salons, restaurants, dry cleaners, travel agents, and taxi drivers. Since legal, accounting, and financial consulting businesses are not eligible for the Quick Method, they cannot use these rates.

## Specific Quick Method Remittance Rates

21-119. As noted in the introduction to this Chapter, in addition to the GST rate of 5 percent that is used in provinces that do not participate in the HST program, there are two different HST rates as of January 1, 2019:

- 13 percent in Ontario
- 15 percent in New Brunswick, Newfoundland, Nova Scotia, and Prince Edward Island

21-120. As the Quick Method is designed to approximate the results under the regular method of calculating GST or HST, different Quick Method remittance rates are required in each of these situations. The relevant rates are as shown in Figure 21-4.

**Figure 21 - 4**
**Quick Method Remittance Rates As At January 1, 2019 (Excluding Quebec)**

| GST/HST Rate | Businesses That Purchase Goods For Resale | Service Providers |
|---|---|---|
| GST Only At 5% (B.C., Alberta, Manitoba, and Saskatchewan) | 1.8% | 3.6% |
| HST At 13% (Ontario) | 4.4% | 8.8% |
| HST At 15% (Newfoundland, Nova Scotia, New Brunswick and Prince Edward Island) | 5.0% | 10.0% |

21-121. Two things should be noted about these rates:

1. In the application of all of the rates in Figure 21-4, there is a credit equal to 1 percent of the first $30,000 of GST/HST inclusive sales in the year ($300 maximum).

2. These are the rates that are used by a business in the specified province that has all of its activities in that province. For businesses that deliver supplies in provinces other than their province of residence, calculations can be quite a bit more complicated. The CRA provides detailed information in its guide, "Quick Method Of Accounting For GST/HST" (RC4058).

### Example Of Quick Method

21-122. As an example of the Quick Method, consider a quarterly filing office supply store, located and operating only in Alberta, with annual taxable sales of less than $400,000. Its first quarter taxable sales were $40,000, resulting in GST included sales of $42,000 [(105%)($40,000)]. Purchases of inventory totaled $26,600 before GST. Qualifying capital expenditures during the first quarter were $3,000 before GST. Under the regular method, the first quarter GST payable would be calculated as follows:

| | |
|---|---|
| Sales [(5%)($40,000)] | $2,000 |
| Purchases [(5%)($26,600)] | ( 1,330) |
| Capital Expenditures [(5%)($3,000)] | ( 150) |
| First Quarter GST Payable - Regular Method | $ 520 |

21-123. Alternatively, the first quarter GST payable, as determined by the Quick Method, is calculated as follows:

| | |
|---|---|
| Basic Tax [(1.8%)(105%)($40,000)] | $756 |
| Credit On First $30,000 [(1%)($30,000)] | ( 300) |
| Subtotal | $456 |
| Input Tax Credit On Current Expenditures | Nil |
| Input Tax Credits On Capital Expenditures [(5%)($3,000)] | ( 150) |
| First Quarter GST Payable - Quick Method | $306 |

21-124. The Quick Method can be preferable, even if adequate data is available to make the calculations under the regular method. For example, a freelance writer, operating out of his principal residence, is not likely to have significant expenditures that qualify for input tax credits. In this case, the Quick Method may result in a smaller net GST payment than the regular calculation of actual GST collected, less input tax credits. It will certainly be less time consuming to file his GST return since input tax credit information on non-capital expenditures will not be needed.

## Exercise Twenty-One - 6

**Subject:** Quick Method

Robbins Hardware sells only fully taxable supplies to customers in Alberta which does not participate in the HST program and has no provincial sales tax. During the first quarter of the year, the business has sales of $42,500, before the inclusion of GST. They have taxable purchases totaling $21,000 before GST. They do not make any capital expenditures during the quarter. Using the Quick Method, determine the GST that is payable for the quarter.

## Exercise Twenty-One - 7

**Subject:** Quick Method

Guy's Boots sells only fully taxable shoes and boots to customers in Ontario where the HST rate is 13 percent. During the first quarter of the year, Guy's Boots has sales of $56,100, before HST. Current expenses, all of which were subject to HST, total $23,400 (before HST). Due to a major renovation of the store, Guy's Boots has capital expenditures of $42,000 (before HST). Compare the use of the Quick Method and the regular method for this quarter.

**SOLUTIONS available in print and online Study Guide.**

**We suggest you work Self Study Problems Twenty-One-5 and 6 at this point.**

## Small Suppliers Exemption

21-125. This is covered beginning at Paragraph 21-84 and will not be repeated here.

## Simplified Input Tax Credit Method

21-126. A method for claiming input tax credits and rebates is available to registrants with annual GST/HST taxable sales, including those of associated businesses, of $1,000,000 or less in the preceding year. An additional requirement is that annual GST/HST taxable purchases total no more than $4,000,000.

21-127. Rather than tracking GST/HST paid on each purchase, the simplified method bases input tax credits on the total GST/HST inclusive amounts of fully taxable purchases. This amount would also include any non-refundable provincial sales taxes paid on taxable supplies. Once this total is established, it is multiplied by the following factor:

**Factor** Applicable GST/HST Rate ÷ (100 Plus The Applicable GST/HST Rate)

**Examples** The factor in Alberta would be 5/105. The factor in Ontario would be 13/113.

21-128. The following items are excluded from the base to which the factor is applied:

- Capital expenditures for real property (these are tracked separately for input tax credit purposes).
- Purchases of zero-rated supplies, such as groceries and prescription drugs.
- Purchases of exempt supplies, such as interest payments.
- Purchases made outside Canada, which are not subject to GST/HST.
- Purchases from non-registrants.
- Refundable provincial sales taxes (only in Quebec).
- Expenses not eligible for input tax credits (e.g., 50 percent of the cost of meals and entertainment).

21-129. There is no election required to use this method and it does not affect the calculation of the GST/HST on sales that must be remitted. The following example illustrates this method as applied in the province of New Brunswick.

**EXAMPLE** Garth Steel Ltd. operates solely in New Brunswick and Nova Scotia. Its only activities involve the provision of fully taxable supplies. During the current year, it has current expenditures of $75,000, real property expenditures of $145,000 and expenditures for capital property other than real property of $25,000. All of these figures are before HST which was charged on all of these expenditures. In addition, the Company paid salaries of $200,000.

**ANALYSIS** The Company's input tax credit for the current year would be as follows:

| | |
|---|---|
| HST Included Amounts For Taxable Expenditures Other Than Real Property [(115%)($75,000 + $25,000 + Nil)] | $115,000 |
| Factor (For New Brunswick and Nova Scotia) | 15/115 |
| Input Tax Credit On Taxable Expenditures | $ 15,000 |
| Input Tax Credit On Real Property Expenditure [(15%)($145,000)] | 21,750 |
| Input Tax Credit For The Current Year | $ 36,750 |

21-130. As noted, the simplified method base only includes purchases of fully taxable goods. A further restriction on the amounts claimed is that credits can be claimed only to the extent that the purchases included in the simplified method base are used to provide fully taxable or zero-rated goods and services. Where a supply is used to provide both taxable and exempt goods and services, the input tax credit claim must be pro-rated so that only the portion that applies to taxable goods and services is claimed.

### Exercise Twenty-One - 8

**Subject:** Simplified Input Tax Credit Method

Simplicity Inc. operates in Alberta where there is no provincial sales tax and no participation in the HST program. For the current year, the Company has GST inclusive sales of $315,000. It has GST inclusive purchases of merchandise and other current expenditures of $189,000. Capital expenditures consist of real property (land and a building) costing $150,000 and capital personal property totaling $50,000. These capital expenditure amounts are before the inclusion of GST. Using the simplified method of accounting for input tax credits, determine Simplicity's GST payable or refund for the current year.

**SOLUTION available in print and online Study Guide.**

# GST/HST Procedures And Administration

## GST/HST Returns And Payments

### *Timing Of Liability*

21-131. In general, the supplier becomes responsible for the tax at the earliest of when the invoice for goods or services is issued, when payment is received, and when payment is due under a written agreement. Following this rule, a registrant usually becomes responsible for remitting GST/HST in the reporting period in which a customer is invoiced, even if this is not the same period in which the cash is actually received.

21-132. Similarly, input tax credits for GST/HST payable to suppliers can be claimed in the reporting period invoices are issued, even if the supplier is paid in a later period.

**Figure 21 - 5**
**Assigned And Optional Reporting Periods**

| Threshold Amount Of Annual Taxable Supplies | Assigned Reporting Period | Optional Reporting Period |
|---|---|---|
| $1,500,000 Or Less | Annual | Monthly Or Quarterly |
| More Than $1,500,000 Up To $6,000,000 | Quarterly | Monthly |
| More Than $6,000,000 | Monthly | None |

## Taxation Year For GST/HST Registrants

21-133. Every registrant is required to have a "fiscal year" for GST/HST purposes. Normally, this fiscal year corresponds to the taxation year for income tax purposes. However, if registrants are using a non-calendar year for income tax purposes they have the option of using the calendar year or, alternatively, using their fiscal year for income tax purposes. For example, a company with a fiscal year ending on January 31, 2019 and with a quarterly filing requirement could choose a three month reporting period ending on January 31, 2019, or a three month reporting period ending on March 31, 2019. The GST/HST fiscal year determines the reporting periods and filing deadlines for GST/HST returns.

## Filing Due Date

21-134. All businesses and organizations that are registered to collect GST/HST are required to file a GST/HST return on a periodic basis, even if there is no activity during the relevant period. The CRA's My Business Account service can be used to file GST/HST returns online. Filing frequencies for the remittance of GST/HST are determined by the total annual taxable supplies made by the registrant and its associated entities. The normal periods, along with the options that are available on an elective basis, are shown in Figure 21-5.

21-135. A registrant may elect to have a shorter filing period than the one that is assigned for their amount of taxable supplies. This may be advantageous for registrants who normally receive a GST/HST refund, such as businesses with significant exports or zero-rated sales (e.g., pharmacies and grocery stores). On a practical note, it may be advantageous for some annual filers to choose to file quarterly as it would force the registrant to keep their records more up-to-date. This could help decrease the work and stress that some proprietors and small businesses face when they deal with their year end accounting. As discussed in the next Section, filing quarterly would also eliminate the need to calculate and pay GST instalments.

21-136. For monthly and quarterly filers, GST/HST returns are due one month after the end of the reporting period. In general, for annual filers, GST/HST returns are due three months after the year end. There is an extension to June 15 for annual filers who are individuals with business income and a December 31 fiscal year end. This is the same filing due date applicable to income tax returns for these individuals.

## Payments And Instalments

21-137. In general, payment of amounts owing are due when the GST/HST returns are due. This is one month after the end of the reporting period for monthly and quarterly filers, and three months after the year end for annual filers. For annual filers who are individuals with a June 15 filing due date, the payment due date is April 30. This means the filing due date and payment due date are the same as is applicable to income tax payable for these individuals.

21-138. Instalment payments are not required for monthly or quarterly filers. However, annual filers are required to make quarterly instalments if the GST/HST remitted for the previous fiscal year was $3,000 or more. Each instalment will be one-quarter of the net tax owing from the previous year. These instalments are due one month after the end of each quarter. For example, calendar year filers are required to make instalments by April 30, July

31, October 31, and January 31. For annual filers below the $3,000 threshold, the net tax is due on the GST/HST return filing due date.

### Interest

21-139. If the GST/HST return shows an amount owing and it is not paid by the due date, interest is assessed. Interest is also assessed on late or deficient instalments. The applicable rates are the same as those used for income tax purposes:

- on taxes owed to the government, the rate is the prescribed rate plus 4 percent; and
- on amounts owed to the taxpayer, the rate is the prescribed rate plus 2 percent.

21-140. As is the case with interest on late income tax instalments, interest paid on late GST/HST payments is not deductible.

### Late Filing Penalty

21-141. The GST/HST late filing penalty is equal to one percent of the unpaid amount, plus one-quarter of one percent per month for a maximum of 12 months. Unlike the income tax situation, there is no doubling of this penalty for a second offense.

## Associated Persons

21-142. You may have noticed that there are a number of GST/HST rules that are related to the amount of supplies delivered during the period. In order to prevent the avoidance of these rules (e.g., splitting a business into two parts so that each would qualify for the Quick Method), GST/HST legislation has rules for associated persons.

21-143. Two or more persons are associated for GST/HST purposes where there is substantial common ownership. For example, if one corporation controls another, the two corporations are associated. An association can exist between two or more corporations, between an individual and a corporation, and among an individual, partnership, trust and corporation.

21-144. While associated persons file separate GST/HST returns, they must combine their total taxable sales of goods and services in certain situations, such as when determining:

- whether they qualify for the small supplier's exemption,
- whether they are eligible for the Quick Method of accounting,
- whether they are eligible for the simplified method of calculating input tax credits,
- the required filing frequency of their returns (i.e., monthly, quarterly or annual).

## Refunds And Rebates

21-145. In a period during which input tax credits exceed GST/HST collections, a refund may be claimed in the GST/HST return for that period. Provided all required returns have been filed and are up to date, interest on unpaid refunds starts accruing 30 days after the later of the last day of the reporting period and the day after the registrant's return is filed.

21-146. The *Excise Tax Act* also provides for a number of rebates of the GST/HST paid by consumers under certain circumstances. For example, if a GST/HST amount is paid in error, or by a foreign diplomat, a rebate of the GST/HST may be claimed on a General Rebate Application Form. Our coverage of the GST/HST rebate for new housing begins in Paragraph 21-167.

## Books And Records

21-147. For GST/HST purposes, every registrant must keep adequate books and records. This requirement is found in ETA 286(1). Such records must be maintained at the registrant's place of business or at the individual's residence in Canada.

21-148. All books and records, along with the accounts and vouchers necessary to verify them, must be kept for a period of six years from the end of the last taxation year to which they relate. This is the same record retention limit that is applicable for income tax purposes.

# Appeals

## *Informal Procedures*

21-149. As is the case with income tax disputes, the usual first step in disputing an assessment or reassessment is to contact the CRA. In many cases the proposed change or error can be corrected or resolved through telephone contact or by letter. In order to authorize a person or firm to represent a GST registrant in such disputes, a consent form must be signed and filed with the CRA.

## *Notice Of Objection*

21-150. If the informal contact with the CRA does not resolve the issue in question, the taxpayer should file a notice of objection. For GST/HST purposes, a formal notice of objection procedure is required.

21-151. In GST/HST disputes, the notice of objection must be filed within 90 days of the date on the notice of assessment. Unlike the situation with income tax objections, there is no general extension of this time period for GST registrants who are individuals, nor is there any extension for individual GST registrants in the year of their death. Failure to meet the 90 day deadline may result in the taxpayer losing all rights to pursue the matter in question.

21-152. On receiving the notice of objection, the Minister is required to reply to the GST registrant:

- vacating the assessment;
- confirming the assessment (refusing to change);
- varying the amount of the assessment; or
- reassessing.

21-153. Unresolved objections will be subject to review by the Assistant Director of Appeals in each Tax Services Office. These reviewers are instructed to operate independently of the assessing divisions and should provide an unbiased second opinion. If the matter remains unresolved after this review, the taxpayer must either accept the Minister's assessment or, alternatively, continue to pursue the matter to a higher level of appeal. The taxpayer has the right to bypass this notice of objection procedure and appeal directly to a higher level.

21-154. As noted in Chapter 2, in income tax disputes, the Minister cannot institute collection procedures until after the notice of objection period has expired. When dealing with GST/HST disputes, collection procedures are not delayed by the objection process. This more aggressive approach is allowed by GST/HST legislation and probably reflects the fact that the government considers GST/HST balances assessed as amounts collected in trust by the registrant on behalf of the government.

## *Tax Court Of Canada, Federal Court Of Appeal, And The Supreme Court Of Canada*

21-155. Procedures for handling GST/HST disputes in these courts are basically the same as the procedures for handling income tax disputes. These procedures are described in Chapter 2 and the description will not be repeated here.

# General Anti-Avoidance Rule

21-156. The GST/HST legislation includes a general anti-avoidance rule (GAAR). This rule is found under Section 274 of the *Excise Tax Act* and is very similar to the GAAR found in the *Income Tax Act*.

21-157. While the GST/HST GAAR is intended to prevent abusive tax avoidance transactions, it is not intended to interfere with legitimate commercial transactions. If a transaction is considered by the CRA to be an avoidance transaction, the tax consequences of the transaction may be adjusted. This could involve denying an input tax credit, allocating an input tax credit to another person, or recharacterizing a payment. But, as with the application of the income tax GAAR, it does not apply if a transaction is undertaken primarily for bona fide purposes other than to obtain a GST/HST benefit.

# Employee And Partner GST/HST Rebate

## General Concept

21-158. Many of the expenses employees can deduct against employment income include a GST/HST component. If the individual was a GST registrant earning business income, these GST/HST payments would generate input tax credits. However, employment is not considered to be a commercial activity and, as a consequence, employees who have no separate commercial activity cannot be registrants. This means that they will not be able to use the usual input tax credit procedure to obtain a refund of GST/HST amounts paid with respect to their employment expenses. A similar analysis applies to partners who have partnership related expenses that are not included in partnership net income or loss.

21-159. The Employee and Partner GST/HST Rebate allows employees and partners to recover the GST/HST paid on their employment or partnership related expenditures, including vehicles and musical instruments, in a way that is similar to the input tax credits that they could have claimed if they were GST registrants. Form GST370 is used to claim the GST/HST rebate and is filed with the employee or partner's income tax return.

21-160. To qualify for this rebate, the individual must be either an employee of a GST registrant, or a member of a partnership that is a GST registrant. Employees of financial institutions are not eligible for the rebate. However, employees of charities, not-for-profit organizations, universities, school boards, and municipalities are eligible as long as the organizations that they work for are registered. In addition, employees of provincial governments, Crown corporations, and the federal government qualify for the rebate. To claim the rebate, the individual must have unreimbursed expenses on which GST/HST was paid that are deductible against employment or partnership income.

## Calculating The GST/HST Rebate Amount

21-161. The GST/HST rebate is based on the GST/HST amounts included in those costs that can be deducted in the determination of employment income. In terms of calculations, this is accomplished by multiplying the GST/HST and non-refundable PST included in the cost by a fraction in which the GST/HST rate is the numerator and 100 plus the GST/HST rate is the denominator.

**EXAMPLE** Marcia Valentino is employed in British Columbia. She has deductible cell phone expenses of $2,000. She paid $100 in GST (5%) and $140 in non-refundable PST (7%). She deducted $2,240 in her calculation of employment income.

**ANALYSIS** Ms. Valentino's rebate would be $107 [($2,240)(5/105)]. This is more than the $100 in GST she paid as the rebate base includes the non-refundable PST.

21-162. Eligible expenses exclude expenses for which a non-taxable allowance was received, zero-rated and exempt supplies, supplies acquired outside of Canada, supplies acquired from non-registrants, and expenses incurred when the employer was a non-registrant.

## Example

21-163. The following simple example illustrates the calculation of the GST/HST rebate for an employee:

**EXAMPLE** Tanya Kucharik is a very successful sales manager employed in Ontario. She used her car 93 percent and her cell phone 80 percent for employment related purposes during 2019. She claimed the following expenses on Form T777, Statement of Employment Expenses, for 2019 (all HST taxable amounts include applicable HST at 13 percent):

| | |
|---|---|
| Cell phone charges (80%) | $ 1,200 |
| Gas, maintenance and car repairs (93%) | 17,500 |
| Insurance on car (93%) | 1,023 |
| Capital cost allowance (CCA) on car (93%) | 3,100 |

The car on which the CCA was deducted was purchased during 2019. She did not own a car prior to this purchase. Note that car insurance is a financial service on which no HST is charged as it is an exempt supply.

**ANALYSIS** On Form GST370, her GST/HST rebate would be as follows:

| | Eligible Expenses | HST Rebate (13/113) |
|---|---|---|
| Eligible Expenses Other Than CCA ($1,200 + $17,500) | $18,700 | $2,151 |
| Eligible CCA On Which HST Was Paid | 3,100 | 357 |
| Totals | $21,800 | $2,508 |

21-164. The employment related expenses that are listed in this calculation will be deducted in Ms. Kucharik's income tax return for 2019. Under normal circumstances, the HST rebate for 2019 expenses will be claimed in Ms. Kucharik's 2019 tax return. As a result, this amount will be received in 2020, either as part of the 2019 refund or as a decrease in the amount owed for 2019.

21-165. As the rebate constitutes a reduction in the incurred costs that were deducted by the employee, an adjustment of the deduction is required for amounts that are received. This is accomplished by including the $2,151 HST rebate on expenses other than CCA in Net Income For Tax Purposes in the year in which it is received (2020 in Ms. Kucharik's case). In similar fashion, the amount of any rebates received that related to CCA ($357) will be deducted from the capital cost of the relevant asset in the year in which it is received (again 2020, in the case of Ms. Kucharik). The GST/HST rebate she received in 2019 that was related to her 2018 income tax return would be added to her 2019 Net Income For Tax Purposes.

21-166. While the rebate is normally claimed in the return in which the expenses are deducted, it can be claimed in any income tax return submitted within four years of the year in which the expenses are claimed.

**We suggest you work Self Study Problem Twenty-One-7 at this point.**

# Residential Property And New Housing Rebate

## General Rules For Residential Property

21-167. Residential real estate is an area of considerable importance to most Canadians. Given this, it is not surprising that residential real estate is provided special treatment under the GST/HST legislation.

21-168. In somewhat simplified terms, GST/HST applies to residential property only on the first sale of a new home. If a new home is resold in substantially unaltered condition, no GST/HST will apply on this later transaction. If the homeowner undertakes renovations, such as a kitchen, GST/HST will be charged on the materials and other costs going into the renovation. By contrast, if a used home is acquired and substantially renovated before the home is lived in by the purchaser, the acquisition will be treated as a new home purchase and the transaction will be taxable for GST/HST purposes. The CRA defines a substantial renovation as one in which 90 percent or more of the interior of an existing house is removed or replaced.

## New Housing Rebate

### *Calculating The Rebate*

21-169. While sales of new homes attract both GST and HST at the applicable rates, rebates of the amount paid are available. In provinces that do not participate in the HST program, the rebate is equal to 36 percent of the GST paid. However, the situation with participating HST provinces is much more complex, including provincial variations in the HST rebate percentage, as well as the price thresholds. Because of this additional complexity, we will deal only with non-participating provinces in this section. The CRA has a detailed guide covering the many complexities in this area, "GST/HST New Housing Rebate" (RC4028).

21-170. With its traditional aversion to providing tax incentives related to luxury expenditures, the government has limited this rebate to a maximum value of $6,300, the amount of the GST rebate on a $350,000 home [(36%)(5%)($350,000) = $6,300]. In addition, the rebate is phased out for houses costing more than $350,000 and completely eliminated for homes costing more than $450,000. All of these amounts are before the inclusion of GST.

21-171. The government's policy goals are accomplished by calculating the rebate as follows:

**[A][($450,000 - B) ÷ $100,000],** where

**A** = The lesser of 36 percent of the GST paid and $6,300; and
**B** = The greater of $350,000 and the cost of the home.

21-172. A simple example will illustrate the application of this formula.

**EXAMPLE** Gilles and Marie Gagnon acquire a new home with a cost of $420,000, paying an additional amount of $21,000 [(5%)($420,000)] in GST.

**ANALYSIS** As 36 percent of the GST paid is $7,560, an amount in excess of the limit of $6,300, the rebate available to Gilles and Marie will be $1,890 {[$6,300][($450,000 - $420,000) ÷ $100,000]}.

### *Implementing The Rebate*

21-173. While the GST could be included in the price paid by the home purchaser, with that individual claiming the rebate, this is not the usual industry practice. The usual practice is for the builder to charge the purchaser an amount that is net of the rebate, with the purchaser assigning rights to the GST rebate to the builder. In the case of our example, the builder would charge Gilles and Marie $439,110 ($420,000 + $21,000 - $1,890). From the point of view of convenience for the purchaser, this appears to be an appropriate practice.

**We suggest you work Self Study Problems Twenty-One-8 and 9 at this point.**

# Sale Of A Business

## Sale Of Assets

21-174. The sale of the assets of a business is a taxable supply for GST purposes. This applies regardless of the legal form in which the business is carried on. However, where "all or substantially all" of the assets that the purchaser needs to carry on a business are being acquired by the purchaser, the GST/HST legislation allows the vendor and purchaser to elect to treat the supply as if it were zero-rated.

21-175. This applies to businesses that provide exempt supplies, as well as to businesses that provide fully taxable or zero-rated supplies. The use of the election is not permitted when the vendor is a registrant and the purchaser is a non-registrant. However, without regard to the type of business, the election can be used when both the vendor and the purchaser are not GST registrants.

21-176. If the election is made, the vendor does not collect GST/HST on the sale of taxable supplies, and the purchaser cannot claim an input tax credit. As a result, a transfer of the

assets of a business can be made without payment of GST/HST. If the election is not made, GST/HST will be collected on the sale. Offsetting input tax credits may be available to the purchaser through the normal input tax credit procedures.

21-177. In determining whether "all or substantially all" of the assets necessary to carry on the business are transferred, the CRA relies on a 90 percent or more test. The CRA has several policy papers on this election in order to provide registrants with guidance in determining compliance with the 90 percent or more test.

## Sale Of Shares

21-178. As a general rule, the sale of shares in a corporation is not a taxable supply because, under the GST/HST legislation, the sale of a financial instrument such as a share is an exempt supply. As a result, share for share exchanges are not taxable for GST/HST purposes.

## Other Situations

### Section 85 Rollovers

21-179. When property used in a commercial activity is rolled into a corporation under Section 85 of the *Income Tax Act*, the rollover is a taxable transaction for GST/HST purposes. For example, if a sole proprietorship or partnership transfers property when a business is incorporated, the rollover of property will be deemed to be a taxable supply for consideration equal to the fair market value of the property. This amount will then be subject to GST/HST.

21-180. A joint election may be available to avoid any related GST/HST liability, providing the vendor sells or transfers all, or substantially all (i.e., 90 percent or more) of the assets that can reasonably be regarded as being necessary for the purchaser to carry on the business. A further requirement is that, if the vendor is a GST registrant, the purchaser must also be a GST registrant.

21-181. If the transfer of property is a taxable supply, GST/HST will be payable on the total fair market value of the share and non-share consideration exchanged for the property, with the elected amount under Section 85 of the *Income Tax Act* being irrelevant. If the transferred property is subsequently used in commercial activities, an input tax credit may be claimed by the transferee for any GST/HST paid on the transfer of the property.

### Amalgamations, Mergers, Winding-Up Of A Business

21-182. Where two corporations are merged or amalgamated into a single corporation, or the activities of one corporation are wound up through a merger with another corporation, the new corporation is generally treated for GST/HST purposes as a person separate from each of the predecessor corporations.

21-183. If the transfer of assets involves an amalgamation under ITA 87 or a winding-up under ITA 88(1), the transfer of assets is deemed not to be a taxable supply for GST/HST purposes and no election is required. The asset or property transferred on the merger or amalgamation is not a taxable supply under the legislation. As a result, there are no GST/HST consequences.

### Transfers Within Corporate Groups

21-184. Transfers of goods and services between members of corporate groups will normally attract GST/HST. However, an election can be made to have such transfers deemed to be made for nil consideration (only for GST/HST purposes), resulting in no required payment of GST/HST.

21-185. The conditions for this election are quite strict and require either the ownership of at least 90 percent of the voting shares of one corporation by the other, or that the companies be sister corporations owned by a parent corporation. In addition, the electing corporations must be Canadian residents and the supplies involved must be used exclusively (more than 90 percent) in a commercial activity.

### Holding Companies

21-186. Although many holding companies only hold shares or debt and do not carry on a "commercial activity" in the usual sense, GST/HST legislation allows holding companies to register for the GST/HST and claim input tax credits if they hold shares or debt in another company that owns property that is used at least 90 percent for commercial activities. These provisions allow holding companies to obtain refunds of GST/HST paid on the purchase of property or services solely related to the holding of the shares or debt.

### Ceasing To Carry On Business

21-187. When a person ceases to carry on a commercial activity, or becomes a small supplier and, as a result, ceases to be a registrant, the person is deemed to have sold all assets at fair market value upon deregistration. If the assets were used for commercial purposes, GST/HST will be payable on the deemed dispositions.

## Specific Applications

21-188. There are many GST/HST procedures that are specific to certain types of transactions or organizations (e.g., import transactions or charitable organizations). Detailed coverage of such procedures clearly goes beyond the scope of a text which focuses on income taxation. However, we do believe that it is useful to provide you with some general information on some of these specific areas:

- **Imports** In general, imports are subject to GST/HST.
- **Exports** In general, exports of goods and services from Canada are zero-rated. This means that while no GST/HST is charged on exports, input tax credits can be claimed by the exporter.
- **Charities** In general, the revenues of registered charities are exempt from GST/HST. However, revenues from commercial activities (e.g., museum gift shop revenues) are fully taxable subject to the small supplier threshold of $50,000 (a special rule for charities expands the small supplier threshold from $30,000 to $50,000). A special provision provides for a 50 percent rebate of the federal GST paid on purchases related to exempt activities. In the HST provinces, there is a 50 percent rebate of the federal portion of the HST on such purchases, as well as an additional rebate of the provincial portion of the HST. The provincial rebate varies from province to province.
- **Not-For-Profit Organizations** In general, the revenues of not-for-profit organizations are fully taxable (in contrast to the situation with registered charities). However, exemptions are provided for such services as subsidized home care and meals on wheels. As was the case with registered charities, qualifying not-for-profit organizations receive a 50 percent rebate of the federal GST paid on purchases related to exempt activities. In the HST provinces, there is a 50 percent rebate of the federal portion of the HST on such purchases, as well as an additional rebate of the provincial portion of the HST. The provincial rebate varies from province to province.

  To be classified as a qualifying not-for-profit organization, the organization must receive significant government funding. Such funding is regarded as significant when at least 40 percent of total revenues come from this source.
- **Government Bodies** All federal government departments receive a full rebate of the GST/HST paid on purchases by means of a tax remission order. Each provincial and territorial government is registered as a separate entity for the GST/HST, and uses "certificates" to receive point of purchase relief from the GST/HST.
- **Crown Corporations** Crown corporations are not GST/HST exempt and are registered as separate persons for purposes of the GST/HST.
- **Municipalities, Universities, Schools And Hospitals (MUSH)** These organizations are classified as "Public Institutions" in the GST/HST legislation and, except where there

are specific exemptions, their revenues are fully taxable. Examples of exemptions include property taxes for municipalities, course fees for universities, and medical services for hospitals. Rebates for the federal GST paid on purchases related to exempt activities are available, with the rates varying from 67 percent for universities to 83 percent for hospitals to 100 percent for municipalities. In the HST provinces, the same rebates are available for the federal portion of the HST, as well as an additional rebate of the provincial portion of the HST. The provincial rebate varies from province to province.

- **Financial Institutions** The GST/HST legislation defines financial institutions to include "listed" financial institutions, such as banks and insurance companies, as well as deemed financial institutions (e.g., businesses with financial revenues exceeding specified threshold levels). Revenues from providing financial services are designated as exempt. This means that, for an institution where the bulk of its revenues is from the provision of financial services, only limited input tax credits will be available.

21-189. These brief comments serve only to give a very general view of the approach taken to these specific types of transactions and organizations. If you are dealing with any of these applications you will, of course, have to consult a more specialized source of information.

# Partnerships And GST/HST

## General Rules

21-190. The ITA treats a partnership as a person only for the purpose of computing income or loss to its partners. The *Excise Tax Act* considers partnerships to be persons that are generally required to register for the GST/HST with respect to commercial activities. In addition, anything a partner does with respect to partnership activities is considered done by the partnership and not by the partners themselves.

21-191. The result is that it is the partnership, and not the partners, who is required to register for the GST/HST with respect to partnership business. Given this, partnerships are required to collect and remit GST/HST on taxable supplies and are eligible for input tax credits. Partners are jointly and severally liable however with respect to GST/HST that relates to the partnership business.

## Partner Expenses

21-192. Non-reimbursed expenditures for property or services incurred personally by individual partners, which relate to the partnership business and that are deductible for income tax purposes by the partners, are generally eligible for the Employee And Partner GST/HST Rebate. Such property and services include office expenses, travel expenses, meals and entertainment, parking, lodging and CCA on certain capital assets such as motor vehicles. This rebate was discussed beginning in Paragraph 21-158.

21-193. A partner can only claim a rebate to the extent that the partnership could have otherwise claimed an ITC if it had incurred the expense directly. This means that, if a partnership provides only exempt goods or services, the partners would not be eligible to claim a GST/HST partner rebate for expenses that they deduct from their share of partnership income.

## Disposition Of A Partnership Interest

21-194. A partnership interest may be disposed of or acquired in many situations. These include the admission of a new partner or retirement of an existing partner. A partnership interest is considered a "financial instrument" and is exempt from the GST/HST. In addition, any legal and accounting fees related to the acquisition or disposition of a partnership interest are not eligible for an input tax credit since they relate to a financial instrument and not to the partnership's business. Finally, drawings and capital contributions that specifically relate to a partnership interest are considered "financial services" and are also exempt from the GST/HST.

## Transfers Between Partners And Partnerships

21-195. In general, there is no GST/HST counterpart to the rollover rule that allows property to be transferred by a partner to a partnership on a tax deferred basis. An exception to this is the case where a business is being transferred and 90 percent or more of the property that is necessary to carry on that business is also transferred. In such cases, the transfer is not subject to GST/HST as long as both transferor and transferee are registrants.

21-196. Transfers of property between partnerships and partners may be subject to GST/HST, generally depending on the status of the transferor and transferee as registrants and whether they are engaged in commercial activities. GST/HST is not applicable to transfers of cash, accounts receivable, or debt however, since these are either not considered property for GST/HST purposes or are considered exempt financial services.

## Reorganization Of The Partnership

21-197. The admission of new partners or retirement of existing partners that terminate the old partnership and result in the creation of a new partnership will not cause the new partnership to register for GST/HST as a new person. As a result, there are no GST/HST implications on the transfer of the old partnership property to the new partnership.

21-198. There are no GST/HST implications to the new partnership where a partnership has ceased to exist, more than half of its members form a new partnership, and transfer 90 percent or more of the property they receive on the cessation of the old partnership to the new partnership. The new partnership is considered to be a continuation of the old partnership for GST/HST purposes.

# Trusts And GST/HST

21-199. A trust is included in the definition of person under the *Excise Tax Act* and, as a consequence, a trust that is engaged in commercial activities is required to register and collect GST/HST on taxable supplies. However, an interest in a trust is considered to be a financial instrument, so the sale of an interest in a trust is an exempt financial service and is not subject to GST/HST.

21-200. A distribution of trust property by a trustee to a beneficiary of a trust is treated as a supply by the trust. The consideration is the same as proceeds of disposition for purposes of the *Income Tax Act*. Distributions of non-commercial property by a trust in the process of the settlement of an estate are generally not considered to be in the course of commercial activities of the trust and are GST/HST exempt. Similarly, a distribution of financial securities is GST/HST exempt as a financial service. The GST/HST only applies to properties acquired by the trust that are used in a commercial activity.

21-201. Where property is settled through the use of an inter vivos trust, including an alter ego or joint spousal or common-law partner trust, the consideration for the property transferred is deemed to equal the amount determined under the *Income Tax Act*. The supply is considered to be made at fair market value and GST/HST is payable on all taxable supplies. However, when an estate is settled, an election can be filed to distribute any property of a deceased registrant without the payment of GST/HST. In this situation, the beneficiary of the deceased's estate must be a registrant, and the beneficiary is deemed to have acquired the property for use exclusively in a commercial activity.

**Additional Supplementary Self Study Problems Are Available Online.**

## Key Terms Used In This Chapter

21-202. The following is a list of the key terms used in this Chapter. These terms, and their meanings, are compiled in the Glossary located at the back of the Study Guide.

| | |
|---|---|
| Capital Personal Property | New Housing GST/HST Rebate |
| Commercial Activity | Partner And Employee GST/HST Rebate |
| Commodity Tax | Quick Method |
| Employee And Partner GST/HST Rebate | Registrant |
| Exempt Goods And Services | Simplified ITC Accounting |
| Fully Taxable Goods And Services | Small Suppliers Exemption |
| Goods And Services Tax (GST/HST) | Supply |
| Harmonized Sales Tax (HST) | Transaction Tax |
| Input Tax Credit (ITC) | Value Added Tax (VAT) |
| MUSH | Zero-Rated Goods And Services |

## Problems For Self Study (Online)

To provide practice in problem solving, there are Self Study and Supplementary Self Study problems available on MyLab Accounting.

Within the text we have provided an indication of when it would be appropriate to work each Self Study problem. The detailed solutions for Self Study problems can be found in the print and online Study Guide.

We provide the Supplementary Self Study problems for those who would like additional practice in problem solving. The detailed solutions for the Supplementary Self Study problems are available online, not in the Study Guide.

The .PDF file "Self Study Problems for Volume 2" on MyLab contains the following for Chapter 21:

- 9 Self Study problems,
- 6 Supplementary Self Study problems, and
- detailed solutions for the Supplementary Self Study problems.

## Assignment Problems

(The solutions for these problems are only available in the solutions manual that has been provided to your instructor.)

### *Assignment Problem Twenty-One - 1*

***(Turnover Tax vs. GST)***

You have been appointed tax policy advisor to a country that has never used taxes on goods or services. Because of the increasing need for revenues, the Finance Minister, Maximus Surplus, is committed to introducing a sales tax. He is considering two alternatives:

- A 5 percent value added tax using the same invoice-credit approach that has been incorporated into Canada's GST system.
- A turnover tax that is applied as goods move from the raw materials supplier, to the manufacturer, to the wholesaler, to the distributor, to the retailer, and finally to the consumer. Minister Surplus would like you to calculate the turnover tax rate that would produce the same amount of revenue as the alternative 5 percent GST.

In illustrating this to Minister Surplus, he would like you to assume a sale price of $250, plus tax, by the raw materials supplier to the manufacturer. At this and subsequent turnover points, he would like you to assume a markup by each seller equal to 40 percent of their before tax cost.

**Required**: Provide the requested information with an explanation of your calculations.

### *Assignment Problem Twenty-One - 2*

***(Registration Requirements)***

Chantelle Chance is a hairdresser who started in business on October 1, 2018 and has not registered to collect the GST. Quarterly revenues from her business for her first year of operation were as follows:

| | |
|---|---:|
| October To December, 2018 | $ 4,000 |
| January To March, 2019 | 6,500 |
| April To June | 9,000 |
| July To September | 9,500 |
| Total For Year Ending September, 2019 | $29,000 |

For the quarter ending December 31, 2019, business revenues were $11,500.

**Required**: Advise Chantelle if registration for the GST is required and include the reasons for your answer. If required, state when GST collection should start and by what date registration must be completed.

## Assignment Problem Twenty-One - 3

### (Registration Requirements And GST Collectible)

After years of study, Martin believes that he has developed a process for making perfect macaroons. He also believes that there is significant demand for these tasty treats. Based on this, on March 1, 2019, he opens a retail operation in an Edmonton mall.

His new business will have a December 31 year end. All of his sales will be in Alberta, a province that has no provincial sales tax. Martin wants to delay collecting GST for as long as legally possible.

Martin's Macaroons had monthly sales for 2019 as follows:

| Month | Sales |
|---|---|
| March | $ 2,420 |
| April | $ 4,650 |
| May | 13,780 |
| June | 13,240 |
| July | $13,780 |
| August | 15,760 |
| September | 16,480 |
| October | $16,670 |
| November | 18,490 |
| December | 21,750 |

**Required**:

A. Indicate the date on which Martin's Macaroons will be required to start collecting GST and the date by which Martin will be required to register.

B. Assume that Martin's Macaroons has elected to file GST on a quarterly basis . Calculate the GST collectible for each quarter of 2019 and specify the due date of each GST return and payment.

C. Assume that Martin's Macaroons files GST on an annual basis. Calculate the GST collectible for 2019 and specify the due date of the GST return and payment.

D. Assume that in January, 2019, Martin comes to you for advice on when he should register for the GST. What factors should he consider?

## Assignment Problem Twenty-One - 4

### (Regular GST Return)

Lassen Ltd., an Alberta corporation, is an annual filer for GST purposes. Alberta does not participate in the HST program and does not have a provincial sales tax.

The following is a summary of the financial statement information for the current year. All amounts are presented without the inclusion of applicable GST.

| | | |
|---|---|---|
| Sales | | $5,700,000 |
| Less Expenses: | | |
| Cost Of Goods Sold | ($2,600,000) | |
| Amortization Expense | ( 720,000) | |
| Salaries And Wages | ( 640,000) | |
| Interest Expense | ( 120,000) | |
| Other Pre-Tax Expenses | ( 370,000) | |
| Income Taxes | ( 240,000) | ( 4,690,000) |
| Net Income | | $1,010,000 |

**Other Information:**

1. Sales included $1,200,000 in exempt supplies and $2,400,000 in zero-rated supplies. The remaining sales were fully taxable for GST purposes.
2. All of the goods sold involved the provision of either fully taxable or zero-rated supplies. During the year, inventories of these goods decreased by $200,000. GST was paid on all goods that were purchased for resale during the year.
3. Capital expenditures for the year amounted to $4,000,000, with GST being paid on all amounts. Of this total, $3,000,000 was for an office building that will be used 40 percent for the provision of fully taxable or zero-rated supplies. The remaining $1,000,000 was for equipment that will be used 70 percent in the provision of exempt supplies. GST was paid on the acquisition of all assets on which amortization is being taken during the year.
4. All of the Other Expenses involved the acquisition of fully taxable supplies and were acquired to assist in the provision of fully taxable supplies. Included is $40,000 reimbursed to sales employees for meals while travelling for business.
5. Of the Salaries And Wages, 40 percent were paid to employees involved in providing exempt supplies.

**Required:** Calculate the net GST payable or refund that Lassen will remit or receive for the current year.

### *Assignment Problem Twenty-One - 5*

#### *(Regular HST Return)*

Conan's Comics is an unincorporated business owned by Conan Barbarian. All of its operations are located in Newfoundland. The HST rate in that province is 15 percent.

The business is an HST registrant that sells both fully taxable and zero-rated goods. In addition, Conan's Comics provides exempt services. The business is an annual filer for HST purposes.

The Income Statement for the current year is as follows. All amounts are before the addition of applicable HST.

| | | |
|---|---|---|
| Revenues: | | |
| Fully Taxable Goods | $643,431 | |
| Zero-Rated Goods | 311,412 | |
| Exempt Services | 416,253 | $1,371,096 |
| Less Expenses: | | |
| Cost Of Fully Taxable Goods Sold | ($489,567) | |
| Cost Of Zero-Rated Goods Sold | ( 203,642) | |
| Amortization | ( 106,911) | |
| Salaries And Wages | ( 62,435) | |
| Interest Expense | ( 16,243) | |
| Other Operating Expenses | ( 28,968) | ( 907,766) |
| Income Before Taxes | | $ 463,330 |
| Less: Federal And Provincial Income Taxes | | ( 157,243) |
| Net Income | | $ 306,087 |

**Other Information:**

1. Inventories of fully taxable goods decreased by $24,650 during this period, while inventories of zero-rated goods increased by $19,243. The zero-rated sales were generated by purchasing and selling zero-rated supplies.
2. Capital expenditures for this period amounted to $1,950,000, with HST being paid on all amounts. Of this total, $1,260,000 was for a building that will be used 35 percent for the

provision of fully taxable supplies and 25 percent for the provision of zero-rated supplies. The remaining $690,000 was for equipment that will be used 38 percent in the provision of fully taxable supplies and 27 percent for the provision of zero-rated supplies. HST was paid on the acquisition of all assets on which amortization is being taken during this period.

3. Of the Other Operating Expenses, 62 percent were related to the provision of fully taxable and 24 percent to the provision of zero-rated supplies.
4. Of the Salaries And Wages, 65 percent were paid to employees involved in providing exempt supplies.

**Required:** Calculate the net HST payable or refund that Conan's Comics will remit or receive for the current year.

## Assignment Problem Twenty-One - 6

### (Quick Method)

John, Alice, Alex, and Jerry Rangi are quadruplets. Their father financed an unincorporated business for each of them 3 years ago. They were each allowed to select their own line of business. As an incentive, their father has indicated that the child who owns the business that generates the most income in the first 5 years will receive a gift of $1,000,000 in cash.

All of the businesses are located in Ontario, with all of the revenues being generated in that province. As all of the business were expected to have taxable supplies well in excess of $30,000, each business was registered for the Ontario HST at its inception.

The siblings provide you with the following annual information for their businesses. All amounts are reported inclusive of HST. None of the sales or purchases were zero-rated or exempt, and none of the businesses made any capital expenditures during the year.

| | Type Of Business | Sales | Purchases |
|---|---|---|---|
| John | Computer Sales, Repairs And Tutoring | $ 103,960 | $ 26,160 |
| Alice | Bicycle Sales And Service | 194,360 | 159,330 |
| Alex | Menswear Sales And Custom Tailoring | 126,560 | 47,460 |
| Jerry | Tarot Card Reading And Cell Phone Sales | 84,750 | 41,810 |

The HST rate in Ontario is 13 percent. The Quick Method remittance rates are 4.4 percent for resellers and 8.8 percent for service providers. When calculating the applicable remittance rate, assume the sales and purchases of the previous year were equal to those of the current year.

**Required**: Recommend whether any of the businesses should use the Quick Method to calculate net HST remittances. Show all of your calculations.

## Assignment Problem Twenty-One - 7

### (Regular And Quick Method GST Returns)

Johnny Dangerous has successfully engaged in criminal activity since he was 12 years old. Financially, he has been very successful and, to date, he has no criminal record. All of his activity is carried out in Ontario. The HST rate for Ontario is 13 percent. The Ontario quick method rates are 4.4 percent for businesses that purchase goods for resale and 8.8 percent for service providers.

Early in his career, his father taught him that the notorious Chicago gangster Al Capone was sent to jail, not for his many murders and other illegal acts, but for tax evasion. Taking this lesson to heart, Johnny has been very diligent about filing both income tax returns and GST returns on time. For the 2019 taxation year, his activities fall into three categories:

**Contract Assassinations** Johnny accepts contracts for assassinations at a base rate of $15,000. He offers volume discounts and charges higher fees for particularly difficult cases. As he enjoys the work, Johnny handles all of this activity personally.

During 2019, his revenues from this work totaled $323,000. While he does not specifically advise his clients that they are paying HST, he files his GST return on the basis that the amounts collected are HST included.

**Export Of Illegal Drugs** A growing part of Johnny's activities involve exporting heroin and other illegal drugs to the U.S. market. His 2019 revenues from this activity totaled $113,000.

**Loan Sharking** As a service to his clients, he offers extremely high interest rate loans to individuals who cannot find other sources of financing. Revenue from this source totaled $87,000 for 2019.

Johnny has an assistant, Cruella Ratched, who works on a full time basis for his business. Since he lost his driver's licence two years ago, her duties include driving him to his jobs using her car. Her salary for 2019 is $85,000 which includes a $12,000 car allowance.

Johnny maintains an office which he rents for $4,000 per month, plus HST. During the year, miscellaneous office costs total $6,900 plus applicable HST. This includes $400 for business insurance. The furniture, fixtures and art in the office are leased at a cost of $2,000 per month, plus HST. Telephone and internet cost $125 per month, plus HST.

Johnny has calculated that these costs should be allocated to his three business activities as follows:

| | |
|---|---|
| Contract Assassinations | 65% |
| Export Of Illegal Drugs | 20% |
| Loan Sharking | 15% |

Expenditures specific to his various activities are as follows:

**Contract Assassinations** Johnny uses a Glock 9mm for this activity. He disposes of each gun after a single use, making this a significant cost of doing business. On January 1, 2019, he had 5 of these guns on hand. Their total capital cost was $3,101, plus HST and they had been allocated to Class 8. They were the only assets in this class and on January 1, 2019, the UCC for this Class was $2,792. During 2019, Johnny acquires an additional 19 guns at $549 each, plus HST. After using each weapon once, he disposes of 20 of his guns. There were no proceeds associated with the disposals.

His only other costs associated with this activity were for travel. Airline, hotel, and taxis totaled $12,000 plus HST. Meals while travelling totaled $7,492 plus HST.

**Export Of Illegal Drugs** Costs associated with this activity are as follows:

| | |
|---|---|
| Purchases Of Processing Equipment (Including HST) | $11,300 |
| Security Service For Lab (Including HST) | 5,650 |
| Shipping Costs (No HST - Using Illegal Immigrants) | 3,000 |
| Bribes To Customs Officials (No HST) | 4,500 |
| Cost Of Materials Exported (No HST) | 21,700 |

**Loan Sharking** Johnny used bank loans to finance these loans. Interest on these loans for 2019 was $12,600. When he experienced difficulties with collections he used a former World Wrestling Foundation champion to enforce the payment of the loans. Costs for this service for 2019 were $4,800 (no HST - small supplier).

**Required**:

A. Determine Johnny's HST payable (refund) for the year ending December 31, 2019, using the regular method of determination.

B. Determine whether Johnny can use the quick method for determining his HST payment or refund for 2019.

C. Without regard to your conclusion in Part B, determine Johnny's HST payable (refund) for the year ending December 31, 2019, using the quick method.

### *Assignment Problem Twenty-One - 8*
#### *(Regular And Quick Method HST Returns)*

For the year ending December 31, 2019, the Income Statement of Sloan Inc. is as follows (all amounts are without the inclusion of applicable HST):

| | | |
|---|---|---|
| Revenues: | | |
| Sales of Fully Taxable Goods | $291,600 | |
| Provision of Exempt Services | 105,300 | $396,900 |
| Less Expenses: | | |
| Cost Of Goods Sold | ($166,050) | |
| Amortization Expense | ( 75,600) | |
| Salaries And Wages | ( 16,200) | |
| Rent | ( 56,700) | |
| Interest Expense | ( 12,150) | |
| Other Operating Expenses | ( 36,450) | ( 363,150) |
| Income Before Taxes | | $ 33,750 |
| Less: Federal And Provincial Income Taxes | | ( 10,800) |
| Net Income | | $ 22,950 |

**Other Information:**

1. Sloan Inc. is a retail business located in Ontario where all of the Company's revenues and expenses are incurred. The HST rate in Ontario is 13 percent. The quick method rates applicable to the province are 4.4 percent for businesses that purchase goods for resale, and 8.8 percent for service providers.
2. For the previous year ending December 31, 2018, Sloan's cost of goods purchased for resale totaled $148,500 and the revenue from sales of taxable supplies totaled $407,700. Both amounts are before HST.
3. Inventories of taxable goods decreased by $10,800 during the year.
4. All of the Other Operating Expenses involved the acquisition of fully taxable supplies and were acquired to assist in the provision of fully taxable supplies.
5. Of the Salaries And Wages, 52 percent were paid to employees involved in providing exempt services.
6. A capital expenditure was made during the year at an HST inclusive cost of $83,620. The expenditure was for furniture and fixtures that will be used 60 percent for the provision of fully taxable goods. HST was paid on the acquisition of all assets on which amortization is being taken during this period.

**Required**: For the year ending December 31, 2019:

A. Determine if Sloan is eligible to use the Quick Method and the Quick Method remittance rate that would be applicable.

B. Calculate the net HST payable or refund that Sloan Inc. will remit or receive using regular HST calculations.

C. Assume that Sloan is eligible to use the Quick Method. Calculate the net HST payable or refund that Sloan Inc. will remit or receive using the Quick Method.

## Assignment Problem Twenty-One - 9

### (Employee HST Rebate Including CCA)

Sarah Martin is a resident of Ontario, a participating province that assesses HST at a 13 percent rate. Her employer is a large public company with all of its operations in that province.

Sarah's work requires extensive travel on behalf of her employer. For this travel, she uses her own car. The car was purchased in 2018 at a price before HST of $27,500. HST raised the total cost to $31,075 [(113%)($27,500)]. In 2018 she claimed maximum CCA of $4,661 [(1/2)(30%)($31,075)]. The portion of her HST rebate related to her car CCA equaled $536 [(13/113)($4,661)]. Sarah indicates that she plans to claim maximum CCA in 2019.

The family uses her husband's car for all personal purposes so that Sarah's car is used 100 percent for employment related activities. Sarah does not receive any reimbursement or allowance from her employer for her travel or car expenses.

In her 2019 tax return, Sarah deducts the following amounts in the calculation of her net employment income:

| | |
|---|---|
| Accommodation (Includes HST Of $1,560) | $13,560 |
| Business Meals And Entertainment - Deductible Amount | |
| (Includes HST of $1,170) | 10,170 |
| Automobile Costs: | |
| Gas And Maintenance (Includes HST Of $1,430) | 12,430 |
| Interest On Automobile Loan | 1,805 |
| Insurance | 1,460 |
| Total Deductions Excluding CCA | $39,425 |

**Required:** Calculate the maximum CCA that Sarah can claim on his car for 2019. In addition, calculate the 2019 HST rebate that Sarah will claim as a result of her deductible expenses.

## Assignment Problem Twenty-One - 10

### (Regular And Simplified HST Returns)

Adeedas Sports is a retail business located in Nova Scotia. All of its revenues occur and expenses are incurred in that province. It has no associated business and files its GST return on an annual basis. Nova Scotia has a 15 percent HST.

Adeedas's Income Statement for the current year is as follows. All amounts are shown without the relevant HST.

| | | |
|---|---|---|
| Revenues: | | |
| Fully Taxable Goods | $397,523 | |
| Exempt Services | 109,564 | $507,087 |
| Less Expenses: | | |
| Cost Of Goods Sold (All Taxable) | ($201,372) | |
| Amortization Expense | ( 34,784) | |
| Salaries And Wages | ( 25,679) | |
| Rent | ( 27,841) | |
| Interest Expense | ( 75,964) | |
| Other Operating Expenses | ( 31,478) | ( 397,118) |
| Income Before Taxes | | $109,969 |
| Less: Federal And Provincial Income Taxes | | ( 21,489) |
| Net Income | | $ 88,480 |

**Other Information:**

1. Inventories of taxable goods decreased by $19,561 during the year.
2. A capital expenditure was made during the year at an HST inclusive cost of $105,294. The expenditure was for equipment that will be used 60 percent for the provision of fully taxable goods. HST was paid on the acquisition of all assets on which amortization is being taken during this period.
3. All of the Other Operating Expenses involved the acquisition of fully taxable supplies and were acquired to assist in the provision of fully taxable supplies.
4. The rent was not subject to HST as it was paid to a non-registrant. The proportion of the leased property that is used for the provision of exempt services is 20 percent.
5. Of the Salaries And Wages, 40 percent were paid to employees involved in providing exempt services.

**Required:**

A. Calculate the net HST payable or refund that Adeedas Sports will remit or receive for the current year using regular GST calculations.

B. Calculate the net HST payable or refund that Adeedas Sports will remit or receive for the current year using the Simplified Input Tax Credit Method.

## *Assignment Problem Twenty-One - 11*

### *(New Housing GST Rebate)*

All of the following independent Cases involve an individual purchasing a new house in Alberta for a total payment of $200,000. Note that, Alberta does not participate in the HST program and does not have a provincial sales tax.

Varying assumptions are made with respect to what is included in the $200,000 payment.

**Case A** The price includes GST.

**Case B** The price does not include any GST.

**Case C** The price includes GST, net of the new housing rebate.

**Required:** For each Case, determine:

- the pre-rebate amount of GST;
- the amount of the GST rebate that can be claimed;
- who would claim the GST rebate; and
- the net amount of GST that will be paid.

## Complete Preface In Volume I

The complete preface to this three volume set of *Canadian Tax Principles* can be found in Volume I.

## MyLab Accounting

### List Of 2019 Tax Rates And Credits For Your Use

A complete list of 2019 tax rates and credits to use when solving problems is available at the front of both Volumes 1 and 2. This information, as well as the Chapter 5 Appendix of common CCA rates, is available as a .PDF file on MyLab found at:

**http://www.pearsonmylabandmastering.com**

Here you will also find:

- Updates and corrections to the textbook and Study Guide (please check periodically)
- Pearson eText of the complete set - 2 Volumes plus Study Guide
- Self Study Problems (The solutions are in this Study Guide)
- Supplementary Self Study Problems and Solutions for each chapter
- Access to CPA Canada's Federal Income Tax Collection (FITAC)
- Access to Intuit Canada's ProFile tax return preparation software
- Practice Examinations and Solutions for each chapter
- Power Point Presentations for each chapter
- Glossary Flashcards for each chapter
- 2019 tax rates, credits and common CCA Classes (PDF file)
- Tax Returns for examples and Self Study tax return problems
  In January, 2020, shortly after the first 2019 filing version of the ProFile tax program is available, updated sample tax returns and Tax Software Problems will also be available.

## This Study Guide

### Contents

Your two volume textbook is accompanied by this Study Guide. The chapters of this Study Guide correspond to the chapters of ***Byrd & Chen's Canadian Tax Principles***. Each of these Study Guide chapters contains the following:

- Detailed guidance on how to work through the text and problems in the chapter.
- Detailed solutions to the Exercises in the textbook for the chapter and the Self Study Problems available online.
- A list of learning objectives for the material in the chapter.

In addition, there are:

- Two sample personal tax returns and two Self Study Tax Software Problems in Chapters 4 and 11.
- A sample corporate tax return in Chapter 13.

## Glossary

At the back of this Study Guide is a comprehensive Glossary that carefully defines more than 500 tax terms that are used throughout the text. Tied to this important resource, at the end of each chapter you will find a list of the Key Terms, without definitions, that were used in that chapter. This provides an additional resource for reviewing the text material in that, by reviewing this list, you can ensure that you are familiar with all of the concepts that are presented in the chapter.

To assist in this review, Glossary Flashcards for each Chapter are available online.

## Using The Solutions

With respect to the problem solutions that are included in this book, the header at the top of each page identifies the solution on the page. The page numbers in this Study Guide have been numbered with the prefix "S-" to distinguish them from the page numbers of the textbook.

We encourage you to try to solve each Exercise and Self Study Problem before consulting these solutions. It is our opinion that one of the most unfortunate misconceptions that many students have is the belief that simply reading through a solution is a good learning experience. It is not!

## How To Work Through Chapter 1

MyLab Accounting for this book can be found at:

**http://www.pearsonmylabandmastering.com**

We suggest you access MyLab before using the text to familiarize yourself with the useful student resources available there. In particular, review the corrections and updates to the textbook and Study Guide that are posted there to save yourself unnecessary frustration.

We recommend the following approach in dealing with the material in this chapter:

### The Canadian Tax System

- Read paragraph 1-1 to 1-12 (in the textbook).
- Do Exercises One-1 and One-2 (in the textbook) and check the solutions in this Study Guide. All solutions to Exercises and Self Study Problems can be found in this Study Guide and the page numbers all start with the prefix S-.
- Read paragraph 1-13 to 1-17.
- Do Exercise One-3 and check the solution in this Study Guide.
- Read paragraph 1-18 to 1-25.

### Tax Policy Concepts And Qualitative Characteristics Of Tax Systems

- Read paragraph 1-26 to 1-28.
- Do Exercise One-4 and check the solution in this Study Guide.
- Do Self Study Problem One-1 which is available on MyLab and check the solution in this Study Guide.
- Read paragraph 1-29 to 1-34.
- Do Self Study Problem One-2 and check the solution in this Study Guide.
- Read paragraph 1-35 to 1-43.
- Do Self Study Problem One-3 and check the solution in this Study Guide.

### Income Tax Reference Materials

- Read paragraph 1-44 to 1-75.
- Do Self Study Problem One-4 and check the solution in this Study Guide.

### Liability For Income Tax

- Read paragraph 1-76 to 1-93.
- Do Exercise One-5 and check the solution in this Study Guide.

### Residence Of Individuals, Including Part Year, Sojourner, And Deemed Residents

- Read paragraph 1-94 to 1-101.
- Do Exercise One-6 and check the solution in this Study Guide.
- Read paragraph 1-102 to 1-106.
- Do Exercise One-7 and check the solution in this Study Guide.
- Read paragraph 1-107 and 1-108.
- Do Exercises One-8 and One-9 and check the solutions in this Study Guide.
- Read paragraph 1-109 to 1-115.
- Do Exercise One-10 and check the solution in this Study Guide.

### Individuals With Dual Residency

- Read paragraph 1-116 to 1-119.
- Do Exercise One-11 and check the solution in this Study Guide.
- Read paragraph 1-120 to 1-122.
- Do Self Study Problems One-5 to One-7 and check the solutions in this Study Guide.

### Residence Of Corporations And Trusts

- Read paragraph 1-123 to 1-129.
- Do Exercises One-12 to One-14 and check the solutions in this Study Guide.
- Do Self Study Problems One-8 and One-9 and check the solutions in this Study Guide.
- Read paragraph 1-130 to 1-132.

### Alternative Concepts Of Income

- Read paragraph 1-133 to 1-141.

### Net Income For Tax Purposes

- Read paragraph 1-142 to 1-167.
- Do Exercises One-15 to One-17 and check the solutions in this Study Guide.
- Do Self Study Problems One-10 to One-12 and check the solutions in this Study Guide.

### Net Income To Taxable Income

- Read paragraph 1-168 and 1-169.

### Principles Of Tax Planning

- Read paragraph 1-170 to 1-188.
- Do Exercises One-18 and One-19 and check the solutions in this Study Guide.

### Abbreviations To Be Used

- Read paragraph 1-189.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 1. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 1 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 1 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 1 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 1 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

# Solutions to Chapter One Exercises

### Exercise One - 1 Solution

Max Jordan, the Jordan family trust, and Jordan Enterprises Ltd. could be required to file income tax returns. Jordan's Hardware, Jordan & Jordan and the Jordan Foundation are not taxable entities for income tax purposes.

### Exercise One - 2 Solution

Under the GST legislation, all of the listed entities could be required to file a GST return. Where only individuals, corporations and trusts can be required to file an income tax return, the definition of a person (i.e., taxable entity) is much broader for GST purposes. As is explained in detail in Chapter 21, whether an entity is required to file a GST return is dependent on the level of commercial activity.

### Exercise One - 3 Solution

| | |
|---|---|
| Federal Tax Payable [(15%)($27,000)] | $4,050 |
| Provincial Tax Payable [(7.5%)($27,000)] | 2,025 |
| Total Tax Payable [(15% + 7.5%)($27,000)] | $6,075 |

### Exercise One - 4 Solution

Margie's HST paid totals $22,360 [(13%)($172,000)]. Based on her Taxable Income of $895,000, this would represent an effective rate of 2.5 percent ($22,360 ÷ $895,000).

Jane's HST paid totals $3,575 [(13%)($27,500)]. On her Taxable Income of $18,000, this would be an effective rate of 19.9 percent ($3,575 ÷ $18,000).

### Exercise One - 5 Solution

She is not correct. Under ITA 2(3) she would be subject to Canadian taxes on employment income earned in Canada.

### Exercise One - 6 Solution

While the situation is not completely clear, it is likely that the CRA would conclude that Simon is no longer a Canadian resident. By retaining his residence, he has maintained one of the primary residential ties. However, the fact that he was not able to sell the property, accompanied by the long-term lease to a third party would probably be sufficient evidence that this is not a significant residential tie. The retention of his membership in the Ontario Institute Of Chartered Public Accountants would be viewed as a secondary residential tie. However, S5-F1-C1 indicates that it would be unusual for a single secondary tie to be sufficient for an individual to be considered a Canadian resident.

### Exercise One - 7 Solution

Jane did, in fact, sever most of her residential ties with Canada. This would suggest that she would not be considered a Canadian resident during the 26 months that she worked in Florida. However, the fact that she returned frequently to visit her boyfriend might lead the CRA to assess her on the basis of being a Canadian resident during this period, but it is not clear that such an assessment would be successful.

### Exercise One - 8 Solution

Mark would be taxed on his worldwide income for the part of the year that he was resident in Canada. This would be the period January 1 through June 15, the date that his wife and children fly to the U.S. June 15 would be latest of the date that Mark leaves Canada (February 1), the date that Mark establishes U.S. residency (February 1), and the date that his wife and children depart Canada (June 15). It is unlikely that the fact that his house was not sold until a later date would influence his residence status.

### Exercise One - 9 Solution

Mr. Kirsh will be a part year resident and liable for Canadian taxes on his worldwide income, including any income on the U.S. bank accounts, for the period September 1 through December 31 of the current year.

### Exercise One - 10 Solution

While Ms. Blakey is the child of a Canadian High Commissioner, it appears that she is no longer a dependant of this individual. It would also appear that she has income in excess of the base for the basic personal tax credit for 2019 of $12,069. As a consequence, she would not be considered a deemed resident under ITA 250(1).

### Exercise One - 11 Solution

**Case 1** As it appears that Dizzy has a permanent home in Los Angeles, the tie-breaker rules would indicate that he is a resident of the United States. As he has been in Canada for more than 183 days in 2019, the sojourner rules might have made him a deemed Canadian resident. However, the tie-breaker rules in the international tax treaty would override this.

The boarding rooms and hotels would not be considered to be a permanent home given that Dizzy never intended to stay for a long period of time.

**Case 2** As Donna was in Canada for more than 183 days in 2019, she is a deemed resident through the application of the sojourner rule, and therefore a dual resident. In applying the tie-breaker rules, the first factor that is considered is in which country the individual has a permanent home. With respect to this criteria, Donna would not be considered to have a permanent home in either country. She gave up her lease on the New York property and, given that she only planned to stay for a short period of time, the Toronto apartment would not be considered a permanent home. In the absence of a permanent home in either country, the next factor to consider would be the location of Donna's "centre of vital interests". This would appear to be the U.S. and, given this, the tie-breaker rules would make Donna a resident of the U.S. and a non-resident of Canada.

### Exercise One - 12 Solution

Roswell Ltd. is a U.S. resident because it was incorporated in that country. It is also a Canadian resident under the mind and management test. In such dual residency cases, the tie-breaker rule in the Canada/U.S. tax treaty indicates that the taxes will be assessed in the country of incorporation. That means that Roswell Ltd. would be considered a resident of the U.S. and a non-resident of Canada.

### Exercise One - 13 Solution

As the Company was incorporated in Canada after April 26, 1965, it would be deemed to be a Canadian resident under ITA 250(4). While the problem does not provide enough information to determine this, it is possible that the Company has dual residency with the country or countries where it does business. This could result in the application of one or more international tax treaties. Note that, in general, where a corporation does business is not relevant to the residency decision.

### Exercise One - 14 Solution

**Case 1** Taxco would be considered a deemed resident of Canada by ITA 250(4) since it was incorporated in Canada after April 26, 1965. Taxco would also be considered a factual resident of the U.S. since its mind and management are located there. Article IV(3) of the Canada/U.S. tax treaty however breaks the tie in favor of the place of incorporation. Taxco would therefore be considered a resident of Canada and a non-resident of the U.S.

**Case 2** Junko would be considered a factual resident of Canada since its mind and management are situated in Canada. Junko would also be considered a resident of the U.S. since it was incorporated there. Article IV(3) of the Canada/U.S. tax treaty however breaks the tie in

favor of the place of incorporation. Junko would therefore be considered a resident of the U.S. for treaty purposes and a non-resident of Canada.

### Exercise One - 15 Solution

Mr. Blanton's Net Income For Tax Purposes is calculated as follows:

| | | |
|---|---|---|
| **Income Under ITA 3(a):** | | |
| Net Employment Income | | $42,000 |
| **Income Under ITA 3(b):** | | |
| Taxable Capital Gains | $24,000 | |
| Allowable Capital Losses | Nil | 24,000 |
| **Balance From ITA 3(a) And (b)** | | $66,000 |
| Subdivision e Deductions | | ( 13,000) |
| **Balance Under ITA 3(c)** | | $53,000 |
| Deduction Under ITA 3(d): | | |
| Business Loss | | ( 15,000) |
| **Net Income For Tax Purposes (Division B Income)** | | **$38,000** |

### Exercise One - 16 Solution

Ms. Stodard's Net Income For Tax Purposes would be calculated as follows:

| | | |
|---|---|---|
| **Income Under ITA 3(a):** | | |
| Interest Income | | $33,240 |
| **Income Under ITA 3(b):** | | |
| Taxable Capital Gains | $24,750 | |
| Allowable Capital Losses | ( 19,500) | 5,250 |
| **Balance From ITA 3(a) And (b)** | | $38,490 |
| Subdivision e Deductions | | Nil |
| **Balance Under ITA 3(c)** | | $38,490 |
| Deduction Under ITA 3(d): | | |
| Rental Loss | | ( 48,970) |
| **Net Income For Tax Purposes (Division B Income)** | | **Nil** |

She would have a non-capital loss carry over of $10,480 ($38,490 - $48,970).

### Exercise One - 17 Solution

Mrs. Bergeron's Net Income For Tax Purposes would be calculated as follows:

| | | |
|---|---|---|
| **Income Under ITA 3(a):** | | |
| Net Employment Income | | $42,680 |
| **Income Under ITA 3(b):** | | |
| Taxable Capital Gains | $27,400 | |
| Allowable Capital Losses | ( 33,280) | Nil |
| **Balance From ITA 3(a) And (b)** | | $42,680 |
| Subdivision e Deductions | | ( 8,460) |
| **Balance Under ITA 3(c)** | | $34,220 |
| Deduction Under ITA 3(d): | | |
| Business Loss | | ( 26,326) |
| **Net Income For Tax Purposes (Division B Income)** | | **$ 7,894** |

She would have an allowable capital loss carry over of $5,880 ($27,400 - $33,280).

***Exercise One - 18 Solution***

Mr. Chung is involved in income splitting, tax deferral, and possibly tax avoidance. He is getting the deduction from taxable income now and his wife will be taxed on the income in the future. All RRSP contributions normally create a tax deferral. The contribution will be deductible and the earnings on the contribution will accumulate on a tax free basis. However, all of these amounts will be taxable when they are withdrawn from the plan. There may also be tax avoidance. This will happen if his spouse is taxed at a lower rate than is currently applicable to Mr. Chung when the funds become taxable to her.

***Exercise One - 19 Solution***

As the dental plan is a benefit that can be received by Mr. Green without being taxed (private health care), tax avoidance is illustrated.

## Self Study Solution One - 1

The HST is based on certain specified expenditures, not on the income level of the individual making the expenditure. In most cases, the proportion of an individual's income that is spent declines as the individual's level of income increases. This means that when a flat rate of tax is applied to a decreasing portion of the individual's income, the rate of taxation as a percentage of that income will decline.

For example, a 13 percent HST applied to $150,000 in expenditures made by a person with $250,000 in income would amount to only 7.8 percent of that person's income ($19,500 ÷ $250,000).

In contrast, that same 13 percent HST applied to $25,000 in expenditures made by a person with $20,000 in income would reflect a tax rate of 16.3 percent ($3,250 ÷ $20,000) of that person's income.

## Self Study Solution One - 2

If tax simplification was the only objective, Mr. Right's proposal would be appropriate. However, such a system would be in conflict with other possible objectives of tax policy. For example, it would almost certainly be in conflict with the objective of fairness in that it would not provide for treating different types of income (capital gains vs. employment income) or people (the poor vs. the rich) in a suitable manner.

His system would also conflict with other objectives such as the goal of equity and after-tax income stability and the need for redistribution of income. In other words, in meeting the objective of simplicity, Mr. Right's system would ignore other possible objectives of a taxation system.

## Self Study Solution One - 3

> **Note** The descriptions of these tax measures are significantly simplified. The objective of this problem is to present the basic ideas so they can be understood without a detailed knowledge of tax, while still providing a basis for discussion. The following analysis is intended to be no more than suggestive of possible points that could be made. There are, of course, many alternative solutions.

***Family Tax Cut***

Possible comments here would be as follows:

**Equity Or Fairness** This provision was heavily criticized for providing most of its benefits to high income individuals. The tax cost of this provision was estimated to be $2.4 billion, very little of which was available to low income families and none to single parent families. Its repeal in 2016 was due in large part to its lack of fairness.

**Simplicity** This was an extremely complex provision that few individuals, other than tax professionals, fully understood. Evidence of this: The government did not get the initial legislation right and was forced to issue revisions.

### *Increase In Lifetime Capital Gains Deduction*

Possible comments here would be as follows:

**Neutrality** The increase in the amount of the deduction for farmers and fishermen is not neutral. It favours farmers and fishermen with no benefits for any other group.

**Simplicity** The determination of what properties are considered to be qualified for this deduction involves some very complex legislation.

### *Home Accessibility Tax Credit*

Possible comments here would be as follows:

**Neutrality** This provision is not neutral. Its benefits accrue exclusively to seniors, disabled individuals, and their families. Other individuals do not benefit from this provision.

**Equity Or Fairness** Disabled seniors face accessibility challenges that are not present for most other individuals. Given this, it can be argued that helping this particular group involves fairer treatment of these individuals.

### *Reduction In Small Business Rate*

Possible comments here would be as follows:

**International Competitiveness** It is likely that this tax cut will make Canada a more attractive environment for small business.

**Certainty** By announcing the decrease in advance, certainty of the future rate was provided.

### *Increase In Tax Free Savings Account Limits*

Possible comments here would be as follows:

**Equity Or Fairness** It was clear that this change would not benefit low income individuals. If an individual is making $20,000 per year, it is highly unlikely that this individual would have the first $5,500, much less an extra $4,500 to contribute. The reversal of the increase in 2016 was due in large part to its lack of fairness.

**Simplicity** This change gets high marks for simplicity. Amounts earned on the assets in the account are not subject to tax, either while the assets are in the plan or when the earnings are removed from the plan.

## Self Study Solution One - 4

The principal other sources of information can be described as follows:

1. **Draft Legislation** This legislation often provides the only information available with respect to announced budget changes that require application in the current taxation year. Explanatory notes are included with released draft legislation but are always set out separately.

2. **Income Tax Regulations** These Regulations provide detailed guidance with respect to the implementation and administrative enforcement of the provisions of the *Income Tax Act*.

3. **International Tax Treaties** These are a group of bilateral tax treaties between Canada and other countries. They are designed to avoid double taxation of taxpayers who pay taxes in more than one jurisdiction and to prevent international tax evasion.

4. **Income Tax Folios** Income Tax Folios are a new series of publications introduced in 2013 that deal with technical issues. The publications are organized into seven Series with each Series divided into Folios that contain Chapters on specific topics. As new Folios are introduced, the Interpretation Bulletins and Income Tax Technical Newsletters they are replacing are being cancelled.

5. **Interpretation Bulletins** These IT-Bulletins give the CRA's interpretations of particular sections of the law which it administers and provide a vehicle for announcing significant changes in departmental interpretation. These Bulletins are being replaced over the next few years by the new series, Income Tax Folios (see item 4).

6. **Income Tax Application Rules, 1971 (ITARs)** These are a set of transitional rules that were introduced when the *Income Tax Act* was heavily revised at the end of 1971. The rules were largely designed to ensure that the provisions of the new *Act* were not applied retroactively. Although they continue to be of some significance in a limited number of situations, their general importance has been greatly diminished over time.

7. **Income Tax Technical News** These newsletters were an occasional publication of the CRA which provided detailed guidance on various current issues. Existing newsletters are being cancelled as new Income Tax Folios (see item 6) are gradually incorporating their content.

8. **Information Circulars** These Circulars provide information with respect to procedural matters related to both the *Income Tax Act* and the Canada Pension Plan.

9. **CRA News Releases, Tax Tips and Fact Sheets** The CRA provides News Releases, tax tips and fact sheets on a variety of current subjects on its website.

10. **Guides And Pamphlets** These non-technical publications provide guidance for the public on a variety of income tax issues (e.g., treatment of rental income).

11. **Advance Income Tax Rulings** For a fee, the CRA will provide an Advance Income Tax Ruling on how it will tax a proposed transaction, subject to certain limitations and qualifications. These are rulings that are provided in response to requests from taxpayers.

12. **Technical Interpretations** The CRA provides both written and telephone Technical Interpretations to the public free of charge. These Interpretations provide technical information on various current issues.

13. **Court Decisions** Decisions by the Tax Court of Canada, the Federal Court and the Supreme Court on income tax cases serve to establish precedents for dealing with particular tax issues.

## Self Study Solution One - 5

S5-F1-C1 indicates that, in general, the CRA will view an individual as becoming a non-resident on the latest of three dates:

- The date the individual leaves Canada.
- The date the individual's spouse or common-law partner and dependants leave Canada.
- The date the individual becomes a resident of another country.

As Paul's wife and daughter did not leave Canada, it would appear that the CRA would take the position that Paul did not stop being a resident of Canada.

As he purchased a house in the U.S., it is possible that he will also be viewed as a resident of that jurisdiction. If this is the case, the tie breaker rules that are contained in the tax treaty between Canada and the U.S. tax treaty must be applied. As Paul has a permanent home available in both locations, we need to apply the center of vital interests criterion. The personal ties appear to be stronger in Canada, so it is likely that the CRA would conclude that the center of vital interests is Canada. Given this, Paul would not be considered to be resident in the U.S.

Based on this conclusion, Paul should report his worldwide income in Canada, and claim a foreign tax credit for any U.S. tax paid on his employment income while he was living and working in the U.S.

## Self Study Solution One - 6

### *Mr. Aiken And Mr. Baker*

Assuming that their respective moves were permanent in nature, both Mr. Aiken and Mr. Baker would be treated as part year residents. This means that they would be considered residents of Canada only for that portion of the year that they were actually in Canada. As a result, they will be liable for Canadian taxes only for a part of the current year. The prorating of deductions and credits are determined in accordance with ITA 114 and ITA 118.91.

### *Mr. Chase*

While Mr. Chase was in Canada for the same number of days as the other individuals, the fact that he was present only on a temporary basis makes him subject to the sojourning rule. Under this rule [see ITA 250(1)(a)], he will be considered a resident for the full year if he sojourns in Canada for 183 days or more during any calendar year. As Mr. Chase was present for 192 days, he would be viewed as a Canadian resident throughout the year.

However, as he appears to also be a resident of the U.S., his dual residency status would be resolved by the tie-breaker rules in the Canada/U.S. tax treaty. As he only has a permanent home in the U.S., the tie breaker rules would deem Mr. Chase not to be a resident of Canada. This means that he would be taxed in the U.S.

## Self Study Solution One - 7

A. Jane Smith would be deemed a Canadian resident because she is a dependent child of a Canadian ambassador [ITA 250(1)(f)].

B. Marvin Black would not be considered a resident of Canada as he does not live in Canada. He would not be a deemed resident as S5-F1-C1 makes it clear that days spent commuting to Canada to earn employment income do not count as sojourning in Canada. However, he would likely be subject to Canadian taxation on the employment income earned in Canada [ITA 2(3)(a)].

C. John Leather would be considered a resident of Canada for the part of the year until September 12. As his presence in Canada during the first part of the year was not on a part time basis, he would not fall under the sojourning rules.

D. Members of the Canadian armed forces are deemed to be Canadian residents without regard to where they actually live. As Francine Donaire is exempt from French taxation due to her relationship to a deemed resident, she is a deemed resident of Canada [ITA 250(1)(g)].

E. More information would be required here. Depending on the nature of his stay in Canada, Robert could either be a part year resident of Canada or, alternatively, a non-resident earning employment income in Canada. If he established sufficient residential ties in Canada, it is possible that he would be viewed as a resident during his short stay.

The importance of this is that, under this interpretation of the facts, he would be subject to Canadian income tax on his worldwide income during his stay. Alternatively, if he is not considered a resident during his stay in Canada, he is likely to be subject to Canadian tax on only his Canadian employment income.

F. The fact that Susan Allen is a Canadian citizen is irrelevant to the determination of residency. Since she appears to have no residential ties with Canada, she would not be considered a Canadian resident.

## Self Study Solution One - 8

A. As AMT Ltd. was incorporated prior to April 27, 1965, it is not automatically considered to be a resident of Canada. However, under Canadian legislation the Company would be deemed a Canadian resident based on the fact that the mind and management was in Canada subsequent to that date. [ITA 250(4)(a) and (c)].

As the mind and management is now in the U.S., it would also be considered a U.S. resident. Given this dual residency, the tie-breaker rules in the Canada/U.S. Tax Treaty resolve the situation by making the Company a resident of its country of incorporation. This would result in AMT being considered a resident of Canada.

B. UIF Inc. was not incorporated in Canada and its mind and management are not currently within Canada. Therefore, UIF Inc. would not be considered a Canadian resident.

C. BDT Ltd. would be deemed a Canadian resident. This is because it was incorporated in Canada subsequent to April 26, 1965. [ITA 250(4)(a)]. However, as the mind and management is now in the U.S., it would also be considered a U.S. resident. Given this dual residency, the tie-breaker rules in the Canada/U.S. Tax Treaty resolve the situation by making the Company a resident of its country of incorporation. This would result in BDT being considered a resident of Canada.

D. While QRS Inc. was not incorporated in Canada, it would appear that its mind and management are located in Ontario. However, as it was incorporated in New York state, it will also be considered a resident of the U.S. As noted previously, in such cases, the tie-breaker rules in the Canada/U.S. Tax Treaty would make the Company a resident of the U.S. as that is the country of incorporation and not a Canadian resident.

## Self Study Solution One - 9

### *Case A*

Mr. Salazar is not a resident of Canada. Commuting across the border for employment purposes is not considered sojourning (S5-F1-C1). However, unless he is exempted by the Canada/U.S. tax treaty, he would be subject to Canadian taxation on the employment income which he earns in Windsor.

With respect to the treaty exemption, his employment income exceeds $10,000 and he is physically present in Canada for more than 183 days in the year. Given these facts, he would not qualify for the treaty exemption.

### *Case B*

The information suggests that Mr. Wills made a clean break with Canada on September 1 of the current year. As a consequence, he would be considered a Canadian resident for the portion of the current year prior to his departure and would be taxed on his worldwide income for this period. For the portion of the year subsequent to his departure, he would no longer be considered a Canadian resident.

***Case C***

Joan Brothers would be deemed to be a Canadian resident under ITA 250(1)(f) because she is a dependent child of an officer or servant of Canada who is deemed to be a resident of Canada under ITA 250(1)(c)(i).

***Case D***

Brogan Inc. was not incorporated in Canada and its mind and management are not currently within Canada. As a result, the Company is not a Canadian resident and none of its income would be subject to Canadian taxes.

***Case E***

Mercer Ltd. was incorporated prior to April 27, 1965 and, if it had not resided in or done business in Canada subsequent to that date, it would not be considered a resident of Canada. However, the fact that directors meetings were held in Canada until May, 1996 makes it a Canadian resident. As the mind and management are now in the U.S., it would also be considered a resident of that country.

In cases of dual residency for corporations, where a corporation could be considered a resident of both countries, the Canada/U.S. tax treaty indicates that the corporation will be deemed to be a resident only in the country in which it is incorporated. Mercer Ltd. would be a resident of Canada and its worldwide income would be subject to tax in Canada.

***Case F***

The Booker Manufacturing Company would be considered resident in Canada because of the location of its mind and management. However, as Booker was incorporated in the U.S., it would also be considered a resident of that country. In cases of dual residency for corporations, where a corporation could be considered a resident of both countries, the Canada/U.S. tax treaty indicates that the corporation will be deemed to be a resident only in the country in which it is incorporated. As a result, the Company is not a Canadian resident and none of its income would be subject to Canadian taxes.

## Self Study Solution One - 10

***Case A***

The Case A solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Employment Income | $50,000 | |
| Interest Income | 12,000 | $62,000 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains | $95,000 | |
| Allowable Capital Losses | ( 73,000) | 22,000 |
| Balance From ITA 3(a) And (b) | | $84,000 |
| Subdivision e Deductions | | ( 8,000) |
| Balance From ITA 3(c) | | $76,000 |
| Deductions Under ITA 3(d): | | |
| Business Loss | | ( 23,000) |
| Net Rental Loss | | ( 5,000) |
| Net Income For Tax Purposes (Division B Income) | | $48,000 |

In this Case, Mr. Dorne has no carry overs available.

***Case B***

The Case B solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Employment Income | $45,000 | |
| Net Rental Income | 23,000 | $68,000 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains | $25,000 | |
| Allowable Capital Losses | ( 46,000) | Nil |
| Balance From ITA 3(a) And (b) | | $68,000 |
| Subdivision e Deductions | | ( 10,500) |
| Balance From ITA 3(c) | | $57,500 |
| Deduction Under ITA 3(d): | | |
| Business Loss | | ( 51,000) |
| Net Income For Tax Purposes (Division B Income) | | $ 6,500 |

In this Case, Mr. Dorne has a carry over of unused allowable capital losses in the amount of $21,000 ($46,000 - $25,000). The lottery prize is not considered to be income for tax purposes.

## Self Study Solution One - 11

***Case A***

The Case A solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Employment Income | $73,300 | |
| Rental Income | 8,300 | $81,600 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains | $42,400 | |
| Allowable Capital Losses | ( 18,600) | 23,800 |
| Balance From ITA 3(a) And (b) | | $105,400 |
| Subdivision e Deductions | | ( 6,200) |
| Balance From ITA 3(c) | | $ 99,200 |
| Deduction Under ITA 3(d): | | |
| Business Loss | | ( 14,700) |
| Net Income For Tax Purposes (Division B Income) | | $ 84,500 |

In this Case, Mr. Marks has no loss carry overs at the end of the year.

***Case B***

The Case B solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Employment Income | $41,400 | |
| Rental Income | 5,900 | $ 47,300 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains | $ 7,800 | |
| Allowable Capital Losses | ( 11,600) | Nil |
| Balance From ITA 3(a) And (b) | | $47,300 |
| Subdivision e Deductions | | ( 2,800) |
| Balance From ITA 3(c) | | $44,500 |
| Deduction Under ITA 3(d): | | |
| Business Loss | | ( 4,700) |
| Net Income For Tax Purposes (Division B Income) | | $39,800 |

In this Case, Mr. Marks has an allowable capital loss carry over of $3,800 ($7,800 - $11,600).

***Case C***

The Case C solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Employment Income | $89,400 | |
| Rental Income | 5,300 | $94,700 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains | $23,700 | |
| Allowable Capital Losses | ( 21,200) | 2,500 |
| Balance From ITA 3(a) and (b) | | $97,200 |
| Subdivision e Deductions | | ( 22,400) |
| Balance From ITA 3(c) | | $74,800 |
| Deduction Under ITA 3(d): | | |
| Business Loss | | ( 112,600) |
| Net Income For Tax Purposes (Division B Income) | | Nil |

In this Case, Mr. Marks would have a business loss carry over in the amount of $37,800 ($74,800 - $112,600).

***Case D***

The Case D solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Employment Income | | $34,300 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains | $24,700 | |
| Allowable Capital Losses | ( 26,300) | Nil |
| Balance From ITA 3(a) And (b) | | $34,300 |
| Subdivision e Deductions | | ( 6,400) |
| Balance From ITA 3(c) | | $27,900 |
| Deduction Under ITA 3(d): | | |
| Business Loss | | ( 47,800) |
| Rental Loss | | ( 20,100) |
| Net Income For Tax Purposes (Division B Income) | | Nil |

Mr. Marks would have a carry over of business and rental losses in the amount of $40,000 ($27,900 - $47,800 - $20,100) and of allowable capital losses in the amount of $1,600 ($24,700 - $26,300).

## Self Study Solution One - 12

### *Case 1*

The Case 1 solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Net Employment Income | $123,480 | |
| Interest Income | 4,622 | $128,102 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains | $24,246 | |
| Allowable Capital Losses | ( 4,835) | 19,411 |
| Balance From ITA 3(a) And (b) | | $147,513 |
| Child Care Costs | | ( 9,372) |
| Balance From ITA 3(c) And Net Income For Tax Purposes | | $138,141 |

In this Case, Mr. Comfort has no loss carry overs at the end of the year.

### *Case 2*

The Case 2 solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Net Business Income | | $72,438 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains | $4,233 | |
| Allowable Capital Loss | ( 7,489) | Nil |
| Balance From ITA 3(a) And (b) | | $72,438 |
| RRSP Contributions | | ( 22,000) |
| Balance From ITA 3(c) | | $50,438 |
| Deduction Under ITA 3(d): | | |
| Net Rental Loss | | ( 9,846) |
| Net Income For Tax Purposes (Division B Income) | | $40,592 |

In this Case, Mr. Comfort has a carry over of $3,256 ($7,489 - $4,233) in unused allowable capital losses.

### *Case 3*

The Case 3 solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Net Employment Income | | $47,234 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains [(1/2)($12,472)] | $6,236 | |
| Allowable Capital Losses [(1/2)($9,332)] | ( 4,666) | 1,570 |
| Balance From ITA 3(a) and (b) | | $48,804 |
| Child Care Costs | | ( 3,922) |
| Balance From ITA 3(c) | | $44,882 |
| Deduction Under ITA 3(d): | | |
| Net Business Loss | | ( 68,672) |
| Net Income For Tax Purposes (Division B Income) | | Nil |

In this Case, Mr. Comfort would have a business loss carry over in the amount of $23,790 ($68,672 - $44,882).

***Case 4***

The Case 4 solution would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Interest Income | $ 6,250 | |
| Net Business Income | 43,962 | $50,212 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains [(1/2)($12,376)] | $ 6,188 | |
| Allowable Capital Losses [(1/2)($23,874)] | ( 11,937) | Nil |
| Balance From ITA 3(a) And (b) | | $50,212 |
| Moving Expenses | | ( 7,387) |
| Balance From ITA 3(c) | | $42,825 |
| Deduction Under ITA 3(d): | | |
| Net Rental Loss | | ( 72,460) |
| Net Income For Tax Purposes (Division B Income) | | Nil |

Mr. Comfort would have a rental loss carry over in the amount of $29,635 ($72,460 - $42,825) and unused allowable capital losses in the amount of $5,749 ($11,937 - $6,188).

## Chapter 1 Learning Objectives

After completing Chapter 1, you should be able to:

1. List some of the different bases that can be used by the various levels of government to assess taxes (paragraph [P hereafter] 1-1 through 1-6).
2. List all of the types of entities that are subject to paying federal income taxes and GST (P 1-7 through 1-12).
3. Explain the relationship between the assessment of taxes at the federal level and the assessment of taxes at the provincial level (P 1-13 through 1-25).
4. List some of the ways that taxation is used to achieve economic objectives (P 1-26).
5. Describe the differences between progressive, regressive, and flat tax systems, including some of the advantages and disadvantages of each system (P 1-27 through 1-34).

---

6. Discuss the issue of who ultimately pays the cost of various types of taxes (P 1-35 and 1-36).
7. Explain the nature of tax expenditures (P 1-37 through 1-40).
8. Evaluate issues in tax policy on the basis of the qualitative characteristics of tax systems (P 1-41 through 1-43).
9. Describe the reference materials that are available on income tax databases (P 1-44 through 1-48).
10. Describe the general structure of the *Income Tax Act* (P 1-49 through 1-60).

---

11. List and explain the nature of other sources of income tax legislation (P 1-61 through 1-70).
12. Describe other sources of income tax information (P 1-71 through 1-75).
13. Describe the charging provisions of the *Income Tax Act* for residents and non-residents (P 1-76 through 1-93).
14. Determine the residence of an individual based on an evaluation of primary and secondary residential ties (P 1-94 through 1-101).
15. Evaluate the residency status of an individual who is temporarily absent from Canada or is only resident for part of the year (P 1-102 through 1-108).

---

16. Identify the types of individuals who will be deemed to be Canadian residents without regard to their actual physical location (P 1-109 through 1-122).
17. Determine the residence of corporations and trusts (P 1-123 through 1-132).
18. Describe, in general terms, the various views of income that are held by economists, accountants, and tax authorities (P 1-133 through 1-141).
19. Calculate Net Income For Tax Purposes by applying the rules found in Section 3 of the *Income Tax Act* (P 1-142 through 1-167).
20. Explain how Net Income For Tax Purposes is converted to Taxable Income (P 1-168 and 1-169).

---

21. Explain the principles of tax planning (P 1-170 through 1-173).
22. Explain and provide examples of tax avoidance or reduction, and tax deferral (P 1-174 through 1-181).
23. Explain and provide examples of income splitting (P 1-182 through 1-188).

# CHAPTER 2

## How To Work Through Chapter 2

We recommend the following approach in dealing with the material in this chapter:

**Administration Of The Department**

- Read paragraph 2-1 to 2-7 (in the textbook).

**Filing Requirements For Living And Deceased Individuals**

- Read paragraph 2-8 to 2-17.
- Do Exercise Two-1 (in the textbook) and check the solution in this Study Guide.
- Read paragraph 2-18 to 2-20.
- Do Exercise Two-2 and check the solution in this Study Guide.

**Withholdings For Income Tax**

- Read paragraph 2-21 to 2-27.

**Instalment Payments For Individuals**

- Read paragraph 2-28 to 2-43.
- Do Exercises Two-3 to Two-5 and check the solutions in this Study Guide.
- Do Self Study Problem Two-1 which is available on MyLab and check the solution in this Study Guide.

**Interest, Penalties And Balance Due Dates For Living And Deceased Individuals**

- Read paragraph 2-44 to 2-55.
- Do Exercise Two-6 and check the solution in this Study Guide.
- Read paragraph 2-56 to 2-60.

**Returns And Payments, Including Instalments, For Corporations**

- Read paragraph 2-61 to 2-73.
- Do Exercises Two-7 and Two-8 and check the solutions in this Study Guide.

**Balance Due Dates For Corporations**

- Read paragraph 2-74 and 2-75.
- Do Exercise Two-9 and check the solution in this Study Guide.

**Interest And Penalties For Corporations**

- Read paragraph 2-76 to 2-79.
- Do Self Study Problems Two-2 to Two-4 and check the solutions in this Study Guide.

**Returns And Payments For Trusts**

- Read paragraph 2-80 to 2-87.
- Do Self Study Problem Two-5 and check the solution in this Study Guide.

### General Administrative Issues, Including The "My Account" Service, Assessments, Refunds, And Adjustments To Returns

- Read paragraph 2-88 to 2-104.

### Appeals And Notices Of Objection

- Read paragraph 2-105 to 2-120.
- Do Exercise Two-10 and check the solution in this Study Guide.
- Read paragraph 2-121 to 2-130.
- Do Self Study Problem Two-6 and check the solution in this Study Guide.

### Tax Evasion, Avoidance, And Planning

- Read paragraph 2-131 to 2-140.

### Collection And Enforcement

- Read paragraph 2-141 to 2-152.
- Do Self Study Problem Two-7 and check the solution in this Study Guide.

### Taxpayer Relief Provisions

- Read paragraph 2-153 to 2-156.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 2. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 2 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 2 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 2 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 2 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

## Solutions to Chapter Two Exercises

### Exercise Two - 1 Solution

While Mr. Katarski's 2019 tax return does not have to be filed until June 15, 2020, his tax liability must be paid by April 30, 2020 in order to avoid the assessment of interest.

### Exercise Two - 2 Solution

Sally Cheung's 2019 tax return must be filed by the later of six months after the date of her death and her normal filing date. As her husband has business income, her normal filing date is June 15, 2020. The later of the two dates would be August 15, 2020, six months after the date of her death. Her final return for 2020 would be due on June 15, 2021.

### Exercise Two - 3 Solution

She is not required to make instalment payments as long as her current year (2019) net tax owing is less than $3,000.

### Exercise Two - 4 Solution

As his net tax owing in the current year and one of the two preceding years is in excess of $3,000, he is required to make instalment payments. The minimum amount would be based on the preceding taxation year's net tax owing of $1,500, and would be $375 ($1,500 ÷ 4) per quarter. They are due on March 15, June 15, September 15, and December 15.

### Exercise Two - 5 Solution

The net tax owing amounts can be calculated as follows:

**2017** $1,000 ($53,000 - $52,000)
**2018** $7,000 ($59,000 - $52,000)
**2019** $4,000 ($64,000 - $60,000)

As the net tax owing exceeds $3,000 in the current year and the first preceding year, instalments are required. The three alternatives for calculating instalment payments are as follows:

- Based on the estimate for the current year, the instalments would be $1,000 ($4,000 ÷ 4).
- Based on the estimate for the preceding year, the instalments would be $1,750 ($7,000 ÷ 4).
- Based on the second preceding year, the first two instalments would each be $250 ($1,000 ÷ 4). The second two instalments would each be $3,250 {[1/2][$7,000 - ($250)(2)]}. The instalments would total $7,000, the same amount as under the preceding year alternative.

While the first two instalments are lower under the second preceding year alternative, the total for all the instalments under this alternative is $7,000, higher than the $4,000 total under the current year alternative. The current year alternative would be the best. They are due on March 15, June 15, September 15, and December 15. Note, however, that if the estimated taxes payable are below actual taxes payable for 2019, instalment interest may be charged.

### Exercise Two - 6 Solution

Given the size of her net tax owing, ITA 163.1 will not be applicable and there will be no penalties for late instalments. The penalty for late filing will be based on the number of **complete** months of non-payment, which is two. It will be equal to 7 percent of taxes payable (5 percent, plus 1 percent per month). If, in one of the three preceding taxation years she has also late filed, the penalty could be 14 percent (10 percent, plus 2 percent per month) if the CRA has already sent a request for the return.

Interest will be assessed on the deficient instalments, calculated from the date on which the instalment was due. Interest will also be assessed on the balance owing on her filing date, along with the penalty for late filing. This interest will be assessed for the period May 1 through July 20, 2020. All of the interest will be calculated at the prescribed rate plus 4 percent.

### *Exercise Two - 7 Solution*

**Not Small CCPC** If we assume that Madco Ltd. is not a small CCPC, the first two instalments would be due on the last day of January and February, 2019. They would be based on the second preceding year and would be $2,667 each ($32,000 ÷ 12). The remaining 10 instalments would be based on the preceding year, less the $5,334 paid in the first two instalments. The amount would be $5,367 [($59,000 - $5,334) ÷ 10] and the instalments would be due on the last day of each month for March to December, 2019.

**Small CCPC** If we assume that Madco Ltd. is a small CCPC, the first instalment would be due on March 31, 2019. The amount would be based on the second preceding year and would equal $8,000 ($32,000 ÷ 4). The remaining three instalments would be based on the preceding year, less the amount paid in the first instalment. These payments would be equal to $17,000 [($59,000 - $8,000) ÷ 3]. These payments would be due on the last days of June, September, and December, 2019.

Note that when the initial instalment(s) are based on the second preceding year, the total amount of instalments will be the same as when all of the instalments are based on the first preceding year. However, using the second preceding year is preferable in that it provides some deferral of taxes.

### *Exercise Two - 8 Solution*

**Not Small CCPC** If we assume that Fadco is not a small CCPC, the minimum instalments would be based on the estimated taxes payable for the taxation year ending November 30, 2019. The amount would be $1,417 ($17,000 ÷ 12) and the instalments would be due on the last day of each month beginning in December, 2018 and continuing to November, 2019. Note that, if the estimate of tax payable for 2019 is too low, interest may be assessed on the deficiency.

**Small CCPC** If we assume that Fadco is a small CCPC, the instalments would be based on the estimated taxes payable for the taxation year ending November 30, 2019. The amount would be $4,250 ($17,000 ÷ 4). These amounts would be due on the last days of February, May, August, and November, 2019.

### *Exercise Two - 9 Solution*

Radco Inc.'s tax return is due six months after the fiscal year end, on July 31, 2019. Unless Radco is able to claim the small business deduction, the final payment on their taxes is due two months after the year end, on March 31, 2019. If Radco is eligible for the small business deduction, the final payment can be deferred for an additional month, to April 30, 2019, provided the Taxable Income for the preceding taxation year did not exceed $500,000.

### *Exercise Two - 10 Solution*

The notice of objection must be filed by the later of:

- 90 days after the date on the Notice of Reassessment (August 13, 2021); or
- one year after the due date for filing the return that is being reassessed (April 30, 2021).

The later of these two dates is August 13, 2021.

## Self Study Solution Two - 1

#### *Need For Instalments*

Instalments are required when an individual's "net tax owing" exceeds $3,000 in the current year and in either of the two preceding years. In somewhat simplified terms, "net tax owing" is defined as the combined federal and provincial taxes payable, less amounts withheld under ITA 153. Mr. Grafton's net tax owing figures are as follows:

**2017** = $1,700 ($31,500 - $29,800)
**2018** = $8,400 ($14,600 - $6,200)
**2019** = $3,100 ($27,400 - $24,300) Estimated

As Mr. Grafton's net tax owing in 2019 (the current year) and his net tax owing in 2018 (one of the two preceding years) is greater than $3,000, he is required to make instalment payments.

#### *Amounts*

If Mr. Grafton bases the first two quarterly payments on the 2017 net tax owing, they would only be $425 each ($1,700 ÷ 4). However, the payments for the last two quarters would be $3,775 each {[$8,400 - (2)($425)] ÷ 2}, resulting in total instalment payments of $8,400.

A preferable alternative would be to base the payments on the net tax owing for 2019. These payments would be $775 each ($3,100 ÷ 4), for a total of $3,100.

#### *Payment Dates*

The quarterly payments would be due on March 15, June 15, September 15, and December 15.

## Self Study Solution Two - 2

#### *Case One*

1. As the corporation's tax payable for both the current and the preceding year exceeds $3,000, instalments are required. As the corporation is not a small CCPC, monthly instalments are required.

2. The three acceptable alternatives would be as follows:
   - Monthly instalments of $9,435 ($113,220 ÷ 12) based on the current year estimate.
   - Monthly instalments of $10,185 ($122,220 ÷ 12) based on the first preceding year.
   - Two monthly instalments of $8,640 ($103,680 ÷ 12) based on the second preceding year, followed by 10 monthly instalments of $10,494 {[($122,220 - (2)($8,640)] ÷ 10}, a total of $122,220.

3. The best alternative in terms of minimum instalments would be 12 instalments of $9,435, resulting in a total of $113,220 of instalment payments.

   The instalments would be due on the last day of each month, beginning in January, 2019.

### Case Two

1. As the corporation's tax payable for both the current and the preceding year exceeds $3,000, instalments are required. As the corporation is not a small CCPC, monthly instalments are required.

2. The three acceptable alternatives would be as follows:

   - Monthly instalments of $9,435 ($113,220 ÷ 12) based on the current year estimate.
   - Monthly instalments of $9,210 ($110,520 ÷ 12) based on the first preceding year.
   - Two monthly instalments of $8,640 ($103,680 ÷ 12) based on the second preceding year, followed by 10 monthly instalments of $9,324 {[($110,520 - (2)($8,640)] ÷ 10}, a total of $110,520.

3. The best alternative would be two payments of $8,640, followed by ten payments of $9,324. While the total instalments are the same $110,520 in both the second and third alternatives, the third alternative is preferable because the first two payments are lower. This provides a small amount of tax deferral.

   The instalments would be due on the last day of each month, beginning in January, 2019.

### Case Three

1. As the corporation's tax payable for both the current and the preceding year exceeds $3,000, instalments are required. As the corporation is a small CCPC, instalments will be quarterly.

2. The three acceptable alternatives would be as follows:

   - Quarterly instalments of $28,305 ($113,220 ÷ 4) based on the current year estimate.
   - Quarterly instalments of $30,555 ($122,220 ÷ 4) based on the first preceding year.
   - One instalment of $25,920 ($103,680 ÷ 4) based on the second preceding year, followed by three instalments of $32,100 [($122,220 - $25,920) ÷ 3], a total of $122,220.

3. The best alternative in terms of minimum instalments would be four instalments of $28,305, for total payments of $113,220. The instalments are due on March 31, June 30, September 30, and December 31, 2019.

### Case Four

1. As the corporation's tax payable for both the current and the preceding year exceeds $3,000, instalments are required. As the corporation is a small CCPC, instalments will be quarterly.

2. The three acceptable alternatives would be as follows:

   - Quarterly instalments of $28,305 ($113,220 ÷ 4) based on the current year estimate.
   - Quarterly instalments of $27,630 ($110,520 ÷ 4) based on the first preceding year.
   - One instalment of $25,920 ($103,680 ÷ 4) based on the second preceding year, followed by three instalments of $28,200 [($110,520 - $25,920) ÷ 3], a total of $110,520.

3. The best alternative would be one payment of $25,920, followed by three payments of $28,200. While the total instalments are the same $110,520 in both the second and third alternatives, the third alternative is preferable because the first payment is lower. This provides a small amount of tax deferral.

   The instalments are due on March 31, June 30, September 30, and December 31, 2019.

## Self Study Solution Two - 3

### *Case One*

1. The individual's net tax owing in each of the three years is as follows:

   **2017** = Nil ($72,300 - $73,700)
   **2018** = $6,200 ($89,400 - $83,200)
   **2019** = $3,300 ($78,300 - $75,000)

   As the net tax owing exceeds $3,000 in the current year and one of the two preceding years, instalments are required.

2. The three alternatives would be:

   - Quarterly instalments of $825 ($3,300 ÷ 4) based on the current year estimate.
   - Quarterly instalments of $1,550 ($6,200 ÷ 4) based on the first preceding year.
   - Based on the second preceding year, the first two instalments would be nil. The remaining two instalments would be $3,100 each [($6,200 -
   - Nil) ÷ 2] for a total of $6,200.

3. The best alternative to minimize instalments would be four quarterly instalments of $825, for a total of $3,300.

   The instalments are due on March 15, June, 15, September 15, and December 15.

### *Case Two*

1. The individual's net tax owing in each of the three years is as follows:

   **2017** = $7,200 ($72,300 - $65,100)
   **2018** = Nil ($89,400 - $90,100)
   **2019** = $6,400 ($78,300 - $71,900)

   As the net tax owing exceeds $3,000 in the current year and one of the two preceding years, instalments are required.

2. The three alternatives would be:

   - Quarterly instalments of $1,600 ($6,400 ÷ 4) based on the current year estimate.
   - Quarterly instalments of nil based on the first preceding year.
   - Two quarterly instalments of $1,800 ($7,200 ÷ 4) based on the second preceding year. No further instalments would be required.

3. The best alternative would be quarterly instalments of nil based on the first preceding year.

### *Case Three*

1. As the corporation's tax payable for both the current and the preceding year exceeds $3,000, instalments are required. As the corporation is a small CCPC, instalments will be quarterly.

2. The three acceptable alternatives would be as follows:

   - Quarterly instalments of $19,575 ($78,300 ÷ 4) based on the current year estimate.
   - Quarterly instalments of $22,350 ($89,400 ÷ 4) based on the first preceding year.
   - One instalment of $18,075 ($72,300 ÷ 4) based on the second preceding year, followed by three instalments of $23,775 [($89,400 - $18,075) ÷ 3], a total of $89,400.

3. The best alternative would be four instalments of $19,575, for total payments of $78,300.

   The instalments are due on March 31, June 30, September 30, and December 31.

***Case Four***

1. As the corporation's tax payable for both the current and the preceding year exceeds $3,000, instalments are required. As the corporation is not a CCPC so cannot be eligible for the small business deduction, monthly instalments are required.

2. The three acceptable alternatives would be as follows:

   - Monthly instalments of $6,525 ($78,300 ÷ 12) based on the current year estimate.
   - Monthly instalments of $6,208.33 ($74,500 ÷ 12) based on the first preceding year.
   - Two monthly instalments of $6,025 ($72,300 ÷ 12) based on the second preceding year, followed by 10 monthly instalments of $6,245 {[($74,500 - (2)($6,025)] ÷ 10}, a total of $74,500.

3. In terms of minimizing instalment payments, both the second and third alternatives involve paying $74,500, which is less than the payment of $78,300 under the first alternative. While the problem does not ask you to take into consideration deferral, the third alternative would be the best in that the first two payments are lower.

   The instalments would be due on the last day of each month, beginning in January.

## Self Study Solution Two - 4

***Case A***

The individual's actual and estimated net tax owing is equal to the Tax Payable in each of the three years as follows:

**2017** = $18,000
**2018** = $14,400
**2019** = $13,500 (Estimated)

As the estimated tax payable for the current year and the actual tax payable for the preceding year exceeds $3,000, instalments are required.

Using the estimated Tax Payable for the current year would result in the minimum instalment payments. Based on this year, the required quarterly instalments would be $3,375 ($13,500 ÷ 4).

They would be due on March 15, June 15, September 15, and December 15 and would total $13,500.

Since the actual federal and provincial taxes payable for 2019 of $16,000 is higher than the tax payable of $14,400 of the preceding year, the instalments should have been based on $14,400. The instalments should have been $3,600 ($14,400 ÷ 4) for each quarter.

Interest at the prescribed base rate plus 4 percent is charged on any portion of a required instalment payment that is not remitted on the required instalment due date. The interest is charged from the date the instalment is due until an offset occurs, or until the due date for the balance owing.

***Case B***

The individual's net tax owing in each of the three years is as follows:

**2017** = $11,000 ($18,000 - $7,000)
**2018** = Nil (Withholdings exceed tax payable. Note this is nil, not a negative amount.)
**2019** = $4,500 ($13,500 - $9,000) (Estimated)

As the individual's net tax owing is expected to exceed $3,000 in 2019 and was more than $3,000 in 2017, the payment of instalments is required.

Using the 2018 net tax owing would result in minimum instalment payments. Based on this year, the required quarterly instalments would be nil.

The fact that the actual federal and provincial taxes payable for 2019 are higher than were estimated is not relevant in this Case.

***Case C***

The corporation's Tax Payable for the three years is as follows:

**2017** = $18,000
**2018** = $14,400
**2019** = $13,500 (Estimated)

As the corporation's tax payable for both the current and the preceding year exceeds $3,000, instalments are required.

Using the estimated Tax Payable for the current year would result in the minimum instalment payments. As the corporation is a small CCPC, the required instalments would be quarterly. The amount would be $3,375 ($13,500 ÷ 4).

They would be due on the last days of March, June, September, and December, 2019.

Like Case A, since the actual federal and provincial taxes payable for 2019 of $16,000 is higher than the tax payable of $14,400 of the preceding year, the instalments should have been based on $14,400. The instalments should have been $3,600 ($14,400 ÷ 4) for each quarter.

Interest at the prescribed base rate plus 4 percent is charged on any portion of a required instalment payment that is not remitted on the required instalment due date. The interest is charged from the date the instalment is due until an offset occurs, or until the due date for the balance owing.

***Case D***

The corporation's Tax Payable for the three years is as follows:

**2017** = $18,000
**2018** = $14,400
**2019** = $16,000 (Estimated and actual)

As the corporation's tax payable for both the current and the preceding year exceeds $3,000, instalments are required.

Using the estimated Tax Payable for 2018 would result in minimum instalment payments. As the corporation is not a CCPC so cannot be eligible for the small business deduction, the required instalments would be monthly. The amount would be $1,200 ($14,400 ÷ 12). They would be due on the last day of each month, beginning in January, 2019.

## Self Study Solution Two - 5

The three taxable entities are individuals, corporations, and trusts. The required information for each is as follows:

**Individuals** For individuals, the taxation year is the calendar year. For individuals without business income, the filing deadline is April 30 of the following year. Individuals with business income, and their spouse or common-law partner, have an extended filing deadline of June 15.

If an individual dies after October, the due date of the return for the year of death is extended to 6 months after the date of death. Instalment payments for all individuals, if required, are to be made quarterly on March 15, June 15, September 15, and December 15.

**Corporations** Corporations can choose any fiscal year that does not exceed 53 weeks. The filing deadline is six months after the fiscal year end. In general, corporations must make instalments on the last day of each month. However, if the corporation qualifies as a small CCPC, quarterly instalments are required on the last day of the last month of each 3 month period in the corporation's taxation year.

**Trusts - Inter Vivos** Inter vivos trusts must use the calendar year as their taxation year. As the required tax return must be filed within 90 days of the taxation year end, returns for inter vivos trusts will be due March 31 (March 30 in leap years). Legislation requires that quarterly instalments be made on March 15, June 15, September 15, and December 15. Note, however, the CRA has generally not enforced this requirement.

**Trusts - Testamentary** The rules are the same for most testamentary trusts. However, the exception to this is a testamentary trust that has been designated a graduated rate estate (GRE). Such GREs can use a non-calendar fiscal year for up to three years subsequent to the death of the settlor. GRE returns are due 90 days after the date that has been selected as the taxation year end. Quarterly instalments are required, with the specific dates determined by the choice of taxation year end. It is likely that the CRA will not enforce the instalment requirement.

## Self Study Solution Two - 6

Since Mr. Coffee has been your client for many years, there should be a signed Consent Form, T1013, filed with the CRA which authorizes you to represent him in his affairs. If you have not already been authorized to represent him online, it would be advantageous for you to request that Mr. Coffee take the steps needed to authorize you to access his file through the

online Represent a Client service. This will enable you to deal with this dispute and any future disputes more quickly.

With respect to resolving this dispute, the first step would be a call to the CRA to discuss the matter. If there has been a misunderstanding of the facts, an error on your or the CRA's part, or missing information, this may be the only step required and the matter can be resolved.

However, if more formal steps are necessary they can be outlined as follows:

**Notice of Objection** As the reassessment relates to the previous year's tax return, it is within the normal three year time limit for reassessment. This means that notice of objection can be filed within 90 days of the date on the Notice of Reassessment or (as Mr. Coffee is an individual) one year from the due date for the return under reassessment. This can be done through the mail by letter or using Form T400A, or online through the Represent A Client service. It should explain the facts and reasons why the reassessment is not justified.

**Tax Court of Canada** If there is an adverse decision on the notice of objection, Mr. Coffee has up to 90 days after the mailing date of the response to the notice of objection to appeal to the Tax Court of Canada. Alternatively, if he does not receive a response to his notice of objection within 90 days, he will then be able to appeal to the Tax Court of Canada. As the amount involved is only $5,000, it would probably be advisable for Mr. Coffee to choose the informal procedures.

**Federal Courts** If Mr. Coffee has elected the informal Tax Court of Canada procedures, no appeal of an adverse decision is possible. An appeal to the Federal Court - Appeals Division would, however, be possible if an adverse decision was rendered under the general procedures. In theory, an adverse decision by the Federal Court could be appealed to the Supreme Court of Canada. However, this can only happen if the Federal Court recommends it or the Supreme Court authorizes such action. This would be extremely unlikely given the amount involved.

## Self Study Solution Two - 7

***Part A***

Based on these facts, Joan Bridge would be liable for a third party penalty. However, if she was able to determine that there was a reasonable basis upon which the Tax Court decision could be overturned by a higher court, the penalty would not apply.

***Part B***

Based on these facts, if Jack Hodge were to prepare and EFILE Barbra's return without obtaining the charitable donation receipt, Jack would be liable for a third party penalty. Given that the size of the donation is so disproportionate to Barbra's apparent income as to defy credibility, to EFILE the return without verifying the amount of the receipt would show an indifference as to whether the *Act* is complied with or would show a wilful, reckless, or wanton disregard of the law.

***Part C***

Marion Flexor is not liable for participating in an understatement of Jason March's taxes payable because she did not know that some of the expense receipts were personal in nature, and would not be reasonably expected to know that this was the case. This is because Marion relied in good faith on the information provided by Jason. Unlike the situation in Part B of this problem, since Jason's business had a significant profit, it would be reasonable to assume he had high travel costs.

## Chapter 2 Learning Objectives

After completing Chapter 2, you should be able to:

1. Explain when an individual is required to file an income tax return (paragraph [P hereafter] P 2-8 to 2-14).
2. List the dates on which income tax returns must be filed by living and deceased individuals (P 2-15 to 2-20).
3. Explain the nature of, and need for, withholding for income tax (P 2-21 to 2-27).
4. Explain the circumstances which result in an individual having to make income tax instalment payments (P 2-28 to 2-32).
5. Calculate the amount of any income tax instalment payments required for individual taxpayers and determine their due date (P 2-33 to 2-43).

---

6. Explain how the prescribed interest rates are used to calculate interest on amounts owing to and from the CRA (P 2-44 to 2-50).
7. Calculate the penalties that will be assessed for the late filing of income tax returns and large late and deficient instalments (P 2-51 to 2-55).
8. Identify the dates on which balances owing by living and deceased individuals are due (P 2-56 and 2-60).
9. Identify the dates on which income tax returns must be filed by corporations and the filing alternatives that are available (P 2-61 to 2-67).
10. Calculate the amount of income tax instalment payments required for corporations, including small CCPCs (P 2-68 to 2-73).

---

11. Identify the dates on which balances owing by corporations are due (P 2-74 and 2-75).
12. Calculate the interest and penalties that will be assessed on late tax payments and for the late filing of corporate income tax returns (P 2-76 to 2-79).
13. Explain the general filing and payment requirements for testamentary and inter vivos trusts (P 2-80 to 2-87).
14. Explain the circumstances in which a taxpayer is required to file an information return (P 2-88).
15. Describe the record keeping requirements of the CRA (P 2-89 and 2-90).

---

16. Briefly describe the My Account and My Business Account services available on the CRA website (P 2-91).
17. Describe the Notice of Assessment, Notice of Reassessment and explain the reassessment period (P 2-92 to 2-94).
18. Explain when interest is paid on refunds and how it is calculated (P 2-95 to 2-100).
19. Explain how to make adjustments to previously filed tax returns (P 2-101 to 2-104).
20. Explain the initial procedures for disputing an assessment and the procedures for filing a notice of objection (P 2-105 to 2-120).

---

21. Describe further appeals procedures, including those made to the Tax Court of Canada, the Federal Court of Appeals, and the Supreme Court of Canada (P 2-121 to 2-130).
22. Explain the difference between tax evasion, avoidance and planning, including the concepts involved in the General Anti-Avoidance Rule (P 2-131 to 2-140).
23. Describe the collection and enforcement procedures available to the CRA (P 2-141 to 2-146).
24. Describe some of the penalties that can be assessed including those applicable to tax advisors and tax return preparers (P 2-147 to 2-152).
25. Briefly describe the taxpayer relief provisions (P 2-153 to 2-156).

# CHAPTER 3

## How To Work Through Chapter 3

We recommend the following approach in dealing with the material in this chapter:

**Employment Income Defined**

- Read paragraph 3-1 to 3-11 (in the textbook).
- Do Exercise Three-1 (in the textbook) and check the solution in this Study Guide.
- Do Self Study Problem Three-1 which is available on MyLab and check the solution in this Study Guide.
- Read paragraph 3-12 to 3-13.

**Employee Versus Self-Employed**

- Read paragraph 3-14 to 3-44.
- Do Self Study Problem Three-2 and check the solution in this Study Guide.

**Salaries And Fringe Benefits**

- Read paragraph 3-45 to 3-63.
- Do Exercises Three-2 and Three-3 and check the solutions in this Study Guide.
- Read paragraph 3-64 to 3-76.
- Do Exercise Three-4 and check the solution in this Study Guide.

**GST/HST/PST On Taxable Benefits**

- Read paragraph 3-77 to 3-78.
- Do Exercise Three-5 and check the solution in this Study Guide.

**Automobile Benefits (Standby Charge And Operating Cost Benefit)**

- Read paragraph 3-79 to 3-116.
- Do Exercise Three-6 and check the solution in this Study Guide.
- Read paragraph 3-117 to 3-122.
- Do Exercise Three-7 and check the solution in this Study Guide.
- Read paragraph 3-123 and 3-124.
- Do Self Study Problems Three-3 to Three-5 and check the solutions in this Study Guide.

**Allowances**

- Read paragraph 3-125 to 3-137.
- Do Exercises Three-8 and Three-9 and check the solutions in this Study Guide.
- Read paragraph 3-138 to 3-142.
- Do Exercise Three-10 and check the solution in this Study Guide.

**Employee Insurance Benefits**

- Read paragraph 3-143 to 3-148.
- Do Exercise Three-11 and check the solution in this Study Guide.

### Loans To Employees

- Read paragraph 3-149 to 3-151.
- Do Exercise Three-12 and check the solution in this Study Guide.
- Read paragraph 3-152 to 3-156.
- Do Exercise Three-13 and check the solution in this Study Guide.
- Do Self Study Problem Three-6 and check the solution in this Study Guide.

### Stock Option Benefits

- Read paragraph 3-157 to 3-171.
- Do Exercise Three-14 and check the solution in this Study Guide.
- Read paragraph 3-172 to 3-176.
- Do Exercise Three-15 and check the solution in this Study Guide.
- Do Self Study Problems Three-7 to Three-9 and check the solutions in this Study Guide.

### Other Inclusions

- Read paragraph 3-177 to 3-185.

### Specific Deductions Including Salesperson's Expenses And Work Space In The Home Costs

- Read paragraph 3-186 to 3-202.
- Do Exercise Three-16 and check the solution in this Study Guide.
- Read paragraph 3-203 to 3-212.
- Do Self Study Problems Three-10 to Three-14 and check the solutions in this Study Guide.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 3. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 3 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 3 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 3 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 3 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

## Solutions to Chapter Three Exercises

### *Exercise Three - 1 Solution*

The bonus will be taxed in Mr. Neelson's hands in the year of receipt. This means that it will be included in his 2020 tax return. With respect to Neelson Inc., the bonus is not payable until more than 180 days after the September 30 fiscal year end. Note that the limit is 180 days from the fiscal year end, not the date on which the bonus was declared.

As a consequence, the Company will not be able to deduct the bonus in the year ending September 30, 2019, the year of declaration. It will be deducted in the year ending September 30, 2020, the year of payment.

### *Exercise Three - 2 Solution*

The tax consequences associated with each of the listed items are as follows:

| Gift | Tax Consequence |
|---|---|
| $15 T-Shirt | No consequences as value is immaterial |
| $75 Birthday Gift | Taxable as it is a near cash gift |
| $400 Performance Reward | Taxable as it is performance related |
| $275 10-Year Award | Non-taxable as it is under $500 |
| $300 Wedding Gift | These remaining three gifts qualify as non-taxable. However, their total value is $700 ($300 + $250 + $150). The $200 excess over $500 will be taxable. |
| $250 Weight Loss Award | |
| $150 Holiday Season Gift | |

### *Exercise Three - 3 Solution*

The tax consequences of the various items would be as follows:

- Discounts on merchandise do not create a taxable benefit provided they are available to all employees and do not reduce the price below the employer's cost.
- It could be argued that these tuition fees are related to business activity. If the argument is successful, the payment would not be taxable to John. If unsuccessful, the $2,000 would be a taxable benefit.
- Special clothing is not a taxable benefit if it is distinctive and the employee is required to wear it at work, or if it is required to protect the employee from some type of employment related hazard. It is unlikely that business clothing would fall into this category as it could be used for personal purposes. The $8,500 should be included in John's income as a taxable benefit.
- The $450 gift would not be taxable to John.
- Employer paid premiums for private health care plans are not a taxable benefit.

### *Exercise Three - 4 Solution*

From Jill's point of view, the best alternative is probably the dental plan. Its value is significantly enhanced by the fact that it can be received without tax consequences. The annual vacation trip is clearly a taxable benefit. With respect to the $4,000 birthday gift, the $3,500 excess over the limit of $500 will be taxable. Note that the desirability of the dental plan would be affected by whether her spouse has a dental plan.

### Exercise Three - 5 Solution

Ms. Correli's taxable benefit would be $4,725, the $4,500 cost of the trip, plus the additional $225 in GST.

### Exercise Three - 6 Solution

As Mrs. Lee's employment related use is more than 50 percent of the total (16,000 out of 28,000), she is eligible for a reduction in the full standby charge. She is also eligible for the alternative one-half of the standby charge calculation of the operating cost benefit. Given these factors, the taxable benefit would be calculated as follows:

| | |
|---|---|
| Standby Charge | |
| [(2%)(12)($25,000 + $1,250 + $2,000)(12,000 ÷ 20,004*)] | $4,067 |
| Operating Cost Benefit - Lesser Of: | |
| • [($0.28)(12,000)] = $3,360 | |
| • [(1/2)($4,067)] = $2,034 | 2,034 |
| Total Benefit | $6,101 |

*[(12 Months)(1,667)]

### Exercise Three - 7 Solution

The actual operating costs paid by the employer do not affect these calculations. Rounded to the nearest whole number, 325 days results in 11 months of availability. As Mr. Forthwith's employment related use is more than 50 percent, he is eligible for a reduction in the full standby charge. He is also eligible for the alternative one-half of the standby charge calculation of the operating cost benefit. Given these factors, the taxable benefit would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2/3)($525 + $68)(11)(3,000 ÷ 18,337*)] | $ 711 |
| Operating Cost Benefit - Lesser Of: | |
| • [($0.28)(3,000)] = $840 | |
| • [(1/2)($711)] = $356 | 356 |
| Total Benefit | $1,067 |

*[(11)(1,667)]

### Exercise Three - 8 Solution

Because the allowance is not based on kilometers driven, she will have to include the $3,600 allowance in her income. Because the allowance has been included in income, she can deduct the employment related portion of her actual automobile costs against this amount. This would be $1,936 [($7,150)(6,500 ÷ 24,000)]. The net inclusion would be $1,664 ($3,600 - $1,936).

### Exercise Three - 9 Solution

As the milage allowance paid by the employer was based on the number of employment related kilometers driven, the $3,500 [(35,000 Km.)($0.10)] will not be included on his T4 Information Return and, as a consequence, it does not have to be included in his employment income. However, he will not be able to deduct his actual costs of owning and operating the automobile.

Mr. Lorenz's actual deductible costs total $11,900 [($5,400 + $15,000)(35,000/60,000)], well in excess of the allowance of $3,500. While Mr. Lorenz could attempt to include the allowance in income and deduct the actual costs, this approach could be disallowed by the CRA.

### *Exercise Three - 10 Solution*

The hotel allowance would appear to be reasonable and would not be included in Ms. Ohm's T4. Given this, it will not be included in her net employment income. Even though her actual costs of $18,300 are in excess of the $16,400 allowance, it would be difficult for Ms. Ohm to argue that the $200 figure is not reasonable. Given this, she does not have the choice of including the $16,400 in income and deducting the actual amount of $18,300.

As the milage charge is based on kilometers, it will not be included in her T4. In addition, since the amount appears to be reasonable in terms of actual costs, she does not have the choice of including it in income and deducting the actual costs. In fact, it would not be to Ms. Ohm's advantage to do so as her actual costs would be $2,880 [($7,200)(9,400/23,500)], which is less than the $3,854 payment she received.

No amounts would be included in Ms. Ohm's net employment income and no amounts would be deductible.

### *Exercise Three - 11 Solution*

As his employer contributes to the plan and the contributions do not create a taxable benefit, the $5,250 in benefits received during the year will be included in his employment income. This will be reduced by the $525 ($300 + $225) in non-deductible contributions that he made during 2018 and 2019, leaving a net inclusion of $4,725 ($5,250 - $525).

### *Exercise Three - 12 Solution*

The ITA 80.4(1) benefit is calculated as follows:

| | |
|---|---|
| The Lesser Of: | |
| • [($100,000)(2%)(1/4) + ($100,000)(3%)(1/4) + ($100,000)(1%)(2/4)] = $1,750 | |
| • [($100,000)(2%)] = $2,000 | $1,750 |
| Less Interest Payment [($100,000)(1%)] | ( 1,000) |
| Net Benefit | $ 750 |

As this is a home purchase loan, the annual benefit cannot exceed the benefit that would result from applying the 2 percent rate that was in effect when the loan was made. Note that the 2 percent rate is not compared to the prescribed rate on a quarter-by-quarter basis, but on an annual basis. The lower figure of $1,750 would then be reduced by the $1,000 in interest paid.

### *Exercise Three - 13 Solution*

In the absence of the interest free loan, the employee would borrow $125,000 at 5 percent, requiring an annual interest payment of $6,250. The after tax cash outflow associated with the employer providing sufficient additional salary to carry this loan would be calculated as follows:

| | |
|---|---|
| Required Salary [$6,250 ÷ (1 - 0.42)] | $10,776 |
| Corporate Tax Savings From Deducting Salary [($10,776)(26%)] | ( 2,802) |
| Employer's After Tax Cash Flow - Additional Salary | $ 7,974 |

Alternatively, if the loan is provided, the employee will have a taxable benefit of $2,500 [(2%)($125,000)], resulting in taxes payable of $1,050 [(42%)($2,500)]. To make this situation comparable to the straight salary alternative, the employer will have to provide the employee with both the loan amount and sufficient additional salary to pay the taxes on the imputed interest benefit. The amount of this additional salary would be $1,810 [$1,050 ÷ (1 - 0.42)]. The employer's after tax cash flow associated with providing the additional salary and the loan amount would be calculated as follows:

| | |
|---|---|
| Required Salary [$1,050 ÷ (1 - 0.42)] | $1,810 |
| Corporate Tax Savings From Deducting Salary [($1,810)(26%)] | ( 471) |
| After Tax Cost Of Salary To Cover Taxes On Benefit | $1,339 |
| Employer's Lost Earnings [(7%)(1 - 0.26)($125,000)] | 6,475 |
| Employer's After Tax Cash Flow - Loan | $7,814 |

Given these results, providing the loan appears to be the better alternative.

### *Exercise Three - 14 Solution*

At time of exercise, Mr. Guise will have an employment income benefit of $21,250 [($31.50 - $23.00)(2,500 Shares)]. As the option price at issue exceeded the fair market value at issue, Mr. Guise will be able to deduct $10,625 [(1/2)($21,250)] in the determination of Taxable Income. These results are summarized in the following table:

| | |
|---|---|
| Fair Market Value Of Shares Acquired [(2,500)($31.50)] | $78,750 |
| Cost Of Shares [(2,500)($23)] | ( 57,500) |
| ITA 7(1)(a) Employment Income Inclusion = **Increase In Net Income For Tax Purposes** | **$21,250** |
| ITA 110(1)(d) Deduction [(1/2)($21,250)] | ( 10,625) |
| **Increase In Taxable Income** | **$10,625** |

When the shares are sold, there will be an allowable capital loss, calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [($28.00)(2,500)] | $70,000 |
| Adjusted Cost Base [($31.50)(2,500)] | ( 78,750) |
| Capital Loss | ($ 8,750) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss | ($ 4,375) |

Mr. Guise will only be able to deduct this loss in 2019 to the extent that he has taxable capital gains on other dispositions. It cannot be deducted against the employment income inclusion.

### *Exercise Three - 15 Solution*

There will be no tax consequences in either 2017 when the options are received, or in 2018, when the options are exercised. This latter result reflects the fact that the acquired shares are those of a Canadian controlled private corporation.

At the time the shares are sold in 2019, there will be an employment income benefit of $58,500 [($75.00 - $42.50)(1,800 Shares)]. As the option price of $42.50 was below the fair market value of $45 at the time the options were issued, there is no deduction under ITA 110(1)(d). Although she could have been eligible for the deduction under ITA 110(1)(d.1), she did not hold the shares for the required two years. These results are summarized in the following table:

| | |
|---|---|
| Deferred Employment Income: | |
| Fair Market Value Of Shares Acquired [(1,800)($75)] | $135,000 |
| Cost Of Shares [(1,800)($42.50)] | ( 76,500) |
| ITA 7(1)(a) Employment Income Inclusion = Increase In **Net Income For Tax Purposes** | **$ 58,500** |
| ITA 110(1)(d) Deduction (Option Price < FMV) | N/A |
| ITA 110(1)(d.1) Deduction (Held Less Than 2 Years) | N/A |
| Increase In **Taxable Income** | **$ 58,500** |

When she sells the shares in 2019, Ms. Van will have an allowable capital loss calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [($49)(1,800)] | $ 88,200 |
| Adjusted Cost Base [($75)(1,800)] | ( 135,000) |
| Capital Loss | ($ 46,800) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss | ($ 23,400) |

Ms. Van will only be able to deduct this loss in 2019 to the extent that she has taxable capital gains on other dispositions. It cannot be deducted against the employment income inclusion.

***Exercise Three - 16 Solution***

The potential deduction is $27,100 [$8,000 + (1/2)($12,000) + $13,100]. However, this total exceeds his commissions and, if these amounts are deducted under ITA 8(1)(f), his deduction will be limited to the commissions of $12,200.

Alternatively, if he uses ITA 8(1)(h), he cannot deduct the advertising or the entertainment, limiting the amount of this deduction to $13,100.

As the two provisions cannot be used simultaneously, Morton would use the larger figure of $13,100 that is available under ITA 8(1)(h).

## Self Study Solution Three - 1

The required information for the four Cases included in this problem is as shown in the following table:

| | Deduction - Empire Inc. Year Ending October 31 | Inclusion-Ms. Betz Calendar Year |
|---|---|---|
| Case A | 2019 | 2019 |
| Case B | 2019 | 2020 |
| Case C | 2020 | 2020 |
| Case D | 2019 | 2019 |

In Case A, the bonus is deducted when accrued because it is paid within 180 days of Empire's 2019 year end. It is taxed when received.

In Case B, the bonus is deducted when accrued because it is paid within 180 days of Empire's 2019 year end. It is taxed when received.

In Case C, the bonus is not paid within 180 days of Empire's year end. As a consequence, it cannot be deducted until the year ending October 31, 2020. However, as it is paid within 3 years of Empire's 2019 year end it is not a salary deferral arrangement. This means it does not have to be included in Ms. Betz's Taxable Income until 2020.

In Case D, the bonus is not paid until more than 3 years after the end of the calendar year in which Ms. Betz rendered the services. This makes it a salary deferral arrangement, resulting in Ms. Betz having to include it in her 2019 Taxable Income. Empire will deduct the bonus in the fiscal year ending October 31, 2019.

## Self Study Solution Three - 2

### *Quantitative Considerations*

If the individual's services are acquired as an employee, the 2019 costs would be as follows:

| | |
|---|---|
| Basic Salary | $250,000 |
| Company Benefits [($250,000)(8%)] | 20,000 |
| CPP (Maximum) | 2,749 |
| Employer's Share Of EI [(1.4)(1.62%)($53,100)] | 1,204 |
| Payroll Tax [(2%)($250,000)] | 5,000 |
| Total Cost | $278,953 |

This is very close to the $280,000 that would have to be paid to the individual if he is classified as an independent contractor.

### *Other Considerations*

While the quantitative factors slightly favour employee classification, this is probably not the best choice. Other factors that should be considered:

- self-employed status relieves the company from any ongoing commitment beyond the period specified in the contract,
- Farnham Ltd. would not be legally responsible for any errors in the work of the engineer if he is self-employed,
- the fact that employment contracts usually require that salary and related benefits grow over time, and
- the added administrative costs of withholding amounts from his salary if he is an employee.

It would appear to be more advantageous to structure the arrangement so that this individual qualifies as an independent contractor.

## Self Study Solution Three - 3

### *Acura TLX*

With employment related usage at more than 50 percent of the total, Ms. Vines can reduce the standby charge on the basis of actual personal usage and Ms. Vines can calculate the operating cost benefit as one-half of the standby charge which results in a lower benefit. The taxable benefit on this vehicle would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2%)($39,000 + $2,340 + $1,950)(5)(3,400 ÷ 8,335*)] | $1,766 |
| Operating Cost Benefit - Lesser Of: | |
| • [(3,400)($0.28)] = $952 | |
| • [(1/2)($1,766)] = $883 | 883 |
| Total Benefit On Acura TLX | $2,649 |

*[(5)(1,667)]

### *Buick Lacrosse*

The $100 insurance included in the monthly lease payment is removed from the standby charge calculation as it is an operating cost.

As the car was driven more than 50 percent for employment related purposes, a reduction in the standby charge is available (but is nil in this case) and Ms. Vines can calculate the operating cost benefit as one-half of the standby charge which results in a lower benefit. The taxable benefit on this vehicle is calculated as follows:

| | |
|---|---|
| Standby Charge [(2/3)(6)($699 - $100)(10,002* ÷ 10,002*)] | $2,396 |
| Operating Cost Benefit - Lesser Of: | |
| • [(14,600)($0.28)] = $4,088 | |
| • [(1/2)($2,396)] = $1,198 | 1,198 |
| Total Benefit On Buick Lacrosse | $3,594 |

*[(6)(1,667)] - since the numerator (personal kilometers of 14,600) cannot exceed the denominator, the effect of applying the reduction fraction is nil (10,002 ÷ 10,002).

***Total Benefit***

The total taxable benefit would be calculated as follows:

| | |
|---|---|
| Total Benefit - Acura | $2,649 |
| Total Benefit - Buick | 3,594 |
| Reimbursement To Company [($0.10)(3,400 Km + 14,600 Km)] | ( 1,800) |
| Total Taxable Benefit | $4,443 |

**Notes:**

- The taxable benefit calculation is not influenced by restrictions on the amount that the Company can deduct with respect to the Acura.
- Calculation of the operating cost benefits is not influenced by the employer's actual operating costs.

## Self Study Solution Three - 4

***Mr. Sam Stern***

The taxable benefit for the president of the Company would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2%)($78,000)(8)] | $12,480 |
| Operating Cost Benefit [(32,000)($0.28)] | 8,960 |
| Taxable Benefit | $21,440 |

As Mr. Stern did not drive the car more than 50 percent for employment related purposes, no reduction in the standby charge is available. Since his employment related use was not more than 50 percent, he cannot use the alternative calculation of the operating cost benefit.

***Ms. Sarah Blue***

The taxable benefit for the marketing vice president would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2/3)(12)($900)(5,000/20,004)] | $1,800 |
| Operating Cost Benefit - Lesser Of: | |
| • [(5,000)($0.28)] = $1,400 | |
| • [(1/2)($1,800)] = $900 | 900 |
| Taxable Benefit | $2,700 |

As employment related driving was more than 50 percent of the total, Ms. Blue can reduce the standby charge on the basis of actual personal usage. As the car was driven more than 50 percent for employment related purposes, Ms. Blue can calculate the operating cost benefit as one-half of the standby charge which results in a lower benefit.

### *Mr. John Stack*

The taxable benefit for the finance vice president would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2%)($48,000)(12)(10,000/20,004] | $5,759 |
| Operating Cost Benefit - Lesser Of: | |
| • [(10,000)($0.28)] = $2,800 | |
| • ](1/2)($5,759)] = $2,880 | 2,800 |
| Payment For Use Of Company Car | ( 7,000) |
| Taxable Benefit | $1,559 |

Mr. Stack's employment related driving was more than 50 percent of the total and, as a consequence, he can reduce his standby charge on the basis of actual personal milage. Mr. Stack could have calculated the operating cost benefit as one-half of the standby charge, but this would have resulted in a higher benefit.

### *Mr. Alex Decker*

The taxable benefit for the industrial relations vice president would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2/3)(10)($500)(8,500/16,670)] | $1,700 |
| Operating Cost Benefit - Lesser Of: | |
| • [(8,500)($0.28)] = $2,380 | |
| • [(1/2)($1,700)] = $850 | 850 |
| Taxable Benefit | $2,550 |

As Mr. Decker's employment related driving is more than 50 percent of the total, he can reduce his standby charge on the basis of actual personal milage. While the $10,000 deposit will affect the deductibility of the lease payments by the employer, it does not influence the calculation of the taxable benefit to Mr. Decker. As the car was driven more than 50 percent for employment related purposes, Mr. Decker can calculate the operating cost benefit as one-half of the standby charge which results in a lower benefit.

### *Tax Planning*

With respect to the tax planning of management compensation, two points can be made. First, the question of providing company cars as a method of compensation should be examined on a case-by-case basis.

In situations where a car is owned by the Company and provided to an executive for a fairly long period of time, the taxable benefit assessed may exceed the value of the benefit. For example, over five years, the taxable benefit without regard for operating costs on Mr. Stern's Mercedes could total $93,600 [(2%)(60)($78,000)]. This is more than $15,000 in excess of the cost of the car.

With the limitations on the deductibility of CCA and leasing costs on cars, the after tax cost to the Company of owning and leasing luxury cars can be very high. While a complete analysis of this issue will depend on a number of variables, it is possible that some of these executives would be better off receiving additional amounts of salary and billing the Company for employment related mileage driven in their own cars.

The second point to be made here is that, except in situations where the car is kept for very short periods of time, the employee will be allocated a smaller taxable benefit if the Company were to lease the car rather than buy it. In general, monthly lease payments on a three year lease will tend to be between 2 percent and 2.5 percent of the capital cost of the cars.

As the leasing standby charge is based on two-thirds of the monthly lease payment, it is clear that the standby charge under this type of arrangement will be less than the 2 percent per month that is assessed when the Company owns the car. However, for shorter lease terms, the lease payment will be a greater percentage of the capital cost and this relationship may reverse.

Other tax planning techniques would involve any procedure that would reduce the capital cost of purchased cars or the lease payments on leased cars. Such procedures would include high residual values on leasing arrangements and low trade in values assigned to old cars when new ones are purchased. In addition, it might be possible to reduce a taxable benefit, such as the one being allocated to Mr. Stern, by selling his car to a leasing company with an immediate leaseback arrangement. Although large refundable deposits on leasing arrangements would reduce the lease payment and therefore the standby charge, there would be a tax cost to the employer (see Chapter 6).

## Self Study Solution Three - 5

### *Employer Continues To Provide Automobile*

If the employer continues to provide the car, John's only cash outflow will be the taxes assessed on the taxable benefit that results from his having the car available. This outflow under the two Cases would be calculated as follows:

| | Case A $35,000 Cost | Case B $70,000 Cost |
|---|---|---|
| Standby Charge | | |
| [(2%)($35,000)(12)] | $ 8,400 | |
| [(2%)($70,000)(12)] | | $ 16,800 |
| Operating Cost Benefit [(40,000 Kilometers)($0.28)] | 11,200 | 11,200 |
| Total Annual Benefit | $19,600 | $28,000 |
| Number Of Years | 2 | 2 |
| Total Benefit | $39,200 | $56,000 |
| John's Marginal Tax Rate | 48% | 48% |
| Total Taxes On Taxable Benefit | $18,816 | $26,880 |

Note that, because John's use of the car is not primarily (more than 50 percent) for employment purposes, he cannot use the alternative one-half of standby charge calculation of the operating cost benefit.

### *John Purchases The Automobile*

If John purchases the car and pays his own operating costs, the total cash outflow in both Cases would be calculated as follows:

| | |
|---|---|
| Purchase Price | $20,000 |
| Estimated Resale Value | ( 12,000) |
| Operating Costs [(2)(40,000 Kilometers)($0.20)] | 16,000 |
| Total Cash Outflow | $24,000 |

### *Conclusion - Case A ($35,000)*

On the basis of non-discounted cash flows, the best alternative would be to have John's employer continue to provide him with the car. If the cash flows were discounted, the results would be even more favourable for this alternative.

### *Conclusion - Case B ($70,000)*

Since the original cost of the car was $70,000, on the basis of non-discounted cash flows, the best alternative would be to have John purchase the car since the taxable benefit is so high.

Although the requirements of the problem ask that only the cash flows be considered, we would note that the alternative of purchasing the car carries more uncertainty. Both the resale value and the actual operating costs are estimates. If there was a large variation from the estimate for either or both of these amounts, it could substantially affect the total cash outflow of the purchase alternative.

## Self Study Solution Three - 6

### *Approach*

The appropriate comparison in evaluating the interest free loan arrangement would be to determine the cost to the Company of providing the loan and then compare this amount with the cost of providing an equivalent benefit in the form of straight salary. The following analysis calculates the Company's lowest cost route to providing Mr. Malone with the financing required, assuming he is not a shareholder.

### *Cost Of Providing For Interest Payments On Commercial Loan*

As the problem indicates, Mr. Malone can borrow on a loan at a rate of interest of 5 percent. This means that the annual interest payments on $200,000 would amount to $10,000. If the interest is deductible, the after tax cost of this interest would be reduced to $4,900 [($10,000)(1 - .51)].

Mr. Malone is in the 51 percent tax bracket and, if the interest is not deductible, $20,408 [$10,000 ÷ (1 - .51)] of before tax salary would be required to provide the necessary $10,000 in after tax funds. If the interest is deductible, the Company will only have to provide for the $4,900 after tax cost of the loan to Mr. Malone, an amount of $10,000 [$4,900 ÷ (1 - .51)]. The annual cost to the Company of providing for this alternative under both assumptions would be as follows:

| | Not Deductible | Deductible |
|---|---|---|
| Gross Salary Increase [$10,000 ÷ (1 - .51)] | $20,408 | |
| Gross Salary Increase [$4,900 ÷ (1 - .51)] | | $10,000 |
| Reduction In Corporate Taxes | | |
| [(25%)($20,408)] | ( 5,102) | |
| [(25%)($10,000)] | | ( 2,500) |
| Net Cost To Company - Additional Salary | $15,306 | $ 7,500 |

### *Cost Of Providing Interest Free Loan*

Mr. Malone would be assessed a taxable benefit on the loan in the amount of imputed interest at the Regulation 4301 rate. The benefit would amount to $4,000 [(2%)($200,000)] for one year. In order to make the two alternatives comparable, if the interest is not deductible, it is necessary to recognize that Mr. Malone would pay an additional $2,040 [(51%)($4,000)] in taxes on this benefit and, as a consequence, the Company would have to pay him an additional $4,163 [$2,040 ÷ (1 - .51)] in salary to provide for this outflow of funds.

If the interest is deductible, the imputed interest would be deemed interest paid. As he is using all of the funds provided to produce investment income, the full amount would be deductible, resulting in no net change in taxes. If this is the case, this alternative only requires looking at the cost of the loan to the company.

The annual cost to the Company of the loan alternative under both assumptions can be calculated as follows:

| | Not Deductible | Deductible |
|---|---|---|
| Gross Salary Increase [$2,040 ÷ (1 - .51)] | $ 4,163 | N/A |
| Reduction In Corporate Taxes [(25%)($4,163)] | ( 1,041) | N/A |
| Lost Earnings On Funds Loaned [(18%)($200,000)] | 36,000 | $36,000 |
| Corporate Taxes On Imputed Earnings | | |
| [(25%)($36,000)] | ( 9,000) | ( 9,000) |
| Net Cost To Company - Loan | $30,122 | $27,000 |

### *Conclusion*

On the basis of the preceding analysis, it can be concluded that the Company should provide additional salary rather than providing Mr. Malone with an interest free loan of $200,000

whether or not his interest is deductible. This alternative results in a net annual cost to the Company which is either $14,816 ($30,122- $15,306) or $19,500 ($27,000 - $7,500) lower. Given the very high earnings rate on funds used by Technocratic, this result is not unexpected.

## Self Study Solution Three - 7

### *Case A*

**2017** In 2017, the year in which the options are issued, there would be no tax consequences for Ms. Wu.

**2018** The tax consequences in 2018 would be as follows:

| | |
|---|---|
| Fair Market Value At Exercise [(12,000)($31)] | $372,000 |
| Cost Of Shares [(12,000)($22)] | ( 264,000) |
| Employment Income Inclusion<br>= Increase In **Net Income For Tax Purposes** | $108,000 |
| Deduction Under ITA 110(1)(d) [(1/2)($108,000)] | ( 54,000) |
| Increase In **Taxable Income** | $ 54,000 |

**2019** When the shares are sold in 2019, the tax consequences would be as follows:

| | |
|---|---|
| Proceeds Of Disposition [(12,000)($28)] | $336,000 |
| Adjusted Cost Base [(12,000)($31)] | ( 372,000) |
| Capital Loss | ($ 36,000) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss | ($ 18,000) |

Ms. Wu will only be able to deduct this loss in 2019 to the extent that she has taxable capital gains on other dispositions.

### *Case B*

**2017** There are no tax consequences in 2017.

**2018** There are no tax consequences in 2018.

**2019** In 2019, the employment income inclusion would be as follows:

| | |
|---|---|
| Fair Market Value At Exercise [(12,000)($31)] | $372,000 |
| Cost Of Shares [(12,000)($22)] | ( 264,000) |
| Employment Income Inclusion<br>= Increase In **Net Income For Tax Purposes** | $108,000 |
| Deduction Under ITA 110(1)(d) [(1/2($108,000)] | ( 54,000) |
| Increase In **Taxable Income** | $ 54,000 |

In addition, there would be an allowable capital loss calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [(12,000)($28)] | $336,000 |
| Adjusted Cost Base [(12,000)($31)] | ( 372,000) |
| Capital Loss | ($ 36,000) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss | ($ 18,000) |

Ms. Wu will only be able to deduct this loss in 2019 to the extent that she has taxable capital gains on other dispositions.

## Self Study Solution Three - 8

### Part A

There would be no tax effects resulting from the granting of the options in 2017.

Since the option price was below the fair market value at the time the shares were issued, there is no deduction available under ITA 110(1)(d) in the calculation of Taxable Income. As Patricia's employer is a public company, the exercise of the options in 2018 will result in the following addition to Net Income For Tax Purposes and Taxable Income:

| | |
|---|---|
| Fair Market Value At Exercise [(1,500)($50)] | $75,000 |
| Option Price [(1,500)($45)] | ( 67,500) |
| Employment Income (Increase In **Net** And **Taxable Income** | $ 7,500 |

In 2019, when the shares are sold, there is the following addition to **Net Income For Tax Purposes** and **Taxable Income**:

| | |
|---|---|
| Proceeds Of Disposition [(1,500)($55)] | $82,500 |
| Adjusted Cost Base [(1,500)($50)] | ( 75,000) |
| Capital Gain | $ 7,500 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 3,750 |

### Part B

There would be no tax effects resulting from the granting of the options in 2017.

If the 2017 trading value for the shares had been $44, the option price would have been above fair market value and the ITA 110(1)(d) deduction would be available. On this basis, the 2018 results would be as follows:

| | |
|---|---|
| Fair Market Value At Exercise [(1,500)($50)] | $75,000 |
| Option Price [(1,500)($45)] | ( 67,500) |
| Employment Income | |
| Increase In **Net Income For Tax Purposes** | $ 7,500 |
| ITA 110(1)(d) Deduction [(1/2)($7,500)] | ( 3,750) |
| Increase In **Taxable Income** | $ 3,750 |

The results for 2019 would be unchanged from Part A.

### Part C

If Patricia's employer had been a Canadian controlled private company, there would be no tax effects in either 2017 or 2018.

There is no deduction available under either ITA 110(1)(d) or ITA 110(1)(d.1) when the shares are sold. The option price was below the fair market value when the options were issued. Further, Patricia did not hold the shares for the two years required for the ITA 110(1)(d.1) deduction. When the shares are sold in 2019, there is the following addition to Net Income For Tax Purposes and Taxable Income:

| | |
|---|---|
| Fair Market Value At Exercise [(1,500)($50)] | $75,000 |
| Option Price [(1,500)($45)] | ( 67,500) |
| Taxable Capital Gain [(1/2)(1,500)($55 - $50)] | 3,750 |
| Increase In **Net Income For Tax Purposes** And **Taxable Income** | $11,250 |

## Self Study Solution Three - 9

| | | |
|---|---|---|
| Salary From Maritime Trust [(6/12)($105,000)] | | $ 52,500 |
| Salary From Bolten [(6/12)($90,000)] | | 45,000 |
| Total Salaries | | $ 97,500 |
| Maritime Trust Stock Options (Note 1): | | |
| Market Price Of Shares [(5,000)($16)] | $80,000 | |
| Option Price [(5,000)($15)] | ( 75,000) | 5,000 |
| Bolten Financial Services Stock Options (Note 1) | | Nil |
| Automobile Benefit (Note 2): | | |
| Standby Charge [(2%)($40,000)(4)(6,668/6,668)] | $3,200 | |
| Operating Cost Benefit - Lesser Of: | | |
| • [(10,000)($0.28)] = $2,800 | | |
| • [(1/2)($3,200)] = $1,600 | 1,600 | 4,800 |
| Loan Benefit (Note 3) | | 2,000 |
| Net Employment Income | | $109,300 |

**Notes:**

1. As Bolten Financial Services is a Canadian controlled private corporation, the exercise of the option to purchase its common stock does not result in a taxable benefit at the time of exercise. Since Maritime Trust Inc. is a public company, the exercise of the option to purchase its common stock does result in a taxable benefit at the time of exercise. Mr. Jurgens has a stock option deduction equal to $2,500 [(1/2)($5,000)] under ITA 110(1)(d) created by the exercise of the Maritime Trust stock option. However, the stock option deduction would reduce Taxable Income and would not affect net employment income. The Bolten stock option income inclusion of $2,000 [(1,000)($22 - $20)] and deduction of $1,000 [(1/2)($2,000)] are both deferred until the shares are sold.

2. As Mr. Jurgens' employment related milage is more than 50 percent of the total milage, he can make use of the reduced standby charge formula. In this case, however, his personal usage exceeded the 6,668 [(4)(1,667)] kilometer maximum usage allowed by the reduction, so the reduction is nil. His employment related milage is more than 50 percent of the total and, as a consequence, he can elect to calculate the operating cost benefit as one-half of the standby charge. Since this is less than the amount determined through the usual calculation, it would be the operating cost benefit.

3. The imputed interest on the interest free loan must be included in employment income under the requirements of ITA 6(9), a benefit which is defined in ITA 80.4(1). The amount of the benefit is $2,000 [(2%)($200,000)(6/12)]. Note that there is a deduction under ITA 110(1)(j) for the amount of this benefit which relates to an interest free home relocation loan of $25,000. However, this is a deduction in the calculation of Taxable Income and will not affect the amount of net employment income.

4. The interest and dividend income is not included in the calculation of net employment income.

## Self Study Solution Three - 10

Ms. Kline's net employment income for the year would be calculated as follows:

| | |
|---|---|
| Gross Salary | $73,500 |
| Registered Pension Plan Contributions | ( 2,400) |
| Automobile Benefit (Note One) | 270 |
| Contributions To Group Disability Plan (Note Two) | Nil |
| Disability Insurance Benefit (Note Two) | 1,400 |
| Professional Dues | ( 1,650) |
| Stock Option Benefit [(200)($70 - $50)] (Note Three) | 4,000 |
| Net Employment Income | $75,120 |

**Note One** Based on the fact that Ms. Kline's employment related usage is more than 50 percent of total usage, the automobile benefit is calculated as follows:

| | |
|---|---|
| Standby Charge [(2/3)(11)($700 - $50)(3,000/18,337*)] | $ 780 |
| Operating Cost Benefit - Lesser Of: | |
| • [(3,000)($0.28)] = $840 | |
| • [(1/2)($780)] = $390 | 390 |
| Total Before Payments | $1,170 |
| Payments For Personal Use [(3,000)($0.30)] | ( 900) |
| Taxable Benefit | $ 270 |

*[(11)(1,667)]

As Ms. Kline's employment related usage is more than 50 percent, she can elect to use one-half the standby charge as the operating cost benefit.

**Note Two** The contributions to the group disability plan are not deductible, but can be applied against the $1,800 received under the plan during the year. Since the employer's contributions to this plan are not a taxable benefit, the $1,800 in benefits received must be included in employment income. However, this benefit can be reduced by the $400 ($225 + $175) in total contributions that she has made in 2018 and 2019.

**Note Three** Although Ms. Kline would qualify for the deduction of one-half of the stock option benefit under ITA 110(1)(d), it is a deduction from Taxable Income and would not affect the calculation of the required figure in this problem, net employment income.

## Self Study Solution Three - 11

As Ms. Firth paid all of her own operating expenses, there is no taxable benefit for vehicle operating costs. However, she has to include the $7,200 car allowance in income. Given this, she can deduct a pro rata share of her actual expenses. The deduction would be $5,728 [($6,200)(85,000 km ÷ 92,000 km)].

Ms. Firth's total entertainment, meal, and travel expenses that would be deductible under ITA 8(1)(f) are as follows:

| | |
|---|---|
| Entertainment Expenses [(1/2)($6,500)] | $3,250 |
| Travel Meals [(1/2)($1,300)] | 650 |
| Lodging | 3,500 |
| Automobile Operating Costs [($6,200)(85,000 ÷92,000)] | 5,728 |
| Total Salesperson Expenses | $13,128 |

As this total is less than her commission income of $14,000, they can all be deducted under ITA 8(1)(f).

Ms. Firth's net employment income for the year would be calculated as follows:

| | | |
|---|---|---|
| Gross Salary | | $72,000 |
| Commission Income | | 14,000 |
| Additions: | | |
| Disability Insurance Receipts, Less Employee's Premium ($2,000 - $250) | $ 1,750 | |
| Car Allowance | 7,200 | |
| Automobile Benefit (Note 1) | 2,471 | |
| Term Life Insurance Benefit [($1,350)(2/3)] | 900 | |
| Low Interest Loan Benefit [($400,000)(2%) - $3,000] | 5,000 | |
| Gift (Note 2) | Nil | |
| Stock Option Benefit [(1,000)($7 - $5)] (Note 3) | 2,000 | |
| Tennis Club Membership (Note 4) | Nil | |
| Travel Allowance | 3,600 | 22,921 |
| Deductions: | | |
| Registered Pension Plan Contributions (Note 5) | ($ 3,200) | |
| Salesperson Expenses (Preceding Calculation) | ( 13,128) | ( 16,328) |
| Net Employment Income | | $92,593 |

**Note 1** The personal benefit on the company car would be calculated as follows:

| | |
|---|---|
| Reduced Standby Charge [(2%)($58,000)(11)(7,000/18,337*)] | $4,871 |
| Operating Costs Benefit | Nil |
| Total Benefit | $4,871 |
| Less: Payments Withheld By Employer | ( 2,400) |
| Taxable Benefit | $2,471 |

* [(1,667)(11)]

**Note 2** Employers can provide their employees with a non-cash gift with a value of less than $500 without creating a taxable benefit. The mini iPad costs less than $500.

**Note 3** Although Ms. Firth would qualify for the deduction of one-half of the stock option benefit under ITA 110(1)(d), it is a deduction from Taxable Income and would not affect the calculation of net employment income.

**Note 4** The $2,500 membership to the Mountain Tennis Club paid by the Company for Ms. Firth is not a taxable benefit since the primary beneficiary appears to be the Company.

**Note 5** Contributions made to a registered pension plan under the terms of the plan are deductible. The matching contributions made by the employer are not a taxable benefit.

**Other Excluded Items** Other items not included and the reason for their exclusion:

- Federal and provincial income taxes withheld are not deductible.

## Self Study Solution Three - 12

Mr. Jones' net employment income would be calculated as follows:

| | | | |
|---|---|---|---|
| Salary | | | $25,800 |
| Taxable Benefit From Fishing Trip | | | 2,450 |
| Commission Income | | | |
| Sales Commissions | | $47,700 | |
| Deductions: | | | |
| Airline Tickets | ($2,350) | | |
| Office Supplies | ( 415) | | |
| Client Entertainment [(50%)($1,750)] | ( 875) | | |
| CCA (Note 1) | ( 7,560) | | |
| Operating Costs (Note 2) | ( 5,040) | ( 16,240) | 31,460 |
| Net Employment Income | | | $59,710 |

**Note 1** The deductible capital cost allowance on the car would be calculated as follows:

| | |
|---|---|
| Full Capital Cost Allowance* | $10,800 |
| Employment Related Usage Proportion (35,000/50,000) | 70% |
| Deductible Amount | $ 7,560 |

*While this subject is not covered until Chapter 5, the maximum capital cost allowance would be calculated as follows:

$$\$10,800 = [(\$24,000)(30\%)(150\%)]$$

**Note 2** As the car was used 30 percent on personal matters, only $5,040 [(70%)($7,200)] in operating costs would be deductible.

**Other Notes**

- The laptop computer is a capital expenditure and is not deductible as an expense. Since an employee cannot deduct CCA except for an automobile, musical instrument, or aircraft, the purchase of the laptop computer would not have any effect on either employment income or taxes payable.
- The payment for Blue Cross would be eligible for the medical expenses tax credit, but would not be deductible in the calculation of net employment income. The life insurance premiums would not have any effect on either employment income or taxes payable.
- Discounts for employees on merchandise normally sold by an employer are not generally considered to be a taxable benefit.

## Self Study Solution Three - 13

### *Part A*

As Mr. Worthy's income includes commissions, he has a choice of deducting his expenses under a combination of ITA 8(1)(f), (i), and (j) or, alternatively under a combination of ITA 8(1)(h), (h.1), (i), and (j).

Deductions under ITA 8(1)(f) are limited to the amount of commissions earned. Alternatively, traveling costs and motor vehicle costs other than capital costs can be deducted under ITA 8(1)(h) and ITA 8(1)(h.1). Deductions under these provisions are not limited to commission

income. As discussed in the text, he cannot use both ITA 8(1)(f) and the combination of ITA 8(1)(h) and (h.1).

As the deduction under ITA 8(1)(f) is limited by commission income, alternative calculations are required to determine the maximum deduction. In the calculations which follow, we have minimized the effect of the commission income limit by listing any item that can be deducted under either ITA 8(1)(f) or ITA 8(1)(i) or (j) under the ITA 8(1)(i) and (j) column.

For example, house utilities and maintenance could be deducted under either ITA 8(1)(f) or 8(1)(i). We have included them under ITA 8(1)(i) in order to minimize the deductions that are limited by commission income.

The required calculations are as follows:

| | ITA 8(1)(f) (Limited To $11,000) | ITA 8(1) (h) and (h.1) | ITA 8(1) (i) and (j) |
|---|---|---|---|
| Work Space In The Home Costs | | | |
| Monthly Charge For Residential Line | - | - | - |
| Long Distance Telephone Charges | - | - | $ 400 |
| Cellular Phone Airtime | - | - | 800 |
| Office Supplies | - | - | 295 |
| House Utilities | - | - | 485 |
| House Maintenance | - | - | 255 |
| House Insurance | $ 70 | - | - |
| Property Taxes | 265 | - | - |
| Capital Cost Allowance - House | - | - | - |
| Mortgage Interest | - | - | - |
| Automobile Costs: | | | |
| Operating Costs [(80%)($2,700)] | 2,160 | 2,160 | - |
| Car Interest [(80%)($2,300)] | - | - | 1,840 |
| Car CCA [(80%)($2,450)] | - | - | 1,960 |
| Entertainment | | | |
| Deductible Portion [(50%)($2,550)] | 1,275 | - | - |
| Travel Costs | | | |
| Hotels | 2,850 | $2,850 | - |
| Deductible Portion Of Meals [(50%)($900)] | 450 | 450 | - |
| Office Furniture | | | |
| Interest | - | - | - |
| Capital Cost Allowance | - | - | - |
| Total | $7,070 | $5,460 | $6,035 |

Using the preceding calculations, Mr. Worthy's minimum net employment income can be calculated as follows:

| | | |
|---|---|---|
| Salary | | $65,000 |
| Commissions | $11,000 | |
| Expenses Under ITA 8(1)(f) - Limited To Commissions | ( 7,070) | 3,930 |
| Total | | $68,930 |
| Expenses Under ITA 8(1)(i) and (j) | | ( 6,035) |
| Net Employment Income | | $62,895 |

Expenses in excess of commission income cannot be deducted under ITA 8(1)(f). Since the total of the expenses is less than the commissions of $11,000, they can all be deducted. The

deduction of automobile capital costs (CCA and financing costs) under ITA 8(1)(j) is permitted without regard to other provisions used.

**Notes:**

1. The monthly telephone charge is not deductible. The long distance charges and cellular telephone airtime to clients can be deducted. The deduction for supplies can be deducted under ITA 8(1)(f) or (i). They have been deducted under ITA 8(1)(i), which is not limited by the commission income.
2. Only 50 percent of entertainment and meals when traveling are deductible.
3. ITA 8(1)(f) prohibits the deduction of amounts associated with capital assets except as they are permitted under ITA 8(1)(j) and ITA 8(1)(p). These latter Paragraphs only permit interest or capital cost allowance to be deducted when it is related to an automobile, aircraft, or musical instrument. Therefore, the interest and the capital cost allowance on the house and the office furniture would not be deductible against employment income. This is a good illustration of the importance of distinguishing between employment income and business income. While these amounts cannot be deducted against employment income, they would likely be deductible against business income.
4. As the car is used 20 percent for personal purposes, this proportion of the operating costs, capital cost allowance, and interest costs will not be deductible.
5. The deduction for work space in the home costs has been split between ITA 8(1)(i) and (f). Since the maintenance portion can be deducted under ITA 8(1)(i) by any employee, it is not limited by the commission income. The insurance and property tax components are limited as they can only be deducted under ITA 8(1)(f). A limitation, which is not illustrated in this problem, prevents the deduction of work space in the home costs from creating an employment loss. If any of these costs had not been deductible during the current year, they could be deducted against employment income in any subsequent year as long as a loss is not created or increased by their deduction.
6. Mr. Worthy's employer must sign Form T2200 certifying that Mr. Worthy is required to incur travel expenses and maintain his own work space. Mr. Worthy must retain this signed form with his records in order to deduct car and home office expenses.

### *Part B*

If Mr. Worthy deducted the ITA 8(1)(f) expenses, they would be limited to his commission income of $4,000. Alternatively, he can use the combination of ITA 8(1)(h) and (h.1). His minimum net employment income under both alternatives can be calculated as follows:

| | ITA 8(1)(f) | ITA 8(1)(h)(h.1) |
|---|---|---|
| Salary | $65,000 | $65,000 |
| Commissions | 4,000 | 4,000 |
| Expenses Under ITA 8(1)(f) - Limited To Commissions | ( 4,000) | Nil |
| Subtotal | $65,000 | $69,000 |
| Expenses Under ITA 8(1)(h) and (h.1) | Nil | ( 5,460) |
| Expenses Under ITA 8(1)(i) and (j) | ( 6,035) | ( 6,035) |
| Net Employment Income | $58,965 | $57,505 |

Using the combination of ITA 8(1)(h), (h.1), (i), and (j) produces a lower net employment income figure. Note that when this approach is used, work space in the home costs are limited to utilities and maintenance. Further, there is no deduction for entertainment costs. However, this approach results in deductions totalling $1,460 ($5,460 - $4,000) more than the amount available using ITA 8(1)(f), (i), and (j) due to the effect of the commission income limit.

## Self Study Solution Three - 14

Mitch Lesner's net employment income would be calculated as follows;

| | |
|---|---|
| Item 1 - Signing Bonus (Note 1) | $10,000 |
| Item 1 - Salary Received (Note 1) | 62,550 |
| Item 1 - RPP Contributions Withheld | ( 1,200) |
| Item 1 - Other Items (Note 1) | Nil |
| Item 2 - Bonus Received (Note 2) | 2,000 |
| Item 3 - Counseling Services (Note 3) | Nil |
| Item 4 - Group Medical Coverage (Note 4) | Nil |
| Item 5 - Employer Contribution To RPP (Note 5) | Nil |
| Item 6 - Professional Dues Paid (Note 6) | ( 785) |
| Item 6 - Employer Reimbursement Of Professional Dues (Note 6) | 628 |
| Item 7 - Wedding Gifts (Note 7) | Nil |
| Item 8 - Squash Club Membership (Note 8) | Nil |
| Item 9 - Housing Loss Reimbursement (Note 9) | 1,300 |
| Item 10 - Imputed Interest On Housing Loan (Note 10) | 170 |
| Item 11 - Stock Option Benefit (Note 11) | 1,280 |
| Item 12 - Automobile Benefit (Note 12) | 741 |
| Item 13 - Stationery And Supplies | ( 129) |
| Item 13 - Long Distance Calls | ( 74) |
| Item 13 - Home Office (Note 13) | ( 563) |
| Item 14 - Home Office Allowance (Note 14) | 1,500 |
| Net Employment Income | $77,418 |

**Note 1** Amounts received prior to, during or after employment are required to be included in employment income when received.

Salary and other forms of remuneration such as bonuses are included in income when received regardless of when earned.

Income taxes, CPP and EI withheld are not deductible. Note, however, that the CPP and EI are eligible for a non-refundable tax credit that will reduce Tax Payable.

**Note 2** Only the $2,000 amount of the bonus that was received in 2019 will be included in that year's Net Income For Tax Purposes. The remaining $5,450 will not be included in Net Income For Tax Purposes until it is received in 2020.

**Note 3** Employer provided mental health counseling services are not considered to be a taxable benefit.

**Note 4** Group medical plans are generally referred to as Private Health Insurance Plans. Employer paid premiums for such plans are not considered to be a taxable benefit.

**Note 5** Employer contributions to RPPs are not considered to be a taxable benefit.

**Note 6** The reimbursement of employee professional dues is considered a taxable benefit, but the employee is generally entitled to an employment expense deduction for annual professional membership dues under ITA 8(1)(i).

**Note 7** Non-cash gifts from employers that total less than $500 per year are not considered taxable benefits. The employer's share of the wedding gifts was $425.

**Note 8** Fees for club memberships where the primary advantage is to the employer are not considered to be a taxable benefit.

**Note 9** Employer-reimbursed housing losses fall into two categories – regular housing losses and eligible housing losses. Eligible housing losses occur when there is

an eligible relocation which generally means a relocation or move the expenses of which would qualify for a moving expense deduction had they been paid by the employee. In this case the move is an eligible relocation meaning that the reimbursement qualifies as an eligible housing loss. The employer reimbursed $17,600 [(80%)($22,000)]. The taxable portion of the loss reimbursement is $1,300 [(1/2)($17,600 - $15,000)]. The remaining tax free amount of $16,300 can be calculated as ($17,600 - $1,300) or [$15,000 + (1/2)($17,600 - $15,000)].

**Note 10** When an employee receives an interest-free or low interest loan an imputed interest benefit is calculated. The interest benefit is $170 [(1%)($200,000)(31/365)]. Note that the alternative calculation, based on months outstanding, would result in a value of $167 [(1%)($200,000) ÷ 12]. It appears that this value would be accepted by the CRA.

There is no reduction in that amount since Mitch is not required to repay any of the interest. As this loan would qualify as a home relocation loan, Mitch will claim a home relocation loan deduction in the calculation of Taxable Income. However, this would have no effect on the required net employment income calculation.

**Note 11** Despite the fact that the option price was 20 percent below fair market value, the issuance of the stock options does not create employment income. However, when he exercises the option by purchasing shares, there is a benefit as follows:

| | |
|---|---|
| Market Value At Exercise Date ($12,800 ÷ 80%) | $16,000 |
| Option Price | ( 12,800) |
| Value of Benefit (200 Shares) | $ 3,200 |
| Per Share Benefit ($3,200 ÷ 200) | $16 Per Share |

As Oxford Associates is a CCPC, this benefit can be deferred until the shares are sold. As 80 shares are sold, there will be a 2019 net employment income inclusion of $1,280 [(80)($16)]. Note that, while this is not relevant to the determination of net employment income, no deduction would be available under either ITA 110(1)(d) or 110(1)(d.1) as the option price will always be less than the fair market value at the time the option was granted.

In addition to the employment income inclusion, there is a taxable capital gain of $1,280 {[1/2][$8,960 - (80/200)($16,000)]}. However, capital gains are not a component of net employment income.

**Note 12** The kilometers driven in the year total 19,252 (19,414 – 162), of which 5,198 are personal and 14,054 (19,252 - 5,198) are employment related. Since the employment related driving accounts for more than 50 percent (14,054 ÷ 19,252 = 73%), a reduced standby charge is available. The automobile benefit would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2/3)(8)($430)(5,198 ÷ 13,336*)] | $ 894 |
| Operating Cost Benefit - Lesser Of: | |
| • [($0.28)(5,198)] = $1,455 | |
| • [(1/2)($894) = $447 | 447 |
| Total Benefit | $1,341 |
| Reimbursement To Employer [(8)($75)] | ( 600) |
| Net Benefit | $ 741 |

*[(8)(1,667)]

**Note 13** Based on floor space, the home office occupies 8.5 percent of the apartment [100 ÷ 1,176]. The work space in the home expenses that may be claimed for the period June 1 to November 30 are the following:

| | |
|---|---|
| Rent Paid [(6)($960)] | $5,760 |
| Electricity Paid [($870)(6 ÷ 8.5 Months)] | 614 |
| Paint | 253 |
| Total Eligible Expenses | $6,627 |
| Home Office Use | 8.5% |
| Deductible Expense | $ 563 |

**Note 14** Allowances received are included in employment income unless the allowance is specifically excluded by ITA 6(1)(b). There is no exclusion for this allowance. The amount is $1,500 [(6)($250)].

## Chapter 3 Learning Objectives

After completing Chapter 3, you should be able to:

1. Explain the basic concept of employment income (paragraph [P hereafter] 3-1 to 3-6).
2. Explain the reasons for using, and rules associated with, bonus arrangements for employees (P 3-7 to 3-13).
3. Distinguish between an employee and a self-employed individual earning business income and list the advantages and disadvantages of both classifications (P 3-14 to 3-44).
4. Explain how salaries and fringe benefits in general are taxed (P 3-45 to 3-55).
5. List the benefits that can be excluded from employment income under ITA 6(1)(a) and the benefits that must be included in income under the other Paragraphs in ITA 6(1) (P 3-56 to 3-59).

6. Apply the content of IT Folio S2-F3-C2 or the CRA Employers' Guide with respect to the tax status of the various employee benefits described within the publications (P 3-60 to 3-63).
7. Explain the basic elements of tax planning for employee benefits (P 3-64 to 3-76).
8. Describe the effects of GST/HST/PST on taxable benefits (P 3-77 and 3-78).
9. Calculate the standby charge and operating cost benefits that apply to employees who are provided with an automobile that is leased or owned by their employer (P 3-79 to 3-122).

10. Explain basic tax planning for company cars (P 3-123 and 3-124).
11. Explain the tax treatment of allowances that are provided by employers to their employees for travel costs (P 3-125 to 3-142).
12. Describe the tax status of various types of insurance benefits that are provided by employers to their employees (P 3-143 to 3-148).
13. Calculate the tax consequences of low-rate or interest free loans to employees (P 3-149 to 3-156).
14. Calculate the tax consequences that result from employees receiving and exercising stock options, and from the subsequent sale of the acquired shares (P 3-157 to 3-176).

15. List and describe other inclusions in employment income (P 3-177 to 3-185).
16. List and describe specific deductions against employment income that are listed in ITA 8 (P 3-186 to 3-206).
17. Explain how deductible work space in the home costs for employees are calculated (P 3-207 to 3-212).

# CHAPTER 4

## How To Work Through Chapter 4

We recommend the following approach in dealing with the material in this chapter:

**Taxable Income Of Individuals**

- Read the beginning of the Chapter to paragraph 4-9 (in the textbook).

**Federal And Provincial Tax Payable Before Credits**

- Read paragraph 4-10 to 4-22.
- Do Exercise Four-1 and check the solution in this Study Guide.
- Read paragraph 4-23 to 4-27.

**Credits Against Tax Payable - Calculating The Amount**

- Read paragraph 4-28 to 4-32.

**Spousal, Eligible Dependant And Canada Caregiver For Child Tax Credits**

- Read paragraph 4-33 to 4-38.
- Do Exercise Four-2 and check the solution in this Study Guide.
- Do Self Study Problem Four-1 which is available on MyLab and check the solution in this Study Guide.
- Read paragraph 4-39 to 4-48.

**Basic Personal And Caregiver Tax Credits**

- Read paragraph 4-49 to 4-59.
- Do Exercises Four-3 to Four-5 and check the solutions in this Study Guide.
- Read paragraph 4-60 and 4-61.
- Do Exercise Four-6 and check the solution in this Study Guide.

**Age, Pension, Canada Employment And Adoption Expenses Tax Credits**

- Read paragraph 4-62 and 4-63.
- Do Exercise Four-7 and check the solution in this Study Guide.
- Read paragraph 4-64 to 4-76.
- Do Exercise Four-8 and check the solution in this Study Guide.

**Digital News Subscriptions Credit**

- Read paragraph 4-77 to 4-78.

**Home Accessibility Tax Credit**

- Read paragraph 4-79 to 4-89.
- Do Exercise Four-9 and check the solution in this Study Guide.

**First Time Home Buyer's And
Volunteer Firefighters And Search And Rescue Workers Tax Credits**

- Read paragraph 4-90 to 4-96.

**Charitable Donations Credit**

- Read paragraph 4-97 to 4-104.
- Do Exercise Four-10 and check the solution in this Study Guide.
- Read paragraph 4-105 to 4-108.
- Do Exercise Four-11 and check the solution in this Study Guide.

**Medical Expense Credit**

- Read paragraph 4-109 to 4-119.
- Do Exercise Four-12 and check the solution in this Study Guide.

**Disability Credit**

- Read paragraph 4-120 to 4-127.
- Do Exercise Four-13 and check the solution in this Study Guide.
- Read paragraph 4-128 to 4-130.

**Education Related Credits Including Carry Forwards And Transfers**

- Read paragraph 4-131 to 4-138.
- Do Exercise Four-14 and check the solution in this Study Guide.
- Read paragraph 4-139 to 4-148.
- Do Exercise Four-15 and check the solution in this Study Guide.

**Employment Insurance And Canada Pension Plan Tax Credits**

- Read paragraph 4-149 to 4-155.

**Credit Transfers To A Spouse Or Common-Law Partner**

- Read paragraph 4-156 to 4-158.
- Do Exercise Four-16 and check the solution in this Study Guide.
- Do Self Study Problems Four-2 and Four-3 and check the solutions in this Study Guide.

**Political Contributions Credit**

- Read paragraph 4-159 to 4-161.
- Do Exercise Four-17 and check the solution in this Study Guide.

**Labour Sponsored Venture Capital Corporation (LSVCC) Credit**

- Read paragraph 4-163 to 4-167.
- Do Self Study Problems Four-4 and Four-5 and check the solutions in this Study Guide.

**Refundable Credits - GST And Refundable Medical Expense Supplement**

- Read paragraph 4-168 to 4-179.
- Do Exercise Four-18 and check the solution in this Study Guide.

**Refundable Credits - Canada Workers Benefit And Teacher School Supply**

- Read paragraph 4-180 to 4-186.

**Refundable Credits - Climate Action Incentive Payments**

- Read paragraph 4-187 to 4-194.

**Refundable Credits - Canada Training Credit (Proposed)**

- Read paragraph 4-195 to 4-201.

**EI And OAS Repayment (Clawback)**

- Read paragraph 4-202 to 4-212.
- Do Exercise Four-19 and check the solution in this Study Guide.

**Comprehensive Example**

- Read paragraph 4-213.
- Do Self Study Problems Four-6 to Four-8 and check the solutions in this Study Guide.

### Sample Personal Tax Return For Chapter 4

- Read the Sample Personal Tax Return For Chapter 4 found in this Chapter of this Study Guide. The complete tax returns are available on MyLab in two formats, a T1 ProFile return file and a .PDF file.

### Tax Software Self Study Problem

- Read the Suggestions For Working With ProFile Software found in this Chapter of this Study Guide.
- Do Tax Software Self Study Problem - Chapter 4 using the ProFile T1 Software. The Self Study Problem is found in this Chapter of this Study Guide. The complete tax return is available on MyLab.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 4. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 4 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 4 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 4 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 4 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

## Sample Personal Tax Return For Chapter 4

The following example contains a T1 individual income tax returns completed using the ProFile T1 Personal Income Tax Program for 2018 tax returns from Intuit Canada. As software for 2019 is not yet available, this example contains 2018 rates and credits.

The updated 2019 filing version of the ProFile software will be available in January, 2020. Non-filing versions will be available prior to that date, but include a number of 2019 draft forms that have not yet been updated. On installation, the program defaults to check for updates, so non-filing versions may be installed automatically. In January, 2020, after the first 2019 filing version is released, the updated 2019 version of this sample return will be available on MyLab at:

**http://www.pearsonmylabandmastering.com**

This example is expanded in Chapter 11 to contain other components of Taxable Income and Tax Payable. In the following example, the relevant T1 schedule or ProFile form name is provided in square brackets to make it easier for users to find where the information is input.

## Sample Files On MyLab

***To View The Tax Return Files***

The complete sample tax returns are available on MyLab in two versions, a T1 ProFile return file and a .PDF file.

To view the ProFile return files (files with a .18T extension), you must have the ProFile program installed. For information on how to obtain the program for free, see MyLab.

To view the .PDF files, you must have the Adobe Reader program installed. This program can be installed for free from the Adobe website (www.adobe.com).

***Tips To Increase The Benefits From Viewing The ProFile Files***

When viewing the sample return ProFile file, we suggest the following:

- Press <F1> on any ProFile form or field to display related information in the help system. In ProFile dialog boxes, click the [?] symbol in the top right corner, then click any element for help on that item.
- By pressing <F4> you will open the Form Explorer. In the categories of forms appearing in the shaded box on the left, if you choose "A. Used" near the bottom of the column, all the forms that have calculations for the return will be shown. You can then double click on the form itself to view it.
- Right clicking on a number in a field shows a variety of options, including the form or schedule where the amount originated from.
- Clicking on "Show Auditor" under the "Audit" list will display any warnings or potential errors.

For students who would like more assistance in using the software, we have provided "Suggestions For Working With ProFile Software" in this Study Guide following this example.

## Sample T1 Tax Return Data

**DISCLAIMER:** All characters appearing in this example are fictitious. Any resemblance to real persons, living or dead, is purely coincidental.

George Pilot (SIN 527-000-145) is a married, semi-retired air force pilot living in Banff, Alberta. His wife, Deborah (SIN 130-692-544) was mauled by a grizzly bear while hiking 3 years ago. The attack left her blind and limited her mobility. [Schedule 2 - Yes to disability amount]

They have been your clients for many years. George was born on February 24, 1967 and Deborah was born on April 10, 1971. They are both Canadian citizens.

After some discussion with George and Deborah, you confirm that they have never owned any foreign property. They both authorize the CRA to provide information to Elections Canada and authorize you to e-file their returns. They are currently living at 69 BBB Street in Banff, Alberta T9Z 0C0. Their home phone number is (403) 111-1111.

George and Deborah have three children who are all in good health:

- Bryan (SIN 527-000-947) was born on March 12, 2011 and had no income during the year.
- Janice (SIN 527-000-269) was born on June 6, 2005 and is in high school. She had income from babysitting totalling $400 during 2018.
- Willa (SIN 527-000-228) was born on January 22, 1999 and is attending university in Edmonton. Willa had Net Income of $3,300 during 2018.

George has a passion for flying and was hired in February to fly fire bombers June 1 to September 30 for the provincial forest service fire control squad located in Banff.

George informs you that on February 12, 2018, he received $2 million from his mother's estate. Using some of these funds, George bought a house in Banff. The remainder of the funds were invested with his stockbroker, $$$$ Inc. In this Chapter 4 version of the example, assume there is no investment income from these funds.

Deborah had no income during the year. [Info - Spousal information - Yes to the question "Is spouse's Net Income zero?"]

George brings you the following receipts and documents:

1. A T4 (included in this example).
2. A T2202A "Tuition And Enrollment Certificate" for himself from Athabasca University. It showed he was a part time student for 6 months and paid $591 in tuition for 2018. [T2202]
3. Two charitable donation receipts. One in George's name for $1,000 from the Canadian Wildlife Federation dated April 10, 2018. A second receipt in Deborah's name for $100 from the Canadian National Institute for the Blind (CNIB) dated December 3, 2018. [Donations]
4. A statement from the Banff Dental Clinic that George paid a total of $1,650 during 2018. This consisted of $850 for himself on November 24, and $200 each for Deborah, Bryan, Willa and Janice on December 15. [Medical]
5. An invoice from the CNIB in Deborah's name for $375 dated December 26, 2018 for computer peripherals designed exclusively for a person who is blind to use a computer. She had obtained a prescription from her doctor specifying her need for this equipment. [Medical]
6. George spent $14,700 during 2018 on various permanent modifications to the house. His goal for these changes was to allow Deborah to be more mobile inside and outside the house (ex., outside ramps and railings in the halls and stairways) and to reduce the risk of harm to her (a walk-in bathtub). George has detailed invoices for the renovations. Since Deborah's mobility impairment is not severe, these expenditures do not qualify as allowable medical expenses. [Schedule 12]
7. An agreement of purchase and sale for a house at 69 BBB St. in Banff. The purchase price was $800,000 and the invoice for legal fees totalled $1,200. The deal closed March 31, 2018 and George paid the purchase price of the house in cash. George and his family had been living in a rented townhouse for the last 5 years. Prior to that George had owned a house, but it went to his ex-wife in the divorce settlement. Deborah has never owned a principal residence. [OtherCredits for the Home Buyers' Credit.]
8. An instalment statement for 2018 that showed that George had paid the CRA instalments of $1,500 on September 14 and December 14 ($3,000 in total). These were the instalments requested by the CRA for the year due to his self-employed income in the previous year. [OtherCredits]

## Sample T1 Tax Return Notes

### *General Notes*

- Inheritances are not taxable.
- Due to his low Net Income For Tax Purposes, George is eligible for the refundable medical expense supplement and the Canada Workers Benefit.
- Although George could consider carrying forward his medical expenses because his non-refundable tax credits are greater than his tax payable, if he did so, he would not receive the refundable medical expense supplement.
- Since Willa is over 17 years of age, her medical expenses are reduced by 3 percent of her Net Income For Tax Purposes.
- Due to his nil Tax Payable, George's charitable donation credit and his tuition credit are both carried forward.
- George does not qualify for the Climate Action Incentive (CAI) as a resident of Alberta. This is a refundable credit available to residents of Ontario, Saskatchewan, Manitoba and New Brunswick and is based on family size.

#### *Item Specific Notes*

- (Item 3) For couples, the CRA's administrative practices permit either spouse to claim some or all of the donations made by the couple. This is not relevant in this version as the donations are carried forward.
- (Item 5) Both ITA 118.2 and Income Tax Folio S1-F1-C1 clearly state that medical expenses can only be deducted by the individual who paid for them. However, in the T1 Guide, this rule is contradicted for couples. According to this Guide, either spouse can claim the medical expense credit, without regard to who actually paid for the expenses. This administrative position is used in practice. As a result, George is claiming the amount Deborah paid for the computer peripherals.
- (Item 6) George's receipts for the expenses eligible for the Home Accessibility Credit total more than the $10,000 maximum for the year on Schedule 12. As a result the maximum credit of $1,500 [(15%)($10,000)] is available. However, since George's non-refundable tax credits already exceed his Tax Payable, he cannot take advantage of this credit and it cannot be carried forward.
- (Item 7) The Home Buyers' Tax Credit of $750 [(15%)($5,000)] is available since George had been living in a rented town house for 5 years and neither he nor Deborah had another principal residence. However, since George's non-refundable tax credits already exceed his Tax Payable, he cannot take advantage of this credit either and it cannot be carried forward.

#### *Tax Planning Points*

- Willa should file a return in order to receive the GST credit and to help her keep track of her tuition credit carry forward.
- (Item 8) George has paid installments based on the CRA's Instalment Reminders. Given the amount of his refund, they were unnecessary. George should review his estimated net tax owing periodically in the future to determine whether instalments should be paid.

### Completed Tax Returns

The complete sample tax returns are available on MyLab in two versions, a T1 ProFile return file and a .PDF file.

## Suggestions For Working With ProFile Software

### Before You Start

To get the maximum benefit from using the ProFile tax software program, we strongly advise that you do the tutorial "Getting Started" included within the program under the Training tab. The data in the sample tax returns can be used in the tutorial. Also on the Training tab is access to "Other Training Options" which include online training and many how-to videos.

### Creating A New T1 Return

To provide some guidance on how to use ProFile to create a simple new personal tax return, we suggest the following approach.

1. Start the ProFile software. Open a new file. Ensure that you have chosen the new file in the correct software (T1) and year (2018 or 2019 if the updated data is available).
2. By default, ProFile will open on the form "Info". Fill in the highlighted cells and answer all questions that are applicable. If you do not fill in the highlighted areas, ProFile will generate an audit message. At a minimum, you will need the following information:

- Taxpayer's Social Insurance Number (SIN)
- Taxpayer's first and last name
- Address, city, province, and postal code
- Telephone number
- Taxpayer's birth date

If applicable, you will also need to enter any relevant information for the spouse on the "Info" form. At a minimum, the following information will be necessary:

- Spouse's Social Insurance Number (SIN)
- Spouse's first and last name
- Address, city, province, and postal code
- Telephone number
- Spouse's birth date

3. Using the Form Explorer (F4), go to the Dependant form and enter all relevant information about any dependants. At a minimum, the following information will be necessary:

   - Dependant's Social Insurance Number (SIN) if there is one
   - Dependant's first and last name
   - Dependant's relationship to the taxpayer
   - Dependant's birth date
   - Dependant's Net Income
   - Address, city, province, and postal code

   Note that if there are child care expenses, the information will flow here from T778. If the Dependant has tuition fee amounts, the tuition fee information should be entered on the Dependant form.

4. Using the Form Explorer (F4), open the relevant information slip form. Enter all relevant information in the appropriate forms. Some common information slip forms are:

   - T3 - Statement of Trust Income
   - T4 - Statement of Remuneration Paid
   - T5 - Statement of Investment Income
   - T2202A - Tuition Slips
   - T4AOAS - Statement of Old Age Security

5. Enter any other relevant income information on the appropriate forms. These forms may include the following:

   - S3Details - Capital Gains Entry
     (this form, not Schedule 3, must be used to input details on capital dispositions)
   - T2125 - Statement of Business Or Professional Activities
   - T2125Asset - T2125 Asset Details
   - T2125CCA - T2125 CCA Details
   - T776 - Statement of Real Estate Rentals
   - T776Asset - T776 Asset Details
   - T776CCA - T776 CCA Details

6. Enter any relevant deduction information on the appropriate forms. These forms may include the following:

   - RRSP - RRSP Deduction
   - T777 - Statement of Employment Expenses (Use the jump link to T777Details in upper right hand corner of form if applicable)
   - T778 - Child Care Expense Deduction
   - Support - Support Payments
   - Auto - Motor Vehicle Expenses

- S4 - Statement of Investment Income
(much of the information for this schedule will be carried forward from the T3, T5, and other information slips, but a few items such as carrying charges are entered directly on Schedule 4)
- LossNetCap - Net Capital Losses (carry forward information)
- LossNonCap - Non-Capital Losses (carry forward information)

7. Enter any relevant tax credit information on the appropriate forms. These forms may include the following:
   - Donations - Charitable Donations
   - Medical - Medical Expenses
8. Enter any remaining relevant information in the appropriate schedule. These schedules may include the following:
   - S2 - Federal Amounts Transferred From Your Spouse or Common-Law Partner (primarily used if spouse or common-law partner is not filing a tax return)
   - T1032 - Joint Election To Split Pension Income
9. Use the function "Show Auditor" under the "Audit" list to check for warnings or potential errors.

## Tips For Using ProFile Software

- Press the F5 key or choose Spouse from the Form menu to display the return of the spouse.
- If you cannot determine where a specific slip or other information should be input, one way to search for the correct form is to open the Form Explorer (F4) and choose the "Key" mode icon in the top right corner of the menu. If you type a key word into the line above the listing of key words, the appropriate form may be found.
- Press the F4 key to view the Form Explorer. Choose the form "Summary" to see the tax data of both spouses on the same one page summary. (Second column will be blank for a single taxpayer.)
- If you want to print only the form you have on the screen, use the print icon identified with 1 in the tool bar. The other print icon opens the print selection screen for printing complete returns. If you want to print just one copy of the return, deselect the print sets you don't want on the print selection screen. Before you print the return, review the forms that have been selected in the print set to ensure that you will not be printing forms you do not require. If it is a coupled return, the print settings for the spouse should be reviewed before clicking on Print as both returns will be printed.
- Review marks can be used to flag information that should be reviewed. The cell with the review mark will be listed when the Show Auditor feature is turned on.
- A memo and/or a tape can be attached to a cell to provide backup information.
- If you are having problems with a specific issue, go to the Training tab, "Other Training Options", to access the online how-to videos which may help solve your problems.

## Tax Software Self Study Problem - Chapter 4

**Note** The following problem contains 2018 (not 2019) information as software for 2019 is not yet available. If you have an updated 2019 version of ProFile installed on your computer, ensure that when you begin, you open a file for 2018, not 2019 as this data is for 2018. Shortly after the first filing version of the 2019 Intuit ProFile software

is available in January, 2020, the updated 2019 version of this problem will be available on MyLab at:

**http://www.pearsonmylabandmastering.com**

This Tax Software Self Study Problem is expanded in Chapter 11 to contain other components of Taxable Income and Tax Payable.

**DISCLAIMER:** All characters appearing in this problem are fictitious. Any resemblance to real persons, living or dead, is purely coincidental.

Ms. Eleanor Victoria's husband died two years ago. After her husband died, she moved from her house in Prince George, B.C., to a rented house in Victoria, B.C.

Ms. Victoria's widowed mother, Marjorie Vancouver lives with Ms. Victoria and takes care of the house, Ms. Victoria's younger daughter, Amy, and all of the household cooking. In addition to OAS benefits, Marjorie has a very small income from her deceased husband's life insurance policy. She has never filed a tax return and she is not infirm.

Diane Victoria, Eleanor's older daughter, is studying psychology at McGill University in Montreal. Her field is addiction research with a special emphasis on gambling. She does volunteer work at a gambling addiction treatment centre in Montreal in the summers. As Eleanor has paid for her tuition and living costs, Diane has agreed that the maximum tuition amount should be transferred to her mother.

Diane has decided not to file a tax return this year as she knows she does not owe any taxes. Her income was earned driving for a client of the addiction treatment centre who had lost his licence after being charged with impaired driving.

Information concerning Ms. Victoria for 2018 is given on the following pages.

**Required**: With the objective of minimizing Ms. Victoria's Tax Payable, prepare the 2018 income tax return of Eleanor Victoria using the ProFile tax software program. List any assumptions you have made, and any notes and tax planning issues you feel should be discussed with Ms. Victoria. Ignore HST implications in your solution by assuming that Ms. Victoria does not qualify for the GST/HST rebate.

| Personal Information | |
|---|---|
| Title | Ms. |
| First Name | Eleanor |
| Last Name | Victoria |
| SIN | 527-000-087 |
| Date of birth (Y/M/D) | 1971-05-15 |
| Marital Status | Widowed |
| Canadian citizen? | Yes |
| Provide information to Elections Canada? | Yes |
| Own foreign property of more than $100,000 Canadian? | No |

| Taxpayer's Address |
|---|
| 111 VVV Street Victoria, B.C. V4H 3W4 |
| Phone number (250) 111-1111 |

| Dependants | Child 1 | Child 2 | Mother |
|---|---|---|---|
| First Name | Diane | Amy | Marjorie |
| Last Name | Victoria | Victoria | Vancouver |
| SIN | 527-000-293 | None | 527-000-483 |
| Date of birth (Y/M/D) | 1998-05-14 | 2006-10-11 | 1946-05-21 |
| Net income | $2,300 | Nil | $8,000 |

| T4 | Box | Amount |
|---|---|---|
| Issuer - 1750 Canada Inc. | | |
| Employment income | 14 | 60,201.80 |
| Employee's CPP contributions | 16 | 2,593.80 |
| Employee's EI premiums | 18 | 858.22 |
| RPP contributions | 20 | 2,406.16 |
| Pension adjustment | 52 | 7,829.00 |
| Income tax deducted | 22 | 6,408.00 |
| Employment commissions | 42 | 0 |
| Union dues | 44 | 748.59 |
| Charitable donations | 46 | 175.00 |

Eleanor has a signed T2200 from her employer specifying her work requires her to have an office in the home. She meets the conditions required to deduct work space in the home expenses. Of the 1,800 square feet in the house, her office, waiting area and storage space totals 310 square feet. She doesn't qualify for the GST rebate.

During 2018 she paid the following:

| | |
|---|---|
| Rent for the year (No GST charged) | $30,000 |
| Utilities (hydro and gas) for the year | 2,500 |
| Cleaning services (No GST charged) | 1,200 |
| Insurance for household effects (No GST charged) | 400 |
| Car insurance (No GST charged) | 700 |

Eleanor and her family had the following medical expenses, all of which Eleanor paid for:

| Patient | (Y/M/D) | Medical Expenses | Description | Am't |
|---|---|---|---|---|
| Eleanor | 2018-08-15 | Grace Hospital | Ambulance charge | 392 |
| Eleanor | 2018-08-18 | Paramed Home Health | Nursing care | 1,350 |
| Marjorie | 2018-05-20 | Dr. Zhang (Optometrist) | Contact lenses | 110 |
| Marjorie | 2018-07-06 | Pharmacy | Prescription | 75 |
| Diane | 2018-09-01 | Dr. Glassman | Physiotherapist | 100 |
| Amy | 2018-05-11 | Walk Right Foot Clinic | Orthotics | 450 |
| Amy | 2018-01-23 | Dr. Tamo | Dental Fees | 1,120 |

| T2202A - (Diane) | Box | Amount |
|---|---|---|
| Tuition fees - for Diane Victoria (daughter) | A | 7,000 |
| Number of months in school - part-time | B | 2 |
| Number of months in school - full-time | C | 8 |

| Donor | Charitable Donation Receipts | Am't |
|---|---|---|
| Eleanor | Heart and Stroke | 375 |
| Eleanor | Terry Fox Foundation | 50 |
| Diane | Addiction Research Council of Canada | 100 |

## Solutions to Chapter Four Exercises

### *Exercise Four - 1 Solution*

The required Tax Payable would be calculated as follows:

| | |
|---|---|
| Tax Payable On First $47,630 At 20.05 Percent (15% + 5.05%) | $ 9,550 |
| Tax Payable On Next $9,070 ($56,700 - $47,630) At 29.65 Percent (20.5% + 9.15%) | 2,689 |
| Total Tax Payable Before Credits | $12,239 |

Her average rate of tax is 21.6 percent ($12,239 ÷ $56,700).

### *Exercise Four - 2 Solution*

Assuming Johan's wife does not have a mental or physical infirmity, the required amount would be calculated as follows:

| | |
|---|---|
| Basic Personal Amount (Johan) | $12,069 |
| Spousal Amount ($12,069 - $2,600) | 9,469 |
| Credit Base | $21,538 |
| Rate | 15% |
| Personal Tax Credits - No Infirmity | $ 3,231 |

If there was a mental or physical infirmity, the amount would be calculated as follows:

| | |
|---|---|
| Basic Personal Amount (Johan) | $12,069 |
| Spousal Amount ($12,069 + $2,230 - $2,600) | 11,699 |
| Credit Base | $23,768 |
| Rate | 15% |
| Personal Tax Credits - With Infirmity | $ 3,565 |

### *Exercise Four - 3 Solution*

As her father is not infirm, Joan would not be entitled to a Canada caregiver credit for him. She is entitled to a Canada caregiver credit for her mother who is infirm. The credit would be:

[15%][$7,140 - ($21,400 - $16,766)] = $376

### *Exercise Four - 4 Solution*

Marcia will be entitled to the spousal tax credit, including the additional amount for an infirm spouse. In addition, she can claim the Canada caregiver credit for her infirm adult son. The total credits would be calculated as follows:

| | |
|---|---|
| Spousal Including Infirm Amount ($12,069 + $2,230 - $5,600) | $ 8,699 |
| Canada Caregiver ($7,140 - Nil) | 7,140 |
| Total Base | $15,839 |
| Rate | 15% |
| Marcia's Tax Credits Related To Spouse And Son | $ 2,376 |

### *Exercise Four - 5 Solution*

Darcy would claim the Canada caregiver amount for a child under ITA 118(1)(b.1). He would also claim the eligible dependant credit for Janice. Because he claims the Canada caregiver amount for a child, he cannot claim the additional amount for an infirm eligible dependant. His total credits would be as follows:

[(15%)($2,230) + (15%)($12,069 + Nil)] = $2,145

### *Exercise Four - 6 Solution*

The base for Sandy's eligible dependant credit for her mother would be nil ($12,069 + $2,230 - $18,000), resulting in an eligible dependant tax credit of nil. Her calculation of the Canada caregiver amount would result in a base of $5,906 [$7,140 - ($18,000 - $16,766)]. As the eligible dependant tax credit was nil, the additional amount is $5,906 ($5,906 - Nil), resulting in a credit of $886 [(15%)($5,906)].

### *Exercise Four - 7 Solution*

Mr. Smythe's age credit would be $816 {[15%][$7,494 - (15%)($51,500 - $37,790)]}.

### *Exercise Four - 8 Solution*

The adoption expenses tax credit would be calculated as follows:

| | |
|---|---|
| Cost Of First China Trip | $ 4,250 |
| Cost Of Second China Trip | 6,420 |
| Chinese Orphanage Fee | 1,600 |
| Canadian Adoption Agency Fee | 3,200 |
| Legal Fees | 2,700 |
| Medical Costs (Qualify For Medical Expense Credit) | Nil |
| Total Eligible Expenses | $18,170 |

Since the $5,000 employer reimbursement is a taxable benefit and included in employment income, it does not reduce the total eligible adoption expenses.

The adoption period begins at the time that an application is made for registration with an adoption agency licensed by a provincial government. This means that all of the expenses listed in the preceding table would be eligible expenses made during the adoption period. However, for 2019, there is an overall limit of $16,255 and the maximum credit that can be claimed is $2,438 [(15%)($16,255)].

### *Exercise Four - 9 Solution*

The snow removal contract would not be a qualifying expenditure. The base for the home accessibility tax credit would be limited to the lesser of $10,000 and the qualifying expenditures of $8,500. This will result in a credit of $1,275 [(15%)($8,500)].

Either spouse can claim the credit and it will be worth the same amount to either spouse.

Since it is non-refundable, whoever claims the credit should have at least $1,275 in federal Tax Payable. Alternatively, the $8,500 base amount can be split between the two spouses.

### Exercise Four - 10 Solution

With Net Income For Tax Purposes of $350,000, the maximum base for Mr. Hoffman's credit is $262,500 [(75%)($350,000)]. As his eligible charitable gifts are less than this, he can use the full amount as the base for his credit. Given this, the calculation of the credit is as follows:

[(15%)(A)] + [(33%)(B)] + [(29%)(C)], where

A = $200
B = The Lesser Of:
- $225,000 - $200 = $224,800
- $325,000 - $210,371 = $114,629 (Note Taxable Income is used here)

C = $ [$225,000 - ($200 + $114,629)]

The charitable donation credit would be equal to $69,807, calculated as [(15%)($200)] + [(33%)($114,629)] + [(29%)($110,171)].

### Exercise Four - 11 Solution

With Net Income For Tax Purposes of $350,000, the maximum base for Ms. Hoffman's credit is $262,500 [(75%)($350,000)]. As her donation credit carry forward is less than this, she can use the full amount as the base for her credit. Given this, the calculation of the credit is as follows:

[(15%)(A)] + [(33%)(B)] + [(29%)(C)], where

A = $200
B = The Lesser Of:
- $225,000 - $200 = $224,800
- $250,000 - $210,371 = $39,629 (Note Taxable Income is used here)

C = $185,171 [$225,000 - ($200 + $39,629)]

The charitable donation credit would be equal to $66,807, calculated as [(15%)($200)] + [(33%)($39,629)] + [(29%)($185,171)]. If she had any unused portions of her 2018 donation, it would be available until 2023.

### Exercise Four - 12 Solution

| | | |
|---|---|---|
| **Amount B** Qualifying Expenses ($4,330 + $4,600) | | $ 8,930 |
| **Amount C** - Lesser Of: | | |
| • [(3%)($150,000)] = $4,500 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,352) |
| Subtotal | | $ 6,578 |
| **Amount D** | | |
| Max's Medical Expenses | $8,425 | |
| Reduced By The Lesser Of: | | |
| • $2,352 | | |
| • [(3%)($8,250)] = $248 | ( 248) | 8,177 |
| Matt's Medical Expenses | $ 120 | |
| Reduced By The Lesser Of:$2,352 | | |
| • [(3%)($6,000)] = $180 | ( 180) | Nil* |
| Allowable Amount Of Medical Expenses | | $14,755 |
| **Amount A** The Appropriate Rate (Minimum Rate) | | 15% |
| Medical Expense Tax Credit | | $ 2,213 |

* As medical expenses can only be reduced to nil, the net result cannot be negative in this calculation.

### Exercise Four - 13 Solution

As Keith has no income, his disability credit can be transferred to John. As Keith is over 17, the disability child supplement is not available. In addition to the disability credit, John will be able to take the Canada caregiver credit, as well as a credit for Keith's medical expenses.

The total credits related to Keith would be as follows:

| | | |
|---|---|---|
| Transfer Of Keith's Disability Amount | | $ 8,416 |
| Canada Caregiver | | 7,140 |
| Keith's Medical Expenses | $16,240 | |
| Reduced By The Lesser Of: | | |
| • 2019 Threshold Amount = $2,352 | | |
| • [(3%)(Nil)] = Nil | Nil | 16,240 |
| Total Credit Base | | $31,796 |
| Rate | | 15% |
| Total Credits Related To Keith | | $ 4,769 |

### Exercise Four - 14 Solution

Ms. Bright's education related tax credits would be calculated as follows:

| | | |
|---|---|---|
| Tuition Amount: | | |
| Total (Including $1,000 Prepayment) | $3,200 | |
| Ineligible Ancillary Fees ($400 - $250) | ( 150) | $3,050 |
| Interest On Student Loan | | 325 |
| Total Credit Base | | $3,375 |
| Rate | | 15% |
| Total Available Credits | | $ 506 |

### Exercise Four - 15 Solution

The available tuition credit would be calculated as follows:

| | |
|---|---|
| Tuition Amount (Maximum Transfer = $5,000) | $23,500 |
| Rate | 15% |
| Tuition Credit (Maximum Transfer = $750) | $ 3,525 |

Note that the transfer and carry forward amounts calculated in the following alternative approaches ignore his medical expense credit.

**Income Tax Act Approach** The $750 maximum transfer of the tuition credit must be reduced by Jerry's Tax Payable, before deducting his medical expense credit, of $80 [(15%)($12,600 - $12,069)]. This will leave a maximum transfer of $670 ($750 - $80) and a carry forward credit of $2,775 ($3,525 - $80 - $670).

**Tax Return Approach** The $5,000 maximum transfer of the tuition credit must be reduced by $531 ($12,600 - $12,069)], the excess of Jerry's Taxable Income over his basic personal amount. This results in a maximum transfer of $4,469 ($5,000 - $531) and a carry forward amount of $18,500 ($23,500 - $531 - $4,469). Multiplying this by 15 percent gives the same $2,775 that we calculated under the alternative approach.

### Exercise Four - 16 Solution

His tax credits would be calculated as follows:

| | |
|---|---|
| Basic Personal Amount | $ 12,069 |
| Spousal Including Infirm Amount ($12,069 + $2,230 - Nil) | 14,299 |
| Age [$7,494 - (15%)($42,000 - $37,790)] | 6,863 |
| Pension Income* | 2,000 |
| Transfer Of Spouse's Age | 7,494 |
| Transfer Of Spouse's Disability | 8,416 |
| Transfer Of Spouse's Tuition - Lesser Of: | |
| • Actual Tuition = $2,200 | |
| • Maximum Transfer = $5,000 | 2,200 |
| Credit Base | $53,341 |
| Rate | 15% |
| Total Credits | $ 8,001 |

* A payment from a life annuity purchased with funds in an RRSP is eligible pension income.

### Exercise Four - 17 Solution

Ms. Unger's $487 credit would be calculated as follows:

| | Contributions | Credit Rate | Tax Credit |
|---|---|---|---|
| First | $400 | 3/4 | $300 |
| Next | 350 | 1/2 | 175 |
| Remaining | 35 | 1/3 | 12 |
| Maximum Credit | $785 | | $487 |

### Exercise Four - 18 Solution

The regular medical expense credit would be calculated as follows:

| | |
|---|---|
| Medical Expenses | $6,250 |
| Lesser Of: | |
| • [(3%)($28,400)] = $852 | |
| • 2019 Threshold Amount = $2,352 | ( 852) |
| Allowable Amount Of Medical Expenses | $5,398 |
| Rate | 15% |
| Medical Expense Credit | $ 810 |

The refundable supplement would be calculated as follows:

| | |
|---|---|
| Lesser Of: | |
| • $1,248 (2019 Maximum) | |
| • [(25/15)($810)] = $1,350 | $1,248 |
| Reduction [(5%)($28,400 - $27,639)] | ( 38) |
| Refundable Medical Expense Supplement | $1,210 |

Ms. Brunt's total Tax Payable (Refund) would be calculated as follows:

| | | |
|---|---|---|
| Tax Payable Before Credits [(15%)($28,400)] | | $4,260 |
| Non-Refundable Credits: | | |
| Basic | $12,069 | |
| Common-Law Partner | 12,069 | |
| Allowable Medical Expenses | 5,398 | |
| Total | $29,536 | |
| Rate | 15% | ( 4,430) |
| Tax Before Refundable Supplement | | $ Nil* |
| Refundable Medical Expense Supplement | | ( 1,210) |
| Tax Payable (Refund) | | ($1,210) |

* As Tax Before Refundable Supplement can only be reduced to nil, the net result cannot be negative for this subtotal.

### *Exercise Four - 19 Solution*

Ms. Jacobi's income before deducting either the EI or OAS repayments would be as follows:

| | |
|---|---|
| Net Employment Income | $65,000 |
| EI Benefits | 10,000 |
| OAS Benefits | 7,400 |
| Income Before Deductions | $82,400 |

Dealing first with the EI repayment, Ms. Jacobi would have to repay $3,000, the lesser of:

- $3,000 [(30%)($10,000)]
- $4,808 [(30%)($82,400 - $66,375)]

Using this deduction, the clawback of her OAS payments would be the lesser of:

- $7,400, the OAS payments included in income, and
- $273 [(15%)($82,400 - $3,000 - $77,580)].

As a result, her Net Income For Tax Purposes would be as follows:

| | |
|---|---|
| Income Before Deductions | $82,400 |
| ITA 60(v.1) Deduction (EI) | ( 3,000) |
| ITA 60(w) Deduction (OAS) | ( 273) |
| Net Income For Tax Purposes | $79,127 |

## Self Study Solution Four - 1

### *Case One*

In this Case One, the combined Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Barbra's Tax Payable | | |
| Federal Tax Before Credits [(15%)($42,000)] | $ 6,300 | |
| Basic Personal Credit [($12,069)(15%)] | ( 1,810) | $ 4,490 |
| Sally's Tax Payable | | |
| Tax On First $147,667 | $30,535 | |
| Tax On Next $32,333 ($180,000 - $147,667) At 29% | 9,377 | |
| Federal Tax Before Credits | $39,912 | |
| Basic Personal Credit [($12,069)(15%)] | ( 1,810) | 38,102 |
| Combined Tax Payable | | $42,592 |

***Case Two***

In this Case Two, the Tax Payable for each individual would be the same and the combined Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Barbra's Tax Payable | | |
| Tax On First $95,259 | $16,908 | |
| Tax On Next $15,741 ($111,000 - $95,259) At 26% | 4,093 | |
| Federal Tax Before Credits | $21,001 | |
| Basic Personal Credit [($12,069)(15%)] | ( 1,810) | $19,191 |
| Sally's Tax Payable | | |
| Tax On First $95,259 | $16,908 | |
| Tax On Next $15,741 ($111,000 - $95,259) At 26% | 4,093 | |
| Federal Tax Before Credits | $21,001 | |
| Basic Personal Credit [($12,069)(15%)] | ( 1,810) | 19,191 |
| Combined Tax Payable | | $38,382 |

***Case Three***

In this Case Three, only Barbra would have Tax Payable which would be calculated as follows:

| | |
|---|---|
| Tax On First $210,371 | $48,719 |
| Tax On Next $11,629 ($222,000 - $210,371) At 33% | 3,838 |
| Federal Tax Before Credits | $52,557 |
| Basic Personal Credit [($12,069)(15%)] | ( 1,810) |
| Common-Law Partner Credit [($12,069)(15%)] | ( 1,810) |
| Barbra's Tax Payable | $48,937 |

## Self Study Solution Four - 2

***Case 1***

Leonard Wilkins will qualify for the following credits:

| | |
|---|---|
| Basic Personal Amount | $12,069 |
| Spousal ($12,069 - $8,720) | 3,349 |
| Canada Caregiver | 7,140 |
| Total Credit Base | $22,558 |
| Rate | 15% |
| Total Credits | $ 3,384 |

***Case 2***

Pete Webb will qualify for the following credits:

| | |
|---|---|
| Basic Personal Amount | $12,069 |
| Spousal ($12,069 - $3,920) | 8,149 |
| EI (Maximum) | 860 |
| CPP (Maximum) | 2,749 |
| Canada Employment | 1,222 |
| Total Credit Base | $25,049 |
| Rate | 15% |
| Total Credits | $ 3,757 |

***Case 3***

Candace Hall will qualify for the following tax credits:

| | |
|---|---|
| Basic Personal Amount | $12,069 |
| Spousal ($12,069 - $5,130) | 6,939 |
| Age [$7,494 - (15%)($69,420 - $37,790)] | 2,749 |
| Pension Income | 2,000 |
| Total Credit Base | $23,757 |
| Rate | 15% |
| Total Credits | $ 3,564 |

Note that, because her income is below the $77,580 income threshold, there will be no clawback of Ms. Hall's OAS receipts.

***Case 4***

Gladys Crawford will qualify for the following tax credits:

| | |
|---|---|
| Basic Personal Amount | $12,069 |
| Spousal ($12,069 - $2,600) | 9,469 |
| Medical Expenses (See Note) | 20,864 |
| Total Credit Base | $42,402 |
| Rate | 15% |
| Total Credits | $ 6,360 |

**Note** The claim for medical expenses is determined as follows:

| | | |
|---|---|---|
| Expenses For Gladys, Her Spouse, And Under 18 Children ($5,150 + $4,240 + $2,040 + $3,220) | | $14,650 |
| Reduced By The Lesser Of: | | |
| • [(3%)($126,470)] = $3,794 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,352) |
| 20 Year Old's Medical Expenses | $8,840 | |
| Reduced By The Lesser Of: | | |
| • [(3%)($9,130)] = $274 | | |
| • $2,352 | ( 274) | 8,566 |
| Allowable Medical Expenses | | $20,864 |

***Case 5***

Austin Schneider will qualify for the following credits:

| | |
|---|---|
| Basic Personal Amount | $12,069 |
| Eligible Dependant (See Note) | 12,069 |
| Total Credit Base | $24,138 |
| Rate | 15% |
| Total Credits | $ 3,621 |

**Note** The eligible dependant credit can be taken for any child. It should not be claimed for the 14 year old as the amount of the credit would be reduced due to his income.

## Self Study Solution Four - 3

### Federal Tax Before Credits

For all of the following Cases, the Federal Tax Before Credits would be calculated as follows:

| | |
|---|---|
| Tax On First $47,630 | $ 7,145 |
| Tax On Next $30,370 ($78,000 - $47,630) At 20.5 Percent | 6,226 |
| Federal Tax Before Credits | $13,371 |

### Case A

The solution to this Case can be completed as follows:

| | | |
|---|---|---|
| Federal Tax Before Credits (As Previously Calculated) | | $13,371 |
| Basic Personal Amount | ($12,069) | |
| Eligible Dependant | ( 12,069) | |
| Tuition | ( 5,640) | |
| Credit Base | ($29,778) | |
| Rate | 15% | ( 4,467) |
| Federal Tax Payable | | $ 8,904 |

### Case B

The solution to this Case can be completed as follows:

| | | |
|---|---|---|
| Federal Tax Before Credits (As Previously Calculated) | | $13,371 |
| Basic Personal Amount | ($12,069) | |
| EI | ( 860) | |
| CPP | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Credit Base | ($16,900) | |
| Rate | 15% | ( 2,535) |
| Charitable Donations (See Note) [(15%)($200) + (29%)($35,000 - $200)] | | ( 10,122) |
| Federal Tax Payable | | $ 714 |

**Note** With a Net Income For Tax Purposes of $78,000, Ms. Sykes' maximum claim for charitable donations is $58,500 [(75%)($78,000)]. However, if this amount was claimed, the resulting credit would exceed her Tax Payable. By claiming $35,000, the unused donation of $115,000 ($150,000 - $35,000) can be carried forward for up to 5 years. As none of her income is taxed at 33 percent, this rate will not be applicable to the calculation of the charitable donations tax credit.

The $2,000,000 that she won in the lottery is not included in her Net Income For Tax Purposes.

**Case C**

The solution to this Case can be completed as follows:

| | | |
|---|---|---|
| Federal Tax Before Credits (As Previously Calculated) | | $13,371 |
| Basic Personal Amount | ($12,069) | |
| Spousal ($12,069 - $7,600) | ( 4,469) | |
| Caregiver Amount For A Child - Martin | ( 2,230) | |
| Transfer Of Martin's Disability | ( 8,416) | |
| Disability Supplement (No Child Care Costs) | ( 4,909) | |
| Credit Base | ($32,093) | |
| Rate | 15% | ( 4,814) |
| Federal Tax Payable | | $ 8,557 |

As Harry is not mentally or physically infirm, no Canada caregiver amount is available for him.

**Case D**

The solution to this Case can be completed as follows:

| | | |
|---|---|---|
| Federal Tax Before Credits (As Previously Calculated) | | $13,371 |
| Basic Personal Amount | ($12,069) | |
| Spousal ($12,069 - $2,540) | ( 9,529) | |
| EI | ( 860) | |
| CPP | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Medical Expenses (See Note) | ( 8,199) | |
| Credit Base | ($34,628) | |
| Rate | 15% | ( 5,194) |
| Federal Tax Payable | | $ 8,177 |

**Note** The claim for medical expenses is determined as follows:

| | | |
|---|---|---|
| Wanda, Buff, And Janice ($2,100 + $360 + $3,645) | | $6,105 |
| Reduced By The Lesser Of: | | |
| • [(3%)($78,000)] = $2,340 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,352) |
| Mark's Medical Expenses | $4,520 | |
| Reduced By The Lesser Of: | | |
| • [(3%)($2,460)] = $74 | | |
| • $2,352 | ( 74) | 4,446 |
| Total Medical Expense Claim | | $8,199 |

**Case E**

The solution to this Case can be completed as follows:

| | | |
|---|---|---|
| Federal Tax Before Credits (As Previously Calculated) | | $13,371 |
| Basic Personal Amount | ($12,069) | |
| Spousal Including Infirm Amount | | |
| ($12,069 + $2,230 - $9,600) | ( 4,699) | |
| Additional Caregiver Amount (Note 1) | ( 2,441) | |
| EI | ( 860) | |
| CPP | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Transfer Of Buff's Disability Amount | ( 8,416) | |
| Transfer Of Buff's Age Amount | ( 7,494) | |
| Transfer Of Buff's Pension Amount | ( 2,000) | |
| Transfer Of Tuition Amounts (See Note 2) | ( 5,000) | |
| Credit Base | ($46,950) | |
| Rate | 15% | ( 7,043) |
| Federal Tax Payable | | $ 6,328 |

**Note 1** As the income adjusted spousal amount is less than the regular caregiver amount, there is an additional amount of $2,441 ($7,140 - $4,699).

**Note 2** While the base for Buff's tuition credit is $8,450, the transfer is limited to $5,000. The unused amount of $3,450 ($8,450 - $5,000) can be carried forward indefinitely, but can only be claimed by Buff.

## Self Study Solution Four - 4

Mr. Lane's federal tax payable (refund) would be calculated as follows:

| | | |
|---|---|---|
| Net Income For Tax Purposes And Taxable Income | | $70,000 |
| Tax On First $47,630 | | $ 7,145 |
| Tax On Next $22,370 ($70,000 - $47,630) At 20.5 Percent | | 4,586 |
| Federal Tax Before Credits | | $11,731 |
| Basic Personal Amount | ($12,069) | |
| Eligible Dependant (Note 1) | ( 12,069) | |
| EI | ( 860) | |
| CPP (maximum) | ( 2,749 | |
| Canada Employment | ( 1,222) | |
| Medical Expenses (Note 2) | ( 2,300) | |
| Credit Base | ($31,269) | |
| Rate | 15% | ( 4,690) |
| Federal Political Tax Credit [(3/4)($400) + (1/2)($50)] | | ( 325) |
| Federal Tax Payable | | 6,716 |
| CPP Overpayment ($2,784 - $2,749) | | ( 35) |
| Federal Tax Withheld (Given) | | ( 10,100) |
| Federal Tax Payable (Refund) | | ($ 3,419) |

**Note 1** The eligible dependant amount can be claimed for either his 10 or 12 year old child. His 15 year old son would not be selected as he has Net Income For Tax Purposes of $8,200.

**Note 2** Allowable medical expenses are as follows:

| | |
|---|---|
| Minor Child's Medical Expenses | $4,400 |
| Reduced By The Lesser Of: | |
| • [(3%)($70,000)] = $2,100 | |
| • 2019 Threshold Amount = $2,352 | ( 2,100) |
| Allowable Medical Expenses | $2,300 |

Since his 15 year old son is under 18 years of age, his allowable medical expenses are not affected by his Net Income For Tax Purposes. If he was 18 or older, they would be.

## Self Study Solution Four - 5

### *Part A*

The Tax Payable calculation for Marg is as follows:

| | |
|---|---|
| Taxable Income | $15,300 |
| Basic Personal Amount | ( 12,069) |
| EI | ( 248) |
| CPP | ( 602) |
| Canada Employment | ( 1,222) |
| Subtotal | $ 1,159 |
| Tuition Amount Claimed (Note 1) | ( 1,159) |
| Subtotal | Nil |
| Rate | 15% |
| Federal Tax Payable (Refund) | Nil |

**Note 1** Marg has a tuition amount available of $6,300. Of this total, she will use $1,159 to reduce her current Tax Payable to nil. This leaves an unused amount of $5,141 ($6,300 - $1,159). Of this amount, $3,841 ($5,000 - $1,159) can be transferred to her father. This will leave her with a carry forward amount of $1,300 ($6,300 - $1,159 - $3,841).

Since Marg's medical expenses were paid for by her father, she cannot claim them herself and they must be claimed by her father. Even if she had paid for them herself and claimed them, she would not increase the transfer to her father as the medical expense tax credit is not taken into consideration in determining the tuition amount that can be transferred.

### *Part B*

Mr. Barth's minimum Net Income For Tax Purposes for the year would be calculated as follows:

| | |
|---|---|
| Gross Salary | $ 82,500 |
| Additions: | |
| Bonus (Note 2) | 20,000 |
| Automobile Benefit (Note 3) | 7,580 |
| Counseling Benefit (Note 4) | 1,500 |
| Imputed Interest Benefit (Note 5) | 375 |
| Stock Option Benefit [($18 - $15)(1,000)] (Note 6) | 3,000 |
| Deductions: | |
| Registered Pension Plan Contributions | ( 3,200) |
| Professional Dues | ( 1,800) |
| Net Income For Tax Purposes | $109,955 |

**Note 2** As the bonus is not payable until more than 3 years after the end of the employer's taxation year, it is a salary deferral arrangement and must be included in income under ITA 6(11).

**Note 3** Since Mr. Barth's employment related usage is not more than 50 percent, there is no reduction of the full standby charge and he cannot use the alternative calculation of the operating cost benefit. Given this, the automobile benefit is calculated as follows:

| | |
|---|---|
| Standby Charge [(2%)($47,500)(10)] | $9,500 |
| Operating Cost Benefit [(6,000)($0.28)] | 1,680 |
| Payments Withheld | ( 3,600) |
| Taxable Benefit | $7,580 |

**Note 4** Counseling services, with the exception of those items specified under ITA 6(1), are considered taxable benefits. The items specified under ITA 6(1)(a)(iv) are counseling with respect to mental or physical health or with respect to re-employment or retirement. As a consequence, the counseling on personal finances is a taxable benefit.

**Note 5** The imputed interest benefit is calculated as follows:

| | |
|---|---|
| Taxable Benefit [($150,000)(2%)(3/12)] | $750 |
| Reduction For Interest Paid | ( 375) |
| Net Addition To Employment Income | $375 |

**Note 6** As the option price was greater than the market price at the time the options were issued, one-half of this amount can be deducted in the determination of Taxable Income. The adjusted cost base of the stock option shares is equal to their fair market value at the exercise date ($18 per share). Since they were sold for $18 per share, there is no capital gain or loss.

### *Taxable Income*

Mr. Barth's Taxable Income would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes = Net Employment Income | $109,955 |
| Stock Option Deduction [(1/2)($3,000)] (Note 6) | ( 1,500) |
| Taxable Income | $108,455 |

### *Tax Payable*

Mr. Barth's Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $95,259 | | $16,908 |
| Tax On Next $13,196 ($108,455 - $95,259) At 26 Percent | | 3,431 |
| Federal Tax Before Credits | | $20,339 |
| Basic Personal Amount | ($12,069) | |
| Spousal Including Infirm Amount | | |
| ($12,069 + $2,230 - $1,250) | ( 13,049) | |
| Spouse's Disability | ( 8,416) | |
| EI | ( 860) | |
| CPP | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Medical Expenses (Note 7) | ( 1,659) | |
| Marg's Tuition Transfer (See Part A) | ( 3,841) | |
| Credit Base | ($43,865) | |
| Rate | 15% | ( 6,580) |
| Charitable Donations (Note 8) | | |
| [(15%)($200) + (29%)($2,000 - $200)] | | ( 552) |
| Net Federal Tax | | $13,207 |
| Federal Income Tax Withheld During Year | | ( 16,000) |
| Federal Tax Payable (Refund) | | ($ 2,793) |

**Note 7** Allowable medical expenses are as follows:

| | | |
|---|---|---|
| John And Spouse Medical Expenses ($200 + $3,550) | | $3,750 |
| Reduced By The Lesser Of: | | |
| • [(3%)($109,955)] = $3,299 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,352) |
| Marg's Medical Expenses | $720 | |
| Reduced By The Lesser Of: | | |
| • [(3%)($15,300)] = $459 | | |
| • $2,352 | ( 459) | 261 |
| Allowable Medical Expenses | | $1,659 |

**Note 8** As none of his income is taxed at 33 percent, this rate will not be applicable to the calculation of the charitable donations tax credit.

## Self Study Solution Four - 6

Mr. Kern's minimum Net Income For Tax Purposes for the year would be calculated as follows:

| | |
|---|---|
| Gross Salary | $67,600 |
| Additions: | |
| Automobile Benefit (Note 1) | 857 |
| Disability Insurance Benefit (Note 2) | 1,300 |
| Stock Option Benefit [($83 - $75)(200)] | 1,600 |
| Deductions: | |
| Registered Pension Plan Contributions | ( 1,800) |
| Contributions To Group Disability Plan | Nil |
| Professional Dues | ( 1,233) |
| Net Income For Tax Purposes | $68,324 |

**Note 1** Based on the fact that Mr. Kern's employment related usage is more than 50 percent of total usage, the automobile benefit is calculated as follows:

| | |
|---|---|
| Standby Charge [(2/3)(9)($815 - $89)(3,000/15,003*)] | $ 871 |
| Operating Cost Benefit - Lesser Of: | |
| • [(3,000)($0.28)] = $840 | |
| • [(1/2)($871)] = $436 | 436 |
| Total Before Payments | $1,307 |
| Payments For Personal Use [($50)(9)] | ( 450) |
| Taxable Benefit | $ 857 |

*[(9)(1,667)]

As Mr. Kern's employment related usage is more than 50 percent, he can elect to use one-half the standby charge as the operating cost benefit.

**Note 2** As his employer contributed to the plan and the contributions did not create a taxable benefit, the $1,650 in benefits received during the year must be included in employment income. However, this benefit is reduced by the $350 ($200 + $150) in total contributions that he has made in 2018 and 2019.

### Taxable Income

Taxable Income would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $68,324 |
| Stock Option Deduction [(1/2)($1,600)] | ( 800) |
| Taxable Income | $67,524 |

### Tax Payable

Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $ 7,145 |
| Tax On Next $19,894 ($67,524 - $47,630) At 20.5 Percent | | 4,078 |
| Federal Tax Before Credits | | $11,223 |
| Basic Personal Amount | ($12,069) | |
| Spousal ($12,069 - $3,660) | ( 8,409) | |
| EI | ( 860) | |
| CPP | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Medical Expenses (Note 3) | ( 3,907) | |
| David's Transfer Of Tuition (Note 4) | ( 5,000) | |
| Credit Base | ($34,216) | |
| Rate | 15% | ( 5,132) |
| Charitable Donations Carried Forward (Note 5) [(15%)($200) + (29%)($500 - $200)] | | ( 117) |
| Net Federal Tax | | $ 5,974 |
| Federal Amounts Withheld During Year (Given) | | ( 7,200) |
| Federal Tax Payable (Refund) | | ($ 1,226) |

**Note 3** The allowable medical expenses would be calculated as follows:

| | | |
|---|---|---|
| Samuel And Spouse Medical Expenses ($2,100 + $770) | | $2,870 |
| Reduced By The Lesser Of: | | |
| • [(3%)($68,324)] = $2,050 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,050) |
| David's Medical Expenses | $3,260 | |
| Reduced By The Lesser Of: | | |
| • $2,352 | | |
| • [(3%)($5,780)] = $173 | ( 173) | 3,087 |
| Allowable Medical Expenses | | $3,907 |

**Note 4** The transfer from David is as follows:

| | |
|---|---|
| Tuition Fees | $ 6,700 |
| Maximum Transfer | ( 5,000) |
| Carry Forward (For David's Use Only) | $ 1,700 |

David's Tax Payable is completely eliminated by his basic personal credit. He can transfer a maximum of $5,000 of his tuition amount to his father. The remaining $1,700 can be carried forward indefinitely, but must be used by David.

**Note 5** As none of his income is taxed at 33 percent, this rate will not be applicable to the calculation of the charitable donations tax credit.

## Self Study Solution Four - 7

Mr. Strong's minimum Taxable Income would be calculated as follows:

| | |
|---|---|
| Salary | $72,000 |
| Additions: | |
| Employer's Disability Contribution (Not A Taxable Benefit) | Nil |
| Automobile Benefit (Note 1) | 8,260 |
| Tuition For Chants Course (Note 2) | 600 |
| Travel Costs (Note 3) | Nil |
| Loan Benefit (Note 4) | 1,500 |
| Deductions: | |
| RPP Contributions | ( 4,200) |
| Cost Of Tools - Maximum (Note 5) | ( 500) |
| Net Income For Tax Purposes And Taxable Income | $77,660 |

**Note 1** The automobile benefit would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2/3)(10)($565 - $40)] | $3,500 |
| Operating Cost Benefit [($0.28)(17,000)] | 4,760 |
| Total Benefits | $8,260 |

As Mr. Strong's employment related use was less than 50 percent, there is no reduction in the standby charge and he cannot use the alternative calculation of the operating cost benefit.

**Note 2** Employer paid tuition is a taxable benefit unless it is for the benefit of that employer. While the spoken French course appears to be for the benefit of the employer, it would be difficult to argue that the employer would benefit from a course in 16th century liturgical chants.

**Note 3** As the travel costs were reimbursed, there is no deduction. As long as the costs were reasonable, there would be no benefit from the reimbursement.

**Note 4** The ITA 80.4(1) loan benefit would be $1,500, the lesser of:

- [($150,000)(2% - Nil)(1/4) + ($150,000)(1% - Nil)(2/4)] $1,500
- [($150,000)(2% - Nil)(3/4)] $2,250

**Note 5** Mr. Strong can deduct the cost of tradesperson's tools that cost more than $1,222. However, the overall limit for this deduction is $500 per year.

### *Tax Payable*

Mr. Strong's federal Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $ 7,145 |
| Tax On Next $30,030 ($77,660 - $47,630) At 20.5 Percent | | 6,156 |
| Tax Before Credits | | $13,301 |
| Credits: | | |
| Basic Personal Amount | ($12,069) | |
| Spousal ($12,069 - $5,600) | ( 6,469) | |
| Canada Caregiver (Note 6) | Nil | |
| EI Premiums | ( 860) | |
| CPP Contributions | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Tuition (Note 7) | ( 600) | |
| Medical Expenses (Note 8) | ( 3,775) | |
| Credit Base | ($27,744) | |
| Rate | 15% | ( 4,162) |
| Charitable Donations (Note 9) [(15%)($200) + (29%)($1,200 - $200)] | | ( 320) |
| Federal Tax Payable | | $ 8,819 |

**Note 6** Because his mother is not mentally or physically infirm, Lance cannot claim the Canada caregiver credit.

**Note 7** When an employer reimburses tuition costs, the tuition credit can be claimed if the reimbursement is included in the employee's income. (See Note 2.)

**Note 8** The base for Mr. Strong's medical expense credit can be calculated as follows:

| | | |
|---|---|---|
| Mr. Strong, His Spouse, And Minor Children ($1,250 + $2,300 + $850) | | $4,400 |
| Reduced By The Lesser Of: | | |
| • [(3%)($77,660)] = $2,330 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,330) |
| Mother's Medical Expenses | $1,960 | |
| Reduced By The Lesser Of: | | |
| • $2,352 | | |
| • [(3%)($8,500)] = $255 | ( 255) | 1,705 |
| Allowable Medical Costs | | $3,775 |

**Note 9** Mr. Strong cannot claim a credit for the $1,500 of donated services. As none of his income is taxed at 33 percent, this rate will not be applicable to the calculation of the charitable donations tax credit.

**Note 10** Mr. Strong cannot claim the First-Time Home Buyers' Credit as he owned a house within 4 years of purchasing the heritage home.

## Self Study Solution Four - 8

***Part A***

Mr. Bosworth's minimum Net Income For Tax Purposes would be calculated as follows:

| | |
|---|---|
| Salary | $180,000 |
| Additions: | |
| Commissions | 11,500 |
| Bonus (Note 1) | Nil |
| Life Insurance Premiums (Employer's Contribution) | 460 |
| Automobile Benefit (Note 2) | 6,800 |
| Stock Option Benefit (Note 3) | 13,000 |
| Gift ($2,500, Less $500 Limit On Gifts) | 2,000 |
| Deductions: | |
| RPP Contributions | ( 5,200) |
| Employment Expenses (Note 4) | ( 20,371) |
| Net Income For Tax Purposes | $188,189 |

**Note 1** As none of the bonus was paid during the year, none of it will be included in Net Income For Tax Purposes.

**Note 2** The standby charge would be calculated as follows:

$$[(2/3)(12)(\$925 - \$75)(20,004 \div 20,004)] = \$6,800$$

As Mr. Bosworth's personal milage exceeds 20,004 kilometers, there is no reduction in the standby charge. There would be no operating cost benefit as Mr. Bosworth paid for all of the operating costs.

**Note 3** The total employment income inclusion would be $13,000 [(5,000)($12.35 - $9.75)]. As the option price was equal to the market price at the time the options were issued, $6,500 [(1/2)($13,000)] can be deducted in the determination of Taxable Income.

**Note 4** Potentially deductible expenses are as follows:

| | |
|---|---|
| Car Operating Costs [(41,000 ÷ 62,000)($10,300)] | $ 6,811 |
| Meals [(50%)($6,420)] | 3,210 |
| Hotels | 10,350 |
| **Subtotal for ITA 8(1)(h) and (h.1)** | **$20,371** |
| Advertising | 12,400 |
| Entertainment [(50%)($6,500)] | 3,250 |
| **Total for ITA 8(1)(f) - Limited To Commissions** | **$36,021** |

All of these costs can be deducted under ITA 8(1)(f). However, the total deduction is limited to commission income which is only $11,500. Alternatively, the car operating costs, meals, and hotels, can be deducted under ITA 8(1)(h) and (h.1). As shown in the preceding table, this total would be $20,371. As Mr. Bosworth cannot simultaneously use ITA 8(1)(f) and the combination of ITA 8(1)(h) and (h.1), he will minimize his Net Income For Tax Purposes by deducting under the latter provisions.

***Part B***

Mr. Bosworth's minimum Taxable Income would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $188,189 |
| Stock Option Deduction [(1/2)($13,000)] | ( 6,500) |
| Taxable Income | $181,689 |

***Part C***

Based on the Taxable Income calculated in Part B, Mr. Bosworth's federal Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $147,667 | | $30,535 |
| Tax On Next $34,022 ($181,689 - $147,667) At 29 Percent | | 9,866 |
| Tax Before Credits | | $40,401 |
| Credits: | | |
| Basic Personal Amount | ($12,069) | |
| Spouse ($12,069 - $6,450) | ( 5,619) | |
| Canada Caregiver Amount For Child | ( 2,230) | |
| Transfer Of Daughter's Disability | ( 8,416) | |
| Disability Supplement (Note 5) | Nil | |
| EI Premiums | ( 860) | |
| CPP Contributions | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Tuition - Andrew | ( 1,670) | |
| Transfer Of Son's Tuition (Note 6) | ( 4,619) | |
| Medical Expenses (Note 7) | ( 14,314) | |
| Credit Base | ($53,768) | |
| Rate | 15% | ( 8,065) |
| Charitable Donations (Note 8) | | |
| [(15%)($200) + (29%)($2,400 - $200)] | | ( 668) |
| Federal Tax Payable | | $31,668 |

**Note 5** Since the daughter's $9,000 attendant care costs that are included in the medical expenses total more than $7,784 ($4,909 + $2,875), the disability supplement is reduced to nil.

**Note 6** As the son has Net Income For Tax Purposes of $12,450, he must use $381 ($12,450 - $12,069) of this total. This means that the maximum transfer to his father will be $4,619 ($5,000 - $381). This will leave the son with the following carry forward:

| | |
|---|---|
| Tuition Amount Including Ancillary Fees ($7,650 + $560) | $8,210 |
| Used By Son In 2019 | ( 381) |
| Transferred To His Father | ( 4,619) |
| Carry Forward (For Son's Use Only) | $3,210 |

The carry forward amount $3,210 can be carried forward indefinitely, but must be used by the son.

**Note 7** The base for Mr. Bosworth's medical expense credit can be calculated as follows:

| | | |
|---|---|---|
| Eligible Medical Expenses<br>Andrew, His Spouse And Minor Child<br>($1,200 + $2,250 + $11,250) | | $14,700 |
| Reduced By The Lesser Of:<br>• [(3%)($188,189)] = $5,646<br>• 2019 Threshold Amount = $2,352 | | ( 2,352) |
| Son's Medical Expenses | $2,340 | |
| Reduced By The Lesser Of:<br>• $2,352<br>• [(3%)($12,450)] = $374 | ( 374) | 1,966 |
| Allowable Medical Expenses | | $14,314 |

**Note 8** As none of his income is taxed at 33 percent, this rate will not be applicable to the calculation of the charitable donations tax credit.

## Solution to Tax Software Self Study Problem - Chapter 4

The complete tax return is available on MyLab in two versions, a T1 ProFile return file and a .PDF file. Note that prior to late January, 2020, the returns will be for 2018, not 2019 as the 2019 filing version will not yet be available.

For more information on how to use the ProFile tax program, refer to the Chapter 4 sample tax return in this Study Guide.

### *Notes To Tax Return*

- Diane transfers the $5,000 maximum tuition amount to Eleanor and carries forward the remaining $2,000 [$7,000 - $5,000]. The carry forward can only be used by Diane.
- Eleanor cannot claim the charitable donation made by Diane, but Diane can carry it forward for up to 5 years.
- Since Amy is under 18 and wholly dependent, Eleanor claimed the eligible dependant credit for Amy.
- Because Marjorie is not infirm, Eleanor can claim no credit for her.
- Since Diane and Marjorie are over 17 years of age, their medical expenses are reduced by 3 percent of their Net Income For Tax Purposes. This means that none of Marjorie's medical expenses can be claimed by Eleanor.
- In calculating work space in the home costs, the household insurance is not deductible as the T4 information shows she has no commission income. The car insurance is not relevant as there is no information that Eleanor uses her car for employment related purposes.

### *Tax Planning Points*

- Although she is not required to file, Marjorie should file a tax return, otherwise she will not be eligible for the GST credit.
- Although she is not required to file, Diane should file a tax return, otherwise she will not be eligible for the GST credit and she will not benefit from the RRSP deduction room created during the year. Filing a tax return will also make her tuition credit and charitable donation tax credit easier to keep track of for carry forward purposes.

# Chapter 4 Learning Objectives

### *Note Regarding Rates And Credits*

A schedule of rates, brackets, credit amounts and other data is available at the beginning of both Volumes of this textbook, (but not this Study Guide) and on MyLab. We expect you to refer to this information when calculating the credits covered in this chapter (i.e., you are not expected to memorize the rates, brackets and credit bases).

After completing Chapter 4, you should be able to:

1. Calculate Taxable Income when an individual has basic deductions against Net Income For Tax Purposes. (paragraph [P hereafter] 4-1 to 4-9).
2. Calculate federal and provincial Tax Payable before the consideration of any tax credits (P 4-10 to 4-32).
3. Calculate the personal tax credits described in ITA 118(1) which include the:
    - spousal,
    - eligible dependant,
    - Canada caregiver for a child,
    - basic,
    - Canada caregiver (P 4-33 to 4-61).
4. Calculate the age tax credit (P 4-62 and 4-63).
5. Calculate the pension income tax credit (P 4-64 to 4-68).

---

6. Calculate the Canada employment tax credit (P 4-69 to 4-71).
7. Calculate the adoption expenses tax credit (P 4-72 to 4-76).
8. Calculate the digital news subscriptions credit that is effective in 2020 (P 4-77 to 4-78).
9. Calculate the home accessibility tax credit (P 4-79 to 4-89).
10. Calculate the first time home buyer's tax credit (P 4-90 to 4-92).

---

11. Calculate the volunteer firefighters and search and rescue workers tax credit (P 4-93 to 4-96).
12. Calculate the charitable donations tax credit when the donation is in the form of cash (P 4-97 to 4-108).
13. Calculate the medical expense tax credit (P 4-109 to 4-119).
14. Calculate the disability tax credit (P 4-120 to 4-130).
15. Calculate the tax credits related to tuition fees, examination fees, ancillary fees, and student loan interest. (P 4-131 to 4-138).

---

16. Calculate the amount of education related tax credits that can be carried forward or transferred to another individual (P 4-139 to 4-148).
17. Calculate the Employment Insurance and Canada Pension Plan credits (P 4-149 to 4-155).
18. List the types and amounts of tax credits that can be transferred to a spouse or common-law partner (P 4-156 to 4-158).
19. Calculate the political contributions tax credit (P 4-159 to 4-162).
20. Calculate the labour sponsored venture capital corporation tax credit (P 4-163 to 4-167).
21. Explain the basic provisions of the refundable GST credit (P 4-168 to 4-175).

---

22. Calculate the refundable medical expense supplement (P 4-176 to 4-179).
23. Calculate the Canada Workers Benefit (P 4-180 to 4-183).
24. Calculate the refundable teacher and early childhood educator school supply tax credit (P 4-184 to 4-186).
25. Explain the climate action incentive payments (refundable credit) (P 4-187 to 4-194).
26. Calculate the OAS and EI clawbacks (P 4-195 to 4-212).
27. Complete a simple personal tax return using the ProFile T1 tax preparation software program.

# CHAPTER 5

## How To Work Through Chapter 5

We recommend the following approach in dealing with the material in this chapter:

**Tax And Accounting Procedures Compared**

- Read the beginning of the chapter to 5-11 (in the textbook).

**Additions To Capital Cost, Including Available For Use Rules**

- Read paragraph 5-12 to 5-32.

**Capital Cost Allowances - General Overview and Rates For Common Classes**

- Read paragraph 5-33 to 5-36.
- Do Exercises Five-1 and Five-2 (in the textbook) and check the solutions in this Study Guide.

**Half-Year (a.k.a. First Year) Rules**

- Read paragraph 5-37 to 5-41.

**Accelerated Investment Incentive (AccII)**

- Read paragraph 5-42 to 5-54.
- Do Exercise Five-3 and check the solution in this Study Guide.

**AccII Application - Classes 12 and 13**

- Read paragraph 5-55 to 5-58.
- Do Exercise Five-4 and check the solution in this Study Guide.

**AccII Application - Class 14**

- Read paragraph 5-59.
- Do Exercise Five-5 and check the solution in this Study Guide.

**AccII Application - Class 53**

- Read paragraph 5-60.
- Do Exercise Five-6 and check the solution in this Study Guide.

**Zero Emission Vehicles**

- Read paragraph 5-61 to 5-67.

**Short Fiscal Periods**

- Read paragraph 5-68 to 5-70.
- Do Exercise Five-7 and check the solution in this Study Guide.

**Class 14.1 (Including Goodwill) And The Repeal Of The CEC Regime**

- Read paragraph 5-71 to 5-85.

**Tax Planning Considerations For CCA**

- Read paragraph 5-86 to 5-90.
- Do Exercise Five-8 and check the solution in this Study Guide.

**Dispositions Of Depreciable Assets**

- Read paragraph 5-91 to 5-99.
- Do Exercise Five-9 and check the solution in this Study Guide.

**Recapture of Capital Cost Allowance**

- Read paragraph 5-100 to 5-103.
- Do Exercise Five-10 and check the solution in this Study Guide.

**Terminal Losses**

- Read paragraph 5-104 to 5-108.
- Do Exercises Five-11 and Five-12 and check the solutions in this Study Guide.

**Dispositions of Class 54 Assets (Zero Emission Vehicles)**

- Read paragraph 5-109 to 5-111.

**Dispositions Of Class 14.1 - Differences From Other Classes**

- Read paragraph 5-112 to 5-118.
- Do Exercise Five-13 and check the solution in this Study Guide.
- Read paragraph 5-119 to 5-121.

**Summary Of Tax Consequences**

- Read paragraph 5-122.

**CCA Schedule - Example**

- Read paragraph 5-123 to 5-124.
- Do Self Study Problems Five-1 to Five-7 which are available on MyLab and check the solutions in this Study Guide.

**Separate Class Election**

- Read paragraph 5-125 to 5-132.
- Do Exercise Five-14 and check the solution in this Study Guide.
- Read paragraph 5-133 to 5-134.

**Change In Use For Automobiles And Other Special Situations**

- Read paragraph 5-135 to 5-140.

**CEC To Class 14.1 - Transitional Rules**

- Read paragraph 5-141 to 5-151.
- Do Exercise Five-15 and check the solution in this Study Guide.
- Read paragraph 5-152 to 5-156.
- Do Exercise Five-16 and check the solution in this Study Guide.
- Read paragraph 5-157 to 5-161.
- Do Exercise Five-17 and check the solution in this Study Guide.
- Read paragraph 5-162 to 5-170.
- Do Self Study Problem Five-8 and check the solution in this Study Guide.
- Read paragraph 5-171 to 5-175.

**To Complete This Chapter**

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 5. Consult the Glossary for the meaning of any key terms you do not know.

- Test yourself with the Chapter 5 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 5 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 5 that is on MyLab.

**Practice Examination**

- Write the Practice Examination for Chapter 5 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

## Solutions to Chapter Five Exercises

### *Exercise Five - 1 Solution*

The correct classes for each of the assets would be as follows:

| Asset | Class |
|---|---|
| Taxicab | 16 |
| Manufacturing and processing equipment | 53 |
| Franchise with a limited life | 14 |
| Passenger vehicle with a cost of $120,000* | 10.1 |
| Government licence with an unlimited life | 14.1 |
| Water storage tank | 6 |
| Photocopy machine (office equipment not specifically listed elsewhere) | 8 |
| Leasehold improvements | 13 |
| Rental building* (not including the land) | 1 |

*These two assets would have to be allocated to separate classes. In addition, as covered later in the Chapter, the taxpayer could elect to include the photocopy machine in a separate class if its capital cost is $1,000 or more.

### *Exercise Five - 2 Solution*

Ignoring the half-year rule, the impact would be calculated as follows:

| | |
|---|---|
| Correct CCA [($326,000)(30%)] | $97,800 |
| CCA Recorded In 2019 [($326,000)(4%)] | ( 13,040) |
| Understatement Of 2019 CCA | $84,760 |

### *Exercise Five - 3 Solution*

The maximum CCA for 2019 and the January 1, 2020 UCC balance are calculated as follows:

| | | |
|---|---|---|
| January 1, 2019 UCC | | $ 950,000 |
| Add: Acquisitions During The Year | $300,000 | |
| Deduct: Dispositions During The Year* | ( 144,000) | 156,000 |
| Add: AccII Adjustment [(1/2)($156,000)] | | 78,000 |
| CCA Base (December 31, 2019 UCC) | | $1,184,000 |
| 2019 CCA [(30%)($1,184,000)] | | ( 355,200) |
| AccII Adjustment Reversal | | ( 78,000) |
| January 1, 2020 UCC | | $ 750,800 |

*The detailed coverage on dispositions is later in the Chapter. We have included dispositions during the year to more fully illustrate the calculation of the AccII adjustment. More accurately, dispositions are the lesser of the capital cost and the proceeds of disposition. To simplify the AccII calculations, this Exercise does not provide the capital cost of the cars disposed of.

### Exercise Five - 4 Solution

The required CCA calculations for 2019 would be as follows:

| | |
|---|---|
| On 2014 Improvements ($52,000 ÷ 15) | $3,467 |
| On 2019 Improvements [(150%)($31,000 ÷ 10)] | 4,650 |
| 2019 CCA | $8,117 |

The required CCA calculations for 2020 would be as follows:

| | |
|---|---|
| On 2014 Improvements ($52,000 ÷ 15) | $3,467 |
| On 2019 Improvements ($31,000 ÷ 10) | 3,100 |
| 2020 CCA | $6,567 |

While this is not required by the Exercise, you should note that the 2028 CCA on the 2019 improvements would be limited to $1,550 ($31,000 - $4,650 - (8)($3,100)], the balance in the UCC for these improvements.

### Exercise Five - 5 Solution

The required calculations are as follows:

| | |
|---|---|
| Acquisition Amount | $375,000 |
| CCA For 2019 [(150%)($375,000 ÷ 10)(275/365)] | ( 42,380) |
| January 1, 2020 UCC | $332,620 |

### Exercise Five - 6 Solution

The required calculations are as follows:

| | |
|---|---|
| January 1, 2019 UCC | $500,000 |
| Acquisitions During The Year | 100,000 |
| AccII Adjustment [(100%)($100,000)] | 100,000 |
| CCA Base | $700,000 |
| 2019 CCA [(50%)($700,000)] | ( 350,000) |
| AccII Adjustment Reversal | ( 100,000) |
| January 1, 2020 UCC | $250,000 |

While this is not required, the ending UCC can be verified as follows:

| | |
|---|---|
| January 1, 2019 UCC | $500,000 |
| Acquisitions During The Year | 100,000 |
| Write-Offs: | |
| CCA On Opening UCC [(50%)($500,000)] | ( 250,000) |
| CCA On Additions [(100%)($100,000)] | ( 100,000) |
| January 1, 2020 UCC | $250,000 |

### Exercise Five - 7 Solution

The required information is calculated as follows:

| | |
|---|---|
| Capital Cost Of Additions | $115,000 |
| AccII Adjustment [(50%)($115,000)] | 57,500 |
| CCA Base | $172,500 |
| 2019 CCA [(20%)($172,500)(153/365)] | ( 14,461) |
| AccII Adjustment Reversal | ( 57,500) |
| January 1, 2020 UCC | $100,539 |

### Exercise Five - 8 Solution

Following the general rule that, when less than the maximum CCA is to be deducted, the amounts deducted should be taken from the class(es) with the lowest rates, the required calculations would be as follows:

| | | |
|---|---|---|
| Required Total | | $45,000 |
| Maximum CCA - Class 1 [(4%)($426,000)] | ($17,040) | |
| Maximum CCA - Class 8 [(20%)($126,000)] | ( 25,200) | ( 42,240) |
| Required Balance | | $ 2,760 |

As they are both 30 percent declining balance classes, the remaining $2,760 could be taken from either Class 10 or Class 10.1. It would be advisable to use Class 10.1, as recapture is not recorded for this class. In addition, if the Class 10.1 vehicle is going to be disposed of in the near future, it could be better tax planning to take the maximum CCA for Class 10.1 of $6,300 [(30%)($21,000)] and reduce the Class 8 CCA to $21,660 ($45,000 - $6,300 - $17,040). Since there is no recapture for Class 10.1, this could increase aggregate future deductions of the other classes. Whether this would be advantageous depends on the anticipated proceeds of disposition.

### Exercise Five - 9 Solution

The only tax consequence would be a taxable capital gain of $2,500 [(1/2)($23,000 - $18,000)].

Following the basic rule for dispositions, we would subtract from the Class 8 UCC the lesser of the proceeds of disposition ($23,000) and the capital cost of the individual asset ($18,000). Subtracting the lesser figure of $18,000 would leave a large positive balance in Class 8. As there are no other dispositions during the year, we can conclude that the balance will be positive at the end of the year. This fact, combined with the presence of many other assets in Class 8 means that there will be no recapture and no terminal loss.

### Exercise Five - 10 Solution

The required information would be calculated as follows:

| | |
|---|---|
| UCC Of The Class At The Beginning Of The Year | $24,883 |
| Add: Acquisitions During The Year | Nil |
| Deduct: Dispositions During The Year - Lesser Of: | |
| • Capital Cost = $27,000 | |
| • Proceeds Of Disposition = $28,500 | ( 27,000) |
| Deduct: One-Half Net Additions | N/A* |
| Negative Ending Balance | ($ 2,117) |
| Recapture Of CCA | 2,117 |
| January 1, 2020 UCC Balance | Nil |

*This adjustment for one-half of the excess of additions over disposal deductions is only made when the net amount is positive.

The effect would be an addition to business income of $2,117 in recaptured CCA. Note that, unlike terminal losses (See Exercise Five-11), the fact that there is still an asset in the class is irrelevant.

While there would also be a taxable capital gain of $750 [(1/2)($28,500 - $27,000)], this would not be included in business income.

### Exercise Five - 11 Solution

The required information would be calculated as follows:

| | |
|---|---|
| UCC Of The Class At The Beginning Of The Year | $24,883 |
| Add: Acquisitions During The Year | Nil |
| Deduct: Dispositions During The Year - Lesser Of: | |
| • Capital Cost = $54,000 | |
| • Proceeds Of Disposition = $18,000 | ( 18,000) |
| Ending Balance With No Remaining Assets | $ 6,883 |
| Terminal Loss | ( 6,883) |
| January 1, 2020 UCC Balance | Nil |

As there is a positive balance in Class 8 at the end of the year, but no remaining assets, there would be a terminal loss of $6,883. This loss is deducted in the calculation of net business income.

### *Exercise Five - 12 Solution*

The accounting results would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $126,000 |
| Net Book Value | ( 43,500) |
| Accounting Gain | $ 82,500 |

For tax purposes, there would be a taxable capital gain calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $126,000 |
| Capital Cost | ( 97,000) |
| Capital Gain | $ 29,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 14,500 |

The capital cost of $97,000 would be subtracted from the UCC, leaving a balance of $2,365,000 ($2,462,000 - $97,000).

While this disposition would reduce the maximum CCA for the current and subsequent years, there would be no recapture (the balance in Class 8 is still positive) or terminal loss (there are still assets in Class 8).

### *Exercise Five - 13 Solution*

CCA on Class 14.1 for 2019 would be calculated as follows:

| | |
|---|---|
| January 1, 2019 Balance | Nil |
| 2019 Additions ($85,000 + $105,000) | $190,000 |
| AccII Adjustment [(1/2)($190,000)] | 95,000 |
| CCA Base | $285,000 |
| 2019 CCA [(5%)($285,000)] | ( 14,250) |
| AccII Adjustment Reversal | ( 95,000) |
| January 1, 2020 UCC | $175,750 |
| Deduct: Dispositions During The Year - Lesser Of: | |
| Capital Cost = $190,000 (See Note) | |
| Proceeds Of Disposition = | |
| ($65,000 + $105,000) = $170,000 | ( 170,000) |
| UCC Subsequent to The Sales | $ 5,750 |

**Note** The capital cost of the single goodwill asset is $190,000 ($85,000 + $105,000).

There would be no immediate tax consequences resulting from the dispositions. Subsequent to the sales, Dextrin Inc. has a Class 14.1 UCC of $5,750 consisting of goodwill with a capital cost of $20,000 ($190,000 - $170,000).

### Exercise Five - 14 Solution

Photocopiers would be included in Class 8, a 20 percent declining balance class. The following table compares the CCA if no election is made with the results if the separate class election is made.

| | No Election 10 Copiers | With Election 2 Copiers | With Election 8 Copiers |
|---|---|---|---|
| January Acquisitions @ $20,000 | $200,000 | $40,000 | $160,000 |
| Dispositions | ( 6,000) | ( 6,000) | N/A |
| Terminal Loss | | $34,000 | |
| December Acquisitions @ $22,000 | 44,000 | $44,000 | |
| AccII Adjustments | 119,000 | 22,000 | 80,000 |
| CCA Base | $357,000 | $66,000 | $240,000 |
| CCA Rate | 20% | 20% | 20% |
| CCA | $ 71,400 | $13,200 | $ 48,000 |

If no election is made, there will be a deduction for CCA of $71,400. Alternatively, if each machine is allocated to a separate class, there will be a deduction for CCA of $61,200 ($13,200 + $48,000). In addition, there will be a terminal loss of $34,000. The use of the election increases the total deductible amount by $23,800 [($13,200 + $48,000) + $34,000 Terminal Loss - $71,400].

### Exercise Five - 15 Solution

The maximum Class 14.1 CCA for 2018 would be calculated as follows:

| | Pre-2017 CEC | Post-2016 Assets |
|---|---|---|
| Opening UCC | $149,610 | Nil |
| Maximum 2017 CCA [(7%)($149,610)] | 10,473 | Nil |
| January 1, 2018 Balance | $139,137 | Nil |
| Add: Acquisitions During The Year | N/A | $89,000 |
| Deduct: One-Half Net Additions | N/A | ( 44,500) |
| CCA Base | $139,137 | $44,500 |
| CCA Rate | 7% | 5% |
| Maximum 2018 CCA | $ 9,740 | $ 2,225 |

The total CCA for Class 14.1 is equal to $11,965 ($9,740 + $2,225).

### Exercise Five - 16 Solution

The amount that would have been added to the CEC account in 2014 totalled $150,000 [(3/4)($120,000 + $80,000)]. Using this information, the capital cost of the two unlimited life franchises would be calculated as follows:

| | |
|---|---|
| [(4/3)($120,654)] | $160,872 |
| [(4/3)($150,000 - $120,654)] | 39,128 |
| Capital Cost - Unlimited Life Franchises | $200,000 |

Note that the capital cost is equal to the amount paid since there have been no dispositions.

### *Exercise Five - 17 Solution*

The relevant calculations here are as follows:

| | |
|---|---|
| CEC Additions [(3/4)(($126,000 + $185,000 + $94,000)] | $303,750 |
| Dispositions [(3/4)($142,000 + $220,000)] | ( 271,500) |
| CEC Balance | $ 32,250 |
| 2016 CEC Deduction [(7%)($32,250)] | ( 2,258) |
| December 31, 2016 CEC | $ 29,992 |

The total capital cost for the remaining asset is calculated as follows:

| | |
|---|---|
| [(4/3)($29,992)] | $39,989 |
| [(4/3)($2,258)] | 3,011 |
| Capital Cost | $43,000 |

The excess of the proceeds of disposition over the original capital cost of the two dispositions was $51,000 [($142,000 - $126,000) + ($220,000 - $185,000)]. This leaves a capital cost of $43,000 ($94,000 - $51,000) for the remaining asset.

## Self Study Solution Five - 1

The required calculation of the maximum CCA is as follows:

| | Class 1 | Class 8 | Class 10 |
|---|---|---|---|
| Opening Balance | $2,597,000 | $718,000 | $524,000 |
| Additions | Nil | Nil | 374,000 |
| Dispositions | | | |
| Proceeds Of Disposition | Nil | Nil | ( 234,000) |
| AccII Adjustment | | | |
| [(1/2)($374,000 - $234,000)] | Nil | Nil | 70,000 |
| CCA Base | $2,597,000 | $718,000 | $734,000 |
| CCA Rate | 4% | 20% | 30% |
| Maximum CCA | $ 103,880 | $143,600 | $220,200 |

This gives a maximum amount for CCA of $467,680 for the taxation year ($103,880 + $143,600 + $220,200).

### *Part B*

Since the Company only has Net and Taxable Income before CCA of $328,000 and the problem states that loss carry overs should not be considered, maximum CCA would not be deducted as this would produce a loss. Only $328,000 in CCA should be taken in order to reduce the Taxable Income to nil.

Given that the CCA deduction is limited to $328,000, it would normally be deducted in the class or classes with the lowest rates. This would leave the unused amounts in classes with higher rates which, in turn, would maximize the amount that could be deducted in the first profitable years. Taking this approach, the $328,000 would be deducted as follows:

| | |
|---|---|
| Class 1 (Maximum Available) | $103,880 |
| Class 8 (Maximum Available) | 143,600 |
| Class 10 (Required Balance) | 80,520 |
| Total CCA | $328,000 |

This CCA deduction would reduce Taxable Income to nil.

Note that if there were immediate plans to sell the building for more than its opening UCC, this could affect the choice of Classes to deduct CCA from as any additional CCA taken on Class 1 would have to be added to income as recaptured CCA when the building is sold.

## Self Study Solution Five - 2

### *Class 1*

The required information is calculated as follows:

| | |
|---|---|
| Opening Balance | $115,000 |
| Additions | Nil |
| Dispositions - Lesser Of: | |
| • Cost = $190,000 | |
| • Proceeds Of Disposition = $110,000 | ( 110,000) |
| Ending Balance With No Remaining Assets In Class | $ 5,000 |
| Terminal Loss | ( 5,000) |
| January 1, 2020 UCC Balance | Nil |

Since the building sold is the last asset in the class, there is a terminal loss of $5,000 which is deducted in the determination of business income. The proceeds of disposition for the building total $110,000 ($260,000 - $150,000). As the adjusted cost base of the land is equal to the proceeds of disposition, there is no gain on the disposition of the land.

### *Class 8*

The required information is calculated as follows:

| | | |
|---|---|---|
| Opening Balance | | $ 96,000 |
| Additions | $52,000 | |
| Dispositions - Lesser Of: | | |
| • Cost = $75,000 | | |
| • Proceeds Of Disposition = $35,000 | ( 35,000) | 17,000 |
| AccII Adjustment [(1/2)($17,000)] | | 8,500 |
| CCA Base | | $121,500 |
| CCA At 20 Percent | | ( 24,300) |
| AccII Adjustment Reversal | | ( 8,500) |
| January 1, 2020 UCC Balance | | $ 88,700 |

### *Class 10*

The required information is calculated as follows:

| | | |
|---|---|---|
| Opening Balance | | $ 6,700 |
| Additions | $ 8,000 | |
| Dispositions - Lesser Of: | | |
| • Cost = $20,000 | | |
| • Proceeds = $25,000 | ( 20,000) | ( 12,000) |
| AccII Adjustment (Only If Net Additions Are Positive) | | N/A |
| Negative Ending Balance | | ($ 5,300) |
| Recaptured CCA (i.e. Recapture) | | 5,300 |
| January 1, 2020 UCC Balance | | Nil |

As the cost of the used car is less than $30,000, its cost is added to Class 10. With respect to the retirement, only the capital cost of the truck sold is deducted from Class 10. The excess of the $25,000 proceeds over the capital cost of $20,000 is a $5,000 capital gain, one-half of which would be taxable. The $12,000 net deduction creates a negative balance in the class and, as a consequence, no CCA will be taken for 2019. However, the negative balance of $5,300 will have to be taken into income as recapture.

### Class 53

The required information is as follows:

| | |
|---|---|
| Opening Balance | $75,000 |
| CCA At 50 Percent | ( 37,500) |
| January 1, 2020 UCC Balance | $37,500 |

### Summary Of Results (Required)

The preceding results can be summarized as follows:

| | |
|---|---|
| Terminal Loss - Class 1 | ($ 5,000) |
| CCA - Class 8 | ( 24,300) |
| Recapture - Class 10 | 5,300 |
| CCA - Class 53 | ( 37,500) |
| Decrease In Net Business Income | ($61,500) |
| Taxable Capital Gain - Class 10 [(1/2)($25,000 - $20,000)] | 2,500 |
| Decrease In Net Income For Tax Purposes | ($59,000) |

Note that detailed coverage of capital gains is available in Chapter 8 of the text.

## Self Study Solution Five - 3

### 2016 Solution

The required calculations are as follows:

| | |
|---|---|
| Opening Balance | Nil |
| Additions To Class 10 [(20 Cars)($21,500)] | $430,000 |
| One-Half Net Additions [(1/2)($430,000)] | ( 215,000) |
| CCA Base | $215,000 |
| CCA [(30%)($215,000)(122/365)] | ( 21,559) |
| One-Half Net Additions | 215,000 |
| Class 10 UCC For January 1, 2017 | $408,441 |

As the business was established on September 1, 2016, its operations were carried out for 122 days in 2016, and only a proportionate share of the annual CCA charge may be taken. We would call your attention to the fact that it is the length of the taxation year, not the period of ownership of the assets, that establishes the fraction of the year for which CCA is to be recorded.

***2017 Solution***

The required calculations are as follows:

| | |
|---|---|
| Opening Balance For Class 10 | $408,441 |
| Additions [(6 Cars)($22,800)] | 136,800 |
| Dispositions - Lesser Of: | |
| • Capital Cost = 6 @ $21,500 = $129,000 | |
| • Proceeds Of Disposition = 6 @ $11,400 = $68,400 | ( 68,400) |
| One-Half Net Additions [(1/2)($136,800 - $68,400)] | ( 34,200) |
| CCA Base | $442,641 |
| CCA [(30%)($442,641)] | ( 132,792) |
| One-Half Net Additions | 34,200 |
| Class 10 UCC For January 1, 2018 | $344,049 |

***2018 Solution***

With respect to Class 10 cars, the required calculations are as follows:

| | |
|---|---|
| Opening Balance For Class 10 | $344,049 |
| Additions [(18 Cars)($24,300)] | 437,400 |
| Dispositions - Lesser Of: | |
| • Capital Cost = 14 @ $21,500 = $301,000 | |
| • Proceeds Of Disposition = $137,200 | ( 137,200) |
| One-Half Net Additions [(1/2)($437,400 - $137,200)] | ( 150,100) |
| CCA Base | $494,149 |
| CCA [(30%)($494,149)] | ( 148,245) |
| One-Half Net Additions | 150,100 |
| Class 10 UCC For January 1, 2019 | $496,004 |

With respect to the BMW convertibles, each would have to be allocated to a separate Class 10.1. Further, the addition to each Class 10.1 would be limited to $30,000. The required calculations would be as follows:

| | **BMW 1 Class 10.1** | **BMW 2 Class 10.1** |
|---|---|---|
| Acquisitions | $30,000 | $30,000 |
| One-Half Net Additions | ( 15,000) | ( 15,000) |
| CCA Base | $15,000 | $15,000 |
| CCA [(30%)($15,000)] | ( 4,500) | ( 4,500) |
| One-Half Net Additions | 15,000 | 15,000 |
| UCC For January 1, 2019 | $25,500 | $25,500 |

***2019 Solution***

The required calculations for the Class 10 vehicles are as follows:

| | |
|---|---|
| Opening Balance For Class 10 | $496,004 |
| Dispositions - Lesser Of: | |
| • Capital Cost = 18 @ $24,300 + 6 @ $22,800 = $574,200 | |
| • Proceeds Of Disposition = 24 @ $8,300 = $199,200 | ( 199,200) |
| Balance Before Terminal Loss | $296,804 |
| Terminal Loss | ( 296,804) |
| UCC For January 1, 2020 | Nil |

After all of the assets in Class 10 have been retired there is still a $296,804 balance in the UCC. This results in a terminal loss that will be deducted in full from the Haddad brothers' other income. How this deduction will be shared by the two brothers will depend on the terms of their partnership agreement for the delivery business. The terminal loss will also be deducted from the UCC balance.

With respect to the two Class 10.1 assets, no recapture or terminal losses can be recorded on these assets. However, in the year of disposal, taxpayers are allowed to deduct one-half year of CCA. Given the short fiscal final year, this means that on each of the Class 10.1 vehicles there would be a CCA deduction of $2,861 [(1/2)(30%)($25,500)(273/365)] for a total of $5,722.

## Self Study Solution Five - 4

### *Part A*

The maximum CCA for the 3 years would be calculated as follows:

| 2017 | Class 1 | Class 10 | Class 8 |
|---|---|---|---|
| Opening Balance | Nil | Nil | Nil |
| Additions | $180,000 | $150,000 | $48,000 |
| One-Half Net Additions | ( 90,000) | ( 75,000) | ( 24,000) |
| CCA Base | $ 90,000 | $ 75,000 | $24,000 |
| Maximum CCA | | | |
| Class 1 [(6%)($90,000)(275 ÷ 365)]* | ( 4,068) | | |
| Class 10 [(30%)($75,000)(275 ÷ 365)] | | ( 16,952) | |
| Class 8 [(20%)($24,000)((275 ÷ 365)] | | | ( 3,616) |
| One-Half Net Additions | 90,000 | 75,000 | 24,000 |
| January 1, 2018 UCC | $175,932 | $133,048 | $44,384 |

*As the Class 1 building is being used 100 percent for non-residential purposes, it would qualify for the 6 percent CCA rate.

The total maximum CCA for 2017 would be $24,636 ($4,068 + $16,952 + $3,616).

| 2018 | Class 1 | Class 10 | Class 8 |
|---|---|---|---|
| Beginning UCC | $175,932 | $133,048 | $44,384 |
| Additions | Nil | 72,000 | Nil |
| Disposition - Lesser Of: | | | |
| Capital Cost = $75,000 | | | |
| Proceeds = [(3)($14,000)] = $42,000 | Nil | ( 42,000) | Nil |
| One-Half Net Additions | | | |
| [(1/2)($72,000 - $42,000)] | Nil | ( 15,000) | Nil |
| CCA Base | $175,932 | $148,048 | $44,384 |
| Maximum CCA | | | |
| Class 1 [(6%)($175,932) | ( 10,556) | | |
| Class 10 [(30%)($148,048)] | | ( 44,414) | |
| Class 8 [(20%)($44,384)] | | | ( 8,877) |
| One-Half Net Additions | Nil | 15,000 | Nil |
| January 1, 2019 UCC | $165,376 | $118,634 | $35,507 |

The total maximum CCA for 2018 would be $63,847 ($10,556 + $44,414 + $8,877).

| 2019 | Class 1 | Class 10 | Class 10.1 | Class 8 |
|---|---|---|---|---|
| Beginning UCC | $165,376 | $118,634 | Nil | $35,507 |
| Additions (Class Maximum)* | Nil | Nil | $30,000 | Nil |
| Class 10 Disposition - Lesser Of: | | | | |
| Capital Cost = $25,000 | | | | |
| Proceeds = $27,000 | N/A | ( 25,000) | N/A | N/A |
| Class 8 Dispositions - Lesser Of: | | | | |
| Capital Cost = $12,000 | | | | |
| Proceeds = Nil | N/A | N/A | N/A | Nil |
| AccII Adjustment | | | | |
| [(50%)($30,000)] | N/A | N/A | 15,000 | N/A |
| Balance | $165,376 | $ 93,634 | $45,000 | $35,507 |
| Maximum CCA | | | | |
| Class 1 [(6%)($165,376)] | ( 9,923) | | | |
| Class 10 [(30%)($93,634)] | | ( 28,090) | | |
| Class 10.1 [(30%)($45,000)] | | | ( 13,500) | |
| Class 8 [(20%)($35,507)] | | | | ( 7,101) |
| AccII Adjustment Reversal | N/A | N/A | ( 15,000) | N/A |
| January 1, 2020 UCC | $155,453 | $ 65,544 | $16,500 | $28,406 |

*Additions to Class 10.1 limited to $30,000.

The total maximum CCA for 2019 would be $58,614 ($9,923 + $28,090 + $13,500 + $7,101).

### *Part B*

The tax effects of the unusual events would be as follows:

**Theft Of Equipment** This is, in effect, a disposition with nil proceeds. There will be no immediate tax effect as the equipment is not the last asset in the class.

**Insurance Deductible** The $7,770 in insurance proceeds would be included in income [ITA 12(1)(f)], and the full repair expenses of $8,270 would be a deductible expense. This results in the $500 in repairs that were not covered under the Company's insurance policy being deducted as a repair or maintenance charge.

**Car Sale** As the car was sold for $2,000 more than its capital cost, there would be a capital gain of $2,000, resulting in a taxable capital gain of $1,000 [(1/2)($2,000)]. However, as there is still a balance in the class at the end of the year, no recapture would be recorded.

## Self Study Solution Five - 5

### *Case One*

For the year ending December 31, 2019, the maximum CCA, as well as the UCC balance for January 1, 2020 for Traxit's Class 14.1 would be as calculated as follows:

| | |
|---|---|
| January 1, 2019 Balance | Nil |
| 2019 Additions ($56,000 + $124,000) | $180,000 |
| AccII Adjustment [(50%)($180,000)] | 90,000 |
| CCA Base | $270,000 |
| 2019 CCA [(5%)($270,000)] | ( 13,500) |
| AccII Adjustment Reversal | ( 90,000) |
| January 1, 2020 UCC | $166,500 |

The results for 2020 would be calculated as follows:

| | |
|---|---|
| January 1, 2020 UCC | $166,500 |
| Disposition - Lesser Of: | |
| Capital Cost = $180,000 | |
| Proceeds Of Disposition = $97,000 | ( 97,000) |
| CCA Base | $ 69,500 |
| 2020 CCA [(5%)($69,500)] | ( 3,475) |
| January 1, 2021 UCC | $ 66,025 |

There would be no immediate tax consequences resulting from the sale of goodwill, other than a reduction in the UCC. Note that the capital cost in the calculation is of the single goodwill property.

***Case Two***

For the year ending December 31, 2019, the maximum CCA, as well as the UCC balance for January 1, 2020 for Traxit's Class 14.1 would be as calculated as follows:

| | |
|---|---|
| January 1, 2019 Balance | Nil |
| 2019 Additions ($34,000 + $47,000) | $ 81,000 |
| AccII Adjustment [(50%)($81,000)] | ( 40,500) |
| CCA Base | $121,500 |
| 2019 CCA [(5%)($121,500)] | ( 6,075) |
| AccII Adjustment Reversal | ( 40,500) |
| January 1, 2020 UCC | $ 74,925 |

The results for 2020 would be calculated as follows:

| | |
|---|---|
| January 1, 2020 UCC | $74,925 |
| Disposition - Lesser Of: | |
| Capital Cost = $81,000 | |
| Proceeds Of Disposition = $85,000 | ( 81,000) |
| Negative Ending Balance | ($ 6,075) |
| Recapture Of CCA | 6,075 |
| January 1, 2021 UCC | Nil |

| | |
|---|---|
| Proceeds Of Disposition | $85,000 |
| Capital Cost | ( 81,000) |
| Capital Gain | $ 4,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 2,000 |

There would be an increase in Net Income For Tax Purposes of $8,075 ($6,075 + $2,000).

## Self Study Solution Five - 6

***Class 1 - Buildings (Existing And Separate Class)***

As the new building has been allocated to a separate Class 1, two calculations are required here. The CCA on the existing Class 1 would be as follows:

| | |
|---|---|
| Opening UCC Balance | $590,000 |
| Disposition - Lesser Of: | |
| Proceeds = $290,000 ($440,000 - $150,000) | |
| Capital Cost = $300,000 ($475,000 - $175,000) | ( 290,000) |
| CCA Base | $300,000 |
| CCA Rate | 4% |
| Maximum CCA | $ 12,000 |

Since the replacement building is new, used 100 percent for non-residential purposes and allocated to a separate Class 1, it qualifies for an enhanced CCA rate. As it is not used for manufacturing and processing, the enhanced rate is 6 percent. Using this rate, the CCA on the new building would be as follows:

| | |
|---|---|
| Opening UCC Balance | Nil |
| Additions ($500,000 - $125,000) | $375,000 |
| AccII Adjustment [(50%)($375,000)] | 187,500 |
| CCA Base | $562,500 |
| CCA Rate | 6% |
| Maximum CCA | $ 33,750 |

### *Class 8 - Furniture*

The required calculation here would be as follows:

| | |
|---|---|
| Opening UCC Balance | $570,000 |
| Additions | 14,000 |
| AccII Adjustment [(50%)($14,000)] | 7,000 |
| CCA Base | $591,000 |
| CCA Rate | 20% |
| Maximum CCA | $118,200 |

### *Class 10 - Vehicles*

The required calculations here would be as follows:

| | |
|---|---|
| Opening UCC Balance | $61,000 |
| Additions | 22,000 |
| AccII Adjustment* | Nil |
| CCA Base | $83,000 |
| CCA Rate | 30% |
| Maximum CCA | $24,900 |

*As the acquired truck was a depreciable property (it had a UCC balance) transferred from a non-arm's length person, the AccII provisions do not apply to this acquisition. The shareholder's UCC does not affect the CCA calculations for Bartel Ltd.

### *Summary (Not Required)*

The maximum CCA is as follows:

| | |
|---|---|
| Class 1 | $ 12,000 |
| Class 1 | 33,750 |
| Class 8 | 118,200 |
| Class 10 | 24,900 |
| Maximum CCA | $188,850 |

## Self Study Solution Five - 7

### *Class 1 - Building*

There were no additions or dispositions in this class. As a consequence, the maximum 2019 CCA would be $25,000 [(4%)($625,000)]. The January 1, 2020 UCC of Class 1 would be $600,000 ($625,000 - $25,000).

### *Class 8 - Office Furniture And Equipment*

The required calculations for this class would be as follows:

| | | |
|---|---|---|
| Opening UCC Balance | | $155,000 |
| Additions | $27,000 | |
| Dispositions - Lesser Of: | | |
| • Capital Cost = $22,000 | | |
| • Proceeds Of Disposition = $35,000 | ( 22,000) | 5,000 |
| AccII Adjustment [(50%)($5,000)] | | 2,500 |
| CCA Base | | $162,500 |
| 2019 CCA [(20%)($162,500)] | | ( 32,500) |
| AccII Adjustment Reversal | | ( 2,500) |
| January 1, 2020 UCC Balance | | $127,500 |

The sale of the furniture and equipment would result in a taxable capital gain that would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $35,000 |
| Capital Cost | ( 22,000) |
| Capital Gain | $13,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 6,500 |

### *Class 10 - Vehicles*

The required calculations for this class would be as follows:

| | | |
|---|---|---|
| Opening UCC Balance | | $118,000 |
| Additions | $33,000 | |
| Disposition of Truck - Lesser Of: | | |
| • Capital Cost = $23,000 | | |
| • Proceeds Of Disposition = $8,500 | ( 8,500) | |
| Disposition of Car - Lesser Of: | | |
| • Capital Cost = $17,000 | | |
| • Proceeds Of Disposition = $8,000 | ( 8,000) | 16,500 |
| AccII Adjustment [(50%)($16,500)] | | 8,250 |
| CCA Base | | $142,750 |
| 2019 CCA [(30%)($142,750)] | | ( 42,825) |
| AccII Adjustment Reversal | | ( 8,250) |
| January 1, 2020 UCC Balance | | $ 91,675 |

Note that the amount received from the insurance company on the destroyed vehicle is treated as proceeds from a disposition.

### Class 12 - Tools

Tools that cost $500 or less are allocated to Class 12 where they are not subject to the half-year rule or the AccII provisions. This means that they are eligible for a write-off rate of 100 percent in the year of acquisition. As a consequence, the entire $34,000 can be deducted as CCA for 2019, leaving a nil January 1, 2020 UCC balance.

### Class 13 - Leasehold Improvements

In general, leasehold improvements will be written off over the term of the lease on a straight line basis. For purposes of applying this calculation, the term of the lease would include the first renewal option, beginning in a period after the improvements were made. In the case of the original improvements, the period to be used is 12 years. With respect to the improvements during the current year, the write-off period will be 9 years. Also note that Class 13 assets are eligible for the AccII provisions on net additions. The required calculations are as follows:

| | | |
|---|---|---|
| Opening UCC Balance | | $ 61,750 |
| Additions | | 45,000 |
| CCA Base | | $106,750 |
| CCA: | | |
| • 2016 Improvements ($78,000 ÷ 12) | ($6,500) | |
| • 2019 Improvements Including AccII Adjustment [($45,000 ÷ 9)(150%)] | ( 7,500) | ( 14,000) |
| January 1, 2020 UCC Balance | | $ 92,750 |

### Class 14.1 - Intangible Assets

The required calculations for this Class are as follows:

| | |
|---|---|
| Opening UCC Balance | Nil |
| Disposition - Lesser Of: | |
| • Capital Cost = Nil | |
| • Proceeds Of Disposition = $87,000 | Nil |
| January 1, 2020 UCC Balance | Nil |

| | |
|---|---|
| Proceeds Of Disposition | $87,000 |
| Capital Cost | Nil |
| Capital Gain | $87,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $43,500 |

### Class 50 - Computer Hardware

The required calculations are as follows:

| | |
|---|---|
| Opening UCC Balance | $ Nil |
| Additions | 28,000 |
| AccII Adjustment [(50%)($28,000)] | 14,000 |
| CCA Base | $42,000 |
| 2019 CCA [(55%)($42,000)] | ( 23,100) |
| AccII Adjustment Reversal | ( 14,000) |
| January 1, 2020 UCC Balance | $ 4,900 |

### *Class 53 - Manufacturing Equipment*

The required calculations are as follows:

| | |
|---|---|
| Opening UCC Balance | $217,000 |
| Dispositions - Lesser Of: | |
| • Capital Cost = $752,000 | |
| • Proceeds Of Disposition = $188,000 | ( 188,000) |
| Ending Balance With No Remaining Assets In Class | $ 29,000 |
| Terminal Loss | ( 29,000) |
| January 1, 2020 UCC Balance | Nil |

After all of the assets in Class 53 have been retired there is still a $29,000 UCC balance. This results in a terminal loss that will be deducted in full from the Net Income of Atlantic Manufacturing Company.

### *Other Income Effects*

In addition, the following income effects resulted from the information provided in the problem:

| | |
|---|---|
| Taxable Capital Gain On Class 8 Assets | $ 6,500 |
| Taxable Capital Gain On Class 14.1 Assets | 43,500 |
| Terminal Loss On Class 53 Assets | ( 29,000) |
| Total Inclusion | $21,000 |

### *Summary Of CCA And UCC Results (Not Required)*

The maximum 2019 CCA and the January 1, 2020 UCC balances can be summarized as follows:

| | Maximum CCA | UCC |
|---|---|---|
| Class 1 | $ 25,000 | $600,000 |
| Class 8 | 32,500 | 127,500 |
| Class 10 | 42,825 | 91,675 |
| Class 12 | 34,000 | Nil |
| Class 13 | 14,000 | 92,750 |
| Class 14.1 | Nil | Nil |
| Class 50 | 23,100 | 4,900 |
| Class 53 | Nil | Nil |

## Self Study Solution Five - 8

### *Part A*

The required calculation of the maximum CCA is as follows:

| | |
|---|---|
| Class 8 [(20%)($163,000)] | $ 32,600 |
| Class 10 (Note 1) | 43,950 |
| Class 12 (Note 2) | 42,000 |
| Class 13 (Note 3) | 24,000 |
| Class 14.1 [(7%)($132,330)] (Note 4) | 9,263 |
| Maximum Total | $151,813 |

**Note 1** The Class 10 CCA would be calculated as follows:

| | |
|---|---|
| Opening Balance | $112,000 |
| Additions | 52,000 |
| Proceeds Of Disposition (Less Than Cost) | ( 29,000) |
| AccII Adjustment [(1/2)($52,000 - $29,000)] | 11,500 |
| CCA Base | $146,500 |
| CCA Rate | 30% |
| Maximum CCA | $ 43,950 |

**Note 2** The rate for Class 12 is 100 percent. However, some additions to this Class are subject to the half-year rules. The presence of an opening balance of $42,000 and the statement that maximum CCA has always been taken, indicates that there must have been $84,000 of costs in 2018 that were subject to this rule. Given this, the entire balance can be deducted in 2019.

**Note 3** The $204,000 balance in Class 13 is equal to 85 percent of $240,000. This means that during the two years 2017 and 2018, 15 percent of their cost was deducted as CCA. As the half-year rules are applicable to this Class, this represents a half year for 2017 and a full year for 2018. Since Class 13 is a straight-line Class, this indicates that the CCA rate is 10 percent (15% ÷ 1.5). Based on this analysis, maximum CCA for 2019 would be $24,000 [(10%)($240,000)].

**Note 4** While the basic rate for Class 14.1 is 5 percent, the transitional rules allow continued use of the old CEC rate of 7 percent on balances carried forward from 2016. The use of this rate is available through 2026.

### *Part B*

Since the Company only has Net and Taxable Income before CCA of $43,000 and the problem states that loss carry overs should not be considered, maximum CCA would not be deducted. Only $43,000 in CCA should be taken in order to reduce the Taxable Income to nil.

As to which CCA Classes should be reduced, the usual procedure is to deduct the required amount from the balances with the lowest rates. By leaving the balances with higher rates untouched, larger amounts of CCA can be deducted in later periods as required.

Taking this approach, the recommended CCA would be as follows:

| | |
|---|---|
| Class 14.1 (Maximum Available) | $ 9,263 |
| Class 13 (Maximum Available) | 24,000 |
| Class 8 ($43,000 - $9,263 - $24,000) | 9,737 |
| Total CCA | $43,000 |

The deduction of this amount of CCA would serve to reduce Taxable Income to nil.

## Chapter 5 Learning Objectives

After completing Chapter 5, you should be able to:

1. Describe the differences between the accounting procedures used for depreciable assets and the tax procedures used for these assets (paragraph [P hereafter] 5-1 to 5-11).
2. Determine the types of costs that are included in the amounts that are added to depreciable asset classes (P 5-12 to 5-25).
3. Recall the basic available for use rules (P 5-26 to 5-28).
4. Recall the general rules for segregating depreciable assets into classes (P 5-29 to 5-31).
5. Recall the types of assets that must be allocated to separate classes (P 5-32).

6. Explain the basic elements of the CCA system (P 5-33 to 5-35).
7. Apply the rates and methods that are applicable to common CCA classes in order to determine the maximum CCA for the period (P 5-36).
8. Describe the half-year rules in the determination of maximum CCA for the period (P 5-37 to 5-38).
9. Describe the Accelerated Investment Incentive (AccII) (P 5-39 to 5-54).
10. Describe the application of the AccII to Classes 12, 13, 14 and 53 (P 5-55 to 5-60).

11. Describe the enhanced CCA provisions for zero emission vehicles in Class 54 and 55 (P 5-61 to 5-67).
12. Apply the short fiscal period rules in the determination of maximum CCA for the period (P 5-68 to 5-70).
13. Describe the additions to Class 14.1 and the special treatment for goodwill and the December 31, 2016 CEC balance (P 5-71 to 5-85).
14. Explain the tax planning considerations that are involved when a business takes less than maximum CCA (P 5-86 to 5-90).
15. Determine the tax consequences associated with dispositions of depreciable assets, including recapture, terminal losses, and capital gains (P 5-91 to 5-108).

16. Explain the special disposition rules applicable to Class 54 (P 5-109 to 5-111).
17. Explain how the treatment of dispositions in Class 14.1 differs from that for other CCA classes (P 5-112 to 5-122).
18. Create the commonly used CCA schedule for a situation with depreciable assets (P 5-123 to 5-124).
19. Apply the provisions relating to separate class elections (P 5-125 to 5-134).
20. Apply the provisions relating to the change in use of automobiles. (P 5-135 to 5-140).
21. Apply the December 31, 2016 CEC to Class 14.1 transitional rules (P 5-141 to 5-175).

# CHAPTER 6

## How To Work Through Chapter 6

We recommend the following approach in dealing with the material in this chapter:

**Overview And Classification Of Business Income**

- Read paragraph 6-1 to 6-16 (in the textbook).

**Business Income Vs. Property Income**

- Read paragraph 6-17 to 6-27.
- Do Exercise Six-1 (in the textbook) and check the solution in this Study Guide.

**Business Income Vs. Capital Gains**

- Read paragraph 6-28 to 6-42.
- Do Exercise Six-2 and check the solution in this Study Guide.

**Business Income And GAAP**

- Read paragraph 6-43 to 6-45.

**Inclusions - Amounts Received And Receivable**

- Read paragraph 6-46 to 6-53.

**Reserves For Doubtful Debts, Undelivered Goods And Unpaid Amounts**

- Read paragraph 6-54 to 6-61.
- Do Exercise Six-3 and check the solution in this Study Guide.
- Read paragraph 6-62.
- Do Exercise Six-4 and check the solution in this Study Guide.
- Read paragraph 6-63.
- Do Exercise Six-5 and check the solution in this Study Guide.
- Do Self Study Problems Six-1 and Six-2 which are available on MyLab and check the solutions in this Study Guide.

**Other Inclusions**

- Read paragraph 6-64 to 6-65.

**Limitations On Deductions From Business And Property Income, Including Work Space In The Home Costs**

- Read paragraph 6-66 to 6-93.
- Do Exercise Six-6 and check the solution in this Study Guide.
- Read paragraph 6-94 to 6-100.
- Do Exercise Six-7 and check the solution in this Study Guide.
- Do Self Study Problem Six-3 and check the solution in this Study Guide.
- Read paragraph 6-101 to 6-103.

**Limitations On Deductions From Business, Property, And Employment Income, Including Reasonableness, Meals And Entertainment**

- Read paragraph 6-104 to 6-112.

**Restrictions On Automobile Costs**

- Read paragraph 6-113 to 6-118
- Do Exercise Six-8 and check the solution in this Study Guide.
- Read paragraph 6-119 to 6-126.
- Do Exercise Six-9 and check the solution in this Study Guide.
- Do Self Study Problems Six-4 to Six-6 and check the solutions in this Study Guide.

**Leasing Property**

- Read paragraph 6-127 to 6-129.
- Do Exercise Six-10 and check the solution in this Study Guide.

**Illegal Payments, Fines And Penalties**

- Read paragraph 6-130 and 6-132.

**Specific Deductions From Business Income, Including Cost Of Sales**

- Read paragraph 6-133 to 6-141.
- Do Exercise Six-11 and check the solution in this Study Guide.
- Do Self Study Problem Six-7 and check the solution in this Study Guide.
- Read paragraph 6-142 to 6-143.

**Reconciliation Of Accounting Net Income And Net Income For Tax Purposes**

- Read paragraph 6-144 to 6-149.
- Do Self Study Problems Six-8 to Six-10 and check the solutions in this Study Guide.

**Taxation Year And Additional Business Income**

- Read paragraph 6-150 to 6-157.
- Do Exercise Six-12 and check the solution in this Study Guide.
- Do Self Study Problem Six-11 and check the solution in this Study Guide.

**Farming Income And Losses, Including Restricted Farm Losses**

- Read paragraph 6-158 to 6-164.
- Do Exercise Six-13 and check the solution in this Study Guide.
- Read paragraph 6-165 to 6-169.

**Professional Income (Billed Basis Of Recognition And Change in Legislation)**

- Read paragraph 6-170 to 6-174.
- Do Exercise Six-14 and check the solution in this Study Guide.
- Do Self Study Problems Six-12 and Six-13 and check the solutions in this Study Guide.

**Sale Of A Business, Including ITA 22 Election On Accounts Receivable**

- Read paragraph 6-175 to 6-180.
- Do Exercise Six-15 and check the solution in this Study Guide.
- Do Self Study Problem Six-14 to Six-16 and check the solutions in this Study Guide.
- Read paragraph 6-181.

**To Complete This Chapter**

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 6. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 6 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 6 Learning Objectives listed in this Study Guide.

- As a review, we recommend you view the PowerPoint presentation for Chapter 6 that is on MyLab.

**Practice Examination**

- Write the Practice Examination for Chapter 6 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

## Solutions to Chapter Six Exercises

***Exercise Six - 1 Solution***

With a single transaction, Joan's activity clearly does not fall within the general definition of operating a business. However, the real question is whether this transaction would be considered an adventure or concern in the nature of trade. As she is not behaving like a dealer and does not appear to have an intent to sell the song rights, it is unlikely that this transaction would be viewed as an adventure or concern in the nature of trade. This means that the royalties would be treated as property income, rather than business income. While this classification would not be important as long as she holds the rights, if there is a disposition of these rights, any gain would be treated as a capital gain, rather than as a fully taxable business gain.

***Exercise Six - 2 Solution***

Provided that she can demonstrate that her intent was to operate the building as a rental property, the gain should qualify as a capital gain. The fact that the offer was unsolicited would support this conclusion.

***Exercise Six - 3 Solution***

The Bad Debt Expense would be as follows:

| | |
|---|---|
| 2019 Estimate Of Future Bad Debts (Credit Allowance) | ($18,400) |
| Increase In Expense To Eliminate Debit Balance In Allowance ($17,200 Actual Write-Offs - $16,000 Allowance) | ( 1,200) |
| 2019 Bad Debt Expense For Accounting Purposes | ($19,600) |

For tax purposes, the net decrease for the year will be the same $19,600 calculated as follows:

| | | |
|---|---|---|
| Add: 2018 Reserve For Tax Purposes | | $ 16,000 |
| Deduct: | | |
| 2019 Actual Write-Offs | ($17,200) | |
| 2019 Reserve For Tax Purposes | ( 18,400) | ( 35,600) |
| 2019 Net Deduction For Tax Purposes | | ($19,600) |

***Exercise Six - 4 Solution***

The amount to be included in net business income would be calculated as follows:

| | |
|---|---|
| Cash Sales | $53,400 |
| Accounts Receivable | 26,300 |
| Reserve For Undelivered Services | ( 5,600) |
| Reserve For Doubtful Accounts | ( 425) |
| Total Increase | $73,675 |

***Exercise Six - 5 Solution***

As some of the proceeds are not receivable for more than two years after the date of sale, a reserve can be deducted under ITA 20(1)(n) for the years 2019, 2020, and 2021. As

December 31, 2022 is more than 36 months after the sale was made, no reserve can be deducted for 2022 or 2023. Note that the previous year's reserve is added to income before deducting the new reserve. The maximum reserve is based on the gross profit of $65,000. None of this profit will be recognized in 2019 as no proceeds are received. In 2020 and 2021, 25 percent of the profit will be recognized, with the remainder being in 2022 when no reserve can be deducted.

The maximum reserve that can be deducted in each year, as well as the minimum income to be recognized in each year, is shown in the following schedule:

| | Income | Proceeds Rec'd |
|---|---|---|
| 2019 Reserve = [(100%)($65,000)] = $65,000 | Nil | Nil |
| 2020 Reserve = [(75%)($65,000)] = $48,750 | $16,250 | $ 30,000 |
| 2021 Reserve = [(50%)($65,000)] = $32,500 | 16,250 | 30,000 |
| 2022 Reserve = Nil (>36 Months From Sale) | 32,500 | 30,000 |
| 2023 Reserve = Nil (All Proceeds Received) | Nil | 30,000 |
| Totals | $65,000 | $120,000 |

Note that the technically correct calculation of income involves adding back the previous year's reserve and deducting the new reserve. For example, the calculation for 2021 involves adding back the 2020 reserve of $48,750 and deducting the new reserve of $32,500 to calculate the income of $16,250 ($48,750 - $32,500).

### *Exercise Six - 6 Solution*

As Ms. Johnson owns 30 percent of the common shares, she is clearly a specified shareholder under ITA 18(5). Her relevant equity balance would be $1,620,000 [(30%)($2,400,000) + (100%)($900,000)]. Given this, the disallowed interest would be calculated as follows:

| | |
|---|---|
| Total Interest Paid To Ms. Johnson [(9%)($4,500,000)] | $405,000 |
| Maximum Deductible Interest [(9%)(1.5)($1,620,000)] | ( 218,700) |
| Disallowed Interest | $186,300 |

### *Exercise Six - 7 Solution*

The following work space in the home costs would be deductible in each of the three scenarios:

| | Part A | Part B | Part C |
|---|---|---|---|
| Utilities | $2,400 | $ 2,400 | $ 2,400 |
| Maintenance And Repairs | 4,600 | 4,600 | 4,600 |
| Property Taxes | Nil | 5,200 | 5,200 |
| House Insurance | Nil | 2,300 | 2,300 |
| Interest On Mortgage | Nil | Nil | 7,800 |
| House CCA | Nil | Nil | 12,000 |
| Subtotal | $7,000 | $14,500 | $34,300 |
| Percentage | 25% | 25% | 25% |
| Subtotal | $1,750 | $ 3,625 | $ 8,575 |
| Repainting And Rewiring (100%) | 1,000 | 1,000 | 1,000 |
| Internet Service Fees [(95%)($960)] | Nil | Nil | 912 |
| Monthly Phone [(95%)($600)] | Nil | Nil | 570 |
| Long Distance Charges (100%) | 390 | 390 | 390 |
| Maximum Deduction | $3,140 | $ 5,015 | $ 11,447 |

### Exercise Six - 8 Solution

With respect to the amount of CCA, since the business commenced operations on September 15, 2019, the CCA is limited to the proportion of the year the business was in operation (108/365) and the AccII provisions would apply. The fact that the car was purchased on October 1 does not affect the short fiscal year calculation.

The base amount for the CCA calculation is limited to the Class 10.1 maximum of $30,000. With respect to the interest, the car was financed for a total of 92 days with a limit of $10 per day. As a result, the amounts that can be deducted are as follows:

| | |
|---|---|
| CCA [(150%)(108/365)(30%)($30,000)] | $3,995 |
| Interest Costs - Lesser Of: | |
| • Amount Paid = $1,200 | |
| • [($10)(92 Days)] = $920 | 920 |
| Total Deduction | $4,915 |

### Exercise Six - 9 Solution

The amount he can deduct is limited to $2,229, the least of:

- $4,925 [($985)(5)];
- $4,080 [($800)(153/30)]; and
- $2,229 {[$4,925][$30,000 ÷ (85%)($78,000)]}.

### Exercise Six - 10 Solution

For tax purposes, the lease would be treated as an operating lease, with the deduction being based only on the lease payments. Under GAAP, the lease would have to be treated as a purchase and capitalized. This is because during the lease term the lease transfers "substantially all of the benefits and risks of ownership related to the leased property from the lessor to the lessee". This means that the accounting deductions would be for amortization on the capitalized asset and interest costs on the associated liability.

### Exercise Six - 11 Solution

The average per unit cost of $2.87 ($663,850 ÷ 231,000) is calculated as follows:

| Price | Units | Total |
|---|---|---|
| $2.50 | 50,000 | $125,000 |
| $2.85 | 35,000 | 99,750 |
| $2.95 | 62,000 | 182,900 |
| $3.05 | 84,000 | 256,200 |
| Totals | 231,000 | $663,850 |

The following calculations will be used in this solution.

| | |
|---|---|
| Fair Market Value (Using Replacement Cost) [($3.10)(102,000)] | $316,200 |
| Fair Market Value (Using Net Realizable Value) [(90%)($4.50)(102,000)] | 413,100 |
| FIFO Cost [(84,000)($3.05) + (102,000 - 84,000)($2.95)] | 309,300 |
| Average Cost [($2.87)(102,000)] | 292,740 |

For tax purposes, the inventory value can be determined by any of the following methods.

| | |
|---|---|
| Fair Market Value = Replacement Cost | $316,200 |
| Fair Market Value = Net Realizable Value | 413,100 |
| Lower of FIFO Cost ($309,300) or Replacement Cost ($316,200) | 309,300 |
| Lower of FIFO Cost ($309,300) or Net Realizable Value ($413,100) | 309,300 |
| Lower of Average Cost ($292,740) or Replacement Cost ($316,200) | 292,740 |
| Lower of Average Cost ($292,740) or Net Realizable Value ($413,100) | 292,740 |

### *Exercise Six - 12 Solution*

Mr. Gelato's additional business income for 2019 will be $18,551 [($12,300)(184 Days ÷ 122 Days)]. The 184 days is for the period July 1 through December 31, while the 122 days is for the period March 1 through June 30. The total business income that Mr. Gelato will have to report for 2019 is $30,851 ($12,300 + $18,551).

### *Exercise Six - 13 Solution*

For Ms. Morph, farming is clearly a secondary source of income. Given this, her farm losses will be restricted. The amount she can deduct for 2019 will be limited to $10,600 [$2,500 + (1/2)($18,700 - $2,500)]. The remaining $8,100 ($18,700 - $10,600) restricted farm loss is available for carry over.

### *Exercise Six - 14 Solution*

Mr. Winters' income inclusion for the year ending December 31, 2019 would be calculated as follows:

| | |
|---|---|
| January 1, 2019 Unbilled Work In Process [(100% - 20%)($35,000)] | $ 28,000 |
| Billings For Work Done In 2019 | 185,000 |
| December 2019 Unbilled Work In Process [(40%)($245,000 - $185,000)] | 24,000 |
| Total 2019 Income Inclusion | $237,000 |

Mr. Winters' income inclusion for the year ending December 31, 2020 would be calculated as follows:

| | |
|---|---|
| Unrecognized Work In Process From 2019 [(100% - 40%)($245,000 - $185,000)] | $ 36,000 |
| Billings For Work Done In 2020 | 247,000 |
| December 2020 Unbilled Work In Process [(60%)($285,000 - $247,000)] | 22,800 |
| Total 2020 Income Inclusion | $305,800 |

### *Exercise Six - 15 Solution*

Mr. Nero would include in his business income the 2018 reserve of $3,800. He could then deduct the $5,250 ($53,450 - $48,200) loss on the receivables. The net tax effect for Mr. Nero would be a deduction in the determination of business income of $1,450 ($5,250 - $3,800).

Mr. Labelle would have to include the $5,250 difference between the face value and the price paid in income. Subsequent to the sale, 100 percent of any difference between the $53,450 face value of the receivables and amounts actually collected will be deductible when calculating Mr. Labelle's net business income.

Mr. Labelle could establish a new reserve for doubtful debts related to any uncollected receivables that are outstanding at the end of the year.

## Self Study Solution Six - 1

The net deduction for bad debts in the calculation of 2019 business income would be calculated as follows:

| | |
|---|---|
| Add: | |
| 2018 Reserve For Doubtful Debts | $11,500 |
| Recoveries Of 2018 Bad Debts During 2019 | 1,500 |
| Deduct: | |
| Actual Bad Debt Write-Offs During 2019 ($8,800 - $700) | ( 8,100) |
| 2019 Reserve For Doubtful Debts ($15,900 + $700) | ( 16,600) |
| 2019 Net Deduction From Business Income | ($11,700) |

Note that the $700 that was due from Dr. Allworth's personal friend has been treated as part of the reserve for doubtful debts, rather than as part of the write-offs for the period. The $190 recovery in 2018 would have been included in income in 2018 and would not affect 2019 income.

## Self Study Solution Six - 2

The results for the 2 years would be as follows:

| | 2019 | 2020 |
|---|---|---|
| Cash Collections ($259,000 - $88,000) | $171,000 | |
| Cash Collections ($360,000 - $72,000) | | $288,000 |
| Ending Receivables | 88,000 | 72,000 |
| Reserve For Doubtful Debts: | | |
| Add Prior Year Reserve | Nil | 7,000 |
| Deduct Current Year Reserve | ( 7,000) | ( 9,500) |
| Deduct Actual Write-Offs | Nil | ( 6,500) |
| Advances From Customers | 27,000 | 21,000 |
| Reserve For Undelivered Merchandise: | | |
| Add Prior Year Reserve | Nil | 27,000 |
| Deduct Current Year Reserve | ( 27,000) | ( 21,000) |
| Gross Profit On Sale Of Unused Materials | 15,000 | Nil |
| Reserve For Unpaid Amounts: | | |
| Add Prior Year Reserve | | 9,677 |
| Deduct Current Year Reserve* | | |
| {[$15,000][($62,000 - $22,000) ÷ $62,000]} | ( 9,677) | |
| {[$15,000][($62,000 - $42,000) ÷ $62,000]} | | ( 4,839) |
| Net Effect | $257,323 | $382,838 |

*As some of the proceeds on the sale of unused materials are not due until two years after the date of the sale, a reserve for unpaid amounts can be deducted. The three year time limit is not relevant as the full balance is paid off prior to the end of that period.

## Self Study Solution Six - 3

### *Part A*

Under ITA 18(12), the following conditions must be satisfied in order for expenses related to work space in a self-contained domestic establishment to be deductible:

- the work space is either the individual's principal place of business; or
- the work space is used exclusively for the purpose of earning income from business and is used on a regular and continuous basis for meeting clients, customers, or patients of the individual in respect of the business.

With respect to Ms. Hart's mail order business, the allocated space in her home would appear to be her principal place of business. This means that she would be able to deduct work space in home costs in determining her net business income.

***Part B***

The calculation of the minimum net business income to be reported in Veronica's personal tax return is as follows:

| | | |
|---|---|---|
| Revenues | | $89,000 |
| Less: Expenses Other Than Home Work Space Costs: | | |
| Cost Of Merchandise Sold | ($46,000) | |
| Packaging Materials | ( 1,547) | |
| Shipping Costs | ( 3,216) | |
| Miscellaneous Office Supplies | ( 825) | |
| Telephone | ( 210) | |
| Advertising Brochures | ( 156) | |
| CCA (Note 1) | ( 2,056) | ( 54,010) |
| Income Before Home Work Space Costs | | $34,990 |
| Less: Home Work Space Costs (Note 2) | | ( 2,174) |
| Net Business Income | | $32,816 |

**Note 1** Maximum CCA amounts on the assets of the business (not including CCA on the house) for the short fiscal year would be calculated as follows (alternative calculations shown in the two columns):

| | **100%** | **Short Fiscal Year (346/365)** |
|---|---|---|
| Class 8 [($14,000)(1/2)(20%)] | $1,400 | $1,327 |
| Class 50 [($1,350)(1/2)(55%)] | 371 | 352 |
| Class 12 [($795)(1/2)(100%)] | 398 | 377 |
| Total | $2,169 | |
| Short Fiscal Year Factor | 346/365 | |
| Maximum CCA | $2,056 | $2,056 |

**Note 2** The home work space costs would be calculated as follows:

| | |
|---|---|
| Utilities For Home (Heat, Light, And Water) | $ 2,850 |
| Mortgage Interest Paid | 4,183 |
| House Insurance | 400 |
| Property Taxes | 1,230 |
| Repairs And Maintenance For Home | 1,125 |
| Total Out-Of-Pocket Costs | $ 9,788 |
| Class 1 CCA [($355,000 - $80,000)(1/2)(4%)] | 5,500 |
| Total Costs For The Home | $15,288 |
| Percentage Of Floor Space | 15% |
| Subtotal | $ 2,293 |
| Short Fiscal Year Factor | 346/365 |
| Deductible Home Work Space Costs | $ 2,174 |

***Part C***

There are two issues that should be discussed with Veronica.

- As this problem asks for "minimum" net business income, CCA must be deducted on Ms. Hart's home. The problem with this is that, if she takes CCA, it could jeopardize the principal residence exemption on this property, resulting in the payment of taxes on a portion of the taxable capital gain that might arise on any future sale of the property, assuming real estate prices are increasing. This is discussed in more detail in Chapter 8.

- Although it is not relevant for this year, Ms. Hart should be aware that the deduction of work space in home costs cannot be used to create a loss in the future. However, any amount not deductible because it is greater than her income can be deducted in any subsequent year provided there is sufficient income from the same business in that year. This provides for an unlimited carry forward of unused work space in home costs (see S4-F2-C2, *Business Use Of Home Expenses*).

## Self Study Solution Six - 4

### *Part A*

In Part A(i), Ms. Wise is an employee and, because her income includes commissions, she can deduct expenses related to the production of employment income under ITA 8(1)(f), provided no deduction is made under ITA 8(1)(h) or ITA 8(1)(h.1).

Deductions under ITA 8(1)(f) are limited to the amount of commissions earned. Alternatively, traveling costs and motor vehicle costs other than capital costs can be deducted under ITA 8(1)(h) and ITA 8(1)(h.1). Deductions under these provisions are not limited to commission income.

The deduction of dues and other expenses under ITA 8(1)(i) and automobile capital costs (CCA and financing costs) under ITA 8(1)(j) is permitted without regard to other provisions used.

| | ITA 8(1)(f) (Limited To $15,000) | ITA 8(1) (h) and (h.1) | ITA 8(1) (i) and (j) | Part A(ii) |
|---|---|---|---|---|
| Professional Dues | - | - | $ 600 | $ 600 |
| Automobile Costs: | | | | |
| Operating Costs [(35,000/50,000)($6,000)] | $ 4,200 | $ 4,200 | - | 4,200 |
| Financing Costs [(35,000/50,000)($2,500)] | - | - | 1,750 | 1,750 |
| CCA (See Note) | - | - | 5,355 | 5,355 |
| Home Office Costs: | | | | |
| Utilities [(40%)($3,550)] | - | - | 1,420 | 1,420 |
| Maintenance [(40%)($1,500)] | - | - | 600 | 600 |
| Insurance [(40%)($950)] | 380 | - | - | 380 |
| Property Taxes [(40%)($4,700)] | 1,880 | - | - | 1,880 |
| Interest [(40%)($13,500)] | - | - | - | 5,400 |
| CCA [($140,000)(4%)] | - | - | - | 5,600 |
| Travel Costs | 23,000 | 23,000 | - | 23,000 |
| Non-Deductible Meals [(50%)($8,000)] | ( 4,000) | ( 4,000) | - | ( 4,000) |
| Country Club Charges | 12,000 | - | - | 12,000 |
| Non-Deductible Membership Fees | ( 2,500) | - | - | ( 2,500) |
| Non-Deductible Meals [(50%)($9,500)] | ( 4,750) | - | - | ( 4,750) |
| Total | $30,210 | $23,200 | $9,725 | $50,935 |

**Note** The car will be allocated to Class 10.1 at a value of $30,000, the 2018 limit. The excess of $23,000 will not be deductible. Maximum CCA for 2018 (pre-AccII provisions) would have been $4,500 [(30%)(1/2)($30,000)]. The deductible amount for 2018 would have been this amount, multiplied by the portion of her total usage that was related to income producing activity.

The January 1, 2019 UCC would be $25,500 ($30,000 - $4,500) and maximum CCA for 2019 would have been $7,650 [(30%)($25,500)]. Note that, in determining the relevant UCC value, the full amount of maximum 2018 CCA was deducted, not just the portion that was actually deducted in that year. The deductible amount for 2019 equals $5,355 [(35,000/50,000)($7,650)].

The deduction for home office costs has been split between ITA 8(1)(i) and (f). Since the utilities and maintenance portion can be deducted under ITA 8(1)(i), it is not limited by the commission income. The insurance and property tax components are limited as they are deducted under ITA 8(1)(f). A limitation, which is not illustrated in this problem, prevents the deduction of home office costs from creating an employment loss.

As the ITA 8(1)(f) amount is limited to the $15,000 in commission income, the total deduction using ITA 8(1)(f), (i) and (j), is $24,725 ($15,000 + $9,725).

The total deduction using ITA 8(1)(h), (h.1), (i) and (j), is $32,925 ($23,200 + $9,725). Note that when this approach is used, home office costs are limited to utilities and maintenance. Further, there is no deduction for entertainment costs. However, this approach results in deductions totaling $8,200 ($32,925 - $24,725) more than the amount available using ITA 8(1)(f), (i), and (j) due to the effect of the commission income limit.

Comparing Parts A (i) and A (ii), there is a difference of $18,010 ($50,935 - $32,925) between the maximum employee and self-employed calculations, illustrating the importance of the difference between being an employee and being self-employed. This problem is, of course, somewhat unrealistic in that, if Ms. Wise was an employee, it is likely that she would be compensated or reimbursed for at least part of her employment related expenses.

### *Part B*

As will be discussed in Chapter 8, capital gains on an individual's principal residence are, in general, not subject to income taxes. While a strict application of the relevant rules would remove from principal residence status the portion of Ms. Wise's home that was used for income producing activities, the administrative procedures of the CRA do not follow this approach. It appears that, as long as no CCA is taken on the work space portion of the home, 100 percent of the property will qualify as a principal residence. Given this, and the assumption that real estate prices are increasing, it would not be wise for Ms. Wise to take CCA on her office space.

## Self Study Solution Six - 5

### *Part A*

As the lease was entered into in 2018, the 2018 limits on deductibility apply for the life of the lease. The maximum deduction for automobile lease payments for 2018 would be the least of:

- $1,800
- $\left[\$800 \text{ x } \frac{31}{30}\right] - \text{Nil} - \left[(\$10{,}000 - \$1{,}000) \text{ x } 2\% \text{ x} \frac{31}{365}\right] - \$500 = \$311$
- $\left[\$1{,}800 \text{ x} \frac{\$30{,}000}{(85\%)(\$85{,}000)}\right] - \left[(\$10{,}000 - \$1{,}000) \text{ x } 2\% \text{ x} \frac{31}{365}\right] - \$500 = \$232$

The least of the three figures is $232 and this will be the maximum 2018 deduction for Borris Industries.

The maximum deduction for automobile lease payments for 2019 would be the least of:

- $[(\$1,800)(12)] = \$21,600$
- $\left[\$800 \times \frac{396}{30}\right] - \$232 - \left[(\$10,000 - \$1,000) \times 2\% \times \frac{396}{365}\right] - \$6,500 = \$3,633$
- $\left[\$21,600 \times \frac{\$30,000}{(85\%)(\$85,000)}\right] - \left[(\$10,000 - \$1,000) \times 2\% \times \frac{365}{365}\right] - \$6,000 = \$2,789$

The least of the three figures is $2,789 and this will be the maximum 2019 deduction for Borris Industries.

***Part B***

In 2018, the Mercedes was used solely for personal purposes. In 2019, it was used primarily (more than 50 percent) for employment purposes, so he is eligible for the reduced standby charge and the alternative operating cost benefit calculation. However, since Mr. Borris' personal usage exceeds 20,004 kilometers during the year, the multiplier of the reduction formula is equal to 1 (20,004 ÷ 20,004). Given this, there is no reduction of the standby charge.

The taxable benefit that will be included in the Net Income For Tax Purposes of Mr. Borris for the two years (note the 2018 rate is different from 2019) is calculated as follows:

| | |
|---|---|
| Standby Charge - No Reduction [(2/3)(1)($1,800)] | $1,200 |
| Operating Cost Benefit - No Alternative [($0.26)(2,500)] | 650 |
| Repayment | ( 500) |
| 2018 Total Benefit | $1,350 |

| | |
|---|---|
| Standby Charge - No Reduction [(2/3)(12)($1,800)] | $14,400 |
| Operating Cost Benefit - Lesser Of: | |
| • [(1/2)($14,400) = $7,200 | |
| • [($0.28)(22,000)] | 6,160 |
| Repayment [($500)(12)] | ( 6,000) |
| 2019 Total Benefit | $14,560 |

## Self Study Solution Six - 6

***Analysis***

The choice between the two alternatives will be based on the comparative cash flows of the two alternatives. The relevant calculations are provided in the sections which follow.

***Employer Provides Automobile***

If Jerry elects to have the employer provide the Lexus, he will have a taxable benefit in each year. Since his employment related milage is greater than 50 percent, he is eligible for the reduced standby charge and the alternative operating cost benefit calculation. The after tax consequence of this choice would be as follows:

| | |
|---|---|
| Standby Charge (Reduced) | |
| [(2%)(12)($48,000)(15,000 ÷ 20,004)] | $8,638 |
| Operating Cost Benefit - Lesser Of: | |
| • [(1/2)($8,638)] = $4,319 | |
| • [($0.28)(15,000)] = $4,200 | 4,200 |
| Total Automobile Benefit | $12,838 |
| Marginal Tax Rate | 51% |
| Annual Increase In Tax | $ 6,547 |

### Jerry Buys the Automobile

The pre-tax cash inflows (outflows) associated with this alternative are as follows:

| | 2019 | 2020 | 2021 |
|---|---|---|---|
| Margin Loan Proceeds | $48,000 | N/A | N/A |
| Lexus Purchase | ( 48,000) | N/A | N/A |
| Allowance Received | 18,000 | $18,000 | $18,000 |
| Loan Repayment | ( 16,000) | ( 16,000) | ( 16,000) |
| Proceeds From Sale Of Car | N/A | N/A | 20,000 |
| Operating Costs [($0.24)(55,000)] | ( 13,200) | ( 13,200) | ( 13,200) |
| Financing Cost | | | |
| [(5%)($48,000)] | ( 2,400) | | |
| [(5%)($32,000)] | | ( 1,600) | |
| [(5%)($16,000)] | | | ( 800) |
| Pre-Tax Cash Inflows (Outflows) | ($13,600) | ($12,800) | $ 8,000 |

The tax savings (costs) associated with this alternative are as follows:

| | 2019 | 2020 | 2021 |
|---|---|---|---|
| Operating Costs [($0.28)(55,000)] | ($15,400) | ($15,400) | ($15,400) |
| Financing Costs (Less Than $10/Day) | ( 2,400) | ( 1,600) | ( 800) |
| CCA (See Note) | | | |
| [(150%)(30%)($30,000)] | ( 13,500) | | |
| [(30%)($30,000 - $13,500)] | | ( 4,950) | |
| [(1/2)(30%)($16,500 - $4,950)] | | | ( 1,733) |
| Total Automobile Costs | ($31,300) | ($21,950) | ($17,933) |
| Employment Usage (40,000 ÷ 55,000) | 72.7% | 72.7% | 72.7% |
| Deductible Amount | ($22,755) | ($15,958) | ($13,037) |
| Allowance | 18,000 | 18,000 | 18,000 |
| Inclusion In Taxable Income | ($ 4,755) | $ 2,042 | $ 4,963 |
| Marginal Tax Rate | 51% | 51% | 51% |
| Increase (Decrease) In Tax | ($ 2,425) | $ 1,041 | $ 2,531 |

**Note** As a Class 10.1 asset is involved, the CCA base is limited to $30,000 The AccII provisions are applicable. When the asset is sold, no recapture or terminal loss can be recognized on Class 10.1. However, one-half year CCA can be deducted in the year of disposal.

The net after tax cash outflow would be calculated as follows:

| | 2019 | 2020 | 2021 |
|---|---|---|---|
| Pre-Tax Cash Inflow (Outflow) | ($13,600) | ($12,800) | $8,000 |
| Tax Inflow (Outflow) | 2,425 | ( 1,041) | ( 2,531) |
| Net Cash Inflow (Outflow) | ($11,175) | ($13,841) | $5,469 |

### Best Alternative

A comparison of the two alternatives is as follows:

| Net Cash Inflows (Outflows) | 2019 | 2020 | 2021 | Total |
|---|---|---|---|---|
| Employer Provided | ($ 6,547) | ($ 6,547) | ($6,547) | ($19,641) |
| Employee Purchase | ( 11,175) | ( 13,841) | 5,469 | ( 19,547) |

There is less than $100 dollars difference in the outflows of the two alternatives with the employee purchase being slightly more advantageous. The cash flows of this alternative are enhanced by the AccII provisions in the year of acquisition.

### *Other Considerations*

There are a number of other considerations that could affect the choice of the best alternative, such as if the actual number of kilometers driven, or personal kilometers driven was to be different from the estimated, or if the resale value of the Lexus was not actually $20,000, but dealing with these factors is beyond the scope of this problem.

## Self Study Solution Six - 7

### *Market Determination - Two Possible Values*

For tax purposes, the business can measure market using either replacement cost or net realizable value. These values would be as follows:

| | |
|---|---|
| Replacement Cost [($16.75)(5,000)] | $83,750 |

| | |
|---|---|
| Net Realizable Value [($18.30)(5,000)] | $91,500 |

While it is not an acceptable practice under GAAP, the CRA will accept the use of market values, without regard to their relationship to cost.

### *Cost Determination - Two Possible Values*

In the determination of cost, taxpayers are permitted to use specific identification (this would not appear to be practical here), a First In, First Out (FIFO) assumption, or Average Cost.

Using the First In, First Out method, the appropriate value for the ending inventory would be determined as follows:

| | |
|---|---|
| 1,500 Units At $16.50 | $24,750 |
| 3,200 Units At $21.42 | 68,544 |
| 300 Units At $20.25 | 6,075 |
| 5,000 Units At FIFO Cost | $99,369 |

Based on average cost, the ending inventory value would be calculated as follows:

| | |
|---|---|
| Number Of Units | 5,000 |
| Average Cost [($297,644 ÷ 15,300)] | 19.45 |
| 5,000 Units At Average Cost | $97,250 |

### *Lower Of Cost And Market - Four Possible Values*

For tax purposes, the possible values here would be as follows:

| | |
|---|---|
| Lower Of Replacement Cost And FIFO Cost | $83,750 |
| Lower Of Replacement Cost And Average Cost | 83,750 |
| Lower Of Net Realizable Value And FIFO Cost | 91,500 |
| Lower Of Net Realizable Value And Average Cost | 91,500 |

For accounting purposes, only the last two values would be acceptable.

## Self Study Solution Six - 8

The appropriate treatment for each of the listed items would be as follows:

1. Neither current nor future income taxes can be deducted in the calculation of Net Income For Tax Purposes. As a consequence, $123,000 would be added back to Net Income to arrive at the required tax figure.

2. Interest on late tax instalments is not deductible in the calculation of Net Income For Tax Purposes. As a consequence, $400 would be added back to Net Income to arrive at the required tax figure.

3. In the calculation of Net Income For Tax Purposes, amortization expense of $83,000 must be added back to accounting Net Income and CCA of $97,000 must replace it as the appropriate deduction for tax purposes.

4. The club dues of $2,500 are not deductible for tax purposes and must be added back to Net Income in the calculation of Net Income For Tax Purposes. In addition, 50 percent of the cost of entertaining clients would not be deductible. This means that the non-deductible portion of the $9,600 total would be $4,800. This amount would also be added back to Net Income in the calculation of Net Income For Tax Purposes.

5. The appropriate tax deduction for bad debts is $6,000 ($5,200 - $3,400 + $4,200). As only $5,200 was deducted in the accounting records, $800 ($6,000 - $5,200) must be deducted in the calculation of Net Income For Tax Purposes.

6. As this life insurance policy was required in order to obtain financing, the premiums would be deductible. No adjustment is required in the calculation of Net Income For Tax Purposes.

7. Provided that they are paid within 180 days of year end, bonuses are deductible when declared by a business. This means that the full amount would be deductible and no adjustment is required in the calculation of Net Income For Tax Purposes.

8. The bond discount amortization is not deductible for tax purposes. As a consequence, the $3,200 must be added back to Net Income in the calculation of Net Income For Tax Purposes.

9. While the landscaping costs were given the appropriate capitalization treatment for accounting purposes, ITA 20(1)(aa) specifically permits such costs to be deducted in the year in which they are paid. Therefore, a deduction of $27,000 will be required in the conversion of accounting Net Income to Net Income For Tax Purposes.

## Self Study Solution Six - 9

The minimum net business income of Fairway Distribution would be calculated as follows:

| | |
|---|---|
| Accounting Income As Reported | $273,000 |
| Additions: | |
| Item 2 - Amortization | 78,500 |
| Item 3 - Cost Of Advertising In Foreign Newspaper (Note 1) | 3,500 |
| Item 3 - Donations To Charities (Note 2) | 1,260 |
| Item 3 - Cost Of Real Estate Appraisal (Note 3) | 1,470 |
| Item 3 - Cost Of Landscaping (Note 4) | 5,260 |
| Item 3 - Mrs. Fairway's Management Fee (Note 5) | 123,000 |
| Subtotal | $485,990 |
| Deductions: | |
| Item 1 - Bad Debt Expense Adjustment (Note 6) | ( 4,200) |
| Item 2 - CCA (Given) | ( 123,600) |
| Net Business Income | $358,190 |

**Note 1** In general, the cost of advertising in foreign media that is directed towards Canadian markets cannot be deducted for tax purposes. While there is an exception for foreign periodicals, it does not apply to foreign newspapers.

**Note 2** Donations to charities cannot be deducted in the calculation of net business income. They will be the basis for a tax credit in the calculation of Tax Payable for Mr. Fairway.

**Note 3** The cost of appraising a capital asset for purposes of sale is not deductible. Rather, it is an addition to the capital cost of the appraised asset.

**Note 4** While landscaping costs related to business properties are deductible when incurred, the cost of improving non-business personal use property would not be.

**Note 5** ITA 67 requires that business expenses be "reasonable in the circumstances". As Mrs. Fairway does not appear to do any work for the business, it would be difficult to view her management fee as reasonable. As a consequence, it would not be deductible.

**Note 6** For tax purposes, the bad debt adjustment would be calculated as follows:

| | |
|---|---|
| Last Year's Reserve | $15,000 |
| Actual Write-Offs | ( 17,500) |
| This Year's Reserve | ( 19,200) |
| Total Deduction For Tax Purposes | ($21,700) |
| Accounting Deduction (Actual Write-Offs) | 17,500 |
| Bad Debt Expense Adjustment | ($ 4,200) |

As $4,200 ($21,700 - $17,500) more than the amount that was written off for accounting purposes can be deducted for tax purposes, an adjustment is required. Note that the accounting procedures that were used in this case are not consistent with GAAP.

## Self Study Solution Six - 10

The Net Income For Tax Purposes of Darlington Inc. would be calculated as follows:

| | |
|---|---|
| Accounting Income | $ 596,000 |
| Additions: | |
| Item 1 - Income Tax Expense | 55,000 |
| Item 3 - Foreign Advertising (Note 1) | Nil |
| Item 4 - Amortization Expense | 623,000 |
| Item 4 - Taxable Capital Gain On Class 8 Disposition [($550,000 - $400,000)(1/2)] | 75,000 |
| Item 5 - Non-Deductible Meals And Entertainment [(50%)($41,400)] | 20,700 |
| Item 6 - Club Fees | 2,500 |
| Item 7 - Property Taxes On Vacant Land (Note 4) | 15,000 |
| Subtotal | $1,387,200 |
| Deductions: | |
| Item 2 - Landscaping Costs (Note 2) | ( 95,000) |
| Item 4 - Accounting Gain On Class 8 Disposition | ( 225,000) |
| Item 4 - CCA (Note 3) | ( 1,017,250) |
| Terminal Loss (See Class 10 CCA Calculation) | ( 113,000) |
| Net Income (Loss) For Tax Purposes | ($ 63,050) |

**Note 1** ITA 19.01 provides for the full deduction of advertising costs in foreign periodicals directed at the Canadian market, provided 80 percent or more of their non-advertising content is original editorial content. If the original editorial content is less than 80 percent, the deduction is equal to 50 percent of the costs. Note that this applies only to periodicals and not other print or broadcast media.

**Note 2** Landscaping costs are fully deductible.

**Note 3** The calculations for determining CCA are as follows:

**Class 1 - Buildings** The required calculations for this class would be as follows:

**Headquarters Building**

| | |
|---|---|
| January 1, 2019 UCC Balance | $1,000,000 |
| CCA At 4 Percent | ( 40,000) |
| January 1, 2020 UCC Balance | $ 960,000 |

**New Building (Separate Class)**

| | |
|---|---|
| Addition ($650,000 - $125,000) | $525,000 |
| AccII Adjustment [(50%)($525,000)] | 262,500 |
| CCA Base | $787,500 |
| CCA At 6 Percent | ( 47,250) |
| AccII Adjustment Reversal | ( 262,500) |
| January 1, 2020 UCC Balance | $477,750 |

**Class 8 - Office Furniture And Equipment** The required calculations for this class would be as follows:

| | | |
|---|---|---|
| January 1, 2019 UCC Balance | | $4,200,000 |
| Additions | $700,000 | |
| Dispositions - Lesser Of: | | |
| • Proceeds = $550,000 | | |
| • Cost = $400,000 | ( 400,000) | 300,000 |
| AccII Adjustment [(50%)($300,000)] | | 150,000 |
| CCA Base | | $4,650,000 |
| CCA At 20 Percent | | ( 930,000) |
| AccII Adjustment Reversal | | ( 150,000) |
| January 1, 2020 UCC Balance | | $3,570,000 |

With respect to the sale that occurred during the year, there would be a capital gain of $150,000 ($550,000 - $400,000). One-half, or $75,000, is included in the Company's Net Income For Tax Purposes, and the accounting gain of $225,000 is deducted.

**Class 10 - Vehicles** The calculations for this Class are as follows:

| | |
|---|---|
| January 1, 2019 UCC Balance | $800,000 |
| Disposition - Lesser Of: | |
| Capital Cost = $1,200,000 | |
| Proceeds Of Disposition = $687,000 | ( 687,000) |
| Ending Balance With No Remaining Assets In Class | $113,000 |
| Terminal Loss | ( 113,000) |
| January 1, 2020 UCC | Nil |

**Note 4** The property taxes on the vacant land are not deductible. They can be added to the cost of the land if the land was acquired for the purpose of earning either business or property income and may be deducted to the extent of any net income earned on the land.

### *Summary Of The Results (Not Required)*

The maximum 2019 CCA and January 1, 2020 UCC balances can be summarized as follows:

| Class | Maximum CCA | UCC |
|---|---|---|
| Class 1 - Main Class | $ 40,000 | $ 960,000 |
| Class 1 - Separate Class | 47,250 | 477,750 |
| Class 8 | 930,000 | 3,570,000 |
| Class 10 | Nil | Nil |
| Total | $1,017,250 | |

In addition, there was a taxable capital gain on the sale of the Class 8 assets of $75,000 and a terminal loss in Class 10 of $113,000.

## Self Study Solution Six - 11

### *Part I*

A. As covered in this Chapter 6, ITA 12(1)(l) requires inclusion of business income from a partnership. As explained in more detail in Chapter 18, Partnerships, each partner's share of partnership profits is considered personal income of each partner. The profit is calculated as though the partnership was an individual resident of Canada. Once determined, it is allocated as per the partnership agreement, with the allocated amount being included in the individual tax returns of each partner.

B. The basic rules of ITA 249.1(1) require that, in general, a partnership with members who are individuals use a December 31 fiscal year end. While ITA 249.1(4) allows a partnership to elect a fiscal year end other than December 31, this election requires complex adjustments for Additional Business Income that may or may not be worthwhile.

C. This question requires an analysis of whether the arrangement with the seamstresses is one of employment. This material is discussed in Chapter 3 which covers employment income. Detailed guidance can be found in the CRA Guide titled "Employee Or Self-Employed?" (RC4110).

The general approach to the employee vs. self-employed question is to determine the intent of the parties to the arrangement. While not conclusive, the first question that will be examined in making this determination is whether the business and the workers intended to have an employee/employer relationship or, alternatively, have the work done by the individuals as self-employed contractors. While there is not sufficient information to make this determination given the information in the problem, the partners should be advised that intent should be determined and supported by the appropriate actions (e.g., have the workers register for GST if they wish to treat them as self-employed contractors).

In the absence of information on intent, other factors can be considered as follows:

**Control** It appears that Montpetit does not exercise a large degree of control over the seamstresses. They are free to work when they choose and may provide their services to different payers at the same time. The seamstresses can choose to accept or refuse work from Montpetit.

**Ownership Of Tools And Equipment** The seamstresses provide the tools and equipment required for the work and the work is done in their homes, not in space provided by Montpetit.

**Ability To Subcontract Or Hire Assistants** It appears that Montpetit does not exercise control over who does the work as long as the quality is satisfactory.

**Financial Risk** Since the work is done for a set fee and the fabric and accessories are provided, there is no financial risk for seamstresses.

**Responsibility For Investment And Management** There is not enough information for this factor to be considered.

**Opportunity For Profit** Since the work is done for a set fee, a seamstress cannot increase her proceeds and hence the profit from a gown. Since the fabric and accessories are supplied and there would appear to be no other material expenditures needed for a gown, there is no opportunity to decrease expenses and increase profit on a gown. As a result, it does not appear that a profit could arise.

In addition to these factors, the work is for a specific gown, not general sewing as part of an ongoing relationship.

On balance, the seamstress contracts for the creation of designer gowns are likely contracts for service (self-employment contracts). Given this, source deductions

would not be required.

***Part II***

A. The $2,400 legal fees would be allocated to Class 14.1. The rate for this Class is 5 percent and it is subject to the half-year rule. For the current year, partnership could deduct CCA of $60 [(5%)(1/2)($2,400)].

B. The sewing machines are capital expenditures and cannot be deducted in the current year. However, a deduction will be available for CCA on these amounts. The sewing accessories can be deducted in the first year as they will be used and replaced in the same year.

C. While this point is not covered in the Business Income Chapter, because of its non-arm's length nature, interest paid to partners cannot be deducted in the determination of partnership income (see Chapter 18 on partnerships). Rather it will be treated as a drawing by the partners.

   The $10,000 contributions are of a capital nature and are not deductible in the calculation of personal Taxable Income.

D. The designer clothes held on consignment at year end are inventory of the partnership and are not deductible as cost of sales. The inventory will be valued either at lower of cost and market or, alternatively, market. The cost is given as $95,000 ($50,000 + $45,000) and the retail price is given as $260,000. It is likely that the net realizable value will be less than the full retail value, but the value cannot be determined with the information given.

E. The $15,000 payment for a limited term distribution right is a capital cost that cannot be currently deducted. However, it would be allocated to Class 14 (limited life intangibles) where it will be available for the deduction of CCA.

F. The payment of the annual membership is not deductible. The Crepe Suzette Diner expenses for entertainment of clients would be deductible, but they are subject to a 50 percent limitation, which means $750 [(50%)($1,500)] of these costs would be allowed as a business expense. The personal usage is not deductible.

## Self Study Solution Six - 12

Christine's minimum net business income can be calculated as follows:

**Design Power**
**Statement of Income and Expenses**
**For The Seven Month Period Ended December 31, 2019**

| | | |
|---|---|---|
| Revenues | | |
| Revenue collected | $22,000 | |
| Revenue billed | 4,000 | |
| Work-In-Progress (Note 1) | 1,500 | $27,500 |
| Expenses | | |
| Capital cost allowance (Note 2) | ($6,446) | |
| Work space in home expenses [(20%)($6,400)] | ( 1,280) | |
| Legal and business license fees | ( 1,000) | |
| Meals and entertainment [(50%)($500)] | ( 250) | |
| Automobile expenses (Note 3) | ( 1,960) | |
| Office and computer supplies | ( 650) | |
| Printing sub-contract fees | ( 1,800) | ( 13,386) |
| Net Business Income | | $14,114 |

**Note 1** ITA 34, which provided for the use of the billed basis of revenue recognition by some professionals, is being phased out. However, this is not relevant in this problem as a visual designers were never eligible for the use of this provision.

**Note 2** CCA amounts are calculated as follows:

| | Class 8 Furniture | Class 10 Car | Class 50 Computer |
|---|---|---|---|
| Additions | $2,000 | $18,000 | $5,000 |
| AccII Adjustment (50% Of Additions) | 1,000 | 9,000 | 2,500 |
| CCA Base | $3,000 | $27,000 | $7,500 |
| CCA Rate | 20% | 30% | 55% |
| CCA For Full Year | $ 600 | $ 8,100 | $4,125 |
| Non-Business Car Usage (30%) | N/A | ( 2,430) | N/A |
| Balance | $ 600 | $ 5,670 | $4,125 |
| Short Fiscal Period Factor | 214/365 | 214/365 | 214/365 |
| Deductible Amount | $ 352 | $ 3,324 | $2,418 |

Class 12 (Software) rate is 100%, but Class 12 is still under the (old) half-year rule. As a result, the CCA for Class 12 is:

**Class 12 CCA** = ($1,200)(1/2)(100%)(214/365) = $352

The non-business usage of the car is 30 percent. CCA is also restricted by the fact that Christine's taxation year only contains 214 days. Given these factors, the total maximum CCA is $6,446 ($352 + $3,324 + $2,418 + $352). Note that the CCA calculation is based on the portion of the year since the inception of the business, not the portion of the year since the assets were acquired.

**Note 3** As the interest amount is well below the prescribed limit, the amount is eligible for deduction, limited only by the amount of business usage. Also note that no portion of the down payment is deductible.

The deduction for automobile costs can be calculated as follows:

| | |
|---|---|
| Gasoline And Oil | 1,100 |
| Licence And Registration | 200 |
| Insurance | 800 |
| Interest On Car Loan | 700 |
| Potential Automobile Cost Deduction | $2,800 |
| Business Usage | 70% |
| Deductible Amount | $1,960 |

## Self Study Solution Six - 13

Carla's minimum net business income can be calculated as follows:

**Carla Jensen**
**Statement Of Business Income**
**For The Year Ending December 31, 2019**

| | | |
|---|---|---|
| Revenues | | |
| Billable Hours (Given) | $116,000 | |
| January 1, 2019 | | |
| Unbilled Work In Process (Note 1) | 23,200 | |
| December 31, 2019 | | |
| Unbilled Work In Process (Note 1) | ( 21,000) | $118,200 |
| Expenses | | |
| Building Operating Costs | ($24,500) | |
| Vehicle Operating Costs (Note 2) | ( 7,200) | |
| Payments To Assistants | ( 13,500) | |
| Miscellaneous Office Costs | ( 3,750) | |
| Business Meals [(50%)($4,200)] | ( 2,100) | |
| CCA (Note 3) | ( 36,633) | |
| Terminal Loss For Class 10 (Note 4) | ( 4,955) | ( 92,638) |
| Net Business Income | | $ 25,562 |

**Note 1** As Carla is a professional accountant she is eligible for the use of the billed basis of recognition. The problem requires the minimum business income so we can assume she makes the ITA 34 election to use the billed basis.

However, as noted in the text, beginning in 2018, this provision is being phased out over 5 years at the rate of 20 percent per year. This means that only $23,200 [(80 percent of $29,000)] of the ending 2018 balance could be deferred in that year. This amount will have to be brought back into Net Business Income in 2019.

For 2019, only $21,000 [(60%)($35,000)] of the ending 2019 balance can be deferred. The amount collected has no effect on the calculation of income under the accrual method.

**Note 2** The car leasing costs would be wholly deductible as the monthly lease charge and the manufacturer's list price are within the prescribed limits.

**Note 3** The total CCA deductible would be as follows (calculations shown separately):

| | |
|---|---|
| Class 1 | $13,560 |
| Class 8 | 17,700 |
| Class 12 | 363 |
| Class 14.1 | 3,525 |
| Class 50 | 1,485 |
| Total CCA | $36,633 |

**Class 1** As the building is used 100 percent for non-residential purposes, it is eligible for the enhanced rate of 6 percent. This means that the maximum CCA would be:

| | |
|---|---|
| Class 1 [($226,000)(6%)] | $13,560 |

**Class 8** The required calculations are as follows:

| | | |
|---|---|---|
| Opening Balance | | $46,500 |
| Additions | $34,000 | |
| Disposal - Lesser Of: | | |
| • Proceeds = $6,000 | | |
| • Cost = $18,000 | ( 6,000) | 28,000 |
| AccII Adjustment | | 14,000 |
| CCA Base | | $88,500 |
| Rate | | 20% |
| Class 8 CCA | | $17,700 |

**Class 12** The CCA on the applications software would be calculated as follows:

| | |
|---|---|
| Class 12 [(1/2)($725)(100%)] | $363 |

**Class 14.1** The CCA on the client list would be calculated as follows:

| | |
|---|---|
| Class 14.1 [(150%)($47,000)(5%)] | $3,525 |

**Class 50** The CCA on the new computer would be calculated as follows:

| | |
|---|---|
| Class 50 [(150%)($1,800)(55%)] | $1,485 |

**Note 4** As the only vehicle used by the business was disposed of during the year, there is no CCA for Class 10. However, as there is a balance left in the Class, there would be a terminal loss calculated as follows:

| | |
|---|---|
| UCC Of The Class At The Beginning Of The Year | $17,255 |
| Deduct: Dispositions During The Year - Lesser Of: | |
| • Capital Cost = $20,300 | |
| • Proceeds Of Disposition = $12,300 | ( 12,300) |
| Ending Balance With No Remaining Assets = Terminal Loss | $ 4,955 |

## Self Study Solution Six - 14

### *Part A - No Election*

If the ITA 22 election is not made, the tax consequences for Gail Gates would be as follows:

| | |
|---|---|
| Add: 2018 Reserve For Doubtful Debts | $15,000 |
| 2019 Income Inclusion | $15,000 |

While Gail has an allowable capital loss of $7,000 [(1/2)($263,000 - $249,000)], she will not be able to deduct this amount as she has had no capital gains in the previous three years and does not expect to have any in the current or subsequent years.

If the ITA 22 election is not made, the tax consequences to Mandy Portals would be as follows:

| | |
|---|---|
| Proceeds Of Disposition (Amount Collected) | $251,000 |
| Adjusted Cost Base | ( 249,000) |
| Capital Gain | $ 2,000 |
| Inclusion Rate | 1/2 |
| 2019 Income Inclusion | $ 1,000 |

### *Part A - Election*

If the ITA 22 election is made, the tax consequences for Gail would be as follows:

| | |
|---|---|
| Add: 2018 Reserve For Doubtful Debts | $15,000 |
| Deduct: Business Loss ($263,000 - $249,000) | ( 14,000) |
| 2019 Income Inclusion | $ 1,000 |

If the ITA 22 election is made, the tax consequences to Mandy would be as follows:

| | |
|---|---|
| Add: Face Value - Price Paid ($263,000 - $249,000) | $14,000 |
| Deduct: Actual Write-Offs ($263,000 - $251,000) | ( 12,000) |
| 2019 Income Inclusion | $ 2,000 |

### *Part B*

For Gail Gates, the ITA 22 election is clearly desirable, converting a $15,000 income inclusion into a $1,000 inclusion.

For Mandy Portals, the fact that actual collections ($251,000) exceed the estimated value of the Accounts Receivable on the date of the sale ($249,000), means that the ITA 22 election would not be desirable. It would double her income inclusion from $1,000 to $2,000.

## Self Study Solution Six - 15

### *Net Employment Income*

The required calculations here are as follows:

| | |
|---|---|
| Salary | $123,000 |
| Additions | |
| Commissions | 11,500 |
| Car Allowance [($800)(12)] | 9,600 |
| Stock Option Benefit [($28 - $23)(500)] | 2,500 |
| Deductions | |
| RPP Contributions | ( 6,300) |
| Car Operating Costs [($9,300)(31,000 ÷ 46,000)] | ( 6,267) |
| Car CCA [($30,000)(30%)(150%)(31,000 ÷ 46,000)] | ( 9,098) |
| Travel [($8,500 + $4,500 + (1/2)($2,000)] | ( 14,000) |
| Client Meals And Entertainment (See Notes) | Nil |
| Parking | Nil |
| Net Employment Income | $110,935 |

**Notes:**

- The fact the initial option price is below market value does not change the calculation of the employment income inclusion. However, there will be no deduction under ITA 110(1)(d) in the determination of Taxable Income.
- The car allowance must be included in income as it is not based on kilometers of use.
- The base for the CCA on the car is limited to $30,000.
- Travel and client promotion costs of $18,300 [($8,500 + $4,500 + (1/2)($2,000 + $8,600)] could be deducted under ITA 8(1)(f). However, this deduction is limited to his commission income of $11,500. He is better off deducting the travel costs of $14,000 [$8,500 + $4,500 + (1/2)($2,000)] using ITA 8(1)(h). As discussed in the text, he cannot use both of the provisions in the same year.

### Net Business Income

The required calculations for net business income are as follows:

| | |
|---|---|
| Net Business Income Before CCA (Given) | $189,000 |
| Class 1 CCA [(4%)($472,200)] | ( 18,888) |
| Class 8 CCA [(20%)($143,300)] | ( 28,660) |
| Class 50 CCA [(55%)($12,500)] | ( 6,875) |
| Net Business Income | $134,577 |

### Net Income For Tax Purposes And Taxable Income

Since there is no stock option benefit deduction, the required calculation here is as follows:

| | |
|---|---|
| Net Employment Income | $110,935 |
| Net Business Income | 134,577 |
| Net Income For Tax Purposes And Taxable Income | $245,512 |

### Tax Payable

The required calculations are as follows:

| | | |
|---|---|---|
| Tax On First $210,371 | | $48,719 |
| Tax On Next $35,141 ($245,512 - $210,371) At 33 Percent | | 11,597 |
| Tax Before Credits | | $60,316 |
| Tax Credits: | | |
| Basic Personal Amount (Andrew) | ($12,069) | |
| Common-Law Partner Including Infirm Amount ($12,069 + $2,230 - $4,500) | ( 9,799) | |
| Canada Caregiver - Bart | ( 7,140) | |
| Transfer Of John's Disability Credit | ( 8,416) | |
| EI Premiums | ( 860) | |
| CPP Contributions | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Transfer Of Tuition - Lesser Of: | | |
| • Absolute Limit Of $5,000 | | |
| • Actual Tuition Of $17,000 | ( 5,000) | |
| Medical Expenses (Note) | ( 17,464) | |
| Total Credit Base | ($64,719) | |
| Rate | 15% | ( 9,708) |
| Federal Tax Payable | | $50,608 |

**Note** The medical expense credit base would be calculated as follows:

| | | |
|---|---|---|
| Medical Expenses For Andrew, John, And Carl ($2,300 + $12,600 + $400) | | $ 15,300 |
| Reduced By The Lesser Of: | | |
| • [(3%)($245,512)] = $7,365 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,352) |
| Balance Before Dependants 18 And Over | | $ 12,948 |
| Bart's Medical Expenses | $4,600 | |
| Reduced By The Lesser Of: | | |
| • $2,352 | | |
| • [(3%)($2,800)] = $84 | ( 84) | 4,516 |
| Total Medical Expense Claim | | $17,464 |

## Self Study Solution Six - 16

### *Net Employment Income*

The Net Employment Income component of Net Income For Tax Purposes would be calculated as follows:

| | |
|---|---|
| Salary | $ 89,000 |
| Additions | |
| Commissions | 12,000 |
| Automobile Benefit (Note 1) | 1,140 |
| Travel Allowance (Note 2) | Nil |
| Art Course Tuition Benefit (Note 3) | 600 |
| Near Cash Gift (Note 4) | 400 |
| Stock Option Benefit [(1,500)($61 - $52)] | 13,500 |
| Deductions | |
| RPP Contributions | ( 3,750) |
| Union Dues | ( 430) |
| Net Employment Income | $112,460 |

**Note 1** The automobile benefit would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2/3)($459)(11)(8,500 ÷ 18,337)] | $1,560 |
| Operating Cost Benefit - Lesser Of: | |
| • [($0.28)(8,500)] = $2,380 | |
| • ($1,560 ÷ 2) = $780 | 780 |
| Total Benefit Before Repayment | $2,340 |
| Repayment | ( 1,200) |
| Automobile Benefit | $1,140 |

**Note 2** As the travel allowance appears to be reasonable given his actual costs, it does not have to be included in Mr. Bowles' income and it is more advantageous for him not to do so. Correspondingly, he cannot deduct the travel costs incurred.

**Note 3** Tuition for the marketing course would appear to be employment related and, as a consequence, would not be included in Mr. Bowles' employment income.

**Note 4** While the non-cash gift for years of service does not have to be included in income, the $400 gift certificate, i.e. near cash gift, must be included.

### *Net Business Income*

The Net Business Income component of Net Income For Tax Purposes would be calculated as follows:

| | | |
|---|---|---|
| Amounts Billed | | $50,250 |
| Deductions: | | |
| Office Rent (12 Months At $500) | ($6,000) | |
| CCA (Note 5) | ( 7,967) | |
| Part Time Assistant | ( 5,725) | |
| Office Supplies | ( 347) | |
| Monthly Telephone Service | ( 312) | |
| Cell Phone Charges | ( 211) | |
| Meals And Entertainment [(1/2)($3,150)] | ( 1,575) | ( 22,137) |
| Net Business Income | | $28,113 |

**Note 5** Maximum CCA would be calculated as follows:

| | |
|---|---|
| Class 13 [(150%)($12,000 ÷ 5*)] | $3,600 |
| Class 8 [(150%)(20%)($10,000)] | 3,000 |
| Class 50 [(150%)(55%)($1,150)] | 949 |
| Class 12 [(1/2)(100%)($836)] (No AccII Adjustment) | 418 |
| Total | $7,967 |

*With respect to the Class 13 amount, this is a straight line Class and it is subject to the half year rules. While the term of the lease is only three years, the deductible amount is the lesser of the capital cost divided by the term of the lease and one-fifth of the capital cost. In this case, the deduction is limited to one-half of one-fifth of the capital cost.

### *Net Income For Tax Purposes And Taxable Income*

Mr. Bowles has Net Income For Tax Purposes and Taxable Income as follows:

| | |
|---|---|
| Net Employment Income | $112,460 |
| Net Business Income | 28,113 |
| Net Income For Tax Purposes | $140,573 |
| Stock Option Deduction [($13,500)(1/2)] | ( 6,750) |
| Taxable Income | $133,823 |

### *Federal Tax Payable*

The required calculations are as follows:

| | | |
|---|---|---|
| Tax On First $95,259 | | $16,908 |
| Tax On Next $38,564 ($133,823 - $95,259) At 26 Percent | | 10,027 |
| Tax Before Credits | | $26,935 |
| Tax Credits: | | |
| Basic Personal Amount | ($12,069) | |
| Spouse ($12,069 - $3,450) | ( 8,619) | |
| EI Premiums | ( 860) | |
| CPP Contributions | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Tuition Credit - Mr. Bowles (Note 6) | ( 600) | |
| Transfer Of Tuition - Lesser Of: | | |
| • $5,000 | | |
| • $9,800 | ( 5,000) | |
| Medical Expenses (Note 7) | ( 10,138) | |
| Total Credit Base | ($41,257) | |
| Rate | 15% | ( 6,189) |
| Charitable Donations | | |
| [(15%)($200) + (29%)($1,425 - $200)] | | ( 385) |
| Political Contributions [(3/4)($275)] | | ( 206) |
| Federal Tax Payable Before Refundable Credits | | $20,155 |

**Note 6** As Mr. Bowles included the reimbursement of the art course in his employment income as a taxable benefit, he can claim the tuition fee credit.

**Note 7** The amount of medical expenses that can be included is calculated as follows:

| | | |
|---|---|---|
| Medical Expenses For Martin, Sally, And Marie ($2,500 + $1,850 + $1,600) | | $ 5,950 |
| Lesser Of: | | |
| • [(3%)($133,823)] = $4,015 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,352) |
| Balance Before Dependants 18 And Over | | $ 3,598 |
| Ellen's Medical Expenses | $6,540 | |
| Reduced By The Lesser Of: | | |
| • $2,352 | | |
| • [(3%)(Nil)] = Nil | Nil | 6,540 |
| Total Medical Expense Claim | | $10,138 |

## Chapter 6 Learning Objectives

After completing Chapter 6, you should be able to:

1. Classify property based on its use and determine what type of income will be produced while the asset is being held and when it is disposed of (paragraph [P hereafter] 6-1 to 6-16).
2. Describe the tax factors that can be affected by the classification of income as business or property (P 6-17 to 6-27).
3. Distinguish between business income and capital gains, including the criteria used by the courts in making this distinction (P 6-28 to 6-42).
4. Describe the major differences between net business income and Net Income as determined under GAAP (P 6-43 to 6-45).
5. Recall the various items that are included in net business income (P 6-46 to 6-53 and P 6-64 to 6-65).

---

6. Apply the system of reserves that can be used in determining net business income (P 6-54 to 6-63).
7. Apply the limitations on deductions that apply to business and property income, including those on home office costs (P 6-66 to 6-103).
8. Apply the limitations on deductions that apply to business, property and employment income, including those related to meals and entertainment and automobile costs (P 6-104 to 6-132).
9. Apply the inventory valuation procedures that are used for determining net business income (P 6-133 to 6-141).
10. Recall the deductions that are specified in the *Income Tax Act* for calculating net business income (P 6-142 to 6-143).

---

11. Reconcile accounting Net Income with net business income (P 6-144 to 6-149).
12. Recall the rules for determining taxation years and calculate additional business income for non-calendar fiscal years (P 6-150 to 6-157).
13. Apply the special provisions related to farm activities and farm losses (P 6-158 to 6-169).
14. Apply the special rule for unbilled work in process applicable to the income of some professionals (P 6-170 to 6-174).
15. Apply the provisions related to the disposition of inventories and accounts receivable in situations where a business is being sold (P 6-175 to 6-181).

# CHAPTER 7

## How To Work Through Chapter 7

We recommend the following approach in dealing with the material in this chapter:

**Property Income - General Concept**

- Read paragraph 7-1 to 7-5 (in the textbook).

**Interest As A Deduction, Including IT Folio S3-F6-C1**

- Read paragraph 7-6 to 7-28.
- Do Self Study Problem Seven-1 which is available on MyLab and check the solution in this Study Guide.

**Discount And Premium On Long-Term Issued Debt**

- Read paragraph 7-29 to 7-35.
- Do Exercise Seven-1 (in the textbook) and check the solution in this Study Guide.
- Read paragraph 7-36 to 7-37.
- Do Exercise Seven-2 and check the solution in this Study Guide.

**Interest Income - General Provisions**

- Read paragraph 7-38 to 7-45.
- Do Exercise Seven-3 and check the solution in this Study Guide.

**Discount And Premium On Long-Term Debt Holdings**

- Read paragraph 7-46 to 7-47.

**Accrued Interest At Transfer**

- Read paragraph 7-48 to 7-50.
- Do Exercise Seven-4 and check the solution in this Study Guide.

**Payments Based On Production Or Use (Royalties)**

- Read paragraph 7-51 to 7-53.

**Rental Income**

- Read paragraph 7-54 to 7-65.
- Do Exercise Seven-5 and check the solution in this Study Guide.
- Do Self Study Problem Seven-2 and check the solution in this Study Guide.

**Eligible And Non-Eligible Cash Dividends Received**

- Read paragraph 7-66 to 7-85.
- Do Exercise Seven-6 and check the solution in this Study Guide.
- Read paragraph 7-86 to 7-95.
- Do Exercise Seven-7 and check the solution in this Study Guide.

### Comparison Of Investment Returns

- Read paragraph 7-96 to 7-97.
- Do Self Study Problems Seven-3 to Seven-6 and check the solutions in this Study Guide.

### Income Trusts

- Read paragraph 7-98 to 7-111.
- Do Exercise Seven-8 and check the solution in this Study Guide.

### Mutual Funds

- Read paragraph 7-112 to 7-122.
- Do Exercise Seven-9 and check the solution in this Study Guide.
- Do Self Study Problem Seven-7 and check the solution in this Study Guide.

### Stock Dividends And Capital Dividends

- Read paragraph 7-123 to 7-128.
- Do Exercise Seven-10 and check the solution in this Study Guide.

### Foreign Source Income

- Read paragraph 7-129 to 7-132.
- Do Exercise Seven-11 and check the solution in this Study Guide.

### Shareholder Benefits

- Read paragraph 7-133 to 7-135.

### Tax Credits Revisited - Dividend And Foreign Tax Credits

- Read paragraph 7-136 to 7-139.
- Do Self Study Problems Seven-8 and Seven- 9 and check the solutions in this Study Guide.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 7. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 7 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 7 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 7 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 7 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

## Solutions to Chapter Seven Exercises

### *Exercise Seven - 1 Solution*

**Tax Consequences** The tax consequences would be as follows:

| | |
|---|---|
| Annual Deduction - 2019 Through 2021 [($1,000,000)(4%)] | $40,000 |

| | |
|---|---|
| Maturity Amount | $1,000,000 |
| Proceeds Of Sale | ( 985,000) |
| 2021 Loss | $ 15,000 |

The bonds are sold for more than 97 percent of their maturity amount. In addition, the four-thirds test is met since the effective interest rate of 4.6 percent is less than four-thirds of the coupon rate [(4%)(4/3) = 5.3%]. As a result, this loss would be fully deductible. This gives a total deduction of $135,000 over the 3 year period [(3)($40,000) + $15,000].

**Accounting Consequences** The accounting consequences would be as follows:

| | |
|---|---|
| Annual Interest Payment [($1,000,000)(4%)] | $40,000 |
| Discount Amortization [($1,000,000 - $985,000) ÷ 3] | 5,000 |
| Annual Interest Expense - 2019 Through 2021 | $45,000 |

Payment of the maturity amount in 2021 would have no tax consequences. Note that the total for the 3 year period would be the same $135,000 [(3)($45,000)] that was deducted for tax purposes.

### *Exercise Seven - 2 Solution*

The tax consequences under each of the three assumptions would be as follows:

**Money Lender** In this case, there would be an income inclusion of $400,000 ($1,400,000 - $1,000,000) in the current year. The interest deduction for the year would be $180,000 [(18%)($1,000,000)].

**No Deliberate Premium** In this case, the premium would have no immediate tax consequences and there would be no tax consequences when the bonds mature. The interest deduction for the year would be $180,000 [(18%)($1,000,000)]. Given that the bonds are paid off for less than the proceeds from their issuance, this result provides the issuer of the bonds with a tax free capital receipt of $400,000.

**Deliberate Premium** In this case, the premium would be amortized at the rate of $40,000 per year ($400,000 ÷ 10). This means the interest deduction for the year would be $140,000 ($180,000 - $40,000).

### *Exercise Seven - 3 Solution*

The total interest to be recorded on the instrument is $28,800 [($60,000)(8%)(6 years)]. It will be allocated as follows:

| Year | Interest Paid | Interest Reported |
|---|---:|---:|
| 2019 | Nil | Nil |
| 2020 | Nil | $ 4,800 |
| 2021 | Nil | 4,800 |
| 2022 | $15,600 | 6,000 |
| 2023 | Nil | 3,600 |
| 2024 | Nil | 4,800 |
| 2025 | 13,200 | 4,800 |
| Total | $28,800 | $28,800 |

**2019** As no anniversary date occurred and no interest was received during 2019, no interest will have to be included in Ms. Dumont's 2019 tax return.

**2020** The first anniversary date occurs on September 30 and this requires the recognition of $4,800 [(8%)($60,000)] of interest.

**2021** The second anniversary date occurs and this requires the recognition of an additional $4,800 of interest.

**2022** An additional $4,800 will have to be recognized because of the third anniversary date. Also during this year, a payment of $15,600 [($4,800)(3.25)] is received. Of this total, $14,400 [(3)($4,800)] has been recognized because of the three anniversary dates. This will require the recognition of an additional $1,200 ($15,600 - $14,400) in 2021, bringing the total for the year to $6,000 ($4,800 + $1,200).

**2023** The anniversary date will require recognition of $4,800. However, only $3,600 of this amount will be included as $1,200 was received and recognized in 2021.

**2024** $4,800 will be recognized on the anniversary date.

**2025** A payment of $13,200 [(2.75)($4,800)] will be received. As $8,400 ($3,600 + $4,800) of the amount received has been recorded on the two anniversary dates, the total for 2025 will be $4,800 ($13,200 - $8,400).

### *Exercise Seven - 4 Solution*

Mr. Lay will include the full $6,000 received in income. However, he can deduct the interest that was accrued on the bonds at the time of purchase of $1,989 [($3,000)(120/181)]. The net amount that will be included in his tax return is $4,011 ($6,000 - $1,989).

### *Exercise Seven - 5 Solution*

The maximum CCA for Class 1 would be calculated as follows:

| | |
|---|---:|
| Capital Cost ($185,000 - $42,000) | $143,000 |
| Improvements | 35,000 |
| Total Additions | $178,000 |
| Accelerated Investment Incentive (AccII) Multiplier | 150% |
| Adjusted CCA Base | $267,000 |
| Rate | 4% |
| Maximum CCA | $ 10,680 |

The required rental income calculation would be as follows:

| | |
|---|---|
| Rental Revenues | $7,200 |
| Rental Expenses Other Than CCA | ( 5,100) |
| Rental Income Before CCA | $2,100 |
| CCA (Maximum) | ( 2,100) |
| Net Rental Income | Nil |

As CCA cannot be used to create a net rental loss, the actual deduction is limited to $2,100, the rental income before CCA. Also note that the maximum available CCA is not limited by the fact the property was purchased in September as the calendar year is considered the fiscal year for property income purposes for individuals.

### Exercise Seven - 6 Solution

The Tax Payable by Ms. Holt would be calculated as follows:

| | |
|---|---|
| Eligible Dividends Received | $15,000 |
| Gross Up At 38 Percent | 5,700 |
| Taxable Dividends | $20,700 |
| Combined Federal/Provincial Tax Rate (29% + 14.5%) | 43.5% |
| Tax Before Dividend Tax Credit | $ 9,005 |
| Dividend Tax Credit [(6/11 + 30%)($5,700)] | ( 4,819) |
| Federal And Provincial Tax Payable | $ 4,186 |

The after tax retention is $10,814 ($15,000 - $4,186). Note that to calculate this amount, the taxes are deducted from the dividends received and not the grossed up taxable dividends.

### Exercise Seven - 7 Solution

The Tax Payable by Mr. Johns would be calculated as follows:

| | |
|---|---|
| Non-Eligible Dividends Received | $17,000 |
| Gross Up At 15 Percent | 2,550 |
| Taxable Dividends | $19,550 |
| Combined Federal/Provincial Tax Rate (29% + 12%) | 41% |
| Tax Before Dividend Tax Credit | $ 8,016 |
| Dividend Tax Credit [(9/13 + 30%)($2,550)] | ( 2,530) |
| Federal And Provincial Tax Payable | $ 5,486 |

The after tax retention is $11,514 ($17,000 - $5,486). Note that to calculate this amount, the taxes are deducted from the dividends received and not the grossed up taxable dividends.

### Exercise Seven - 8 Solution

John will include an additional $7,000 [(2,000)($5.00 - $1.50)] in his Net Income For Tax Purposes. His adjusted cost base will be increased by the $10,000 [(2,000)($5.00)] reinvestment of the distribution and reduced by the $3,000 [(2,000)($1.50)] return of capital.

The reinvestment of the $10,000 distribution will result in the acquisition of an additional 175.44 ($10,000 ÷ $57) units. The adjusted cost base calculations are as follows:

| | Amount | Number Of Units |
|---|---|---|
| Original Investment | $110,000 | 2,000.00 |
| Reinvestment Of Distribution | 10,000 | 175.44 |
| Tax Free Return Of Capital | ( 3,000) | N/A |
| Adjusted Cost Base/Number Of Units | $117,000 | 2,175.44 |

This will result in an average cost of $53.78 ($117,000 ÷ 2,175.44) per unit.

### Exercise Seven - 9 Solution

Given the purchase price per unit is $13, the reinvestment will result in Ms. Tiompkins receiving 80.77 ($1,050 ÷ $13) additional units. This will leave her holding 3,580.77 units with an adjusted cost base of $40,425 ($39,375 + $1,050). Her adjusted cost base per unit after the reinvestment is $11.29 ($40,425 ÷ 3,580.77).

### Exercise Seven - 10 Solution

The required calculations would be as follows:

| | |
|---|---|
| Original Shares Held | 200,000 |
| Stock Dividend Percentage | 10% |
| New Shares Acquired | 20,000 |
| Per Share Addition To Paid Up Capital | $15 |
| Eligible Stock Dividend Received | $300,000 |
| Gross Up At 38 Percent | 114,000 |
| Taxable Eligible Dividend | $414,000 |

There would be a federal dividend tax credit of $62,182 [(6/11)($114,000)]. The $300,000 stock dividend would be added to the $2,400,000 [($12)(10%)(2,000,000)] original cost of his shares and the adjusted cost base per share would be calculated as follows:

[($2,400,000 + $300,000) ÷ (200,000 + 20,000)] = $12.27

Note that his percentage of ownership remains at 10 percent (220,000 ÷ 2,200,000).

### Exercise Seven - 11 Solution

The federal Tax Payable on the amount received assuming it is foreign non-business income or business income would be calculated as follows:

| | Non-Business Income | Business Income |
|---|---|---|
| Amount Received | $22,500 | $22,500 |
| Foreign Tax Withheld | 7,500 | 7,500 |
| Inclusion For Foreign Income | $30,000 | $30,000 |
| Deduction Of Excess Withholding [$7,500 - (15%)($30,000)] | ( 3,000) | N/A |
| Increase In Taxable Income | $27,000 | $30,000 |
| Rate | 29% | 29% |
| Tax Payable Before Credit | $ 7,830 | $ 8,700 |
| Foreign Tax Credit [(15%)($30,000)] | ( 4,500) | |
| Foreign Tax Credit (Amount Withheld) | | ( 7,500) |
| Federal Tax Payable | $ 3,330 | $ 1,200 |

Note that the total tax cost if the foreign income is business income is $8,700 ($7,500 + $1,200). This is the same amount that would have been paid by Norah on the receipt of $30,000 of Canadian source business income [(29%)($30,000) = $8,700]. This compares to a tax cost of $10,830 ($7,500 + $3,330) in the non-business income case. This reflects the fact that the $3,000 deduction of the excess foreign tax withholding is not as valuable as the $3,000 credit against Tax Payable that was received in the business income case.

## Self Study Solution Seven - 1

### *Case A*

The interest would be deductible as the direct use of the borrowed funds was to acquire the Bee Ltd. shares.

### *Case B*

Since the proceeds exceed the borrowings, Ms. Burns has complete flexibility with respect to linking. She could allocate all of the $225,000 to property B or alternatively, $50,000 to property A, with the other $175,000 going to property B. Any other allocation totaling $225,000 would be acceptable.

### *Case C*

When the value of the replacement property is less than the amount borrowed, the taxpayer must use a pro-rata allocation of the borrowed money. In this case, the result would be an allocation of $71,053 [($60,000 ÷ $190,000)($225,000)] to property A and an allocation of $153,947 [($130,000 ÷ $190,000)($225,000)] to property B.

### *Case D*

Under ITA 20.1 (the disappearing source rules), the $145,000 balance will be deemed to be used to produce income. Therefore, he can continue to deduct the interest.

## Self Study Solution Seven - 2

### *2018 (Pre-AccII)*

The maximum CCA for 2018 would be calculated as follows:

| | Class 1 | Class 8 |
|---|---|---|
| Addition | $690,000 | $43,000 |
| One-Half Net Additions | ( 345,000) | ( 21,500) |
| CCA Base | $345,000 | $21,500 |
| Maximum CCA: | | |
| [(4%)($345,000)] | ( 13,800) | |
| [(20%)($21,500)] | | ( 4,300) |
| Add: One-Half Net Additions | 345,000 | 21,500 |
| January 1, 2019 UCC | $676,200 | $38,700 |

Net Rental Income for 2018 would be calculated as follows:

| | |
|---|---|
| Rental Revenue | $63,600 |
| Expenses Other Than CCA | ( 23,400) |
| Income Before CCA | $40,200 |
| Class 1 CCA | ( 13,800) |
| Class 8 CCA | ( 4,300) |
| Net Rental Income | $22,100 |

Note that when an individual uses assets to produce property income (e.g., rental income), the full calendar year is considered to be the taxation year of the individual. This means that the short fiscal period rules are not applicable to Mr. Thorne.

***2019***

The results of the Class 8 disposition would be calculated as follows:

| | |
|---|---|
| January 1, 2019 UCC | $38,700 |
| Disposition - Lesser Of: | |
| • Cost = $43,000 | |
| • Proceeds Of Disposition = $31,000 | ( 31,000) |
| Positive Balance With No Remaining Assets In Class | $ 7,700 |
| Terminal Loss | ( 7,700) |
| January 1, 2020 UCC - Class 8 | Nil |

The terminal loss will be deducted from the Class 8 UCC leaving a January 1, 2020 balance of nil.

The maximum CCA for 2019 would be 27,048 [(4%)($676,200)]. However, as the deduction of CCA cannot be used to create a loss, the actual amount deducted would be limited to $17,400, as shown in the calculation of Net Rental Income.

| | |
|---|---|
| Rental Revenue | $54,500 |
| Expenses Other Than CCA And Terminal Loss | ( 29,400) |
| Terminal Loss On Class 8 Assets | ( 7,700) |
| Income Before CCA | $17,400 |
| CCA (Limited To Income Before CCA) | ( 17,400) |
| Net Rental Income | Nil |

The January 1, 2020 UCC of the Class 1 building would be calculated as follows:

| | |
|---|---|
| January 1, 2019 UCC | $676,200 |
| 2019 CCA Deducted | ( 17,400) |
| January 1, 2020 UCC - Class 1 | $658,800 |

## Self Study Solution Seven - 3

### *Part A - Bonds (Interest)*

The after tax returns on the bonds would be calculated as follows:

| | Sarah | Sally | Suzanne |
|---|---|---|---|
| Interest [(4.5%)($15,000)] | $675 | $675 | $675 |
| Federal/Provincial Tax Payable | | | |
| Sarah (15% + 5% = 20%) | ( 135) | | |
| Sally (26% + 11% = 37%) | | ( 250) | |
| Suzanne (33% + 16% = 49%) | | | ( 331) |
| After Tax Return - Interest | $540 | $425 | $ 344 |

### *Part B - Preferred Stock (Dividends)*

The after tax returns resulting from an investment in the preferred stock begins with the calculation of the federal and provincial Tax Payable:

| | Sarah (20%) | Sally (37%) | Suzanne (49%) |
|---|---|---|---|
| Dividends [(5.6%)($15,000)] | $ 840 | $ 840 | $ 840 |
| Gross Up Of 38 Percent | 319 | 319 | 319 |
| Taxable Dividend | $1,159 | $1,159 | $1,159 |
| Combined Rate (See Part A) | 20% | 37% | 49% |
| Tax Before Dividend Tax Credit | $ 232 | $ 429 | $ 568 |
| Dividend Tax Credit | | | |
| [(6/11 + 27%)($319)] | ( 260) | ( 260) | ( 260) |
| Tax Payable (Tax Savings) | ($ 28) | $ 169 | $ 308 |

Based on the preceding calculations of federal and provincial Tax Payable, the after tax returns on the preferred shares are calculated as follows:

| | Sarah (20%) | Sally (37%) | Suzanne (49%) |
|---|---|---|---|
| Dividends [(5.6%)($15,000)] | $840 | $840 | $840 |
| Tax Savings (Tax Payable) | 28 | ( 169) | ( 308) |
| After Tax Return - Dividends | $868 | $671 | $532 |

### *Comparison*

A comparison of the after tax rates of return can be made as follows:

| | Sarah (20%) | Sally (37%) | Suzanne (49%) |
|---|---|---|---|
| After Tax Dividends | $868 | $671 | $532 |
| After Tax Interest | ( 540) | ( 425) | ( 344) |
| Advantage Of Preferred Stock | $328 | $246 | $188 |

### *Recommendation*

For each of the sisters, the preferred stock offers the superior after tax return. Note, however, that the advantage of the dividends declines as the taxpayer's tax rate increases. In addition, there is a somewhat higher level of risk associated with preferred shares.

## Self Study Solution Seven - 4

In the following solution, note that the after tax return amount does not include the original investment. Some students add $600,000 to the after tax return which is not correct.

### *Guaranteed Investment Certificate*

The required calculations for this investment are as follows:

| | |
|---|---|
| Interest Received [($600,000)(4.5%)] | $27,000 |
| Combined Federal/Provincial Tax Rate (29% + 12%) | 41% |
| Tax Payable | $11,070 |

| | |
|---|---|
| Interest Received | $27,000 |
| Tax Payable | ( 11,070) |
| After Tax Return - Guaranteed Investment Certificate | $15,930 |

### *Preferred Shares*

The required calculations for this investment are as follows:

| | |
|---|---|
| Dividends Received [($600,000)(5.25%)] | $31,500 |
| Gross Up of 38 Percent | 11,970 |
| Taxable Income | $43,470 |
| Combined Federal/Provincial Tax Rate (29% + 12%) | 41% |
| Tax Payable Before Dividend Tax Credit | $17,823 |
| Federal/Provincial Dividend Tax Credit [($11,970)(6/11 + 28%)] | ( 9,881) |
| Total Tax Payable | $ 7,942 |

| | |
|---|---|
| Dividends Received (Before Gross Up) | $31,500 |
| Tax Payable | ( 7,942) |
| After Tax Return - Preferred Shares | $23,558 |

### *High Tech Shares*

The required calculations for this investment are as follows:

| | |
|---|---|
| Proceeds Of Disposition | $675,000 |
| Adjusted Cost Base | ( 600,000) |
| Capital Gain | $ 75,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $37,500 |
| Combined Federal/Provincial Tax Rate (29% + 12%) | 41% |
| Tax Payable | $15,375 |

| | |
|---|---|
| Capital Gain Realized (100%) | $75,000 |
| Tax Payable | ( 15,375) |
| After Tax Return - High Tech Shares | $59,625 |

## Self Study Solution Seven - 5

The major considerations in deciding between the three alternative investment strategies are the after tax return and the certainty of the related cash flows.

**Guaranteed Investment Certificate** As long as the certificate is purchased from a financial institution that is guaranteed by the federal government, there is virtually no risk that the principal or interest could be lost. Your combined federal and provincial tax rate for interest is 44 percent (29% + 15%). This means that the $100,000 investment would provide an after-tax amount calculated as follows:

| | |
|---|---|
| Interest [($100,000)(5.5%)] | $5,500 |
| Federal/Provincial Tax Payable [($5,500)(33% + 18%)] | ( 2,805) |
| After Tax Cash Flow - Guaranteed Investment Certificate | $2,695 |

**Common Stock Purchase** If you invest the $100,000 in common stock, you will be exposing yourself to a greater risk and uncertainty of cash flows than the guaranteed investment certificate alternative. There is no guarantee that the stock will pay a dividend of $5,000 during the year. There is the possibility that more or less than $5,000 will be paid. In addition, the estimated market price of at least $106,000 on December 31, 2019 is not certain. The price on that date could be higher or lower.

Assuming that the stock does pay $5,000 in dividends and you sell the shares for $106,000 on December 31, 2019, your after tax return on the investment is as follows:

| | |
|---|---|
| Dividends Received | $5,000 |
| Gross Up [(38%)($5,000)] | 1,900 |
| Taxable Dividends | $6,900 |
| Taxable Capital Gain [(1/2)($106,000 - $100,000)] | 3,000 |
| Taxable Income | $9,900 |
| Combined Tax Rate (33% + 18%) | 51% |
| Tax Payable Before Dividend Tax Credit | $5,049 |
| Dividend Tax Credit [($1,900)(6/11 + 27%)] | ( 1,549) |
| Tax Payable | $3,500 |

| | |
|---|---|
| Dividends Received | $5,000 |
| Capital Gain (100%) | 6,000 |
| Tax Payable | ( 3,500) |
| After Tax Cash Flow - Common Stock Purchase | $7,500 |

**Rental Property** If you invest the $100,000 in real estate, you will be choosing the highest risk alternative. Rental properties can require significant personal involvement if there are problems with the tenant or repairs become necessary. The transaction costs (e.g., real estate commissions and legal fees), would be much higher on this investment than on either of the other two. In addition, the real estate investment is the least liquid of the three alternatives and you might encounter difficulties in the disposition of this investment. The estimated net proceeds of $175,000 on December 31, 2019 is not certain. The net proceeds could be higher or lower.

Assuming that the property has the anticipated revenues and expenses and you net $175,000 when you sell the property on December 31, 2019, your after tax return on the investment is as follows:

| | |
|---|---|
| Gross Rents | $13,200 |
| Expenses | ( 9,600) |
| CCA (Property Sold Prior To Year End) | Nil |
| Net Rental Income | $ 3,600 |

In addition to this net rental income, you anticipate a capital gain of $10,000 ($175,000 - $165,000), of which one-half, or $5,000, would be included in your income. Based on these figures, the Tax Payable would be calculated as follows:

| | |
|---|---|
| Net Rental Income | $3,600 |
| Taxable Capital Gain | 5,000 |
| Taxable Income | $8,600 |
| Tax Rate (33% + 18%) | 51% |
| Tax Payable | $4,386 |

The total after tax cash flow would be as follows:

| | |
|---|---|
| Net Rental Income | $ 3,600 |
| Capital Gain (Cash Flow is 100% Of Gain) | 10,000 |
| Tax Payable | ( 4,386) |
| After Tax Cash Flow - Rental Property | $ 9,214 |

**Conclusion** Based purely on after tax returns, it would appear that you should acquire the rental property. However, as previously indicated, this alternative involves the most risk and uncertainty.

In choosing between the guaranteed investment certificate and the shares of Norton Ltd., the after tax cash flows from the shares are considerably higher. However, the return on the shares is made up of dividends and a potential capital gain, both of which are more uncertain than the interest on the guaranteed investment certificate. Given this, the possibility of greater than anticipated dividends and/or capital gains must be weighed against the additional risk of lower than anticipated returns.

Other factors which may influence your decision are as follows:

- The funds are locked into the investment certificate and can only be withdrawn prior to maturity at a severe interest penalty, if at all.
- The investment in common stock would give you more flexibility if you should require some of the funds before the end of the year. All or some portion of the stockholding could be sold during the year.
- Any dividends or rent that is paid will be available for your use as at the payment date. The interest will not be available to you until maturity.

## Self Study Solution Seven - 6

Ms. Smursch's minimum Net Income For Tax Purposes would be calculated as follows:

| | | |
|---|---|---|
| Income From A Business Or Profession: | | |
| Billable Hours (Given) | $345,000 | |
| December 21, 2018 Unbilled Work In Progress (Note 1) | 18,400 | |
| December 31, 2019 Unbilled Work In Progress (Note 2) | ( 8,400) | |
| Office Supplies And Office Expenses | ( 23,000) | |
| Rent | ( 60,000) | |
| Meals And Entertainment [(1/2)($18,000)] | ( 9,000) | |
| Convention Expenses (Note 3) | ( 2,400) | $260,600 |
| Property Income: | | |
| Income From Income Trust [($3.50 - $1.50)(2,500)] | | 5,000 |
| Taxable Capital Gain (Note 4) | | 8,417 |
| Minimum Net Income For Tax Purposes | | $274,017 |

**Note 1** As Sara is a professional accountant she is eligible for the use of the billed basis of recognition. However, as noted in the text, beginning in 2018, this provision is being phased out over 5 years at the rate of 20 percent per year. This means that for 2018, she was only able to defer $18,400, 80 percent of her $23,000 unbilled work in progress. This amount will have to be taken into income in 2019.

**Note 2** With respect to the December 31 unbilled work in progress, she can defer only $8,400, 60 percent of the December 31 balance of $14,000.

**Note 3** Unless the scope of Ms. Smursch's business is likely to extend to this activity in the Middle East, the costs of the Beirut convention cannot be deducted.

**Note 4** The adjusted cost base of the Realty Income Trust units would be calculated as follows:

| | |
|---|---|
| Original Cost [(2,500)($43.00] | $107,500 |
| Reinvestment Of Distribution [(2,500)($3.50)] | 8,750 |
| Tax Free Return Of Capital [(2,500)($1.50)] | ( 3,750) |
| Adjusted Cost Base | $112,500 |

The taxable capital gain on the disposition of all the units would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $129,333 |
| Adjusted Cost Base | ( 112,500) |
| Capital Gain | $ 16,833 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 8,417 |

The distribution reinvestment resulted in 194.44 additional shares ($8,750 ÷ $45). However, this number is irrelevant as all of the units were sold.

## Self Study Solution Seven - 7

**Note To Instructors** This problem is somewhat unrealistic in that, under the Canada/U.K. tax treaty, it is unlikely that there would be any amounts withheld on interest payments between the two countries. Note that this problem does not contain enough information to do a complete calculation of the foreign tax credit which is not covered until Chapter 11. We have assumed that the credit is equal to the maximum 15 percent of the amount withheld.

### *Taxable Income And Tax Payable*

The amount of taxable income and tax payable resulting from the investments would be calculated as follows:

| | | |
|---|---|---|
| Interest On Term Deposit [(7%)(£200,000)($1.70)] | $23,800 | |
| Excess Withholding (See Note) | ( 2,380) | $21,420 |
| B&B Trust Distribution [($1.50)(8,000)] | $12,000 | |
| Return Of Capital [($0.50)(8,000)] | ( 4,000) | 8,000 |
| Liberty Inc. Dividends [($1.60)(2,000)] | $ 3,200 | |
| Dividend Gross Up [(38%)(3,200)] | 1,216 | 4,416 |
| Temple Capital Gain [($0.40)(2,500)] | $ 1,000 | |
| Non-Taxable One-Half | ( 500) | 500 |
| Temple Eligible Dividends [($1.00)(2,500)] | $ 2,500 | |
| Dividend Gross Up [(38%)($2,500)] | 950 | 3,450 |
| Temple Interest [($1.00)(2,500)] | | 2,500 |
| Taxable Income | | $40,286 |
| Tax Rate (29% + 16%) | | 45% |
| Tax Before Credits | | $18,129 |
| Dividend Tax Credit [($1,216 + $950)(6/11 + 30%)] | | ( 1,831) |
| Foreign Tax Credit - Note [(15%)(7%)(£200,000)($1.70)] | | ( 3,570) |
| Tax Payable | | $12,728 |

**Note - Foreign Source Property Income** As required, 100 percent of the foreign interest is included in Net Income For Tax Purposes. However, for individuals, the credit against Tax Payable that is provided under ITA 126(1) is limited to a maximum of 15 percent of the foreign source non-business income and the excess withholding is deducted. With the withholding rate at 25 percent, this deduction would be equal to $2,380 [(25% - 15%)(7%)(£200,000)($1.70)].

### *Adjusted Cost Base - B&B Trust*

The reinvestment of the $12,000 [($1.50)(8,000)] distribution at $52 per unit would acquire an additional 230.77 units. After recognizing these changes, the adjusted cost base per unit would be as follows:

$30.13 [($240,000 + $12,000 - $4,000) ÷ (8,000 + 230.77)]

### *Adjusted Cost Base - Temple Small Cap*

The reinvestment of the $6,000 [($2.40)(2,500)] distribution at $38 per unit would acquire an additional 157.89 units. After recognizing these changes, the adjusted cost base per unit would be as follows:

$39.88 [($100,000 + $6,000) ÷ (2,500 + 157.89)]

## Self Study Solution Seven - 8

### *Employment Income*

Jeremy's net employment income would be calculated as follows:

| | |
|---|---|
| Gross Wages | $74,000 |
| RPP Contributions | ( 5,600) |
| Union Dues | ( 896) |
| Net Employment Income | $67,504 |

### *Property Income*

Jeremy's property income would be calculated as follows:

| | |
|---|---|
| Eligible Dividends Received | $8,600 |
| Gross Up Of Eligible Dividends (38%) | 3,268 |
| Non-Eligible Dividends Received | 6,400 |
| Gross Up Of Non-Eligible Dividends (15%) | 960 |
| Foreign Dividends Before Withholding ($13,600 ÷ 85%) | 16,000 |
| Interest | 3,420 |
| Property Income | $38,648 |

### *Net Business Income*

Jeremy's net business income would be calculated as follows:

| | |
|---|---|
| Net Cash Flow | $187,000 |
| Principal Payments On Car Loan ($14,400 - $5,100) | 9,300 |
| Non-Deductible Interest [($5,100 - (365)($10 Daily Maximum)] | 1,450 |
| December 31 Receivables | 26,700 |
| January 1 Billed Receivables | ( 23,200) |
| December 31 Work In Process (Note 1) | 31,300 |
| January 1 Work In Process | ( 28,900) |
| December 31 Accounts Payable | ( 14,200) |
| January 1 Accounts Payable | 15,600 |
| Subtotal | $205,050 |
| CCA ($26,150 + $9,253 + $13,500) (Note 2) | ( 48,903) |
| Car Operating Costs (Already Deducted) | Nil |
| Net Business Income | $156,147 |

**Note 1** Since Jeremy is a management consultant, he was not able to use the billed basis of income recognition. This means that he is not eligible for the transitional provision related to the billed basis and must include 100 percent of his unbilled work in progress in his income.

**Note 2** The CCA would be calculated as follows:

**Class 1 CCA**

| | |
|---|---|
| January 1, 2019 UCC | $342,837 |
| Additions (Improvements) | 62,000 |
| AccII Adjustment [(50%)($62,000)] | 31,000 |
| Base For CCA | $435,837 |
| Rate | 6% |
| CCA | $ 26,150 |

As the building was acquired new and was used 100 percent for non-residential purposes, it is eligible for the 6 percent CCA rate. The fact that it was the only building owned by the business would result in it automatically being allocated to a separate class, but it must remain in a separate Class 1 to continue to qualify for the 6 percent rate.

**Class 8 CCA**

| | |
|---|---|
| January 1, 2019 UCC | $10,564 |
| Additions | 47,000 |
| Disposals - Lesser Of: | |
| • Proceeds Of Disposition = $23,200 | |
| • Capital Cost = $25,000 | ( 23,200) |
| AccII Adjustments [(50%)($47,000 - $23,200)] | 11,900 |
| Base For CCA | $46,264 |
| Rate | 20% |
| CCA | $ 9,253 |

**Class 10.1 CCA**

As the cost of the car exceeds $30,000, the addition to Class 10.1 is limited to this value. The maximum deduction for 2019 would be $13,500 [(150%)(30%)($30,000)].

### Net Income For Tax Purposes And Taxable Income

There are no Taxable Income deductions available. As a consequence, Taxable Income is equal to Net Income For Tax Purposes.

| | |
|---|---|
| Net Employment Income | $ 67,504 |
| Property Income | 38,648 |
| Net Business Income | 156,147 |
| Pension Income | 32,500 |
| Net Income For Tax Purposes And Taxable Income | $294,799 |

### Tax Payable

Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $210,371 | | $48,719 |
| Tax On Next $84,428 ($294,799 - $210,371) At 33 Percent | | 27,861 |
| Tax Before Credits | | $76,580 |
| Tax Credits: | | |
| Basic Personal Amount (Jeremy) | ($12,069) | |
| Spouse ($12,069 - $8,400) | ( 3,669) | |
| Canada Caregiver - Sarah | ( 7,140) | |
| Jeremy's Age Credit [$7,494 - (15%)($294,799 - $37,790) | Nil | |
| Jeremy's Pension Credit | ( 2,000) | |
| EI | ( 860) | |
| CPP | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Transfer Of Spouse's Age Credit [$7,494 - (15%)($8,400 - $37,790) | ( 7,494) | |
| Transfer Of Spouse's Pension Credit | ( 2,000) | |
| Transfer Of Sarah's Disability Credit | ( 8,416) | |
| Transfer Of Samantha's Tuition Credit (Note 5) | ( 5,000) | |
| Medical Expenses (Note 6) | ( 14,548) | |
| Total Credit Base | ($67,167) | |
| Rate | 15% | ( 10,075) |
| Charitable Donations (Note 7) | | ( 756) |
| Dividend Tax Credit On: | | |
| Eligible Dividends [(6/11)($3,268)] | | ( 1,783) |
| Non-Eligible Dividends [(9/13)($960)] | | ( 665) |
| Foreign Tax Credit - Amount Withheld [(15%)($16,000)] | | ( 2,400) |
| Federal Tax Payable | | $60,901 |

**Note 5** Samantha's child support received is not included in her Net Income For Tax Purposes. Given this, Samantha has Net Income For Tax Purposes of nil and would qualify as a dependant of Jeremy's. Even though she lives with Jeremy, he cannot claim the Canada caregiver tax credit for her or her children as they are not mentally or physically infirm.

The maximum transfer of the tuition credit would be the lesser of:

- The actual tuition of $16,400.
- The absolute maximum of $5,000.

**Note 6** The claim for medical expenses is determined as follows:

| | | |
|---|---|---|
| Medical Expenses Of Jeremy And Sandra ($4,000 + $1,700) | | $ 5,700 |
| Reduced By The Lesser Of: | | |
| • [(3%)($294,799)] = $8,844 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,352) |
| Balance Before Dependants 18 And Over | | $ 3,348 |
| Sarah's Medical Expenses | $9,400 | |
| Reduced By The Lesser Of: | | |
| • $2,352 | | |
| • [(3%)(Nil)] = Nil | Nil | 9,400 |
| Samantha's Medical Expenses | $ 1,800 | |
| Reduced By The Lesser Of: | | |
| • $2,352 | | |
| • [(3%)(Nil)] = Nil | Nil | 1,800 |
| Total Medical Expense Claim | | $14,548 |

**Note 7** Jeremy's charitable donations tax credit would be calculated as follows:

| | |
|---|---|
| 15 Percent Of $200 | $ 30 |
| 33 Percent Of The Lesser Of: | |
| ($2,400 - $200) = $2,200 | |
| $294,799 - $210,371 = $84,428 | 726 |
| 29 Percent Of [($2,400 - ($200 + $2,200)] | Nil |
| Total Credit | $756 |

## Self Study Solution Seven - 9

### *Net Business Income*

Derek's Net Business Income is calculated as follows:

| | | |
|---|---|---|
| Accounting Net Income | | $211,000 |
| Additions: | | |
| Amortization Expense | $18,000 | |
| Meals And Entertainment (Note 1) | 5,750 | |
| Automobile Operating Costs - Personal (Note 2) | 1,350 | 25,100 |
| | | $236,100 |
| Deductions: | | |
| Capital Cost Allowance | | |
| Automobile (Note 3) | ($ 9,703) | |
| Furniture And Fixtures (Note 4) | ( 11,100) | |
| Building [(6%)($450,000)] (Note 5) | ( 27,000) | ( 47,803) |
| Net Business Income For Tax Purposes | | $188,297 |

**Note 1** As the business deducted 100 percent of the meals and entertainment costs, the non-deductible one-half of this amount needs to be added back to arrive at Net Business Income For Tax Purposes.

**Note 2** As the business deducted 100 percent of the automobile operating costs, the portion related to Derek's personal use must be added back. This amount would be $1,350 [($4,800)(9,000 ÷ 32,000)].

**Note 3** The addition to UCC for the car would be limited to $30,000 and it would be allocated to a separate Class 10.1. Maximum CCA for 2019 would be $13,500 [(150%)(30%)($30,000)]. However, the business can only deduct $9,703 [($13,500)(23,000 ÷ 32,000)].

**Note 4** CCA for Class 8 would be calculated as follows:

| | |
|---|---|
| UCC January 1, 2019 | $42,000 |
| Additions | 12,000 |
| Disposals - Lesser Of: | |
| Proceeds Of Disposition = $3,000 | |
| Capital Cost = $10,000 | ( 3,000) |
| AccII Adjustment [(50%)($12,000 - $3,000)] | 4,500 |
| Base For CCA | $55,500 |
| Rate | 20% |
| Class 8 CCA | $11,100 |

**Note 5** As the building was acquired new and was used 100 percent for non-residential purposes, it is eligible for the 6 percent CCA rate. The fact that it was the only building owned by the business would result in it automatically being allocated to a separate class, but it must remain in a separate Class 1 to continue to qualify for the 6 percent rate.

### *Property Income*

Derek's property income is calculated as follows:

| | |
|---|---:|
| Eligible Dividends On Breax | $ 8,000 |
| Gross Up On Eligible Dividends [(38%)($8,000)] | 3,040 |
| Realco Income Trust Units [(5,000)($1.50)] | 7,500 |
| Debt Securities (Note 6) | 12,000 |
| Foreign Term Deposit (Note 7) | 15,000 |
| Total Property Income | $45,540 |

**Note 6** Derek would have to recognize $8,000 [(8%)($100,000)] in interest on the July 1, 2019 anniversary of the debt security. In addition, because a $12,000 payment is received on December 31, 2019, he would have to recognize an additional $4,000 ($12,000, less the $8,000 recognized on the anniversary date).

**Note 7** As non-business income is involved, the tax credit will be limited to $3,000 [(15%)($20,000)]. The remaining $5,000 ($8,000 - $3,000) can be deducted against the interest. This leaves an inclusion of $15,000 ($20,000 - $5,000).

### *Capital Gain*

The adjusted cost base of the Breax shares that were sold was $52 ($130,000 ÷ 2,500). Given this, the capital gain on the Breax common shares would be calculated as follows:

| | |
|---|---:|
| Proceeds [($65)(1,000)] | $65,000 |
| Adjusted Cost Base [($52)(1,000)] | ( 52,000) |
| Capital Gain | $13,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 6,500 |

### *Net Income For Tax Purposes And Taxable Income*

There are no Taxable Income deductions available. As a consequence, Taxable Income is equal to Net Income For Tax Purposes.

| | |
|---|---:|
| Net Business Income | $188,297 |
| Total Property Income | 45,540 |
| Taxable Capital Gain | 6,500 |
| Net Income For Tax Purposes And Taxable Income | $240,337 |

### *Tax Payable*

Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $210,371 | | $48,719 |
| Tax On Next $29,966 ($240,337 - $210,371) At 33 Percent | | 9,889 |
| Tax Before Credits | | $58,608 |
| Tax Credits: | | |
| Basic Personal Amount (Derek) | ($12,069) | |
| Spouse ($12,069 - $9,500) | ( 2,569) | |
| Canada Caregiver For A Child | ( 2,230) | |
| Disability Transferred From Brad | ( 8,416) | |
| Disability Supplement For Brad (Note 8) | Nil | |
| First Time Home Buyers | ( 5,000) | |
| Transfer Of Bill's Tuition Credit (Note 9) | ( 5,000) | |
| Medical Expenses (Note 10) | ( 18,648) | |
| Total Credit Base | ($53,932) | |
| Rate | 15% | ( 8,090) |
| Dividend Tax Credit On Eligible Dividends [(6/11)($3,040)] | | ( 1,658) |
| Foreign Tax Credit [(15%)($20,000)] | | ( 3,000) |
| Federal Tax Payable | | $45,860 |

**Note 8** Since Brad's medical expenses claimed for the medical expense tax credit total more than $7,784 ($4,909 + $2,875), Derek cannot claim the disability supplement for him.

**Note 9** As Bill's income is below the basic credit amount of $12,069, he cannot use any of his available tuition credit. Given this, the maximum transfer is the lesser of:

- The actual tuition of $8,500.
- The absolute maximum of $5,000.

**Note 10** The base for the medical expense tax credit is calculated as follows:

| | | |
|---|---|---|
| Medical Expenses Of Derek, Emily, Brad And Barbara ($1,400 + $1,600 + $11,400 + $2,300) | | $ 16,700 |
| Lesser Of: | | |
| • [(3%)($240,337)] = $7,210 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,352) |
| Balance Before Dependants 18 And Over | | $ 14,348 |
| Bill's Medical Expenses | $4,600 | |
| Reduced By The Lesser Of: | | |
| • $2,352 | | |
| • [(3%)($10,000)] = $300 | ( 300) | 4,300 |
| Medical Expense Tax Credit Base | | $18,648 |

## Chapter 7 Learning Objectives

After completing Chapter 7, you should be able to:

1. Explain the nature of property income (paragraph [P hereafter] 7-1 to 7-5).
2. Describe the rules applicable to the deductibility of interest payments and be able to apply these rules to various types of borrowing (P 7-6 to 7-28).
3. Apply the provisions relating to the treatment of discount and premium on long-term issued debt (P 7-29 to 7-37).
4. Calculate the taxable amount of interest income for both individuals and corporations (P 7-38 to 7-45).
5. Explain the tax treatment of discounts and premiums on long-term debt holdings (P 7-46 and 7-47).

---

6. Apply the provisions related to accrued interest at the time of transfer of debt obligations (P 7-48 to 7-50).
7. Describe tax procedures for royalties and payments based on production or use (P 7-51 to 7-53).
8. Calculate net rental income (P 7-54 to 7-65).
9. Apply the gross up and tax credit procedures to determine the tax consequences of receiving eligible and non-eligible dividend income (P 7-66 to 7-95).
10. Compare the after-tax returns from various types of investments (P 7-96 to 7-97).

---

11. Discuss the provisions relating to investments in income trusts (P 7-98 to 7-111).
12. Discuss the provisions relating to investments in mutual funds (P 7-112 to 7-122).
13. Explain the general treatment of stock dividends and capital dividends (P 7-123 to 7-128).
14. Explain the general tax treatment of withholdings on foreign source business and non-business income (P 7-129 to 7-132).
15. Explain the general treatment of shareholder benefits (P 7-133 to 7-135).

# CHAPTER 8

## How To Work Through Chapter 8

We recommend the following approach in dealing with the material in this chapter:

**Economic Background And General Rules For Capital Gains Taxation**

- Read paragraph 8-1 to 8-30 (in the textbook).
- Do Exercises Eight-1 and Eight-2 (in the textbook) and check the solutions in this Study Guide.
- Read paragraph 8-31 to 8-36.

**Identical Properties**

- Read paragraph 8-37 to 8-38.
- Do Exercise Eight-3 and check the solution in this Study Guide.
- Do Self Study Problem Eight-1 which is available on MyLab and check the solution in this Study Guide.

**Partial Dispositions And Warranties On Capital Assets**

- Read paragraph 8-39 to 8-41.
- Do Exercise Eight-4 and check the solution in this Study Guide.
- Do Self Study Problem Eight-2 and check the solution in this Study Guide.

**Capital Gains Reserves**

- Read paragraph 8-42 to 8-61.
- Do Exercise Eight-5 and check the solution in this Study Guide.
- Do Self Study Problems Eight-3 and Eight-4 and check the solutions in this Study Guide.

**Bad Debts On Sales Of Capital Property**

- Read paragraph 8-62 to 8-63.
- Do Exercise Eight-6 and check the solution in this Study Guide.
- Do Self Study Problems Eight-5 and Eight-6 and check the solutions in this Study Guide.

**Special Rule For Sales Of Real Property**

- Read paragraph 8-64 to 8-71.
- Do Exercise Eight-7 and check the solution in this Study Guide.

**Principal Residence**

- Read paragraph 8-72 to 8-81.
- Do Exercises Eight-8 and Eight-9 and check the solutions in this Study Guide.
- Do Self Study Problem Eight-7 and check the solution in this Study Guide.
- Read paragraph 8-82 to 8-86.

**Personal Use And Listed Personal Property**

- Read paragraph 8-87 to 8-94.
- Do Exercise Eight-10 and check the solution in this Study Guide.
- Do Self Study Problem Eight-8 and check the solution in this Study Guide.

### Gains And Losses On Foreign Currency

- Read paragraph 8-95 to 8-106.
- Do Exercise Eight-11 and check the solution in this Study Guide.
- Do Self Study Problem Eight-9 and check the solution in this Study Guide.

### Options

- Read paragraph 8-107 to 8-112.

### Deemed Dispositions - Change In Use Including Principal Residences

- Read paragraph 8-113 to 8-121.
- Do Exercise Eight-12 and check the solution in this Study Guide.
- Read paragraph 8-122 to 8-128.
- Do Exercise Eight-13 and check the solution in this Study Guide.
- Read paragraph 8-129 to 8-130.
- Do Exercise Eight-14 and check the solution in this Study Guide.
- Do Self Study Problems Eight-10 and Eight-11 and check the solutions in this Study Guide.
- Read paragraph 8-131.

### Deemed Dispositions - Departures From Canada

- Read paragraph 8-132 to 8-133.
- Do Exercises Eight-15 and Eight-16 and check the solutions in this Study Guide.
- Do Self Study Problem Eight-12 and check the solution in this Study Guide.

### Deferral Provisions On Small Business Investments

- Read paragraph 8-134 to 8-136.
- Do Exercise Eight-17 and check the solution in this Study Guide.
- Do Self Study Problem Eight-13 and check the solution in this Study Guide.

### Deferral Provisions On Replacement Property For Capital Gains And CCA

- Read paragraph 8-137 to 8-153.
- Do Exercise Eight-18 and check the solution in this Study Guide.

### Replacement Property - Combined Use Of Deferral Elections

- Read paragraph 8-154 to 8-165.
- Do Exercise Eight-19 and check the solution in this Study Guide.

### Capital Gains And Tax Planning

- Read paragraph 8-166 to 8-168.
- Do Self Study Problems Eight-14 to Eight-18 and check the solutions in this Study Guide.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 8. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 8 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 8 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 8 that is on MyLab.

### Practice Examination

Write the Practice Examination for Chapter 8 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

# Solutions to Chapter Eight Exercises

### *Exercise Eight - 1 Solution*

The capital cost of this Class 1 asset would be $3,500,000 ($5,600,000 - $600,000 - $1,500,000). As it is used 100 percent for non-residential purposes and is in a separate Class 1, the maximum CCA for 2019 would be $315,000 [(150%)($3,500,000)(6%)].

### *Exercise Eight - 2 Solution*

| | |
|---|---|
| Proceeds Of Disposition [(1,000)($14.50)] | $14,500 |
| Adjusted Cost Base [(1,000)($23.00)] | ( 23,000) |
| Total Capital Loss | ($ 8,500) |
| Disallowed Portion [(600)($23 - $14.50)] | 5,100 |
| Adjusted Capital Loss | ($ 3,400) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss | ($ 1,700) |

The adjusted cost base of the acquired shares would be calculated as follows:

| | |
|---|---|
| Purchase Price [(600)($13.75)] | $8,250 |
| Disallowed Loss [(600)($23 - $14.50)] | 5,100 |
| Adjusted Cost Base | $13,350 |

### *Exercise Eight - 3 Solution*

The relevant average cost calculations are as follows:

| Acquisition Date Or Sale Date | Shares Purchased (Sold) | Cost Per Share | Total Cost | Average Cost/Share |
|---|---|---|---|---|
| January 15, 2018 | 650 | $23.50 | $15,275 | |
| March 12, 2018 | 345 | 24.25 | 8,366 | |
| Subtotal | 995 | | $23,641 | $23.76 |
| September 15, 2018 | ( 210) | $23.76 | ( 4,990) | |
| Subtotal | 785 | | $18,651 | |
| February 14, 2019 | 875 | $26.75 | 23,406 | |
| Subtotal | 1,660 | | $42,057 | $25.34 |
| October 1, 2019 | ( 340) | $25.34 | ( 8,616) | |
| End Of Year Balances | 1,320 | | $33,441 | |

Ms. Montrose's taxable capital gain for 2018 is calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [($25.50)(210)] | $5,355 |
| Adjusted Cost Base [($23.76)(210)] | ( 4,990) |
| Capital Gain | $ 365 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 183 |

Ms. Montrose's taxable capital gain for 2019 is calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [($29.50)(340)] | $10,030 |
| Adjusted Cost Base [($25.34)(340)] | ( 8,616) |
| Capital Gain | $ 1,414 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 707 |

### Exercise Eight - 4 Solution

For 2018, there will be a taxable capital gain of $27,500 [(1/2)($292,000 - $237,000)]. For 2019, there will be an allowable capital loss of $2,400 [(1/2)($4,800)]. This allowable capital loss will only be deductible in the determination of 2019 Net Income For Tax Purposes, to the extent that there are 2019 taxable capital gains. Any undeducted loss is subject to the carry over provisions described in Chapter 11. This would include carrying the loss back to apply against the 2018 taxable capital gain.

### Exercise Eight - 5 Solution

Mr. Goodson's capital gain on this transaction is $71,800 ($382,000 - $293,000 - $17,200) and the uncollected proceeds are $300,000 ($382,000 - $82,000). Given this, the maximum reserve for 2018 is $56,387, the lesser of:

| | |
|---|---|
| • [($71,800)($300,000 ÷ $382,000)] | $56,387 (Reserve) |
| • [($71,800)(20%)(4 - 0)] | $57,440 (Reserve) |

His taxable capital gain for 2018 is $7,707 [(1/2)($71,800 - $56,387)].

At the end of 2019, the uncollected proceeds are $240,000 ($300,000 - $60,000). Based on this, the capital gain to be recognized for 2019 would be as follows:

| | |
|---|---|
| 2018 Reserve Added To Income | $56,387 |
| 2019 Reserve - Lesser Of: | |
| • [($71,800)($240,000 ÷ $382,000)] = $45,110 | |
| • [($71,800)(20%)(4 - 1)] = $43,080 | ( 43,080) |
| 2019 Capital Gain | $13,307 |

His taxable capital gain for 2019 is $6,654 [(1/2)($13,307)].

### Exercise Eight - 6 Solution

For 2018, there will be an allowable capital loss of $7,500 [(1/2)($110,000 - $125,000)]. For 2019, there will be an allowable capital loss of $17,500 [(1/2)(Nil - $35,000)]. The total allowable capital loss of $25,000 ($7,500 + $17,500) over the two years is equivalent to the allowable capital loss that would have resulted if the property had been sold for cash of $75,000. The capital loss would equal $50,000 ($125,000 - $75,000) and the allowable capital loss would be $25,000 [(1/2)($50,000)].

These allowable capital losses will only be deductible against taxable capital gains. However, they can be carried over to other years in which the taxpayer has taxable capital gains and deducted in the determination of Taxable Income. (See Chapter 11.)

### Exercise Eight - 7 Solution

A comparison of the tax effects for Part 1 and Part 2 is as follows:

| (See Following Explanations) | **Part 1** | **Part 2** |
|---|---|---|
| Building - Fair Market Value | $500,000 | |
| Building - Deemed Proceeds | | $615,000 |
| UCC | ( 615,000) | ( 615,000) |
| Terminal Loss | ($115,000) | Nil |

| (See Following Explanations) | Part 1 | Part 2 |
|---|---|---|
| Land - Fair Market Value | $750,000 | |
| Land - Deemed Proceeds | | |
| ($1,250,000 - $615,000) | | $635,000 |
| Adjusted Cost Base | ( 425,000) | ( 425,000) |
| Capital Gain | $325,000 | $210,000 |
| Inclusion Rate | 1/2 | 1/2 |
| Taxable Capital Gain | $162,500 | $105,000 |
| Terminal Loss | ( 115,000) | Nil |
| Net Income Inclusion | $ 47,500 | $105,000 |

**Part 1 Explanation** In the absence of the special rule, there would be a taxable capital gain of $162,500 on the land. This would be reduced by the $115,000 ($615,000 - $500,000) terminal loss on the building, resulting in a net income inclusion of $47,500.

**Part 2 Explanation** ITA 13(21.1)(a) modifies the results in such situations by deeming the proceeds of disposition for the building to be:

The Lesser Of:

| | | |
|---|---|---|
| • The FMV of the land and building | $1,250,000 | |
| Reduced By The Lesser Of: | | |
| • The ACB of the land = $425,000 | | |
| • The FMV of the land = $750,000 | ( 425,000) | $825,000 |
| • The Greater Of: | | |
| • The FMV of the building = $500,000 | | |
| • The Lesser Of: | | |
| The cost of the building = $930,000 | | |
| The UCC of the building = $615,000 | | $615,000 |

With the building proceeds at $615,000, the terminal loss is eliminated. The $635,000 deemed proceeds for the land result in a capital gain of $210,000. In effect, this eliminates the terminal loss of $115,000 by reducing the capital gain by the same amount (from $325,000 to $210,000) and increases the net income inclusion by one-half of this amount or $57,500 ($105,000 - $47,500).

### *Exercise Eight - 8 Solution*

There would be no tax consequences due to the sales. There would be a capital gain on the first sale of $20,500 ($109,500 - $89,000). This gain could be eliminated by designating the first property as his principal residence for the six years 2010 through 2015. The gain reduction would be calculated as follows:

$$\left(\$20{,}500 \times \frac{(6+0)\,*}{6}\right) = \underline{\underline{\$20{,}500}} \quad (\textbf{Reduction}, \text{ Not Gain})$$

* Although the gain reduction formula includes a +1 in the numerator, the numerator cannot exceed the denominator as the gain reduction cannot be larger than the total capital gain.

The $26,000 ($178,000 - $152,000) capital gain on the second home could be eliminated by designating the second property as his principal residence for the years 2016 through 2019 and adding the plus one in the numerator. The gain reduction would be calculated as follows:

$$\left(\$26{,}000 \times \frac{(4+1)}{5}\right) = \underline{\underline{\$26{,}000}} \quad (\textbf{Reduction}, \text{ Not Gain})$$

### *Exercise Eight - 9 Solution*

The total gain on the two properties can be calculated as follows:

| | City Home (12 Years) | Cottage (9 Years) |
|---|---|---|
| Sales Price | $198,000 | $143,500 |
| Adjusted Cost Base | ( 126,000) | ( 85,000) |
| Total Capital Gain | $ 72,000 | $ 58,500 |

In this example, the years 2011 through 2019 could be allocated to either property. This raises the question of which property should be the designated the principal residence during these years. If both properties had been owned for the same length of time, you would simply allocate the number of years owned, less 1 year, to the property with the larger gain. However, that is not the case here. Given the different ownership periods, the optimum solution requires the calculation of annual increases in value for each property.

The annual calculations are as follows:

| | |
|---|---|
| Annual Gain - City Home ($72,000 ÷ 12) | $6,000 |
| Annual Gain - Cottage ($58,500 ÷ 9) | $6,500 |

Given these values, the years 2012 through 2019 (1 year less than owned) should be allocated to the cottage. When these 8 years are combined with the plus 1 in the numerator of the reduction formula, the $58,500 gain on the cottage will be completely eliminated. This leaves the years 2008 through 2011 for the Ottawa house, resulting in the following gain reduction:

$$\left(\$72{,}000 \times \frac{(4+1)}{12}\right) = \underline{\underline{\$30{,}000}} \text{ (**Reduction**, Not Gain)}$$

This will leave a total capital gain on the sale of the two properties of $42,000 ($58,500 - $58,500 + $72,000 - $30,000).

### *Exercise Eight - 10 Solution*

The results would be as follows:

| | Personal Use Property | Listed Personal Property |
|---|---|---|
| Gain On Sailboat ($68,000 - $43,000) | $25,000 | |
| Gain On Oil Painting ($25,000 - $1,000) | | $24,000 |
| Loss On Personal Automobile | Nil | |
| Loss On Necklace ($18,000 - $46,000) | | ( 28,000) |
| Capital Gain | $25,000 | Nil |
| Inclusion Rate | 1/2 | N/A |
| Net Taxable Capital Gain | $12,500 | Nil |

The only tax consequence of these dispositions is a taxable capital gain of $12,500 [(1/2)($25,000)]. The gain on the oil painting is completely eliminated by the loss on the necklace. As this loss on the necklace is greater than the gain on the painting, there is a listed personal property loss carry over of $2,000 [(1/2)($28,000 - $24,000)].

### *Exercise Eight - 11 Solution*

In 2018, as a result of his share purchase, Mr. Pratt will have an exchange gain of $612 [(450)(TT$68)(C$0.23 - C$0.21)]. As this qualifies as an ITA 39(2) foreign currency capital gain, he will only include $206 [(1/2)($612 - $200)] of this in his Net Income For Tax Purposes.

In 2019, there will be a capital gain on the sale of $1,170 {[(450)(TT$96)(C$0.19)] - [(450)(TT$68)(C$0.23)]}. None of this gain qualifies under ITA 39(2), so there would be no

$200 exclusion. Mr. Pratt's 2019 Net Income For Tax Purposes will include $585 [(1/2)($1,170)] of this gain.

### Exercise Eight - 12 Solution

The change in use will trigger capital gains on the land and building as follows:

| | Land | Building |
|---|---:|---:|
| Proceeds Of Disposition | $120,000 | $111,000 |
| Adjusted Cost Base | ( 20,000) | ( 23,000) |
| Capital Gain | $100,000 | $ 88,000 |
| Inclusion Rate | 1/2 | 1/2 |
| Taxable Capital Gain | $ 50,000 | $ 44,000 |

For capital gains purposes, the new capital cost will be $111,000 for the building and $120,000 for the land.

As the change is from personal to business use and the fair market value is greater than the cost, the new UCC for the building will be its cost, plus one-half of the difference between the fair market value and the cost. The relevant CCA calculation is as follows:

| | |
|---|---:|
| Original Cost | $23,000 |
| Bump Up [(1/2)($111,000 - $23,000)] | 44,000 |
| Cost For CCA Purposes = UCC | $67,000 |
| One-Half Net Additions | ( 33,500) |
| CCA Base | $33,500 |
| Rate | 4% |
| 2019 CCA | $ 1,340 |

Note that for individuals, the calendar year is considered the fiscal year for property income purposes. As a consequence, there is no adjustment for a short fiscal period in the year of acquisition. Also note that, the half-year rule is generally not applicable to non-arm's length transfers if the transferor used the property as a depreciable property prior to the transfer. The cottage was not previously used as a depreciable property and, as a result, the half-year provisions are applicable.

### Exercise Eight - 13 Solution

**No ITA 45(2) Election** The 2018 change in use would be treated as a deemed disposition/re-acquisition at the fair market value of $210,000. As the home was personal use property, the $10,000 loss ($210,000 - $220,000) would not be deductible.

The maximum CCA for 2018 would be $4,200 [($210,000)(4%)(1/2)]. This would result in a net rental income for 2018 of $4,800 ($21,600 - $12,600 - $4,200).

When the property is sold in 2019, she would have a taxable capital gain of $67,500 [($345,000 - $210,000)(1/2)]. In addition, there would be recapture of CCA of $4,200, the amount of CCA taken in 2018 for a total income inclusion of $71,700 ($67,500 + $4,200).

**ITA 45(2) Election** If she did not take CCA in 2018, her net rental income would be $9,000 ($21,600 - $12,600), $4,200 higher than when no ITA 45(2) election is made. However, she could then elect under ITA 45(2) and this means that the property could continue to be designated as her principal residence in 2019. Given this, the capital gain could be eliminated by the principal residence deduction. This is clearly a better alternative as shown in the following table:

| | No Election | ITA 45(2) Election |
|---|---|---|
| 2018 Income | $ 4,800 | $9,000 |
| 2019 Income | 71,700 | Nil |
| Total | $76,500 | $9,000 |

### Exercise Eight - 14 Solution

**No ITA 45(3) Election** The maximum CCA for 2018 would be $7,500 [($375,000)(4%)(1/2)]. Deducting this amount would result in a 2018 net rental income of $2,300 ($9,800 - $7,500).

Because he has deducted CCA for this year, he cannot treat the property as his principal residence and, when he moves in on January 1, 2019, the change in use will create a deemed disposition/re-acquisition at the fair market value of $450,000. This will result in a taxable capital gain of $37,500 [($450,000 - $375,000)(1/2)]. There would also be recapture of the $7,500 of CCA taken in 2018.

When he sells the property at the end of the year for $510,000, there will be an additional taxable capital gain of $30,000 [($510,000 - $450,000)(1/2)]. However, as he lived in the condominium during 2019, this gain would be eliminated through the use of the principal residence exemption. This would leave a 2019 income inclusion of $45,000 ($37,500 + $7,500 + $30,000 - $30,000).

**ITA 45(3) Election** If he does not take CCA in 2018, his net rental income will be $9,800. However, if he makes the ITA 45(3) election, the unit can be designated as his principal residence for both 2018 and 2019. This means that there will be no additional income in 2019. This is clearly a better alternative as shown in the following table:

| | No Election | ITA 45(3) Election |
|---|---|---|
| 2018 Income | $ 2,300 | $9,800 |
| 2019 Income | 45,000 | Nil |
| Total | $47,300 | $9,800 |

### Exercise Eight - 15 Solution

There would be a deemed disposition on his departure, leaving him liable for the taxes on a $55,000 [(1/2)($1,030,000 - $920,000)] taxable capital gain.

### Exercise Eight - 16 Solution

As real property is exempt from the deemed disposition provision contained in ITA 128.1(4)(b), there would be no tax consequences with respect to the rental property at the time of Ms. Twain's departure. However, real property is Taxable Canadian Property and, as a consequence, as explained in Chapter 1, she would be liable for Canadian taxes on both recapture and capital gains resulting from a subsequent sale of the property, even after she becomes a non-resident.

### Exercise Eight - 17 Solution

The capital gain would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $1,350,000 |
| Adjusted Cost Base | ( 750,000) |
| Capital Gain | $ 600,000 |

As the lesser of the proceeds of disposition and the cost of the replacement shares is the $1,200,000 cost of the replacement shares, the maximum deferral would be $533,333 [($600,000)($1,200,000 ÷ $1,350,000)].

The adjusted cost base of the new shares would be calculated as follows:

| | |
|---|---|
| Initial Cost | $1,200,000 |
| Deferred Capital Gain | ( 533,333) |
| Adjusted Cost Base | $ 666,667 |

### *Exercise Eight - 18 Solution*

The Company would have to record recapture of $750,000 ($650,000 - $1,400,000) for 2018. This is reversed during 2019 by electing under ITA 13(4). Since the replacement cost of the new building exceeds the normal recapture of CCA, the amended recapture of CCA is nil. Using the ITA 13(4) formula, the amended 2018 recapture of CCA would be calculated as follows:

| | | |
|---|---|---|
| UCC Balance | | $650,000 |
| Deduction: | | |
| Lesser Of: | | |
| • Proceeds Of Disposition = $1,400,000 | | |
| • Capital Cost = $1,500,000 | $1,400,000 | |
| Reduced By The Lesser Of: | | |
| • Normal Recapture = $750,000 | | |
| • Replacement Cost = $2,350,000 | ( 750,000) | ( 650,000) |
| Recapture Of CCA (Amended) | | Nil |

The result is that the UCC of the replacement building would be limited to $1,600,000 ($2,350,000 - $750,000). This also reflects the economic substance of the replacement transaction ($650,000 + $2,350,000 - $1,400,000 = $1,600,000).

### *Exercise Eight - 19 Solution*

As the replacement did not occur until 2019, Hadfeld's 2018 tax return will include a capital gain of $225,000 ($950,000 - $725,000), of which one-half or $112,500 is taxable, and recapture of $101,850 ($725,000 - $623,150).

Since the cost of the replacement property exceeded the proceeds of disposition for the old property, these amounts can be reversed in 2019 through a 2018 amended return. The deemed capital cost and UCC of the new building are as follows:

| | |
|---|---|
| Actual Capital Cost | $980,000 |
| Capital Gain Deferred By Election ($950,000 - $725,000) | ( 225,000) |
| Deemed Capital Cost | $755,000 |
| Recapture Deferred By Election ($725,000 - $623,150) | ( 101,850) |
| 2019 UCC | $653,150 |

Each of these amounts are $30,000 more than the old capital cost and UCC. This reflects the $30,000 ($980,000 - $950,000) over and above the insurance proceeds that the Company spent on replacing the building.

## Self Study Solution Eight - 1

***Part A***

The total cost of the 1,222 shares remaining on December 31, 2019 would be $17,077. This is calculated in the following table:

| Acquisition Or Sale Date | Shares Purchased (Sold) | Cost Per Share | Total Cost | Average Cost/Share |
|---|---|---|---|---|
| March 2013 | 650 | $11.00 | $ 7,150 | |
| September, 2014 | 922 | 13.00 | 11,986 | |
| May, 2016 | 480 | 17.00 | 8,160 | |
| Subtotal | 2,052 | | $27,296 | $13.30 |
| November, 2016 Sale | ( 610) | $13.30 | ( 8,113) | |
| July, 2019 | 240 | 18.00 | 4,320 | |
| Subtotal | 1,682 | | $23,503 | $13.97 |
| October, 2019 | ( 460) | $13.97 | ( 6,426) | |
| December 31, 2019 Balances | 1,222 | | $17,077 | |

***Part B***

The average cost of the shares sold during July, 2019 would be calculated as follows:

| | |
|---|---|
| April, 2018 Purchase [(2,200)($12)] | $26,400 |
| December, 2018 Purchase [(1,450)($17)] | 24,650 |
| Total Cost | $51,050 |
| Average Cost ($51,050 ÷ 3,650) | $13.99 |

Given this average cost, the taxable capital gain on the July, 2019 sale of shares would be calculated as follows:

| | |
|---|---|
| Proceeds [(2,840)($22)] | $62,480.00 |
| Cost [(2,840)($13.99)] | ( 39,731.60) |
| Capital Gain | $22,748.40 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $11,374.20 |

## Self Study Solution Eight - 2

No recognition can be given to the warranty at the time the land is sold. This means that a taxable capital gain of $600,000 [(1/2)($2,600,000 - $1,400,000)] will result from this sale. However, since no reduction in the capital gain can be made to reflect potential outlays under the warranty, the subsequent outlays that are required under the warranty agreement will be treated as a capital loss. Thus, the $1,040,000 payment that is required in 2019 will result in a $520,000 [(1/2)($1,040,000)] allowable capital loss.

This allowable capital loss must first be deducted against taxable capital gains that occur in 2019. If such gains are not sufficient to absorb the loss, some or all of the $520,000 can be carried back to 2018 to be applied against the gain that was recognized when the sale occurred.

Any loss that is not carried back can be carried forward indefinitely and applied against future capital gains. (Loss carry overs are covered in Chapter 11.)

## Self Study Solution Eight - 3

The capital gain on the two tracts of land would be calculated as follows:

| | Tract A | Tract B |
|---|---|---|
| Proceeds Of Disposition | $127,000 | $106,000 |
| Adjusted Cost Base | ( 71,000) | ( 87,000) |
| Capital Gain | $ 56,000 | $ 19,000 |

### *2019 Solution*

At the end of 2019, the proceeds not due for Tract A is $110,000 ($127,000 - $17,000). The corresponding figure for Tract B is $74,000 ($106,000 - $32,000).

The minimum taxable capital gain to be included in Ms. Helm's income for 2019 would be calculated as follows:

| | Tract A | Tract B |
|---|---|---|
| Total Capital Gain | $ 56,000 | $ 19,000 |
| Maximum Reserve For 2019: | | |
| Tract A - Lesser Of: | | |
| [($56,000)($110,000 ÷ $127,000)] = $48,504 | | |
| [($56,000)(20%)(4)] = $44,800 | ( 44,800) | |
| Tract B - Lesser Of: | | |
| [($19,000)($74,000 ÷ $106,000)] = $13,264 | | |
| [($19,000)(20%)(4)] = $15,200 | | ( 13,264) |
| Subtotal | $ 11,200 | $ 5,736 |
| Inclusion Rate | 1/2 | 1/2 |
| 2019 Inclusion | $ 5,600 | $ 2,868 |

### *2020 Solution*

At the end of 2020, the proceeds not due for Tract A is $85,000 ($110,000 - $25,000). The proceeds not due for Tract B are not changed from 2019.

The minimum taxable capital gain to be included in Ms. Helm's income for 2020 would be calculated as follows:

| | Tract A | Tract B |
|---|---|---|
| 2019 Reserve Added Back | $ 44,800 | $ 13,264 |
| 2020 Reserve: | | |
| Tract A - Lesser Of: | | |
| [($56,000)($85,000 ÷ $127,000)] = $37,480 | | |
| [($56,000)(20%)(3)] = $33,600 | ( 33,600) | |
| Tract B - Lesser Of: | | |
| [($19,000)($74,000 ÷ $106,000)] = $13,264 | | |
| [($19,000)(20%)(3)] = $11,400 | | ( 11,400) |
| Subtotal | $ 11,200 | $ 1,864 |
| Inclusion Rate | 1/2 | 1/2 |
| 2020 Inclusion | $ 5,600 | $ 932 |

# Self Study Solution Eight - 4

## Capital Gain And Recapture

The immediate tax consequences of the sale can be calculated as follows:

| | Land | Building | Total Gain |
|---|---|---|---|
| Proceeds Of Disposition | $300,000 | $1,200,000 | |
| Adjusted Cost Base/Capital Cost | ( 250,000) | ( 950,000) | |
| Capital Gain | $ 50,000 | $ 250,000 | $300,000 |

| | Building |
|---|---|
| Opening UCC Balance Of Class 1 | $790,742 |
| Lesser Of: | |
| • Proceeds Of Disposition = $1,200,000 | |
| • Capital Cost = $950,000 | ( 950,000) |
| Negative Ending Balance = Recapture Of CCA | ($159,258) |

## Part A - Down Payment = 10 Percent

### *2019 Results*

The $159,258 of recapture must be included in income in this year.

With a down payment of $150,000 [(10%)($1,500,000)], interest must be accrued on the outstanding balance of $1,350,000 ($1,500,000 - $150,000). At 6 percent, the amount would be $81,000.

With respect to the capital gains, under ITA 40(1)(a)(iii), the amount that can be deducted as a capital gains reserve is equal to the lesser of:

- [(Capital Gain)(Proceeds Not Yet Due ÷ Total Proceeds)]
- [(Capital Gain)(20%)(4 - Number Of Preceding Years Ending After Disposition)]

While the gains on the land and building must be calculated separately, there is no reason to separate them for the purposes of determining the available reserve. This is based on the fact that, in the absence of some reason to apply it differently, the 10 percent down payment would apply equally to each component of the sale.

With a down payment of $150,000, the available reserve would be the lesser of:

- [($300,000)($1,350,000 ÷ $1,500,000)] = $270,000
- [($300,000)(20%)(4 - 0)] = $240,000

Using the lesser figure of $240,000, the taxable capital gain to be included in Net Income For Tax Purposes would be $30,000 [(1/2)($300,000 - $240,000). The total inclusion in Net Income For Tax Purposes for 2019 would be as follows:

| | |
|---|---|
| Recapture | $159,258 |
| Interest | 81,000 |
| Taxable Capital Gain | 30,000 |
| Total For 2019 | $270,258 |

### *2020 Results*

For this year, the reserve would be the lesser of:

- [($300,000)($1,350,000 ÷ $1,500,000)] = $270,000
- [($300,000)(20%)(4 - 1)] = $180,000

Based on this, the total inclusion in Net Income For Tax Purposes for 2020 would be as follows:

| | |
|---|---|
| 2019 Reserve Added To Income | $240,000 |
| 2020 Reserve | ( 180,000) |
| Net Capital Gain | $ 60,000 |
| Inclusion Rate | 1/2 |
| Net Taxable Capital Gain | $ 30,000 |
| Interest (Same As 2019) | 81,000 |
| Total For 2020 | $111,000 |

***2021 Results***

For this year, the reserve would be the lesser of:

- [($300,000)(Nil ÷ $1,500,000)] = Nil
- [($300,000)(20%)(4 - 2)] = $120,000

Based on this, the total inclusion in Net Income For Tax Purposes for 2021 would be as follows:

| | |
|---|---|
| 2020 Reserve Added To Income | $180,000 |
| 2021 Reserve | Nil |
| Net Capital Gain | $180,000 |
| Inclusion Rate | 1/2 |
| Net Taxable Capital Gain | $ 90,000 |
| Interest | Nil |
| Total For 2021 | $ 90,000 |

## Part B - Down Payment = 30 Percent

***2019 Results***

While the down payment is changed in this case, the amount of recapture would be the same as in Part A. However, the interest would be reduced to $63,000 [(6%)($1,500,000 - $450,000)].

With the down payment of $450,000 [(30%)($1,500,000)], the available reserve would be the lesser of:

- [($300,000)($1,050,000 ÷ $1,500,000)] = $210,000
- [($300,000)(20%)(4 - 0)] = $240,000

Using the lesser figure of $210,000, the taxable capital gain to be included in Net Income For Tax Purposes would be $45,000 [(1/2)($300,000 - $210,000)].

The total inclusion in Net Income For Tax Purposes for 2019 would be as follows:

| | |
|---|---|
| Recapture | $159,258 |
| Interest | 63,000 |
| Taxable Capital Gain | 45,000 |
| Total For 2019 | $267,258 |

***2020 Results***

For this year, the reserve would be the lesser of:

- [($300,000)($1,050,000 ÷ $1,500,000)] = $210,000
- [($300,000)(20%)(4 - 1)] = $180,000

Based on this, the total inclusion in Net Income For Tax Purposes for 2020 would be as follows:

| | |
|---|---|
| 2019 Reserve Added To Income | $210,000 |
| 2020 Reserve | ( 180,000) |
| Net Capital Gain | $ 30,000 |
| Inclusion Rate | 1/2 |
| Net Taxable Capital Gain | $ 15,000 |
| Interest (Same As 2019) | 63,000 |
| Total For 2020 | $ 78,000 |

***2021 Results***

For this year, the results are the same as in Part A. The reserve would be the lesser of:

- [($300,000)(Nil ÷ $1,500,000)] = Nil
- [($300,000)(20%)(4 - 2)] = $120,000

Based on this, the total inclusion in Net Income For Tax Purposes for 2021 would be as follows:

| | |
|---|---|
| 2020 Reserve Added To Income | $180,000 |
| 2021 Reserve | Nil |
| Net Capital Gain | $180,000 |
| Inclusion Rate | 1/2 |
| Net Taxable Capital Gain | $ 90,000 |
| Interest | Nil |
| Total For 2021 | $ 90,000 |

## Self Study Solution Eight - 5

For 2018, Mrs. Simpkins would have a capital gain of $10,000 ($25,000 - $15,000), of which one-half is taxable, resulting in a taxable capital gain of $5,000. While this could have been reduced through the use of reserves, Mrs. Simpkins chose not to do so.

In 2019, the inability to collect the note payment would result in a capital loss of $10,000 (Nil - $10,000). The $5,000 allowable amount of this loss must first be applied against any taxable capital gains that are realized in 2019. If such gains are not sufficient to absorb the loss, all or part of the $5,000 can be carried back and applied against the taxable capital gain that was recognized in 2018 (assuming there were no 2018 allowable capital losses net against it).

Any loss that is not carried back can be carried forward indefinitely and applied against future capital gains. (Loss carry overs are covered in Chapter 11.)

## Self Study Solution Eight - 6

***Capital Gains Reserve***

With respect to the capital gains, under ITA 40(1)(a)(iii), the amount that can be deducted as a capital gains reserve is equal to the lesser of:

- [(Capital Gain)(Proceeds Not Yet Due ÷ Total Proceeds)]
- [(Capital Gain)(20%)(4 - Number Of Preceding Years Ending After Disposition)]

***2019 Results***

The only tax consequence in this year is the capital gain that occurs on the sale. The gain, along with the maximum deductible reserve, would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $6,680,000 |
| Adjusted Cost Base | ( 2,160,000) |
| Capital Gain | $4,520,000 |
| Reserve - Lesser Of: | |
| • [($4,520,000)($4,500,000 ÷ $6,680,000)] = $3,044,910 | |
| • [($4,520,000)(20%)(4 - 0)] = $3,616,000 | ( 3,044,910) |
| Capital Gain | $1,475,090 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 737,545 |

As no provision can be made for the estimated cost of the warranty, the total Net Income For Tax Purposes inclusion for 2019 would be $737,545.

### *2020 Results*

For this year, the reserve would be the lesser of:

- [($4,520,000)($3,000,000 ÷ $6,680,000)] = $2,029,940
- [($4,520,000)(20%)(4 - 1)] = $2,712,000

Based on this, the total inclusion in Net Income For Tax Purposes for 2020 would be as follows:

| | |
|---|---|
| 2019 Reserve Added To Income | $3,044,910 |
| 2020 Reserve | ( 2,029,940) |
| Capital Gain | $1,014,970 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 507,485 |
| Interest [(4%)($4,500,000)] | 180,000 |
| Total | $ 687,485 |

### *2021 Results*

For this year, the reserve would be the lesser of:

- [($4,520,000)($1,500,000 ÷ $6,680,000)] = $1,014,970
- [($4,520,000)(20%)(4 - 2)] = $1,808,000

He will have a capital gain consisting of the addition of the 2020 reserve in income and the deduction of a new reserve for 2021. He will also have a capital loss due to the $1,000,000 payment to the developer. As this payment is required by a warranty on a capital asset, it is a capital loss.

Based on this, the total inclusion in Net Income For Tax Purposes for 2021 would be as follows:

| | |
|---|---|
| 2020 Reserve Added To Income | $2,029,940 |
| 2021 Reserve | ( 1,014,970) |
| Capital Gain | $1,014,970 |
| Capital Loss On Warranty Payment On Capital Asset | ( 1,000,000) |
| Net Capital Gain | $ 14,970 |
| Inclusion Rate | 1/2 |
| Net Taxable Capital Gain | $ 7,485 |
| Interest [(4%)($3,000,000)] | 120,000 |
| Total | $ 127,485 |

### *2022 Results*

With the bankruptcy of the developer, no interest will be collected in 2022 and the balance of the loan must be written off as a bad debt, resulting in a capital loss of $1,500,000 [(Nil - ($4,500,000 - $3,000,000)].

Lawrence will include the 2021 reserve of $1,014,970 in income. Since the loan was to be paid off in 2022, there would have been no new reserve to be deducted, regardless of the bankruptcy.

The capital loss can be deducted to the extent of the capital gain of $1,014,970. The remaining allowable capital loss of $242,515 [(1/2)($1,500,000 - $1,014,970)] can only be deducted in 2022 to the extent of taxable capital gains in that year. However, it can be carried back to be applied to the capital gains that were recognized in previous years.

### *Summary (Not Required)*

The results can be summarized as follows:

| Year | Interest | Net Taxable Gain (Allowable Loss) |
|---|---|---|
| 2019 | Nil | $737,545 |
| 2020 | $180,000 | 507,485 |
| 2021 | 120,000 | 7,485 |
| 2022 | Nil | ( 242,515) |
| Totals | $300,000 | $1,010,000 |

The amount of the taxable capital gain can be verified as follows:

| | |
|---|---|
| Initial Capital Gain | $4,520,000 |
| Warranty Payment | ( 1,000,000) |
| Bad Debt | ( 1,500,000) |
| Capital Gain | $2,020,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $1,010,000 |

## Self Study Solution Eight - 7

The gains on the two properties can be calculated as follows:

| | Country Home | Condominium |
|---|---|---|
| Proceeds Of Disposition | $1,200,000 | $900,000 |
| Adjusted Cost Base | ( 850,000) | ( 625,000) |
| Real Estate Commissions | | |
| [(5%)($1,200,000)] | ( 60,000) | |
| [(5%)($900,000)] | | ( 45,000) |
| Total Capital Gain | $ 290,000 | $230,000 |

The annual gain was $18,125 ($290,000 ÷ 16) on the country home and $28,750 ($230,000 ÷ 8) on the condominium. This would indicate that the maximum number of years should be allocated to the condominium. However, because of the plus 1 in the reduction formula, one year can be left off.

Based on this analysis, the seven years 2013 through 2019 should allocated to the condominium, with the nine years 2004 through 2012 being allocated to the country home. The required calculations would be as follows:

| | Country Home | Condominium |
|---|---|---|
| Total Capital Gain | $ 290,000 | $230,000 |
| Exemption: | | |
| Country Home | | |
| [$290,000][(9 + 1) ÷ 16] | ( 181,250) | |
| Condominium | | |
| [$230,000][(7 + 1) ÷ 8] | | ( 230,000) |
| Capital Gain | $108,750 | Nil |
| Inclusion Rate | 1/2 | N/A |
| Taxable Capital Gain | $ 54,375 | Nil |

This gives a total taxable capital gain on the two properties of $54,375.

## Self Study Solution Eight - 8

### *Classification Of Property*

All of the items sold are personal use property. However, if they can be classified as "listed personal property", their tax treatment will be different. Under ITA 54, listed personal property consists of the following items.

- (i) print, etching, drawing, painting, sculpture, or other similar work of art,
- (ii) jewelry,
- (iii) rare folio, rare manuscript, or rare book,
- (iv) stamp, or
- (v) coin.

The Paul Borduas painting, as well as the Hemingway first edition clearly fall into the listed personal property classification. The Bentley and the Chris Craft clearly do not.

The classification of the fountain pen collection is not clear. The issue is whether a pen can be considered jewelry (and not a writing implement) as there are fountain pens that cost as much as $100,000 and are made from precious metals and stones.

The dictionary definition of jewel includes "a precious possession". However, the definition of jewelry is more narrow, referring to "ornaments for personal adornment". Whether something that is displayed on one's desk would be considered personal adornment would be debatable, but the fact that Mr. Howard always "wears" the pens prominently would favour the jewelry classification.

In the solution which follows, we have classified the pens as jewelry. However, we recognize that this classification could be subject to challenge.

### *Effect On Net Income For Tax Purposes*

The overall amount to be included in Net Income For Tax Purposes can be calculated as follows:

| | | |
|---|---|---|
| **Personal Use Property (Note 1)** | | |
| Gain On Antique Boat ($62,000 - $45,000) | $17,000 | |
| Loss On Bentley | Nil | $17,000 |
| **Listed Personal Property** | | |
| Gain On First Edition ($31,000 - $12,000) | $19,000 | |
| Gain On Painting ($132,000 - $128,000) | 4,000 | |
| Total Listed Personal Property Gains | $23,000 | |
| Loss On Pens (Note 2) | ( 23,000) | Nil |
| Net Capital Gains | | $17,000 |
| Inclusion Rate | | 1/2 |
| Addition To Net Income For Tax Purposes | | $ 8,500 |

**Note 1** Unless an item of personal use property can be classified as listed personal property, losses on its disposition cannot be deducted. However, gains on such property are taxable, without regard to the classification.

**Note 2** The total loss on the pen collection is $29,000 ($13,000 - $42,000). However, the current year deduction is limited to the $23,000 in gains on listed personal property. The remaining $6,000 ($29,000 - $23,000) can be carried back 3 years and forward 7 years to be applied against gains on listed personal property that have occurred in previous years or may occur in subsequent years.

## Self Study Solution Eight - 9

The taxable capital gain on the sale of securities would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [(3,500)(€33.50)($1.49)] | $174,703 |
| Adjusted Cost Base [(3,500)(€30.00)($1.46)] | ( 153,300) |
| Capital Gain On Sale Of Securities | $ 21,403 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 10,702 |

The taxable capital gain on the foreign exchange conversion would be calculated as follows:

| | |
|---|---|
| Proceeds Of Conversion [(€117,250)($1.52)] | $178,220 |
| Adjusted Cost Base Of Currency [(€117,250)($1.49)] | ( 174,703) |
| Capital Gain On Foreign Exchange | $ 3,517 |
| ITA 39(1.1) Reduction Of Capital Gain | ( 200) |
| Net Capital Gain | $ 3,317 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 1,659 |

Ms. Laval's minimum Net Income For Tax Purposes inclusion would be a total taxable capital gain of $12,361 ($10,702 + $1,659).

Because Ms. Laval is an individual, the ITA 39(1.1) deduction of $200 reduces the capital gain on the foreign exchange conversion.

## Self Study Solution Eight - 10

### 2017 Results

During 2017, 100 percent of the property was used for income producing purposes. The CCA for the year would be calculated as follows:

| | |
|---|---|
| Capital Cost ($645,000 - $120,000) | $525,000 |
| One-Half Net Additions | ( 262,500) |
| CCA Base | $262,500 |
| Maximum CCA [(4%)($262,500)] | ( 10,500) |
| One-Half Net Additions | 262,500 |
| UCC - January 1, 2018 | $514,500 |

There are no additional tax consequences during this year.

### 2018 Results

On January 1, 2018, there would be a deemed disposition/acquisition of 25 percent of the depreciable property. The transaction would be measured using the building's fair market value of $460,000 ($560,000 - $100,000). Given this, the maximum CCA on the remaining 75 percent would be calculated as follows:

| | |
|---|---|
| Opening UCC | $514,500 |
| Deemed Disposition - Lesser Of: | |
| • Capital Cost [(25%)($525,000)] = $131,250 | |
| • Deemed Proceeds [(25%)($460,000)] = $115,000 | ( 115,000) |
| CCA Base | $399,500 |
| Maximum CCA [(4%)($399,500)] | ( 15,980) |
| UCC - January 1, 2019 | $383,520 |

While the value of the building has declined from $525,000 ($645,000 - $120,000) to $460,000 ($560,000 - $100,000), no loss can be recognized. As there is still an asset in the Class, a terminal loss cannot be recognized. In addition, we would remind you that you cannot have a capital loss on a depreciable asset disposition.

The allowable capital loss on the land of $2,500 [(25%)(1/2)($120,000 - $100,000)] can be deducted against the taxable capital gains on dispositions from her portfolio. Since her income from other sources is so high, she will deduct maximum CCA regardless of how the business is doing.

The cost to Laci of the 25 percent of the property that is being used for personal purposes would be $115,000 [(25%)($460,000)] allocated to the building and $25,000 [(25%)($100,000)] allocated to the land.

### 2019 Results

On January 1, 2019, there would be a deemed acquisition of 25 percent of the depreciable property. The capital cost of the building acquisition would be $140,000 [(25%)($690,000 - $130,000)]. However, as the change is from personal use to business use and the fair market value of the building is greater than its cost, the UCC will be limited to her cost plus one-half of the difference between fair market value and cost or $127,500 [$115,000 + (1/2)($140,000 - $115,000)].

Maximum CCA for would be calculated as follows:

| | |
|---|---|
| Opening UCC | $383,520 |
| Deemed Acquisition<br>[$115,000 + (1/2)($140,000 - $115,000)] | 127,500 |
| One-Half Net Additions [(1/2)($127,500)] | ( 63,750) |
| CCA Base | $447,270 |
| Maximum CCA [(4%)($447,270)] | ( 17,891) |
| One-Half Net Additions | 63,750 |
| UCC - January 1, 2020 | $493,129 |

As a result of the deemed disposition, Laci would have a taxable capital gain on both the land and the building. They would be calculated as follows:

| | Land | Building |
|---|---|---|
| Proceeds Of Disposition | | |
| [(25%)($130,000)] | $32,500 | |
| [(25%)($560,000)] | | $140,000 |
| Adjusted Cost Base [(25%)($100,000)] | ( 25,000) | |
| Capital Cost [(25%)($460,000)] | | ( 115,000) |
| Capital Gains | $ 7,500 | $ 25,000 |
| Inclusion Rate | 1/2 | 1/2 |
| Taxable Capital Gains | $ 3,750 | $ 12,500 |

Even though Laci has a home other than the apartment, she could eliminate these gains by making use of the +1 year in the principal residence exemption formula. Assuming she did that, she would have to allow for the designated year in the exemption formula when she sells her home.

## Self Study Solution Eight - 11

### *2017 Results*

During 2017, 80 percent of the property is used for income producing purposes. Based on this the maximum CCA that can be deducted for this year is calculated as follows:

| | |
|---|---|
| Capital Cost [(80%)($500,000)] | $400,000 |
| One-Half Net Additions | ( 200,000) |
| CCA Base | $200,000 |
| Maximum CCA [(4%)($200,000)] | ( 8,000) |
| One-Half Net Additions | 200,000 |
| UCC - January 1, 2018 | $392,000 |

There are no additional tax consequences during this year.

### *2018 Results - Business To Personal Use*

On January 1, 2018, there would be a deemed disposition/acquisition of 20 percent of the total property. This would result in a taxable capital gain on the land calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [(20%)($230,000)] | $46,000 |
| Adjusted Cost Base [(20%)($225,000)] | ( 45,000) |
| Capital Gain | $ 1,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain On Land | $ 500 |

There would also be taxable capital gain on the building, calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [(20%)($585,000) | $117,000 |
| Adjusted Cost Base [(20%)($500,000)] | ( 100,000) |
| Capital Gain | $ 17,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 8,500 |

The maximum CCA for 2018 would be calculated as follows:

| | |
|---|---|
| Opening UCC | $392,000 |
| Disposition: Lesser Of: | |
| Capital Cost [(20%)($500,000)] = $100,000 | |
| Proceeds Of Disposition | |
| [(20%)($585,000) = $117,000 | ( 100,000) |
| CCA Base | $292,000 |
| Maximum CCA [(4%)($292,000)] | ( 11,680) |
| UCC - January 1, 2019 | $280,320 |

***2019 Results - Personal To Business Use***

On January 1, 2019, there would be a deemed disposition/acquisition of 40 percent of the total property. This would result in a taxable capital gain on the land, calculated as follows:

| | | |
|---|---|---|
| Proceeds Of Disposition [(40%)($245,000)] | | $98,000 |
| Adjusted Cost Base: | | |
| [(20%)($225,000)] | ($45,000) | |
| [(20%)($230,000)] | ( 46,000) | ( 91,000) |
| Capital Gain | | $ 7,000 |
| Inclusion Rate | | 1/2 |
| Taxable Capital Gain On Land | | $ 3,500 |

There would also be a taxable capital gain on the building, calculated as follows:

| | | |
|---|---|---|
| Proceeds Of Disposition [(40%)($630,000)] | | $252,000 |
| Adjusted Cost Base: | | |
| [(20%)($500,000)] | ($100,000) | |
| [(20%)($585,000)] | ( 117,000) | ( 217,000) |
| Capital Gain | | $ 35,000 |
| Inclusion Rate | | 1/2 |
| Taxable Capital Gain | | $ 17,500 |

With respect to maximum CCA, this change in use involves a deemed disposition/acquisition from personal use to business use. In addition, the fair market value of the building is greater than her cost. Given this, the UCC will be limited to her cost plus one-half of the difference between fair market value and cost. This amount would be $17,500, as calculated in the preceding table as the taxable capital gain.

Maximum CCA for would be calculated as follows:

| | | |
|---|---|---|
| Opening UCC | | $280,320 |
| Deemed Acquisition Cost | | |
| [(20%)($500,000)] | $100,000 | |
| [(20%)($585,000)] | 117,000 | |
| Bump Up | 17,500 | 234,500 |
| One-Half Net Additions [(1/2)($234,500)] | | ( 117,250) |
| CCA Base | | $397,570 |
| Maximum CCA [(4%)($397,570)] | | ( 15,903) |
| One-Half Net Additions | | 117,250 |
| UCC - January 1, 2020 | | $489,537 |

***Note To Students***

In the Required we have asked you to ignore the principal residence exemption as the focus of the problem is on change in use. The textbook states that if there is non-residential use of a principal residence, the CRA will not apply the partial disposition rules so long as the income use is ancillary to the main use as a principal residence, there is no structural change to the property, and no CCA is claimed.

CCA was claimed on the 20 percent that went from business to principal residence back to business and the textbook does not specifically cover the effect of this CCA issue or a property where the principal residence portion is originally a small percentage of the total, on the principal residence exemption.

The fact that the business had claimed CCA on the 20 percent portion that was subsequently added to the personal portion when the business use dropped from 80 percent to 60 percent would not cause any adjustment to the principal residence. From a tax policy point of view, a change from personal use to business use is a concern since the personal use disposition results in capital gains with the added cost potentially being fully deductible as CCA. This is the reason why the change of use rules only allow half the increase in value to be added to cost. This issue does not arise, however when the property is converted from an income use to a personal use.

If the principal residence exemption was considered, when the 40 percent principal residence portion is changed to business use in 2019, that event would cause a disposition of a principal residence which would then be eligible for the principal residence exemption. As a result, there would be no net capital gain for 2019.

## Self Study Solution Eight - 12

Mr. Lange's taxable capital gain on deemed dispositions resulting from his departure from Canada would be calculated as follows:

| | |
|---|---|
| Vacant land | N/A |
| Automobile | N/A |
| Coin Collection ($11,000 - $5,000) | $ 6,000 |
| Enbridge Shares ($38,000 - $24,000) | 14,000 |
| BCE Shares ($35,000 - $42,000) | ( 7,000) |
| Royal Bank Shares ($23,000 - $15,000) | 8,000 |
| Nal Enterprises Ltd. Shares ($153,000 - $26,000) | 127,000 |
| Capital Gain | $148,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain On Departure | $ 74,000 |

The vacant land is exempt from the deemed disposition rules that are applicable to individuals leaving Canada. However, as it is taxable Canadian property, a later sale of this land will attract Canadian income taxes, even though Mr. Lange is no longer a Canadian resident.

The loss on the automobile is not deductible as the vehicle is a personal use property.

## Self Study Solution Eight - 13

### *First Sale*

Since Ms. Tosh has held the Tech Ltd. common shares for more than 185 days, it is a qualifying disposition. Since the Small Oil common shares were purchased immediately, they can be designated as replacement shares.

Preferred shares cannot be designated as replacement shares. As a result, the Small Bank Inc. shares do not qualify as replacement shares.

The capital gain on the Tech Ltd. disposition is $700,000 ($4,200,000 - $3,500,000). As the cost of replacement shares is only $3,800,000, the permitted deferral is limited as per the following calculation:

[($700,000)($3,800,000 ÷ $4,200,000)] = $633,333 Deferral

Given this, the adjusted cost base of the Small Oil shares would be calculated as follows:

| | |
|---|---|
| Unadjusted Cost | $3,800,000 |
| Deferral Amount | ( 633,333) |
| Adjusted Cost Base Of Small Oil Shares | $3,166,667 |

### *Second Sale*

Since Ms. Tosh has held the Future Inc. common shares for more than 185 days, it is a qualifying disposition. Since the eligible small business corporation common shares were purchased in the current year, they can be designated as replacement shares.

The capital gain on the disposition of Future Inc. shares is $1,800,000 ($5,600,000 - $3,800,000). Of the $5,600,000 in proceeds, only $5,200,000 ($2,400,000 + $2,800,000) was invested in replacement shares. This means that the permitted deferral will be limited as per the following calculation:

[($1,800,000)($5,200,000 ÷ $5,600,000)] = $1,671,429 Deferral

Using this information, the adjusted cost base of the newly acquired shares would be calculated as follows:

| | Sombra Shares | Ziff Shares |
|---|---|---|
| Purchase Price | $2,400,000 | $2,800,000 |
| Deferral: | | |
| [($1,671,429)($2,400,000 ÷ $5,200,000)] | ( 771,429) | |
| [($1,671,429)($2,800,000 ÷ $5,200,000)] | | ( 900,000) |
| Adjusted Cost Base | $1,628,571 | $1,900,000 |

### *Net Taxable Capital Gain*

If Ms. Tosh does not purchase any other replacements shares within 120 days of December 31, 2019, the two sales would result in a taxable capital gain, calculated as follows:

| | Total Gain | Deferral | Net Gain |
|---|---|---|---|
| Tech Ltd. Shares | $ 700,000 | $ 633,333 | $ 66,667 |
| Future Inc. Shares | 1,800,000 | 1,671,429 | 128,571 |
| Totals | $2,500,000 | $2,304,762 | $195,238 |
| Inclusion Rate | | | 1/2 |
| Net Taxable Capital Gain | | | $ 97,619 |

### Tax Advice

If Ms. Tosh invests in any eligible small business corporation common shares, including her brother's company's, within 120 days of December 31, 2019, she can designate up to $800,000 as replacement shares. She would then be able to defer more or all of the capital gain on the two sales of shares.

If she wants to invest in her brother's company after the 120 days has passed, she should review her other investments to determine if she can use the deferral provisions on small business investments to her advantage to obtain the $1,000,000.

There is the question of whether Ms. Tosh should invest in her brother's new company, but that would involve an analysis that goes beyond the scope of the material in the text.

## Self Study Solution Eight - 14

### 2019 Results

The insurance proceeds would create recaptured CCA, calculated as follows:

| | |
|---|---|
| Opening UCC Balance | $ 368,000 |
| Disposition - Lesser Of: | |
| • Cost = $500,000 | |
| • Proceeds Of Disposition = $490,000 | ( 490,000) |
| Negative Closing Balance = Recapture | ($ 122,000) |
| Recapture | 122,000 |
| January 1, 2020 UCC | Nil |

The $122,000 in recapture would be taken into 2019 income and added back to the UCC to create a UCC balance of nil.

### 2020 Results

Using ITA 13(4), Trail Resources Ltd. would file an amended return for the 2019 taxation year. The revised recapture would be calculated as follows:

| | | |
|---|---|---|
| January 1, 2019 UCC Balance | | $368,000 |
| Deduction: | | |
| Lesser Of: | | |
| • Proceeds Of Disposition = $490,000 | | |
| • Capital Cost = $500,000 | $490,000 | |
| Reduced By The Lesser Of: | | |
| • Normal Recapture = $122,000 | | |
| • Replacement Cost = $650,000 | ( 122,000) | ( 368,000) |
| Recapture Of 2019 CCA (Amended) | | Nil |

The new nil figure for the recapture on the disposition of the old building will replace the old figure of $122,000 that was included in the original 2019 return.

The UCC of the new building will be adjusted for this change as follows:

| | |
|---|---|
| Cost Of New Building | $ 650,000 |
| Reversal Of Recapture - ITA 13(4) Election | ( 122,000) |
| UCC | $ 528,000 |

Given this, the required maximum CCA for 2020 and the January 1, 2021 UCC balance would be calculated as follows:

| | |
|---|---|
| Opening UCC - Class 1 | Nil |
| Addition Of UCC Of New Building | $528,000 |
| AccII Adjustment | 264,000 |
| Base For CCA | $792,000 |
| Maximum CCA [($792,000)(6%)] | ( 47,520) |
| AccII Adjustment Reversal | ( 264,000) |
| January 1, 2021 UCC | $480,480 |

The reasonableness of the CCA base calculation can be verified by noting that the $528,000 is equal to the initial UCC of $368,000, plus the cost of the new building of $650,000, less the insurance proceeds of $490,000. The AccII provisions are applied to the addition to Class 1.

## Self Study Solution Eight - 15

### *Part A*

The 2019 tax consequences would be as follows:

**Land** The Company would have a taxable capital gain on the Land calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $1,100,000 |
| Adjusted Cost Base | ( 350,000) |
| Capital Gain | $ 750,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 375,000 |

**Building** The Company would have a taxable capital gain and recapture calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $2,300,000 |
| Capital Cost | ( 2,100,000) |
| Capital Gain | $ 200,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 100,000 |

| | |
|---|---|
| Opening UCC | $ 850,000 |
| Deduct Disposition - Lesser Of: | |
| Capital Cost = $2,100,000 | |
| Proceeds Of Disposition = $2,300,000 | ( 2,100,000) |
| Negative Closing UCC Balance = Recapture | ($1,250,000) |
| Recapture (Included In Income) | 1,250,000 |
| UCC - January 1, 2020 | Nil |

**Equipment** The Company would have recapture calculated as follows:

| | |
|---|---|
| Opening UCC | $165,000 |
| Deduct Disposition - Lesser Of: | |
| Capital Cost = $450,000 | |
| Proceeds Of Disposition = $320,000 | ( 320,000) |
| Negative Closing UCC Balance = Recapture | ($155,000) |
| Recapture (Included In Income) | 155,000 |
| UCC - January 1, 2020 | Nil |

***Part B***

**Land** With respect to the Land, the capital gain resulting from the use of the ITA 44(1) election would be the lesser of:

- $750,000 (regular capital gain); and
- $500,000 (the excess of the $1,100,000 proceeds of disposition for the old land over the $600,000 cost of the replacement land).

The taxable amount would be $250,000 [(1/2)($500,000)] and this would be included in the revised 2019 Net Income For Tax Purposes. The original gain of $375,000 would be eliminated in the revised return.

If the ITA 44(1) election is used in 2020, the deemed adjusted cost base of the replacement land would be calculated as follows:

| | |
|---|---|
| Actual Cost | $600,000 |
| Capital Gain Reversed By Election ($750,000 - $500,000) | ( 250,000) |
| Deemed Adjusted Cost Base Of Replacement Land | $350,000 |

Note that the deemed adjusted cost base of the replacement land has been reduced to the adjusted cost base of the old land.

**Building** If the ITA 44(1) election is used in 2020, the amended 2019 capital gain would be nil, the lesser of:

- $200,000 (regular capital gain); and
- Nil (reflecting the fact that there was no excess of the $2,300,000 proceeds of disposition for the old building over the $2,500,000 cost of the replacement building).

Using this election will reduce the deemed capital cost for the building as follows:

| | |
|---|---|
| Actual Cost | $2,500,000 |
| Capital Gain Reversed By Election | ( 200,000) |
| Deemed Capital Cost Of Replacement Building | $2,300,000 |

If the ITA 13(4) election is used in 2020, the amended 2019 recapture would be calculated as follows:

| | | |
|---|---|---|
| January 1, 2019 UCC Balance | | $850,000 |
| Deduction: | | |
| Lesser Of: | | |
| • Proceeds Of Disposition = $2,300,000 | | |
| • Capital Cost = $2,100,000 | ($2,100,000) | |
| Reduced By The Lesser Of: | | |
| • Normal Recapture = $1,250,000 | | |
| • Replacement Cost = $2,500,000 | 1,250,000 | ( 850,000) |
| Recapture Of 2019 CCA (Amended) | | Nil |

If both elections are used in 2020, the UCC of the replacement building is calculated as follows:

| | |
|---|---|
| Deemed Capital Cost | $2,300,000 |
| Recapture Reversed By Election | ( 1,250,000) |
| UCC - Replacement Building | $1,050,000 |

Note that the $1,050,000 UCC for the new building is equal to the UCC of the old building ($850,000), plus the additional $200,000 ($2,500,000 - $2,300,000) in funds required for its acquisition.

These new nil figures for the capital gain and the recapture on the disposition of the old building will replace the old figures of $100,000 and $1,250,000 that were included in the original 2019 return.

**Equipment** As this is a voluntary disposition, the ITA 13(4) and 44(1) elections can only be used on real property (land and buildings). They cannot be used on the equipment and, as a consequence, the $155,000 in recapture will not be altered in the amended return. As the elections cannot be used, both the capital cost and the UCC of the new equipment will be $520,000.

***Part C***

**The Election** The ITA 44(6) election applies when there is a disposition involving a combination of part land and part building. If, for either of the assets, the proceeds of disposition exceed the adjusted cost base, the election allows the transfer of all or part of that excess to the other asset.

As will be demonstrated in this problem, this can provide some relief when ITA 44(1) and ITA 13(4) fail to eliminate all of the capital gains arising on one part of the disposition of the old property. ITA 44(1) fully eliminated the capital gain on the building. However, a $500,000 capital gain remained on the land. This would suggest that it could be advantageous to transfer some of the proceeds of disposition from the land to the building.

The excess of the proceeds of disposition of the old land over the cost of the replacement land was $500,000 ($1,100,000 - $600,000). This is the maximum available transfer from the land to the building. However, the excess of the cost of the replacement building over the old building's proceeds of disposition is only $200,000 ($2,500,000 - $2,300,000). If a transfer in excess of this amount is made, any reduction in the capital gain on the land will be matched by an increased capital gain on the building.

Applying ITA 44(6) in an optimal manner will result in the following adjusted proceeds of disposition:

| | Land | Building |
|---|---|---|
| Actual Proceeds Of Disposition | $1,100,000 | $2,300,000 |
| Optimal Transfer Land To Building | ( 200,000) | 200,000 |
| Adjusted Proceeds Of Disposition | $ 900,000 | $2,500,000 |

**Application To Land** If both ITA 44(1) and ITA 44(6) are applied, the resulting capital gain on the land will be calculated as the lesser of:

- $550,000 ($900,000 - $350,000); and
- $300,000 (the excess of the $900,000 adjusted proceeds of disposition for the old land over the $600,000 cost of the replacement land).

This is a reduction of $200,000 ($500,000 - $300,000) from the amount that was calculated when only ITA 44(1) was applied. However, the adjusted cost base of the land would be unchanged by the use of ITA 44(6):

| | |
|---|---|
| Actual Cost | $600,000 |
| Capital Gain Reversed By Election ($550,000 - $300,000) | ( 250,000) |
| Deemed Adjusted Cost Base Of Replacement Land | $350,000 |

**Application To Building** With the proceeds of disposition transfer limited to $200,000, the capital gain on the building is still nil. Specifically, the gain will be the lesser of:

- $400,000 ($2,500,000 - $2,100,000); and
- Nil (reflecting the fact that there was no excess of the $2,500,000 adjusted proceeds of disposition for the old building over the $2,500,000 cost of the replacement building).

However, the capital cost and UCC of the building will be reduced by the application of ITA 44(6):

| | |
|---|---|
| Actual Cost | $2,500,000 |
| Capital Gain Reversed By The Two Elections | ( 400,000) |
| Deemed Capital Cost | $2,100,000 |
| Recapture Reversed By Election | ( 1,250,000) |
| UCC - Replacement Building | $ 850,000 |

Note that the UCC for the new building is equal to the UCC of the old building.

**Comparison** The table which follows compares the results of using only ITA 44(1) and ITA 13(4) with the results that arise when the ITA 44(6) election is also used.

| | **No ITA 44(6)** | **With ITA 44(6)** |
|---|---|---|
| Capital Gains | | |
| Land | $500,000 | $300,000 |
| Building | Nil | Nil |
| Replacement Property | | |
| Adjusted Cost Base Of Land | $ 350,000 | $ 350,000 |
| Capital Cost Of Building | 2,300,000 | 2,100,000 |
| UCC | 1,050,000 | 850,000 |

As you can see in the table, the use of ITA 44(6) has reduced the capital gain on the land by $200,000. However, it has done so at the cost of reducing the capital cost and UCC of the replacement building. There is a tax cost associated with this trade off in that only one-half of the capital gain would have been taxed in the current year, whereas the future CCA that has been lost would be fully deductible.

## Self Study Solution Eight - 16

### *Part A*

The proceeds of disposition were greater than the relevant capital costs for all the destroyed and expropriated assets. As a result, with respect to Net Income For Tax Purposes, the 2019 tax effects related to the involuntary dispositions would be as follows:

| | **Old Land** | **Old Building** | **Old Contents** |
|---|---|---|---|
| Proceeds Of Disposition | $723,000 | $4,800,000 | $1,256,000 |
| Adjusted Cost Base/Capital Cost | ( 256,000) | ( 3,700,000) | ( 972,000) |
| Capital Gains | $467,000 | $1,100,000 | $ 284,000 |
| Inclusion Rate | 1/2 | 1/2 | 1/2 |
| Taxable Capital Gains | $233,500 | $ 550,000 | $ 142,000 |

| | | |
|---|---|---|
| Opening UCC | $1,856,000 | $ 72,000 |
| Capital Cost (Less Than Proceeds) | ( 3,700,000) | ( 972,000) |
| Closing UCC | ($1,844,000) | ($900,000) |
| Recapture Of CCA | 1,844,000 | 900,000 |
| UCC - January 1, 2020 | Nil | Nil |

The increase in Net Income For Tax Purposes totals $3,669,500 ($233,500 + $550,000 + $142,000 + $1,844,000 + $900,000).

### Part B - Land

As the land, building and contents were replaced before the end of the second taxation year following the involuntary dispositions, Fraser can use both ITA 44(1) and ITA 13(4) to modify these results. These changes will be implemented through an amended return.

With respect to the land, the capital gain resulting from the use of the ITA 44(1) election would be the lesser of:

- $467,000 (regular capital gain); and
- $223,000 (the excess of the $723,000 proceeds of disposition for the old land over the $500,000 cost of the new land).

The taxable amount of this capital gain will be $111,500 [(1/2)($223,000)]. The original gain of $467,000 would be eliminated in the revised return.

### Part B - Building

With respect to the building, the capital gain resulting from the use of the ITA 44(1) election would be nil, the lesser of:

- $1,100,000 (regular capital gain); and
- Nil (reflecting the fact that there was no excess of the $4,800,000 proceeds of disposition for the old building over the $5,700,000 cost of the replacement building).

Under ITA 13(4), the revised recapture would be calculated as follows:

| | | |
|---|---|---|
| January 1, 2019 UCC Balance | | $1,856,000 |
| Deduction: | | |
| Lesser Of: | | |
| • Proceeds Of Disposition = $4,800,000 | | |
| • Capital Cost = $3,700,000 | ($3,700,000) | |
| Reduced By The Lesser Of: | | |
| • Normal Recapture = $1,844,000 | | |
| • Replacement Cost = $5,700,000 | 1,844,000 | ( 1,856,000) |
| Recapture Of 2019 CCA (Amended) | | Nil |

These new nil figures for the capital gain and recapture on the building disposition will replace the old figures of $1,100,000 and $1,844,000 that were included in the original 2019 return.

### Part B - Building Contents

If this was a voluntary disposition, the building contents would not be "former business property" and would not qualify for either the ITA 13(4) election or the ITA 44(1) election. However, as this is an involuntary disposition, both elections are available.

Under ITA 44(1), the revised capital gain would be $23,000, the lesser of:

- $284,000 (regular capital gain); and
- $23,000 (the excess of the $1,256,000 proceeds of disposition for the old building contents over the $1,233,000 cost of the replacement contents)

The taxable amount of the gain will be $11,500 [(1/2)($23,000)].

Under ITA 13(4), the revised recapture would be reduced from $900,000 to nil. The calculation is as follows:

| | | |
|---|---|---|
| January 1, 2019 UCC Balance | | $ 72,000 |
| Deduction: | | |
| Lesser Of: | | |
| • Proceeds Of Disposition = $1,256,000 | | |
| • Capital Cost = $972,000 | ($972,000) | |
| Reduced By The Lesser Of: | | |
| • Normal Recapture = $900,000 | | |
| • Replacement Cost = $1,233,000 | 900,000 | ( 72,000) |
| Recapture Of 2019 CCA (Amended) | | Nil |

These new figures for the capital gain and recapture on the contents disposition will replace the old figures of $284,000 and $900,000 that were included in the original 2019 return.

### Comparison - Part A and Part B

As shown in the table which follows, the disposition of the land, building and contents resulted in an increase in 2019 Net Income For Tax Purposes of $3,669,500. When the two elections are used, the amended 2019 return will show a Net Income For Tax Purposes of only $123,000. This is a savings of $3,546,500 ($3,669,500 - $123,000).

| | Part A As Reported | Part B With Elections |
|---|---|---|
| Land - Taxable Capital Gain | $ 233,500 | $111,500 |
| Building - Taxable Capital Gain | 550,000 | Nil |
| Contents - Taxable Capital Gain | 142,000 | 11,500 |
| Building - Recaptured CCA | 1,844,000 | Nil |
| Contents - Recaptured CCA | 900,000 | Nil |
| Total Increase | $3,669,500 | $123,000 |

### Part C

Assuming Fraser decides to use the elections under ITA 44(1) and ITA 13(4), the deemed cost and UCC of the replacement properties would be as follows:

| | Land | Building | Contents |
|---|---|---|---|
| Actual Cost Of Replacement Property | $500,000 | $5,700,000 | $1,233,000 |
| Capital Gain Reversed By Election | | | |
| Land ($467,000 - $223,000) | ( 244,000) | | |
| Building ($1,100,000 - Nil) | | ( 1,100,000) | |
| Contents ($284,000 - $23,000) | | | ( 261,000) |
| Deemed Cost Of Replacement Property | $256,000 | $4,600,000 | $ 972,000 |

| | Building | Contents |
|---|---|---|
| Deemed Capital Cost Of Replacement Property | $4,600,000 | $ 972,000 |
| Recaptured CCA Reversed By Election | | |
| Building ($1,844,000 - Nil) | ( 1,844,000) | |
| Contents ($900,000 - Nil) | | ( 900,000) |
| UCC - Replacement Property | $2,756,000 | $ 72,000 |

The deemed adjusted cost base of the replacement land has been reduced to the adjusted cost base of the old land.

The $4,600,000 deemed capital cost of the replacement building is equal to the $3,700,000 capital cost of the old building, plus the additional $900,000 ($5,700,000 - $4,800,000) in funds paid by Fraser in excess of the insurance proceeds.

In a similar fashion, the UCC for the new building is equal to the UCC of the old building ($1,856,000), plus the additional $900,000 ($5,700,000 - $4,800,000) in funds paid by Fraser in excess of the insurance proceeds.

The deemed capital cost of the new Class 8 assets is equal to the $972,000 capital cost of the old assets.

In a similar fashion, the UCC for the new Class 8 assets is equal to the $72,000 UCC of the old Class 8 assets. Since the $1,233,000 cost of the replacement assets is less than the $1,256,000 in insurance proceeds, there is no increase in the UCC.

### Part D - Optimal Transfer

The ITA 44(6) election applies when there is a disposition involving a combination of part land and part building. If, for either of the assets, the proceeds of disposition exceed the adjusted cost base, the election allows the transfer of all or part of that excess to the other asset.

As will be demonstrated in this problem, this can provide some relief when ITA 44(1) and ITA 13(4) fail to eliminate all of the capital gains arising on one part of the disposition of the old property. ITA 44(1) fully eliminated the capital gain on the building. However, a $223,000 capital gain remained on the land. This would suggest that it could be advantageous to transfer some of the proceeds of disposition from the land to the building.

The excess of the proceeds of disposition of the old land over the cost of the replacement land was $223,000 ($723,000 - $500,000). This is the maximum transfer needed from the land to the building. Since the excess of the cost of the replacement building over the old building's proceeds of disposition is $900,000 ($5,700,000 - $4,800,000), this transfer can be made with creating a capital gain on the building.

Applying ITA 44(6) will result in the following adjusted proceeds of disposition:

| | Land | Building |
|---|---|---|
| Actual Proceeds Of Disposition | $723,000 | $4,800,000 |
| Transfer Needed - Land To Building | ( 223,000) | 223,000 |
| Adjusted Proceeds Of Disposition | $500,000 | $5,023,000 |

### Part D - Application To Land

If both the ITA 44(1) and the ITA 44(6) elections are used, the capital gain on the land will be nil, calculated as the lesser of:

- $244,000 ($500,000 - $256,000); and
- Nil (the excess of the $500,000 adjusted proceeds of disposition for the old land over the $500,000 cost of the new land).

Given this result, the adjusted cost base of the replacement property will be calculated as follows:

| | |
|---|---|
| Actual Cost | $500,000 |
| Capital Gain Reversed By The Two Elections | ( 244,000) |
| Deemed Adjusted Cost Base Of Replacement Land | $256,000 |

Note that this is equal to the adjusted cost base of the old land.

### Part D - Application To The Building

With the proceeds of disposition transfer limited to $223,000, the capital gain on the building is still nil. Specifically, the gain will be the lesser of:

- $1,323,000 ($5,023,000 - $3,700,000); and
- Nil (there is still no excess of the $5,023,000 proceeds of disposition over the replacement cost of $5,700,000).

The deemed capital cost and UCC for the building would be calculated as follows:

| | |
|---|---|
| Actual Cost | $5,700,000 |
| Capital Gain Reversed By The Two Elections | ( 1,323,000) |
| Deemed Capital Cost | $4,377,000 |
| Recapture Reversed By ITA 13(4) | ( 1,844,000) |
| UCC - Replacement Building | $2,533,000 |

### *Part D - Comparison*

The table which follows compares the results of using only ITA 44(1) and ITA 13(4) with the results that arise when the ITA 44(6) election is also used.

| | No ITA 44(6) | With ITA 44(6) | Difference |
|---|---|---|---|
| Capital Gains | | | |
| Land | $223,000 | Nil | ($223,000) |
| Building | Nil | Nil | |
| Replacement Property | | | |
| Adjusted Cost Base Of Land | $ 256,000 | $256,000 | Nil |
| Capital Cost Of Building | 4,600,000 | 4,377,000 | ( 223,000) |
| UCC | 2,756,000 | 2,533,000 | ( 223,000) |

Note that this election is not made without a cost. Had the $223,000 been left as a capital gain, tax would have applied on only one-half of the total. While we have eliminated this $111,500 in income, we have given up future CCA for the full amount of the $223,000. In other words, we have given up $223,000 in future deductions in return for eliminating $111,500 of income in 2019.

## Self Study Solution Eight - 17

### *Employment Income*

Paul's commission income of $62,500 is large enough not to limit the deduction of his employment related expenses. The required calculations would be as follows:

| | |
|---|---|
| Salary | $ 85,000 |
| Additions: | |
| Commissions | 62,500 |
| Stock Option Benefit [(1,500)($19 - $15)] | 6,000 |
| Expense Allowance [(12)($2,500)] | 30,000 |
| Deductions: | |
| RPP Contributions | ( 4,100) |
| Professional Association Dues | ( 1,500) |
| Work Space In The Home Expenses (Note 1) | ( 2,290) |
| Automobile Costs | |
| CCA (Note 2) | ( 6,120) |
| Operating Costs [(80%)($6,100)] | ( 4,880) |
| Hotel Costs | ( 11,500) |
| Airline And Other Transportation | ( 9,200) |
| Client Meals And Entertainment [(1/2)($10,400)] | ( 5,200) |
| Net Employment Income | $138,710 |

**Note 1** As Paul has commission income, he can deduct 20 percent of all of the costs except the mortgage interest. This will provide a deduction of $2,290 [(20%)($3,400 + $7,200 + $850)].

**Note 2** The 2019 CCA would be based on a UCC calculated as though 100 percent of the available CCA had been taken in 2018. As the AccII provisions were not in place for 2018, the 100 percent CCA for 2018 would be $4,500 [(50%)(30%)($30,000)]. Using this figure, the deductible 2019 CCA would be $6,120 [(80%)(30%)($30,000 - $4,500)]. Note that the original base for CCA is limited to the Class 10.1 maximum of $30,000.

### *Property Income*

The required calculations here would be as follows:

| | |
|---|---|
| Non-Eligible Dividends | $ 5,400 |
| Gross Up On Non-Eligible Dividends [(15%)($5,400)] | 810 |
| Net Rental Income (Note 3) | 9,500 |
| Net Property Income | $15,710 |

**Note 3** As the change in use is from personal to business, the base for calculating CCA would be as follows:

| | | |
|---|---|---|
| Cost Of Building ($250,000 - $75,000) | | $175,000 |
| Fair Market Value At Change In Use ($375,000 - $100,000) | $275,000 | |
| Cost | ( 175,000) | |
| Increase In Value (Bump Up) | $100,000 | |
| Inclusion Factor | 1/2 | 50,000 |
| Cost For UCC And CCA Purposes | | $225,000 |
| One-Half Net Additions [(1/2)(($225,000)] | | ( 112,500) |
| CCA Base | | $112,500 |
| Rate For Class 1 | | 4% |
| CCA | | $ 4,500 |

Using this CCA figure, net rental income would be $9,500 ($14,000 - $4,500).

### *Net Taxable Capital Gains*

The required calculations here would be as follows:

| | | |
|---|---|---|
| Stock Option Shares [(1,500)($22 - $19)] | | $ 4,500 |
| Sale Of Paintings (Note 4) | | Nil |
| Land Sale | | |
| Total Gain ($350,000 - $100,000) | $250,000 | |
| Reserve For Land Sale (Note 5) | ( 178,571) | 71,429 |
| Change In Use: | | |
| Cottage - Land ($100,000 - $75,000) | $ 25,000 | |
| Cottage - Building ($275,000 - $175,000) | 100,000 | 125,000 |
| Net Capital Gains | | $200,929 |
| Inclusion Rate | | 1/2 |
| Net Taxable Capital Gains | | $100,465 |

**Note 4** The paintings would be listed personal property, which means that losses are only deductible to the extent of gains on listed personal property. While there was a gain on one painting of $5,000 ($15,000 - $10,000), there was a loss on the second painting of $6,000 ($10,000 - $4,000). This loss can be used to eliminate the gain on the first painting. However, the remaining $1,000 ($6,000 - $5,000) cannot be deducted in the current year. It can be carried back 3 years and forward 7 years to be applied against listed personal property gains in those years.

**Note 5** The total proceeds of disposition for the land would be $350,000 [$100,000 + (5)($50,000)]. Given this, the gain on the land would be $250,000 ($350,000 - $100,000). The maximum reserve would be $178,571, the lesser of:

- $178,571 [($250,000)($250,000 ÷ $350,000)]
- $200,000 [($250,000)(20%)(4 - 0)]

### Net And Taxable Income

The required calculations here would be as follows:

| | |
|---|---|
| Net Employment Income | $138,710 |
| Net Property Income | 15,710 |
| Net Taxable Capital Gains | 100,465 |
| **Net Income For Tax Purposes** | **$254,885** |
| Stock Option Deduction [(1/2)($6,000)] | ( 3,000) |
| **Taxable Income** | **$251,885** |

### Federal Tax Payable

The required calculations here would be as follows:

| | | |
|---|---|---|
| Tax On First $210,371 | | $48,719 |
| Tax On Next $41,514 ($251,885 - $210,371) At 33 Percent | | 13,670 |
| Tax Before Credits | | $62,389 |
| Tax Credits: | | |
| Basic Personal Amount | ($12,069) | |
| Spouse ($12,069 - $8,400) | ( 3,669) | |
| Canada Caregiver For Child - May | ( 2,230) | |
| Transfer Of May's Disability | ( 8,416) | |
| Disability Supplement | ( 4,909) | |
| Transfer Of Tuition Credit (Note 6) | ( 5,000) | |
| Medical Expenses (Note 7) | ( 14,448) | |
| EI | ( 860) | |
| CPP | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Total Credit Base | ($55,572 | |
| Rate | 15% | ( 8,336) |
| Subtotal | | $54,053 |
| Charitable Donations Credit (Note 8) | | ( 360) |
| Non-Eligible Dividend Tax Credit [(9/13)($810)] | | ( 561) |
| Federal Tax Payable | | $53,132 |

**Note 6** The transfer of Virginia's tuition credit would be $5,000, the lesser of:

- $5,000
- $9,350

**Note 7** The base for the medical expense tax credit would be calculated as follows:

| | |
|---|---|
| Total Medical Expenses | $16,800 |
| Lesser Of: | |
| • [(3%)($254,885)] = $7,647 | |
| • 2019 Threshold Amount = $2,352 | ( 2,352) |
| Medical Expense Tax Credit Base | $14,448 |

**Note 8** The charitable donations tax credit would be calculated as follows:

| | |
|---|---|
| 15 Percent Of $200 | $ 30 |
| 33 Percent Of The Lesser Of: | |
| $1,200 - $200 = $1,000 | |
| $251,885 - $210,371 = $41,514 | 330 |
| 29 Percent Of Nil ($1,200 - $1,200) | Nil |
| Total Credit | $360 |

## Self Study Solution Eight - 18

### *Employment Income*

Lorenzo's commission income of $43,000 is large enough not to limit the deduction of his employment related expenses. The required calculations here would be as follows:

| | |
|---|---|
| Salary | $136,000 |
| Additions | |
| Commissions | 43,000 |
| One-Half Total Bonus (Note 1) | 11,000 |
| Expense Allowance [(12)($2,500)] | 30,000 |
| Stock Option Benefit [(500)($108 - $92)] | 8,000 |
| Deductions | |
| RPP Contributions | ( 4,200) |
| Professional Association Dues | ( 1,500) |
| Automobile Costs | |
| CCA (Note 2) | ( 6,120) |
| Operating Costs [(80%)($6,300)] | ( 5,040) |
| Hotel Costs | ( 9,700) |
| Airline And Other Transportation | ( 5,400) |
| Client Meals And Entertainment [(1/2)($9,300)] | ( 4,650) |
| Workspace In Home Expenses (Note 3) | ( 978) |
| Net Employment Income | $190,412 |

**Note 1** As the bonus is paid more than 180 days after the employer's year end, the employer will not be able to deduct the accrual in 2019. This, however, does not change Lorenzo's tax position. He will not have to include one-half of the bonus in income until it is paid in 2020.

**Note 2** The 2019 CCA would be based on a UCC calculated as though 100 percent of the available CCA had been taken in 2018. As the AccII provisions did not come into effect until 2019, the 100 percent CCA of the Class 10.1 vehicle for 2018 would be $4,500 [(50%)(30%)($30,000 maximum)]. Using this figure, the deductible 2019 CCA would be $6,120 [(80%)(30%)($30,000 - $4,500)].

**Note 3** As Lorenzo has commission income, he can deduct 12 percent of all of the costs except the mortgage interest. This will provide a deduction of $978 [(12%)($1,250 + $1,300 + $5,600)].

### Property Income

The required calculations here would be as follows:

| | |
|---|---|
| Net Rental Income (Note 4) | $2,610 |
| Income Trust Distribution [(500)($2.40)] | 1,200 |
| Eligible Dividends | 4,200 |
| Gross Up On Eligible Dividends [(38%)($4,200)] | 1,596 |
| Total Property Income | $9,606 |

**Note 4** As the change in use is from personal to business, the base for calculating CCA would be as follows:

| | | |
|---|---|---|
| Cost Of Building ($105,000 - $42,000) | | $63,000 |
| Fair Market Value At Change In Use ($350,000 - $100,000) | $250,000 | |
| Cost | ( 63,000) | |
| Increase In Value (Bump Up) | $187,000 | |
| Inclusion Factor | 1/2 | 93,500 |
| Cost For UCC And CCA Purposes | | $156,500 |
| One-Half Net Additions [(1/2)($156,500)] | | ( 78,250) |
| CCA Base | | $ 78,250 |
| Rate For Class 1 | | 4% |
| CCA | | $ 3,130 |

Using this CCA figure, net rental income would be $2,610 ($5,740 - $3,130).

### Net Taxable Capital Gains

The required calculations here would be as follows:

| | | |
|---|---|---|
| Stock Option Shares [(500)($115 - $108)] | | $ 3,500 |
| Sculpture (Note 5) | | 38,000 |
| Change In Use: | | |
| Cottage - Land ($100,000 - $42,000) | $ 58,000 | |
| Cottage - Building ($250,000 - $63,000) | 187,000 | 245,000 |
| Real Property Income Trust (Note 6) | | 2,161 |
| Land Sale ($180,000 - $78,000) | $102,000 | |
| Reserve For Land Sale (Note 7) | ( 71,400) | 30,600 |
| Net Capital Gains | | $319,261 |
| Inclusion Rate | | 1/2 |
| Net Taxable Capital Gains | | $159,631 |

**Note 5** As the actual adjusted cost base of this personal use property is less than $1,000, its deemed adjusted cost base is $1,000 (the floor). This results in a gain of $38,000 ($39,000 - $1,000).

**Note 6** The $1,200 income trust distribution was used to acquired 20.51 additional units ($1,200 ÷ $58.50). Using this figure, the capital gain calculation would be:

| | |
|---|---|
| Proceeds Of Disposition [(520.51)($60.25)] | $31,361 |
| Adjusted Cost Base [(500)($56) + $1,200)] | ( 29,200) |
| Capital Gain | $ 2,161 |

**Note 7** The gain on the land would be $102,000 ($180,000 - $78,000). The maximum reserve would be $71,400, the lesser of:

- $71,400 [($102,000)($126,000 ÷ $180,000)]
- $81,600 [($102,000)(20%)(4 - 0)]

### *Net And Taxable Income*

The required calculations here would be as follows:

| | |
|---|---|
| Net Employment Income | $190,412 |
| Property Income | 9,606 |
| Net Taxable Capital Gains | 159,631 |
| Net Income For Tax Purposes | $359,649 |
| Stock Option Deduction [(1/2)($8,000)] | ( 4,000) |
| Taxable Income | $355,649 |

### *Federal Tax Payable*

The required calculations here would be as follows:

| | | |
|---|---|---|
| Tax On First $210,371 | | $48,719 |
| Tax On Next $145,278 ($355,649 - $210,371) At 33 Percent | | 47,942 |
| Tax Before Credits | | $96,661 |
| Tax Credits: | | |
| Basic Personal Amount | ($12,069) | |
| Spouse ($12,069 - $6,300) | ( 5,769) | |
| Canada Caregiver For Child - Anita | ( 2,230) | |
| Transfer Of Anita's Disability | ( 8,416) | |
| Disability Supplement | ( 4,909) | |
| Transfer Of Tuition - Lesser Of: | | |
| • Absolute Limit Of $5,000 | | |
| • Actual Tuition Of $9,300 | ( 5,000) | |
| Medical Expenses (Note 8) | ( 15,273) | |
| EI | ( 860) | |
| CPP | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Total Credit Base | ($58,497) | |
| Rate | 15% | ( 8,775) |
| Subtotal | | $87,886 |
| Charitable Donations Credit (Note 9) | | ( 756) |
| Dividend Tax Credit [(6/11)($1,596)] | | ( 871) |
| Federal Tax Payable | | $86,259 |

**Note 8** The base for the medical expense tax credit would be calculated as follows:

| | |
|---|---|
| Total Medical Expenses | $17,625 |
| Lesser Of: | |
| • [(3%)($359,649))] = $10,789 | |
| • 2019 Threshold Amount = $2,352 | ( 2,352) |
| Medical Expense Tax Credit Base | $15,273 |

**Note 9** The charitable donations tax credit would be calculated as follows:

| | |
|---|---|
| 15 Percent Of $200 | $ 30 |
| 33 Percent Of The Lesser Of: | |
| $2,200 ($2,400 - $200) | |
| $145,278 ($355,649 - $210,371) | 726 |
| 29 Percent Of Nil ($2,200 - $2,200) | Nil |
| Total Credit | $756 |

## Chapter 8 Learning Objectives

After completing Chapter 8, you should be able to:

1. Explain the economic basis for treating capital gains more favourably than other types of income (paragraph [P hereafter] 8-1 to 8-10).
2. Apply the general rules for the determination of gains and losses on the disposition of capital assets (P 8-11 to 8-36).
3. Calculate capital gains and losses on dispositions of identical properties (P 8-37 to 8-38).
4. Determine the tax consequences associated with partial dispositions of capital assets (P 8-39).
5. Calculate capital gains and losses on dispositions of capital assets with warranties attached (P 8-40 to P 8-41).

6. Apply the rules related to capital gains reserves (P 8-42 to 8-61).
7. Determine the tax consequences of a bad debt arising on a debt from the sale of capital assets (P 8-62 and 8-63).
8. Apply the special rule for sales of real property (P 8-64 to 8-71).
9. Apply the basic rules related to the reduction of taxation of capital gains arising from the disposition of a principal residence (P 8-72 to 8-81).
10. Describe the approaches available on the disposition of farm property that is also a principal residence (P 8-82 to 8-86).

11. Determine the tax consequences that result from dispositions of personal use property (P 8-87 to 8-91).
12. Determine the tax consequences that result from dispositions of listed personal property (P 8-92 to 8-94).
13. Determine the tax consequences that result from foreign currency transactions (P 8-95 to 8-106).
14. Determine the tax consequences that result from dispositions of options (P 8-107 to 8-112).
15. Determine the amount of capital gain or loss resulting from a change in the use of a capital asset (P 8-113 to 8-121).

16. Describe the principal residence elections that are available when there is a change in use (P 8-122 to 8-130).
17. Describe how an individual deals with the CCA on automobiles where the amount of employment or business usage changes over time. (P 8-131).
18. Explain the basic requirements for deemed dispositions on departures from Canada (P 8-132 to 8-133).
19. Apply the deferral provisions for capital gains arising on the disposition of small business investments (P 8-134 to 8-136).
20. Apply the deferral provisions for capital gains arising on voluntary and involuntary dispositions of property that is subsequently replaced (P 8-137 to 8-149).
21. Apply the deferral provisions for recapture arising on voluntary and involuntary dispositions of capital property that is subsequently replaced (P 8-150 to 8-165).
22. Explain the role of capital gains and losses in tax planning (P 8-166 to 8-168).

# CHAPTER 9

## How To Work Through Chapter 9

We recommend the following approach in dealing with the material in this Chapter:

**Coverage And Organization Of Chapter 9**

- Read paragraph 9-1 to 9-10 (in the textbook).

**Inclusions - Pension Benefits, Retiring Allowances, And Death Benefits**

- Read paragraph 9-11 to 9-19.

**Inclusions - Deferred Income Plans, Scholarships, Social Assistance Payments, Universal Child Care Benefits**

- Read paragraph 9-20 to 9-27.

**Deductions - CPP Contributions On Self-Employed Earnings**

- Read paragraph 9-28 to 9-31.

**Deductions - Moving Expenses**

- Read paragraph 9-32 to 9-45.
- Do Exercise Nine-1 (in the textbook) and check the solution in this Study Guide.
- Do Self Study Problem Nine-1 which is available on MyLab and check the solution in this Study Guide.

**Deductions - Child Care Expenses**

- Read paragraph 9-46 to 9-57.
- Do Exercise Nine-2 and check the solution in this Study Guide.
- Do Self Study Problems Nine-2 and Nine-3 and check the solutions in this Study Guide.

**Deductions - Disability Supports Deduction**

- Read paragraph 9-58 to 9-66.
- Do Exercise Nine-3 and check the solution in this Study Guide.

**Related Inclusions/Deductions - Employment Insurance Benefits**

- Read paragraph 9-67 and 9-68.

**Related Inclusions/Deductions - Pension Income Splitting**

- Read paragraph 9-69 to 9-77.
- Do Exercise Nine-4 and check the solution in this Study Guide.
- Do Self Study Problems Nine-4 and Nine-5 and check the solutions in this Study Guide.

**Related Inclusions/Deductions - Spousal And Child Support**

- Read paragraph 9-78 to 9-87.
- Do Exercise Nine-5 and check the solution in this Study Guide.

**Related Inclusions/Deductions - Annuity Payments Received**

- Read paragraph 9-88 to 9-96.
- Do Exercise Nine-6 and check the solution in this Study Guide.

**Tax Free Savings Accounts (TFSAs)**

- Read paragraph 9-97 to 9-101.

**Registered Education Savings Plans (RESPs), Canada Education Savings Grants**

- Read paragraph 9-102 to 9-110.
- Do Exercise Nine-7 and check the solution in this Study Guide.
- Read paragraph 9-111 to 9-129.
- Do Self Study Problem Nine-6 and check the solution in this Study Guide.

**Comparison of TFSAs, RRSPs And RESPs**

- Read paragraph 9-130 to 9-138.

**Registered Disability Savings Plans (RDSPs)**

- Read paragraph 9-139 to 9-141.

**Non-Arm's Length Transfers Of Property - Inadequate Considerations (ITA 69)**

- Read paragraph 9-142 to 9-156.
- Do Exercise Nine-8 and check the solution in this Study Guide.
- Read paragraph 9-157 to 9-159.
- Do Exercise Nine-9 and check the solution in this Study Guide.
- Do Self Study Problem Nine-7 and check the solution in this Study Guide.

**Inter Vivos Transfers To A Spouse**

- Read paragraph 9-160 to 9-167.
- Do Exercise Nine-10 and check the solution in this Study Guide.

**Non-Arm's Length Transfers Of Depreciable Assets**

- Read paragraph 9-168 to 9-172.
- Do Exercises Nine-11 and Nine-12 and check the solutions in this Study Guide.
- Do Self Study Problem Nine-8 and check the solution in this Study Guide.

**Inter Vivos Transfer Of Farm Or Fishing Property To A Child**

- Read paragraph 9-173 to 9-176.
- Do Exercise Nine-13 and check the solution in this Study Guide.

**Deemed Dispositions - On Death**

- Read paragraph 9-177 to 9-185.
- Do Exercise Nine-14 and check the solution in this Study Guide.
- Read paragraph 9-186.
- Do Self Study Problem Nine-9 and check the solution in this Study Guide.

**Income Attribution**

- Read paragraph 9-187 to 9-205.
- Do Exercises Nine-15 to Nine-17 and check the solutions in this Study Guide.
- Read paragraph 9-206 to 9-209.
- Do Self Study Problems Nine-10 and Nine-11 and check the solutions in this Study Guide.

**Anti-Avoidance Provisions And Tax Planning**

- Read paragraph 9-210 to 9-212.
- Do Self Study Problems Nine-12 and Nine-13 and check the solutions in this Study Guide.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 9. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 9 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 9 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 9 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 9 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

## Solutions to Chapter Nine Exercises

### *Exercise Nine - 1 Solution*

Ms. Chevlak cannot deduct the $1,300 house hunting trip. However, this amount can be reimbursed by her employer without creating a taxable benefit. Given these facts, the employer should reimburse this amount directly, with the balance of $4,700 being paid as a general moving allowance. The amount that can be deducted in 2019 against this general allowance, as well as the amount to be carried forward would be calculated as follows:

| | |
|---|---|
| Allowance Paid By Employer ($6,000 - $1,300) | $4,700 |
| Moving Costs | ( 6,400) |
| Lease Penalty | ( 1,200) |
| Available Deduction | ($2,900) |
| Income At New Location = Maximum Deduction | 2,000 |
| Carry Forward | ($ 900) |

The maximum moving expense deduction is limited to $2,000, the income at the new location. The remaining $900 can be carried forward and deducted against income earned at the new location in a subsequent year.

If a $6,000 moving allowance had been paid, the full amount would have been included in employment income with the same deductions of $7,600 ($6,400 + $1,200). After the $2,000 in income, this would have left $400 in income rather than a future deduction of $900. The $1,300 difference is the cost of the house hunting trip.

### *Exercise Nine - 2 Solution*

The deduction will have to be made by the lower income spouse, Mr. Sampras. The deduction will be the least of the following amounts:

- The actual costs of $10,500.
- Annual Child Care Expense Amount of $18,000 [(1)($8,000) + (2)($5,000)].
- 2/3 of Mr. Sampras' earned income, an amount of $13,000 [(2/3)($14,000 + $5,500)].

The least of these three amounts is $10,500.

### Exercise Nine - 3 Solution

As Jose is not eligible for the disability tax credit, he will deduct the cost of full time attendant care under ITA 64. When combined with the other disability support costs and the reimbursement, the qualifying costs total $36,000 ($23,000 + $18,000 - $5,000). As this is less than his income from employment, he will be able to deduct the full amount of these costs as his disability supports deduction.

### Exercise Nine - 4 Solution

In the absence of pension income splitting John would not pay any taxes for 2019. Joanna's Net Income For Tax Purposes before any OAS clawback would be $92,400 ($85,000 + $7,400). There would be an OAS clawback of $2,223 [(15%)($92,400 - $77,580), leaving Joanna with a Net and Taxable Income of $90,177 ($92,400 - $2,223). Based on this figure, her 2019 Amount Owing would be calculated as follows:

| | | |
|---|---|---|
| Tax Of First $47,630 | | $ 7,145 |
| Tax On Next $42,547 ($90,177 - $47,630) At 20.5% | | 8,722 |
| Total Before Credits | | $15,867 |
| Basic Personal | ($12,069) | |
| Credits: | | |
| Spousal ($12,069 - $7,400) | ( 4,669) | |
| Age [$7,494 - (15%)($90,177 - $37,790) | Nil | |
| Pension | ( 2,000) | |
| Spouse's Age | ( 7,494) | |
| Total | ($26,232) | |
| Rate | 15% | ( 3,935) |
| Federal Tax Payable | | $11,932 |
| OAS Clawback | | 2,223 |
| Total Amount Owing - Joanna Only | | $14,155 |

If maximum pension splitting is used, it will give both Joanna and John Net and Taxable Income of $49,900 [($85,000)(1/2) + $7,400]. Since this is below the income threshold, there will be no clawback of OAS for Joanna or John. Based on these figures, the Amount Owing for both Joanna and John would be the same and is calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $7,145 |
| Tax On Next $2,270 ($49,900 - $47,630) At 20.5% | | 465 |
| Total Before Credits | | $7,610 |
| Credits: | | |
| Basic Personal | ($12,069) | |
| Age [$7,494 - (15%)($49,900 - $37,790) | ( 5,678) | |
| Pension | ( 2,000) | |
| Total | ($19,747) | |
| Rate | 15% | ( 2,962) |
| Federal Tax Payable | | $ 4,648 |
| OAS Clawback | | Nil |
| Total Amount Owing For Each | | $ 4,648 |

With pension income splitting, the total amount owing by Joanna and John would be $9,296 [(2)($4,648)]. This is an improvement of $4,859 over the $14,155 that Joanna would have paid without income splitting. Further savings would be available at the provincial level.

### Exercise Nine - 5 Solution

The total required child support is $9,000 [(6 Months)($1,500)] and Sandra's $12,000 [(3)($1,500 + $2,500)] in payments will be allocated to this requirement first. This means that $9,000 of her payment will not be deductible to her or taxable to Jerry. The remaining $3,000 ($12,000 - $9,000) will be considered a payment towards spousal support and will be deductible to Sandra and taxable to Jerry.

### Exercise Nine - 6 Solution

A total of $63,492 [(4)($15,873)] in payments will be received from this annuity. The $15,873 will be included in his annual tax return. However, because the annuity was purchased with after tax funds, he is eligible for a deduction equal to:

$$\left[\frac{\$55,000}{\$63,492}\right][\$15,873] = \underline{\underline{\$13,750}} \text{ Deduction}$$

As a result, Mr. Hollock's Net Income For Tax Purposes will increase by $2,123 ($15,873 - $13,750) each year.

### Exercise Nine - 7 Solution

For 2018, the contributions to Jeanine's RESP total $1,700 ($500 + $1,200). This is within the $2,500 limit for contributions eligible for CESGs. This means that the 2018 CESG would be calculated as follows:

| | |
|---|---:|
| First $500 At 40 Percent | $200 |
| Remaining $1,200 ($1,700 - $500) At 20 Percent | 240 |
| Total CESG For 2018 | $440 |

For 2019, the contributions to Jeanine's RESP total $3,900 ($1,500 + $2,400). The CESG room is limited to $3,300 [(2)($2,500) - $1,700 from the previous year]. This means that $600 ($3,900 - $3,300) of the total contributions will not be eligible for CESGs. Given this, the 2019 CESG would be calculated as follows:

| | |
|---|---:|
| First $500 At 40 Percent | $200 |
| Remaining $2,800 ($3,300 - $500) At 20 Percent | 560 |
| Total CESG For 2019 | $760 |

If it is expected that annual contributions to Jeanine's RESP will be less than $2,500 in the future, this would suggest that Jeanine's father should limit his 2019 contribution to $900 and defer the extra $600 to the following year. In that year, it would be eligible for the CESG.

### Exercise Nine - 8 Solution

Mr. Lipky's proceeds of disposition will be the amount received of $95,000, resulting in a capital loss of $5,000 ($95,000 - $100,000). His brother's adjusted cost base will be the fair market value of the land, or $75,000, and he will have no gain or loss on his sale at $75,000. In this case, the application of the ITA 69 rules has resulted in the potential loss of $20,000 ($95,000 - $75,000) not being available to either Carl Lipky or his brother.

### Exercise Nine - 9 Solution

Under ITA 69(1.2), the proceeds of disposition in this case will be the greater of the $33,000 actual proceeds and the $211,000 fair market value of the property without considering the lease. The greater amount would be $211,000, resulting in a taxable capital gain for Mr. Bates of $89,000 [(1/2)($211,000 - $33,000)]. The adjusted cost base to the corporation would be the actual transfer price of $33,000. This would lead to double taxation on a subsequent sale of the property on the difference between $211,000 and $33,000.

### Exercise Nine - 10 Solution

**ITA 73(1) Applies** If Mr. Schwartz does not elect out of ITA 73(1), the results are as follows:

- His deemed proceeds of disposition will be equal to the $225,000 adjusted cost base of the land. Given this, there will be no tax consequences as a result of this transfer.
- The adjusted cost base to his spouse will be deemed to be $225,000, despite the fact that she paid $300,000 for the land.

**Elect Out Of ITA 73(1)** If Mr. Schwartz elects out of ITA 73(1):

- The adjusted cost base of the land to his spouse will be $300,000, the amount she paid.
- He will have to include a taxable capital gain in his Net Income For Tax Purposes calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $300,000 |
| Adjusted Cost Base | ( 225,000) |
| Capital Gain | $ 75,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 37,500 |

### Exercise Nine - 11 Solution

**ITA 73(1) Applies** If Ms. Sharp does not elect out of ITA 73(1), the results will be as follows:

- The deemed proceeds to Ms. Sharp will be the $110,000 UCC value, resulting in no tax consequences for her at the time of transfer.
- For CCA and recapture purposes the spouse will receive the property at $110,000.
- Despite the fact that her spouse paid $225,000, he would retain her $175,000 capital cost, with the difference between $175,000 and the $110,000 UCC balance considered to be deemed CCA.

**Elect Out Of ITA 73(1)** If Ms. Sharp elects out of ITA 73(1):

- For capital gains purposes, the capital cost for Ms. Sharp's husband would be $225,000. However, for CCA and recapture purposes, ITA 13(7)(e) would deem his capital cost to be $200,000 [($175,000 + (1/2)($225,000 - $175,000)].
- She will include the following amounts in her Net Income For Tax Purposes:

| | |
|---|---|
| Proceeds Of Disposition | $225,000 |
| Capital Cost | ( 175,000) |
| Capital Gain | $ 50,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 25,000 |

| | |
|---|---|
| UCC | $110,000 |
| Deduct Lesser Of: | |
| Proceeds Of Disposition = $225,000 | |
| Capital Cost = $175,000 | ( 175,000) |
| Negative Ending Balance = Recapture Of CCA | ($ 65,000) |

### Exercise Nine - 12 Solution

**Ms. Lee** The tax consequence for Ms. Lee is as follows:

| | |
|---|---|
| UCC For Ms. Lee | $37,200 |
| Deduct Lesser Of: | |
| Proceeds Of Disposition = $40,000 | |
| Capital Cost = $53,000 | ( 40,000) |
| Negative Ending Balance = Recapture Of CCA | ($ 2,800) |

**Ms. Lee's Father** As this was a non-arm's length transfer at a value below the transferor's capital cost, ITA 13(7)(e) will deem the father's capital cost to be equal to Ms. Lee's capital cost of $53,000. The $13,000 difference between this value and the $40,000 he paid for the asset is treated as deemed CCA, resulting in a UCC value of $40,000. When he later sells the asset for $44,000, the result will be as follows:

| | |
|---|---|
| UCC For Ms. Lee's Father | $40,000 |
| Deduct Lesser Of: | |
| Proceeds Of Disposition = $44,000 | |
| Deemed Capital Cost = $53,000 | ( 44,000) |
| Negative Ending Balance = Recapture Of CCA | ($ 4,000) |

### Exercise Nine - 13 Solution

With respect to the land, the $280,000 paid is between the $250,000 adjusted cost base floor and the $325,000 fair market value ceiling. Therefore, the proceeds of disposition would be $280,000, resulting in a taxable capital gain for Mr. Nobel of $15,000 [(1/2)($280,000 - $250,000]). The $280,000 would also be the adjusted cost base for his daughter.

With respect to the barn, as there was no consideration given, the transfer would take place at the UCC floor of $85,000. There would be no tax consequences for Mr. Nobel. With respect to his daughter, she would assume a UCC value of $85,000 but would retain the original capital cost of $115,000. The $30,000 difference would be considered deemed CCA.

### Exercise Nine - 14 Solution

With respect to truck A, it would be transferred to her husband at its UCC value of $25,500 [(1/2)($51,000)]. No income would be included in Ms. Lardner's final tax return and, while the UCC value for the truck in Michel's hands would be the $25,500 transfer value, it would retain its original capital cost of $42,000 with the difference between the two values being treated as deemed CCA.

Truck B would be transferred to Melinda at its fair market value of $33,000. This means that the proceeds of disposition for the two trucks would be $58,500 ($25,500 + $33,000). This would result in recapture of $7,500 ($51,000 - $58,500) being included in Ms. Lardner's final tax return. The $33,000 transfer price would be the UCC value to Melinda. Since Ms. Lardner's original capital cost exceeds the $33,000 fair market value, Melinda would retain Ms. Lardner's $42,000 capital cost with the difference between the two values being treated as deemed CCA.

### Exercise Nine - 15 Solution

> **NOTE** You may find it helpful to review Exercises Nine-10 and Nine-11 before completing this Exercise as many students find the rules related to the ITA 73(1) roll-overs difficult to understand.

ITA 73(1) provides for a tax free rollover of capital property to a spouse. The tax consequences for Mr. and Mrs. Moreau for the two years can be outlined as follows:

- 2018 for Mr. Moreau - none.
- 2018 for Mrs. Moreau - none.
- 2019 for Mr. Moreau - none.
- 2019 for Mrs. Moreau - total income of $12,950. She would have taxable dividends of $3,450 and the taxable capital gain of $9,500 [(1/2)($42,000 - $23,000)] attributed to her.

### Exercise Nine - 16 Solution

There is no provision for a tax free transfer of shares to a child. The tax consequences for Norah and Nicki Moreau for the two years can be outlined as follows:

- 2018 for Nicki - none.
- 2018 for Norah - a taxable capital gain of $7,000 [(1/2)($37,000 - $23,000)].
- 2019 for Nicki - a taxable capital gain of $2,500 [(1/2)($42,000 - $37,000)].
- 2019 for Norah - taxable dividends of $3,450 attributed to her.

### Exercise Nine - 17 Solution

Since Mr. Bronski does not elect out of ITA 73(1) by including a gain on his tax return at the time of the transfer, the income attribution rules will apply. Even if he did elect out of ITA 73(1), the rules would still apply as the loan does not bear interest at the prescribed rate.

There will be no tax consequences for either Mr. or Mrs. Bronski in 2018. Because the transfer is a tax free rollover, the adjusted cost base of the bonds to Mrs. Bronski will be $115,000. All of the 2019 interest income of $6,100 will be attributed to Mr. Bronski. In addition to the interest of $6,100, there would be a taxable capital gain of $7,000 [(1/2)($129,000 - $115,000)], which would also be attributed to Mr. Bronski. The total addition to Mr. Bronski's income for 2019 is $13,100 ($6,100 + $7,000). There will be no tax consequences for Mrs. Bronski in 2019.

## Self Study Solution Nine - 1

Costs for food and lodging at or near an old or new residence are limited to a maximum period of 15 days. Note that the 9 days spent travelling to Vancouver are not included in the 15 day total. Since the daily costs for her Montreal stay are higher than those for her Vancouver stay, she claims the 15 day maximum at the Montreal rate.

The deductible moving expenses can be calculated as follows:

| | | |
|---|---|---|
| House Hunting Trip Hotel And Food (Not Deductible) | | Nil |
| Real Estate Commission - Montreal Home | | $27,500 |
| Legal Fees - Montreal Home | | 800 |
| Other Montreal Home Costs (Not Deductible) | | Nil |
| Storage Costs | | 2,200 |
| Moving Company Charges | | 10,200 |
| Hotel In Montreal (15 Nights At $350) | | 5,250 |
| Food - Maximum (15 Days At $51 Flat Rate) | | 765 |
| Expenses Of Travel To Vancouver: | | |
| Gas (Using Simplified Method) | Nil | |
| Simplified Milage Rate [(4,558 @ $0.58) | $2,644 | |
| Hotel (9 Nights - Total) | 1,575 | |
| Food (9 Days At $51 Simplified Rate) | 459 | 4,678 |
| Vancouver Hotel | | Nil |
| Moving Expense Deductions Available | | $51,393 |

Moving costs can only be deducted against "income earned at the new work location". This raises the question as to whether the general moving allowance, compensation for house loss, and payment for higher housing costs would fall into this category. It would be our view that since these amounts were paid by the Vancouver office subsequent to Michelle commencing work at that location, they would qualify. Based on this view, the total employment income at the new work location would be as follows:

| | |
|---|---|
| Salary At New Location (One Month @ $15,000) | $15,000 |
| General Moving Allowance | 20,000 |
| Compensation For Loss On Montreal Residence (Note 1) | 30,000 |
| Payment For Higher Housing Costs (Note 2) | 10,000 |
| Total Employment Income At New Location | $75,000 |

**Note 1** Under ITA 6(20), one-half of any housing loss reimbursement in excess of $15,000 must be included in income. As the total reimbursement was $75,000 ($625,000 - $550,000), the inclusion would be $30,000 [(1/2)($75,000 - $15,000)].

**Note 2** Any amounts paid to compensate an employee for higher housing costs must be included in income in full.

As the deductible costs are less than the income at the new location, they are fully deductible in Michelle's 2019 tax return. There would be no carry forward of moving costs.

## Self Study Solution Nine - 2

***Mrs. Fortin***

Generally, the spouse with the lower income must claim the deduction for child care expenses. However, under certain circumstances, for example if this spouse is hospitalized, the spouse with the higher income can claim the deduction for the period of hospitalization. Thus Mrs. Fortin can claim the least of the following:

| | Case A | Case B |
|---|---|---|
| Actual Payments [($400)(48)] | $ 19,200 | $19,200 |
| 2/3 Of Earned Income [(2/3)($84,000)] | $56,000 | $56,000 |
| Annual Expense Limit: | | |
| Case A [(2)($8,000)] | $16,000 | |
| Case B [(2)($8,000) + (1)($5,000)] | | $21,000 |
| Periodic Expense Limit: | | |
| Case A [(2)($200)(6 weeks)] | $ 2,400 | |
| Case B {[(2)($200)(6 weeks)] + [(1)($125)(6 weeks)]} | | $ 3,150 |

In Case A, the least of these figures is $2,400, the Periodic Expense Limit. In Case B, the least of the figures is $3,150, also the Periodic Expense Limit.

***Mr. Fortin***

The calculations for Mr. Fortin are as follows:

| | Case A | Case B |
|---|---|---|
| Actual Payments | $19,200 | $19,200 |
| 2/3 Of Earned Income [(2/3)($8,000)] | $ 5,333 | $ 5,333 |
| Annual Expense Limit: | | |
| Case A [(2)($8,000)] | $16,000 | |
| Case B [(2)($8,000) + (1)($5,000)] | | $21,000 |

The lowest figure in both cases is $5,333, two-thirds of Mr. Fortin's earned income. Mr. Fortin's deduction for the current year will be reduced by the amount claimed by Mrs. Fortin. Mr. Fortin's deduction for the current year is $2,933 ($5,333 - $2,400) in Case A, and $2,183 ($5,333 - $3,150) in Case B.

## Self Study Solution Nine - 3

The deductible actual costs are as follows:

| | |
|---|---|
| Actual Costs Excluding Camp Costs (48 weeks At $260) | $12,480 |
| Periodic Cost Limit For Camp Weeks [($125)(1)(4 weeks) + ($200)(1)(4 weeks) + ($275)(1)(4 weeks)] | 2,400 |
| Deductible Actual Costs | $14,880 |

Generally, the common-law partner with the lower income must claim the deduction for child care expenses. In this case, that would be Sue Brendal. However, under certain circumstances, the common-law partner with the higher income can claim a deduction that is subject to a weekly limitation.

One of these circumstances is when the lower income common-law partner is in attendance on a full time basis at a designated financial institution. This means that for the 5 week period that Sue is attending the accounting course, Maureen can deduct limited child care expenses.

The calculations for determining the deductible costs for each individual are as follows:

| | Maureen | Sue |
|---|---|---|
| Actual Costs And Limited Camp Costs | $14,880 | $14,880 |
| Annual Expense Limit [($5,000)(1) + ($8,000)(1) + ($11,000)(1)] | $24,000 | $24,000 |
| 2/3 Of Earned Income | | |
| [(2/3)($216,000)] | $144,000 | |
| [(2/3)($24,000)] | | $16,000 |
| Periodic Expense Limit [($125)(1)(5 weeks) + ($200)(1)(5 weeks) + ($275)(1)(5 weeks)] | $3,000 | N/A |

The least of these amounts for Maureen is $3,000. You should note that there is no requirement that actual payments be allocated on the basis of the time that Sue was attending the accounting course.

The lowest figure for Sue is $14,880, the actual child care costs. Sue's deduction for the current year of $11,880 ($14,880 - $3,000) has been reduced by the amount claimed by Maureen.

As Maureen is the higher income common-law partner, her 3 week stay in the hospital has no effect on the child care expense calculations.

## Self Study Solution Nine - 4

### *Net And Taxable Income*

| John's Income | No Split | With Split |
|---|---|---|
| Pension Receipt | $ 64,000 | $64,000 |
| Net Rental Income | 23,000 | 23,000 |
| Pension Income To Fatima | N/A | ( 32,000) |
| Net And Taxable Income | $87,000 | $55,000 |

| Fatima's Income | No Split | With Split |
|---|---|---|
| Interest Income | $8,400 | $ 8,400 |
| Pension Income From John | N/A | 32,000 |
| Net And Taxable Income | $8,400 | $40,400 |

### *Federal Tax Payable With No Pension Income Splitting*

**Fatima** Fatima's federal Tax Payable with no pension income splitting would be calculated as follows:

| | |
|---|---|
| Tax Before Credits [(15%)($8,400)] | $1,260 |
| Basic Personal Credit [(15%)($12,069)] | ( 1,810) |
| Federal Tax Payable - Fatima | Nil |

**John** Without pension income splitting, John's Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax Of First $47,630 | | $7,145 |
| Tax On Next $39,370 ($87,000 - $47,630) At 20.5% | | 8,071 |
| Total Before Credits | | $15,216 |
| Credits: | | |
| Basic Personal | ($12,069) | |
| Spousal ($12,069 - $8,400) | ( 3,669) | |
| Pension | ( 2,000) | |
| Total | ($17,738) | |
| Rate | 15% | ( 2,661) |
| Federal Tax Payable - John | | $12,555 |

### *Federal Tax Payable With Pension Income Splitting*

**Fatima** When pension income splitting is used, Fatima's Tax Payable would be as follows:

| | | |
|---|---|---|
| Tax Before Credits [(15%)($40,400)] | | $6,060 |
| Credits: | | |
| Basic Personal | ($12,069) | |
| Pension | ( 2,000) | |
| Total | ($14,069) | |
| Rate | 15% | ( 2,110) |
| Federal Tax Payable - Fatima | | $ 3,950 |

**John** With pension income splitting, John's Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $7,145 |
| Tax On Next $7,370 ($55,000 - $47,630) At 20.5% | | 1,511 |
| Tax Before Credits | | $8,656 |
| Credits: | | |
| Basic Personal | ($12,069) | |
| Spousal | Nil | |
| Pension | ( 2,000) | |
| Total | ($14,069) | |
| Rate | 15% | ( 2,110) |
| Federal Tax Payable - John | | $6,546 |

***Comparison***

| | |
|---|---|
| Federal Tax Payable Without Income Splitting (John Only) | $12,555 |
| Federal Tax Payable With Income Splitting ($3,950 + $6,546 ) | ( 10,496) |
| Savings With Pension Income Splitting | $ 2,059 |

## Self Study Solution Nine - 5

***Part A - Net And Taxable Income***

| **Martin's Income** | **Scenario 1** | **Scenario 2** |
|---|---|---|
| Pension Receipt | $124,000 | $124,000 |
| Pension Income To Sally | N/A | ( 62,000) |
| OAS | N/A | 7,400 |
| Net Income Before OAS Clawback | $124,000 | $ 69,400 |
| OAS Clawback (Notes 1 and 2) | N/A | N/A |
| Net And Taxable Income - Martin | $124,000 | $ 69,400 |

| **Sally's Income** | **Scenario 1** | **Scenario 2** |
|---|---|---|
| OAS | $ 7,400 | $ 7,400 |
| Interest Earned | 43,000 | 43,000 |
| Pension Income From Martin | N/A | 62,000 |
| Net Income Before OAS Clawback | $50,400 | $112,400 |
| OAS Clawback (Note 3) | Nil | ( 5,223) |
| Net And Taxable Income - Sally | $50,400 | $107,177 |

**Note 1** As Martin did not apply for OAS in Scenario 1, there can be no clawback.

**Note 2** In Scenario 2, Martin's Net Income is less than the clawback income threshold of $77,580 so there is no clawback.

**Note 3** With pension income splitting, the OAS clawback for Sally would be $5,223 [(15%)($112,400 - $77,580)].

***Part B - Scenario 1***

Without pension income splitting, Martin's Amount Owing would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $95,259 | | $16,908 |
| Tax On Next $28,741 ($124,000 - $95,259) At 26% | | 7,473 |
| Tax Before Credits | | $24,381 |
| Credits: | | |
| Basic Personal | ($12,069) | |
| Age [$7,494 - (15%)($124,000 - $37,790) | Nil | |
| Pension | ( 2,000) | |
| Total | ($14,069) | |
| Rate | 15% | ( 2,110) |
| Federal Tax Payable | | $22,271 |
| OAS Clawback | | N/A |
| Total Amount Owing - Martin | | $22,271 |

Without pension income splitting, Sally's Amount Owing would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $7,145 |
| Tax On Next $2,770 ($50,400 - $47,630) At 20.5% | | 568 |
| Tax Before Credits | | $7,713 |
| Credits: | | |
| Basic Personal | ($12,069) | |
| Age [$7,494 - (15%)($50,400 - $37,790) | ( 5,603) | |
| Disability | ( 8,416) | |
| Total | ($26,088) | |
| Rate | 15% | ( 3,913) |
| Total Amount Owing (No Clawback) - Sally | | $3,800 |

***Part B - Scenario 2***

With pension income splitting and the OAS payments, Martin's Amount Owing would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $7,145 |
| Tax On Next $21,770 ($69,400 - $47,630) At 20.5% | | 4,463 |
| Tax Before Credits | | $11,608 |
| Credits: | | |
| Basic Personal | ($12,069) | |
| Age [$7,494 - (15%)($69,400 - $37,790)] | ( 2,753) | |
| Pension | ( 2,000) | |
| Total | ($16,822) | |
| Rate | 15% | ( 2,523) |
| Total Amount Owing (No Clawback) - Martin | | $ 9,085 |

With pension income splitting, Sally's Amount Owing would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $95,259 | | $16,908 |
| Tax On Next $11,918 ($107,177 - $95,259) At 26% | | 3,099 |
| Tax Before Credits | | $20,007 |
| Credits: | | |
| Basic Personal | ($12,069) | |
| Age [$7,494 - (15%)($107,177 - $37,790)] | Nil | |
| Disability | ( 8,416) | |
| Pension | ( 2,000) | |
| Total | ($20,485) | |
| Rate | 15% | ( 3,073) |
| Federal Tax Payable | | $16,934 |
| OAS Clawback | | 5,223 |
| Total Amount Owing - Sally | | $22,157 |

### *Part B - Comparison Of After Tax Income*

This amount would be calculated as follows:

| | | |
|---|---|---|
| Amount Owing - Scenario 1 ($22,271 + $3,800) | | $26,071 |
| Amount Owing - Scenario 2 ($9,085 + $22,157) | ($31,242) | |
| OAS Benefits Received - Scenario 2 | 7,400 | ( 23,842) |
| Cash Advantage - Scenario 2 | | $ 2,229 |

This problem illustrates the complexity associated with pension income splitting. Although Scenario 2 served to make the incomes more equal, it had several negative side effects (e.g., the clawback of a large part of Sally's OAS, as well as the elimination of her age credit.) However, there is a definite cash advantage to Scenario 2.

The result would be improved if pension income splitting was limited to an amount that would give Martin a Net Income of the OAS clawback income threshold as that would reduce Sally's OAS clawback without clawing back his OAS. However, that may not be the best solution. Finding the optimum solution is not an intuitive process, especially if there are other factors such as medical costs, and would require the use of tax software.

## Self Study Solution Nine - 6

### *Part A - Net Income For Tax Purposes*

The minimum Net Income For Tax Purposes that can be reported by Mr. Masters is calculated as follows:

| | | |
|---|---|---|
| Wages From Summer Employment | | 5,400 |
| Moving Costs To Pelican Lake (Note 1) | | ( 350) |
| Scholarship Received | $3,500 | |
| Exempt Portion Of Scholarship (100%) | ( 3,500) | Nil |
| Moving Costs To Winnipeg (Note 1) | | Nil |
| Eligible Dividends Received | | 2,000 |
| Gross Up Of Dividends (38 Percent) | | 760 |
| Child Support Received (Note 2) | | Nil |
| Inheritance (Not Taxable) | | Nil |
| TFSA Contributions (Note 3) | | Nil |
| TFSA Withdrawal (Note 3) | | Nil |
| Net Income For Tax Purposes | | $7,810 |

**Note 1** The cost of the move to Pelican Lake is deductible against the income that was earned there as it is more than 40 km from Winnipeg. Since there was no addition to his Net Income For Tax Purposes due to his scholarship, he cannot deduct the cost of the move back to Winnipeg.

**Note 2** While spousal support is taxable to the recipient and deductible to the payor, child support is not taxable to the recipient or deductible to the payor.

**Note 3** TFSA contributions and withdrawals have no tax consequences since the total $20,000 contributed is less than the maximum contribution allowable. There is also no income attribution as a result of the TFSA contribution by Mr. Masters' wife.

### *Part B - Registered Education Savings Plan*

Payments into an RESP are not deductible. However, no tax liability is created by the amounts earned on the assets held in the plan. Rather, the earnings of these assets will be taxed in the hands of the recipient (presumably Mr. Masters' son) when the funds are withdrawn. However, to be eligible to receive these payments, the child must be in full time or part time attendance at an institution that would qualify the child for the education tax credit.

Mr. Masters must obtain information regarding the contribution room available for the Canada Education Savings Grant (CESG). Since his parents have been contributing to the RESP, it is not possible to determine how much CESG his son has available without more information.

Given his wife's profession, it is likely the family income is far too high to qualify for the Canada Learning Bonds program. As a result, that program would have no impact on any advice related to Mr. Masterson's son's RESP.

## Self Study Solution Nine - 7

### *Part A - Case 1 - Sale To Arm's Length Party*

The result for Martin would be as follows:

| | |
|---|---|
| Proceeds Of Disposition | $500,000 |
| Adjusted Cost Base | ( 360,000) |
| Capital Gain | $140,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 70,000 |

With respect to the subsequent sale by the arm's length purchaser, the results for that individual would be as follows:

| | |
|---|---|
| Proceeds Of Disposition | $500,000 |
| Adjusted Cost Base | ( 500,000) |
| Capital Gain | Nil |

### *Part A - Case 2 - Sale To Sister*

The result for Martin would be as follows:

| | |
|---|---|
| Deemed Proceeds Of Disposition - ITA 69(1)(b) | $500,000 |
| Adjusted Cost Base | ( 360,000) |
| Capital Gain | $140,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 70,000 |

With respect to the subsequent sale by Martin's sister, the results for her would be as follows:

| | |
|---|---|
| Proceeds Of Disposition (Actual) | $500,000 |
| Adjusted Cost Base | ( 360,000) |
| Capital Gain | $140,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 70,000 |

Note that in this case the $140,000 capital gain is subject to double taxation.

***Part A - Case 3 - Gift To Son***

The result for Martin would be as follows:

| | |
|---|---|
| Deemed Proceeds Of Disposition - ITA 69(1)(b) | $500,000 |
| Adjusted Cost Base | ( 360,000) |
| Capital Gain | $140,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 70,000 |

With respect to the subsequent sale by Martin's son, the results for him would be as follows:

| | |
|---|---|
| Proceeds Of Disposition | $500,000 |
| Adjusted Cost Base (Actual) | ( 500,000) |
| Capital Gain | Nil |

The fact that his son is younger than 18 years of age does not affect the results.

***Part A - Case 4 - Sale To Mother***

The result for Martin would be as follows:

| | |
|---|---|
| Proceeds Of Disposition (Actual) | $600,000 |
| Adjusted Cost Base | ( 360,000) |
| Capital Gain | $240,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $120,000 |

With respect to the subsequent sale by Martin's mother, the results for her would be as follows:

| | |
|---|---|
| Proceeds Of Disposition (Actual) | $500,000 |
| Adjusted Cost Base - ITA 69(1)(a) | ( 500,000) |
| Capital Gain | Nil |

Despite the fact that Martin had to record the actual proceeds of $600,000, his mother's adjusted cost base will be the fair market value of $500,000. This means that she did not have a $100,000 capital loss to economically offset (for the family unit) the effect of his capital gain.

***Part B***

In Case 2, the sale was for $360,000, less than the $500,000 fair market value of the asset. Martin might agree to do this in an attempt to transfer the $140,000 gain to his sister. This could be motivated by the fact that she is in a lower tax bracket. It could also reflect the fact that she has unused capital losses that she would like to be able to use.

In Case 4, the sale was for $600,000, more than the $500,000 fair market value of the asset. The motivation here could be that his mother has capital gains that she would like to offset with a capital loss resulting from her re-selling the asset for $500,000 and/or Martin has unused capital losses greater than $140,000 that he would like to be able to use.

## Self Study Solution Nine - 8

***Scenario 1 - FMV > Transferor's Capital Cost***

The results of the disposition for Martin can be calculated as follows:

| | |
|---|---|
| UCC Balance | $36,000 |
| Lesser Of: | |
| Proceeds Of Disposition = $87,000 | |
| Capital Cost = $52,000 | ( 52,000) |
| Negative Ending UCC Balance = Recapture Of CCA | ($16,000) |

| | |
|---|---|
| Proceeds Of Disposition | $87,000 |
| Capital Cost | ( 52,000) |
| Capital Gain | $35,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $17,500 |

Martin's Net Income For Tax Purposes will increase by $33,500 ($16,000 + $17,500).

For his sister, her capital cost for capital gains purposes will be the transfer price of $87,000. However, because the fair market value of the asset exceeded its original capital cost, ITA 13(7)(e) will limit the value used for CCA and recapture calculations to the following amount:

[$52,000 + (1/2)($87,000 - $52,000)] = $69,500

***Scenario 2 - FMV < Transferor's Capital Cost***

The results of this disposition for Marion can be calculated as follows:

| | |
|---|---|
| UCC Balance | $105,000 |
| Lesser Of: | |
| Proceeds Of Disposition = $142,000 | |
| Capital Cost = $212,000 | ( 142,000) |
| Negative Ending UCC Balance = Recapture Of CCA | ($ 37,000) |

Marion's Net Income For Tax Purposes will increase by $37,000.

In this case, where the fair market value of the asset is less than its capital cost, ITA 13(7)(e) deems the transferee's capital cost of the transferred asset to be equal to the transferor's capital cost, an amount of $212,000. This capital cost will be used for purposes of determining any capital gain and/or recapture on a future disposition.

The $70,000 ($212,000 - $142,000) difference between this value and the transfer price will be considered deemed CCA. The resulting UCC balance of $142,000 will be used by Marion's brother for calculating future CCA.

## Self Study Solution Nine - 9

**Note To Student** Part B of this problem requires knowledge of ITA 13(21.1) as there is a capital gain on the land and a terminal loss on the building. This provision is covered in detail in Chapter 8.

### *Case A(1)*

Assuming that the transfer was to Margarette's spouse, the land would have been transferred at its cost and the building would have been transferred at its UCC. As a consequence, there would have been no tax effects to be included in Margarette's final return.

For CCA purposes, the building would have been transferred at Margarette's UCC of $363,000. Given this, maximum CCA would be $14,520 [(4%)($363,000)] for 2019 leaving a UCC of $348,480. Since the acquisition of the building is a non-arm's length transaction, it was used and continues to be used to produce income and was owned for more than one year by Margarette, the half year rule does not apply to Gianni.

Note, however, that after the transfer, Gianni would have retained the building's old capital cost of $473,000. Using this figure for the building, the tax effects that would occur at the time of the 2020 sale of the property would be as follows:

| | Land | Building |
|---|---|---|
| Proceeds Of Disposition | $160,000 | $525,000 |
| Adjusted Cost Base/Capital Cost | ( 150,000) | ( 473,000) |
| Capital Gain | $ 10,000 | $ 52,000 |
| Inclusion Rate | 1/2 | 1/2 |
| Taxable Capital Gain | $ 5,000 | $ 26,000 |

| | |
|---|---|
| UCC | $348,480 |
| Deduct Disposition - Lesser Of: | |
| • Capital Cost = $473,000 | |
| • Proceeds Of Disposition = $525,000 | ( 473,000) |
| Negative Closing UCC Balance = Recaptured CCA | ($124,520) |

A total of $155,520 ($5,000 + $26,000 + $124,520) would be added to the 2020 Net Income For Tax Purposes of Gianni. With the death of Margarette, there can be no income or capital gains attributed to her from Gianni.

### *Case A(2)*

As the transfer was to her daughter, Ciara, the deemed proceeds will be recorded at fair market value for the land and building. Based on this, the following calculations show the tax effects that will be included in Margarette's final return:

| | Land | Building |
|---|---|---|
| Deemed Proceeds | $175,000 | $571,000 |
| Adjusted Cost Base/Capital Cost | ( 150,000) | ( 473,000) |
| Capital Gain | $ 25,000 | $ 98,000 |
| Inclusion Rate | 1/2 | 1/2 |
| Taxable Capital Gain | $ 12,500 | $ 49,000 |

| | |
|---|---|
| UCC Of Building | $363,000 |
| Deduct Disposition - Lesser Of: | |
| • Capital Cost = $473,000 | |
| • Deemed Proceeds = $571,000 | ( 473,000) |
| Negative Closing UCC Balance = Recaptured CCA | ($110,000) |

A total of $171,500 ($12,500 + $49,000 + $110,000) would be added to Margarette's 2019 Net Income For Tax Purposes.

With respect to Ciara's tax records, the land will have a tax cost of $175,000 and the building will be a Class 1 asset with a tax cost equal to Margarette's deemed proceeds of $571,000.

Maximum 2019 CCA is $22,840 [($571,000)(4%)], leaving a UCC of $548,160 ($571,000 - $22,840). Since the acquisition of the building is a non-arm's length transaction, it was used and continues to be used to produce income and was owned for more than one year by Margarette, the half year rule does not apply to Ciara. In addition, ITA 13(7)(e), which requires the calculation of a limited UCC balance, is not applicable to transfers at death.

Since there cannot be a capital loss on depreciable property and the building is the only asset in the class, the 2020 tax effects associated with the sale of the building would be calculated as follows:

| | Land | Building |
|---|---|---|
| Proceeds Of Disposition | $160,000 | $525,000 |
| Adjusted Cost Base | ( 175,000) | |
| Capital Cost Limited To Proceeds | | ( 525,000) |
| Capital Gain (Loss) | ($ 15,000) | Nil |
| Inclusion Rate | 1/2 | N/A |
| Allowable Capital Loss | ($ 7,500) | Nil |

| | |
|---|---|
| UCC | $548,160 |
| Deduct Disposition - Lesser Of: | |
| • Capital Cost = $571,000 | |
| • Proceeds Of Disposition= $525,000 | ( 525,000) |
| Positive Closing UCC Balance = Terminal Loss | $ 23,160 |

A total of $30,660 ($23,160 + $7,500) would be deducted from the 2020 Net Income For Tax Purposes of Ciara as the problem indicates that she has sufficient income and taxable capital gains.

### *Comparison Case A(1) And A(2)*

The overall tax consequences in the two cases are as shown in the following table:

| | Case A(1) Gianni | Case A(2) Margarette | Case A(2) Ciara |
|---|---|---|---|
| 2019 | Nil | $171,500 | Nil |
| 2019 - CCA Taken | ($ 14,520) | | ($22,840) |
| 2020 | 155,520 | | ( 30,660) |
| Net Income For Tax Purposes (Loss) | $141,000 | $171,500 | ($53,500) |

There is a difference in the Case A(1) and Case A(2) results of $23,000 [$141,000 - ($171,500 - $53,500)]. This reflects the fact that, in Case A(2), a portion of the amount that was taxed as a capital gain (50 percent) in Margarette's final return was deducted by Ciara as CCA and a terminal loss (100 percent).

This can be shown in the following calculation:

| | |
|---|---|
| Actual Sale Price Of Building For Ciara | $525,000 |
| Fair Market Value (Deemed Proceeds) At Death | ( 571,000) |
| Amount Deducted By Ciara As CCA And Terminal Loss* | ($ 46,000) |
| Portion Taxed As Capital Gain In Final Return [(1/2)($46,000)] | 23,000 |
| Difference | ($ 23,000) |

*$23,160 + $22,840 = $46,000

### Part B

If the proceeds of the sale of the property by Ciara were allocated $300,000 to the land and $385,000 to the building, the tax effects associated with the sale of the building would be initially calculated as follows:

| | Land | Building |
|---|---|---|
| Proceeds Of Disposition | $300,000 | $385,000 |
| Adjusted Cost Base | ( 175,000) | |
| Capital Cost Limited To Proceeds | | ( 385,000) |
| Capital Gain | $125,000 | Nil |
| Inclusion Rate | 1/2 | 1/2 |
| Taxable Capital Gain | $ 62,500 | Nil |

| | |
|---|---|
| UCC | $548,160 |
| Deduct Disposition - Lesser Of: | |
| • Capital Cost = $571,000 | |
| • Proceeds Of Disposition= $385,000 | ( 385,000) |
| Positive Closing UCC Balance = Terminal Loss | $163,160 |

Since there is a capital gain on the land and a terminal loss on the building, ITA 13(21.1)(a) requires the deemed proceeds of disposition for the building to be determined as follows:

The Lesser Of:

| | | |
|---|---|---|
| • The FMV of the land and building | $685,000 | |
| Reduced By The Lesser Of: | | |
| • The ACB of the land = $175,000 | | |
| • The FMV of the land = $300,000 | ( 175,000) | $510,000 |
| • The Greater Of: | | |
| • The FMV of the building = $385,000 | | |
| • The Lesser Of: | | |
| The cost of the building = $571,000 | | |
| The UCC of the building = $548,160 | | $548,160 |

The proceeds that would be allocated to the building would be $510,000, leaving $175,000 ($685,000 - $510,000) to be allocated to the land. The net result is that the terminal loss would be reduced by $125,000 (the amount of the potential capital gain) to $38,160 ($510,000 - $548,160) and the capital gain would be nil ($175,000 - $175,000).

## Self Study Solution Nine - 10

### Alonso

#### *At Transfer*

As Alonso did not elect out of the ITA 73(1) spousal rollover, no income will result from the transfer to his spouse Alice. However, there is no rollover for the transfer of public company shares to a related minor. This means there will be a taxable capital gain on the transfer of 10,000 shares to his son as follows:

| | |
|---|---|
| Deemed Proceeds Of Disposition [($17.00)(10,000)] | $170,000 |
| Adjusted Cost Base [($12.50)(10,000)] | ( 125,000) |
| Capital Gain | $ 45,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 22,500 |

#### *Dividends*

As all of the shares were given to a spouse and a related minor, 100 percent of the dividends would be attributed back to Alonso. His increase in Net Income For Tax Purposes due to the dividends would be $16,560 [(15,000)(138%)($0.80)].

#### *Sale Of Shares*

As there is no attribution of capital gains when shares are transferred to a related minor, the sale of shares by Alonso's son would have no effect on Alonso's 2019 Net Income For Tax Purposes. However, the gain on the sale of shares by his spouse would be attributed back to Alonso. The amount is calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [($16.00)(5,000)] | $80,000 |
| Adjusted Cost Base [($12.50)(5,000)] | ( 62,500) |
| Capital Gain | $17,500 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $8,750 |

### Alice

None of these transactions would have any effect on Alice's 2019 Income For Tax Purposes.

### Alonso Jr.

When Alonso Jr. sells his Lisgar Inc. shares, he will have an allowable capital loss calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [($16.00)(10,000)] | $160,000 |
| Adjusted Cost Base [($17.00)(10,000)] | ( 170,000) |
| Capital Loss | ($ 10,000) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss | ($ 5,000) |

This loss can only be deducted in 2019 to the extent that Alonso Jr. has taxable capital gains during 2019. As a result, the sale will not affect Net Income For Tax Purposes unless he has taxable capital gains.

# Self Study Solution Nine - 11

## Note

As the farm would be considered qualified farm property, any capital gains arising from a disposition could be eligible for the lifetime capital gains deduction. If Long Consulting Ltd. is a qualified small business corporation, capital gains on the disposition of these shares could also be eligible for the lifetime capital gains deduction. As this deduction is not discussed until Chapter 11, the problem specifies that these possibilities should be ignored.

## Long Consulting Ltd.

### *1. Gift To Spouse - ITA 73(1) Applies*

ITA 73(1) permits transfers of a capital property to a spouse at its tax value (adjusted cost base or UCC). This means that the shares in Long Consulting Ltd. could be gifted to Mr. Long with no immediate tax consequences.

The tax basis for these shares for the spouse would remain at the adjusted cost base of $210,000.

Any dividends paid on the shares would be attributed to Mrs. Long.

If Mr. Long subsequently sell these shares for $525,000 ($50,000 more than the $475,000 fair market value at the time of the gift), the resulting taxable capital gain of $157,500, as calculated in the following table, would also be attributed to Mrs. Long.

| | |
|---|---|
| Proceeds (Fair Market Value) | $525,000 |
| Adjusted Cost Base | ( 210,000) |
| Capital Gain | $315,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $157,500 |

### *2. Gift To Spouse - Elect Out Of ITA 73(1)*

As an alternative, Mrs. Long could elect out of the provisions of ITA 73(1). Under ITA 69, the gift would be recorded as a disposition at the $475,000 fair market value. Mrs. Long would have an immediate taxable capital gain of $132,500 [(1/2)($475,000 - $210,000)] and Mr. Long's adjusted cost base would be $475,000. However, since the transfer is a gift, and Mr. Long does not use his own funds to purchase the shares, income attribution would apply to any dividends received by Mr. Long. In addition, if the property was subsequently sold by Mr. Long for $525,000, the resulting taxable capital gain of $25,000 [(1/2)(525,000 - $475,000)] would be attributed back to Mrs. Long.

### *3 And 4. Gift To Children*

Under ITA 69, a gift to a related party is deemed to be a transfer at fair market value. Given this, a taxable capital gain of $132,500 [(1/2)($475,000 - $210,000) would result from a transfer to either child. The adjusted cost base to the children would be the fair market value of $475,000.

Under the general income attribution rules, the dividend income paid on the shares given to Mary, who is under 18, would be attributed back to Mrs. Long. The problem specifies that the tax on split income should be ignored. However, as is discussed in Chapter 11, this dividend income would be subject to the tax on split income and, because of this, it would be exempt from the general income attribution rules.

As Barry is over 18, the gift would not result in attribution of dividends.

There is no attribution of capital gains on assets transferred to children, without regard to their age. This means that, if the property was later sold for $525,000, the resulting taxable capital gain of $25,000 would be taxed in the hands of the child who received the gift.

## Rental Property

### 1. Gift To Spouse - ITA 73(1) Applies

Here again, ITA 73(1) would permit a transfer to Mr. Long at tax values with no immediate tax consequences.

The tax cost of the building to Mr. Long would be the UCC of $125,000. However, Mr. Long would retain the capital cost of $190,000. With respect to the land, its adjusted cost base would be $100,000. This was Mrs. Long's tax cost and the current fair market value of the land.

As the transfer is a gift, income attribution rules would apply. This means that any net rental income would be attributed to Mrs. Long.

If Mr. Long were to later sell the building for $325,000 ($50,000 more than its fair market value at the time of the gift), the following amounts would be attributed to Mrs. Long:

| | |
|---|---|
| Capital Cost | $190,000 |
| UCC | ( 125,000) |
| Recaptured CCA | $ 65,000 |

| | |
|---|---|
| Proceeds Of Disposition | $325,000 |
| Adjusted Cost Base | ( 190,000) |
| Capital Gain | $135,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 67,500 |

Since we are assuming the value of the land on which the building was situated has not changed, the sale of the land by Mr. Long would have no tax consequences for Mrs. Long. As you are asked to assume that no CCA is taken between the date of the gift and the date the property is sold, there would be no recapture of CCA resulting from the sale.

### 2. Gift To Spouse - Elect Out Of ITA 73(1)

Mrs. Long could also elect out of the provisions of ITA 73(1) and transfer the rental property at its fair market value. However, if she does, she would immediately be taxed on the recapture of $65,000, as well as the taxable capital gain of $42,500 [(1/2)($275,000 - $190,000)]. There would be no tax consequences related to the land as its tax cost is equal to its fair market value.

In this case, the cost of the building to Mr. Long for capital gains purposes would be $275,000. For CCA and recapture purposes, the value would be limited to $232,500 [$190,000 + (1/2)($275,000 - $190,000)]. His cost for the land would be $100,000.

Electing out of ITA 73(1) would not change the fact that the transfer is a gift to a spouse and, as a consequence, future rental income would be attributed to Mrs. Long.

If Mr. Long subsequently sells the building for $325,000, the additional taxable capital gain of $25,000 [(1/2)($325,000 - $275,000)] would also be attributed back to Mrs. Long. As we are assuming the value of the land remains at $100,000 and that no CCA is taken prior to the sale, there are no tax consequences associated with its sale.

### 3 And 4. Gift To Children

There is no exemption from the general rules of ITA 69 for transfers of depreciable property to children. As a consequence, Mrs. Long would be subject to taxation based on a disposition of the property at its fair market value of $275,000. This would result in immediate taxation on a $42,500 [(1/2)($275,000 - $190,000)] taxable capital gain, as well as on recapture of $65,000 ($190,000 - $125,000). There would be no tax consequences related to the land as its tax cost is equal to its fair market value.

The cost of the building to either of the children for capital gains purposes would be \$275,000. The cost for the land would be \$100,000. For CCA and recapture purposes, the value would be limited to \$232,500 [\$190,000 + (1/2)(\$275,000 - \$190,000)].

If this property was given to Mary, the income attribution rules of ITA 74.1 would apply to any amount of property income subsequently earned. This would mean that until Mary reached 18 years of age, any property income from the rental property would be attributed to Mrs. Long. Alternatively, if the property was gifted to her son, Barry, all subsequent income would be taxed in his hands.

There is no attribution of capital gains on gifts to related children under 18. There would be no attribution of capital gains on a gift to either child. This means that if the property were later sold for \$325,000 (\$275,000 + \$50,000), the \$25,000 taxable capital gain would be taxed in the hands of the child who received the gift. As noted in the discussion of the alternative gift recipients, there would be no recapture of CCA resulting from the sale.

## Dynamics Inc.

### *1. Gift To Spouse - ITA 73(1) Applies*

As with the other properties, these shares could be given to Mr. Long and, under the provisions of ITA 73(1), no immediate tax consequences would arise.

The tax basis for Mr. Long would be unchanged at \$212,000.

Any dividend income on the shares would be attributed to Mrs. Long.

If Mr. Long were to subsequently sell the shares for \$434,000 (\$50,000 more that their \$384,000 fair market value at the time of the gift), the income attribution rules of ITA 74.1 would require that the following taxable capital gain be attributed to the income of Mrs. Long:

| | |
|---|---|
| Proceeds Of Disposition | \$434,000 |
| Adjusted Cost Base | ( 212,000) |
| Capital Gain | \$222,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | \$111,000 |

### *2. Gift To Spouse - Elect Out Of ITA 73(1)*

Mrs. Long could elect out of ITA 73(1) by recording the \$86,000 [(1/2)(\$384,000 - \$212,000)] taxable capital gain at the time of the transfer to her spouse.

In this case the adjusted cost base to Mr. Long would be \$384,000.

However, as long as the property was transferred as a gift, attribution would apply to both dividend income received by Mr. Long and to any further capital gains realized on a subsequent sale. If the property was subsequently sold for \$434,000, Mr. Long would have a taxable capital gain of \$25,000 [(1/2)(\$434,000 - \$384,000)] that would be attributed back to Mrs. Long.

### *3 And 4. Gift To Children*

In the case of a transfer to either of her children, ITA 69 would require that the gift be treated as a deemed disposition with the proceeds at the fair market value of \$384,000. This would result in an immediate taxable capital gain of \$86,000 [(1/2)(\$384,000 - \$212,000)]

The tax base to the children would be the fair market value of \$384,000.

A transfer to Mary would result in the application of the income attribution rules of ITA 74.1. This would mean that subsequent dividend income on these shares would be allocated to Mrs. Long until Mary reaches 18 years of age. If the shares were transferred to Barry, there would be no attribution of dividends.

There is no attribution of capital gains on assets transferred to children, without regard to their age. This means that, if the property was later sold for $434,000, the resulting taxable capital gain of $25,000 [(1/2)($434,000 - $384,000)] would be taxed in the hands of the child who received the gift.

## Farm Land

### 1. Gift To Spouse - ITA 73(1) Applies

As with all of the other properties, Mrs. Long could make a tax free transfer of the farm land to her husband under ITA 73(1).

The adjusted cost base to Mr. Long would remain unchanged at $80,000.

As farm income is considered to be business income rather than property income, there would be no attribution of any farm income that arises while Mr. Long is holding the property.

In the event of a subsequent sale of the farm land for $225,000 ($50,000 more than the fair market value at the time of transfer), the following taxable capital gain would be attributed to Mrs. Long under ITA 74.1:

| | |
|---|---|
| Proceeds Of Disposition | $225,000 |
| Adjusted Cost Base | ( 80,000) |
| Capital Gain | $145,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 72,500 |

### 2. Gift To Spouse - Elect Out Of ITA 73(1)

Alternatively, Mrs. Long could elect out of ITA 73(1) and transfer the property at its fair market value of $175,000. This would result in an immediate taxable capital gain of $47,500 [(1/2)($175,000 - $80,000)].

In this case the adjusted cost base to Mr. Long would be $175,000.

A noted, farm income is business income and this would not be attributed to Mrs. Long

As the transfer was a gift, the income attribution rules would apply to subsequent capital gains on the property. If Mr. Long sells the property for $225,000, the resulting $25,000 [(1/2)($225,000 - $175,000)] taxable capital gain would be attributed back to Mrs. Long.

### 3 And 4. Gift To Children

ITA 73(3) permits the inter vivos transfer of farm property used by the taxpayer or her family to a child on a tax free basis. The deemed proceeds would be Mrs. Long's adjusted cost base, which means that Mrs. Long would incur no taxation at the time of the gift to either child.

The adjusted cost base to either child would be the same $80,000 that was deemed to be the proceeds of the disposition.

As noted in our discussion of the transfer of this property to Mr. Long, because farm income is business income rather than property income, there will be no attribution of farm income in the case of a transfer to either child.

On most transfers to related minors, there is no attribution of capital gains. This is a reflection of the fact that, unlike the rules for transfers to a spouse, there is no general rollover provision for transfers to related minors on a tax free basis. However, when a transfer is made to a related minor under the provisions of ITA 73(3) and the transfer value is below fair market value, ITA 75.1 requires that any subsequent gain resulting from a disposition by the transferee before they reach age 18 be attributed back to the transferor.

This means that, if the farm property is transferred to Mary and she sells the property for $225,000 before she reaches age 18, a taxable capital gain of $72,500 [(1/2)($225,000 - $80,000)] will be attributed to Mrs. Long. If the transfer was to Barry, this capital gain would not be attributed to Mrs. Long and would be taxed in his hands.

## Self Study Solution Nine - 12

### *Net Employment Income*

Carolyn's employment income would be calculated as follows:

| | |
|---|---|
| Salary [(10 Months)($5,000)] | $50,000 |
| RPP Contributions (Note 1) | ( 2,600) |
| Automobile (Note 2) | 6,047 |
| Travel Allowance (Note 3) | Nil |
| Moving Cost Allowance | 10,000 |
| Housing Loss Reimbursement (Note 4) | Nil |
| Housing Cost Allowance (Note 5) | 7,500 |
| Net Employment Income | $70,947 |

**Note 1** While Carolyn's RPP contributions can be deducted, the matching contribution by her employer does not create a taxable benefit.

**Note 2** The automobile benefit would be calculated as follows:

| | |
|---|---|
| Standby Charge [(2%)($42,000)(9)(8,000 ÷ 15,003*)] | $4,031 |
| Operating Cost Benefit - Lesser Of: | |
| • [(1/2)($4,031)] = $2,016 | |
| • [(8,000)($0.28)] = $2,240 | 2,016 |
| Total Benefit | $6,047 |

* [(9)(1,667)]

**Note 3** As the allowance appears to be reasonable, it does not have to be included in income. Given this, Carolyn cannot deduct her actual costs.

**Note 4** As the housing loss reimbursement is less than $15,000, it does not have to be included in income.

**Note 5** Assistance with higher housing costs related to a required move must be included in an employee's income.

### *Property Income*

Carolyn's property income is calculated as follows:

| | |
|---|---|
| Eligible Dividends Received | $ 5,800 |
| Gross Up At 38 Percent | 2,204 |
| Recapture On Rental Property (Note 6) | 20,000 |
| Total Property Income | $28,004 |

**Note 6** The fair market value of the rental building when it is bequeathed to Carolyn is $270,000 ($320,000 - $50,000). While this would be the UCC value that Carolyn would use to calculate CCA, because the fair market value of the property at the time of transfer is less than its capital cost, Carolyn must use her mother's capital cost of $300,000 ($400,000 - $100,000).

Carolyn's proceeds from the sale of the building is $290,000 ($340,000 - $50,000) and, when she subtracts the lesser of the capital cost ($300,000) and the proceeds ($290,000) from the $270,000 UCC, the result is recapture of $20,000 ($270,000 - $290,000).

### Taxable Capital Gains

Carolyn's only capital gains will arise on the sale of the shares that were gifted to her by her father. Note that her adjusted cost base for these shares will be their fair market value at the time of the gift.

| | |
|---|---|
| Proceeds Of Disposition | $74,000 |
| Adjusted Cost Base | ( 62,000) |
| Capital Gain | $12,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 6,000 |

### Other Income And Deductions

Carolyn's other income and other deductions amount is calculated as follows:

| | |
|---|---|
| Spousal Support (Note 7) | $ 500 |
| Moving Costs (Note 8) | ( 27,944) |
| Child Care Cost (Note 9) | ( 7,300) |
| Total Other Income And Deductions | ($34,744) |

**Note 7** When the full amount of support is not paid, the first payments are deemed to be for child support. Given the total payments of $12,500 and the required child support of $12,000 [(12)($1,000)], Carolyn will include only $500 in her Net Income For Tax Purposes.

**Note 8** Costs for food and lodging at or near an old or new residence are limited to a maximum period of 15 days. Carolyn has a total of 23 eligible days: 14 days in Lethbridge and 9 days in Edmonton. Note that the 2 days spent travelling to Edmonton are not included in the 15 day total. As the hotel in Edmonton is the more expensive, she will deduct all 9 days spent there. Carolyn's deductible moving costs can be calculated as follows:

| | |
|---|---|
| Selling Cost Of Lethbridge Property | $12,500 |
| Legal Fees - Sale Of Lethbridge Property | 600 |
| Legal Fees - Purchase Of Edmonton Property | 450 |
| Storage Costs - February 15 Through March 10 | 1,400 |
| Cost Of Moving Belongings | 7,250 |
| Lodging In Lethbridge And Edmonton (9 @ $200 + 6 @$175) | 2,850 |
| Simplified Meal Cost [(3)($51)(15 + 2 Days)] | 2,601 |
| Simplified Milage [($.58)(506)] | 293 |
| Total Deductible Moving Costs | $27,944 |

As this amount is less than her income at her new job, she will be able to deduct the full amount of these expenses.

**Note 9** Carolyn's deductible care costs would be the least of three amounts:

| | | |
|---|---|---|
| Actual Costs Plus Deductible Camp Costs | | |
| Edmonton Cost [(38)(($175)] | $6,650 | |
| Camp [(2)($200 + $125)] | 650 | $ 7,300 |
| Annual Limit ($8,000 + $5,000) | | $13,000 |
| Two-Thirds Earned Income [(2/3)($70,947 + $2,600 RPP)] | | $49,031 |

The least of these three amounts is the actual cost of $7,300.

### Net Income For Tax Purposes

Carolyn's Net Income For Tax Purposes would be determined as follows:

| | |
|---|---|
| Net Employment Income | $70,947 |
| Property Income | 28,004 |
| Taxable Capital Gains | 6,000 |
| Other Income And Deductions | ( 34,744) |
| Net Income For Tax Purposes | $70,207 |

### Taxable Income

As Carolyn has no Division C deductions, her Taxable Income would be equal to her Net Income For Tax Purposes.

### Tax Payable

Carolyn's Tax Payable would be determined as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $ 7,145 |
| Tax On Next $22,577 ($70,207 - $47,630) At 20.5 Percent | | 4,628 |
| Tax Before Credits | | $11,773 |
| Tax Credits: | | |
| Basic Personal | ($12,069) | |
| Eligible Dependant | ( 12,069) | |
| EI Premiums | ( 860) | |
| CPP Contributions | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Medical Expenses (Note 10) | ( 5,494) | |
| Total Credit Base | ($34,463) | |
| Rate | 15% | ( 5,169) |
| Dividend Tax Credit [(6/11)($2,204)] | | ( 1,202) |
| Charitable Donations (Note 11) [(15%)($200) + (29%)($600 - $200)] | | ( 146) |
| Federal Tax Payable | | $ 5,256 |

**Note 10** The medical expenses eligible for the credit are as follows:

| | |
|---|---|
| Total Medical Costs | $7,600 |
| Lesser Of: | |
| • $2,106 [(3%)($70,207)] | |
| • 2019 Threshold Amount = $2,352 | ( 2,106) |
| Medical Expense Tax Credit Base | $5,494 |

**Note 11** As none of her income is taxed at 33 percent, this rate will not be applicable to the calculation of the charitable donations tax credit.

## Self Study Solution Nine - 13

***Part A - Net Income For Tax Purposes And Taxable Income For Mr. Winded***

The Net Income For Tax Purposes for Mr. Winded would be calculated as follows:

| | | | |
|---|---|---|---|
| **Net Employment Income** | | | |
| Salary [($84,000)(2/12)] | | $14,000 | |
| Standby Charge [(2/3)($360)(2)] | | 480 | |
| Operating Cost Benefit [(90%)(3,000)($0.28)] | | | |
| (Alternate calculation not available) | | 756 | |
| Taxable Portion Of Gift ($700 - $500) | | 200 | |
| Stock Option Benefit [(1,500)($11 - $8)] | | 4,500 | |
| RPP Contributions | | ( 500) | $ 19,436 |
| **Net Business Income** (Note 1) | | | 15,805 |
| **Property Income** | | | |
| Interest Income | | $ 3,478 | |
| Eligible Dividends Received | | 1,700 | |
| Eligible Dividends Attributed From Mrs. Winded | | 1,400 | |
| Gross Up [(38%)($1,700 + $1,400)] | | 1,178 | |
| Non-Eligible Dividends Received From Sail | | 800 | |
| Gross Up [(15%)($800)] | | 120 | |
| Net Rental Income (Note 2) | | Nil | 8,676 |
| **Net Taxable Capital Gains** | | | |
| TCG On Sale Of Celebrate Ltd. Shares | | | |
| [(1/2)(1,000)($17 – $11)] | | $ 3,000 | |
| Attributed TCG On Sale Of Preferred Shares | | | |
| [(1/2)(($31,000 - $27,000)] | | 2,000 | |
| TCG On Listed Personal Property | | | |
| Stamps ($5,000 – $8,000) | ($3,000) | | |
| Rare Book ($4,200 – $1,000) | 3,200 | | |
| Painting ($1,000 – $1,000) | Nil | | |
| | $ 200 | | |
| Inclusion Rate | 1/2 | 100 | |
| Loss On Furniture (PUP) Of $3,800 | | | |
| ($4,800 - $1,000 Floor) Not Deductible | | Nil | |
| TCG On Sale Of Sail Shares | | | |
| [(1/2)($48,000 – $12,000)] | | 18,000 | |
| TCG On Sale Of CNR Shares (Note 3) | | 1,230 | |
| ACL On Sale Of BCE Shares (Note 4) | | ( 400) | |
| TCG On Sale Of Cottage (Note 5) | | 50,000 | 73,930 |
| **Other Income And Deductions** | | | |
| Old Age Security | | $ 5,350 | |
| CPP Receipts | | 9,600 | |
| Pension Income From Celebrate Ltd. Pension Plan | | 44,000 | |
| RRIF Withdrawal | | 8,000 | |
| Moving Expenses (Note 6) | | ( 23,000) | |
| Pension Income Transferred To Spouse | | | |
| [(1/2)($44,000 + $8,000)] | | ( 26,000) | 17,950 |
| Net Income Before Clawback | | | $135,797 |
| OAS Clawback - Lesser Of: | | | |
| • Amount Received = $5,350 | | | |
| • $8,733 [(15%)($135,797 - $77,580)] | | | ( 5,350) |
| Net Income For Tax Purposes - Mr. Winded | | | $130,447 |

**Note 1** Net Business Income would be calculated as follows:

| | | |
|---|---|---|
| Revenues | | $38,000 |
| Expenses: | | |
| Supplies | | ( 16,000) |
| Advertising | | ( 1,000) |
| Home Office Costs (See Following Calculation) | | ( 3,060) |
| CCA | | |
| Class 50 [(55%)(1/2)($3,800)] | ($1,045) | |
| Class 8 | | |
| {[20%][$2,400 + (1/2)($1,600)]} | ( 640) | |
| Class 12 [(100%)($450)]* | ( 450) | ( 2,135) |
| Net Business Income | | $15,805 |

* As the two hand tools cost a total of $450, each must have cost less than $500. As a result, the first year one-half rule is not applicable.

The deductible home office costs can be calculated as follows:

| | |
|---|---|
| Mortgage Interest | $ 4,000 |
| Utilities | 3,600 |
| Property Taxes | 4,500 |
| Insurance | 1,400 |
| Maintenance | 1,800 |
| Total | $15,300 |
| Floor Space Used | 20% |
| Deductible Amount | $ 3,060 |

**Note 2** Net Rental Income would be calculated as follows:

| | Property A | Property B | Total |
|---|---|---|---|
| Rental Revenues | $ 98,000 | $62,000 | $160,000 |
| Operating Expenses | ( 104,000) | ( 54,000) | ( 158,000) |
| Income (Loss) Before CCA | ($ 6,000) | $ 8,000 | $ 2,000 |
| Class 8 CCA* | | | ( 2,000) |
| Net Rental Income | | | Nil |

*Maximum CCA on Class 8 would have been $5,600 [(20%)($12,000 + $16,000)]. However, the actual deduction is limited to the amount that would reduce the Net Rental Income to nil. Note that the CCA was claimed on Class 8 in order to preserve the Class 1 UCC balances. This will result in a lower amount of recapture when the buildings are sold. The Class 8 assets would likely have little or no proceeds of disposition when they are disposed of. This means that recapture on these assets would be unlikely.

**Note 3** - The taxable capital gain on the sale of CNR shares would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [($67.00)(300)] | $20,100 |
| Adjusted Cost Base [($58.80*)(300)] | ( 17,640) |
| Capital Gain | $ 2,460 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 1,230 |

*The average cost of these shares would be calculated as follows:

| | Shares | Total | Per Share |
|---|---|---|---|
| May 1, 2015 Purchase At $52 | 200 | $10,400 | |
| May 1, 2016 Purchase At $46 | 300 | 13,800 | |
| Balance | 500 | $24,200 | $48.40 |
| May 1, 2017 Sale At Cost Of $48.40 ($24,200 ÷ 500) | (400) | ( 19,360) | |
| Balance | 100 | $ 4,840 | $48.40 |
| May 1, 2018 Purchase At $64 | 200 | 12,800 | |
| Balance | 300 | $17,640 | $58.80 |

**Note 4** The allowable capital loss on the sale of BCE shares would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [(1,000)($36)] | $36,000 |
| Adjusted Cost Base [(1,000)($38)] | ( 38,000) |
| Capital Loss | ($ 2,000) |
| Capital Loss Per Share ($2,000 ÷ 1,000) | $2 Loss/Share |

As 600 of the shares were reacquired within 30 days of the sale, with respect to these 600 shares, the capital loss is considered a superficial loss and is disallowed. This will leave an allowable capital loss of $400 [(1/2)($2)(400)]. The remaining capital loss of $1,200 [($2)(600)] will be added to the adjusted cost base of the 600 reacquired shares.

**Note 5** The taxable capital gain on the sale of the cottage would be calculated as follows:

| | Winnipeg Home | Lake Winnipeg Cottage |
|---|---|---|
| Proceeds Of Disposition | $313,000 | $290,000 |
| Selling Costs | ( 13,000) | ( 10,000) |
| Adjusted Cost Base | ( 140,000) | ( 80,000) |
| Capital Gain | $160,000 | $200,000 |
| Exempt Portion | | |
| Home [($160,000)(9+1)] ÷ 10] | ( 160,000) | |
| Cottage [($200,000)(7+ 1)] ÷ 16] | | ( 100,000) |
| Capital Gain | Nil | $100,000 |
| Inclusion Rate | | 1/2 |
| Taxable Capital Gain | Nil | $ 50,000 |

* The costs of selling a previously occupied residence that was ordinarily inhabited can be deducted as part of moving expenses. There is no restriction on claiming the selling costs to both reduce the capital gain on the old residence and also to increase moving expenses.

The annual gain on the two properties is as follows:

- Winnipeg Home ($160,000 ÷ 10) = $16,000
- Lake Winnipeg Cottage ($200,000 ÷ 16) = $12,500

Given this, maximum available years should be allocated to the Winnipeg property. These would be the 9 years 2010 through 2019. This would leave the 7 years 2004 through 2010 for the cottage.

**Note 6** As there is no income in the Vancouver location during 2018, the moving expenses incurred in that year will have to be deducted in 2019. None of the costs of the house hunting trip are deductible. The eligible moving expenses that were incurred in 2018 and 2019 are as follows:

| | |
|---|---|
| Legal Fees - Purchase Of New Home | $ 4,800 |
| January Air Fare | 1,200 |
| Selling Costs - Sale Of Old Home | 13,000 |
| Transport Of Household Effects | 4,000 |
| Total Available Moving Expenses | $23,000 |

These expenses can only be deducted to the extent of employment and business income earned during 2019. As these two amounts total $35,241 ($19,436 + $15,805), the full amount of eligible expenses can be deducted.

### *Part A - Taxable Income For Mr. Winded*

Taxable Income for Mr. Winded would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $130,447 |
| Stock Option Deduction [($4,500)(1/2)] | ( 2,250) |
| Taxable Income - Mr. Winded | $128,197 |

### *Part A - Net Income For Tax Purposes And Taxable Income For Mrs. Winded*

Mrs. Winded has no Taxable Income deductions. This means that her Taxable Income is equal to her Net Income For Tax Purposes which would be calculated as follows:

| | |
|---|---|
| Old Age Security | $ 7,400 |
| Canada Pension Plan | 3,100 |
| Transferred Pension Income | 26,000 |
| Dividends (Attributed Back To Mr. Winded) | Nil |
| Net Income For Tax Purposes = Taxable Income - Mrs. Winded | $36,500 |

### *Part B - Federal Balance Owing (Tax Payable) For Mrs. Winded*

While the medical expenses can be claimed by either spouse, they are claimed on Mrs. Winded's return as she has the lower Net Income For Tax Purposes. This results in a lesser reduction of the medical expenses claimed in the computation of the credit. She does have sufficient Tax Payable to fully utilize the credit.

Mrs. Winded's federal Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax Before Credits [(15%)($36,500)] | | $5,475 |
| Tax Credits: | | |
| Basic | ($12,069) | |
| Age (Note 7) | ( 7,494) | |
| Disability | ( 8,416) | |
| Pension Amount | ( 2,000) | |
| Medical Expenses (Note 8) | ( 2,455) | |
| Total Credit Base | $32,434 | |
| Rate | 15% | ( 4,865) |
| Federal Tax Payable | | $ 610 |

**Note 7** Rachel's income is below the income threshold for the age credit. This means the full age amount is available to her.

**Note 8** The base for the medical expense credit is calculated as follows:

| | |
|---|---|
| Total Medical Expenses ($150 + $4,600 - $1,200) | $3,550 |
| Reduced By The Lesser Of: | |
| • [(3%)($36,500)] = $1,095 | |
| • 2019 Threshold Amount = $2,352 | ( 1,095) |
| Base For Medical Expense Credit | $2,455 |

### *Part B - Federal Tax Payable For Mr. Winded*

As Mrs. Winded has fully utilized her credits, there are none to be transferred to Mr. Winded. The Federal Balance Owing for Mr. Winded would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $95,259 | | $16,908 |
| Tax On Next $32,938 ($128,197 - $95,259) At 26 Percent | | 8,564 |
| Tax Before Credits | | $25,472 |
| Tax Credits | | |
| Basic | ($12,069) | |
| Spousal (Income Exceeds $14,299) | Nil | |
| Age (Income Exceeds $87,750) | Nil | |
| Pension Amount | ( 2,000) | |
| CPP | ( 700) | |
| EI | ( 200) | |
| Canada Employment | ( 1,222) | |
| Total Credit Base | ($16,191) | |
| Rate | 15% | ( 2,429) |
| Charitable Donations (Note 9) | | |
| [(15%)($200) + (29%)($3,700 - $200)] | | ( 1,045) |
| Dividend Tax Credits | | |
| Eligible Dividends [(6/11)($1,178)] | | ( 643) |
| Sail Ltd. Dividends [(9/13)($120)] | | ( 83) |
| Federal Tax Payable | | $21,272 |
| OAS Repayment | | 5,350 |
| Total Balance Owing | | $26,622 |

**Note 9** As none of his income is taxed at 33 percent, this rate will not be applicable to the calculation of the charitable donations tax credit.

## Chapter 9 Learning Objectives

After completing Chapter 9, you should be able to:

1. Identify the major other sources of income that are listed under Subdivision d of the *Income Tax Act* (paragraph [P hereafter] 9-1 to 9-19).
2. Identify the income inclusions from deferred income plans (P 9-20 and 9-21).
3. Apply the rules related to education assistance payments, social assistance, workers' compensation payments and the universal child care benefit (P 9-22 to 9-27).
4. Determine the deductible amount of CPP contributions on self-employed income (P 9-28 to 9-31).
5. Determine the deductible amount of moving expenses for an individual (P 9-32 to 9-45).

---

6. Determine the deductible amount of child care expenses (P 9-46 to 9-57).
7. Apply the provisions related to the disability supports deduction (P 9-58 to 9-66).
8. Apply the provisions related to EI benefits and repayments (P 9-67 and 9-68).
9. Explain the general rules for pension income splitting (P 9-69 to 9-77).
10. Explain the tax treatment of child support and spousal support payments and receipts (P 9-78 to 9-87).

---

11. Determine the taxable portion of annuity payments received (P 9-88 to 9-96).
12. Describe the major features of Tax Free Savings Accounts (P 9-97 to 9-101).
13. Explain the provisions associated with Registered Education Savings Plans, Canada Education Savings Grants and Canada Learning Bonds (P 9-102 to 9-129).
14. Compare the major features of TFSAs, RRSPs and RESPs (P 9-130 to 9-138).
15. Describe the major features of Registered Disability Savings Plans (P 9-139 to 9-141).

---

16. Determine the tax consequences of non-arm's length transfers of property at values other than fair market value (P 9-142 to 9-159).
17. Describe the special rollover provisions applicable to inter vivos transfers of capital property to a spouse (P 9-160 to 9-167).
18. Determine the tax consequences of non-arm's length transfers of depreciable property (P 9-168 to 9-172).
19. Describe the special rollover provisions applicable to inter vivos transfers of farm or fishing property to a child (P 9-173 to 9-176).
20. Explain the basic requirements for deemed dispositions on death and any rollovers available at that time (P 9-177 to 9-186).

---

21. Apply the income attribution rules to inter vivos transfers of capital property to a spouse and to related individuals who are under the age of 18 (P 9-187 to 9-205).
22. Describe the income attribution rules applicable to transfers to other related parties (P 9-206 to 9-209).
23. Describe some of the anti-avoidance provisions that relate to the income attribution rules (P 9-210 and 9-211).
24. Describe some of the tax planning techniques that are available to mitigate the income attribution rules (P 9-212).

# CHAPTER 10

## How To Work Through Chapter 10

We recommend the following approach in dealing with the material in this Chapter:

### Planning For Retirement

- Read paragraph 10-1 to 10-19 (in the textbook).

### Registered Retirement Savings Plans (RRSPs)

- Read paragraph 10-20 to 10-36.
- Do Exercise Ten-1 (in the textbook) and check the solution in this Study Guide.
- Read paragraph 10-37.

### RRSP Deduction Limit

- Read paragraph 10-38 to 10-48.
- Do Exercises Ten-2 and Ten-3 and check the solutions in this Study Guide.

### Pension Adjustments (PAs)

- Read paragraph 10-49 to 10-51.
- Do Exercise Ten-4 and check the solution in this Study Guide.
- Read paragraph 10-52 to 10-59.
- Do Exercise Ten-5 and check the solution in this Study Guide.

### Past Service Pension Adjustments (PSPAs) And Pension Adjustment Reversals

- Read paragraph 10-60 to 10-71.
- Do Self Study Problem Ten-1 which is available on MyLab and check the solution in this Study Guide.

### Examples Of RRSP Deduction Calculations

- Read paragraph 10-72.
- Do Exercises Ten-6 and Ten-7 and check the solutions in this Study Guide.

### Undeducted And Excess RRSP Contributions, Including Tax Planning For

- Read paragraph 10-73 to 10-78.
- Do Exercise Ten-8 and check the solution in this Study Guide.
- Read paragraph 10-79 to 10-82.
- Do Self Study Problem Ten-2 to Ten-5 and check the solutions in this Study Guide.

### RRSP And RRIF Administration Fees

- Read paragraph 10-83.

### RRSP Withdrawals, Voluntary Conversions And Involuntary Termination (Age)

- Read paragraph 10-84 to 10-93.

**Spousal RRSP**

- Read paragraph 10-94 to 10-102.
- Do Exercise Ten-9 and check the solution in this Study Guide.

**Home Buyers' Plan (HBP) And Lifelong Learning Plan (LLP)**

- Read paragraph 10-103 to 10-113.
- Do Exercise Ten-10 and check the solution in this Study Guide.
- Read paragraph 10-114 to 10-122.
- Do Exercise Ten-11 and check the solution in this Study Guide.

**RRSPs - Departure From Canada And Death Of The RRSP Registrant**

- Read paragraph 10-123 to 10-138.
- Do Self Study Problem Ten-6 and check the solution in this Study Guide.

**Registered Pension Plans (RPPs)**

- Read paragraph 10-139 to 10-157.

**Pooled Registered Pension Plans, Target Benefit Plans And Expanded CPP**

- Read paragraph 10-158 to 10-167.

**Registered Retirement Income Funds (RRIFs) - General Rules**

- Read paragraph 10-168 to 10-178.
- Do Exercise Ten-12 and check the solution in this Study Guide.

**RRIFs - Death Of The RRIF Registrant And Evaluation Of RRIFs**

- Read paragraph 10-179 to 10-186.

**Deferred Profit Sharing Plans And Profit Sharing Plans**

- Read paragraph 10-187 to 10-196.

**Transfers Between Plans And Retiring Allowances**

- Read paragraph 10-197 to 10-200.
- Do Exercise Ten-13 and check the solution in this Study Guide.
- Do Self Study Problems Ten-7 and Ten-8 and check the solutions in this Study Guide.

**Retirement Compensation Arrangements, Salary Deferral Arrangements And Individual Pension Plans**

- Read paragraph 10-201 to 10-221.
- Do Self Study Problems Ten-9 and Ten-10 and check the solutions in this Study Guide.

**To Complete This Chapter**

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 10. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 10 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 10 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 10 that is on MyLab.

**Practice Examination**

- Write the Practice Examination for Chapter 10 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

## Solutions to Chapter Ten Exercises

### *Exercise Ten - 1 Solution*

| Invested Inside RRSP | |
|---|---|
| Deductible Contribution | $20,000 |
| Dividends Received [(5)(5%)($20,000)] | 5,000 |
| Balance After Five Years | $25,000 |
| Tax On Withdrawal [(40%)($25,000)] | ( 10,000) |
| Available For Vacation | $15,000 |

| Invested Inside TFSA | |
|---|---|
| Initial Investment [($20,000)(1 - .40)] | $12,000 |
| Tax Free Dividends [(5)(5%)($12,000)] | 3,000 |
| Available For Vacation | $15,000 |

| Invested Outside RRSP And TFSA | |
|---|---|
| Initial Investment [($20,000)(1 - .40)] | $12,000 |
| After Tax Dividends [(5)(5%)($12,000)(1 - .22)] | 2,340 |
| Available For Vacation | $14,340 |

Investing outside the RRSP or TFSA is the worst alternative by $660 ($15,000 - $14,340).

### *Exercise Ten - 2 Solution*

His Earned Income for RRSP purposes would be $70,500 ($56,000 + $2,500 + $12,000).

### *Exercise Ten - 3 Solution*

Her Earned Income for RRSP purposes would be $54,500 ($82,000 + $3,000 - $12,500 - $18,000).

### *Exercise Ten - 4 Solution*

The basic mechanism here is the Pension Adjustment (PA). Individuals who belong to an RPP or a DPSP have their RRSP Deduction Limit reduced by the amount of their PA for the previous year. PAs are designed to reflect the amount of contributions or benefits that have been accumulated in employer sponsored RPPs and DPSPs.

### *Exercise Ten - 5 Solution*

The Pension Adjustment will be $6,400 ($2,300 + $1,800 + $2,300).

### *Exercise Ten - 6 Solution*

The required calculations would be as follows:

| | |
|---|---|
| Unused Deduction Room - End Of 2018 | $4,800 |
| Lesser Of: | |
| • 2019 RRSP Dollar Limit = $26,500 | |
| • 18% Of 2018 Earned Income Of $38,000 = $6,840 | 6,840 |
| 2019 RRSP Deduction Limit | $11,640 |
| RRSP Deduction Is Least Of: | |
| • RRSP Deduction Limit = $11,640 | |
| • Available Contributions = $6,000 | |
| • Amount Mr. Haslich Chooses To Deduct = $4,500 | ( 4,500) |
| Unused RRSP Deduction Room - End Of 2019 | $ 7,140 |

Assuming Mr. Haslich deducted only $4,500, he would have $1,500 ($6,000 - $4,500) in undeducted contributions that can be carried forward and deducted in a subsequent year.

If Mr. Haslich wanted to deduct his maximum RRSP deduction of $11,640, he would have to contribute an additional $5,640 ($11,640 - $6,000).

### *Exercise Ten - 7 Solution*

The required calculations would be as follows:

| | |
|---|---|
| Unused Deduction Room - End Of 2018 | $10,750 |
| Lesser Of: | |
| • 2019 RRSP Dollar Limit = $26,500 | |
| • 18% Of 2018 Earned Income Of $66,530* = $11,975 | 11,975 |
| Less 2018 PA | ( 4,800) |
| 2019 RRSP Deduction Limit | $17,925 |
| RRSP Deduction Is Lesser Of: | |
| • RRSP Deduction Limit = $17,925 | |
| • Available Contributions = $19,760 ($6,560 + $13,200) | ( 17,925) |
| Unused RRSP Deduction Room - End Of 2019 | Nil |

*Earned Income = $6,530 - $18,000 + $75,600 + $2,400 (RPP)

Mr. Black's maximum RRSP deduction is $17,925. While he has no Unused RRSP Deduction Room, he has $1,835 ($19,760 - $17,925) in undeducted contributions that can be carried forward and deducted in a subsequent year in which there is sufficient RRSP deduction room.

### *Exercise Ten - 8 Solution*

In 2017 and 2018, 18 percent of Ms. Brownell's $160,000 in earned income is more than the RRSP dollar limit for those years. Her 2019 earned income is not relevant in this Exercise as it will not be used until 2020. Given this, the calculation of the excess amount of contributions is as follows:

| | |
|---|---|
| 2018 Contribution (July 1) | $27,350 |
| 2018 Addition To Deduction Room = RRSP Dollar Limit | ( 26,230) |
| Excess Contributions For 2018 (Less Than $2,000) | $ 1,120 |
| 2019 Contribution (May 1) | 30,000 |
| 2019 Addition To Deduction Room = RRSP Dollar Limit | ( 26,500) |
| Permitted $2,000 Cushion | ( 2,000) |
| Excess Contributions Subject To Penalty | $ 2,620 |

As the excess contribution for 2018 was less than $2,000, there is no penalty for that year. There will be a 2019 penalty of $210 [(1%)($2,620)(8 Months)]. The fact that there is no RRSP deduction is not relevant to the penalty.

### *Exercise Ten - 9 Solution*

As a spousal contribution was made in 2018, one of the two years prior to 2019, income attribution will apply. However, it will only apply to the extent of the $5,000 contribution made by Mrs. Garveau. This means that $5,000 of the withdrawal will be taxed in the hands of Mrs. Garveau, with the remaining $4,000 taxed in the hands of Mr. Garveau.

### *Exercise Ten - 10 Solution*

Ms. DeBoo will have to repay $867 [(1/15)($18,000 - $5,000)] during 2019. Note that the voluntary payment that was made during 2018 did not reduce the fraction of the remaining balance that must be paid in 2019.

### *Exercise Ten - 11 Solution*

There are no tax consequences associated with the withdrawal of $5,000. He is not enrolled in a qualifying education program in either 2018 or 2019 and, as a consequence, his repayment period begins in 2019. As he makes the required payments of $500 ($5,000 ÷ 10) within 60 days of the end of each of the years 2019 through 2028, there are no tax consequences associated with his repayments.

### *Exercise Ten - 12 Solution*

He has no required minimum withdrawal for 2019, the year the RRIF is established. His minimum withdrawal for 2020 will be $27,500 [$660,000 ÷ (90 - 66)].

### *Exercise Ten - 13 Solution*

It would appear that Mr. Bartoli began working for his employer in 1976. Given this, he can rollover a total of $59,500 [($2,000)(20 Years Before 1996) + ($1,500)(13 Years Before 1989)] to his RRSP. The remainder of the retiring allowance will be taxed in 2019.

## Self Study Solution Ten - 1

### *Case 1*

The required 2019 PA would be calculated as follows:

| | |
|---|---|
| Employer's Contribution To DPSP | $2,500 |
| Employer's Contribution To RPP | 1,000 |
| Fredia's Contribution To RPP | 1,000 |
| PA | $4,500 |

### *Case 2*

The required 2019 PA would be calculated as follows:

[(1.25%)(9)($71,000)] = $7,988

Note that the contributions made during 2019 have no influence on the PA for a defined benefit RPP.

### *Case 3*

The required PSPA would be calculated as follows:

| | |
|---|---|
| 2017 Amount [(1.1%)(9)($38,000)] | $3,762 |
| 2018 Amount [(1.1%)(9)($42,000)] | 4,158 |
| 2019 PSPA | $7,920 |

In addition to the PSPA calculated above, there would be a 2019 PA of $5,049 [(1.1%)(9)($51,000)].

### *Case 4*

The required PAR would be calculated as follows:

| | |
|---|---|
| 2017 PA | $ 5,200 |
| 2018 PA | 5,400 |
| 2019 PAR | $10,600 |

***Case 5***

The required PSPA would be calculated as follows:

| | |
|---|---|
| 2017 Amount [(1.5% - 1.3%)(9)($58,000)] | $1,044 |
| 2018 Amount [(1.5% - 1.3%)(9)($62,000)] | 1,116 |
| 2019 PSPA | $2,160 |

There would also be a 2019 PA. However, this cannot be calculated as the problem does not provide the 2019 pensionable earnings.

## Self Study Solution Ten - 2

***Part A - Maximum RRSP Deduction***

Deeta's maximum 2019 RRSP deduction would be calculated as follows:

| | |
|---|---|
| Unused Deduction Room - January 1, 2018 | $35,000 |
| 2018 Addition | Nil |
| 2019 Addition (Based On 2018 Earned Income Of Nil) | Nil |
| Maximum 2019 RRSP Deduction | $35,000 |

***Part B - Excess RRSP Contributions***

At the beginning of 2018, Deeta's undeducted contributions of $37,000 are equal to her $35,000 unused deduction room, plus the permitted $2,000 cushion. As she withdraws $25,000 and made no further contributions during 2018, there are no excess contributions during the 2018 taxation year.

The excess contributions for 2019 would be calculated as follows:

| | |
|---|---|
| Undeducted Contributions | |
| January 1, 2019 ($37,000 - $25,000) | $12,000 |
| Additional Contribution On May 2, 2019 | 40,000 |
| Total Undeducted Contributions | $52,000 |
| Unused Deduction Room | ( 35,000) |
| Permitted Cushion | ( 2,000) |
| Excess Contributions Subject To Penalty | $15,000 |
| Penalty Rate | 1% |
| Monthly Penalty | $ 150 |
| Months (May To December) | 8 |
| Total Penalty For 2019 | $ 1,200 |

***Part C - Advice On Tax Planning***

As the preceding calculation demonstrates, Deeta's excess contributions are attracting a significant penalty, based on a monthly charge of 1 percent of the excess amount.

As her earned income for 2019 will be $61,000, the addition to her 2020 deduction room will be $10,980. As her December 31, 2019 excess contributions are $15,000, she will need to withdraw $4,020 ($15,000 - $10,980) in order to avoid having an additional penalty in 2020. If the excess contributions are withdrawn from the RRSP prior to the end of the year following the year in which an assessment is received for the year in which the contribution is made, an offsetting deduction is available. If, however, any excess is not withdrawn within this specified time frame, it will be included in income and taxed on withdrawal, even though it was never deducted from income. Deeta should withdraw the $4,020 immediately to stop the assessment of the penalty.

Since she has never had a TFSA, she should open one. The withdrawn funds should be contributed to her TFSA, along with any other excess funds up to her TFSA contribution room. For 2019, the maximum total contributions are $63,500 and, while TFSA contributions are not deductible, earnings accumulate on a tax free basis. In addition, withdrawals can be made without tax consequences.

Whether Deeta should withdraw the $2,000 cushion as well depends on future expectations. As there is no time limit on using contributions that are in the plan, it would make sense to simply leave the $2,000 in place, provided that she expects to have earned income in some future year.

In the future, she should ensure that she continues to contribute to her RRSP and TFSA, but should limit the amounts to the maximum permitted contribution.

## Self Study Solution Ten - 3

Mr. Barnes' 2018 Earned Income for RRSP purposes would be calculated as follows:

| | |
|---|---|
| Salary | $55,000 |
| Taxable Benefits | 1,150 |
| Union Dues | ( 175) |
| Net Employment Income | $55,975 |
| Business Income | 4,150 |
| Rental Loss | ( 11,875) |
| Spousal Support Received | 2,400 |
| Earned Income | $50,650 |

Note that CPP and EI contributions do not reduce Earned Income for RRSP purposes.

Since Mr. Barnes has no undeducted RRSP contributions, his maximum deductible RRSP contribution for 2019 is equal to his RRSP Deduction Limit.

This is calculated for Part A (not a member of RPP or DPSP) and Part B (member of RPP) as follows:

| | Part A | Part B |
|---|---|---|
| Unused Deduction Room - End Of 2018 | Nil | Nil |
| Annual Addition - Lesser Of: | | |
| • 2019 RRSP Dollar Limit = $26,500 | | |
| • 18% of 2018 Earned Income Of $50,650 = $9,117 | 9,117 | 9,117 |
| Less 2018 PA | N/A | ( 4,200) |
| Maximum Deductible RRSP Contribution | $9,117 | $4,917 |

## Self Study Solution Ten - 4

The annual addition for 2019 would be the lesser of $26,500 and 18 percent of Earned Income for 2018. The latter amount would be calculated as follows:

| | |
|---|---|
| Salary | $86,200 |
| Taxable Benefits | 5,600 |
| RPP Contributions (Note 1) | Nil |
| Union Dues | ( 450) |
| Net Employment Income (RRSP Figure) | $91,350 |
| Business Loss | ( 4,500) |
| Rental Income | 6,700 |
| Common-Law Partner Support Paid | ( 12,000) |
| Eligible Dividends (Note 2) | Nil |
| Interest (Note 2) | Nil |
| 2018 Earned Income | $81,550 |
| Rate | 18% |
| Annual Addition (Less Than $26,500) | $14,679 |

**Note 1** While Ms. Storm's RPP contribution would be deducted in determining Net Income For Tax Purposes, it is not deducted in calculating employment income for RRSP Earned Income purposes.

**Note 2** Neither the eligible dividends nor the interest are part of RRSP Earned Income.

Ms. Storm's maximum deductible RRSP contribution would be calculated as follows:

| | |
|---|---|
| Opening Unused RRSP Deduction Room | $17,000 |
| Annual Addition | 14,679 |
| 2018 Pension Adjustment [(2)($2,500)] | ( 5,000) |
| RRSP Deduction Limit For 2019 | $26,679 |
| Undeducted Contributions From Prior Years | ( 8,000) |
| Maximum Deductible Contribution For 2019 | $18,679 |

## Self Study Solution Ten - 5

### *Part A*

For purposes of determining her maximum 2019 RRSP contribution, 2018 Earned Income would be calculated as follows:

| | | |
|---|---|---|
| Net Employment Income* | | |
| Salary | $150,000 | |
| Automobile Benefit | 6,500 | |
| Employee Stock Option Benefit | 3,000 | |
| Benefit On Interest Free Loan | 1,500 | |
| Deductible Employment Expenses | ( 3,400) | $157,600 |
| Net Business Income | | 14,600 |
| Royalty Income (Own Invention) | | 6,600 |
| Net Rental Loss | | ( 10,000) |
| Spousal Support Received | | 24,000 |
| Earned Income | | $192,800 |

*Note that, in calculating Earned Income for RRSP purposes, no deduction is made from net employment income for contributions made to an RPP.

A listing of the items that are not included in the calculation of Earned Income is as follows:

- Registered Pension Plan Contributions
- Interest Income
- Taxable Capital Gains
- Eligible Dividends

### Part B

The calculation of Sherly's maximum deductible RRSP contribution for 2019 is as follows:

| | |
|---|---|
| 2017 RRSP Dollar Limit | $26,010 |
| 2018 RRSP Dollar Limit | 26,230 |
| Opening Unused RRSP Deduction Room | $52,240 |
| Annual Addition - Lesser Of: | |
| • 2019 RRSP Dollar Limit = $26,500 | |
| • 18 Percent Of 2018 Earned Income | |
| [(18%)($192,800)] = $34,704 | 26,500 |
| 2018 PA | ( 15,000) |
| Maximum Deductible RRSP Contribution For 2019 | $63,740 |

## Self Study Solution Ten - 6

### Part A

Mr. Sabatini's minimum net employment income would be calculated as follows:

| | |
|---|---|
| Salary | $ 58,000 |
| Commissions | 74,000 |
| Registered Pension Plan Contributions | ( 3,500) |
| Net Disability Benefits (Note 1) | 3,950 |
| Life Insurance Premium Taxable Benefit | |
| [(50%)($3,000)] | 1,500 |
| Automobile Benefit (Note 2) | 6,671 |
| Stock Option Benefit | |
| [($23.50 - $12.50)(1,000 Shares)] | 11,000 |
| Golf And Country Club Costs (Note 3) | ( 3,400) |
| Net Employment Income | $148,221 |

**Note 1** As Mr. Sabatini's employer has made contributions to the sickness and accident plan, the benefit of $4,500 is taxable. This is reduced by the payments of $550 [($100)(12 - 1)/2] that were made by Mr. Sabatini during the year, leaving a net benefit of $3,950.

**Note 2** With respect to the standby charge, Mr. Sabatini's employment related usage is over 50 percent of the total and, as a consequence, he can reduce his standby charge to the extent of personal usage that is less than 1,667 kilometers per month. Also note that, as the car was not available during November, his standby charge would be based on 335 days of availability. This would be rounded to 11 months (335/30). Given this, the standby charge would be as follows:

[($68,000)(11 Months)(2%)(7,000/18,337)] = $5,711

As Mr. Sabatini's employment related use was over 50 percent of the total use, he can base his operating cost benefit on one-half of the standby charge. Given this, the benefit would be the lesser of:

- [($0.28)(7,000)] = $1,960; and
- [(1/2)($5,711)] = $2,856

Using the lesser figure of $1,960, the total benefit would be calculated as follows:

| | |
|---|---|
| Standby Charge | $5,711 |
| Operating Cost Benefit | 1,960 |
| Payment To Employer | ( 1,000) |
| Total Automobile Benefit | $6,671 |

**Note 3** Only 50 percent of the $6,800 country club entertainment costs can be deducted by Mr. Sabatini. The $5,000 membership fee would not be a taxable benefit and would not be deductible by his employer.

**Other Notes**

- The travel costs that the corporation reimbursed to Mr. Sabatini have no tax effect.
- The CPP and EI contributions are not deductible. They can be used to create credits against Tax Payable.
- Income taxes withheld are not deductible.
- Donations to a registered charity will create a credit against Tax Payable, but cannot be deducted in the determination of net employment income.
- Parking fees related to Mr. Sabatini's normal employment location are not deductible.
- Although he cannot deduct his share of the life insurance premiums, the life insurance proceeds will not be taxable.
- The use of frequent flyer points earned on employment related travel does not normally create a taxable benefit.
- The discounts on merchandise provided by the employer are not a taxable benefit.

### Part B

Mr. Sabatini's 2018 Earned Income and maximum deductible 2019 RRSP contribution would be calculated as follows:

| | |
|---|---|
| 2018 Earned Income From Employment (Given) | $116,000 |
| 2018 Business Loss | ( 12,500) |
| 2018 Rental Income | 7,500 |
| 2018 Earned Income | $111,000 |
| | |
| Unused Deduction Room - End Of 2018 | Nil |
| Annual Addition - Lesser Of: | |
| • 2019 RRSP Dollar Limit = $26,500 | |
| • 18% of 2018 Earned Income Of $111,000 = $19,980 | $19,980 |
| Less 2018 PA | ( 6,800) |
| 2019 RRSP Deduction Limit | $13,180 |
| | |
| RRSP Deduction For 2019 | $ 2,600 |

While Mr. Sabatini has deduction room of $13,180, only the $2,600 contribution to his wife's plan can be deducted. His $10,000 contribution to his own RRSP is not relevant as it was deducted in the previous year.

### Part C

Since the RRSP has no beneficiary specified, an amount equal to the fair market value of all the property held in the RRSP at the time of death will have to be reported on Mr. Sabatini's return for 2020, the year of death.

### Part D

Since Mr. Sabatini's wife is the sole beneficiary, she can choose to transfer all the assets in the RRSP to an RRSP in her name. If this is done, there will be no tax consequences for either his wife or Mr. Sabatini's final return. This would likely be the most tax advantageous arrangement for dealing with Mr. Sabatini's RRSP.

Note that there are also provisions that allow RRSPs to be transferred to a financially dependent child on a basis that shifts the tax burden to the child. Given Mr. Sabatini is receiving child support for an 8 year son, this approach might also be tax advantageous.

## Self Study Solution Ten - 7

### General Tax Planning Goals

The most desirable solution would be to find benefits that would be fully deductible to the Company and free of taxation for Mr. Jones. The only items that fall into this category would be:

- payments for private health care plans;
- payments for disability insurance;
- discounts on company merchandise; and
- annual non-cash gifts with a value of $500 or less.

Discounts on industrial engines are not likely to be of any value to Mr. Jones. However, Mr. Jones should arrange to have the Company provide private health care coverage, including a dental plan. The Company could also pay the premiums on a disability insurance plan without it becoming a taxable benefit to Mr. Jones at the time of payment (benefits received would be taxable). Finally, an annual non-cash gift with a value of $500 or less would be deductible to the company and received tax free by Mr. Jones.

### Use Of RPP, DPSP, RRSP And Retiring Allowance

In terms of tax deferral, Mr. Jones should be included in the Company's Registered Pension Plan (RPP). Once he is admitted to the plan, both he and the Company should make the maximum contributions that are permitted under the terms of the plan. The limiting factor here is that these contributions cannot result in a Pension Adjustment that is in excess of the lesser of 18 percent of Mr. Jones' compensation for the year or the money purchase limit for the year under consideration ($27,230 for 2019).

While there is no indication that the Company has such an arrangement, a Deferred Profit Sharing Plan (DPSP) might also be useful. Whether or not Mr. Jones would be able to use such an arrangement would depend on the total employee/employer contributions to the Company's RPP. Contributions to a DPSP are included in the calculation of Mr. Jones' Pension Adjustment and, when combined with the RPP contributions, the total is subject to the limitation described in the preceding paragraph.

### Housing Loan

The Company could provide a loan to Mr. Jones to purchase his new residence. A low interest or interest free loan will result in imputed interest being added to Mr. Jones' Taxable Income without an offsetting deduction. Note, however, that the prescribed rate for this purpose is at the low rate of 2 percent. At this rate, even if the loan is interest free, the taxable benefit associated with such loans is fairly small and could make a large interest free loan desirable. On the $100,000 he requires to buy a residence, the benefit on an interest free loan would only be $2,000 [(2%)(100,000)].

As there is an intent to compensate, arrangements would have to be made for forgiving the loan after Mr. Jones retires. While such forgiveness would be taxable to Mr. Jones, he expects to be in a lower tax bracket after retiring, resulting in an absolute tax savings.

### *Company Car*

The Company could provide Mr. Jones with an automobile. In this case, Mr. Jones will be assessed for a personal benefit of a standby charge (24 percent per year of the capital cost or two-thirds of the lease payments, if he is not eligible for a reduction) and for operating costs (one-half of the standby charge or $0.28 per kilometer of personal use). Whether or not this will be desirable depends on an analysis of how Mr. Jones would actually use the car. In some cases, especially if the car has a list price of more than $30,000, the taxable benefit may exceed the actual benefit, making this an undesirable form of compensation.

### *Recreational Facilities*

The Company could pay the dues for any recreational facilities that Mr. Jones might wish to use. While these amounts will not be treated as a taxable benefit to Mr. Jones, the payments will not be deductible to the Company. Given that the Company is subject to a marginal tax rate that is lower than Mr. Jones' combined rate, it is unlikely the Company would agree to do this.

### *Moving Costs*

The Company could provide assistance with the costs that will be incurred by Mr. Jones in moving to Hamilton. With respect to costs that Mr. Jones would be permitted to deduct, it makes little difference whether the Company pays the costs, or simply pays an equivalent amount in salary and lets Mr. Jones pay the costs and deduct them. However, certain types of moving costs that would not be deductible by Mr. Jones can be paid by the Company without creating a taxable benefit. An example of this would be compensation for a loss on a personal residence owned by Mr. Jones if a loss exists on his house in Windsor. (See Chapter 9)

### *Bonus And/Or Stock Options*

If Martin Manufacturing has a year end after July 6, it can declare a bonus in the third year, but not pay it until the following calendar year. This will defer Mr. Jones' taxation of the bonus by one year without deferring Martin's deduction.

As an incentive, the Company could grant Mr. Jones options to purchase its stock. This would have no tax cost to the Company. The timing of the tax cost of the options for Mr. Jones could be delayed until after retirement.

### *Services As A Self-Employed Contractor Or Through A Corporation*

Since Mr. Jones has been operating as a consultant, it may be possible to structure the project so that he will be considered an independent contractor rather than an employee. This would considerably increase the amount and type of expenditures that would be deductible by him and also create an opportunity to income split with his wife, if she could assist him in the project in some way. Her assistance would have to have a business purpose (supernatural phenomena expertise would have questionable value) and any payments to her would have to be reasonable in the circumstances.

In considering this alternative it should be kept in mind that, if Mr. Jones is not an employee, some of the possibilities that have been previously discussed would no longer be feasible. For example, unless Mr. Jones is an employee, it would not be possible for him to be a member of the Company's RPP.

Another possibility would be for Mr. Jones to provide his services through a corporation. However, this would probably not be helpful. Given his relationship with Martin Manufacturing Company, any corporation would likely be viewed as a personal services business and taxed at full corporate rates. (Personal services corporations are covered in Chapter 12, Taxable Income And Tax Payable For Corporations.)

# Self Study Solution Ten - 8

## Part A - RRSP Contribution

In order to calculate the maximum deductible RRSP contribution, net employment income and net rental income must first be calculated.

### *Net Employment Income*

The calculations required for 2018 (to be used in the RRSP earned income calculation) and 2019 would be as follows:

| | 2018 | 2019 |
|---|---|---|
| Gross Salary | $47,000 | $53,000 |
| Commissions | 6,200 | 7,800 |
| RPP Contributions | ( 1,800) | ( 1,950) |
| Work Space In Home Costs (Note 1) | ( 1,001) | ( 1,073) |
| Net Employment Income | $50,399 | $57,777 |

**Note 1** As an employee, Kerri cannot deduct either the listed mortgage interest or CCA on this office space. Because she has commission income, Kerri can deduct all of the other listed costs. Given this, the 2018 and 2019 deductions are as follows:

| | 2018 | 2019 |
|---|---|---|
| Utilities And Maintenance | $1,850 | $2,040 |
| Insurance | 625 | 715 |
| Property Taxes | 4,200 | 4,400 |
| Total | $6,675 | $7,155 |
| Percentage Used | 15% | 15% |
| Deductible Amount | $1,001 | $1,073 |

### *Net Rental Income*

The calculations required for 2018 and 2019 would be as follows:

| | 2018 | 2019 |
|---|---|---|
| Rents | $ 8,400 | $13,800 |
| Expenses Other Than CCA | ( 10,300) | ( 11,100) |
| Income (Loss) Before CCA | ($ 1,900) | $ 2,700 |
| CCA (Note 2) | N/A | ( 2,700) |
| Net Rental Income | ($ 1,900) | Nil |

**Note 2** As CCA cannot be used to increase or create a rental loss, no deduction can be made in 2018. For 2019, the maximum available CCA deduction is $10,400 [(4%)($340,000 - $80,000)]. However, the actual deduction is limited to the $2,700 of rental income prior to the deduction of CCA. The first year one-half rule is not applicable as this is the second year the property is owned. The fact that no CCA was deducted in the first year is not relevant.

### RRSP Calculations

Determining the appropriate amount here requires the calculation of Earned Income for 2018. The calculation is as follows:

| | |
|---|---|
| 2018 Net Employment Income | $50,399 |
| 2018 RPP Contributions Deducted | 1,800 |
| Spousal Support Received [(12)($500)] | 6,000 |
| 2018 Net Rental Loss | ( 1,900) |
| 2018 Earned Income | $56,299 |

Using this figure, Ms. Sosteric's maximum 2019 deduction, along with the additional contribution required to make this deduction, would be calculated as follows:

| | |
|---|---|
| Opening Unused Deduction Room | $ 6,200 |
| Annual Addition - Lesser Of: | |
| • 2019 RRSP Dollar Limit = $26,500 | |
| • 18% Of 2018 Earned Income Of $56,299 = $10,134 | 10,134 |
| Less 2018 PA (Employee And Employer RPP Contributions) | ( 3,600) |
| Maximum RRSP Deduction | $12,734 |
| Undeducted Contributions In Plan | ( 5,800) |
| Required Additional Contribution | $ 6,934 |

## Part B - Net Income For Tax Purposes And Taxable Income

### Other Required Information

While we can use several of the figures from Part A to calculate Net Income For Tax Purposes, two other items must be calculated before we can complete this figure.

### Taxable Capital Gain And Dividends - Employer's Shares

The tax consequences related to buying, holding, and selling her employer's shares are as follows:

| | |
|---|---|
| Proceeds Of Disposition [(5,000)($14.75)] | $73,750 |
| Adjusted Cost Base [(5,000)($12.00)] | ( 60,000) |
| Capital Gain | $13,750 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 6,875 |

| | |
|---|---|
| Eligible Dividends [(5,000)($0.60)] | $3,000 |

### Child Care Costs

Kerri's deductible child care costs are the least of three amounts:

**Actual Costs** The actual costs were given as $8,600.

**Annual Limit** The annual limit is $13,000 ($8,000 for Barry and $5,000 for Kim).

**Income Limit** For this purpose, Ms. Sosteric's "earned income" is her gross employment income of $60,800 ($53,000 + $7,800). Two-thirds of this amount is $40,533.

The least of these figures is the actual costs of $8,600.

As Ms. Sosteric has no deductions applicable to the determination of Taxable Income, her Taxable Income is equal to her Net Income For Tax Purposes which is as follow:

| | |
|---|---|
| Net Employment Income (Part A) | $57,777 |
| Net Rental Income (Part A) | Nil |
| RRSP Deduction (Part A) | ( 12,734) |
| Spousal Support Received | 6,000 |
| Taxable Capital Gains | 6,875 |
| Eligible Dividends [(5,000)($0.60)] | 3,000 |
| Gross Up [(38%)($3,000)] | 1,140 |
| Child Care Costs | ( 8,600) |
| Net Income For Tax Purposes And Taxable Income | $53,458 |

## Part B - Tax Payable

The required calculations for her Tax Payable are as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $7,145 |
| Tax On Next $5,828 ($53,458 - $47,630) At 20.5 Percent | | 1,195 |
| Tax Before Credits | | $8,340 |
| Tax Credits: | | |
| Basic Personal Amount | ($12,069) | |
| Eligible Dependant - Either Child | ( 12,069) | |
| EI Premiums | ( 860) | |
| CPP Contributions | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Medical Expenses (Note 3) | ( 1,016) | |
| Total Credit Base | ($29,985) | |
| Rate | 15% | ( 4,498) |
| Dividend Tax Credit [(6/11)($1,140)] | | ( 622) |
| Federal Tax Payable | | $3,220 |

**Note 3** The base for Ms. Sosteric's medical expense tax credit would be calculated as follows:

| | |
|---|---|
| Eligible Expenses | $2,620 |
| Reduced By The Lesser Of: | |
| • [(3%)($53,458)] = $1,604 | |
| • 2019 Threshold Amount = $2,352 | ( 1,604) |
| Base For Credit | $1,016 |

# Self Study Solution Ten - 9

## Part A - Spousal RRSP Contribution

As noted in the problem, we are to assume that Ahmed's 2018 Earned Income is equal to his 2019 Earned Income. In order to calculate the 2019 Earned Income, we need to calculate both net employment income and net rental income. These are the only components of Mr. Sidi's Earned Income.

### *Net Employment Income*

Even though Ahmed is no longer an employee, he has employment income related to the exercise of his stock option shares. The calculations are as follows:

| | |
|---|---|
| Exercise Date Value [(5,000)($21)] | $105,000 |
| Option Price [(5,000)($15)] | ( 75,000) |
| Employment Income Inclusion | $ 30,000 |

There will be a deduction in the determination of Taxable Income equal to one-half of this inclusion or $15,000.

### *Net Rental Income*

The required calculations here are as follows:

| | |
|---|---|
| Revenues ($34,000 + $42,000 + $26,000) | $102,000 |
| Recapture On Property A (Note 1) | 138,000 |
| Expenses Other Than CCA ($29,000 + $37,000 + $23,000) | ( 89,000) |
| CCA (Note 1) | ( 38,240) |
| Net Rental Income | $112,760 |

**Note 1** CCA on the rental properties would be calculated as follows:

| | Property A | Property B | Property C |
|---|---|---|---|
| UCC On January 1 | $422,000 | $571,000 | $385,000 |
| Dispositions - Capital Cost | ( 560,000) | N/A | N/A |
| Subtotal | ($138,000) | $571,000 | $385,000 |
| Recapture | 138,000 | N/A | N/A |
| Balance Subject To CCA | Nil | $571,000 | $385,000 |
| Rate | N/A | 4% | 4% |
| CCA | Nil | $ 22,840 | $ 15,400 |

The total 2019 CCA would be $38,240 ($22,840 + $15,400).

### *RRSP Deduction*

Since we are assuming that Ahmed's 2018 Earned Income is equal to his 2019 Earned Income, the required figure is calculated as follows:

| | |
|---|---|
| Employment Income | $ 30,000 |
| Net Rental Income | 112,760 |
| 2018 Earned Income (Assumed To Be Equal To 2019) | $142,760 |

The maximum deductible spousal RRSP contribution for 2019 would be the lesser of $25,697 [(18%)($142,760)] and the 2019 RRSP Dollar Limit of $26,500. Using the lesser figure, the maximum deductible contribution would be $25,697.

## Part B - Net Income For Tax Purposes

While the employment income and rental income figures from Part A are components of Net Income For Tax Purposes, other figures are needed to complete this Part B calculation.

### *Taxable Capital Gains*

There will be a taxable capital gain on the sale of the shares, calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [(5,000)($23)] | $115,000 |
| Adjusted Cost Base [(5,000)($21)] | ( 105,000) |
| Capital Gain | $ 10,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 5,000 |

In addition, there will be a capital gain on the sale of Property A, calculated as follows:

| | Land | Building |
|---|---|---|
| Proceeds Of Disposition | $340,000 | $620,000 |
| Adjusted Cost Base/Capital Cost | ( 100,000) | ( 560,000) |
| Capital Gain | $240,000 | $ 60,000 |

The total capital gain is $300,000 ($240,000 + $60,000). However, as the total proceeds were not collected in the year of sale, he can reduce his income inclusion through the use of a reserve.

| | |
|---|---|
| Total Capital Gain ($240,000 + $60,000) | $300,000 |
| Reserve - Lesser Of: | |
| • [($300,000)($864,000 ÷ $960,000)] = $270,000 | |
| • [($300,000)(20%)(4 - 0)] = $240,000 | ( 240,000) |
| Capital Gain | $ 60,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain For 2019 | $ 30,000 |

### *Minimum RRIF Withdrawal*

A registrant can irrevocably elect to base the minimum RRIF withdrawal calculation on the age of his spouse rather than his own age. If the spouse is younger, this will minimize the required withdrawal. Adrianna is aged 66, which is 5 years younger than Ahmed.

For individuals under the age of 71, the minimum RRIF withdrawal is calculated by dividing the fair market value of the assets in the plan at the beginning of the year by the number 90, less the registrant's age, or the spouse's age if elected.

The minimum RRIF withdrawal would be $52,083 [$1,250,000 ÷ (90 - 66)].

### *Pension Income Splitting*

The election to split CPP benefits is provided for in the Canada Pension Plan regulations and results in an actual split of the payments. The ITA 60.03 legislation allows certain other types of pension income to be split. Both payments of RPPs and withdrawals from RRIFs qualify for this split which is implemented solely on the tax returns. The total qualifying pension income for Ahmed is $138,083 ($86,000 + $52,083), one-half of which is $69,042.

***Net Income For Tax Purposes***

Based on the preceding calculations and the Other Information provided in the problem, Ahmed's minimum Net Income For Tax Purposes can be calculated as follows:

| | |
|---|---|
| Employment Income - Part A | $ 30,000 |
| Net Rental Income - Part A | 112,760 |
| Spousal RRSP Deduction - Part A | ( 25,697) |
| RPP Receipts (Pension Split) | 86,000 |
| CPP Receipts After Election To Split With Wife | 5,500 |
| Taxable Capital Gain - Option Shares | 5,000 |
| Taxable Capital Gain - Rental Property | 30,000 |
| Minimum RRIF Withdrawal (Pension Split) | 52,083 |
| Interest From Canadian Sources | 18,000 |
| Eligible Dividends Received | 2,200 |
| Gross Up [(38%)($2,200)] | 836 |
| Foreign Source Interest (100 Percent) | 3,000 |
| Net Income For Tax Purposes Before Pension Split | $319,682 |
| Income Allocated To Wife [(1/2)($86,000 + $52,083)] | ( 69,042) |
| Net Income For Tax Purposes | $250,640 |

## Part B - Taxable Income

Ahmed's Taxable Income would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $250,640 |
| Stock Option Deduction - Part A | ( 15,000) |
| Taxable Income | $235,640 |

## Part B - Tax Payable

As the problem requires the minimum Tax Payable, Ahmed has claimed the credits for his son, the medical expenses and charitable donations. These could have been claimed by Adrianna. The required calculations are as follows:

| | | |
|---|---|---|
| Tax On First $210,371 | | $48,719 |
| Tax On Next $25,269 ($235,640 - $210,371) At 33 Percent | | 8,339 |
| Tax Before Credits | | $57,058 |
| Tax Credits: | | |
| Basic Personal Amount | ($12,069) | |
| Spousal (Note 2) | Nil | |
| Age (Net Income Too High) | Nil | |
| Canada Caregiver - Son | ( 7,140) | |
| Canada Employment | ( 1,222) | |
| Pension Income | ( 2,000) | |
| Transfer Of Disability From Son | ( 8,416) | |
| Medical Expenses (Note 3) | ( 13,048) | |
| Total Credit Base | ($43,895) | |
| Rate | 15% | ( 6,584) |
| Charitable Donations (Note 4) | | ( 1,284) |
| Dividend Tax Credit On Eligible Dividends [(6/11)($836)] | | ( 456) |
| Foreign Tax Credit (Amount Withheld) | | ( 300) |
| Federal Tax Payable | | $48,434 |

**Note 2** While Adrianna has only $7,500 of OAS and the $5,500 in CPP benefits in her name, the added amounts resulting from the pension income splitting of more than $69,000 will be more than enough to eliminate the spousal tax credit. This additional income will use up all of her other tax credits (age and pension), preventing any transfers to Ahmed.

**Note 3** The base for the medical expense tax credit is calculated as follows:

| | | |
|---|---|---|
| Ahmed And Adrianna ($2,500 + $3,100) | | $5,600 |
| Lesser Of: | | |
| • [(3%)($250,640)] = $7,519 | | |
| • 2019 Threshold Amount = $2,352 | | ( 2,352) |
| Subtotal | | $ 3,248 |
| Son's Medical Expenses | $9,800 | |
| Reduced By The Lesser Of: | | |
| • $2,352 | | |
| • [(3%)(Nil)] = Nil | Nil | 9,800 |
| Allowable Amount Of Medical Expenses | | $13,048 |

**Note 4** Ahmed's charitable donations tax credit would be calculated as follows:

| | |
|---|---|
| 15 Percent Of $200 | $ 30 |
| 33 Percent Of The Lesser Of: | |
| ($4,000 - $200) = $3,800 | |
| ($235,640 - $210,371) = $25,269 | 1,254 |
| Total Credit | $1,284 |

## Part C - Pension Income Splitting

Given Ahmed's high Taxable Income, even after pension splitting, more than $25,000 is being taxed at the maximum 33 percent federal rate. Despite splitting the maximum amount of pension income, none of Adrianna's income is taxed at higher than 20.5 percent federally.

As a result, maximum pension income splitting appears to be advantageous if only federal tax rates are considered.

What should also be considered is the effect of the pension income splitting on the OAS clawback for Adrianna and the effect of provincial income taxes on both Ahmed and Adrianna. The effect of the OAS clawback and provincial taxes could make it more advantageous to reduce the amount of income splitting so that Adrianna's Net Income For Tax Purposes is below the OAS clawback income threshold.

While the ability to claim more medical expenses could be a factor in some pension income splitting analyses, it would have very little influence in this case given the high levels of Net Income involved.

## Chapter 10 Learning Objectives

After completing Chapter 10, you should be able to:

1. Explain the general procedures used to provide tax deferral on retirement saving (paragraph [P hereafter] 10-1 to 10-16).
2. Describe the difference between a defined benefit pension plan and a defined contribution (a.k.a. money purchase) pension plan (P 10-17 to 10-19).
3. Describe the basic operation of RRSPs (P 10-20 to 10-37).
4. Understand the terms: RRSP Deduction Limit, Unused RRSP Deduction Room and RRSP Dollar Limit (P 10-38 to 10-45).
5. Calculate Earned Income for RRSP purposes (P 10-46 to 10-48).

---

6. Explain the concepts underlying Pension Adjustments (PAs) (P 10-49 to 10-60).
7. Explain the concepts underlying Past Service Pension Adjustments (PSPAs) (P 10-61 to 10-66).
8. Explain the concepts underlying Pension Adjustment Reversals (PARs) (P 10-67 to 10-71).
9. Calculate an individual's maximum RRSP deduction and Unused RRSP Deduction Room (P 10-72).
10. Apply the tax treatment for undeducted RRSP contributions (P 10-73 and 10-74).

---

11. Determine whether an individual has made "excess" contributions to an RRSP and identify associated tax planning issues including the use of TFSAs (P 10-75 to 10-82).
12. Recall the tax treatment of RRSP and RRIF administration fees (P 10-83).
13. Apply the provisions relating to RRSP withdrawals and voluntary conversions of RRSPs (P 10-84 to 10-91).
14. Apply the provisions relating to RRSP terminations due to the age limitation (P 10-92 to 10-93).
15. Apply the provisions associated with spousal RRSPs and identify associated tax planning issues (P 10-94 to 10-102).

---

16. Describe and apply the provisions of the Home Buyers' Plan (P 10-103 to 10-113).
17. Describe and apply the provisions of the Lifelong Learning Plan (P 10-114 to 10-122).
18. Apply the RRSP provisions relating to departure from Canada and death of the registrant (P 10-123 to 10-138).
19. Explain the general provisions associated with Registered Pension Plans (RPPs) (P 10-139 to 10-157).
20. Describe, in general terms, Pooled Registered Pension Plans (PRPPs) and Target Benefit Plans (P 10-158 to 10-161).

---

21. Describe how an expanded CPP program could help the retirement savings problem (P 10-162 to 10-167).
22. Describe the basic operation of RRIFs and the role that RRIFs play in tax planning for retirement (P 10-168 to 10-186).
23. Explain the general rules for Deferred Profit Sharing Plans (P 10-187 to 10-192).
24. Describe, in general terms, Profit Sharing Plans (P 10-193 to 10-196).
25. Describe the tax free transfers that can be made between various types of plans (P 10-197 and 10-198).

---

26. Apply the special rules associated with RRSP contributions and retiring allowances (P 10-199 and 10-200).
27. Explain the general provisions related to Retirement Compensation Arrangements (P 10-201 to 10-210).
28. Describe Salary Deferral Arrangements (P 10-211 to 10-218).

# CHAPTER 11

## How To Work Through Chapter 11

We recommend the following approach in dealing with the material in this Chapter:

**Taxable Income Introduction And Overview**

- Read paragraph 11-1 to 11-7 (in the textbook).

**Lump-Sum Payments**

- Read paragraph 11-8 to 11-13.

**Loss Carry Over Provisions, Listed Personal Property Losses**

- Read paragraph 11-14 to 11-35.
- Do Exercise Eleven-1 (in the textbook) and check the solution in this Study Guide.

**Non-Capital Losses**

- Read paragraph 11-36 to 11-38.
- Do Exercise Eleven-2 and check the solution in this Study Guide.
- Read paragraph 11-39 to 11-40.

**Net Capital Losses (Including Special Rules At Death)**

- Read paragraph 11-41 to 11-49.
- Do Exercise Eleven-3 and check the solution in this Study Guide.
- Read paragraph 11-50 to 11-54.
- Do Exercise Eleven-4 and check the solution in this Study Guide.

**Allowable Business Investment Losses (ABILs)**

- Read paragraph 11-55 to 11-62.
- Do Exercise Eleven-5 and check the solution in this Study Guide.
- Do Self Study Problem Eleven-1 which is available on MyLab and check the solution in this Study Guide.

**Farm Losses**

- Read paragraph 11-63 to 11-67.
- Do Exercise Eleven-6 and check the solution in this Study Guide.
- Do Self Study Problem Eleven-2 and check the solution in this Study Guide.

**Lifetime Capital Gains Deduction**

- Read paragraph 11-68 to 11-85.
- Do Exercise Eleven-7 and check the solution in this Study Guide.
- Read paragraph 11-86 to 11-93.
- Do Exercise Eleven-8 and check the solution in this Study Guide.
- Do Self Study Problem Eleven-3 and check the solution in this Study Guide.

### Ordering Of Deductions And Losses

- Read paragraph 11-94 to 11-103.
- Do Exercise Eleven-9 and check the solution in this Study Guide.

### Tax Payable Overview And Tax On Split Income (TOSI)

- Read paragraph 11-104 to 11-147.
- Do Exercise Eleven-10 and check the solution in this Study Guide.
- Do Self Study Problem Eleven-4 and check the solution in this Study Guide.

### Transfer Of Dividends To A Spouse Or Common-Law Partner

- Read paragraph 11-148.
- Do Exercise Eleven-11 and check the solution in this Study Guide.
- Do Self Study Problems Eleven-5 and Eleven-6 and check the solutions in this Study Guide.

### Charitable Donations Credit - Gifts Of Capital Property

- Read paragraph 11-149 to 11-166.
- Do Exercise Eleven-12 and check the solution in this Study Guide.
- Read paragraph 11-167.
- Do Exercise Eleven-13 and check the solution in this Study Guide.
- Read paragraph 11-168 to 11-174.

### Foreign Tax Credits Revisited

- Read paragraph 11-175 to 11-186.
- Do Exercise Eleven-14 and check the solution in this Study Guide.

### Alternative Minimum Tax (AMT)

- Read paragraph 11-187 to 11-200.
- Do Exercise Eleven-15 and check the solution in this Study Guide.

### Comprehensive Tax Payable And Sample Personal Tax Return For Chapter 11

- Read paragraph 11-201.
- Do Self Study Problems Eleven-7 to Eleven-11 and check the solutions in this Study Guide.
- Read the Sample Personal Tax Return For Chapter 11 found in this Chapter of this Study Guide. The complete tax returns are available on MyLab in two formats, a T1 ProFile return file and a .PDF file.

### Tax Software Self Study Problem

- Do Tax Software Self Study Problem - Chapter 11 using the ProFile T1 Software. The Self Study Case is found in this Chapter of this Study Guide. The complete tax return is available on MyLab.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 11. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 11 Glossary Flashcards on MyLab.
- Ensure you have achieved the Chapter 11 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 11 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 11 that is on MyLab. Mark your examination using the Practice Examination Solution that is also on MyLab.

# Sample Personal Tax Return For Chapter 11

The following example contains a T1 individual income tax returns completed using the ProFile T1 Personal Income Tax Program for 2018 tax returns from Intuit Canada. As software for 2019 is not yet available, this example contains 2018 rates and credits.

The updated 2019 filing version of the ProFile software will be available in January, 2020. Non-filing versions will be available prior to that date, but include a number of 2019 draft forms that have not yet been updated. On installation, the program defaults to check for updates, so non-filing versions may be installed automatically. In January, 2020, after the first 2019 filing version is released, the updated 2019 version of this sample return will be available on MyLab at:

**http://www.pearsonmylabandmastering.com**

This example was introduced in Chapter 4 and is expanded in Chapter 11 to contain other components of Taxable Income and Tax Payable. For comparison purposes, you might find it useful to review the Chapter 4 version of this example before proceeding with this version.

In the following example, the relevant T1 schedule or ProFile form name is provided in square brackets to indicate where the information is input.

## Sample Problem Data

**DISCLAIMER:** All characters appearing in this example are fictitious. Any resemblance to real persons, living or dead, is purely coincidental.

George Pilot (SIN 527-000-145) is a married, semi-retired air force pilot living in Banff, Alberta. His wife, Deborah (SIN 130-692-544) was mauled by a grizzly bear while hiking 3 years ago. The attack left her blind and limited her mobility. [Part A S2 - Yes to disability amount. Part B, check appropriate box on the Info form on Deborah's return under Filing.]

They have been your clients for many years. George was born on February 24, 1967 and Deborah was born on April 10, 1971. They are both Canadian citizens.

After some discussion with George and Deborah, you confirm that they have never owned any foreign property. They both authorize the CRA to provide information to Elections Canada and authorize you to e-file their returns. They are currently living at 69 BBB Street in Banff, Alberta T9Z 0C0. Their home phone number is (403) 111-1111.

George and Deborah have three children who are all in good health:

- Bryan (SIN 527-000-947) was born on March 12, 2011 and had no income during the year.
- Janice (SIN 527-000-269) was born on June 6, 2005 and is in high school. She had income from babysitting totalling $400 during 2018.
- Willa (SIN 527-000-228) was born on January 22, 1999 and is attending university in Edmonton. Willa had Net Income of $3,300 during 2018.

George has a passion for flying and was hired in February to fly fire bombers June 1 to September 30 for the provincial forest service fire control squad located in Banff.

George informs you that on February 12, 2018, he received $2 million from his mother's estate. Using some of these funds, George bought a house in Banff. The remainder of the funds were invested with his stockbroker, $$$$ Inc.

Deborah, a voice teacher, adapted to her blindness quickly and required no outside help to take care of the family last year or for the first eight months of 2018. She decided to move temporarily to Edmonton with Willa to attend the music program at the University of Alberta.

During 2018, Deborah made a $50,000 loan to her brother, Andrew, who used the funds to expand his business. On December 15, 2018, Andrew paid her interest of $1,500 and principal of $5,000. Also during 2018, Deborah gave private voice lessons and earned a total of $3,200 in teaching fees. [S2 for Deborah's income in Part A. In Part B, Deborah's income is on S4 and T2125.]

George brings you the following receipts and documents:

1. A T4, T4A and a T5 (included in this example). A statement from his bank stating that he paid $7,382 in interest on the mortgage on his house during 2018. (See Items 17 and 23.)
2. A T2202A "Tuition And Enrollment Certificate" for himself from Athabasca University. It showed he was a part time student for 6 months and paid $591 in tuition for 2018. [T2202]
3. Two charitable donation receipts. One in George's name for $1,000 from the Canadian Wildlife Federation dated April 10, 2018. A second receipt in Deborah's name for $100 from the Canadian National Institute for the Blind (CNIB) dated December 3, 2018. [Donations]
4. A statement from the Banff Dental Clinic that George paid a total of $1,650 during 2018. This consisted of $850 for himself on November 24, and $200 each for Deborah, Bryan, Willa and Janice on December 15. [Medical]
5. An invoice from the CNIB in Deborah's name for $375 dated December 26, 2018 for computer peripherals designed exclusively for a person who is blind to use a computer. She had obtained a prescription from her doctor specifying her need for this equipment. [Medical]
6. George spent $14,700 during 2018 on various permanent modifications to the house. His goal for these changes was to allow Deborah to be more mobile inside and outside the house (ex., outside ramps and railings in the halls and stairways) and to reduce the risk of harm to her (a walk-in bathtub). George has detailed invoices for the renovations. Since Deborah's mobility impairment is not severe, these expenditures do not qualify as allowable medical expenses. [Schedule 12]
7. An agreement of purchase and sale for a house at 69 BBB St. in Banff. The purchase price was $800,000 and the invoice for legal fees totalled $1,200. The deal closed March 31, 2018 and George paid the purchase price of the house in cash. George and his family had been living in a rented townhouse for the last 5 years. Prior to that George had owned a house, but it went to his ex-wife in the divorce settlement. Deborah has never owned a principal residence. [OtherCredits for the Home Buyers' Credit.]
8. An instalment statement for 2018 that showed that George had paid the CRA instalments of $1,500 on September 14 and December 14 ($3,000 in total). These were the instalments requested by the CRA for the year due to his self-employed income in the previous year. [OtherCredits]
9. A T2202A "Tuition And Enrollment Certificate" for Deborah from the University of Alberta. It showed she was a full time student for 4 months and paid $2,600 in tuition for 2018. [S2 in Part A, Deborah's T2202 in Part B.]
10. A T2202A "Tuition And Enrollment Certificate" for Willa from the University of Alberta. It showed she was a full time student for 8 months and paid $6,200 in tuition for 2018. She had signed the certificate authorizing the maximum transfer of her tuition amount to her father. [Dependant]
11. His 2017 Notice of Assessment that shows that his 2018 RRSP Deduction Limit is $13,979. He has no undeducted RRSP contributions from previous years. [RRSP]
12. A contribution receipt to a spousal RRSP (George contributed to Deborah's RRSP) for $2,000 from $$$$ Inc. dated February 20, 2019. [RRSP]

13. A receipt for $2,000 from George's 40 year old sister, Shirley Burns (SIN 527-000-582) for child care. She took care of Bryan after school during 2018 while Deborah was in Edmonton. [Input on Dependants, flows to T778]

14. A receipt for Janice, an accomplished trombone player, from the Peak Music Camp in Whistler, B.C. The receipt for $1,600 was for two weeks of intensive music instruction at the camp. This fee also included $400 in accommodations and $325 for meals. [Input on Dependants, flows to T778]

15. A receipt for $2,148 from the Mountain Moving Company dated April 1, 2018. The invoice showed that the fee was charged to pack and move George's household effects from 123 CCC Avenue, Calgary to his new house in Banff, a total of 125 kilometers. George's new home is 5 kilometers from the Alberta Fire And Brimstone Control offices. George and his family made the move in his truck. Since George has no travel receipts, he agrees that you should use the simplified method to calculate his moving costs. [T1M]

16. In July, 2018, George asked you how much he could contribute to TFSAs for himself, and Deborah. By accessing their accounts through the CRA's online Represent A Client service, you informed him that he could contribute $25,000 for both himself and Deborah. George brings in TFSA Statements for himself and Deborah that shows he made the maximum contribution to each TFSA on October 20, 2018. It also shows that Deborah withdrew $3,000 from her TFSA on December 15, 2018.

17. George's new stockbroker, Mr. Ace Securities at $$$$ Inc., convinces him to take out a mortgage on his new home in order to invest the funds in various stocks. George assumes a $500,000 mortgage as of June 1, 2018. On that date, the funds from his mortgage are transferred to $$$$ Inc. into a trading (i.e., non-registered) account. The $7,382 mortgage interest on the bank statement relates to this mortgage. The stockbroker assures George that the funds will remain fully invested in the trading account. [S4]

18. George's transaction summary statement from $$$$ Inc. for 2018 lists the details of 33 sales of stock in George's trading account. The net result, after commissions, is a capital gain of $4,072. [S3Details]

19. On January 8, 2018, George sold his 1971 Ford Mustang for $50,000. The car was driven only on sunny Sunday afternoons. Its original price in 2002 was $6,000, and George reconditioned it over the years at a cost of $12,000. [S3Details]

20. At the beginning of 2018, George has a net capital loss carry forward of $2,580 [(1/2)($5,160)] from 2016. [LossNetCap]

21. During 2018, he paid $6,000 in spousal support to his ex-wife, Marilyn (SIN 527-000-103), pursuant to a written agreement. [Support payments]

22. George owns a commercial property at 999 JJJ Avenue, Edmonton, Alberta T9Z 0C0. The property was 10 years old when he purchased it on February 15, 2016 for $600,000 of which $160,000 was allocated to the land. Shortly after George purchased the building, the major tenant went bankrupt and he had rental losses for 2016 and 2017. No capital additions were made since the building's acquisition. The financial information for the property, for the year ended December 31,2018, is as follows [Rental]:

| | |
|---|---|
| Rental income | $46,700 |
| Mortgage interest | $19,500 |
| Maintenance and repairs | 5,100 |
| Management and administration fees | 8,200 |
| Legal fees | 1,000 |
| Property taxes | 11,750 |
| Total expenses | $45,550 |
| Net Income before amortization | $ 1,150 |

23. In Calgary in prior years, George gave the occasional private flying lesson and found it very rewarding. After moving to Banff, he began to pursue private pilot training in earnest beginning April 1 through his business, Pilot's Flying School. A portion of his new house is used exclusively for various training activities such as one-to-one ground instruction. He also writes and reviews practice pilot exams. George's fiscal year end for the business is December 31.

    The business area of the house occupies 420 square feet of the 2,100 square foot house. George does not intend to claim any CCA on the house. At your request he provides the following costs related to the house during the period April 1, 2018 through December 31, 2018 [T2125]:

| | |
|---|---|
| Utilities | $1,500 |
| Repairs And Maintenance | 4,325 |
| Home Insurance | 700 |
| Mortgage Interest | 7,382 |
| Property Taxes | 2,600 |

24. On April 15, 2018, George purchased a laptop computer and various software that will be used solely for his business activities. The laptop cost $1,900 and the software costs totalled $800. Prior to this, George had not been using a computer for business purposes. [T2125]

25. George provides the following other information for Pilot's Flying School, for the fiscal period ended December 31, 2018:

| | |
|---|---|
| Lesson and training fees received | $40,200 |
| Plane rental fees | 9,600 |
| Business meals with clients | 3,250 |
| Licenses and fees | 1,650 |
| Office expenses | 550 |
| Accounting fees | 300 |

## Completed Tax Returns And Related Notes

There are three sample tax returns available on MyLab in two versions, a T1 ProFile return file and a .PDF file. Notes to the returns are in a separate .PDF file.

A. A single return assuming George does not elect to pension income split and Deborah does not file a tax return.
B. A coupled return assuming George elects to split his pension income with Deborah and she files a tax return as well.

## Notes To The Chapter 11 Return - No Pension Splitting

### *Only George Is Filing A Return*

### *General Notes*

- Inheritances are not taxable.
- Willa's tuition fees total more than $5,000. As a result, her transfer to George is limited to the $5,000 maximum. Only Willa can claim the unused credits in the future. Willa should file a return in order to receive the GST credit and to help her keep track of her tuition credit carry forward.
- Since Willa is over 17 years of age, her medical expenses are reduced by 3 percent of her Net Income For Tax Purposes.
- George is not eligible for the refundable medical expense supplement or the Canada Workers Benefit as his income is too high. Given 3 percent of his Net Income is greater than the medical expense threshold, the only allowable medical expenses are those of Willa. In the ProFile tax file there is a memo attached to the line "Total medical expenses -

line 330" (green highlight) that says "Net Income too high, do not claim medical expenses except for Willa so carry forward is optimized". Since they were paid in November and December, they could be claimed in the following year if the 12 month limit is used.
- Deborah has interest income of $1,500 and professional fees of $3,200. As a result, the spousal credit base is decreased by this amount on Schedule 2. Note that the principal repayment of $5,000 is not income. Deborah's disability credit has been transferred to George, as well as all of her tuition tax credit since it totals less than $5,000.
- George does not qualify for the Climate Action Incentive (CAI) as a resident of Alberta. This is a refundable credit available to residents of Ontario, Saskatchewan, Manitoba and New Brunswick and is based on family size.

### *Item Specific Notes*

- (Item 3) For couples, the CRA's administrative practices permit either spouse to claim some or all of the donations made by the couple. George should claim both donations as combining them is advantageous given the 15 percent rate on the first $200 of donations.
- (Item 5) Both ITA 118.2 and Income Tax Folio S1-F1-C1 clearly state that medical expenses can only be deducted by the individual who paid for them. However, in the T1 Guide, this rule is contradicted for couples. According to this Guide, either spouse can claim the medical expense credit, without regard to who actually paid for the expenses. This administrative position is used in practice. As a result, George is claiming the amount Deborah paid for the computer peripherals.
- (Item 6) George's receipts for the expenses eligible for the Home Accessibility Credit total more than the $10,000 maximum for the year on Schedule 12. As a result the maximum credit of $1,500 [(15%)($10,000)] is available.
- (Item 7) The Home Buyers' Tax Credit of $750 [(15%)($5,000)] is available since George had been living in a rented town house for 5 years and neither he nor Deborah had another principal residence.
- (Items 13 and 14) Since Deborah was in full time attendance at the University of Alberta, George can deduct child care costs of up to $4,000 [(2)($125)(16 weeks)]. The $2,000 paid to Shirley Burns is totally deductible. The deduction for child care costs is limited to $125 per week for overnight camp fees. This results in maximum deductible child care costs of $2,250.
- (Item 15) Form T1M, Claim For Moving Expenses should be filled out to calculate the deductible moving expenses. George cannot deduct the legal fees related to the purchase of his new home because he had been living in a rented townhouse in Calgary. On Form T1M, since the "Simplified Method" box is checked, the program calculates the allowable deduction for milage using the 2018 Alberta rate on Line 2.
- (Item 17) The house was purchased for cash and the mortgage was obtained for investment purposes only. As a result all of the interest is deductible on Schedule 4. In order that all of the interest remains deductible in the future, George should ensure that the $500,000 from the mortgage remain invested and is not used for personal purposes.
- (Item 18) As long as the transaction summary from the bank is available if requested by the CRA, it is not necessary to list separately each stock sale. Only the net capital gain needs to be input on S3Details.
- (Item 20) George has claimed his net capital loss carry forward of $2,580 as his total taxable capital gains were well in excess of this amount.
- (Item 22) Since the rental property has been showing a loss since its acquisition, no CCA could have been taken prior to 2018. As a result, the beginning of the year UCC of the building will be George's original allocation of $440,000 ($600,000 - $160,000 land cost). The CCA for 2018 is limited to $1,150, the amount that reduces his rental income to nil.

### *T2125 (Items 24 to 26)*

- The Industry Code must be chosen from the list near the top right corner of the T2125. The appropriate choice is 611690, "All Other Schools And Instruction".
- The mortgage interest is not included in the workspace in the home costs. The house was purchased for cash and the mortgage was obtained for investment purposes only and is not a cost of maintaining the house. As a result all of the interest is deductible on Schedule 4. (See Item 17)
- The non-deductible portion of business meals of $1,625 (50% of $3,250) has been excluded.
- The laptop computer has been allocated to CCA Class 50 (55 percent). The software has been allocated to CCA Class 12 (100 percent). Because of the short fiscal year, the CCA has been prorated beginning April 1, the start of the business, not the date of the purchase of the assets. The assets aren't eligible for the accelerated investment incentive because they are purchased prior to November 21, 2018.

### *Tax Planning Points*

- If he has sufficient funds, George should contribute the maximum deductible for 2019 of $16,810 [see RRSPLimit form] to a spousal RRSP as soon as possible. Since George is already getting a pension and Deborah appears to have little income, a spousal RRSP would offer more opportunity for future income splitting. Although the pension income splitting legislation allows for some flexibility, the maximum split is 50 percent. With a spousal RRSP, Deborah can be taxed on 100 percent of the funds from her RRSP.
- George should consider opening RESPs for Bryan and Janice if he has not already done so. How much he should contribute will depend on many factors (see the text), but it is probably advisable that he contribute enough to take advantage of the Canada Education Savings Plan each year if he has sufficient funds.
- Deborah has created some RRSP contribution room with her professional income. George should consider whether Deborah should contribute to her own RRSP. Funds for George's RRSP and the RESPs should probably have priority given George's higher tax bracket and the Canada Education Savings Plan, though with his inheritance there should be sufficient funds to contribute to all the plans.
- Since TFSA contributions are not deductible and withdrawals are not taxable, the TFSAs will not have an effect on any of the tax returns. George should try to contribute the maximum to both his and Deborah's TFSA on an ongoing basis if he has sufficient funds. He should replace Deborah's withdrawal as soon as possible as it was withdrawn in the preceding calendar year. As long as there are other funds available where related income would be taxable, it would be advisable not to make withdrawals from the TFSAs in order to take advantage of the tax free earnings.
- George should consider a TFSA for Willa. If her income is earned income for RRSP purposes, he should also consider contributing to an RRSP in Willa's name.

## Notes To The Chapter 11 Returns - With Pension Splitting

### *Both Are Filing Returns With Pension Income Splitting*

The notes to the return with no pension income splitting are also relevant in this scenario.

In creating Deborah's tax return, the following forms and schedules were filled in:

- T2202 - Tuition slips
- T2125 - Statement of Business or Professional Activities
- T1032 - Joint Election To Split Income (originated from George's return)
- Schedule 4 - Statement of Investment Income

Neither Deborah or George should claim the medical expenses, other than George claiming the medical expenses for Willa. Although 3 percent of Deborah's Net Income is less than the threshold, which would enable her to make a claim where George cannot, the tuition fee credit is calculated before consideration of medical expenses, so the claim for medical expenses has no effect on her Tax Payable and does not save her any taxes.

To test this, click Yes that Deborah should claim the medical expenses. What you will find is that her total non-refundable tax credits are greater than her tax payable because her tuition tax credit does not change. This means that the medical expense credit would be wasted. Since they were paid in November and December, they could be claimed in the following year if the 12 month limit is used. On the medical expenses list subtotal in both returns is a memo not to claim any of the listed medical expenses, but to carry them forward in case they make a difference in the following year.

Willa's medical expenses could have been claimed by Deborah, but since it will make no difference to her federal tax payable, it is more advantageous to have George claim Willa's medical expenses.

In addition, although we do not cover provincial tax rules in the text, if you examine Deborah's Alberta tax credits [AB428], you will see that she does not utilize all of her non-refundable Alberta tax credits, even if she does not claim any medical expenses. Claiming Willa's medical credit will decrease George's Alberta and federal tax payable.

Since the couple has elected to split the pension income, the withholdings on the pension income must also be split.

The tax savings can be calculated by comparing the Tax Summary for the couple with and without pension income splitting.

| | |
|---|---|
| Combined Balance Owing - No Pension Splitting | $ 814 |
| Combined Refund - With Pension Splitting | 751 |
| Tax Savings | $1,565 |

## Tax Software Self Study Problem - Chapter 11

**This Problem is an expansion of the Tax Software Self Study Problem - Chapter 4.**

**Note** The following problem contains 2018 (not 2019) information as software for 2019 is not yet available. If you have an updated 2019 version of ProFile installed on your computer, ensure that when you begin, you open a file for 2018, not 2019 as this data is for 2018. Shortly after the first filing version of the 2019 Intuit ProFile software is available in January, 2020, the updated 2019 version of this problem will be available on MyLab at:

**http://www.pearsonmylabandmastering.com**

**DISCLAIMER:** All characters appearing in this problem are fictitious. Any resemblance to real persons, living or dead, is purely coincidental.

Ms. Eleanor Victoria's husband died two years ago. After her husband died, she moved from her house in Prince George, B.C., to a rented house in Victoria, B.C.

Ms. Victoria's widowed mother, Marjorie Vancouver lives with Ms. Victoria and takes care of the house, Ms. Victoria's younger daughter, Amy, and all of the household cooking. In addition to OAS benefits, Marjorie has a very small income from her deceased husband's life insurance policy. She has never filed a tax return and she is not infirm.

Diane Victoria, Eleanor's older daughter, is studying psychology at McGill University in Montreal. Her field is addiction research with a special emphasis on gambling. She does volunteer work at a gambling addiction treatment centre in Montreal in the summers. As Eleanor has paid for her tuition and living costs, Diane has agreed that the maximum tuition amount should be transferred to her mother.

Diane has decided not to file a tax return this year as she knows she does not owe any taxes. Her income was earned driving for a client of the addiction treatment centre who had lost his licence after being charged with impaired driving.

Late in December, 2018, Eleanor was notified that she had inherited $500,000 from an aunt. Eleanor loves her work and though she plans to travel more, she has no plans to retire.

Information concerning Ms. Victoria for 2018 is given on the following pages.

**Required**:

A. With the objective of minimizing Ms. Victoria's Tax Payable, prepare the 2018 income tax return of Eleanor Victoria using the ProFile tax software program. List any assumptions you have made, and any notes and tax planning issues you feel should be discussed with Ms. Victoria. Ignore HST implications in your solution by assuming that Ms. Victoria does not qualify for the GST/HST rebate.

B. Calculate the maximum deductible contribution Ms. Victoria can make to her RRSP for the 2019 taxation year. What advice would you give Ms. Victoria concerning the various deferred savings plans available to her given the funds from her inheritance?

| Personal Information | |
|---|---|
| Title | Ms. |
| First Name | Eleanor |
| Last Name | Victoria |
| SIN | 527-000-087 |
| Date of birth (Y/M/D) | 1971-05-15 |
| Marital Status | Widowed |
| Canadian citizen? | Yes |
| Provide information to Elections Canada? | Yes |
| Own foreign property of more than $100,000 Canadian? | No |

| Taxpayer's Address |
|---|
| 111 VVV Street Victoria, B.C. V4H 3W4 |
| Phone number (250) 111-1111 |

| Dependants | Child 1 | Child 2 | Mother |
|---|---|---|---|
| First Name | Diane | Amy | Marjorie |
| Last Name | Victoria | Victoria | Vancouver |
| SIN | 527-000-293 | None | 527-000-483 |
| Date of birth (Y/M/D) | 1998-05-14 | 2006-10-11 | 1946-05-21 |
| Net income | $2,300 | Nil | $8,000 |

| T4 | Box | Amount |
|---|---|---|
| Issuer - 1750 Canada Inc. | | |
| Employment income | 14 | 60,201.80 |
| Employee's CPP contributions | 16 | 2,593.80 |
| Employee's EI premiums | 18 | 858.22 |
| RPP contributions | 20 | 2,406.16 |
| Pension adjustment | 52 | 7,829.00 |

| Employment commissions | 42 | 0 |
| Union dues | 44 | 748.59 |
| Charitable donations | 46 | 175.00 |

Eleanor has a signed T2200 from her employer specifying her work requires her to have an office in the home. She meets the conditions required to deduct work space in the home expenses. Of the 1,800 square feet in the house, her office, waiting area and storage space totals 310 square feet. She doesn't qualify for the GST rebate.

During 2018 she paid the following:

| | |
|---|---|
| Rent for the year (No GST charged) | $30,000 |
| Utilities (hydro and gas) for the year | 2,500 |
| Cleaning services (No GST charged) | 1,200 |
| Insurance for household effects (No GST charged) | 400 |
| Car insurance (No GST charged) | 700 |

| T2202A - (Diane) | Box | Amount |
|---|---|---|
| Tuition fees - for Diane Victoria (daughter) | A | 7,000 |
| Number of months in school - part-time | B | 2 |
| Number of months in school - full-time | C | 8 |

Eleanor and her family had the following medical expenses, all of which Eleanor paid for:

| Patient | (Y/M/D) | Medical Expenses | Description | Am't |
|---|---|---|---|---|
| Eleanor | 2018-08-15 | Grace Hospital | Ambulance charge | 392 |
| Eleanor | 2018-08-18 | Paramed Home Health | Nursing care | 1,350 |
| Marjorie | 2018-05-20 | Dr. Zhang (Optometrist) | Contact lenses | 110 |
| Marjorie | 2018-07-06 | Pharmacy | Prescription | 75 |
| Diane | 2018-09-01 | Dr. Glassman | Physiotherapist | 100 |
| Amy | 2018-05-11 | Walk Right Foot Clinic | Orthotics | 450 |

| Insurance | 1,093.27 |
| Interest on mortgage | 5,377.58 |
| Payment on principal | 3,688.95 |
| Plumbing repairs | 290.94 |
| Snow plow annual contract | 300.00 |
| Lawyer's fees for new lease | 172.54 |
| Hydro (during vacancy) | 288.34 |
| Building purchased October 1, 2015 for $168,900 - UCC beginning of year | 168,900.00 |
| Washer/dryer purchased May 9, 2017 for $921 - UCC beginning of year | 921.00 |
| Stove and refrigerator purchased August 17, 2018 | 1,500.00 |

## Solutions to Chapter Eleven Exercises

### *Exercise Eleven - 1 Solution*

Mr. Smothers will have a listed personal property loss carry forward from 2018 of $5,500 [(1/2)($89,000 - $100,000)]. This can only be applied against the 2019 taxable gain on listed personal property of $2,000 [(1/2)($5,000 - $1,000)]. Based on this, his Net and Taxable Income would be calculated as follows:

| | |
|---|---|
| Income Under ITA 3(a) | $62,000 |
| Income Under ITA 3(b) ($2,000 - $2,000) | Nil |
| Net Income For Tax Purposes And Taxable Income | $62,000 |

In this case, the listed personal property loss carry forward of $3,500 ($5,500 - $2,000) can only be applied against taxable capital gains on listed personal property.

If the sale had been of shares, Mr. Smothers would have had a regular net capital loss carry forward of $5,500 from 2018. His Net and Taxable Income would be calculated as follows:

| | |
|---|---|
| Income Under ITA 3(a) | $62,000 |
| Income Under ITA 3(b) | 2,000 |
| Net Income For Tax Purposes ($2,000 Higher) | $64,000 |
| Loss Carry Forward (Limited To Taxable Capital Gains) | ( 2,000) |
| Taxable Income (Same) | $62,000 |

In this case, the $3,500 net capital loss carry forward can be applied against any taxable capital gains.

### Exercise Eleven - 2 Solution

The required calculation is as follows:

| | |
|---|---|
| Amount E ($58,000 + $2,200) | $60,200 |
| Amount F ($35,000 + $13,000) | ( 48,000) |
| Amount D | ( 2,200) |
| Non-Capital Loss | $10,000 |

Note that this is the excess of the business loss of $58,000, over the $48,000 in positive sources of income for the year. The additional farm loss of $2,200 would be allocated to a separate loss balance. It is included in the E component and then deducted in the D component. Since it is less than $2,500, the farm loss is not restricted and is fully deductible against any type of income.

### Exercise Eleven - 3 Solution

If Laura makes no effort to minimize the net capital loss carry forward, her Net Income For Tax Purposes and Taxable Income would be calculated as follows:

| | |
|---|---|
| Net Taxable Capital Gain | $40,000 |
| Rental Loss | ( 30,000) |
| Net Income For Tax Purposes | $10,000 |
| Net Capital Loss Carry Forward (Taxable Income To Nil) | ( 10,000) |
| Taxable Income | Nil |

This approach results in a net capital loss carry forward of $5,000, and a non-capital loss carry over of nil.

Alternatively, if she chooses to completely eliminate the net capital loss carry forward, the non-capital loss would be calculated as follows:

| | |
|---|---|
| Amount E ($30,000 + $15,000) | $45,000 |
| Amount F - Income Under ITA 3(c) | ( 40,000) |
| Non-Capital Loss Carry Over | $ 5,000 |

While Taxable Income remains unchanged at nil, the net capital loss carry forward has been reduced from $5,000 to nil, with the non-capital loss carry forward increased from nil to $5,000.

### Exercise Eleven - 4 Solution

If Derek was alive, his 2019 taxable capital gain would limit the use of his net capital loss carry forward in 2019. This limitation does not apply in the year of death. To maximize tax savings, his final return should have a Taxable Income of $12,069, the 2019 basic personal amount. This means that $11,731 ($23,800 - $12,069) of the net capital loss carry forward should be deducted. This can be applied against any type of income in 2019. The $8,269 ($20,000 - $11,731) can be carried back to 2018 in an amended return and applied against any type of income.

### *Exercise Eleven - 5 Solution*

The Allowable Business Investment Loss for the year would be calculated as follows:

| | |
|---|---|
| Actual Loss On Disposition | $50,000 |
| Disallowed By Lifetime Capital Gains Deduction Use | ( 26,000) |
| Business Investment Loss | $24,000 |
| Inclusion Rate | 1/2 |
| Allowable Business Investment Loss | $12,000 |

All of the $12,000 can be deducted against Mr. Latvik's employment income. With respect to the disallowed $26,000, it becomes an ordinary capital loss, of which $18,000 can be deducted against the current year's capital gains on the publicly traded securities. This leaves a net capital loss carry over of $4,000 [(1/2)($26,000 - $18,000)].

### *Exercise Eleven - 6 Solution*

It appears that Ms. Bodkin's farming activities are a subordinate source of income. Given this, the deduction of the 2018 loss would be limited to $17,500 [$2,500 + (1/2)($32,500 - $2,500)]. The remaining $18,500 ($36,000 - $17,500) is a restricted farm loss carry forward.

In 2019, $3,500 of this carry forward can be deducted against the 2019 farm income. This leaves a restricted farm loss carry forward of $15,000 ($18,500 - $3,500). Ms. Bodkin's 2019 Net Income For Tax Purposes is $88,500 ($85,000 + $3,500) and her 2019 Taxable Income is $85,000 ($85,000 + $3,500 - $3,500).

### *Exercise Eleven - 7 Solution*

The annual gains limit is **$26,000** ($42,000 - $16,000). This is calculated using the ITA 110.6 formula of A - B where:

The A component of the formula would be equal to **$42,000**, the lesser of:

- $74,000 ($114,000 + $42,000 - $82,000); and
- $42,000.

The B component would be **$16,000**, the sum of:

- $13,000*; and
- $3,000.

*The amount by which $45,000, exceeds $32,000 ($114,000 - $82,000 + $42,000 - $42,000).

Note that the net taxable capital gain on non-qualified property was $32,000 ($114,000 - $82,000). The mechanics of the B component of the formula are such that the first $32,000 of the $45,000 net capital loss deduction was charged against these gains and did not erode the annual gains limit. Only the remaining $13,000 ($45,000 - $32,000) served to reduce the annual gains limit.

To make maximum use of her lifetime capital gains deduction, it would be advisable for Ms. Slovena to deduct only $32,000 of the net capital loss carry forward. If she did this, the B component would be $3,000 and her annual gains limit would increase to $39,000 [$42,000 - (Nil + $3,000)]. Although she would have used $13,000 ($39,000 - $26,000) more of her lifetime capital gains deduction, her tax liability for 2019 would not change and she would have a net capital loss carry forward of $13,000 ($45,000 - $32,000) that could be applied against any type of capital gain for an unlimited period of time.

### Exercise Eleven - 8 Solution

His maximum lifetime capital gains deduction is $223,500, the least of the following:

**Available Deduction** His remaining deduction would be $415,456 ($433,456 - $5,000 - $13,000).

**Annual Gains Limit** In the absence of capital gains on non-qualified property in any of the years under consideration, the simplified version of this calculation can be used. Given this, this limit would be calculated as follows:

| | |
|---|---|
| Qualified Gain [(1/2)($510,000)] | $255,000 |
| Net Capital Loss Deducted [(1/2)($63,000)] | ( 31,500) |
| Annual Gains Limit | $223,500 |

**Cumulative Gains Limit** In the absence of capital gains on non-qualified property in 2012 and 2014, the annual gains limits for 2012 and 2014 would simply be the amount of the taxable capital gains on shares in a qualified small business corporation in those years. Given this, the required calculation would be as follows:

| | |
|---|---|
| Sum Of Annual Gains Limits ($5,000 + $13,000 + $223,500) | $241,500 |
| Previous Years' Capital Gains Deduction ($5,000 + $13,000) | ( 18,000) |
| Cumulative Net Investment Loss | Nil |
| Cumulative Gains Limit | $223,500 |

### Exercise Eleven - 9 Solution

Alan's Net Income For Tax Purposes would be calculated as follows:

| | | |
|---|---|---|
| Income Under ITA 3(a): | | |
| Business Income | $12,000 | |
| Employment Income | 56,000 | |
| Farming Income | 3,500 | $71,500 |
| Income Under ITA 3(b): | | |
| Taxable Capital Gains | | 9,000 |
| Net Income For Tax Purposes | | $80,500 |

Alan's Taxable Income is as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $80,500 |
| Loss Carry Forwards: | |
| Restricted Farm Losses (Limited to farming income) | ( 3,500) |
| Net Capital Losses (Limited to taxable capital gains) | ( 9,000) |
| Non-Capital Losses (All) | ( 36,000) |
| Taxable Income | $32,000 |

**Loss Carry Forwards**

| | |
|---|---|
| • Restricted farm loss carry forward ($8,000 - $3,500) | $ 4,500 |
| • Net capital loss carry forward ($20,000 - $9,000) | $11,000 |
| • Non-capital loss carry forward | Nil |

### Exercise Eleven - 10 Solution

The regular Tax Payable would be calculated as follows:

| | |
|---|---|
| Income Sources: | |
| Taxable Non-Eligible Dividends [(115%)($15,000)] | $17,250 |
| Contract Income | 13,200 |
| Taxable Eligible Dividends [(138%)($8,600)] | 11,868 |
| Deduction For Split Income - Taxable Non-Eligible Dividends | ( 17,250) |
| Net Income For Tax Purposes = Taxable Income | $25,068 |
| Rate | 15% |
| Tax Payable Before Credits | $ 3,760 |
| Basic Personal Credit [(15%)($12,069)] | ( 1,810) |
| Dividend Tax Credit - Eligible Dividends [(6/11)(38%)($8,600)] | ( 1,783) |
| Regular Tax Payable | $ 167 |

The Tax Payable on Split Income would be calculated as follows:

| | |
|---|---|
| Split Income - Taxable Non-Eligible Dividends | $17,250 |
| Rate | 33% |
| Tax Payable Before Dividend Tax Credit | $ 5,693 |
| Dividend Tax Credit [(9/13)(15%)($15,000)] | ( 1,558) |
| Tax Payable On Split Income | $ 4,135 |

The total Tax Payable would be $4,302 ($167 + $4,135).

### Exercise Eleven - 11 Solution

Without the transfer, Mr. Ho's wife would have income of $11,730 [(138%)($8,500)], $339 less than the base for the spousal credit of $12,069. This would result in a small spousal credit of $51 [(15%)($339)]. With the transfer, he would be eligible for the full $1,810, an increase of $1,759 [($1,810 - $51). Given this, the analysis of his position at the federal level is as follows:

| | |
|---|---|
| Additional Taxes On Dividends [(33%)(138%)($8,500)] | $3,871 |
| Increase In Spousal Tax Credit | ( 1,759) |
| Dividend Tax Credit [(6/11)(38%)($8,500)] | ( 1,762) |
| Tax Increase (Decrease) | $ 350 |

As the result of the transfer is a tax increase, the election would not be desirable. With or without the election Mrs. Ho will have no Tax Payable.

### Exercise Eleven - 12 Solution

With the gift being made at $85,000, Ms. Felder will have a taxable capital gain of $11,500 [(1/2)($85,000 - $62,000)], plus recapture of $34,000 ($62,000 - $28,000), for a total Net Income For Tax Purposes of $45,500. Given this, her maximum credit base would be calculated as follows:

| | |
|---|---|
| 75% Of Net Income For Tax Purposes [(75%)($45,500)] | $34,125 |
| 25% Of Taxable Capital Gain [(25%)($11,500)] | 2,875 |
| 25% Of Recaptured CCA [(25%)($34,000)] | 8,500 |
| Charitable Donations Credit Base Limit (Equals Income From Donation) | $45,500 |

Note that, because Ms. Felder's Taxable Income is less than $210,371, the 33 percent tax rate is not relevant in calculating the charitable donations tax credit. This base results in a potential credit of $13,167 [(15%)($200) + (29%)($45,500 - $200)]. While this amount could be used, she does not have sufficient Tax Payable to utilize the whole potential credit. Her federal Tax Payable for the year would be calculated as follows:

| | |
|---|---|
| Tax Before Credits [(15%)($45,500)] | $6,825 |
| Basic Personal Credit | ( 1,810) |
| Federal Tax Payable Before Donations Credit | $5,015 |

In order to reduce her Tax Payable to nil, Ms. Felder should use a sufficient amount of her charitable donations credit base to produce a tax credit of $5,015. To arrive at the credit base that will result in this tax credit, the following equation must be solved for X:

$5,015 = [(15%)($200)] + [(29%)(X - $200)
$5,015 - $30 + $58 = [(29%)(X)]

Solving this equation for X provides a value of $17,390 which equals the amount of her donation that produces the $5,015 [(15%)($200) + (29%)($17,390 - $200)] credit that will reduce her federal Tax Payable to nil. This leaves a carry forward of $67,610 ($85,000 - $17,390).

### *Exercise Eleven - 13 Solution*

As a donation of publicly traded shares is involved, there will be no recognized capital gain on the sale. This means that Mr. Radeem's Taxable Income for 2019 will consist of his employment income of $90,000. The limit for the base of Mr. Radeem's charitable donations tax credit would be $67,500 [(75%)($90,000)]. If he were to use this amount, his 2019 charitable donations tax credit would be $19,547 [(15%)($200) + (29%)($67,500 - $200)]. Note that, because Mr. Radeem's Taxable Income is less than $210,371, the 33 percent tax rate is not relevant in calculating the charitable donations tax credit.

As it would exceed his Tax Payable after other tax credits, Mr. Radeem will not want to deduct the maximum available charitable donations tax credit. Given this, he needs to determine the amount of the credit that will reduce his Tax Payable to nil. This is determined as follows:

| | |
|---|---|
| Tax On First $47,630 | $ 7,145 |
| Tax On Next $42,370 ($90,000 - $47,630) At 20.5 Percent | 8,686 |
| Tax Before Credits | $15,831 |
| Tax Credits (Given) | ( 4,000) |
| Federal Tax Payable Before Donations Credit | $11,831 |

In order to reduce his Tax Payable to nil, Mr. Radeem should use a sufficient amount of his charitable donations credit base to produce a tax credit of $11,831. To arrive at the credit base that will result in this tax credit, the following equation must be solved for X:

$11,831 = [(15%)($200)] + [(29%)(X - $200)
$11,831 - $30 + $58 = [(29%)(X)]

Solving this equation for X provides a value of $40,893 which equals the amount of his donation that will produce the $11,831 [(15%)($200) + (29%)($40,893 - $200)] credit that will reduce his federal Tax Payable to nil. This leaves a carry forward of $69,107 ($110,000 - $40,893).

### *Exercise Eleven - 14 Solution*

Ms. Cheung's Net Income For Tax Purposes and Taxable Income would be calculated as follows:

| | |
|---|---|
| Net Rental Income | $44,000 |
| Net Taxable Capital Gains | 2,500 |
| Foreign Non-Business Income | 3,500 |
| Net Income For Tax Purposes | $50,000 |
| Net Capital Loss Carry Forward | ( 2,500) |
| Adjusted Division B Income | $47,500 |
| Non-Capital Loss Carry Forward | ( 4,000) |
| Taxable Income | $43,500 |

Ms. Cheung's credit for foreign tax paid would be the lesser of the foreign tax withheld of $385 [(11%)($3,500)] and an amount determined by the following formula:

$$\left[\frac{\text{Foreign Non} - \text{Business Income}}{\text{Adjusted Division B Income}}\right][\text{Tax Otherwise Payable}]$$

In this formula, the Adjusted Division B Income would be $47,500 (as shown in the preceding table). Note that, because the non-capital loss is not deducted here, this is not the same as her Taxable Income of $43,500.

Ms. Cheung's Tax Otherwise Payable would be calculated as follows (note that the foreign tax credit is not subtracted in this calculation):

| | |
|---|---|
| Tax Before Credits [(15%)($43,500)] | $6,525 |
| Basic Personal Credit | ( 1,810) |
| Tax Otherwise Payable | $4,715 |

Using this information, the formula amount would be $347 [($3,500 ÷ $47,500)($4,715)]. As this is less than the $385 withheld, this would be the foreign tax credit. Based on this, Ms. Cheung's actual federal Tax Payable would be calculated as follows:

| | |
|---|---|
| Tax Before Credits [(15%)($43,500)] | $6,525 |
| Basic Personal Credit | ( 1,810) |
| Foreign Tax Credit | ( 347) |
| Federal Tax Payable | $4,368 |

### *Exercise Eleven - 15 Solution*

Mr. Blouson's regular Tax Payable would be calculated as follows:

| | |
|---|---|
| Tax On First $47,630 | $ 7,145 |
| Tax On Next $37,370 ($85,000 - 47,630) At 20.5% | 7,661 |
| Total | $14,806 |
| Basic Personal Credit | ( 1,810) |
| Dividend Tax Credit [(6/11)(38%)($20,000)] | ( 4,145) |
| Regular Federal Tax Payable | $ 8,851 |

For alternative minimum tax purposes, his adjusted taxable income would be calculated as follows:

| | |
|---|---|
| Regular Taxable Income | $85,000 |
| 30 Percent Of Capital Gains [(30%)(2)($22,500)] | 13,500 |
| Dividend Gross Up [(38%)($20,000)] | ( 7,600) |
| Adjusted Taxable Income | $90,900 |

Calculation of the alternative minimum tax would be as follows:

| | |
|---|---|
| Adjusted Taxable Income | $90,900 |
| Basic Exemption | ( 40,000) |
| Amount Subject To Tax | $50,900 |
| Rate | 15% |
| Minimum Tax Before Credit | $ 7,635 |
| Basic Personal Credit | ( 1,810) |
| Alternative Minimum Tax | $ 5,825 |

Mr. Blouson would not pay the alternative minimum tax as it is less than the regular Tax Payable. Note that the $50,000 RRSP deduction does not affect the alternative minimum tax calculation.

## Self Study Solution Eleven - 1

The calculation of Miss Atwater's Taxable Income for 2018 would be as follows:

| | |
|---|---|
| Net Rental Income | $34,200 |
| Interest Income | 4,000 |
| Net Income For Tax Purposes And Taxable Income | $38,200 |

The corresponding calculation for 2019 is as follows:

| | | |
|---|---|---|
| Net Rental Income | $ 35,200 | |
| Interest Income | 4,200 | $39,400 |
| Allowable Business Investment Loss [(1/2)($170,000)] | | ( 85,000) |
| Net Income For Tax Purposes And Taxable Income | | Nil |

There is a deemed disposition of the shares for proceeds of nil due to the bankruptcy of the company. As the capital loss relates to the shares of a small business corporation, it is a Business Investment Loss. This means that, in contrast to other types of capital losses, the allowable portion can be deducted against any source of income. The total Allowable Business Investment Loss (ABIL) that is available for deduction in 2019 is $85,000 [(1/2)($170,000)].

As the ABIL was recognized in 2019, it must first be used to reduce that year's income to nil. Note that, because of this rule, she cannot deduct a smaller amount in order to have sufficient income to absorb her basic personal tax credit. This will use up $39,400 of the $85,000 total and leave a balance of $45,600 to be carried over to other years.

In carrying this amount back to 2018, the optimum solution would leave $11,809 of Taxable Income so that Miss Atwater can take advantage of her basic personal tax credit. Note that the calculation of the optimum carry back uses the basic personal amount of the carry back year, not the current year.

This means that she needs a loss carry back deduction of $26,391 ($38,200 - $11,809) in 2018. This deduction will leave a Taxable Income of $11,809. As planned, the federal taxes

on this amount will be eliminated by the basic personal credit.

A carry back of $26,391 to 2018 leaves a carry forward balance of $19,209 ($45,600 - $26,391) to be used in future years.

The undeducted Allowable Business Investment Loss can be deducted against other sources of income in the 10 (not 20) year carry forward period. If it has not been utilized within the 10 years, it then becomes a net capital loss carry forward, deductible for an unlimited number of future periods, but only against net taxable capital gains.

## Self Study Solution Eleven - 2

### *2016 Analysis*

The required information can be calculated as follows:

| | | |
|---|---|---|
| ITA 3(a) | | |
| Business Income | $19,800 | |
| Taxable Dividends [(138%)($1,870)] | 2,581 | $22,381 |
| ITA 3(b) | | |
| Taxable Capital Gains [(1/2)($1,320)] | $ 660 | |
| Allowable Capital Losses [(1/2)($4,620)] | ( 2,310) | Nil |
| ITA 3(c) | | $22,381 |
| ITA 3(d) | | |
| Farm Loss (See Note) | | ( 6,750) |
| Net Income For Tax Purposes And Taxable Income | | $15,631 |

**Note** Dale's farm losses are restricted as follows:

| | | |
|---|---|---|
| Total Farm Loss | | $11,000 |
| Deductible Amount: | | |
| First $2,500 | ($2,500) | |
| One-Half Of $8,500 ($11,000 - $2,500) | ( 4,250) | ( 6,750) |
| Restricted Farm Loss Carry Forward | | $ 4,250 |

As noted in the problem, none of the losses can be carried back before 2016. This would leave the following carry forward balances at the end of 2016:

- Restricted Farm Loss Carry Forward $4,250
- Net Capital Loss Carry Forward ($2,310 - $660) $1,650

### *2017 Analysis*

The required information can be calculated as follows:

| | | |
|---|---|---|
| ITA 3(a) | | |
| Farm Income | $ 2,200 | |
| Taxable Dividends [(138%)($2,351)] | 3,244 | $ 5,444 |
| ITA 3(b) | | |
| Taxable Capital Gains [(1/2)($2,200)] | $ 1,100 | |
| Allowable Capital Losses | Nil | 1,100 |
| ITA 3(c) | | $ 6,544 |
| ITA 3(d) | | |
| Business Loss | | ( 15,400) |
| Net Income For Tax Purposes | | Nil |
| 2016 Net Capital Loss Carry Forward | | ($ 1,100) |
| Taxable Income (Loss) | | Nil |

Since there are taxable capital gains this year, and the problem states that Dale would like to deduct the maximum amount of his net capital loss carry forwards, the net capital loss carry forward of $1,100 is added to the balance of the non-capital loss.

The non-capital loss carry over is calculated as follows:

| | |
|---|---|
| Business Loss | $15,400 |
| 2016 Net Capital Loss Deducted | 1,100 |
| ITA 3(c) Income | ( 6,544) |
| Non-Capital Loss Carry Over For 2017 | $ 9,956 |

The entire non-capital loss carry over could be carried back to 2016, but since Dale requires $15,400 in Taxable Income to fully utilize his tax credits, the maximum carry back to 2016 is $231, calculated as follows:

| | |
|---|---|
| 2016 Taxable Income (As Reported) | $15,631 |
| Non-Capital Loss Carry Back From 2017 | ( 231) |
| 2016 Amended Taxable Income (Minimum) | $15,400 |

This carry back leaves Dale with his required $15,400 in Taxable Income. There would be the following carry forward balances at the end of 2017:

| | |
|---|---|
| • Restricted Farm Loss Carry Forward (Unchanged) | $4,250 |
| • Net Capital Loss Carry Forward ($1,650 - $1,100)] | $ 550 |
| • Non-Capital Loss Carry Forward ($9,956 - $231) | $9,725 |

***2018 Analysis***

The required information can be calculated as follows:

| | | |
|---|---|---|
| ITA 3(a) | | |
| Business Income | $33,000 | |
| Farm Income | 3,465 | |
| Taxable Dividends [(138%)($3,160)] | 4,361 | $40,826 |
| ITA 3(b) | | |
| Taxable Capital Gains [(1/2)($4,400)] | $2,200 | |
| Allowable Capital Losses | Nil | 2,200 |
| Net Income For Tax Purposes | | $43,026 |
| Restricted Farm Loss Carry Forward (Equal To Farm Income) | | ( 3,465) |
| Net Capital Loss Carry Forward (Less Than $2,200) | | ( 550) |
| Non-Capital Loss Carry Forward (All) | | ( 9,725) |
| Taxable Income | | $29,286 |

There would be the following carry forward balance at the end of 2018:

| | |
|---|---|
| • Restricted Farm Loss Carry Forward ($4,250 - $3,465) | $ 785 |

### *2019 Analysis*

The required information can be calculated as follows:

| | | |
|---|---|---|
| ITA 3(a) | | |
| Taxable Dividends [(138%)($5,140)] | | $ 7,093 |
| ITA 3(b) | | |
| Taxable Capital Gains [(1/2)($4,950)] | $ 2,475 | |
| Allowable Capital Losses [(1/2)($15,950)] | ( 7,975) | Nil |
| ITA 3(c) | | $ 7,093 |
| ITA 3(d) | | |
| Business Loss | ($20,900) | |
| Farm Loss | ( 2,200) | ( 23,100) |
| Net Income For Tax Purposes And Taxable Income | | Nil |

The available non-capital loss can be calculated as follows:

| | | |
|---|---|---|
| Business Loss | $20,900 | |
| Farm Loss (Unrestricted) | 2,200 | $23,100 |
| ITA 3(c) Income | | ( 7,093) |
| Non-Capital Loss Carry Over For 2019 | | $16,007 |

Although technically, the farm loss is accounted for separately from the non-capital loss, since the farm loss is less than $2,500 it is treated as an unrestricted farm loss and can be applied against all types of income. ITA 31 states that any loss allowed under that provision is considered an unrestricted loss from a farming business for the year for the purposes of calculating the non-capital loss carryover. As a result, the preceding loss carry over of $16,007 is available for carry back to 2018 to be applied against any type of income.

With respect to the net capital loss of $5,500 ($7,975 - $2,475), there are $1,650 ($2,200 - $550) in taxable capital gains left in 2018 as the basis for a carry back. This means that $1,650 of the 2019 net capital loss can be carried back, leaving $3,850 ($5,500 - $1,650) to be carried forward as a net capital loss balance.

If both the $16,007 non-capital loss and the $1,650 net capital loss were carried back to 2018, the result would be a Taxable Income of $11,629 ($29,286 - $16,007 - $1,650), less than the $15,400 that is required to fully utilize Dale's available tax credits. As the net capital loss can only be deducted to the extent of taxable capital gains, it would be advisable to claim the full amount of this loss carry back. Based on this view, the non-capital loss deduction will be limited to $12,236 ($29,286 - $15,400 - $1,650), an amount that will provide for full use of Dale's 2018 tax credits:

| | |
|---|---|
| 2018 Taxable Income (As Reported) | $29,286 |
| Non-Capital Loss Carry Back From 2019 | ( 12,236) |
| Net Capital Loss Carry Back From 2019 | ( 1,650) |
| 2018 Amended Taxable Income | $15,400 |

These carry backs leave Dale with his required $15,400 in 2018 Taxable Income. There would be the following carry forward balances at the end of 2019:

- Restricted Farm Loss Carry Forward (Unchanged) $ 785
- Net Capital Loss Carry Forward ($5,500 - $1,650)] $3,850
- Non-Capital Loss Carry Forward (Nil + $16,007 - $12,236) $3,771

## Self Study Solution Eleven - 3

To the extent that there has been use of the lifetime capital gains deduction in previous years, business investment losses (BILs) are disallowed. When they are disallowed, they become ordinary capital losses that must be deducted against the current year's taxable capital gains. Given this, the non-disallowed portion of the BIL would be calculated as follows:

| | |
|---|---|
| 2019 BIL Realized ($55,000 - $228,000 - $1,000) | $174,000 |
| BIL Disallowed By Previous Use Of ITA 110.6 ($38,000 + $21,000) | ( 59,000) |
| Remaining Business Investment Loss | $115,000 |
| Inclusion Rate | 1/2 |
| Allowable Business Investment Loss | $ 57,500 |

Using this analysis, Mr. Barkin's minimum Net Income For Tax Purposes and Taxable Income would be calculated as follows:

| | | |
|---|---|---|
| Net Employment Income | | $115,000 |
| Allowable Business Investment Loss | | ( 57,500) |
| Net Taxable Capital Gains: | | |
| Taxable Capital Gain [(1/2)($328,000 - $153,000 - $2,000)] | $86,500 | |
| Allowable Capital Loss (Disallowed ABIL) [(1/2)($59,000)] | ( 29,500) | 57,000 |
| Net Income For Tax Purposes | | $114,500 |
| Lifetime Capital Gains Deduction (Note 1) | | Nil |
| Net Capital Loss Carry Forward Deducted (Note 2) | | ( 13,700) |
| Taxable Income | | $100,800 |

**Note 1** As the only capital gains during 2019 are on qualified property, the simplified formula for the annual gains limit can be used. Given this, the lifetime capital gains deduction is nil, the least of:

| | |
|---|---|
| Amount Available [(1/2)($866,912)]* | $433,456 |
| Amount Used [(1/2)($38,000 + $21,000)] | ( 29,500) |
| Amount Available | $403,956 |

*This is the 2019 limit for gains on dispositions of shares of a qualified small business corporation. For gains on qualified farm or fishing property, the 2019 limit would be $1,000,000.

| | |
|---|---|
| Taxable Capital Gain On Qualified Property | $86,500 |
| Allowable Capital Loss Deducted (Disallowed ABIL) | ( 29,500) |
| ABIL Realized | ( 57,500) |
| Annual Gains Limit Prior To Loss Carry Forward | Nil |
| Net Capital Loss Deducted | ( 13,700) |
| Annual Gains Limit | Nil |

| | |
|---|---|
| Sum Of Annual Gains Limits ($19,000 + $10,500 + Nil) | $29,500 |
| Amounts Deducted In Previous Years ($19,000 + $10,500) | ( 29,500) |
| CNIL | ( 4,800) |
| Cumulative Gains Limit | Nil |

**Note 2** Even without the deduction of the net capital loss carry forward, the annual gains limit was nil, preventing the deduction of any amount for the lifetime capital

gains deduction. Given this, it is appropriate to deduct the net capital loss carry forward.

## Self Study Solution Eleven - 4

### *CASE A*

As Marty is actively engaged in the business on a regular, continuous, and substantial basis, the corporation is an Excluded Business. Given this, Marty's dividends will not be classified as Split Income.

While Miranda is not actively engaged in the business she is over 24 years of age and owns at least 10 percent of both the number of voting rights and the fair market value of the corporation's outstanding shares. In addition, the Company is not a professional corporation, less than 90 percent of its business involves performing services, and substantially all of its income is not from a related business. Given this, she would meet the Excluded Shares test and the dividends she received will not be classified as Split Income.

### *CASE B*

As Jerome is actively engaged in the business on a regular, continuous, and substantial basis, the corporation is an Excluded Business from his point of view. Given this, Jerome's dividends will not be classified as Split Income.

While Jeff has not been active in the business in either 2018 or 2019, he worked full time in the business for more than the required 5 years (2012 through 2017). Given this, the corporation is an Excluded Business and Jeff's dividends will not be classified as Split Income.

### *CASE C*

As Charles is actively engaged in the business on a regular, continuous, and substantial basis, the corporation is an Excluded Business. Given this, Charles' dividends will not be classified as Split Income.

As Clifford has never been actively involved in Clill, it is not an Excluded Business from his point of view. However, Clifford is over 24 years of age and owns more than 10 percent of the number of voting rights and the fair market value of the Clill shares. In addition, Clill is not a professional corporation, less than 90 percent of its business involves performing services, and substantially all of its income is not from a related business. Given this, Clifford's shares would be Excluded Shares and the dividends he received would not be classified as Split Income.

## Self Study Solution Eleven - 5

### *Part A - Taxable Income*

Mr. and Mrs. Hanson's Taxable Income would be calculated as follows:

| | Mr. Hanson | Mrs. Hanson |
|---|---|---|
| Old Age Security Benefits | $ 7,400 | $ 7,400 |
| RRIF Income | 50,000 | Nil |
| Registered Pension Plan Receipts | 25,380 | 1,680 |
| Dividends Received | 800 | 180 |
| Gross Up On Dividends (38 Percent) | 304 | 68 |
| Interest On Government Bonds | 500 | 4,359 |
| Net Taxable Capital Gain | Nil | Nil |
| Net Income Before Clawback | $84,384 | $13,687 |
| Social Benefits Repayment (See Note) | ( 1,021) | Nil |
| Net Income For Tax Purposes And Taxable Income | $83,363 | $13,687 |

**Note** Mrs. Hanson would not have to repay any of her OAS benefits as her Net Income is well below the threshold income of $77,580. Mr. Hanson's social benefits repayment would be the lesser of:

- $7,400, and
- [(15%)($84,384 - $77,580)] = $1,021.

### Part A - Tax Credits

Mr. Hanson cannot take the spousal credit because Mrs. Hanson's Net Income is more than the $12,069 base for this credit. Mrs. Hanson cannot transfer her dividends under ITA 82(3) as the transfer would leave her with Net Income of $13,439 ($13,687 - $180 - $68). This would still be more than the $12,069 base for the spousal credit and, as a consequence, no spousal tax credit would be created. Given these considerations, the amount that can be transferred from Mrs. Hanson to Mr. Hanson is calculated as follows:

| | |
|---|---|
| Age | $7,494 |
| Pension (On RPP Only) | 1,680 |
| Reduced By Mrs. Hanson's Taxable Income In Excess Of Her Basic Personal Tax Credit($13,439 - $12,069) | ( 1,370) |
| Credit Base Transferred To Spouse | $7,804 |

Mr. Hanson's maximum tax credits would be as follows:

| | |
|---|---|
| Basic Personal Amount | $ 12,069 |
| Age $7,494 - [(15%)($83,363 - $37,790)] | 658 |
| Pension | 2,000 |
| Transfers From Mrs. Hanson (See Preceding) | 7,804 |
| Total Base | $22,531 |
| Rate | 15% |
| Total | $ 3,380 |
| Dividend Tax Credit [(6/11)($304)] | 166 |
| Charitable Donations [(15%)($200) + (29%)($600 + $200 - $200)] | 204 |
| Total Credits | $ 3,750 |

Charitable donations can be claimed by either spouse, as long as the total donations are less than 75 percent of the claiming spouse's Net Income For Tax Purposes. As Mrs. Hanson has no Tax Payable, Mr. Hanson will claim her charitable donations. It is usually advantageous for one spouse to claim all the charitable donations if they total more than $200, as the low rate of credit is only applied once. Note that as none of Mr. Hanson's Taxable Income is taxed at the 33 percent federal tax rate, that rate is not relevant to the calculation of his charitable donations tax credit.

### Part A - Loss Carry Overs

Mrs. Hanson's net capital loss of $175 [(1/2)($725 - $375)] can be carried back 3 years and forward indefinitely to be claimed against taxable capital gains.

### Part B - Pension Income Splitting

The optimum use of pension income splitting would accomplish the following objectives:

- it would permit Mrs. Hanson to claim her dividend tax credit,
- it would permit Mrs. Hanson to fully utilize her pension income tax credit,
- it would eliminate Mr. Hanson's OAS clawback, and
- it would enable both Mr. and Mrs. Hanson to be in the same 20.5 percent tax bracket.

## Self Study Solution Eleven - 6

***Part A***

Mr. and Mrs. Dalton's Taxable Income would be calculated as follows:

| | Mr. Dalton | Mrs. Dalton |
|---|---|---|
| Old Age Security Benefits | $ 7,400 | $ 7,400 |
| Registered Pension Plan Receipts | Nil | 62,000 |
| RRIF Income | 1,640 | 12,420 |
| Interest On Government Bonds | 1,420 | 2,580 |
| Eligible Dividends Received | 3,420 | 460 |
| Gross Up On Dividends (38 Percent) | 1,300 | 175 |
| Net Income Before Clawback | $15,180 | $85,035 |
| Social Benefits Repayment (Note 1) | Nil | ( 1,118) |
| Net Income For Tax Purposes And Taxable Income Before Any Transfer Of Dividends | $15,180 | $83,917 |

**Note 1** Mr. Dalton would not have to repay any of his OAS benefits as his Net Income is well below the threshold income of $77,580. Mrs. Dalton's social benefits repayment would be the lesser of:

- $7,400, and
- [(15%)($85,035 - $77,580)] = $1,118.

Mr. Dalton's Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Federal Tax Before Credits [(15%)($15,180)] | | $2,277 |
| Tax Credits | | |
| Basic Personal | ($12,069) | |
| Other (Transferred To Mrs. Dalton) | Nil | |
| Total Base | ($12,069) | |
| Rate | 15% | ( 1,810) |
| Dividend Tax Credit [(6/11)($1,300)] | | ( 709) |
| Federal Tax Payable | | Nil |

The transfer to Mrs. Dalton would be calculated as follows:

| | | |
|---|---|---|
| Credits Available For Transfer: | | |
| Age | | $ 7,494 |
| Pension (Limited To RRIF Receipts) | | 1,640 |
| Disability | | 8,416 |
| Total Available | | $17,550 |
| Reduced By Excess Of: | | |
| Mr. Dalton's Net Income | ($15,180) | |
| Over Basic Personal Credit Amount | 12,069 | ( 3,111) |
| Available For Transfer To Mrs. Dalton | | $14,439 |

The amount owing for Mrs. Dalton would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | $ 7,145 | |
| Tax On Next $36,287 ($83,917 - $47,630) At 20.5 Percent | 7,439 | $14,584 |
| Tax Credits | | |
| Basic Personal | ($12,069) | |
| Spousal Including Extra Infirm Amount ($12,069 +$2,230 - $15,180) | Nil | |
| Additional Caregiver Amount (Note 2) | ( 7,140) | |
| Age {$7,494 - [(15%)($83,917 - $37,790)]} | ( 575) | |
| Pension | ( 2,000) | |
| Transfer From Spouse (Preceding Calculation) | ( 14,439) | |
| Credit Base | ($36,223) | |
| Rate | 15% | ( 5,433) |
| Charitable Donations [(15%)($200) +(29%)($350 + $960 - $200)] (Note 3) | | ( 352) |
| Dividend Tax Credit [(6/11)($175)] | | ( 95) |
| Federal Tax Payable | | $ 8,704 |
| OAS Clawback (Note 1) | | 1,118 |
| Amount Owing - Mrs. Dalton | | $9,822 |

**Note 2** Mr. Dalton's income was below the Canada caregiver income threshold of $16,766. In the absence of the spousal credit, the Canada caregiver amount would have been $7,140. Given this, the additional Canada caregiver amount would be $7,140 ($7,140 - Nil).

**Note 3** Charitable donations can be claimed by either spouse, as long as the total donations are less than 75 percent of the claiming spouse's Net Income For Tax Purposes. As Mr. Dalton has no Tax Payable, Mrs. Dalton will claim his charitable donations. It is usually advantageous for one spouse to claim all the charitable donations if they total more than $200, as the low rate of credit is only applied once. Note that as none of Mrs. Dalton's Taxable Income is taxed at the 33 percent federal tax rate, that rate is not relevant to the calculation of her charitable donations tax credit.

### *Part B - Eligibility For Transfer*

Mrs. Dalton cannot currently take the spousal credit because Mr. Dalton's Net Income is more than the $14,299 ($12,069 + $2,230) base for the credit. However, Mr. Dalton can transfer his dividends under ITA 82(3) as the transfer would leave Mr. Dalton with a Net Income of $10,460 ($15,180 - $3,420 - $1,300). This is below the $14,299 base for the spousal credit and, as a result, the transfer would create a spousal tax credit and is permitted.

### *Part C*

If all of Mr. Dalton's dividends are transferred to Mrs. Dalton, their new Taxable Income figures would be calculated as follows:

| | Mr. Dalton | Mrs. Dalton |
|---|---|---|
| Net Income Before Clawback As Per Part A | $15,180 | $85,035 |
| Dividend Transfer | ( 3,420) | 3,420 |
| Gross Up Transfer | ( 1,300) | 1,300 |
| Net Income After Dividend Transfer Before Clawback | $10,460 | $89,755 |
| Social Benefits Repayment (Note 4) | Nil | ( 1,826) |
| Net Income For Tax Purposes And Taxable Income | $10,460 | $87,929 |

**Note 4** Mr. Dalton would not have to repay any of his OAS benefits as his Net Income is well below the threshold income of $77,580. Mrs. Dalton's social benefits repayment would be the lesser of:

- $7,400, and
- [(15%)($89,755 - $77,580)] = $1,826.

As Mr. Dalton's revised income figure is below the basic personal credit of $12,069, his Tax Payable would continue to be nil. The transfer to Mrs. Dalton would be calculated as follows:

| | | |
|---|---|---|
| Credits Available For Transfer: | | |
| Age | | $ 7,494 |
| Pension (Limited To RRIF Receipts) | | 1,640 |
| Disability | | 8,416 |
| Total Available | | $17,550 |
| Reduced By Excess Of: | | |
| Mr. Dalton's Net Income | ($10,460) | |
| Over Basic Personal Credit Amount | 12,069 | ( Nil) |
| Available For Transfer | | $17,550 |

With respect to Mrs. Dalton, her amount owing would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | $7,145 | |
| Tax On Next $40,299 ($87,929 - $47,630) At 20.5% | 8,261 | $15,406 |
| Tax Credits | | |
| Basic Personal | ($12,069) | |
| Spousal Including Infirm Amount | | |
| ($12,069 +$2,230 - $10,460) | ( 3,839) | |
| Additional Caregiver Amount (Note 5) | ( 3,301) | |
| Age {$7,494 - [(15%)($87,929 - $37,790)]} | Nil | |
| Pension | ( 2,000) | |
| Transfer From Spouse (Preceding Calculation) | ( 17,550) | |
| Credit Base | ($38,759) | |
| Rate | 15% | ( 5,814) |
| Charitable Donations [(15%)($200) + | | |
| (29%)($350 + $960 - $200)] | | ( 352) |
| Dividend Tax Credit [(6/11)($175 + $1,300)] | | ( 805) |
| Federal Tax Payable | | $ 8,435 |
| OAS Clawback (Note 4) | | 1,826 |
| Amount Owing - Mrs. Dalton | | $10,261 |

**Note 5** As was the case before the transfer of dividends, Mr. Dalton's income is below the Canada caregiver income threshold of $16,766. In the absence of the spousal credit, the Canada caregiver amount would have been $7,140. Given this, the additional Canada caregiver amount would be $3,301 ($7,140 - $3,839).

### Conclusion

The use of the ITA 82(3) dividend transfer has decreased Mrs. Dalton's federal Tax Payable by $269 ($8,704 - $8,435). However, it has increased her OAS clawback by $708 ($1,826 - $1,118). Since the net effect is an increase in the amount owing of $439 ($10,261 - $9,822), the dividend transfer should not be done.

## Self Study Solution Eleven - 7

The regular Tax Payable calculations would be as follows:

| | Walter | Wendel | Winston |
|---|---|---|---|
| Employment And Business Income | $ 52,100 | $42,300 | $ 41,300 |
| Eligible Dividends Received | 82,300 | Nil | 12,300 |
| Dividend Gross Up (38 Percent) | 31,274 | Nil | 4,674 |
| RRSP Deduction | Nil | ( 27,000) | Nil |
| Taxable Capital Gains | 36,400 | Nil | 226,550 |
| Net Income For Tax Purposes | $202,074 | $15,300 | $284,824 |
| Lifetime Capital Gains Deduction | ( 36,400) | Nil | ( 221,500) |
| Taxable Income | $165,674 | $15,300 | $ 63,324 |
| Federal Tax (Note 1) | $ 35,757 | $ 2,295 | $ 10,362 |
| Basic Personal Credit | ( 1,810) | ( 1,810) | ( 1,810) |
| Dividend Tax Credit (6/11 of Gross Up) | ( 17,059) | Nil | ( 2,549) |
| Regular Federal Tax Payable | $ 16,888 | $ 485 | $ 6,003 |

**Note 1** The federal tax payable, before the dividend tax credit, is as follows:

| | Taxable Income | Federal Tax Calculations | Federal Tax |
|---|---|---|---|
| Walter | $165,674 | $30,535 + (29%)($18,007) | $35,757 |
| Wendel | $ 15,300 | (15%)($15,300) | $ 2,295 |
| Winston | $ 63,324 | $7,145 + (20.5%)($15,694) | $10,362 |

The alternative minimum tax (AMT) calculations would be as follows:

| | Walter | Wendel | Winston |
|---|---|---|---|
| Regular Taxable Income | $165,674 | $15,300 | $ 63,324 |
| 30% Of Capital Gains (Note 2) | 21,840 | Nil | 135,930 |
| Dividend Gross Up | ( 31,274) | Nil | ( 4,674) |
| Adjusted Taxable Income | $156,240 | $15,300 | $194,580 |
| AMT Exemption | ( 40,000) | ( 40,000) | ( 40,000) |
| AMT Base | $116,240 | $ Nil | $154,580 |
| Rate | 15% | 15% | 15% |
| Federal AMT Before Credit | $ 17,436 | $ Nil | $ 23,187 |
| Basic Personal Credit | ( 1,810) | ( 1,810) | ( 1,810) |
| Federal AMT | $ 15,626 | Nil | $ 21,377 |
| Regular Federal Tax Payable | ( 16,888) | | ( 6,003) |
| Additional Tax Required (Note 3) | Nil | Nil | $ 15,374 |

**Note 2** The 30 percent capital gain inclusion can be calculated by taking 30 percent of double the taxable capital gain.

**Note 3** The excess AMT over regular tax payable for Winston can be carried forward for 7 years and applied against any future excess of regular Tax Payable over the alternative minimum tax.

## Self Study Solution Eleven - 8

### *Part A - Net Income For Tax Purposes*

Ms. Worthmore's minimum Taxable Income is calculated as follows:

| | | |
|---|---|---|
| **Employment Income** | | |
| Gross Salary - Intra Graphics | $73,532 | |
| Gross Salary - Lindworth Inc. | 2,500 | |
| RPP Contributions | ( 1,233) | $74,799 |
| **Income From Property** | | |
| Eligible Dividend Attribution (Note One) | $ 182 | |
| Gross Up [(38%)($182)] | 69 | |
| Non-Eligible Dividends From Lindworth | 4,325 | |
| Gross Up [(15%)($4,325)] | 649 | 5,225 |
| **Taxable Capital Gains** | | |
| Attribution From Husband (Note Two) | $ 1,144 | |
| Transfer To Jayne (Note Three) | 122 | |
| Lackmere Shares (Note Four) | 394 | |
| Agricultural Land (Note Five) | 9,000 | 10,660 |
| **Other Income And Deductions** | | |
| Spousal Support Payments [($225)(12)] | ($ 2,700) | |
| RRSP Deduction (Note Six) | ( 6,849) | ( 9,549) |
| Net Income For Tax Purposes | | $81,135 |

**Note One** There would be income attribution for the $182 [($3.50)(52)] in dividends received by Mr. Dalton on the shares received as a gift.

**Note Two** In the case of transfers to a spouse, unless an election is made not to have Section 73 apply, the property is transferred at the adjusted cost base of the transferor. There is no recognition of capital gains at the time of transfer. However, when Mr. Dalton sells the shares on August 31, 2019, there would be attribution of taxable capital gains in the amount of $1,144 [($56 - $12)(52)(1/2)].

**Note Three** In the case of a gift to a minor child, it is treated as a deemed disposition at fair market value. This results in a taxable capital gain at the time of transfer in the amount of $122 [($27 - $18)(27)(1/2)].

**Note Four** The taxable capital gain on the Lackmere Ltd. shares would be computed using the average value for the shares. The average value would be calculated as follows:

| | |
|---|---|
| 122 Shares At $92 | $11,224 |
| 178 Shares At $71 | 12,638 |
| Total Cost | $23,862 |
| Average Cost ($23,862 ÷ 300 Shares) | $ 79.54 |

Based on this, the gain would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [(122)($86)] | $10,492 |
| Adjusted Cost Base [(122)($79.54)] | ( 9,704) |
| Capital Gain | $ 788 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 394 |

**Note Five** When there is a non-arm's length transfer of property for consideration of less than fair market value, ITA 69 deems that, for the transferor, the transfer takes place at fair market value. Given this, the taxable capital gain would be calculated as follows:

| | |
|---|---|
| Deemed Proceeds Of Disposition (FMV) | $28,000 |
| Adjusted Cost Base | ( 10,000) |
| Capital Gain | $18,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 9,000 |

**Note Six** Ms. Worthmore's 2018 Earned Income (assumed to be equal to the 2019 figure) is as follows:

| | |
|---|---|
| Gross Salary - Intra | $73,532 |
| Gross Salary - Lindworth | 2,500 |
| Spousal Support Paid And Deducted [(12)($225)] | ( 2,700) |
| Earned Income | $73,332 |

Ms. Worthmore's maximum deductible 2019 RRSP contribution is calculated as follows:

| | |
|---|---|
| Unused Deduction Room - End of 2018 | Nil |
| Lesser Of: | |
| • 2019 RRSP Dollar Limit = $26,500 | |
| • [(18%)($73,332)] = $13,200 | $13,200 |
| Less 2018 PA | ( 6,351) |
| Maximum Deductible RRSP Contribution | $ 6,849 |

This means the excess contribution of $651 ($7,500 - $6,849) can be carried forward and deducted in future years.

### Part B - Taxable Income

As Ms. Worthmore has no deductions from her Net Income For Tax Purposes, her 2019 Taxable Income would be $81,135, the same amount as her 2019 Net Income For Tax Purposes

### Part C - Tax Payable

**Note Seven** Ms. Worthmore can claim all of the medical expenses of her husband and daughters, Joyce and June without taking into consideration June's income, as she is under 18 years of age. Allowable medical expenses are as follows:

| | |
|---|---|
| John Dalton, Joyce And June Medical Expenses ($1,056 + $2,200 + $9,850) | $13,106 |
| Threshold - Lesser Of: | |
| [(3%)($81,135)] = $2,434 | |
| 2019 Limit Of $2,352 | ( 2,352) |
| Allowable Medical Expenses | $10,754 |

Ms. Worthmore's federal Tax Payable can be calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $ 7,145 |
| Tax On Next $33,505 ($81,135 - $47,630) At 20.5 Percent | | 6,869 |
| Gross Federal Tax Payable | | $14,014 |
| Basic Personal Amount | ($12,069) | |
| Spousal $12,069 - $1,065 | ( 11,004) | |
| CPP Contribution | ( 2,749) | |
| EI Premiums | ( 860) | |
| Canada Employment | ( 1,222) | |
| Transfer Of Spouse's Tuition Credit - Lesser of: | | |
| • Absolute Limit Of $5,000 | | |
| • Tuition Paid Of $2,300 | ( 2,300) | |
| Medical Expenses (Note Seven) | ( 10,754) | |
| Credit Base | ($40,958) | |
| Rate | 15% | ( 6,144) |
| Eligible Dividend Tax Credit [(6/11)($69)] | | ( 38) |
| Non-Eligible Dividend Tax Credit [(9/13)($649)] | | ( 449) |
| Charitable Donations (Note Eight) [(15%)($200) + (29%)($342 - $200)] | | ( 71) |
| Political Contributions [(3/4)($100)] | | ( 75) |
| Federal Tax Payable | | $ 7,237 |

**Note Eight** As none of her income is taxed at 33 percent, this rate will not be applicable to the calculation of the charitable donations tax credit.

## Self Study Solution Eleven - 9

### *Taxable Income*

Mr. Slater's Net Income For Tax Purposes And Taxable Income would be calculated as follows:

| | | |
|---|---|---|
| Employment Income - Salary | | $ 35,000 |
| Proprietorship Income ($28,300 - $2,300 - Note One) | | 26,000 |
| Property Income: | | |
| Interest On Savings Account | $ 4,450 | |
| Interest On Loans To Friends | 12,000 | |
| Eligible Canadian Dividends | 44,000 | |
| Gross Up [($44,000)(38%)] | 16,720 | |
| Dividends From U.S. Corporations (Before Withholding, No Gross Up) | 10,000 | 87,170 |
| Taxable Capital Gain [(1/2)($111,500 - $23,000)] | | 44,250 |
| CPP Benefits | | 5,100 |
| Old Age Security Benefits (Note Three) | | 7,400 |
| Restricted Farm Loss (Note Two) | | ( 5,750) |
| Net Income Before OAS Repayment | | $199,170 |
| OAS Repayment (Note Three) - Lesser Of: | | |
| • $7,400 | | |
| • $18,239 [(15%)($199,170 - $77,580)] | | ( 7,400) |
| Net Income For Tax Purposes And Taxable Income | | $191,770 |

**Note One** The drawings from the proprietorship have no effect on the Taxable Income of Mr. Slater. Funds invested are capital and not deductible. The proprietorship income of $28,300 is reduced by the interest of $2,300 on the proprietorship bank loan.

**Note Two** Since Mr. Slater's farming operation is a subordinate source of income, his farm loss would be restricted as follows:

| | |
|---|---|
| Farm Revenues | $36,000 |
| Farm Expenses | ( 45,000) |
| Total Farm Loss | ($ 9,000) |
| Deductible Portion [$2,500 + (1/2)($9,000 - $2,500)] | 5,750 |
| Restricted Farm Loss Carry Over | ($ 3,250) |

The $3,250 restricted farm loss carry over could be carried back to the preceding 3 years and forward for 20 years, to be deducted against farming income.

**Note Three** Even though Mr. Slater did not receive the $7,400, it must be included in income and deducted because he has received an information return which includes the amount.

### *Tax Payable*

Mr. Slater's federal Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $147,667 | | $30,535 |
| Tax On Next $44,103 ($191,770 - $147,667) At 29 Percent | | 12,790 |
| Gross Federal Tax | | $43,325 |
| Tax Credits: | | |
| Basic Personal Amount | ($12,069) | |
| Spousal, Including Extra Amount For Infirmity ($12,069 + $2,230) | ( 14,299) | |
| Mr. Slater's Age {$7,494 - [(15%)($191,770 - $37,790)]} | Nil | |
| Spouse's Disability | ( 8,416) | |
| Canada Employment | ( 1,222) | |
| Credit Base | ($36,006) | |
| Rate | 15% | ( 5,401) |
| Charitable Donations (Note Four) [(15%)($200) + (29%)($2,700 - $200)] | | ( 755) |
| Subtotal = Tax Otherwise Payable For Foreign Tax Credit | | $37,169 |
| Dividend Tax Credit [(6/11)($16,720)] | | ( 9,120) |
| Foreign Tax Credit (Note Five) | | ( 1,500) |
| Federal Political Contributions Tax Credit (Note Six) | | ( 350) |
| OAS Clawback | | 7,400 |
| OAS Withheld | | ( 7,400) |
| Federal Tax Payable | | $26,199 |

**Note Four** As none of his income is taxed at 33 percent, this rate will not be applicable to the calculation of the charitable donations tax credit.

**Note Five** The federal foreign tax credit will be the lesser of the foreign tax actually paid of $1,500 and an amount determined by the following formula:

$$\left[\frac{\text{Foreign Non - Business Income}}{\text{Adjusted Division B Income}}\right][\text{Tax Otherwise Payable}]$$

The Tax Otherwise Payable is equal to federal Tax Payable before the dividend tax credit and political contributions tax credit is deducted (the Subtotal in the preceding table). This amount would be $1,938 [($10,000 ÷ $191,770)($37,169)], leaving the actual taxes of $1,500 as the lesser amount.

**Note Six** The political contributions tax credit can be calculated as follows:

| | |
|---|---|
| 3/4 Of First $400 | $300 |
| 1/2 Of The Next $100 | 50 |
| Total Credit | $350 |

### Other Notes

- The gambling income would not be taxable as Mr. Slater's activity is not extensive enough to be considered a business given his winnings and funds lost in gambling.
- Inheritances are capital receipts and do not constitute Taxable Income.
- The life insurance premiums are not deductible.
- The mortgage payments on his personal residence are not deductible.

## Self Study Solution Eleven - 10

### Deemed Dispositions Immediately Before Death

Immediately before the time of Mrs. Steele's death, there is a deemed disposition of all of her capital property. If the beneficiary is a spouse, the deemed proceeds of disposition will, in general, be equal to the tax cost of the property (ACB or UCC). If Andrea's representatives choose to do so, they can elect out of this rollover and record the transfer at fair market value. For the transfers to her daughter, the deemed proceeds of disposition must be equal to fair market value.

### Principal Residence To Daughter

The bequest of the family home to her daughter would result in a capital gain of $134,600 ($544,000 - $409,400). As it appears to have been Mrs. Steele's principal residence, the application of the principal residence exemption formula to this amount would result in a deduction of the maximum amount of $134,600.

### Other Properties At Death

Under ITA 70(6), property may be transferred at death to a spouse on the basis of adjusted cost base or its UCC. This means that the Rolston Inc. shares, the painting, and the assets of the boutique can be transferred to Mr. Steele with no tax effects in Mrs. Steele's final return. The adjusted cost base and UCC of these properties to Mr. Steele will be the same amounts that applied to Mrs. Steele, prior to her death.

Although the AGF Industries shares would also be eligible for a tax free rollover, it would not be advantageous to do so as there is an unrealized capital loss on these shares. It would be preferable for the legal representative of Mrs. Steele to elect in the final return to have the AGF Industries shares transferred to Mr. Steele at fair market value in order to utilize the capital loss. Electing out of ITA 70(6) is implemented in the final tax return and does not require the filing of a form.

There is no rollover available for the rental property as that is being transferred to her daughter. There is a taxable capital gain for the rental property on both the building and the land and recaptured CCA on the building.

The allowable capital loss resulting from the election on the shares, and the taxable capital gains and recaptured CCA on the deemed disposition of the rental property can be calculated as follows:

| | AGF Shares | Land | Building |
|---|---|---|---|
| Fair Market Value | $ 7,900 | $164,000 | $235,000 |
| Adjusted Cost Base/Capital Cost | ( 10,600) | ( 92,000) | ( 183,000) |
| Capital Gain (Loss) | ($ 2,700) | $ 72,000 | $ 52,000 |
| Inclusion Rate | 1/2 | 1/2 | 1/2 |
| Taxable Capital Gain (Loss) | ($ 1,350) | $ 36,000 | $ 26,000 |

| | Building |
|---|---|
| Capital Cost | $183,000 |
| UCC | ( 144,800) |
| Recapture Of CCA | $ 38,200 |

### *Mortgage Interest - Attribution*

With respect to the mortgage interest received by Mr. Steele, it was earned on mortgages given to him by Mrs. Steele and, as a consequence, it would be attributed to her up until her death on June 3, 2019. This means that $886 [(154/365)($2,100)] of the $2,100 would be included in her income. As attribution from a spouse ceases when the transferor spouse dies, the remaining $1,214 ($2,100 - $886) would be included in Mr. Steele's income. When this is combined with his $425 boutique salary, his total income for the year is $1,639. His income for the whole year, not just prior to Mrs. Steele's death, will decrease the spousal credit available on Mrs. Steele's final return.

### *Net Income For Tax Purposes And Taxable Income*

Mrs. Steele's minimum Taxable Income (ignoring CPP) would be calculated as follows:

| | | |
|---|---|---|
| Business Income | | $55,200 |
| Property Income: | | |
| Eligible Dividends Received | $1,090 | |
| Gross Up [(38%)($1,090)] | 414 | |
| Interest | 2,025 | |
| Attributed Mortgage Interest (Note One) | 886 | |
| Rent Revenues | 41,200 | |
| Rental Expenses (Note Two) | ( 24,650) | |
| Recaptured CCA On Rental Property | 38,200 | 59,165 |
| Net Taxable Capital Gains: | | |
| Taxable Capital Gains On Rental Property ($26,000 + $36,000) | $62,000 | |
| Allowable Capital Loss On AGF Industries Shares | ( 1,350) | 60,650 |
| Net Income | | $175,015 |
| Net Capital Loss Carry Forward (Note Three) | | ( 76,500) |
| Taxable Income | | $ 98,515 |

**Note One** Income attribution would cease with Ms. Steele's death on June 3, 154 days into 2019. Given this, the amount of mortgage interest attribution would be $886 [(2,100)(154/365)].

**Note Two** As there was a deemed disposition of the rental property immediately before the time of Mrs. Steele's death, no CCA can be taken for 2019.

**Note Three** In the year of death, any capital losses and capital loss carry forwards can be deducted against any type of income, not just capital gains, as long as the lifetime capital gains deduction has not been claimed. As a result, although she has net taxable capital gains of only $60,650, she can deduct her total net capital loss carry forward of $76,500.

### *Tax Payable*

Mrs. Steele's minimum federal Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $95,259 | | $16,908 |
| Tax On Remaining $3,256 ($98,515 - $95,259) At 26 Percent | | 847 |
| Gross Federal Tax | | $17,755 |
| Basic Personal Amount | ($12,069) | |
| Spousal ($12,069 - $1,639) | ( 10,430) | |
| Credit Base | ($22,499) | |
| Rate | 15% | ( 3,375) |
| Dividend Tax Credit [(6/11)(38%)($1,090)] | | ( 226) |
| Federal Tax Payable | | $14,154 |

## Self Study Solution Eleven - 11

### *Part A - Taxable Income*

Daniel Tong's employment income would be calculated as follows:

| | | |
|---|---|---|
| Inclusions: | | |
| Salary | $78,000 | |
| 2018 Bonus (Cash Basis) | 6,000 | |
| Home Office Allowance | 2,400 | |
| Standby Charge - No Reduction [($5,200)(2/3)] | 3,467 | |
| Automobile Operating Benefit [(14,000 km)($0.28)] | 3,920 | |
| Group Term Life Insurance Premium | 650 | |
| Dental Insurance | Nil | |
| Stock Option Benefit [(2,500)($15 - $12)] | 7,500 | $101,937 |
| Deductions: | | |
| Company Pension Contributions | ($ 3,900) | |
| Home Office [(30/300)($2,100 + $750)] | ( 285) | |
| Office Supplies | ( 230) | ( 4,415) |
| Net Employment Income | | $ 97,522 |

**Notes**

- In general, the only home office costs that can be deducted are utilities and maintenance. In the case of employees with commission income, a pro rata share of insurance and property taxes would also be deductible. However, it does not appear that Mr. Tong has any commission income.
- As the only capital costs that are deductible by an employee are those related to an automobile, aircraft, or musical instrument, the cost of the computer and peripherals are not deductible.
- The use of employment related frequent flyer points is not considered a taxable benefit by the CRA.

Mr. Tong's Net Income For Tax Purposes and Taxable Income would be calculated as follows:

| | | |
|---|---|---|
| Net Employment Income (See Preceding) | | $ 97,522 |
| Business Income - Sale Of Automobile | | |
| [$14,500 - ($2,500 + $8,100)] | | 3,900 |
| Property Income: | | |
| Portus Dividends Received | $4,500 | |
| Gross Up [(38%)($4,500)] | 1,710 | |
| Less Interest Expense | ( 1,200) | 5,010 |
| Spousal RRSP Withdrawal (Attributed To Mr. Tong) | | 1,000 |
| Net Taxable Capital Gain: | | |
| Taxable Capital Gain On Portus Shares (Note 1) | $3,581 | |
| Allowable Capital Loss On Global Shares (Note 2) | Nil | 3,581 |
| RRSP Contribution (Note 3) | | ( 10,200) |
| Net Income For Tax Purposes | | $100,813 |
| Stock Option Benefit [(1/2)($7,500)] | | ( 3,750) |
| Net Capital Loss Carry Forward (Note 4) | | ( 3,581) |
| Taxable Income | | $ 93,482 |

**Note 1** For shares acquired through the exercise of stock options, the adjusted cost base is the fair market value of the shares at the time of exercise. Based on this, the average cost of his Portus Ltd. shares is calculated as follows:

| | |
|---|---|
| 2,500 Shares At $15 | $37,500 |
| 250 Shares At $18 | 4,500 |
| Total Adjusted Cost Base | $42,000 |

Based on this total, the average cost per share is $15.27 ($42,000 ÷ 2,750). Using this figure, the taxable capital gain would be calculated as follows:

| | |
|---|---|
| Proceeds [(1,250)($21)] | $26,250 |
| Adjusted Cost Base [(1,250)($15.27)] | ( 19,088) |
| Capital Gain | $ 7,162 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 3,581 |

**Note 2** The $2,400 loss ($8,600 - $11,000) is deemed to be superficial, as Mr. Tong repurchased more than 800 Global shares within 30 days of the original disposition. This means that the loss will be disallowed. However, it will be added to the adjusted cost base of the replacement shares, giving a total adjusted cost base of $8,200 ($5,800 + $2,400).

**Note 3** Mr. Tong's 2019 RRSP deduction room would be calculated as follows:

| | |
|---|---|
| Lesser Of: | |
| 2019 RRSP Limit = $26,500 | |
| 18% Of $61,500 = $11,070 | $11,070 |
| 2018 Pension Adjustment | Nil |
| Total 2019 Deduction Room | $11,070 |

While he has $11,070 in deduction room, his actual deduction is limited to $10,200, his $2,200 in undeducted contributions from the beginning of the year, plus his $8,000 contribution to his wife's RRSP.

**Note 4** Mr. Tong has a net capital loss balance of $11,500 ($2,500 + $6,000 + $3,000). However, the amount that can be deducted is limited to the 2019 taxable capital gain, or $3,581. This will leave a net capital loss balance of $7,919 ($11,500 - $3,581).

### *Part B - Tax Payable*

Mr. Tong's minimum federal Tax Payable is calculated as follows:

| | | |
|---|---|---|
| Tax On First $47,630 | | $7,145 |
| Tax On Next $45,852 ($93,482 - $47,630) At 20.5 Percent | | 9,400 |
| Gross Federal Tax | | $16,545 |
| Basic Personal Amount | ($12,069) | |
| Spousal | ( 12,069) | |
| CPP | ( 2,749) | |
| EI | ( 860) | |
| Canada Employment | ( 1,222) | |
| Transfer Of Tuition (Note 5) | ( 5,000) | |
| Credit Base | ($33,969) | |
| Rate | 15% | ( 5,095) |
| Dividend Tax Credit [(6/11)(38%)($4,500)] | | ( 933) |
| Federal Tax Payable | | $10,517 |

**Note 5** Marion's federal Tax Payable is nil as the scholarship is not taxable income.

| | |
|---|---|
| Interest Income | $ 3,000 |
| Scholarship ($10,000 - $10,000) | Nil |
| Taxable Income | $ 3,000 |
| Basic Personal Amount | ( 12,069) |
| Federal Tax Payable | Nil |

As Marion is unable to use any of her tuition credit, the transfer is the lesser of:

- The absolute limit of $5,000
- The actual tuition cost of $7,150

Given this, the maximum transfer is $5,000. However, the $2,150 ($7,150 - $5,000) excess can be carried forward indefinitely to be used against Marion's future Tax Payable.

### *Part B - Carry Forwards*

- From Note 4, there is a net capital loss of $7,919 available for carry forward to subsequent years.
- From Note 5, Marion has a $2,150 tuition amount available for carry forward to subsequent years.

## Solution to Tax Software Self Study Problem - Chapter 11

The complete tax return is available on the MyLab in two versions, a T1 ProFile return file and a .PDF file. Note that prior to late January, 2020, the returns will be for 2018, not 2019 as the 2019 filing version will not yet be available.

For more information on how to use the ProFile tax program, refer to the Chapter 4 sample tax return in this Study Guide.

### *Notes To Tax Return*

- Diane transfers the $5,000 maximum tuition amount to Eleanor and carries forward the remaining $2,000 [$7,000 - $5,000]. The carry forward can only be used by Diane.
- Eleanor cannot claim the charitable donation made by Diane, but Diane can carry it forward for up to 5 years.
- Since Amy is under 18 and wholly dependent, Eleanor claimed the eligible dependant credit for Amy.
- Note that, because Marjorie is not infirm, Eleanor can claim no credit for her.
- Since Diane and Marjorie are over 17 years of age, their medical expenses are reduced by 3 percent of their Net Income For Tax Purposes. This means that none of Marjorie's medical expenses can be claimed by Eleanor.
- In calculating work space in the home costs, the household insurance is not deductible as the T4 information shows she has no commission income. The car insurance is not relevant as there is no information that Eleanor uses her car for employment related purposes.
- The Croft Computer Camp was an overnight camp which means that the deductible costs are limited to $125 per week, a total of $250 [(2)($125)]. In contrast, there is no limit on the costs of day camps. This provides for the deduction of the entire $400 cost of the Y Day Camp.
- Since Eleanor is currently renting out her house, but plans to move back into it, no CCA is taken on the Class 1 building to preserve her principal residence status. Since she had a rental loss in the previous year, and the cost is equal to the UCC, no CCA has been taken on the building. Her CCA on the Class 8 assets would not affect her principal residence election and should be taken. The payments on principal are not deductible.

  If she chose to take CCA on the building, the maximum potential CCA for the year would be $6,756 [(4%)($168,900)] since the first year one-half rule does not apply to the second year of rental. The maximum deductible CCA on the building would be limited to the net rental income after the CCA on the Class 8 assets of $5,553 ($5,887 - $334). This would reduce her Tax Payable for 2018, but she would no longer be eligible for the principal residence gain reduction on the property. In addition, the CCA would be recaptured on a subsequent sale if the proceeds were greater than the UCC.

  Given her inheritance, she should have more than sufficient funds to pay her income taxes without taking CCA on her rental property. As a result, she should preserve her ability to claim the principal residence gain reduction by not taking CCA on the house.

### *Tax Planning Points*

- Since Marjorie is taking care of Amy and is over 18 years old, Eleanor could pay her for child care costs and deduct them. Given Marjorie's low income, it is probable that Eleanor is already providing some funds to her. The amount should be calculated on a basis that is no more than the going rate per hour for similar services for the time when Amy is home and Eleanor is not. As long as Marjorie's income remains below the basic personal credit plus the age credit, it would not result in any income tax liability for Marjorie. Since she is over 80 years old, there would be no CPP liability.
- Although she is not required to file, Marjorie should file a tax return, otherwise she will not be eligible for the GST credit. If Eleanor pays her for child care in the future, filing a tax return could also reduce the probability that Eleanor will be asked for proof of payment.
- Although she is not required to file, Diane should file a tax return, otherwise she will not be eligible for the GST credit and she will not benefit from the RRSP deduction room created during the year. Filing a tax return will also make her tuition tax credit and charitable donation tax credit easier to keep track of for carry forward purposes.
- With the inflow of funds from the inheritance, Eleanor should review her debt outstanding and pay off any balances that have non-deductible interest, such as credit card balances. Although it is not exactly a tax planning point, Eleanor should compare the after tax cost of the interest she is paying on her rental property mortgage with the after tax yields that she can obtain on her investments to determine whether she should pay off her mortgage.

### *Part B*

The maximum deductible RRSP contribution that Eleanor can make for 2019 is calculated as $5,538 by the program on the form "RRSPLimit". To access the form, press <F4> and type "rrsplimit" in the form box.

Note that if Eleanor chooses to deduct CCA on her rental building and reduce her net rental income to nil, her maximum deductible RRSP contribution will be reduced by $1,000 [(18%)($5,553)]. This is another reason she should not take CCA on the rental building.

Given her inheritance, Eleanor should contribute the maximum deductible RRSP contribution as early in 2019 as possible.

Eleanor should open an RESP for Amy if she has not already done so. How much she should contribute will depend on many factors (see the text), but she should request that her accountant create a contribution schedule that will maximize Canada Education Savings Plan contributions and optimize RESP contributions.

Eleanor should open TFSAs for herself, Diane and possibly Marjorie and determine how much she should contribute to each. This would involve many investment and budgeting factors, as well as her future financial plans. Since the contributions are not deductible and the withdrawals are not taxable, the TFSAs will not have an effect on any of the tax returns.

Given her inheritance she should also consider overcontributing up to $2,000 to her RRSP which would allow her to take advantage of the tax free earnings in the RRSP without penalty. This would only be advantageous as long as she plans to have earned income for RRSP purposes sufficient to deduct the $2,000 in the future.

## Chapter 11 Learning Objectives

After completing Chapter 11, you should be able to:

1. Recall the specified deductions from Net Income For Tax Purposes in the calculation of Taxable Income (paragraph [P hereafter] 11-1 to 11-7).
2. Apply the rules related to lump-sum payments (P 11-8 to 11-13).
3. Recall the general rules for the treatment of losses and loss carry overs (P 11-14 to 11-29).
4. Explain the treatment of losses on personal use property (P 11-30).
5. Apply the loss carry over provisions applicable to losses on listed personal property (P 11-31 to 11-35).

---

6. Apply the loss carry over provisions applicable to non-capital losses (P 11-36 to 11-40).
7. Apply the loss carry over provisions applicable to net capital losses (P 11-41 to 11-44).
8. Apply the rules for the conversion of a net capital loss carry over to a non-capital loss carry over (P 11-45 to 11-49).
9. Explain the special rules for net capital losses that are applicable to deceased taxpayers (P 11-50 to 11-54).
10. Explain the special features associated with Allowable Business Investment Losses (P 11-55 to 11-62).

---

11. Apply the loss carry over provisions applicable to regular and restricted farm losses (P 11-63 to 11-67).
12. Apply the provisions of the lifetime capital gains deduction (P 11-68 to 11-97).
13. Describe the importance of the ordering of deductions and losses in computing Net Income For Tax Purposes and Taxable Income (P 11-98 to 11-103).
14. Describe Basic Federal Tax Payable (P 11-104 to 11-109).
15. Identify amounts that may be taxed as split income (P 11-110 to 11-124).

---

16. Determine the applicability of the Tax On Split Income (TOSI) (P 11-125 to 11-131).
17. Describe those items that will be Excluded Amounts with respect to the TOSI (P 11-132 to 11-142).
18 Calculate the amount of the TOSI (P 11-143 to 11-147).
19. Apply the provisions for the transfer of dividends to a spouse or common-law partner (P 11-148).
20. Calculate the charitable donations tax credit for donations of various types of property (P 11-149 to 11-174).

---

21. Calculate foreign business and non-business income tax credits (P 11-175 to 11-186).
22. Apply the provisions associated with the alternative minimum tax (P 11-187 to 11-200).
23. Review a personal tax return completed using the ProFile T1 tax preparation software program.

# CHAPTER 12

## How To Work Through Chapter 12

We recommend the following approach in dealing with the material in this Chapter:

**Note On Recent Developments**

- Read the Note at the beginning of the Chapter (in the textbook).

**Computation Of Net Income For Corporations**

- Read paragraph 12-1 to 12-4.
- Do Exercise Twelve-1 (in the textbook) and check the solution in this Study Guide.
- Do Self Study Problem Twelve-1 which is available on MyLab and check the solution in this Study Guide.

**Deductions Available For Corporations In The Computation Of Taxable Income**

- Read paragraph 12-5 to 12-9.

**Dividends Received From Other Corporations**

- Read paragraph 12-10 to 12-12.
- Do Exercise Twelve-2 and check the solution in this Study Guide.

**Dividends Received - Other Situations Including Stop Loss Rules**

- Read paragraph 12-13 to 12-22.
- Do Exercise Twelve-3 and check the solution in this Study Guide.
- Read paragraph 12-23.
- Do Self Study Problem Twelve-2 and check the solution in this Study Guide.

**Non-Capital Loss Carry Over For A Corporation**

- Read paragraph 12-24 to 12-30.
- Do Exercises Twelve-4 and Twelve-5 and check the solutions in this Study Guide.

**Ordering Of Taxable Income Deductions**

- Read paragraph 12-31 to 12-36.
- Do Self Study Problems Twelve-3 and Twelve-4 and check the solutions in this Study Guide.

**Geographical Allocation Of Income To Permanent Establishments**

- Read paragraph 12-37 to 12-44.
- Do Self Study Problem Twelve-5 and check the solution in this Study Guide.

**Federal Tax Payable For Corporations**

- Read paragraph 12-45 to 12-51.
- Do Exercise Twelve-6 and check the solution in this Study Guide.

**Provincial Tax Payable For Corporations**

- Read paragraph 12-52 to 12-62.

**Other Goals Of The Corporate Tax System**

- Read paragraph 12-63 to 12-64.

**Small Business Deduction - Definitions And Calculation**

- Read paragraph 12-65 to 12-101.
- Do Exercise Twelve-7 and check the solution in this Study Guide.

**Elimination Of The Small Business Deduction For Large CCPCs**

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 12. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 12 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 12 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 12 that is on MyLab.

**Practice Examination**

- Write the Practice Examination for Chapter 12 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

## Solutions to Chapter Twelve Exercises

### *Exercise Twelve - 1 Solution*

**Item 1** You would add the accounting loss of $5,600 ($48,300 - $53,900). You would also add the recapture of CCA of $13,700 ($34,600 - $48,300), for a total addition of $19,300.

**Item 2** As goodwill is not amortized for accounting purposes and there was no impairment during the year, no adjustment of the accounting figures is required. However, when the goodwill is added to Class 14.1, it would be subject to the half-year rule and amortization at a rate of 5 percent per year. This means that you would subtract of CCA $4,500 [($180,000)(1/2)(5%)].

**Item 3** You would add the charitable donations of $15,000.

**Item 4** You would deduct the premium amortization of $4,500.

### *Exercise Twelve - 2 Solution*

| | |
|---|---|
| Net Income For Tax Purposes | $263,000 |
| Dividends Received | ( 14,200) |
| Charitable Donations | ( 8,600) |
| Non-Capital Loss Carry Forward (All) | ( 82,000) |
| Net Capital Loss Carry Forward* | ( 14,250) |
| Taxable Income | $143,950 |

*While there is a net capital loss of $18,000 available, the actual deduction is limited to the current year's taxable capital gains of $14,250. The remaining net capital loss carry forward is $3,750 ($18,000 - $14,250).

### *Exercise Twelve - 3 Solution*

Although Loren has held the shares for more than 365 days, it owns more than 5 percent of the shares. As a result, this transaction would be subject to the stop loss rules. The deductible loss would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [($21.15)(1,000)] | $21,150 |
| Adjusted Cost Base [($25.30)(1,000)] | ( 25,300) |
| Total Loss | ($ 4,150) |
| Disallowed Portion [($2.16)(1,000)] | 2,160 |
| Capital Loss | ($ 1,990) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss | ($ 995) |

### *Exercise Twelve - 4 Solution*

Hacker's Net Income For Tax Purposes would be nil, the business and property income of $63,500, less the allowable business investment loss of $75,750 [(1/2)($151,500)].

The net capital loss carry over balance at the end of the year would be $7,650 [(1/2)($23,100 - $38,400)].

The non-capital loss carry over would be calculated as follows:

| | |
|---|---|
| Amount E (The ABIL) | $75,750 |
| Amount F - ITA 3(c) Income | ( 63,500) |
| Non-Capital Loss At End Of Year | $12,250 |

### Exercise Twelve - 5 Solution

The non-capital loss balance at the end of the year would be calculated as follows:

| | | |
|---|---|---|
| Amount E: | | |
| Net Business Loss | | $273,000 |
| ABIL | | 5,250 |
| Dividends Received And Deducted | | 48,000 |
| Net Capital Loss Carry Forward Deducted (Limited To Net Taxable Capital Gains For The Year) | | 13,500 |
| Total For Amount E | | $339,750 |
| Amount F - ITA 3(c) Income: | | |
| Interest | ($27,200) | |
| Dividends | ( 48,000) | |
| Net Taxable Capital Gains [(1/2)($111,000 - $84,000)] | ( 13,500) | ( 88,700) |
| Non-Capital Loss At End Of Year | | $251,050 |
| Net Capital Loss Carry Forward ($19,000 - $13,500) | | $ 5,500 |

### Exercise Twelve - 6 Solution

The percentage of Taxable Income earned in each province would be calculated as follows:

| | Gross Revenues | | Wages And Salaries | |
|---|---|---|---|---|
| | Amount | Percent | Amount | Percent |
| Ontario | $1,303,000 | 44.6% | $ 52,000 | 31.5% |
| Manitoba | 896,000 | 30.7% | 94,000 | 57.0% |
| Not Related To A Province | 724,000 | 24.7% | 19,000 | 11.5% |
| Total | $2,923,000 | 100.0% | $165,000 | 100.0% |

The average of the two percentages applicable for income not related to a province is 18.1%, leaving an average for income related to a province of 81.9%. Given this, federal Tax Payable can be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($226,000)] | $85,880 |
| Federal Tax Abatement [(10%)(81.9%)($226,000)] | ( 18,509) |
| General Rate Reduction [(13%)($226,000)] | ( 29,380) |
| Federal Tax Payable | $37,991 |

### Exercise Twelve - 7 Solution

As a CCPC throughout the year and with no associated companies, Kartoom is eligible for the full amount of the $500,000 annual business limit. The amount eligible for the small business deduction will be the least of:

| | |
|---|---|
| **Active Business Income** | **$425,000** |
| **Adjusted Taxable Income** (See following calculation) | **$292,857** |
| **Annual Business Limit** | **$500,000** |

| | |
|---|---|
| Net Income For Tax Purposes | $570,000 |
| Dividends Received | ( 85,000) |
| Non-Capital Loss Carry Forward | ( 160,000) |
| Taxable Income | $325,000 |
| 100/28 Times Foreign Non-Business Tax Credit [(100/28)(15%)($60,000)] | ( 32,143) |
| Adjusted Taxable Income | $292,857 |

The least of these figures is the adjusted Taxable Income of $292,857.

### *Exercise Twelve - 8 Solution*

The B component of the ITA 125(5.1) reduction formula is $2,925 [(.00225)($11,300,000 - $10,000,000)]. Given this, the required reduction would be calculated as follows:

[($500,000)($2,925 ÷ $11,250)] = $130,000 **Reduction**

This reduction leaves the annual business limit at $370,000 ($500,000 - $130,000).

The foreign non-business income tax credit is equal to $5,400 [(15%)($36,000)]. The small business deduction for Largely Small Inc. is equal to 19 percent of the least of:

| | | |
|---|---|---|
| • Active Business Income ($1,233,000 - $36,000) | | $1,197,000 |
| • Taxable Income ($1,233,000 - $914,000) | $319,000 | |
| Less 100/28 Times Non-Business Income FTC Of $5,400 | ( 19,286) | $ 299,714 |
| • Reduced Annual Business Limit ($500,000 - $130,000) | | $ 370,000 |

The small business deduction is equal to $56,946 [(19%)($299,714)]. The foreign non-business income is less than $50,000 so the calculation of the passive income grind is not required.

### *Exercise Twelve - 9 Solution*

The required reduction in the annual business limit would be calculated as follows:

[($300,000/$500,000)][(5)($105,000 - $50,000)] = $165,000 **Reduction**

This reduction would leave the company's annual business limit at $135,000 ($300,000 - $165,000).

The 2019 small business deduction for Investco would be 19 percent of the least of:

| | |
|---|---|
| • Active Business Income | $350,000 |
| • Taxable Income | $475,000 |
| • Reduced Annual Business Limit | $135,000 |

The small business deduction is equal to $25,650 [(19%)($135,000)].

### Exercise Twelve - 10 Solution

**Case 1** The B component of the TCEC reduction formula is $7,875 [(.00225)($13,500,000 - $10,000,000)]. Given this, the required reduction would be calculated as follows:

[($350,000)($7,875 ÷ $11,250)] = $245,000 **Reduction**

The calculation of the AAII grind would be calculated as follows:

[($350,000/$500,000)][(5)($72,000 - $50,000)] = $77,000 **Reduction**

The greater of these reductions is the TCEC grind amount of $245,000. This leaves an annual business limit of $105,000 ($350,000 - $245,000). Using this, the 2019 small business deduction for Reduco would be 19 percent of the least of:

| | |
|---|---|
| • Active Business Income | $450,000 |
| • Taxable Income ($540,000 - $60,000) | $480,000 |
| • Reduced Annual Business Limit | $105,000 |

The small business deduction in this Case 1 is equal to $19,950 [(19%)($105,000)].

**Case 2** The B component of the TCEC reduction formula is $2,250 [(.00225)($11,000,000 - $10,000,000)]. Given this, the required reduction would be calculated as follows:

[($350,000)($2,250 ÷ $11,250)] = $70,000 **Reduction**

The AAII reduction would be the same $77,000 that was determined in Case 1. This would also be the greater of the two reductions, resulting in an annual business limit of $273,000 ($350,000 - $77,000). Given this, the small business deduction for Reduco is equal to 19 percent of the least of:

| | |
|---|---|
| • Active Business Income | $450,000 |
| • Taxable Income ($540,000 - $60,000) | $480,000 |
| • Reduced Annual Business Limit | $273,000 |

The small business deduction in this Case 2 is equal to $51,870 [(19%)($273,000)].

### Exercise Twelve - 11 Solution

The small business deduction for Marion Manufacturing would be equal to 19 percent of the least of:

| | | |
|---|---|---|
| • Canadian Active Business Income (M&P Profits) | | $411,000 |
| • Taxable Income ($462,000 - $310,000) | $152,000 | |
| Less 4 Times Business Income FTC Of $3,150 | ( 12,600) | $139,400 |
| • Annual Business Limit | | $500,000 |

Based on this, the small business deduction would be $26,486 [(19%)($139,400)].

The M&P deduction would be equal to 13 percent of the lesser of:

| | | |
|---|---|---|
| • M&P Profits | $411,000 | |
| Less Amount Eligible For Small Business Deduction | ( 139,400) | $271,600 |
| • Taxable Income ($462,000 - $310,000) | $152,000 | |
| Less: | | |
| Amount Eligible For Small Business Deduction | ( 139,400) | |
| 4 Times Business FTC Of $3,150 | ( 12,600) | |
| Aggregate Investment Income (Taxable Capital Gain) | ( 30,000) | $ Nil |

The M&P profits deduction would be equal to nil.

It would have been possible to increase the small business deduction to the full $411,000 of active business income by increasing Taxable Income to $423,600 ($411,000 + $12,600 FTC adjustment that will be deducted). This could be accomplished by limiting the deduction for charitable donations to $38,400 ($462,000 - $423,600). The remaining unclaimed donations of $271,600 ($310,000 - $38,400) could be carried forward for up to five years.

Although this increases Taxable Income and the total Tax Payable for the year, there could still be an ultimate tax savings with this approach, as the small business deduction cannot be carried forward, while charitable donations can be. As the Exercise states that Marion expects large increases in income in the future, this approach would be advantageous if Marion's expectations turn out to be correct.

### *Exercise Twelve - 12 Solution*

The federal Tax Payable for Marchand Inc. would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($320,000)] | $121,600 |
| Federal Tax Abatement [(10%)($320,000)] | ( 32,000) |
| M&P Deduction [(13%)($180,000)] | ( 23,400) |
| General Rate Reduction [(13%)($320,000 - $180,000)] | ( 18,200) |
| Federal Tax Payable | $ 48,000 |

As you would expect, the overall tax rate is equal to 15 percent ($48,000 ÷ $320,000).

### *Exercise Twelve - 13 Solution*

The federal Tax Payable for Redux Ltd. would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($200,000)] | $76,000 |
| Federal Tax Abatement [(10%)($200,000)] | ( 20,000) |
| Small Business Deduction (Note One) | ( 26,600) |
| M&P Deduction (Note Two) | ( 650) |
| General Rate Reduction (Note Three) | ( 7,150) |
| Federal Tax Payable | $21,600 |

**Note One** The small business deduction would be equal to $26,600, 19 percent of $140,000, the least of:

| | |
|---|---|
| Active Business Income | 200,000 |
| Taxable Income | 200,000 |
| Business Limit | 140,000 |

**Note Two** The M&P deduction would be equal to $650, 13 percent of $5,000, the lesser of:

| | | |
|---|---|---|
| • M&P Profits | $145,000 | |
| Amount Eligible For Small Business Deduction | ( 140,000) | $ 5,000 |
| • Taxable Income | $200,000 | |
| Amount Eligible For Small Business Deduction | ( 140,000) | $60,000 |

**Note Three** The general rate reduction would be calculated as follows:

| | |
|---|---|
| Taxable Income | $200,000 |
| Amount Eligible For The SBD | ( 140,000) |
| Amount Eligible For The M&P Deduction | ( 5,000) |
| Full Rate Taxable Income | $ 55,000 |
| Rate | 13% |
| General Rate Reduction | $ 7,150 |

### *Exercise Twelve - 14 Solution*

The Taxable Income figure would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $146,000 |
| Dividends Received | ( 30,000) |
| Non-Capital Loss Carry Forward | ( 75,000) |
| Net Capital Loss Carry Forward | ( 25,000) |
| Taxable Income | $ 16,000 |

Starting with this figure, the required calculation of Part I Tax Payable would be as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($16,000)] | $6,080 |
| Federal Tax Abatement [(88%)(10%)($16,000)] | ( 1,408) |
| General Rate Reduction [(13%)($16,000)] | ( 2,080) |
| Foreign Business Income Tax Credit (See Note) | ( 879) |
| Part I Tax Payable | $1,713 |

**Note** The foreign business income tax credit would be $879, the least of:

- The amount withheld $3,000
- $\left[\frac{\$20{,}000}{\$146{,}000 - \$30{,}000 - \$25{,}000}\right][\$6{,}080 - \$2{,}080]$ $879
- $6,080 - $2,080 $4,000

The unused foreign business tax amount of $2,121 ($3,000 - $879) can be carried back 3 years and forward for 10 years. In calculating the allowable tax credit for such carry overs, these unused amounts will be added to the foreign tax paid factor in the calculation of the foreign business income tax credit.

## Self Study Solution Twelve - 1

1. The required adjustments would be:
   - Add: Amortization expense of $254,000.
   - Deduct: CCA of $223,000.

2. The required adjustment would be:
   - Deduct: Premium amortization of $2,000.

3. The capital gain on this sale is $40,000 ($120,000 - $80,000). Because $48,000 ($120,000 - $72,000) of the proceeds are outstanding at the end of the current year, a reserve can be deducted. The reserve will be the lesser of:
   - $16,000 [($40,000)($48,000 ÷ $120,000)]
   - $32,000 [($40,000)(20%)(4 - 0)]

   The deduction of the lesser value of $16,000 will leave a capital gain of $24,000 ($40,000 - $16,000). Based on this, the required adjustments are:
   - Deduct: Accounting gain of $67,000 ($120,000 - $53,000).
   - Add: Taxable capital gain of $12,000 [(1/2)($24,000)].

   There is no recapture on this disposition as the Company still owns Class 44 assets, and there is a positive balance in the class at the end of the year.

4. The required adjustments would be:
   - Add: Membership fees of $8,000.
   - Add: Non-deductible entertainment expenses of $6,000 [(50%)($12,000)].

5. The required adjustment would be:
   - Add: Charitable donations of $11,000.

6. The required adjustments would be:
   - Add: Accounting loss of $16,000 ($23,000 - $39,000).
   - Add: Recapture of $23,000 (Nil - $23,000).

## Self Study Solution Twelve - 2

1. The adjustments here would be as follows:

- Add the donation of $45,000.
- Deduct the accounting gain of $7,000 ($45,000 - $38,000).
- Add the taxable capital gain of $1,500 [(1/2)($45,000 - $42,000)].
- Add the recapture of $5,500 ($42,000 - $36,500).

2. The adjustments here would be as follows:

- Add the amortization expense of $32,450.
- Deduct the CCA of $27,650.

3. The adjustment here would be as follows:

- Add the increase in the warranty liability of $2,010 ($10,470 - $8,460).

4. Since item 1 created a taxable capital gain of $1,500, the adjustments here would be as follows:

- Add the accounting loss of $550 ($12,870 - $12,320).
- Deduct the allowable capital loss of $275 [(1/2)($12,870 - $12,320)].

5. The adjustment here would be as follows:

- Add the $2,600 in bond discount amortization.

6. The adjustments here would be as follows:

- Add the accounting loss of $14,810 ($107,000 - $92,190).
- Deduct the terminal loss of $9,580 ($92,190 - $101,770).

## Self Study Solution Twelve - 3

The required calculation of Net Income For Tax Purposes and Taxable Income is as follows:

| | | |
|---|---|---|
| ITA 3(a) Dividends | | $ 22,300 |
| ITA 3(b) Taxable Capital Gains | $15,600 | |
| Allowable Capital Losses | ( 3,450) | 12,150 |
| ITA 3(c) | | $ 34,450 |
| ITA 3(d) Business Loss | | ( 126,000) |
| Net Income For Tax Purposes | | Nil |
| Dividends Received | | ($ 22,300) |
| Net Capital Loss Carry Forward | | |
| (Limited To Net Taxable Capital Gains) | | ( 12,150) |
| Charitable Donations | | Nil |
| Taxable Income | | Nil |

The carry forward balances available at the end of the year are as follows:

**Net Capital Loss Carry Forward**

| | |
|---|---|
| Beginning Balance | $42,300 |
| Used During Year | ( 12,150) |
| Net Capital Loss Carry Forward | $30,150 |

**Charitable Donations Carry Forward**

| | |
|---|---|
| Beginning Balance | $3,500 |
| Added During Year | 2,600 |
| Used During Year | Nil |
| Unused Charitable Donations | $6,100 |

**Non-Capital Loss**

| | |
|---|---|
| Balance Under E | |
| Dividends | $ 22,300 |
| Business Loss | 126,000 |
| Net Capital Loss Carry Forward Deducted | 12,150 |
| Subtotal | $160,450 |
| Balance Under F - Income Under ITA 3(c) | ( 34,450) |
| Non-Capital Loss | $126,000 |

**Non-Capital Loss Carry Forward**

| | |
|---|---|
| Balance From Previous Years | $ 33,500 |
| Added During Year | 126,000 |
| Used During Year | Nil |
| Non-Capital Loss Carry Forward | $159,500 |

As per the policy of the Company, this solution minimizes the net capital loss carry forward. In the absence of this policy, an alternative solution could minimize the non-capital loss balance.

# Self Study Solution Twelve - 4

## 2016 Analysis

### *Net And Taxable Income*

The required calculations for Net Income For Tax Purposes and Taxable Income are as follows:

| | |
|---|---|
| Net Business Income | $123,000 |
| Dividends | 6,000 |
| **Net Income For Tax Purposes** | **$129,000** |
| Dividends | ( 6,000) |
| Charitable Donations | ( 1,500) |
| **Taxable Income** | **$121,500** |

There is an allowable capital loss of $6,000 [(1/2)($12,000)] that can only be deducted against taxable capital gains.

### *2016 Carry Forwards*

The following carry forward amount is available at the end of 2016:

- Net Capital Loss $6,000

## 2017 Analysis

### *Net And Taxable Income*

The required calculations for Net Income For Tax Purposes and Taxable Income are as follows:

| | |
|---|---|
| Net Business Income | $18,000 |
| Taxable Capital Gain [(1/2)($32,000)] | 16,000 |
| Dividends | 7,000 |
| **Net Income For Tax Purposes** | **$41,000** |
| Dividends | ( 7,000) |
| Charitable Donations | ( 8,500) |
| Net Capital Loss Carry Forward (All) | ( 6,000) |
| **Taxable Income** | **$19,500** |

### *2017 Carry Forwards*

As the Company was able to deduct all of the net capital loss from 2016, no carry forward amounts remain.

## 2018 Analysis

### *Net And Taxable Income*

The required calculations for Net Income For Tax Purposes and Taxable Income are as follows:

| | |
|---|---|
| Dividends = Income Under ITA 3(c) | $ 6,000 |
| Business Loss [ITA 3(d)] | ( 85,000) |
| **Net Income For Tax Purposes And Taxable Income** | Nil |

### Net Capital Loss Carry Back And Amended 2017 Return

In 2018, there is a net capital loss of $12,500 [(1/2)($25,000)]. While there was a $16,000 taxable capital gain in 2017, $6,000 of this amount was used by the net capital loss carry forward from 2016. This means that only $10,000 of the $12,500 can be carried back to 2017. Given this, the 2017 amended return would be as follows:

| | |
|---|---|
| Taxable Income As Reported | $19,500 |
| Net Capital Loss Carry Back From 2018 | ( 10,000) |
| Amended 2017 Taxable Income | $ 9,500 |

### Non-Capital Loss Carry Back And Amended 2016 Return

The 2018 non-capital loss would be calculated as follows:

| | |
|---|---|
| Business Loss | $85,000 |
| Dividends Received And Deducted | 6,000 |
| Amount E | $91,000 |
| Income Under ITA 3(c) | ( 6,000) |
| 2018 Non-Capital Loss | $85,000 |

As the 2016 Taxable Income was $121,500, all of this loss can be carried back to that year. Given this, the amended return for 2016 would be as follows:

| | |
|---|---|
| Taxable Income As Reported In 2016 | $121,500 |
| Non-Capital Loss Carry Back from 2018 | ( 85,000) |
| Amended 2016 Taxable Income | $ 36,500 |

### 2018 Carry Forwards

The following carry forward amounts are available at the end of 2018:

| | |
|---|---|
| • Net Capital Loss ($12,500 - $10,000) | $2,500 |
| • Charitable Donations | 4,200 |
| • Non-Capital Loss | Nil |

## 2019 Analysis

### Net And Taxable Income

The required calculations for Net Income For Tax Purposes and Taxable Income are as follows:

| | |
|---|---|
| Net Business Income | $32,000 |
| Taxable Capital Gains | 8,000 |
| Dividends | 9,000 |
| **Net Income For Tax Purposes** | **$49,000** |
| Dividends | ( 9,000) |
| Current Charitable Donations | ( 1,800) |
| Charitable Donations Carry Forward | ( 4,200) |
| Net Capital Loss Carry Forward (All) | ( 2,500) |
| **Taxable Income** | **$31,500** |

### 2019 Carry Forwards

At the end of 2019, there are no carry forward balances.

## Self Study Solution Twelve - 5

The allocation to each of these provinces and the United States would be based on the following calculations:

| | Salaries And Wages | | Gross Revenues | |
|---|---|---|---|---|
| **Province** | **Amount** | **Percent** | **Amount** | **Percent** |
| Manitoba | $ 369,750 | 15% | $1,252,000 | 20% |
| Ontario | 616,250 | 25% | 1,565,000 | 25% |
| Quebec | 986,000 | 40% | 2,191,000 | 35% |
| United States | 493,000 | 20% | 1,252,000 | 20% |
| Total | $2,465,000 | 100% | $6,260,000 | 100% |

The province by province average of the two percentages, calculated above, would be used to allocate the total Taxable Income of $1,467,000 as follows:

| Province | Wages | Revenues | Average | Taxable Income |
|---|---|---|---|---|
| Manitoba | 15% | 20% | 17.5% | $ 256,725 |
| Ontario | 25% | 25% | 25.0% | 366,750 |
| Quebec | 40% | 35% | 37.5% | 550,125 |
| United States | 20% | 20% | 20.0% | 293,400 |
| Total | 100% | 100% | 100.0% | $1,467,000 |

## Self Study Solution Twelve - 6

Kannon's Part I tax payable for the year would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($473,000)] | $179,740 |
| Federal Tax Abatement [(10%)(88.6%)($473,000)] (Note One) | ( 41,908) |
| Small Business Deduction (Note Two) | ( 47,711) |
| General Rate Reduction (Note Three) | ( 28,846) |
| Part I Tax Payable | $ 61,275 |

**Note One** The federal tax abatement must be reduced because of the foreign business income. The percentage would be calculated as follows:

| | |
|---|---|
| Canadian Wages And Salaries As Percentage Of Total ($560,000 + $642,000) ÷ $1,298,000 | 92.6% |
| Canadian Gross Revenues As Percentage Of Total ($1,200,000 + $1,232,000) ÷ $2,879,000 | 84.5% |

Based on these calculations, the percentage of income on which the federal tax abatement would be available is 88.6 percent [(92.6% + 84.5%) ÷ 2].

**Note Two** Since Kannon's Taxable Capital Employed In Canada during 2018 was greater than $10 million, its small business deduction is reduced. The B component of the ITA 125(5.1) reduction formula is $5,600 [(.00225)($12,488,890 - $10,000,000)]. Given this, the required reduction would be calculated as follows:

[($500,000)($5,600 ÷ $11,250)] = $248,889 **Reduction**

The small business deduction is equal to 19 percent of the least of:

| | |
|---|---|
| • Canadian Active Business Income | $440,000 |
| • Taxable Income | 473,000 |
| • Reduced Annual Business Limit ($500,000 - $248,889) | 251,111 |

The small business deduction would be $47,711 [(19%)($251,111)].

**Note Three** The general rate reduction would be calculated as follows:

| | |
|---|---|
| Taxable Income | $473,000 |
| Amount Eligible For Small Business Deduction | ( 251,111) |
| Full Rate Taxable Income | $221,889 |
| Rate | 13% |
| General Rate Reduction | $ 28,846 |

## Self Study Solution Twelve - 7

The Taxable Income and Tax Payable for the Serendipity Shop Corp. for the year would be calculated as follows:

| | | |
|---|---|---|
| Net Income For Tax Purposes | | $240,000 |
| Deductions: | | |
| Dividends | ($20,000) | |
| Donations | ( 48,000) | ( 68,000) |
| Taxable Income | | $172,000 |

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($172,000)] | $ 65,360 |
| Federal Tax Abatement [(10%)($172,000)] | ( 17,200) |
| Small Business Deduction (Note) | ( 25,650) |
| General Rate Reduction [(13%)($172,000 - $135,000)] | ( 4,810) |
| Part I Federal Tax Payable | $ 17,700 |

**Note** The small business deduction is based on the least of the following:

| | |
|---|---|
| Active business income | $220,000 |
| Taxable Income | 172,000 |
| Allocated annual business limit | 135,000 |

The small business deduction is equal to $25,650 [(19%)($135,000)].

## Self Study Solution Twelve - 8

### Part A - Net Income For Tax Purposes

The minimum Net Income For Tax Purposes for Borscan Inc. would be calculated as follows:

| | | |
|---|---|---|
| Accounting Income Before Taxes | | $1,275,000 |
| Additions: | | |
| Taxable Capital Gain - Building [(1/2)($625,000 - $500,000 - $100,000)] | $ 12,500 | |
| Taxable Capital Gain - Land ($100,000 - $100,000) | Nil | |
| Recaptured CCA ($500,000 - $350,000) | 150,000 | |
| Amortization Expense | 255,000 | |
| Interest And Penalties - Late Payment | 500 | |
| Charitable Donations | 13,500 | 431,500 |
| | | $1,706,500 |
| Deductions: | | |
| Capital Cost Allowance | ($287,000) | |
| Gain On Expropriated Building (From Income Statement) | ( 25,000) | ( 312,000) |
| Net Income For Tax Purposes | | $1,394,500 |

### Part B - Taxable Income

The minimum Taxable Income for Borscan Inc. would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $1,394,500 |
| Dividends Received | ( 25,000) |
| Charitable Donations | ( 13,500) |
| Net Capital Loss Carry Forward (Note) | ( 12,500) |
| Non-Capital Loss Carry Forward | ( 35,000) |
| Taxable Income | $1,308,500 |

**Note** The net capital loss carry forward can be used only to the extent of the taxable capital gain for the year, resulting in a deduction of $12,500. This leaves a remaining net capital loss carry forward of $17,500 ($30,000 - $12,500).

### Part C - Tax Payable

The minimum federal Tax Payable for Borscan Inc. is as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($1,308,500)] | $497,230 |
| Federal Tax Abatement [(10%)($1,308,500)] | ( 130,850) |
| General Rate Reduction [(13%)($1,308,500)] | ( 170,105) |
| Federal Tax Payable | $196,275 |

## Self Study Solution Twelve - 9

### *Part A - Net Income*

Net Income For Tax Purposes for Industrial Tools Ltd. would be calculated as follows:

| | | |
|---|---|---|
| Accounting Income Before Taxes | | $2,305,000 |
| Additions: | | |
| Taxable Capital Gain On Building (Note) | $ 37,500 | |
| Taxable Capital Gain On Land ($200,000 - $200,000) | Nil | |
| Recaptured CCA ($875,000 - $625,000) | 250,000 | |
| Charitable Donations | 28,000 | |
| Interest And Penalties | 2,500 | |
| Warranty Reserve | 20,000 | |
| Amortization Expense | 478,000 | 816,000 |
| | | $3,121,000 |
| Deductions: | | |
| Accounting Gain On Building (Given) | ($225,000) | |
| CCA | ( 523,000) | ( 748,000) |
| Net Income For Tax Purposes | | $2,373,000 |

**Note** The taxable capital gain on the building would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition ($1,150,000 - $200,000) | $950,000 |
| Adjusted Cost Base ($1,075,000 - $200,000) | ( 875,000) |
| Capital Gain | $ 75,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 37,500 |

As its value has not changed, there is no capital gain on the land.

### *Part B - Taxable Income*

Taxable Income for Industrial Tools Ltd. would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $2,373,000 |
| Dividends Received | ( 42,000) |
| Charitable Donations | ( 28,000) |
| Net Capital Loss Carry Forward (Note) | ( 37,500) |
| Taxable Income | $2,265,500 |

**Note** The net capital loss carry forward can be used only to the extent of the taxable capital gain for the year, resulting in a deduction of $37,500. This leaves a remaining net capital loss carry forward of $52,500 ($90,000 - $37,500).

### *Part C - Tax Payable*

Federal Tax Payable for Industrial Tools Ltd. would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($2,265,500)] | $860,890 |
| Federal Tax Abatement [(10%)($2,265,500)] | ( 226,550) |
| General Rate Reduction [(13%)($2,265,500)] | ( 294,515) |
| Federal Part I Tax Payable | $339,825 |

## Self Study Solution Twelve - 10

### *Part A - Net Income For Tax Purposes*

The minimum Net Income For Tax Purposes would be calculated as follows:

| | |
|---|---|
| Accounting Income Before Taxes | $530,400 |
| Accounting Gain On Sale Of Shares | ( 22,900) |
| Taxable Capital Gain [(1/2)($22,900)] | 11,450 |
| Donations To Registered Canadian Charity | 18,700 |
| Net Income For Tax Purposes | $537,650 |

### *Part B - Taxable Income*

The minimum Taxable Income would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $537,650 |
| Donations To Registered Canadian Charity | ( 18,700) |
| Dividends From Taxable Canadian Corporations | ( 9,400) |
| Non-Capital Loss Carry Forward | ( 21,950) |
| Net Capital Loss Carry Forward* | ( 11,450) |
| Taxable Income | $476,150 |

*While there is a net capital loss carry forward of $13,500, the deduction is limited to $11,450, the taxable gain that was recognized during the current year. This leaves a net capital loss carry forward of $2,050.

### *Part C - Tax Payable*

The minimum federal Part I Tax Payable is as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($476,150)] | $180,937 |
| Federal Tax Abatement [(10%)(90%)($476,150)] (Note One) | ( 42,854) |
| Small Business Deduction (Note Two) | Nil |
| M&P Deduction (Note Three) | ( 51,136) |
| General Rate Reduction (Note Four) | ( 10,764) |
| Foreign Non-Business Tax Credit (Assumed Equal To Withheld) | ( 4,845) |
| Foreign Business Tax Credit (Assumed Equal To Withheld) | ( 20,700) |
| Part I Tax Payable | $ 50,638 |

**Note One** No income would be allocated to Manitoba as there are no permanent establishments in that province. However, the Manitoba sales would be included in the Ontario total, as the Manitoba customers are serviced through that province. Based on this, the allocation would be as follows:

| Gross Revenues | Amount | Percent |
|---|---|---|
| Ontario And Manitoba | $5,725,000 | 91.0 |
| New York | 565,000 | 9.0 |
| Total | $6,290,000 | 100.0 |

| Salaries And Wages | Amount | Percent |
|---|---|---|
| Ontario | $3,540,000 | 89.0 |
| New York | 438,000 | 11.0 |
| Total | $3,978,000 | 100.0 |

| | |
|---|---|
| Average Ontario Percent [(91.0% + 89.0%) ÷ 2] | 90.0% |
| Average New York Percent [(9.0% + 11.0%) ÷ 2] | 10.0% |
| Total | 100.0% |

Based on the preceding calculations, the federal tax abatement would be $42,854 [(10%)(90%)($476,150)].

**Note Two** There is no small business deduction in the calculation of Part I tax, as Mercury Manufacturing Company is not Canadian controlled.

**Note Three** Since Mercury Manufacturing Company is not a Canadian controlled private corporation, aggregate investment income is not relevant to the M&P calculation. The M&P deduction would be equal to $51,136. This amount is 13 percent of $393,350, which is the lesser of:

| | | |
|---|---|---|
| M & P Profits (Given) | | $410,000 |
| Taxable Income | $476,150 | |
| Less 4 Times Foreign Business Tax Credit [(4)($20,700)] | ( 82,800) | $393,350 |

**Note Four** The general rate reduction would be calculated as follows:

| | |
|---|---|
| Taxable Income | $476,150 |
| Amount Eligible For The M&P Deduction | ( 393,350) |
| Full Rate Taxable Income | $ 82,800 |
| Rate | 13% |
| General Rate Reduction | $ 10,764 |

### *Part D - Foreign Tax Credits*

To calculate the M&P deduction, both the foreign business and non-business tax credits must first be calculated without considering the general rate reduction. This is necessary as otherwise there would be a circular calculation that could not be solved since the general rate reduction calculation requires the income eligible for the M&P deduction and the calculation of the M&P deduction uses the foreign business tax credit.

Although the foreign non-business tax credit is not used directly in the M&P deduction calculation, it is required to calculate the foreign business tax credit which is used.

In Part C of this problem, it is assumed that the credits are equal to the foreign tax withheld so that the alternative calculations were not necessary.

Using the amounts from Part C, the actual foreign tax credits can be calculated as follows:

**Foreign Non-Business Tax Credit** The Tax Otherwise Payable for this calculation would be calculated as follows:

| | |
|---|---|
| Base Amount Of Tax [(38%)($476,150)] | $180,937 |
| Federal Tax Abatement (Note One) | ( 42,854) |
| General Rate Reduction (Note Four) | ( 10,764) |
| Tax Otherwise Payable (Foreign Non-Business Credit) | $127,319 |

Using this information, the foreign non-business tax credit would be the lesser of:

- The Amount Withheld $4,845
- $\left(\dfrac{\text{Foreign Non - Business Income}}{\text{Adjusted Net Income}}\right)$(Part I Tax Otherwise Payable)

$\left(\dfrac{\$32,300}{\$537,650 - \$11,450 - \$9,400}\right)(\$127,319)$ $7,957

The lesser figure would be the actual withholding of $4,845.

**Foreign Business Tax Credit** The Tax Otherwise Payable for this calculation would be calculated as follows:

| | |
|---|---|
| Base Amount Of Tax [(38%)($476,150)] | $180,937 |
| General Rate Reduction (Note Four) | ( 10,764) |
| Tax Otherwise Payable (Foreign Business Credit) | $170,173 |

Using this information, the foreign business tax credit would be the least of:

- The Amount Withheld $20,700
- $\left(\dfrac{\text{Foreign Business Income}}{\text{Adjusted Net Income}}\right)$(Part I Tax Otherwise Payable)

$\left(\dfrac{\$64,200}{\$537,650 - \$11,450 - \$9,400}\right)(\$170,173)$ $21,140

- Tax Otherwise Payable, Less The Foreign Non-Business Tax Credit [($170,173) - $4,845] $165,328

The least of these three figures would be the U.S. taxes withheld of $20,700.

## Chapter 12 Learning Objectives

After completing Chapter 12, you should be able to:

1. Calculate a corporation's Net Income For Tax Purposes (paragraph [P hereafter] 12-1 to 12-4).
2. List the deductions that are available to corporations in calculating Taxable Income (P 12-5 to 12-9).
3. Apply the treatment for different types of dividends received, including the application of the stop loss rules (P 12-10 to 12-23).
4. Calculate the non-capital loss carry over for a corporation (P 12-24 to 12-30).
5. Determine the optimum ordering of the deductions available in calculating corporate Taxable Income (P 12-31 to 12-36).

---

6. Allocate corporate Taxable Income to specific provinces (P 12-37 to 12-44).
7. Apply the basic corporate tax rate and explain the effect of the federal tax abatement and the general rate reduction (P 12-45 to 12-51).
8. Calculate provincial Tax Payable for a corporation using a supplied schedule of rates and other data (P 12-52 to 12-62).
9. List the important non-revenue raising goals of the corporate tax system (P 12-63 and 12-64).
10. Explain the rules for determining which corporations and what amounts of income are eligible for the small business deduction (P 12-65 to 12-90).

---

11. Calculate the amount of the small business deduction (P 12-91 to 12-101).
12. Calculate the reduction in the small business deduction that is applicable to large CCPCs (P 12-102 to 12-120).
13. Identify personal services corporations and explain their tax treatment (P 12-121 to 12-127).
14. Identify professional corporations and management companies and explain their tax treatment (P 12-128 and 12-129).
15. Calculate the manufacturing and processing profits deduction for all types of corporations (P 12-130 to 12-146).

---

16. Calculate the general rate reduction that is available to all corporations and the specific application of the general rate reduction to CCPCs (P 12-147 to 12-160).
17. Calculate the foreign non-business (property) and business income tax credits for corporations and apply the rules that deal with any excess of foreign tax withheld over the foreign tax credit (P 12-161 to 12-173).
18. Describe the refundable journalism labour tax credit (P 12-174 to 12-177).

# CHAPTER 13

## How To Work Through Chapter 13

We recommend the following approach in dealing with the material in this Chapter:

**Note On Current Developments**

- Read the Note at the beginning of the Chapter (in the textbook).

**Integration**

- Read paragraph 13-1 to 13-20.
- Do Exercises Thirteen-1 and Thirteen-2 (in the textbook) and check the solutions in this Study Guide.
- Do Self Study Problem Thirteen-1 which is available on MyLab and check the solution in this Study Guide.
- Read paragraph 13-21 to 13-22.

**Refundable Tax On Aggregate Investment Income**

- Read paragraph 13-23 to 13-38.

**Additional Refundable Tax On Investment Income (ART)**

- Read paragraph 13-39 to 13-42.
- Do Exercise Thirteen-3 and check the solution in this Study Guide.
- Read paragraph 13-43 to 13-53.

**Refundable Portion Of Part I Tax**

- Read paragraph 13-54 to 13-66.
- Do Exercise Thirteen-4 and check the solution in this Study Guide.

**Refundable Part IV Tax On Dividends Received**

- Read paragraph 13-67 to 13-92.
- Do Exercise Thirteen-5 and check the solution in this Study Guide.
- Read paragraph 13-93 and 13-94.

**Designation Of Eligible Dividends**

- Read paragraph 13-95 to 13-98.

**CCPCs And Their GRIP**

- Read paragraph 13-99 to 13-104.
- Do Exercise Thirteen-6 and check the solution in this Study Guide.

**Non-CCPCs And Their LRIP**

- Read paragraph 13-105 to 13-108.

**Part III.1 Tax On Excessive Eligible Dividend Designations (EEDDs)**

- Read paragraph 13-109 to 13-117.

**Refundable Dividend Tax On Hand (RDTOH)**

- Read paragraph 13-118 to 13-128.
- Do Exercise Thirteen-7 and check the solution in this Study Guide.
- Read paragraph 13-129 to 13-143.
- Do Exercise Thirteen-8 and check the solution in this Study Guide.

**Eligible And Non-Eligible RDTOH Balances Defined**

- Read paragraph 13-144 to 13-156.
- Do Exercise Thirteen-9 and check the solution in this Study Guide.
- Do Self Study Problems Thirteen-2 to Thirteen-5 and check the solutions in this Study Guide.

**Economic Impact Of Changes**

- Read paragraph 13-157 to 13-162.

**Example Of RDTOH Calculations**

- Read paragraph 13-163 to 13-174

**Working Through Large Corporate Problems**

- Read paragraph 13-175 and 13-176.
- Do Self Study Problems Thirteen-6 to Thirteen-9 and check the solutions in this Study Guide.

**Sample Corporate Tax Return**

- Read the Sample Corporate Tax Return found on in this Study Guide. The complete tax return is available on MyLab in two formats, a T2 ProFile return file and a .PDF file.

**To Complete This Chapter**

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 13. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 13 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 13 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 13 that is on MyLab.

**Practice Examination**

- Write the Practice Examination for Chapter 13 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

## Sample Corporate Tax Return

The following simplified example contains a T2 corporate income tax return completed using the ProFile T2 corporate tax preparation program from Intuit Canada. It contains 2018 (not 2019) information as the current Profile software release does not support fiscal periods ending after April 30, 2019. Shortly after the first filing version of the 2019 Intuit ProFile software is available in January, 2020, the updated 2019 version of this problem will be available on MyLab at:

**http://www.pearsonmylabandmastering.com**

As this example is designed to illustrate corporate tax return calculations, limited GIFI (General Index of Financial Information) data has been included. The relevant T2 schedule or form name is provided in square brackets to make it easier for users to find where the information is input. Note that capital dividends are covered in detail in Chapter 14.

## Sample Files On MyLab

### *To View The Tax Return Files*

The complete sample tax return is available on MyLab in two versions, a T2 ProFile return file and a .PDF file.

To view the ProFile return file (with a .GT2 extension), you must have the ProFile program installed. For information on how to obtain the program for free, see MyLab.

To view the .PDF files, you must have the Adobe Reader program installed. This program can be installed for free from the Adobe website (www.adobe.com).

## Sample Problem Data

> **Note**: The government's Crown Copyright does not permit us to use fake Business Numbers in software examples. To reduce the number of ProFile's error messages because of this, we have used NR (for not registered) in the Business Number field.

On the ProFile schedule titled "Info", the Filing question "Complete return from GIFI?" is answered Yes by default. Click the No box and you can ignore the GIFI requirements.

MetroFaux Inc. is a Canadian controlled private corporation based in Saskatoon that manufactures metal and composite office furniture. Its head office is located at 123 ABC Avenue, Saskatoon, SK S7G 1A1, phone number (306)111-1111. The signing officer and contact person is the President of the company, Jack Saskatoon. MetroFaux Inc. was incorporated on August 28, 1977.

Most of its income is earned from active business in Canada. The Company has no associated corporations. Although the company has a sophisticated website, it is only for information purposes. It has no income from a web page or website. [Schedule 88 is not applicable.]

As at December 31, 2017, the following information applied to MetroFaux Inc:

| | |
|---|---:|
| Taxable Capital Employed In Canada [Info] | $1,590,000 |
| RDTOH [T2, line 460] | Nil |
| Dividends Declared And Paid During 2017 | Nil |
| GRIP Balance [Schedule 53] | 276,000 |

During the taxation year ending December 31, 2018, the condensed before tax Income Statement of MetroFaux Inc. was prepared in accordance with the International Financial Reporting Standards (IFRS). In condensed form it is as follows:

**MetroFaux Inc.**
**Condensed Income Statement**
**Year Ending December 31, 2018**

| | | |
|---|---:|---:|
| Sales | $3,980,000 | |
| Gain On Building Sale | 160,000 | $4,140,000 |
| Amortization Expense | $ 607,000 | |
| Other Expenses Excluding Taxes | 1,773,000 | 2,380,000 |
| Accounting Income Before Taxes | | $1,760,000 |

### *Preliminary GIFI Procedures*

On the ProFile schedule titled "Info", the Filing question "Complete return from GIFI?" is answered Yes by default. Click the No box. Ignore the GIFI requirements except as follows:

- On GIFI Schedule 125 (Income Statement), input the total sales as "Trade sales of goods and services" (Code 8000) and the Gain On Building Sale as "Realized gains / losses on disposal of assets" (Code 8210) from the drop down menu under Revenues. Input the

Amortization Expense as "Amortization of tangible assets" (Code 8670) and the Other Expenses as "Other expenses" (Code 9270) from the drop down menu under Operating Expenses.

- On GIFI Schedule 100 (Balance Sheet), input the Net Income figure as "Cash and deposits" (Code 1000) in order to make the total assets equal to the total liabilities and equity.

Although this will not properly complete the GIFI statements, it will eliminate the warning messages that would otherwise be generated when the Net Income figure and Amortization Expense are input on Schedule 1. These GIFI entries will have no effect on the calculations in the tax return. To prevent audit warnings, S141, "Notes Checklist", has to be completed. Assume there are no notes to the financial statements and answer "No" to any other relevant questions.

**Other Information**:

1. Expenses include interest and penalties of $2,300 resulting from late income tax installments and a failure to file the 2017 tax return within the prescribed time period. [Schedule 1]
2. Expenses include a deduction for charitable donations to the Cancer Research Society in the amount of $15,000. [Schedule 2]
3. Revenues include eligible dividends of $36,000 from Canadian Tax Save Inc., a taxable Canadian corporation. MetroFaux Inc. has no association with Canadian Tax Save Inc. and considers the dividends portfolio dividends. [Schedule 3. Note that under the GRIP/LRIP double column, "Column F deduction type" = s. 112 and $36,000 must be placed in the "Indicate eligible dividends" column.]
4. The Company paid $100,000 in taxable eligible dividends during 2018. [Schedule 3]
5. The Company has available a non-capital loss carry over from the previous year of $56,000 [S4Supp]. The net capital loss carry forward from 2015 is $22,500 (1/2 of $45,000). [Schedule 4 - note 100 percent figures are used for the capital loss]
6. During 2018, the Company earned $97,000 of interest income on bonds purchased in 2017 that mature in 2022. [Schedule 7]
7. Amortization expense on the Income Statement amounts to $607,000 The opening UCC balance was $905,000 for Class 8, $800,000 for Class 10 and $429,000 for Class 53. The only fixed asset acquisition was $100,000 in Class 53 manufacturing equipment on May 1, 2018. There were no dispositions in Classes 8 or 10. [Schedule 8 flows to Schedule 1]
8. The Gain On Building Sale resulted from the sale of a building for proceeds of $792,000 of which $120,000 was allocated to the land. The building at 456 DEF Street, Regina, Saskatchewan S7G 1A1, was acquired on August 28, 2009 for $764,000, of which $100,000 was allocated to the land. The sales office of the Company had been located in this building and the sales office has subsequently moved to leased space in Saskatoon. As the Company leases all of its other buildings and equipment, the building was the only asset in Class 1. The Undepreciated Capital Cost of this class prior to the disposition of the building was $514,000. [Schedules 1, 6 and 8]
9. Information related to Canadian manufacturing and processing activities for the year is as follows: [Schedule 27]

| | |
|---|---|
| Cost of capital [(10% of $6,000,000) + ($200,000 in rental costs)] | $ 800,000 |
| Portion of capital used in M&P activities | 500,000 |
| Cost of labour | 1,000,000 |
| Portion of labour used in M&P activities | 760,000 |

10. All of the common shares of MetroFaux Inc. are held by the president, Jack Saskatoon (SIN 527-000-582). [Schedule 50]

11. The beginning balance in the Company's capital dividend account is nil [CDA]. Note that capital dividends are covered in detail in Chapter 14.

12. The Company paid one federal income tax instalment of $212,000 on September 1, 2018 [TaxPaid].

## Completed Tax Return

The complete sample tax return is available on MyLab in two versions, a T2 ProFile return file and a .PDF file.

## Notes On Sample Corporate Tax Return

### *Loss Carry Forwards*

The losses of prior taxation years deducted in the calculation of Taxable Income consist of the non-capital loss of $56,000 and a $14,000 net capital loss. As calculated on Schedule 4, the net capital loss carry forward deduction is limited by the $28,000 capital gain for the year and leaves a capital loss carry forward of $17,000. Note Schedule 4 uses the 100 percent amounts. There is no non-capital loss carry forward remaining.

### *Building Sale*

The $160,000 Gain On Building Sale is deducted on Schedule 1 as the tax effects of the disposition are included in Net Income For Tax Purposes. As calculated on Schedule 6, the taxable capital gain on the building sale is $14,000 [(1/2)($792,000 - $764,000)].

As calculated on Schedule 8, the recapture of CCA on the building is equal to $150,000 ($664,000 - $514,000). This is shown as an addition on Schedule 1, separate from the CCA.

### *Aggregate Investment Income*

As calculated on Schedule 7, Part 1, the aggregate investment income of $97,000 consists of:

- the taxable capital gains of $14,000, less
- the $14,000 net capital loss carry forward claimed, plus
- net property income of $133,000 (dividends received of $36,000 plus interest income of $97,000), less
- taxable dividends deductible of $36,000.

This figure is used in calculating the refundable portion of Part I tax.

### *Active Business Income*

As calculated on Schedule 7, Part 5, income from active business carried on in Canada of $1,580,800 is Net Income For Tax Purposes of $1,727,800 less the sum of:

- the taxable capital gains of $14,000, plus
- net property income of $133,000 (dividends received of $36,000 plus interest income of $97,000).

This figure is used in the small business deduction calculation and in Schedule 27 for the M&P deduction.

### *M&P Labour*

As the grossed up M&P Labour of $1,013,333 [(100/75)($760,000)] is greater than the $1,000,000 Cost of Labour, M&P Labour in the Schedule 27, Part 7 calculation is limited to $1,000,000.

As mentioned in the text, although the effect of the federal M&P deduction has been negated by the general rate reduction, there are still provincial M&P tax reductions available. In this example, MetroFaux Inc. is eligible for the Saskatchewan M&P tax reduction. (See Schedule 404.)

***Capital Dividend Account***
The balance in the Capital Dividend Account is $14,000 [(1/2)($692,000 - $664,000)]. A tax free capital dividend of $14,000 could have been paid if form T2054 had been filed. (See Chapter 14.)

***GRIP***
As no dividends were declared or paid during 2017, no eligible dividends could have been paid. As a result, Schedule 53 has no amount on line 300, "Eligible dividends paid in the previous tax year".

## Solutions to Chapter Thirteen Exercises

***Exercise Thirteen - 1 Solution***
If she incorporates, the corporation will pay taxes of $15,000 [(15%)($100,000)], leaving $85,000 to be distributed as dividends. Her individual Tax Payable on these non-eligible dividends would be calculated as follows:

| | |
|---|---|
| Non-Eligible Dividends Received | $ 85,000 |
| Gross Up [(15%)($85,000)] | 12,750 |
| Grossed Up Dividends | $97,750 |
| Personal Tax Rate | 45% |
| Tax Before Credit | $ 43,988 |
| Dividend Tax Credit [(9/13 + 30%)($12,750)] | ( 12,652) |
| Tax Payable On Dividends | $31,336 |

The net after tax retention would be $53,664 ($85,000 - $31,336). This compares to $55,000 [($100,000)(1 - .45)] retained if a corporation is not used. Clearly the use of a corporation is not desirable in this situation. This result reflects the fact that the corporate tax rate is above the 13.04 percent required for integration and the provincial dividend tax credit is below the 30.8 percent required for integration.

***Exercise Thirteen - 2 Solution***
If he incorporates, the corporation will pay taxes of $30,000 [(30%)($100,000)], leaving $70,000 to be distributed as dividends. His individual Tax Payable on these eligible dividends would be calculated as follows:

| | |
|---|---|
| Eligible Dividends Received | $70,000 |
| Gross Up [(38%)($70,000)] | 26,600 |
| Grossed Up Dividends | $96,600 |
| Personal Tax Rate | 42% |
| Tax Before Credit | $40,572 |
| Dividend Tax Credit [(6/11 + 28%)($26,600)] | ( 21,957) |
| Tax Payable On Dividends | $18,615 |

The net after tax retention would be $51,385 ($70,000 - $18,615). This compares to $58,000 [($100,000)(1 - .42)] retained if a corporation is not used. Clearly the use of a corporation is not desirable in this situation. While the corporate tax rate of 30 percent is greater than the required 27.54 percent, the real problem here is the fact that the provincial dividend tax credit of 28 percent is significantly below the required 45.5 percent.

### *Exercise Thirteen - 3 Solution*

Zircon's Taxable Income would be calculated as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $281,000 |
| Dividends From Taxable Canadian Corporations | ( 22,000) |
| Net Capital Loss Carry Forward | ( 26,000) |
| Non-Capital Loss Carry Forward | ( 23,000) |
| Taxable Income | $210,000 |

Zircon's amount eligible for the small business deduction of $198,000 is the least of active business income of $198,000, Taxable Income of $210,000, and the annual business limit of $500,000.

Given these calculations, Zircon's additional refundable tax on investment income would be calculated using the lesser of:

| | | |
|---|---|---|
| Aggregate Investment Income | | |
| Taxable Capital Gains | $46,000 | |
| Net Capital Loss Deducted | ( 26,000) | |
| Interest Income | 15,000 | $35,000 |
| Taxable Income | $210,000 | |
| Amount Eligible For SBD | ( 198,000) | $12,000 |

The additional refundable tax on investment income would be $1,280 [(10-2/3%)($12,000)]. Note that the Taxable Income limit is $23,000 ($35,000 - $12,000) less than the Aggregate Investment Income. This difference is the result of the deduction of the $23,000 non-capital loss carry forward.

### *Exercise Thirteen - 4 Solution*

If Ms. Nicastro receives the income directly, she will retain $49,000 [($100,000)(1 - .51)]. Alternatively, if the investments are transferred to a corporation, the results would be as follows:

| | |
|---|---|
| Corporate Investment Income | $100,000 |
| Corporate Tax At 52 Percent | ( 52,000) |
| After Tax Income | $ 48,000 |
| Dividend Refund [($48,000 ÷ .61667) - $48,000] | 29,837 |
| Non-Eligible Dividends Paid To Ms. Nicastro | $ 77,837 |

| | |
|---|---|
| Non-Eligible Dividends Received | $ 77,837 |
| Gross Up Of 15 Percent | 11,676 |
| Personal Taxable Income | $ 89,513 |
| Personal Tax Rate | 51% |
| Tax Payable Before Dividend Tax Credit | $ 45,652 |
| Dividend Tax Credit [(9/13 + 30%)($11,676)] | ( 11,586) |
| Personal Tax Payable With Corporation | $ 34,066 |

| | |
|---|---|
| Non-Eligible Dividends Received | $ 77,837 |
| Personal Tax Payable | ( 34,066) |
| After Tax Cash Retained With Corporation | $ 43,771 |

There would be no tax deferral with the corporation as the corporate taxes of $52,000 are $1,000 more than the $51,000 she would pay on direct receipt of the income. In addition, the use of a corporation would reduce the after tax funds retained by $5,229 ($43,771 vs. $49,000). There is clearly a disadvantage resulting from the use of a corporation.

### Exercise Thirteen - 5 Solution

The amount of Part IV Tax Payable would be calculated as follows:

| | |
|---|---|
| Tax On Portfolio Investments [(38-1/3%)($14,000)] | $5,367 |
| Tax On Emerald Inc. Dividends | Nil |
| Tax On Ruby Inc. Dividends [(30%)($15,000)] | 4,500 |
| Part IV Tax Payable | $9,867 |

### Exercise Thirteen - 6 Solution

Since Taxable Income is greater than Aggregate Investment Income (comparison used in D in the following table), the 2019 ending balance in GRIP will be calculated as follows:

| | | |
|---|---|---|
| C - GRIP Balance At End Of 2018 | | $ 35,000 |
| D - Taxable Income | $960,000 | |
| Income Eligible For SBD ($42,750 ÷ 19%) | ( 225,000) | |
| Aggregate Investment Income ($65,000 + $23,000 - $14,000) | ( 74,000) | |
| Adjusted Taxable Income | $661,000 | |
| Rate | 72% | 475,920 |
| E - Eligible Dividends Received | | 85,000 |
| G - Eligible Dividends Designated in 2018 | | ( 25,000) |
| GRIP At End Of 2019 | | $570,920 |

The eligible dividends paid during 2019 will be deducted from the GRIP in 2020.

Note that, in this Exercise, there is no ADJUSTED Aggregate Investment Income grind to the annual business limit for the small business deduction. This is because the 2019 grind would be based on the 2018 ADJUSTED Aggregate Investment Income which is less than $50,000.

### Exercise Thirteen - 7 Solution

The opening balance in the single RDTOH account is $76,667 ($153,333 - $76,666). This is the relevant RDTOH value for all 3 Cases.

**Case 1**

| | |
|---|---|
| Opening Balance In RDTOH Account | $76,667 |
| Transitional Eligible RDTOH - Lesser Of: | |
| • Opening Balance RDTOH = $76,667 | |
| • No GRIP Opening Balance = Nil | Nil |
| Transitional Non-Eligible RDTOH | $76,667 |

| | |
|---|---|
| Transitional Eligible RDTOH | Nil |
| Transitional Non-Eligible RDTOH | $76,667 |

**Case 2**

| | |
|---|---|
| Opening Balance In RDTOH Account | $76,667 |
| Transitional Eligible RDTOH - Lesser Of: | |
| • Opening Balance RDTOH = $76,667 | |
| • [(38-1/3%)(Opening GRIP Balance)] | |
| [(38-1/3%)($300,000 - $200,000)] = $38,333 | ( 38,333) |
| Transitional Non-Eligible RDTOH | $38,334 |
| Transitional Eligible RDTOH | $38,333 |
| Transitional Non-Eligible RDTOH | 38,334 |

**Case 3**

| | |
|---|---|
| Opening Balance In RDTOH Account | $76,667 |
| Transitional Eligible RDTOH - Lesser Of: | |
| • Opening Balance RDTOH = $76,667 | |
| • [(38-1/3%)(Opening GRIP Balance)] | |
| [(38-1/3%)($500,000 - $200,000)] = $115,000 | ( 76,667) |
| Transitional Non-Eligible RDTOH | Nil |
| Transitional Eligible RDTOH | $76,667 |
| Transitional Non-Eligible RDTOH | Nil |

### *Exercise Thirteen - 8 Solution*

The refundable amount of Debut Inc.'s Part I tax would be the least of the following three figures:

| | | |
|---|---|---|
| Foreign Non-Business Income (100 Percent) | | $15,000 |
| Taxable Capital Gains [(1/2)($38,250)] | | 19,125 |
| Net Rental Income | | 6,500 |
| Interest Income | | 9,200 |
| Net Capital Loss Carry Forward Deducted | | ( 9,000) |
| Aggregate Investment Income Under ITA 129(4) | | $40,825 |
| Rate | | 30-2/3% |
| Amount Before Foreign Income Adjustment | | $12,520 |
| Deduct Excess Of: | | |
| Foreign Non-Business Tax Credit | ($ 750) | |
| Over 8 Percent Of Foreign Non-Business Income [(8%)($15,000)] | 1,200 | Nil |
| Amount Under ITA 129(4)(a)(i) | | $12,520 |

| | |
|---|---|
| Taxable Income ($121,825 - $22,000 - $9,000) | $90,825 |
| Deduct: | |
| Amount Eligible For The Small Business Deduction ($9,500 ÷ 19%) | ( 50,000) |
| [(100 ÷ 38-2/3)($750)] Foreign Non-Business Tax Credit | ( 1,940) |
| Adjusted Taxable Income | $38,885 |
| Rate | 30-2/3% |
| Amount Under ITA 129(4)(a)(ii) | $11,925 |

| | |
|---|---|
| Amount Under ITA 129(4)(a)(iii) = Part I Tax Payable (Given) | $19,536 |

The least of these three amounts is $11,925, and this would be the refundable portion of Part I tax for the year.

***Exercise Thirteen - 9 Solution***

**Dividend Refund On Eligible Dividends** The dividend refund on eligible dividends would be $76,667, the lesser of:

- $76,667 (38-1/3% of the $200,000 of eligible dividends paid in 2019)
- $134,167 (the balance in the Eligible RDTOH on December 31, 2019)

While the Exercise does not require this information, the corporation would start 2020 with a $150,000 ($350,000 - $200,000) balance in its GRIP.

**Dividend Refund On Non-Eligible Dividends** Component 1 of the dividend refund on non-eligible dividends would be $95,833, the lesser of:

- $153,333 (38-1/3% of the $400,000 of non-eligible dividends paid in 2019)
- $95,833 (the balance in the Non-Eligible RDTOH on December 31, 2019)

With respect to Component 2, 38-1/3% of the $400,000 of non-eligible dividends paid during 2019 exceeds the balance in the Non-Eligible RDTOH by $57,500 ($153,333 - $95,833). Given this, Component 2 would be equal to the lesser of:

- the excess of $57,500; and
- $57,500 ($134,167 - $76,667), the balance left in the Eligible RDTOH after the refund on eligible dividends paid.

The purpose of Component 2 is to allow access to the Eligible RDTOH for dividend refunds on the payment of non-eligible dividends when there is no balance left in the Non-Eligible RDTOH.

The total refund resulting from the payment of non-eligible dividends is $153,333 ($95,833 + $57,500). Note that $153,333 is equal to 38-1/3 percent of the $400,000 in non-eligible dividends paid.

You should also be aware that the combined refund of $230,000 ($76,667 + $153,333) is equal to the combined balances ($134,167 + $95,833) in the two RDTOH accounts.

## Self Study Solution Thirteen - 1

The required calculations would be as follows:

**Corporate Taxes**

| | |
|---|---|
| Income For The Year | $50,000 |
| Corporate Taxes (17%) | ( 8,500) |
| Income Available For Dividends | $41,500 |

**Personal Taxes On Dividends**

| | |
|---|---|
| Dividend Income | $41,500 |
| Gross Up (15%) | 6,225 |
| Taxable Dividends | $47,725 |
| | |
| Tax Payable Before Dividend Tax Credit [(33% + 16%)($47,725)] | $23,385 |
| Dividend Tax Credit [(9/13 + 4/13)($6,225)] | ( 6,225) |
| Personal Tax Payable | $17,160 |

**Total Taxes On Corporate Flow Through**

| | |
|---|---|
| Corporate Taxes | $ 8,500 |
| Personal Taxes | 17,160 |
| Total Taxes | $25,660 |

**Total Taxes On Income Earned Directly**

| | |
|---|---|
| Income For The Year | $50,000 |
| Combined Federal/Provincial Tax Rate (33% + 16%) | 49% |
| Personal Tax Payable | $24,500 |

While the provincial dividend tax credit is at the rate required for perfect integration, the combined corporate federal/provincial tax rate is above the 13.04 percent that is required to achieve this goal. The result is that taxes on $50,000 of income flowed through a corporation is $1,160 ($25,660 - $24,500) higher than the taxes on the same $50,000 of income received directly.

## Self Study Solution Thirteen - 2

The opening balance in the single RDTOH account is $95,833 ($115,000 - $19,167). This is the relevant opening balance RDTOH value for all three Cases.

**Case 1**

| | |
|---|---|
| Opening Balance In RDTOH Account | $95,833 |
| Transitional Eligible RDTOH - Lesser Of: | |
| • Opening Balance RDTOH = $95,833 | |
| • No GRIP Opening Balance = Nil | Nil |
| Transitional Non-Eligible RDTOH | $95,833 |

| | |
|---|---|
| Transitional Eligible RDTOH | Nil |
| Transitional Non-Eligible RDTOH | $95,833 |

**Case 2**

| | |
|---|---|
| Opening Balance In RDTOH Account | $95,833 |
| Transitional Eligible RDTOH - Lesser Of: | |
| • $95,833 - Opening Balance RDTOH | |
| • $11,500 [(38-1/3%)($120,000 - $90,000)] | ( 11,500) |
| Transitional Non-Eligible RDTOH | $84,333 |

| | |
|---|---|
| Transitional Eligible RDTOH | $ 11,500 |
| Transitional Non-Eligible RDTOH | 84,333 |

**Case 3**

| | |
|---|---|
| Opening Balance In RDTOH Account | $95,833 |
| Transitional Eligible RDTOH - Lesser Of: | |
| • $95,833 - Opening Balance RDTOH | |
| • $103,500 [(38-1/3%)($390,000 - $120,000)] | ( 95,833) |
| Transitional Non-Eligible RDTOH | Nil |

| | |
|---|---|
| Transitional Eligible RDTOH | $95,833 |
| Transitional Non-Eligible RDTOH | Nil |

## Self Study Solution Thirteen - 3

**Dividend Refund On Eligible Dividends** The refund on eligible dividends would be the lesser of:

- $115,000 (38-1/3 percent of the $300,000 of eligible dividends paid in 2019)
- $201,250 (the balance in the Eligible RDTOH on December 31, 2019)

While the problem does not require this information, the corporation would start 2020 with a $225,000 ($525,000 - $300,000) balance in its GRIP.

**Dividend Refund On Non-Eligible Dividends** Component 1 of the refund on non-eligible dividends would be the lesser of:

- $345,000 (38-1/3 percent of the $600,000 of non-eligible dividends paid in 2019)
- $143,750 (the balance in the Non-Eligible RDTOH on December 31, 2019)

Component 2 would be equal to $86,250, the excess of $230,000, 38-1/3 percent of the $600,000 of non-eligible dividends paid during 2019, over $143,750, the balance in the Non-Eligible RDTOH on December 31, 2019. Note that this component of the refund will have to be taken out of the corporation's Eligible RDTOH.

The total refund resulting from the payment of non-eligible dividends is $230,000 ($143,750 + $86,250). Note that $230,000 is equal to 38-1/3 percent of the $600,000 in non-eligible dividends paid.

You should also be aware that the combined refund of $345,000 ($115,000 + $230,000) is equal to the combined balances ($201,250 + $143,750) in the two RDTOH accounts.

## Self Study Solution Thirteen - 4

### *Part A - Transitional RDTOH Balances*

As FOL has no GRIP balance on December 31, 2018, the transitional Eligible RDTOH would be nil, with all of the old RDTOH becoming a transitional Non-Eligible RDTOH of $2,000.

Similarly, SHI had no December 31, 2018 GRIP balance. Again, this would result in a transitional Eligible RDTOH of nil, with all of the old RDTOH becoming a transitional Non-Eligible RDTOH of $10,000.

### *Part B - Required Balances For FOL*

For FOL, the only refundable taxes paid in 2019 would be on the $7,000 of Canadian interest income. This amount would be added to the Non-Eligible RDTOH for this corporation. Given this, the December 31, 2019 Non-Eligible RDTOH balance for FOL would be as follows:

| | |
|---|---:|
| Transitional Non-Eligible RDTOH | $2,000 |
| Refundable Portion Of Part I Tax [(30-2/3%)($7,000)]* | 2,147 |
| December 31, 2019 Non-Eligible RDTOH | $4,147 |

*While the full calculation of the refundable portion of Part I tax would require selecting the least of the amounts described in ITA 129(4)(a)(i), (ii), and (iii), the problem asks you to assume that refundable portion of Part I tax is equal to 30-2/3 percent of Aggregate Investment Income.

Based on this information, FOL's 2019 dividend refund would be $4,147, the lesser of:

- $28,750 [(38-1/3%)($75,000)]; and
- $4,147, the balance in the Non-Eligible RDTOH.

### *Part C - Required Balance For SHI*

For 2019, SHI would pay Part IV tax as follows:

| | |
|---|---|
| Part IV Tax Payable On Eligible Dividends From Royal Bank [(38-1/3%)($8,000)] | $3,067 |
| Part IV Tax Payable SHI's Share Of FOL's Dividend Refund On Payment Of Non-Eligible Dividends (100%) - Part B | 4,147 |
| Part IV Tax Payable | $7,214 |

SHI's Part I refundable taxes would be as follows:

| | |
|---|---|
| Interest Income | $12,000 |
| Taxable Capital Gain [(1/2)($47,250)] | 23,625 |
| Aggregate Investment Income | $35,625 |
| Rate | 30-2/3% |
| Refundable Portion Of SHI's Part I Tax Payable | $10,925 |

Turning to SHI's RDTOH balances, the transitional Eligible RDTOH balance for the corporation was nil. The only 2019 addition would be $3,067 in Part IV taxes on the eligible dividends received by SHI on portfolio investments. This would leave a balance of $3,067 (Nil + $3,067).

As none of FOL's dividends were designated as eligible, the $4,147 in Part IV taxes paid on the FOL's non-eligible dividends would be added to SHI's Non-Eligible RDTOH.

The December 31, 2019 balances in SHI's RDTOH accounts would be as follows:

| | |
|---|---|
| Transitional Eligible RDTOH | Nil |
| Part IV Tax On Royal Bank Eligible Dividends | $3,067 |
| December 31, 2019 Eligible RDTOH | $3,067 |

| | |
|---|---|
| Transitional Non-Eligible RDTOH | $10,000 |
| Part IV Tax On FOL's Non-Eligible Dividends | 4,147 |
| Part I Refundable Tax On Aggregate Investment Income | 10,925 |
| December 31, 2019 Non-Eligible RDTOH | $25,072 |

### *Part D - SHI's Dividend Refund*

The amount of dividends that can be designated as eligible is limited by the corporation's GRIP. The balance in this account is $8,000, the initial balance of nil, plus the $8,000 in eligible dividends received from Royal Bank. This means that the maximum amount of dividends that can be designated as eligible is $8,000 and the dividend refund on these dividends would be $3,067, the lesser of:

- $3,067 [(38-1/3%)($8,000)]; and
- $3,067, the balance in SHI's Eligible RDTOH.

With $8,000 of the dividends paid designated as eligible, the remaining $42,000 ($50,000 - $8,000) would be non-eligible. The dividend refund on these dividends would be $16,100, the lesser of:

- $16,100 [(38-1/3%)($42,000)]; and
- $25,072, the balance in SHI's Non-Eligible RDTOH.

SHI's total dividend refund would be as follows:

| | |
|---|---|
| Dividend Refund On Eligible Dividends | $ 3,067 |
| Dividend Refund On Non-Eligible Dividends | 16,100 |
| Total Dividend Refund | $19,167 |

## Self Study Solution Thirteen - 5

**Note To Students** The assumed Tax Payable of $23,960 cannot be verified based on the information in the problem. It is, however, a reasonable figure given the information that is available.

### *Part A - Transitional RDTOH Balances*

For purposes of determining the transitional RDTOH balances, the corporation's single RDTOH balance was $4,150 ($6,450 - $2,300). As the corporation had no GRIP balance, the transitional Eligible RDTOH will be nil, with all of the $4,150 balance allocated to the transitional Non-Eligible RDTOH.

### *Part B - Part IV Tax Payable*

The Part IV Tax Payable for Insal Ltd. would be calculated as follows:

| | |
|---|---|
| Dividend Refund Received By Dorne Inc. | $8,400 |
| Insal's Percentage Of Ownership | 45% |
| Part IV Tax Payable On Dorne's Non-Eligible Dividends | $3,780 |
| Part IV Tax Payable On Enbridge's Eligible Dividends [(38-1/3%)($6,200)] | 2,377 |
| Part IV Tax Payable | $6,157 |

### *Part C - Part I Refundable Tax Paid*

The refundable portion of the Part I tax would be the least of the following amounts:

| | |
|---|---|
| Taxable Capital Gain [(1/2)($24,600)] | $12,300 |
| Net Rental Income | 4,200 |
| Aggregate Investment Income | $16,500 |
| Rate | 30-2/3% |
| **ITA 129(4)(a)(i)** | $ 5,060 |
| Taxable Income | $123,400 |
| Amount Eligible For Small Business Deduction (See Note) | ( 45,000) |
| Total | $ 78,400 |
| Rate | 30-2/3% |
| **ITA 129(4)(a)(ii)** | $ 24,043 |
| **ITA 129(4)(a)(iii)** Part I Tax Payable - Given | $ 23,960 |

**Note** As the problem indicates that Insal's Tax Payable was reduced by a small business deduction of $8,550, the amount eligible for this deduction must have been $45,000 ($8,550 ÷ 19%).

The refundable portion of Part I tax is equal to $5,060, which is the least of the preceding three amounts.

### Part D - Eligible RDTOH

As noted in Part A, Insal's transitional Eligible RDTOH is nil. Given this, the December 31, 2019 Eligible RDTOH would be:

| | |
|---|---|
| Transitional Eligible RDTOH | $ Nil |
| Part IV Taxes Paid On Enbridge's Eligible Dividends | 2,377 |
| December 31, 2019 Eligible RDTOH | $2,377 |

As none of the dividends paid by Dorne were designated as eligible, the Part IV tax paid on these dividends cannot be added to Insal's Eligible RDTOH. While the $6,200 of eligible dividends received from Enbridge can be added to Insal's GRIP, the non-eligible dividends received from Dorne cannot be.

### Part D - Non-Eligible RDTOH

Insal's December 31, 2019 Non-Eligible RDTOH would be calculated as follows:

| | |
|---|---|
| Transitional Non-Eligible RDTOH | $ 4,150 |
| Part IV Tax Payable On Dorne's Non-Eligible Dividends | 3,780 |
| Refundable Part I Tax | 5,060 |
| December 31, 2019 Non-Eligible RDTOH | $12,990 |

### Part E - Dividend Refund

The maximum amount of dividends that can be designated as eligible is limited by Insal's GRIP. We know that the initial 2019 balance here was nil and that the $6,200 of eligible dividends received from Enbridge would be added. There is also the possibility that there would a further amount added as a result of some of the corporation's income not being eligible for the small business deduction. (This amount cannot be determined based on the information in the problem.)

However, given Insal's policy of designating dividends as eligible only when a dividend refund is available, a further addition to the GRIP would not be relevant in this problem. This is because a dividend refund will only be available for the balance in the Eligible RDTOH, an amount of $2,377. Based on this, the eligible dividend designation will be for $6,200, the amount of the eligible dividends received. The refund on these dividends will be $2,377 [($6,200)(38-1/3%)].

The remaining dividends of $12,050 ($18,250 - $6,200) will be non-eligible.

The refund on these non-eligible dividends would be $4,619, the lesser of:

- $4,619 [(38-1/3%)($12,050)]; and
- $12,990, the balance in the Non-Eligible RDTOH.

The total dividend refund would be as follows:

| | |
|---|---|
| Dividend Refund On Eligible Dividends | $2,377 |
| Dividend Refund On Non-Eligible Dividends | 4,619 |
| Total Dividend Refund | $6,996 |

## Self Study Solution Thirteen - 6

### *Part A - Part I Tax Payable*

The required calculations to determine Part I federal Tax Payable are as follows:

| | |
|---|---|
| Net Income For Tax Purposes | $473,900 |
| Dividends ($108,000 + $56,000) | ( 164,000) |
| Taxable Income | $309,900 |

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($309,900)] | $117,762 |
| Federal Tax Abatement [(10%)($309,900)] | ( 30,990) |
| Small Business Deduction (Note One) | ( 41,097) |
| Additional Refundable Tax On Investment Income (Note Two) | 9,984 |
| General Rate Reduction (Note Three) | Nil |
| Part I Federal Tax Payable | $ 55,659 |

**Note One** The small business deduction is 19 percent of the least of the following three amounts:

| | | |
|---|---|---|
| 1. | Active Business Income | $216,300 |
| 2. | Taxable Income (no foreign tax credit adjustment) | $309,900 |
| 3. | Allocated Annual Business Limit ($500,000 - $200,000) | $300,000 |

The lowest of these figures is the active business income of $216,300 and this gives a small business deduction of $41,097 [(19%)($216,300)].

**Note Two** The aggregate investment income of $93,600 is calculated as follows:

| | |
|---|---|
| Interest On Government Bonds | $ 36,300 |
| Taxable Capital Gains | 57,300 |
| Aggregate Investment Income | $ 93,600 |

The ITA 123.3 refundable tax (ART) is 10-2/3 percent of the lesser of:

| | | | |
|---|---|---|---|
| 1. | Aggregate Investment Income | | $93,600 |
| 2. | Taxable Income | $309,900 | |
| | Deduct: Amount Eligible For The SBD | ( 216,300) | $93,600 |

The ITA 123.3 tax on aggregate investment income is $9,984 [(10-2/3%)($93,600)].

**Note Three** The general rate reduction would be calculated as follows:

| | |
|---|---|
| Taxable Income | $309,900 |
| Amount Eligible For The Small Business Deduction | ( 216,300) |
| Aggregate Investment Income (Note Two) | ( 93,600) |
| Full Rate Taxable Income | Nil |
| Rate | 13% |
| General Rate Reduction | Nil |

### *Part B - Refundable Part I Tax Payable*

The refundable portion of Part I Tax Payable would be the least of:

| | |
|---|---|
| • Amount Under ITA 129(4)(a)(i) [(30-2/3%)($93,600)] | $28,704 |
| • Amount Under ITA 129(4)(a)(ii) [(30-2/3%)($309,900 - $216,300)] | $28,704 |
| • Amount Under ITA 129(4)(a)(iii) Part I Tax Payable (Part A) | $55,659 |

The Part I refundable Tax Payable would be $28,704.

### Part C - Part IV Tax Payable

The required calculation of the Part IV Tax Payable is as follows:

| | |
|---|---|
| Part IV Tax On Portfolio Investments [($56,000)(38-1/3%)] | $21,467 |
| Part IV Tax On Subsidiary Dividends* | Nil |
| Total Part IV Tax | $21,467 |

*The subsidiary is a connected corporation. As it did not receive a dividend refund as a result of paying the dividends, Part IV tax is not applicable.

### Part D - GRIP Balance

Since Taxable Income is greater than Aggregate Investment Income, the December 31, 2019 GRIP balance would be calculated as follows:

| | | |
|---|---|---|
| GRIP Balance At End Of 2018 | | $ 59,000 |
| Taxable Income | $309,900 | |
| Income Eligible For SBD | ( 216,300) | |
| Aggregate Investment Income | ( 93,600) | |
| Adjusted Taxable Income | Nil | |
| Rate | 72% | Nil |
| Eligible Dividends Received | | 56,000 |
| Eligible Dividends Designated in 2018 | | Nil |
| GRIP Balance At End Of 2019 | | $115,000 |

### Part E - RDTOH Balances - December 31, 2019

As there was no December 31, 2018 balance in Vader's RDTOH, both the transitional eligible RDTOH and the transitional Non-Eligible RDTOH would be nil.

The December 31, 2019 balance in the Eligible RDTOH would be as follows:

| | |
|---|---|
| Transitional Balance | $ Nil |
| Part IV Tax On Portfolio Investments | 21,467 |
| Eligible RDTOH - December 31, 2019 | $21,467 |

The December 31, 2019 balance in the Non-Eligible RDTOH would be as follows:

| | |
|---|---|
| Transitional Balance | $ Nil |
| Part I Refundable Tax | 28,704 |
| Non-Eligible RDTOH - December 31, 2019 | $28,704 |

### Part F - Dividend Refunds

The corporation's GRIP balance at the end of 2019 is $115,000. As this is greater than the $32,400 of dividends paid in the year, all of these dividends can be designated as eligible.

The Eligible RDTOH of $21,467 is sufficient to support a full dividend refund on $56,000 ($21,467 ÷ 38-1/3%). This is also greater than the $32,400 of eligible dividends paid and means that the dividend refund on eligible dividends paid in 2019 would be equal to $12,420 [(38-1/3%)($32,400)].

No dividend refund would be claimed for 2019 on non-eligible dividends because no non-eligible dividends were paid in 2019.

### Part G - Total Federal Tax Payable

The required calculation to determine federal Tax Payable is as follows:

| | |
|---|---|
| Part I Tax (Part A) | $55,659 |
| Part IV Tax (Part C) | 21,467 |
| Dividend Refund (Part F) | ( 12,420) |
| Federal Tax Payable | $64,706 |

***Part H - RDTOH Balances - January 1, 2020***

The January 1, 2020 balance in the Eligible RDTOH would be as follows:

| | |
|---|---|
| Eligible RDTOH - December 31, 2019 | $21,467 |
| Dividend Refund On 2019 Eligible Dividends Paid | ( 12,420) |
| Eligible RDTOH - January 1, 2020 | $ 9,047 |

The January 1, 2020 balance in the Non-Eligible RDTOH would be as follows:

| | |
|---|---|
| Non-Eligible RDTOH - December 31, 2019 | $28,704 |
| Dividend Refund On 2019 Non-Eligible Dividends Paid | Nil |
| Non-Eligible RDTOH - January 1, 2020 | $28,704 |

## Self Study Solution Thirteen - 7

***Part A - Part I Tax Payable***

The Part I Tax Payable is calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($503,500)] | $191,330 |
| Federal Tax Abatement [(10%)(72.95%)($503,500)] | ( 36,730) |
| Small Business Deduction [(19%)($200,000 Which Was Given)] | ( 38,000) |
| Additional Refundable Tax On Investment Income (Note One) | 11,781 |
| General Rate Reduction (Note Three) | ( 25,097) |
| Foreign Non-Business Income Tax Credit (Given) | ( 8,250) |
| Foreign Business Income Tax Credit (Given) | ( 34,300) |
| Part I Tax Payable | $ 60,734 |

**Note One** The aggregate investment income of $110,450 is calculated as follows:

| | |
|---|---|
| Interest On Loan To Subsidiary | $ 43,250 |
| Foreign Investment Income | 55,000 |
| Taxable Capital Gains | 24,500 |
| Net Capital Losses Claimed | ( 12,300) |
| Aggregate Investment Income (Note Two) | $110,450 |

The ITA 123.3 refundable tax (ART) is 10-2/3 percent of the lesser of:

| | | |
|---|---|---|
| 1. Aggregate Investment Income | | $110,450 |
| 2. Taxable Income | $503,500 | |
| Deduct: Amount Eligible For The SBD | ( 200,000) | $303,500 |

The ITA 123.3 tax on aggregate investment income is $11,781 [(10-2/3%)($110,450)].

**Note Two** The definition contained in ITA 129(4.1) excludes income from property that is incidental to carrying on an active business and, as a consequence, we have left out the $5,050 of term deposit interest. With respect to the interest on the loan to the subsidiary, if the subsidiary had deducted the $43,250 in computing active business income eligible

for the small business deduction, ITA 129(6) would have deemed this interest to be active business income rather than investment income. However, the problem notes that the subsidiary was not involved in the production of active business income and, as a consequence, the interest from the subsidiary is included in the above calculation of aggregate investment income.

**Note Three** The general rate reduction is based on the amount of Taxable Income that is not subject to other types of favourable tax treatment. The reduction would be calculated as follows:

| | |
|---|---|
| Taxable Income | $503,500 |
| Amount Eligible For The Small Business Deduction (Given) | ( 200,000) |
| Aggregate Investment Income (Note One) | ( 110,450) |
| Full Rate Taxable Income | $193,050 |
| Rate | 13% |
| General Rate Reduction | $ 25,097 |

### *Part B - Refundable Portion Of Part I Tax Payable*

The refundable portion of Part I tax would be the least of the following three amounts:

| | | |
|---|---|---|
| Aggregate Investment Income (See Note One) | | $110,450 |
| Rate | | 30-2/3% |
| Total | | $ 33,871 |
| Deduct Excess Of: | | |
| Foreign Non-Business Tax Credit | ($8,250) | |
| Over 8% Of Foreign Non-Business Income [(8%)($55,000)] | 4,400 | ( 3,850) |
| Amount Under ITA 129(4)(a)(i) | | $ 30,021 |

| | |
|---|---|
| Taxable Income | $503,500 |
| Deduct: | |
| Amount Eligible For The Small Business Deduction | ( 200,000) |
| [(100 ÷ 38-2/3)($8,250)] Foreign Non-Business Tax Credit | ( 21,336) |
| [(4)($34,300)] Foreign Business Tax Credit | ( 137,200) |
| Total | $144,964 |
| Rate | 30-2/3% |
| Amount Under ITA 129(4)(a)(ii) | $ 44,456 |

| | |
|---|---|
| Amount Under ITA 129(4)(a)(iii) = Part I Tax Payable (Part A) | $60,734 |

The least of these three amounts is $30,021, the amount calculated under ITA 129(4)(a)(i).

### *Part C - Part IV Tax Payable*

The Part IV Tax Payable would be calculated as follows:

| | |
|---|---|
| On Eligible Portfolio Dividends Received [(38-1/3%)($19,600)] | $ 7,513 |
| Share Of Dividend Refund Included In Non-Eligible Dividends From Subsidiary [(75%)($12,750)] | 9,563 |
| Part IV Tax Payable | $17,076 |

### Part D - GRIP Balance

Since Taxable Income is greater than Aggregate Investment Income, the December 31, 2019 GRIP balance would be calculated as follows:

| | | |
|---|---|---|
| GRIP Balance At End Of 2018 | | $ Nil |
| Taxable Income | $503,500 | |
| Income Eligible For SBD | ( 200,000) | |
| Aggregate Investment Income | ( 110,450) | |
| Adjusted Taxable Income | $193,050 | |
| Rate | 72% | 138,996 |
| Eligible Dividends Received | | 19,600 |
| Eligible Dividends Designated in 2018 | | Nil |
| GRIP Balance At End Of 2019 | | $158,596 |

### Part E - RDTOH Balances

The transitional balances for Sinzer would be based on the existing RDTOH of $13,900 ($23,500 - $9,600). As the corporation has no GRIP on December 31, 2018, none of this total will be allocated to its Eligible RDTOH, leaving the transitional balance in this account at nil. Given this, the transitional Non-Eligible RDTOH would be $13,900 ($13,900 - Nil).

The December 31, 2019 balance in the Eligible RDTOH would be as follows:

| | |
|---|---|
| Transitional Balance | $ Nil |
| Part IV Tax On Eligible Dividends - Portfolio Investments | 7,513 |
| Eligible RDTOH - December 31, 2019 | $7,513 |

The December 31, 2019 balance in the Non-Eligible RDTOH would be as follows:

| | |
|---|---|
| Transitional Balance | $13,900 |
| Part I Refundable Tax | 30,021 |
| Part IV Tax On Non-Eligible Subsidiary Dividends | 9,563 |
| Non-Eligible RDTOH - December 31, 2019 | $53,484 |

### Part F - Dividend Refund

Dividend refunds are calculated on the basis of dividends paid, not dividends declared. The relevant total here is $109,000 [$25,000 + (3)($28,000)].

As the corporation's GRIP balance is larger than this total, the corporation's policy would require that the full amount of the dividend be designated as eligible. The Eligible RDTOH of $7,513 is sufficient to support a full dividend refund on $19,600 ($7,513 ÷ 38-1/3%). If $109,000 of dividends paid are designated eligible, the refund on these eligible dividends would be $7,513, the lesser of:

- $41,783 [(38-1/3%)($109,000)]; and
- $7,513, the balance in the Eligible RDTOH.

The Non-Eligible RDTOH of $53,484 is sufficient to support a full dividend refund on $139,523 ($53,484 ÷ 38-1/3%). If all of the dividends paid are designated eligible, no dividend refund could be claimed on non-eligible dividends because no non-eligible dividends were paid in 2019.

### *Part G - Total Federal Tax Payable*

The required calculation to determine federal Tax Payable is as follows:

| | |
|---|---|
| Part I Tax (Part A) | $60,734 |
| Part IV Tax (Part C) | 17,076 |
| Dividend Refund (Part F) | ( 7,513) |
| Federal Tax Payable | $70,297 |

### *Part H - Advice On Dividend Policy*

The change in tax rules for years after 2018 affects the dividend refund available on the payment of eligible dividends. Sinzer's dividend policy to maximize eligible dividends, which was beneficial to you personally before 2019, now limits the dividend refund that can be claimed by your corporation. I suggest you change the policy to paying the maximum amount of eligible dividends on which a dividend refund would be available. That will increase the taxes paid by you personally on the total dividends received, but will give you an increase in the dividend refund at the corporate level.

The Eligible RDTOH of $7,513 would all be refunded on the payment of $19,600 in eligible dividends [(38-1/3%)($19,600) = $7,513]. This is equal to the eligible dividends received during 2019. The remaining $89,400 would be non-eligible dividends which would enable Sinzer to claim a dividend refund of $34,270 [(38-1/3%)($89,400)] because it is less than the balance in the Non-Eligible RDTOH.

The increase in the personal tax rate going from eligible to non-eligible dividends is about 8 percentage points on average. Using that estimate means that it will cost you personally $7,152 [(8%)($89,400)] in taxes to receive a dividend refund of $34,270 in your corporation. As you are the sole shareholder, you will benefit from the dividend refund.

## Self Study Solution Thirteen - 8

### *Part A - Net And Taxable Income*

The calculation of Acme Imports' Net Income For Tax Purposes and Taxable Income would be as follows:

| | | |
|---|---|---|
| Accounting Income Before Taxes | | $232,300 |
| Additions: | | |
| Amortization Expense | $29,500 | |
| Charitable Donations | 25,000 | |
| Taxable Capital Gain On Sale Of Equipment [(1/2)($84,500 - $62,000)] | 11,250 | |
| Golf Club Membership | 2,800 | |
| 50 Percent Of Business Meals And Entertainment | 3,360 | |
| Share Issue Costs [(80%)($950)] | 760 | |
| Costs Of Supplementary Letters Patent | 7,000 | |
| Interest On Mortgage For The Land | 12,300 | 91,970 |
| Deductions: | | |
| CCA (Note One) | ($53,050) | |
| Gain On Sale Of Equipment ($84,500 - $27,500) | ( 57,000) | ( 110,050) |
| **Net Income For Tax Purposes** | | **$214,220** |
| Charitable Donations | | ( 25,000) |
| Dividends From Sarco Ltd. | | ( 24,000) |
| **Taxable Income** | | **$165,220** |

**Note One** The maximum CCA on the Class 8 equipment would be calculated as follows:

| | | |
|---|---|---|
| Opening UCC | | $256,000 |
| Disposition - Lesser Of: | | |
| Proceeds Of Disposition = $84,500 | | |
| Capital Cost = $62,000 | | ( 62,000) |
| CCA Base | | $194,000 |
| Rate | | 20% |
| CCA - Class 8 | | $ 38,800 |

The customer list, as well as the cost of the supplementary letters patent would be added to Class 14.1. The maximum CCA for this Class would be as follows:

| | |
|---|---|
| Opening UCC | Nil |
| Additions ($183,000 + $7,000) | $190,000 |
| AccII Adjustment [(1/2)($190,000)] | 95,000 |
| CCA Base | $285,000 |
| Rate | 5% |
| CCA - Class 14.1 | $ 14,250 |

Base on this, the maximum total CCA would be $53,050 ($38,800 + $14,250).

Several of the items in this problem need further comment. These are as follows:

- **Item 4** With respect to the costs of issuing shares, such amounts have to be deducted over at least 5 years at a maximum rate of 20 percent per year.
- **Item 6** Only 50 percent of the $6,720 in charges at the local golf and country club are deductible.
- **Item 7** The cars provided to the principal shareholder and to the manager of the Company will result in their being assessed for a substantial taxable benefit. However, the costs are fully deductible to the Company.
- **Item 10** The fees paid to the site consultant are deductible as indicated in ITA 20(1)(dd). ITA 18(3.1) disallows the deduction of interest on financing related to land during construction. The $12,300 interest on the $244,000 mortgage on the land would be capitalized and is not deductible.

### *Part B - Active Business Income*

The active business income of Acme is as follows:

| | | |
|---|---|---|
| Net Income For Tax Purposes | | $214,220 |
| Dividends | | ( 24,000) |
| Aggregate Investment Income: | | |
| Interest Revenue | ($10,000) | |
| Taxable Capital Gain | ( 11,250) | ( 21,250) |
| Active Business Income | | $168,970 |

***Part C - Federal Tax Payable***

The calculation of Acme Ltd.'s federal Tax Payable would be as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($165,220)] | $ 62,784 |
| Federal Tax Abatement [(10%)($165,220)] | ( 16,522) |
| Small Business Deduction (Note Two) | ( 31,392) |
| Additional Refundable Tax On Investment Income (Note Three) | Nil |
| General Rate Reduction (Note Four) | Nil |
| Part I Tax Payable | $ 14,870 |
| Part IV Tax Payable (Note Five) | 3,000 |
| Dividend Refund (No Dividends Declared) | Nil |
| Federal Tax Payable | $ 17,870 |

**Note Two** As Acme and Sarco's combined ADJUSTED Aggregate Investment Income exceeds $50,000, there will be a grind of the annual business limit. The amount of the grind is as follows:

[($500,000/$500,000)][(5)($110,000 - $50,000)] = $300,000

Applying this grind, the small business deduction is 19 percent of the least of the following three amounts:

| | |
|---|---|
| 1. Active Business Income (Part B) | $168,970 |
| 2. Taxable Income (no foreign tax credit adjustment) | $165,220 |
| 3. Reduced Annual Business Limit ($500,000 - $300,000) | $200,000 |

This gives a small business deduction of $31,392 [(19%)($165,220)].

**Note Three** The ITA 123.3 refundable tax (ART) is 10-2/3 percent of the lesser of:

| | | |
|---|---|---|
| 1. Aggregate Investment Income (Part B) | | $21,250 |
| 2. Taxable Income | $165,220 | |
| Deduct: Amount Eligible For The SBD | ( 165,220) | Nil |

Since the income eligible for the small business deduction is equal to Taxable Income, there is no ITA 123.3 tax on investment income payable.

**Note Four** The general rate reduction would be nil, calculated as follows:

| | |
|---|---|
| Taxable Income | $165,220 |
| Amount Eligible For The Small Business Deduction | ( 165,220) |
| Aggregate Investment Income (Part B) | ( 21,250) |
| Full Rate Taxable Income | Nil |
| Rate | 13% |
| General Rate Reduction | Nil |

**Note Five** The Part IV Tax on Sarco's non-eligible dividend would be as follows:

| | |
|---|---|
| Sarco's Dividend Refund | $5,000 |
| Acme's Ownership Percentage | 60% |
| Acme's Share Of Refund = Part IV Tax Payable | $3,000 |

***Part D - RDTOH Balances***

The amount of refundable Part I tax will be the least of the following three amounts. In this problem, the calculation of these amounts is greatly simplified by the absence of foreign non-business income. The calculations are as follows:

**ITA 129(4)(a)(i)** $6,517 - This amount would be 30-2/3 percent of Aggregate Investment Income of $21,250 ($10,000 + $11,250).

**ITA 129(4)(a)(ii)** Nil - This amount would be 30-2/3 percent of Taxable Income, reduced by the amount of income that is eligible for the small business deduction [(30-2/3%)($165,220 - $165,220)].

**ITA 129(4)(a)(iii)** $14,870 - This amount would be the Part I Tax Payable.

The least of these amounts is nil, so there would be no refundable portion of Part I tax.

As Acme's RDTOH on December 31, 2018 was nil, both the transitional Eligible RDTOH and the transitional Non-Eligible RDTOH would be nil. As there is no addition to the Eligible RDTOH for the year, the December 31, 2019 balance in the Eligible RDTOH would be nil.

The December 31, 2019 balance in the Non-Eligible RDTOH would be as follows:

| | |
|---|---|
| Transitional Non-Eligible RDTOH | $ Nil |
| Part IV Tax Payable On Sarco's Non-Eligible Dividend | 3,000 |
| Non-Eligible RDTOH - December 31, 2019 | $3,000 |

The December 31, 2019 GRIP would be as follows:

| | | |
|---|---|---|
| GRIP Balance At End Of 2018 | | Nil |
| Taxable Income | $165,220 | |
| Income Eligible For SBD | ( 165,220) | |
| Aggregate Investment Income | ( 21,250) | |
| Adjusted Taxable Income | $ Nil | |
| Rate | 72% | Nil |
| Eligible Dividends Received | | Nil |
| Eligible Dividends Designated in 2018 | | Nil |
| GRIP Balance At End Of 2019 | | Nil |

### *Part A - Net And Taxable Income*

The calculation of Acme Imports' Net Income For Tax Purposes and Taxable Income would be as follows:

| | | |
|---|---|---|
| Accounting Income Before Taxes | | $232,300 |
| Additions: | | |
| Amortization Expense | $29,500 | |
| Charitable Donations | 25,000 | |
| Taxable Capital Gain On Sale Of Equipment [(1/2)($84,500 - $62,000)] | 11,250 | |
| Golf Club Membership | 2,800 | |
| 50 Percent Of Business Meals And Entertainment | 3,360 | |
| Share Issue Costs [(80%)($950)] | 760 | |
| Costs Of Supplementary Letters Patent | 7,000 | |
| Interest On Mortgage For The Land | 12,300 | 91,970 |
| Deductions: | | |
| CCA (Note One) | ($53,050) | |
| Gain On Sale Of Equipment ($84,500 - $27,500) | ( 57,000) | ( 110,050) |
| **Net Income For Tax Purposes** | | **$214,220** |
| Charitable Donations | | ( 25,000) |
| Dividends From Sarco Ltd. | | ( 24,000) |
| **Taxable Income** | | **$165,220** |

**Note One** The maximum CCA on the Class 8 equipment would be calculated as follows:

| | |
|---|---|
| Opening UCC | $256,000 |
| Disposition - Lesser Of: | |
| Proceeds Of Disposition = $84,500 | |
| Capital Cost = $62,000 | ( 62,000) |
| CCA Base | $194,000 |
| Rate | 20% |
| CCA - Class 8 | $ 38,800 |

The customer list, as well as the cost of the supplementary letters patent would be added to Class 14.1. The maximum CCA for this Class would be as follows:

| | |
|---|---|
| Opening UCC | Nil |
| Additions ($183,000 + $7,000) | $190,000 |
| AccII Adjustment [(1/2)($190,000)] | 95,000 |
| CCA Base | $285,000 |
| Rate | 5% |
| CCA - Class 14.1 | $ 14,250 |

Base on this, the maximum total CCA would be $53,050 ($38,800 + $14,250).

Several of the items in this problem need further comment. These are as follows:

- **Item 4** With respect to the costs of issuing shares, such amounts have to be deducted over at least 5 years at a maximum rate of 20 percent per year.
- **Item 6** Only 50 percent of the $6,720 in charges at the local golf and country club are deductible.
- **Item 7** The cars provided to the principal shareholder and to the manager of the Company will result in their being assessed for a substantial taxable benefit. However, the costs are fully deductible to the Company.
- **Item 10** The fees paid to the site consultant are deductible as indicated in ITA 20(1)(dd). ITA 18(3.1) disallows the deduction of interest on financing related to land during construction. The $12,300 interest on the $244,000 mortgage on the land would be capitalized and is not deductible.

### *Part B - Active Business Income*

The active business income of Acme is as follows:

| | | |
|---|---|---|
| Net Income For Tax Purposes | | $214,220 |
| Dividends | | ( 24,000) |
| Aggregate Investment Income: | | |
| Interest Revenue | ($10,000) | |
| Taxable Capital Gain | ( 11,250) | ( 21,250) |
| Active Business Income | | $168,970 |

### Part C - Federal Tax Payable

The calculation of Acme Ltd.'s federal Tax Payable would be as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($165,220)] | $ 62,784 |
| Federal Tax Abatement [(10%)($165,220)] | ( 16,522) |
| Small Business Deduction (Note Two) | ( 31,392) |
| Additional Refundable Tax On Investment Income (Note Three) | Nil |
| General Rate Reduction (Note Four) | Nil |
| Part I Tax Payable | $ 14,870 |
| Part IV Tax Payable (Note Five) | 3,000 |
| Dividend Refund (No Dividends Declared) | Nil |
| Federal Tax Payable | $ 17,870 |

**Note Two** As Acme and Sarco's combined ADJUSTED Aggregate Investment Income exceeds $50,000, there will be a grind of the annual business limit. The amount of the grind is as follows:

[($500,000/$500,000)][(5)($110,000 - $50,000)] = $300,000

Applying this grind, the small business deduction is 19 percent of the least of the following three amounts:

| | |
|---|---|
| 1. Active Business Income (Part B) | $168,970 |
| 2. Taxable Income (no foreign tax credit adjustment) | $165,220 |
| 3. Reduced Annual Business Limit ($500,000 - $300,000) | $200,000 |

This gives a small business deduction of $31,392 [(19%)($165,220)].

**Note Three** The ITA 123.3 refundable tax (ART) is 10-2/3 percent of the lesser of:

| | | |
|---|---|---|
| 1. Aggregate Investment Income (Part B) | | $21,250 |
| 2. Taxable Income | $165,220 | |
| Deduct: Amount Eligible For The SBD | ( 165,220) | Nil |

Since the income eligible for the small business deduction is equal to Taxable Income, there is no ITA 123.3 tax on investment income payable.

**Note Four** The general rate reduction would be nil, calculated as follows:

| | |
|---|---|
| Taxable Income | $165,220 |
| Amount Eligible For The Small Business Deduction | ( 165,220) |
| Aggregate Investment Income (Part B) | ( 21,250) |
| Full Rate Taxable Income | Nil |
| Rate | 13% |
| General Rate Reduction | Nil |

**Note Five** The Part IV Tax on Sarco's non-eligible dividend would be as follows:

| | |
|---|---|
| Sarco's Dividend Refund | $5,000 |
| Acme's Ownership Percentage | 60% |
| Acme's Share Of Refund = Part IV Tax Payable | $3,000 |

### Part D - RDTOH Balances

The amount of refundable Part I tax will be the least of the following three amounts. In this problem, the calculation of these amounts is greatly simplified by the absence of foreign non-business income. The calculations are as follows:

**ITA 129(4)(a)(i)** $6,517 - This amount would be 30-2/3 percent of Aggregate Investment Income of $21,250 ($10,000 + $11,250).

**ITA 129(4)(a)(ii)** Nil - This amount would be 30-2/3 percent of Taxable Income, reduced by the amount of income that is eligible for the small business deduction [(30-2/3%)($165,220 - $165,220)].

**ITA 129(4)(a)(iii)** $14,870 - This amount would be the Part I Tax Payable.

The least of these amounts is nil, so there would be no refundable portion of Part I tax.

As Acme's RDTOH on December 31, 2018 was nil, both the transitional Eligible RDTOH and the transitional Non-Eligible RDTOH would be nil. As there is no addition to the Eligible RDTOH for the year, the December 31, 2019 balance in the Eligible RDTOH would be nil.

The December 31, 2019 balance in the Non-Eligible RDTOH would be as follows:

| | |
|---|---|
| Transitional Non-Eligible RDTOH | $ Nil |
| Part IV Tax Payable On Sarco's Non-Eligible Dividend | 3,000 |
| Non-Eligible RDTOH - December 31, 2019 | $3,000 |

The December 31, 2019 GRIP would be as follows:

| | | |
|---|---|---|
| GRIP Balance At End Of 2018 | | Nil |
| Taxable Income | $165,220 | |
| Income Eligible For SBD | ( 165,220) | |
| Aggregate Investment Income | ( 21,250) | |
| Adjusted Taxable Income | $ Nil | |
| Rate | 72% | Nil |
| Eligible Dividends Received | | Nil |
| Eligible Dividends Designated in 2018 | | Nil |
| GRIP Balance At End Of 2019 | | Nil |

## Self Study Solution Thirteen - 9

### *Part A - Net And Taxable Income*

Brasco's minimum Net Income For Tax Purposes and Taxable Income would be calculated as follows:

| | | |
|---|---|---|
| Active Business Income (Given) | | $171,000 |
| Net Taxable Capital Gains (Given) | | 36,000 |
| Canadian Source Interest Income | | 2,200 |
| Eligible Portfolio Dividends | | 15,800 |
| Foreign Source Investment Income (Gross Amount) | | 4,500 |
| Non-Eligible Dividends From Subsidiary | | 37,800 |
| **Net Income For Tax Purposes** | | **$267,300** |
| Dividends Received: | | |
| Portfolio | ($15,800) | |
| Subsidiary | ( 37,800) | ( 53,600) |
| Charitable Donations | | ( 11,900) |
| Non-Capital Loss Carry Forward Deducted | | ( 25,800) |
| Net Capital Loss Carry Forward Deducted (Note One) | | ( 36,000) |
| **Taxable Income** | | **$140,000** |

**Note One** Note that the net capital loss carry forward is limited to the taxable capital gains. This will leave a net capital loss carry forward of $28,500 ($64,500 - $36,000) for subsequent periods.

### *Part B - Part I Tax Payable (FTC = Amount Withheld)*

Assuming the foreign non-business tax credit is equal to the amount withheld, Brasco's Tax Payable would be calculated as follows:

| | |
|---|---|
| Base Amount Of Part I Tax [(38%)($140,000)] | $53,200 |
| Federal Tax Abatement [(10%)($140,000)] | ( 14,000) |
| Small Business Deduction (Note Two) | ( 23,750) |
| Additional Refundable Tax On Investment Income (Note Three) | 715 |
| General Rate Reduction (Note Four) | ( 1,079) |
| Foreign Non-Business Tax Credit (Given As Amount Withheld) | ( 675) |
| Part I Tax Payable | $14,411 |

**Note Two** The small business deduction is 19 percent of the least of the following three amounts:

| | | | |
|---|---|---|---|
| 1. | Active Business Income (Given) | | $171,000 |
| 2. | Taxable Income | $140,000 | |
| | Deduct: | | |
| | [(100/28)($675)] Foreign Non-Business Tax Credit | ( 2,411) | $137,589 |
| 3. | Allocated Annual Business Limit (Given) | | $125,000 |

The lowest of these figures is the allocated annual limit of $125,000 and this gives a small business deduction of $23,750 [(19%)($125,000)].

**Note Three** The aggregate investment income of $6,700 is calculated as follows:

| | |
|---|---|
| Taxable Capital Gains | $36,000 |
| Net Capital Loss Carry Forward Deducted | ( 36,000) |
| Canadian Interest | 2,200 |
| Foreign Investment Income | 4,500 |
| Aggregate Investment Income | $ 6,700 |

The ITA 123.3 refundable tax (ART) is 10-2/3 percent of the lesser of:

| | | | |
|---|---|---|---|
| 1. | Aggregate Investment Income | | $ 6,700 |
| 2. | Taxable Income | $140,000 | |
| | Deduct: Amount Eligible For The SBD | ( 125,000) | $15,000 |

The ITA 123.3 tax on aggregate investment income is $715 [(10-2/3%)($6,700)].

**Note Four** The general rate reduction is based on the amount of Taxable Income that is not subject to other types of favourable tax treatment. The reduction would be calculated as follows:

| | |
|---|---|
| Taxable Income | $140,000 |
| Amount Eligible For The Small Business Deduction (Note Two) | ( 125,000) |
| Aggregate Investment Income (Note Three) | ( 6,700) |
| Full Rate Taxable Income | $ 8,300 |
| Rate | 13% |
| General Rate Reduction | $ 1,079 |

### *Part C - Refundable Part I Tax Payable*

The refundable portion of Part I tax will be the least of the following three amounts:

| | | |
|---|---|---|
| Aggregate Investment Income (Note Three) | | $ 6,700 |
| Rate | | 30-2/3% |
| | | $ 2,055 |
| Deduct Excess Of: | | |
| Foreign Non-Business Tax Credit | ($675) | |
| Over 8% Of Foreign Non-Business Income [(8%)($4,500)] | 360 | ( 315) |
| Amount Under ITA 129(4)(a)(i) | | $ 1,740 |

| | |
|---|---|
| Taxable Income | $140,000 |
| Deduct: | |
| Amount Eligible For The Small Business Deduction | ( 125,000) |
| [(100 ÷ 38-2/3)($675)] Foreign Non-Business Tax Credit | ( 1,746) |
| Adjusted Taxable Income | $ 13,254 |
| Rate | 30-2/3% |
| Amount Under ITA 129(4)(a)(ii) | $ 4,065 |

| | |
|---|---|
| Amount Under ITA 129(4)(a)(iii) = Part I Tax Payable | $14,411 |

The least of these three amounts would be $1,740, the amount calculated under ITA 129(4)(a)(i).

### *Part D - Part IV Tax Payable*

The calculation of Part IV Tax Payable would be as follows:

| | |
|---|---|
| Part IV Tax On Masco's Non-Eligible Dividends [(60%)($24,1520)] | $14,490 |
| Part IV Tax On Eligible Dividends From Portfolio Investments [(38-1/3%)($15,800)] | 6,057 |
| Part IV Tax Payable | $20,547 |

### *Part E - GRIP Balance*

The 2019 ending balance in GRIP will be calculated as follows:

| | | |
|---|---|---|
| GRIP Balance At End Of 2018 | | $126,000 |
| Taxable Income | $140,000 | |
| Income Eligible For SBD | ( 125,000) | |
| Aggregate Investment Income | ( 6,700) | |
| Adjusted Taxable Income | $ 8,300 | |
| Rate | 72% | 5,976 |
| Eligible Dividends Received | | 15,800 |
| Eligible Dividends Designated in 2018 | | Nil |
| GRIP Balance At End Of 2019 | | $147,776 |

Any eligible dividends paid during 2019 will be deducted from the GRIP in 2020.

### Part F - RDTOH Balances

The January 1, 2019 GRIP balance is $126,000 ($126,000 - Nil).

The base for the transitional RDTOH balances is the $7,000 balance in Brasco's RDTOH on December 31, 2018 (no dividends were paid in 2018). The transitional Eligible RDTOH will be the lesser of:

- The $7,000 RDTOH balance; and
- $48,300 [(38-1/3%)($126,000)].

The lesser figure is $7,000 and this will be the transitional Eligible RDTOH. This allocation will leave the transitional Non-Eligible RDTOH equal to nil ($7,000 - $7,000).

Based on this, the December 31, 2019 RDTOH balances would be as follows:

| | |
|---|---:|
| Transitional Balance | $ 7,000 |
| Part IV Tax On Eligible Dividends - Portfolio Investments | 6,057 |
| Eligible RDTOH - December 31, 2019 | $13,057 |

The December 31, 2019 balance in the Non-Eligible RDTOH would be as follows:

| | |
|---|---:|
| Transitional Balance | $ Nil |
| Part I Refundable Tax | 1,740 |
| Part IV Tax On Masco's Non-Eligible Dividends | 14,490 |
| Non-Eligible RDTOH - December 31, 2019 | $16,230 |

### Part G - Dividend Refund

Brasco paid $39,000 in dividends, creating a potential refund of $14,950 [(38-1/3%)($39,000)]. Given Brasco's GRIP balance of $147,776, the entire $39,000 dividend could be designated as eligible. However, the Eligible RDTOH balance is only $13,057. Given this, the maximum designation on which a full refund would be available would be $34,062 ($13,057 ÷ 38-1/3%).

If $34,062 of the dividends paid are designated eligible, the dividend refund on these eligible dividends would be $13,057, the lesser of:

- $13,057 [(38-1/3%)($34,062)]; and
- $13,057, the balance in the Eligible RDTOH.

This would leave $4,938 ($39,000 - $34,062) as non-eligible dividends. The dividend refund on these non-eligible dividends would be $1,893, the lesser of:

- $1,893 [(38-1/3%)($4,938)]; and
- $16,230, the balance in the Non-Eligible RDTOH.

Based on this, the total dividend refund would be as follows:

| | |
|---|---:|
| Dividend Refund On Eligible Dividends | $13,057 |
| Dividend Refund On Non-Eligible Dividends | 1,893 |
| Total Dividend Refund | $14,950 |

### Part H - Foreign Tax Credit

If you cannot assume that the foreign tax credit is equal to the amount withheld, the actual foreign tax credit is a complex calculation in this situation. The use of foreign taxes paid as credits against Canadian Tax Payable is limited by a formula that includes the "tax otherwise payable". In the case of foreign taxes paid on non-business income, the "tax otherwise payable" in the formula includes the ART that is assessed under ITA 123.3 and the general rate reduction. This creates a problem in that the calculation of the ART and the general rate reduction include the amount eligible for the small business deduction [ITA 123.3(b)]. In

turn, the determination of the amount eligible for the small business deduction requires the use of the foreign tax credits for foreign taxes paid on non-business and business income [ITA 125(1)(b)(i) and (ii)].

To solve this circular calculation, for the purpose of calculating the small business deduction, the foreign tax credit for taxes paid on non-business income is calculated using a "tax otherwise payable" figure that does not include the ART under ITA 123.3 or the general rate reduction. This means that in situations where foreign non-business income, the small business deduction, and the ART are involved, the following procedures should be used:

1. Calculate the foreign non-business tax credit using a "tax otherwise payable" that excludes both the ART and the general rate reduction. This initial version of the foreign non-business tax credit will be used only for determining the small business deduction, with the actual credit available calculated after the ART and the general rate reduction have been determined.
2. Calculate the amount eligible for the small business deduction using the number determined in step 1.
3. Calculate the ART and the general rate reduction using the amount eligible for the small business deduction determined in step 2.
4. Calculate the actual foreign non-business tax credit using a "tax otherwise payable" figure that includes the ART and the general rate reduction.

The initial version of the foreign non-business tax credit (Step 1) will be the lesser of the actual tax paid of $675, and an amount determined by the following formula:

$$\left(\frac{\text{Foreign Non - Business Income}}{\text{Adjusted Net Income}}\right)(\text{Part I Tax Otherwise Payable Excluding The ART And GRR})$$

$$= \left(\frac{\$4,500}{\$267,300 - \$53,600 - \$36,000}\right)(\$53,200 - \$14,000)$$

$$= \$993$$

Part I tax otherwise payable in the preceding formula does not include the ART under ITA 123.3 or the general rate reduction. Adjusted Net Income in the formula is Net Income For Tax Purposes minus deductible dividends and the net capital loss carry forward claimed in the current year. In this case, the actual tax paid of $675 will be the credit. This means that the previously calculated small business deduction will be unchanged (Note 2, Step 2) and, in turn, the ART (Note 3, Step 3) and general rate reduction (Note 4, Step 3) will be unchanged.

We can now calculate the actual foreign non-business tax credit which takes into consideration the ART and the general rate reduction (Step 4). It is the lesser of the actual taxes paid of $675 and an amount determined by the following formula:

$$\left(\frac{\text{Foreign Non - Business Income}}{\text{Adjusted Net Income}}\right)(\text{Part I Tax Otherwise Payable Including The ART And GRR})$$

$$= \left(\frac{\$4,500}{\$267,300 - \$53,600 - \$36,000}\right)(\$53,200 - \$14,000 + \$715 - \$1,079)$$

$$= \$983$$

In this calculation, the actual taxes paid of $675 will again be the credit.

## Chapter 13 Learning Objectives

After completing Chapter 13, you should be able to:

1. Explain the goal of integration in the design of the Canadian corporate tax system (paragraph [P hereafter] 13-1 to 13-5).
2. Calculate after-tax income retained from eligible and non-eligible dividends received (P 13-6 to 13-14).
3. Demonstrate how the dividend gross up and tax credit procedures work to implement integration with respect to business income (P 13-15 to 13-22).
4. List the components of aggregate investment income as it is defined in ITA 129(4) and describe the basic concept of refundable taxes (P 13-23 to 13-38).
5. Calculate the additional refundable tax (ART) on the investment income of a CCPC (P 13-39 to 13-47).

---

6. Calculate the Part I refundable tax on the investment income of a CCPC (P 13-48 to 13-66).
7. Apply the provisions related to the Part IV refundable tax on private corporations, including those related to dividends from a connected corporation (P 13-67 to 13-94).
8. Explain and apply the eligible dividend designation calculations relevant to CCPCs and their GRIP (P 13-95 to 13-104).
9. Explain and apply the eligible dividend designation calculations relevant to non-CCPCs and their LRIP (P 13-105 to 13-108).
10. Describe and calculate the Part III.1 tax on excessive eligible dividend designations (EEDD) (P 13-109 to 13-117).

---

11. Apply the transitional provision to the balance in the Refundable Dividend Tax On Hand (RDTOH) account (P 13-118 to 13-130).
12. Calculate the Part I refundable tax (P 13-131 to 13-143).
13. Calculate the balance in the Eligible and Non-Eligible (RDTOH) accounts (P 13-144 to 13-152).
14. Calculate the dividend refund on the payment of eligible and non-eligible dividends (P 13-153 to 13-156).

---

15. Describe the economic impact of the change in RDTOH rules (P 13-157 to 13-174).
16. Use a logical approach to deal with comprehensive calculations of corporate Taxable Income and Tax Payable (P 13-175 to 13-176).
17. Review a simple corporate tax return completed using the ProFile T2 tax preparation software program.

# CHAPTER 14

## How To Work Through Chapter 14

We recommend the following approach in dealing with the material in this chapter:

### Acquisition Of Control Rules, Including Effect On Loss Carry Forwards

- Read paragraph 14-1 to 14-21 (in the textbook).
- Do Exercise Fourteen-1 (in the textbook) and check the solution in this Study Guide.
- Read paragraph 14-22 to 14-24.
- Do Exercise Fourteen-2 and check the solution in this Study Guide.
- Read paragraph 14-25 to 14-34.
- Do Exercise Fourteen-3 and check the solution in this Study Guide.
- Do Self Study Problems Fourteen-1 and Fourteen-2 which are available on MyLab and check the solutions in this Study Guide.

### Associated Companies

- Read paragraph 14-35 to 14-52.
- Do Exercise Fourteen-4 and check the solution in this Study Guide.
- Do Self Study Problems Fourteen-3 and Fourteen-4 and check the solutions in this Study Guide.

### Investment Tax Credits And SR & ED Expenditures By CCPCs

- Read paragraph 14-53 to 14-62.
- Do Exercise Fourteen-5 and check the solution in this Study Guide.
- Read paragraph 14-63 to 14-65.
- Do Exercise Fourteen-6 and check the solution in this Study Guide.

### Refundable Investment Tax Credits

- Read paragraph 14-66 to 14-71.
- Do Exercise Fourteen-7 and check the solution in this Study Guide.
- Do Self Study Problem Fourteen-5 and check the solution in this Study Guide.
- Read paragraph 14-72 to 14-75.

### Shareholders' Equity Under GAAP

- Read paragraph 14-76 to 14-78.

### Paid Up Capital

- Read paragraph 14-79 to 14-82.
- Do Exercise Fourteen-8 and check the solution in this Study Guide.

### Tax Basis Retained Earnings

- Read paragraph 14-83 to 14-91.

### Capital Dividend Account

- Read paragraph 14-92 to 14-95.
- Do Exercise Fourteen-9 and check the solution in this Study Guide.
- Do Self Study Problem Fourteen-6 and Fourteen-7 and check the solutions in this Study Guide.

### Distributions Of Corporate Surplus Through Cash, Stock And In Kind Dividends

- Read paragraph 14-96 to 14-107.
- Do Exercise Fourteen-10 and check the solution in this Study Guide.
- Read paragraph 14-108 to 14-110.
- Do Exercise Fourteen-11 and check the solution in this Study Guide.

### Capital Dividends

- Read paragraph 14-111 to 14-115.

### ITA 84(1) Deemed Dividends - Increase In PUC

- Read paragraph 14-116 to 14-120.
- Do Exercise Fourteen-12 and check the solution in this Study Guide.
- Read paragraph 14-121.

### ITA 84(2) Deemed Dividends - On Winding-Up

- Read paragraph 14-122 to 14-126.
- Do Exercise Fourteen-13 and check the solution in this Study Guide.

### ITA 84(3) Deemed Dividends - Redemption, Acquisition, Or Cancellation Of Shares

- Read paragraph 14-127 to 14-130.
- Do Exercise Fourteen-14 and check the solution in this Study Guide.

### ITA 84(4) And ITA 84(4.1) Deemed Dividends

- Read paragraph 14-131 to 14-136.
- Do Exercise Fourteen-15 and check the solution in this Study Guide.
- Do Self Study Problem Fourteen-8 and check the solution in this Study Guide.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 14. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 14 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 14 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 14 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 14 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

## Solutions to Chapter Fourteen Exercises

### *Exercise Fourteen - 1 Solution*

**No Acquisition Of Control** Net Income For Tax Purposes for 2019 is $289,000 ($42,000 + $247,000) and, if there was no acquisition of control, the total $135,000 non-capital loss carry forward could be deducted. This would result in a 2019 Taxable Income of $154,000 ($289,000 - $135,000).

**Acquisition Of Control** If there was an acquisition of the control on January 1, 2019, Net Income For Tax Purposes would still be $289,000. However, in this case, the non-capital loss carry forward could only be used to the extent of the pen business income of $42,000. This means that Taxable Income would be $247,000 ($289,000 - $42,000) with a non-capital loss carry forward of $93,000 ($135,000 - $42,000).

### *Exercise Fourteen - 2 Solution*

The tax consequences of the acquisition of control procedures are as follows:

**Land** As the fair market of the land is less than its adjusted cost base, ITA 111(4)(c) will require that it be written down to its fair market value of $215,000. This will result in an allowable capital loss of $39,000 [($293,000 - $215,000) ÷ 2].

**Class 8 Assets** As the fair market value of this property is less than its UCC, ITA 111(5.1) requires that it be written down to its fair market value. The $92,000 ($276,000 - $184,000) write-down will be treated as CCA to be deducted in the deemed taxation year. For capital gains purposes, the property will retain its original capital cost of $416,000.

### *Exercise Fourteen - 3 Solution*

It would clearly be desirable to elect to have a deemed disposition of the non-depreciable assets. This could be achieved by electing to have a deemed disposition of the non-depreciable assets for $650,000. This would result in a $75,000 taxable capital gain [(1/2)($650,000 - $500,000)] on the deemed disposition. This will leave $35,000 ($110,000 - $75,000) of the net capital loss carry forward.

This $35,000 could be eliminated by electing to have a deemed disposition of the depreciable property at an elected value of $470,000. This election would produce the required taxable capital gain of $35,000 [(1/2)($470,000 - $400,000)].

The election would also produce recapture of $50,000 ($400,000 - $350,000). As this is $5,000 ($50,000 - $45,000) greater than the operating loss, this would result in Taxable Income and Tax Payable. However, the ability to use the remaining $35,000 net capital loss carry forward is probably worth the cost of the Tax Payable on the extra $5,000 of income. In addition, the election would result in increased future CCA based on a new capital cost, for CCA purposes only, of $435,000 [$400,000 + (1/2)($470,000 - $400,000)].

### *Exercise Fourteen - 4 Solution*

**Top And Middle** Top and Middle are associated under ITA 256(1)(a) as Top controls Middle.

**Top And Bottom** Top and Bottom are associated under ITA 256(1)(b) as they are both controlled by the same person, Mr. Top. He controls Top directly. In addition, he controls Bottom through a combination of direct ownership, indirect ownership, and deemed ownership. His majority interest would be calculated as follows:

| | |
|---|---:|
| Direct Interest in Bottom | 5% |
| Indirect Interest Through Top Company [(100%)(10%)] | 10% |
| Indirect Interest Through Control Of Middle Company | 35% |
| Deemed Interest Through Son - ITA 256(1.3) | 15% |
| Deemed Interest Through Options - ITA 256(1.4) | 10% |
| Controlling Interest | 75% |

**Middle And Bottom** Middle and Bottom are associated under ITA 256(1)(b) as they are both controlled by the same person, Mr. Top. Mr. Top controls Middle indirectly through Top. He controls Bottom through a combination of direct and indirect control, as described in the discussion of Top and Bottom.

### Exercise Fourteen - 5 Solution

With respect to the $125,000 in apprentice salaries, the investment tax credit is available on an annual salary maximum of $20,000 per apprentice. As a result, there will be a $10,000 [(5)(10%)($20,000)] credit against 2019 federal Tax Payable. This $10,000 credit will be added to income in 2020.

With respect to the $3,000,000 in capital expenditures, there will be a 2019 credit against federal Tax Payable of $300,000 [(10%)($3,000,000)]. The $300,000 credit will not influence the calculation of 2019 CCA. This amount will be $750,000 [(50%)(1/2)($3,000,000)].

In 2020, the $300,000 credit will be deducted from the January 1, 2020 UCC, leaving a balance of $1,950,000 ($3,000,000 - $750,000 - $300,000). Given this, 2020 CCA will be $975,000 [(50%)($1,950,000)].

### Exercise Fourteen - 6 Solution

For 2019, the A value in the reduction formula would be $2,500,000 ($12,500,000 - $10,000,000). Based on this, the amount that would be available for the enhanced 35 percent credit would be calculated as follows:

[$3,000,000][($40,000,000 – $2,500,000) ÷ $40,000,000] = $2,812,500

### Exercise Fourteen - 7 Solution

As Sci-Tech has Taxable Income of less than $500,000 in the previous year, and its Taxable Capital Employed in Canada is less than $10 million, it is a qualifying company and its annual expenditure limit is not reduced from the maximum value of $3,000,000.

Given the $3,000,000 annual expenditure limit for the 35 percent rate, the total amount of investment tax credits available can be calculated as follows:

| | |
|---|---:|
| Qualified Property [(10%)($123,000)] | $ 12,300 |
| SR&ED Current Expenditures [(35%)($1,200,000)] | 420,000 |
| Total Available Amount | $432,300 |

The refund available would be as follows:

| | |
|---|---:|
| Qualified Property [(40%)($12,300)] | $ 4,920 |
| SR&ED Current Expenditures [(100%)($420,000)] | 420,000 |
| Total Refund Available | $424,920 |

The non-refunded investment tax credit of $7,380 ($432,300 - $424,920) can be carried forward 20 years to be applied against Tax Payable. There was no Tax Payable in the last three years so it cannot be carried back.

The cost of the qualified property will be reduced in the following year by the refundable investment tax credit of $4,920. The $420,000 tax credit on current SR&ED expenditures will be added to income in the following taxation year.

### Exercise Fourteen - 8 Solution

The adjusted cost base of the shares would be determined as follows:

| | Number of Shares | Cost/Share | Total Cost |
|---|---:|---:|---:|
| First Purchase | 2,400 | $1.10 | $2,640 |
| Second Purchase | 3,850 | $1.82 | 7,007 |
| Totals | 6,250 | | $9,647 |

The adjusted cost base for all of the investor's shares is $9,647. The adjusted cost base per share would be $1.54 ($9,647 ÷ 6,250).

The PUC for the investor's shares would be calculated as follows:

| | Number of Shares | PUC/Share | Total PUC |
|---|---|---|---|
| First Sale | 100,000 | $1.10 | $110,000 |
| Second Sale | 50,000 | $1.35 | 67,500 |
| Third Sale | 30,000 | $1.82 | 54,600 |
| Total PUC Of Outstanding Shares | 180,000 | | $232,100 |

| | |
|---|---|
| Number Of Shares (From First Table) | 6,250 |
| PUC Per Share [$232,100 ÷ 180,000 Shares] | $ 1.29 |
| PUC For Investor's Shares | $8,063 |

### *Exercise Fourteen - 9 Solution*

The balance in the capital dividend account as at December 31, 2019 would be as follows:

| | |
|---|---|
| 2017 Capital Gain On Land [(1/2)($22,000)] | $11,000 |
| 2018 Capital Dividend Received | 8,200 |
| 2019 Sale Of Goodwill [(1/2)($43,000 - Nil)] | 21,500 |
| 2019 Capital Dividend Paid | ( 16,000) |
| Balance - End Of 2019 | $24,700 |

### *Exercise Fourteen - 10 Solution*

The required calculations are as follows:

| | |
|---|---|
| Fair Market Value Per Share | $25.00 |
| New Shares Received [(5%)(1,000)] | 50 |
| Non-Eligible Dividend Received | $1,250.00 |
| Gross Up [(15%)($1,250.00)] | 187.50 |
| Taxable Dividend | $1,437.50 |
| Dividend Tax Credit [(9/13)(15%)($1,250)] | $129.81 |

Jean's Net Income For Tax Purposes would be increased by the taxable dividend of $1,437.50. His federal Tax Payable would be decreased by the dividend tax credit of $129.81.

| | Number of Shares | ACB/Share | Total ACB |
|---|---|---|---|
| Pre-Dividend Shares | 1,000 | $18 | $18,000 |
| Stock Dividend Addition | 50 | $25 | 1,250 |
| Totals | 1,050 | | $19,250 |

The per share adjusted cost base of Jean's shares would be $18.33 ($19,250 ÷ 1,050).

### *Exercise Fourteen - 11 Solution*

The required calculations for the corporation are as follows:

| | |
|---|---|
| Proceeds Of Disposition [($51)(150,000)] | $7,650,000 |
| Adjusted Cost Base [($42)(150,000)] | ( 6,300,000) |
| Capital Gain | $1,350,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 675,000 |

The calculations for Sandrine are as follows:

| | |
|---|---|
| Dividend Received [(15%)($51)(150,000)] | $1,147,500 |
| Gross Up [(15%)($1,147,500)] | 172,125 |
| Taxable Dividend | $1,319,625 |
| Dividend Tax Credit [(9/13)(15%)($1,147,500)] | $ 119,163 |

Cloutier Ltd.'s Net Income For Tax Purposes would be increased by the $675,000 taxable capital gain. Sandrine's Net Income For Tax Purposes would be increased by the taxable dividend of $1,319,625. Her federal Tax Payable would be decreased by the dividend tax credit of $119,163.

### *Exercise Fourteen - 12 Solution*

This transaction will result in an ITA 84(1) deemed dividend for all shareholders, calculated as follows:

| | |
|---|---|
| PUC Of New Shares [(40,000)($12.70)] | $508,000 |
| Increase In Net Assets | ( 450,000) |
| ITA 84(1) Deemed Dividend | $ 58,000 |

This would be allocated to all 166,000 (126,000 + 40,000) shares outstanding, on the basis of $0.35 per share. This would be a taxable dividend, subject to either the eligible or non-eligible dividend gross up and tax credit procedures. The $0.35 per share dividend would also be added to the adjusted cost base of all 166,000 shares.

With the addition of $0.35 resulting from the ITA 84(1) deemed dividend to the original issue price of $10.50, the adjusted cost base of these shares is now $10.85 per share. Mr. Uni's sale of 5,000 shares at $13.42 per share would result in a taxable capital gain calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition [($13.42)(5,000)] | $67,100 |
| Adjusted Cost Base [($10.85)(5,000)] | ( 54,250) |
| Capital Gain | $12,850 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 6,425 |

### *Exercise Fourteen - 13 Solution*

The analysis of the $2,350,000 distribution would be as follows:

| | |
|---|---|
| Cash Distributed | $2,350,000 |
| PUC Of Shares | ( 250,000) |
| ITA 84(2) Deemed Dividend | $2,100,000 |
| ITA 83(2) Capital Dividend | ( 340,000) |
| ITA 88(2)(b) Taxable Dividend | $1,760,000 |

To the extent the Company has a balance in its GRIP account, some amount of the $1,760,000 dividend could be designated as eligible. Any remainder will be taxed as a non-eligible dividend.

The wind-up results in a disposition of the shares. The tax consequences of this disposition are as follows:

| | |
|---|---|
| Cash Distributed | $2,350,000 |
| ITA 84(2) Deemed Dividend | ( 2,100,000) |
| ITA 54 Proceeds Of Disposition | $ 250,000 |
| Adjusted Cost Base | ( 250,000) |
| Capital Gain | Nil |

As shown by the preceding calculation, there would be no capital gain on the disposition.

### *Exercise Fourteen - 14 Solution*

The redemption transaction would have no tax consequences for Ms. Tandy. The tax consequences to Jesuiah Tandy resulting from the redemption of his shares would be as follows:

| | |
|---|---|
| Proceeds Of Redemption [(15,000)($11.75)] | $176,250 |
| PUC [(15,000)($8.25)] | ( 123,750) |
| ITA 84(3) Deemed Dividend | $ 52,500 |
| Gross Up Of 15 Percent | 7,875 |
| Taxable Dividend | $ 60,375 |

| | |
|---|---|
| Dividend Tax Credit [(9/13)(15%)($52,500)] | $ 5,452 |

| | |
|---|---|
| Proceeds Of Redemption [(15,000)($11.75)] | $176,250 |
| ITA 84(3) Deemed Dividend | ( 52,500) |
| ITA 54 Proceeds Of Disposition | $123,750 |
| Adjusted Cost Base [(15,000)($7.90)] | ( 118,500) |
| Capital Gain (PUC - ACB) | $ 5,250 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 2,625 |

Both the taxable dividend and the taxable capital gain would increase Jesuiah's Net Income For Tax Purposes by a total of $63,000 ($60,375 + $2,625). The federal dividend tax credit would decrease federal Tax Payable by $5,452.

### *Exercise Fourteen - 15 Solution*

To the extent of the $225,000 PUC reduction, the dividend will be treated as a tax free distribution. The tax consequences will be a reduction in the PUC of these shares to $225,000 ($450,000 - $225,000), as well as an adjusted cost base reduction to $400,000 ($625,000 - $225,000). The $105,000 ($330,000 - $225,000) excess of the distribution over the PUC reduction will be an ITA 84(4) deemed dividend, subject to either the eligible or non-eligible dividend gross up and tax credit procedures. As it will be taxed as a dividend, this part of the distribution will not be subtracted from the adjusted cost base of the shares.

## Self Study Solution Fourteen - 1

### *Part A - Non-Capital And Net Capital Losses*

**Net Business Loss** The net business loss for the period to March 31, 2019 would be as follows:

| | |
|---|---|
| Loss As Per March 31, 2019 Income Statement | ($23,000) |
| Required Accounts Receivable Adjustment ($45,000 - $33,000) | ( 12,000) |
| Building Election - Recaptured CCA ($285,000 - $270,000) | 15,000 |
| Fixtures And Equipment - Deemed CCA ($95,000 - $90,000) | ( 5,000) |
| Vehicles Election - Recaptured CCA ($87,000 - $80,000) | 7,000 |
| Net Business Loss For Period Ending March 31, 2019 | ($18,000) |

**Net And Taxable Income** Net Income For Tax Purposes and Taxable Income for the period ending March 31, 2019, calculated as per the ITA 3 rules, would be as follows:

| | | |
|---|---|---|
| ITA 3(a) - Non-Capital Income (Positive Amounts Only) | | Nil |
| ITA 3(b) - Net Taxable Capital Gains (Losses): | | |
| Elections Under ITA 111(4)(e): | | |
| Gain On Land [(1/2)($420,000 - $275,000)] | $ 72,500 | |
| Gain On Building [(1/2)($320,000 - $285,000)] | 17,500 | |
| Required Write-Down - ITA 111(4)(c) And (d) | | |
| Loss On Temporary Investments | | |
| [(1/2)($53,000 - $23,000)] | ( 15,000) | 75,000 |
| ITA 3(c) - Total | | $ 75,000 |
| ITA 3(d) - Business Loss For The Period | | ( 18,000) |
| Net Income For Tax Purposes | | $ 57,000 |
| Net Capital Loss Carry Forward | | |
| (Limited To Amount Included Under ITA 3(b) | | ( 75,000) |
| Taxable Income | | Nil |

**Lost Net Capital Loss** The net capital loss that would be lost would be calculated as follows:

| | |
|---|---|
| From 2017 [(1/2)($68,000)] | $34,000 |
| From 2018 [(1/2)($85,000)] | 42,500 |
| Net Capital Loss Balance At March 31, 2019 | $76,500 |
| Amount Deducted In 2019 | ( 75,000) |
| Net Capital Loss Lost On Acquisition of Control | $ 1,500 |

**Non-Capital Loss Carry Forward** The non-capital loss carry forward would be calculated as follows:

| | |
|---|---|
| Net Business Loss For Period | $ 18,000 |
| Net Capital Loss Deducted | 75,000 |
| Subtotal | $ 93,000 |
| Income Under ITA 3(c) | ( 75,000) |
| Non-Capital Loss For The Period Ending March 31, 2019 | $ 18,000 |
| Non-Capital Loss Carry Forward From 2017 | 63,500 |
| Non-Capital Loss Carry Forward From 2018 | 78,500 |
| Non-Capital Loss Carry Forward At March 31, 2019 | $160,000 |

### *Part B - Loss Carry Forward In 2019*

The April 1 to December 31, 2019 Net Income For Tax Purposes would be $78,000 ($123,000 - $45,000). Note that there is no restriction against deducting the current year loss on bread operations against other sources of income. However, none of the non-capital loss carry forward of $160,000 can be used as these losses can only be applied against income in the bread operations. This leaves the 2019 Taxable Income equal to the Net Income For Tax Purposes of $78,000. The non-capital loss carry forward at December 31, 2019 is unchanged at $160,000.

### *Part C - Loss Carry Forward In 2020*

The $40,000 loss on the figurines must be deducted from the profits of the bread operations to produce a Net Income For Tax Purposes of $171,000 ($211,000 - $40,000). As this income is entirely from bread operations, all of the $160,000 non-capital loss carry forward can be deducted, leaving a Taxable Income of $11,000. There is no remaining non-capital loss carry forward at December 31, 2020.

## Self Study Solution Fourteen - 2

### *Part A*

As a result of the acquisition of control, LF will have a deemed taxation year end on April 30, 2019. This results in a short January 1, 2019 through April 30, 2019 taxation year for LF. The effects of this include:

- An additional year will be counted towards the expiry of the non-capital losses.
- If CCA is to be taken, it will have to be calculated for a short fiscal period.
- All of the usual year end procedures (timing of bonuses, inclusion of reserves, etc.) will have to be carried out.
- For the first year after the acquisition of control, LF can choose a new fiscal year end, on any date up to 53 weeks after the deemed year end.

Other implications are as follows:

- Any net capital loss balance that that remains cannot be used after the deemed year end.
- Any non-capital loss balance that is carried forward can only be used against profits earned in the same or a similar line of business.
- The manufacturing equipment, because its fair market value is less than its UCC, will have to be written down to the $285,000 UCC value. The $90,000 ($375,000 - $285,000) amount of the write down will be treated as deemed CCA.

### *Part B*

The land, Class 1 assets, and Class 8 assets all have fair market values in excess of their tax values. If the deemed disposition election is made and the fair market value of these assets is used as the elected value, the results would be as follows:

| Asset | Recapture | Capital Gain |
|---|---:|---:|
| Land ($925,000 - $450,000) | N/A | $475,000 |
| Class 1 ($650,000 - $515,000) | $135,000 | Nil |
| Class 8 ($15,000 - $10,000) | 5,000 | Nil |
| Total Income | $140,000 | $475,000 |

### Part C

If the Companies believe that they will be able to generate sufficient income to use the non-capital loss carry forward in future periods, they will not want to make elections that will result in any unneeded pre-acquisition income. If the elections are made, the losses will increase the adjusted cost base or UCC balance of the assets the elections are made on. In the case of the land, the increased cost will not be of benefit until the land is sold. In the case of the depreciable assets, the increased UCC will only be deductible at the applicable rates of 4 or 20 percent. Alternatively, a non-capital loss carry forward can be deducted in full, as soon as the Companies have sufficient appropriate income to absorb it.

The situation with net capital losses is different. If such losses are not used during the short fiscal period prior to the acquisition of control, they will be lost forever. Given this, it would be appropriate to make an election that would absorb the $65,000 net capital loss from 2017. This will require a capital gain of $130,000 [(2)($65,000)] which can be created by electing a deemed disposition on the land at a value of $580,000. This election will create a taxable capital gain of $65,000 [(1/2)($580,000 - $450,000)].

Given the required write-down of the manufacturing equipment, the Net Business Loss would be calculated as follows:

| | |
|---|---|
| Operating Loss To April 30, 2019 (Given) | ($ 55,000) |
| Deemed CCA On Class 53 ($375,000 - $285,000) | ( 90,000) |
| Net Business Loss For The Period Ending April 30, 2019 | ($145,000) |

Using this figure, along with the results of the election on the land, Net and Taxable Income would be calculated as follows:

| | |
|---|---|
| ITA 3(a) Non-Capital Income (Positive Amounts Only) | Nil |
| ITA 3(b) Net Taxable Capital Gains | |
| Election Under ITA 111(4)(e) On Land | $ 65,000 |
| ITA 3(c) Total | $ 65,000 |
| ITA 3(d) Net Business Loss For The Period | ( 145,000) |
| Net Income For Tax Purposes | Nil |
| Net Capital Loss Carry Forward (See Following) | ($ 65,000) |
| Taxable Income | Nil |

The non-capital loss carry forward at April 30, 2019 would be calculated as follows:

| | |
|---|---|
| Net Business Loss For The Period | $145,000 |
| Net Capital Loss Deducted | 65,000 |
| Subtotal | $210,000 |
| Income Under ITA 3(c) | ( 65,000) |
| Non-Capital Loss For The Period Ending April 30, 2019 | $145,000 |
| Carry Forward From 2017 | 180,000 |
| Carry Forward From 2018 | 140,000 |
| Non-Capital Loss Carry Forward | $465,000 |

The net capital loss balance from 2017 would be eliminated by the $65,000 carry forward deduction, leaving a balance of nil to be carried forward.

***Part D***

If there is uncertainty with respect to the ability of OLC and LF to generate income in the same or similar line of business in amounts sufficient to absorb the non-capital loss carry forward, additional elections should be made to absorb as much of this balance as possible. This would require elections on all of the assets with capital gains or recapture. Under this approach Net Business Income would be calculated as follows:

| | |
|---|---|
| Operating Loss To April 30, 2019 (Given) | ($ 55,000) |
| Deemed CCA On Class 53 ($375,000 - $285,000) | ( 90,000) |
| Class 1 - Recaptured CCA | 135,000 |
| Class 8 - Recaptured CCA | 5,000 |
| Net Business Loss For The Period Ending April 30, 2019 | ($ 5,000) |

The resulting Net and Taxable Income amounts would be calculated as follows:

| | |
|---|---|
| ITA 3(a) - Non-Capital Income (Positive Amounts Only) | Nil |
| ITA 3(b) - Net Taxable Capital Gains (Losses): | |
| Capital Gain On Land [(1/2)($925,000 - $450,000)] | $237,500 |
| ITA 3(c) - Total | $237,500 |
| ITA 3(d) - Business Loss For The Period | ( 5,000) |
| Net Income For Tax Purposes | $232,500 |
| Net Capital Loss Carry Forward (All) | ( 65,000) |
| Subtotal | $167,500 |
| Non-Capital Loss Carry Forward | |
| (Maximum Needed To Reduce Income To Nil) | ( 167,500) |
| Taxable Income | Nil |

Under this Part D approach, the non-capital loss carry forward at April 30, 2019 would be calculated as follows:

| | |
|---|---|
| Net Business Loss For The Period | $ 5,000 |
| Net Capital Loss Deducted | 65,000 |
| Subtotal | $ 70,000 |
| Income Under ITA 3(c) | ( 237,500) |
| Non-Capital Loss For The Period Ending April 30, 2019 | Nil |

| | |
|---|---|
| Carry Forward From 2017 | $180,000 |
| Carry Forward From 2018 | 140,000 |
| Non-Capital Loss Carry Forward Deducted | |
| For The Period Ending April 30, 2019 | ( 167,500) |
| Non-Capital Loss Carry Forward | $152,500 |

As in Part C, the net capital loss from 2017 is eliminated by the $65,000 loss carry forward deduction.

## Self Study Solution Fourteen - 3

***Part A***

By virtue of ITA 251(2)(a), John Fleming and Eric Flame are related by the fact that they are married to persons who are connected by a blood relationship (their wives). In addition, under ITA 256(1.5) a person who owns shares in two or more corporations shall be, as a shareholder of one of the corporations, deemed to be related to himself as a shareholder of the other corporation(s).

Given this, Fleming Ltd. and Lartch Inc. are associated under ITA 256(1)(d). John Fleming controls Fleming Ltd., is a member of a related group (John Fleming and Eric Flame) that controls Lartch Inc., and owns more than 25 percent of the voting shares of Lartch Inc.

In a similar fashion, Flame Ltd. is associated with Lartch Inc. under ITA 256(1)(d), as Eric Flame controls Flame Ltd., is a member of a related group (John Fleming and Eric Flame) that controls Lartch Inc., and owns more than 25 percent of Lartch Inc.

Based on these associations, Fleming Ltd. and Flame Ltd. are associated under ITA 256(2), as they are both associated with a third corporation, Lartch Inc. If it was desirable, Lartch Inc. could make the appropriate election under ITA 256(2) to be deemed not to be associated with Fleming Ltd. and Flame Ltd. which would allow Fleming Ltd. and Flame Ltd. to avoid association. However, the annual business limit for Lartch Inc. would be reduced to nil.

### Part B

Mr. and Mrs. Cuso are a group with respect to both Male Ltd. and Female Inc. [ITA 256(1.2)(a) - two or more persons holding shares in the same corporation]. As a group, they control both Male Ltd. and Female Inc. Therefore, the two Companies are associated under ITA 256 (1)(b). The fact that Mr. and Mrs. Cuso are related is not relevant.

### Part C

Ms. Jones and Miss Lange are a group that controls Alliance Ltd. However, they do not control Breaker Inc., as Mrs. Kelly (not a member of the group that controls Alliance Ltd.) owns 50 percent of the shares. Therefore, Alliance Ltd. and Breaker Inc. are not associated.

### Part D

While they are not related, Mr. Martin and Mr. Oakley constitute a group [ITA 256(1.2)(a)] with respect to both Martin Inc. and Oakley Ltd. As both Martin Inc. and Oakley Ltd. are controlled by the same group, the two Companies are associated under ITA 256(1)(b).

### Part E

The two Companies are related, but not associated. While Lily and James are related, they are not a group with respect to the two Companies and there is no cross-ownership of shares.

## Self Study Solution Fourteen - 4

### Case 1

As a group, Mr. Jones and Mr. Twitty control both Jones Ltd. and Twitty Inc. As a consequence, these two Companies would be associated under ITA 256(1)(b).

### Case 2

Ms. Wynette controls Wynette Enterprises Ltd., and is related to each member of the group that controls Lynn Inc. In addition, Ms. Wynette has the necessary 25 percent plus cross-ownership in Lynn Inc. As a consequence, Wynette Enterprises Ltd. and Lynn Inc. are associated under ITA 256(1)(d).

### Case 3

A group, consisting of Mr. Travis and Mr. Cash, has control of both Cowboys Ltd. and Horses Inc. Therefore, Cowboys Ltd. and Horses Inc. are associated under ITA 256(1)(b).

### Case 4

As Randy's Boots Inc. controls Hill Inc., those two companies are associated under ITA 256(1)(a).

As Mr. Nelson owns 80 percent of the shares of Willie's Hits Ltd., he controls that company. This gives him control over the 20 percent of Hill Inc. shares that are owned by Willie's Hits.

However, Mr. Nelson does not control Randy's Boots, and this means that his indirect interest in Hill Inc. through Randy's Boots of 24 percent [(30%)(80%)] is the product of the two ownership percentages.

As a result, his overall interest in Hill Inc. is only 44 percent (20% + 24%), which is not sufficient to give him control over Hill. Therefore, Willie's Hits Ltd. and Hill Inc. are not associated and Willie's Hits Ltd. and Randy's Boots Inc. are not associated.

### *Case 5*

Ms. Parton controls Alpha Company, is related to each member of the group (Ms. Parton and her spouse) that control Beta Company, and has cross-ownership of Beta Company in excess of 25 percent. This means that these two Companies are associated under ITA 256(1)(d).

Her spouse controls Centra Company, is related to each member of the group (the spouse and Ms. Parton) that controls Beta Company, and has the necessary cross-ownership of at least 25 percent of Beta Company shares. This means that these two Companies are also associated under ITA 256(1)(d).

As they are not controlled by the same individual or group, Alpha Company and Centra Company are not associated under ITA 256(1). However, as they are both associated with the same third corporation (Beta Company), Alpha and Centra would be associated under ITA 256(2). Note that ITA 256(2) allows Alpha and Centra to avoid association, provided Beta elects not to be associated with either Company. This will mean, however, that Beta will have a business limit for the period of nil.

### *Case 6*

For the purposes of determining associated companies, Ms. Gale is deemed to own the 30 percent interest in Norton Music Inc. that is held by her minor child [ITA 256(1.3)] and the 20 percent interest in Norton Music Inc. for which she holds an option [ITA 256(1.4)]. When this is combined with her own interest of 10 percent, she would be considered to control Norton Music Inc. As she controls both Kristal Enterprises Ltd. and Norton Music Inc., these Companies are associated under ITA 256(1)(b).

## Self Study Solution Fourteen - 5

### *Case A*

Luxor's annual expenditure limit would be $2,887,500. This amount is calculated as follows:

[$3,000,000][($40,000,000 – $1,500,000) ÷ $40,000,000]

### *Case B*

Gargle's annual expenditure limit would be $2,827,500, calculated as follows:

[$3,000,000][($40,000,000 – $2,300,000) ÷ $40,000,000]

As the eligible SR&ED current expenditures exceed this limit, some of the expenditures will only be eligible for the 15 percent rate:

| | |
|---|---|
| Total Current SR&ED Expenditures | $3,200,000 |
| Annual Expenditure Limit (Eligible For 35 Percent Rate) | ( 2,827,500) |
| Limited To 15 Percent Rate | $ 372,500 |

The total amount of investment tax credits available can be calculated as follows:

| | |
|---|---|
| Qualified Property [(10%)($86,000)] | $ 8,600 |
| SR&ED Current Expenditures: | |
| At 35 Percent Rate [(35%)($2,827,500)] | 989,625 |
| At 15 Percent Rate [(15%)($372,500)] | 55,875 |
| Total Available Amount | $1,054,100 |

Gargle is a qualifying corporation. The refund available would be as follows:

| | Rate | ITC | Refund |
|---|---|---|---|
| Qualified Property | 40% | $ 8,600 | $ 3,440 |
| SR&ED Current Expenditures | 100% | 989,625 | 989,625 |
| SR&ED Current Expenditures | 40% | 55,875 | 22,350 |
| Total Available | | $1,054,100 | $1,015,415 |

The non-refunded investment tax credit of $38,685 ($1,054,100 - $1,015,415) can be carried forward 20 years to be applied against Tax Payable. There was no Tax Payable in the last three years so it cannot be carried back.

The cost of the qualified property will be reduced in 2020 by the refundable investment tax credit of $3,440. The $1,011,975 ($989,625 + $22,350) refundable tax credit on current SR&ED expenditures will be added to income in 2020.

### *Case C*

With respect to the $250,000 in apprentice salaries, the investment tax credit is available on an annual salary maximum of $20,000 per apprentice. As a result, there will be a $17,500 [(5)(10%)($15,000) + (5)(10%)($20,000 maximum)] credit against 2018 federal Tax Payable. This $17,500 credit will be added to income in 2019.

With respect to the $800,000 in capital expenditures, there will be a 2019 credit against federal Tax Payable of $80,000 [(10%)($800,000)].

The $80,000 credit will not influence the calculation of 2018 CCA. This amount will be $360,000 [(30%)(150%)($800,000)].

In 2019, the $80,000 credit will be deducted from the January 1, 2019 UCC, leaving a balance of $360,000 ($800,000 - $360,000 - $80,000). Given this, 2019 CCA will be $108,000 [(30%)($360,000)].

## Self Study Solution Fourteen - 6

The December 31, 2019 balance in the capital dividend account is calculated as follows:

| | |
|---|---|
| 2008 Capital Gain [(1/2)($343,500 - $225,000)] | $ 59,250 |
| 2009 Life Insurance Proceeds | 162,000 |
| 2011 Capital Loss [(1/2)($150,000 - $220,000)] | ( 35,000) |
| 2013 Capital Dividend Received | 26,000 |
| 2017 Net Capital Loss | |
| {[1/2][($80,000 - $50,000) - ($100,000 - $45,000)]} | ( 12,500) |
| Capital Dividends Paid [(3)($45,000)] | ( 135,000) |
| Balance December 31, 2019 | $ 64,750 |

## Self Study Solution Fourteen - 7

The December 31, 2019 balance in the capital dividend account is calculated as follows:

| | |
|---|---|
| 2008 Life Insurance Proceeds | $186,000 |
| 2010 Capital Dividend Received | 26,300 |
| 2015 Capital Dividend Paid | ( 45,200) |
| 2016 Capital Gain [(1/2)($226,100 - $184,300)] | 20,900 |
| 2018 Capital Gain [(1/2)($93,400 - $48,600)] | 22,400 |
| 2018 Capital Loss [(1/2)($108,300 - $112,600)] | ( 2,150) |
| 2019 Capital Dividend Paid | ( 16,400) |
| Balance December 31, 2019 | $191,850 |

## Self Study Solution Fourteen - 8

***Case 1***

To the extent of the $163,000 PUC reduction, the liquidating dividend will be treated as a tax free distribution to Mr. Farnsworth. However, there will be tax consequences related to this distribution:

- The PUC of Mr. Farnsworth's shares will be reduced to $160,000 ($323,000 - $163,000).
- The ACB of Mr. Farnsworth's shares will be reduced to $299,000 ($462,000 - $163,000).

The $97,000 ($260,000 - $163,000) excess of the distribution over the PUC reduction will be an ITA 84(4) deemed dividend. For inclusion in Taxable Income, it will be grossed up to $111,550 [(115%)($97,000)]. It will generate a federal dividend tax credit of $10,073 [(9/13)(15%)($97,000)]. This deemed dividend part of the distribution will not be subtracted from the adjusted cost base of the shares.

***Case 2***

The tax consequences to Michelle Chawla resulting from the redemption of her shares would be as follows:

| | |
|---|---|
| Proceeds Of Redemption [($20.80)(125,000)] | $2,600,000 |
| PUC [($20)(125,000)] | ( 2,500,000) |
| ITA 84(3) Deemed Dividend | $ 100,000 |

| | |
|---|---|
| Proceeds Of Redemption [($20.80)(125,000)] | $2,600,000 |
| ITA 84(3) Deemed Dividend | ( 100,000) |
| ITA 54 Proceeds Of Disposition | $2,500,000 |
| Adjusted Cost Base [($16.80)($125,000)] | ( 2,100,000) |
| Capital Gain | $ 400,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 200,000 |

For purposes of determining Taxable Income, the ITA 84(3) dividend will be grossed up to $115,000 [(115%)($100,000)], resulting in a total increase in Taxable Income of $315,000 ($115,000 + $200,000). A federal dividend tax credit of $10,385 [(9/13)(15%)($100,000)] will result from this transaction.

### *Case 3*

This transaction will result in an ITA 84(1) deemed dividend for all shareholders, calculated as follows:

| | |
|---|---|
| PUC Of New Shares [(42,000)($24.10)] | $1,012,200 |
| Increase In Net Assets (Liability Eliminated) | ( 900,000) |
| ITA 84(1) Deemed Dividend | $ 112,200 |

This would be allocated to all 275,000 (233,000 + 42,000) shares outstanding, on the basis of $0.408 per share ($112,200 ÷ 275,000).

Sue's share of the dividend would be $9,506 [(23,300)($0.408)]. For inclusion in her Taxable Income, this amount will be grossed up to $10,932 [(115%)($9,506)].

The deemed dividend will be added to the adjusted cost base of Sue's shares, resulting in a value of $22.908 ($22.50 + $0.408)] per share. A federal dividend tax credit of $987 [(9/13)(15%)($9,506)] will result from this transaction.

The tax consequences of Sue selling her shares would be as follows:

| | |
|---|---|
| Proceeds Of Disposition [(23,300)($24.85)] | $579,005 |
| Adjusted Cost Base [(23,300)($22.908)] | ( 533,756) |
| Capital Gain | $ 45,249 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 22,625 |

This will result in a total increase in Taxable Income of $33,557 ($22,625 + $10,932).

### *Case 4*

The analysis of the $3,175,000 distribution would be as follows:

| | |
|---|---|
| Cash Distributed | $3,175,000 |
| PUC Of Shares | ( 400,000) |
| ITA 84(2) Deemed Dividend | $2,775,000 |
| ITA 83(2) Capital Dividend | ( 427,000) |
| ITA 88(2)(b) Wind-Up Dividend | $2,348,000 |

The capital dividend would be distributed tax free. For inclusion in Taxable Income, the $2,348,000 dividend would be grossed up to $2,700,200 [(115%)($2,348,000)]. It would generate a federal dividend tax credit of $243,831 [(9/13)(15%)($2,348,000)].

The transaction would also result in an allowable capital loss calculated as follows:

| | |
|---|---|
| Cash Distributed | $3,175,000 |
| ITA 84(2) Deemed Dividend | ( 2,775,000) |
| ITA 54 Proceeds Of Disposition | $ 400,000 |
| Adjusted Cost Base | ( 1,450,000) |
| Capital Loss | ($1,050,000) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss | ($ 525,000) |

The allowable capital loss can be used in the current year, only to the extent of taxable capital gains realized in the current year.

## Chapter 14 Learning Objectives

After completing Chapter 14, you should be able to:

1. Explain the need for, and the tax implications of, a deemed year end when there has been an acquisition of control (paragraph [P hereafter] 14-1 to 14-13).
2. Apply the provisions related to charitable donations and loss carry forwards when there has been an acquisition of control (P 14-14 to 14-21).
3. Explain the treatment of unrecognized losses at a deemed year end resulting from an acquisition of control (P 14-22 to 14-34).
4. Apply the associated companies rules (P 14-35 to 14-52).
5. Apply the general rules applicable to investment tax credits and SR & ED expenditures by CCPCs (P 14-53 to 14-65).

---

6. Apply the provisions related to refundable investment tax credits (P 14-66 to 14-70).
7. Apply the carry over rules for investment tax credits, as well as describe the influence of an acquisition of control on their availability (P 14-71 to 14-75).
8. Explain the relationship between tax basis Shareholders' Equity and Shareholders' Equity as presented under GAAP (P 14-76 to 14-78).
9. Explain the concept of, and calculate the amount of, Paid Up Capital (P 14-79 to 14-82).
10. Identify and explain the major components of Tax Basis Retained Earnings (P 14-83 to 14-91).

---

11. Explain the objectives of, and list the major components of, the capital dividend account (P 14-92 to 14-95).
12. List the various types of dividends used to distribute corporate surplus (P 14-96 to 14-100).
13. Apply the procedures related to the declaration and payment of cash dividends (P 14-101 to 14-104).
14. Apply the procedures related to the declaration and payment of stock dividends (P 14-105 to 14-107).
15. Apply the procedures related to the declaration and payment of dividends in kind (P 14-108 to 14-110).

---

16. Apply the procedures related to the declaration and payment of capital dividends (P 14-111 to 14-115).
17. Explain and apply the procedures related to ITA 84(1) deemed dividends when there has been an increase in PUC (P 14-116 to 14-121).
18. Explain and apply the procedures related to ITA 84(2) deemed dividends on winding up (P 14-122 to 14-126).
19. Explain and apply the procedures related to ITA 84(3) deemed dividends on redemption, acquisition or cancellation of shares (P 14-127 to 14-130).
20. Explain and apply the procedures related to ITA 84(4) and 84(4.1) deemed dividends (P 14-131 to 14-136).

# CHAPTER 15

## How To Work Through Chapter 15

We recommend the following approach in dealing with the material in this chapter:

**The Decision To Incorporate - Tax Considerations**

- Read paragraph 15-1 to 15-9 (in the textbook).

**Other Advantages And Disadvantages Of Incorporation**

- Read paragraph 15-10 to 15-11.
- Do Self Study Problems Fifteen-1 and Fifteen-2 which is available on MyLab and check the solutions in this Study Guide.

**Basic Example Data - Tax Reduction And Deferral**

- Read paragraph 15-12 to 15-24.

**Public Companies - Tax Reduction And Deferral**

- Read paragraph 15-25 to 15-34.
- Do Exercise Fifteen-1 (in the textbook) and check the solution in this Study Guide.

**CCPCs - Active Business Income - Tax Reduction And Deferral**

- Read paragraph 15-35 to 15-40.
- Do Exercise Fifteen-2 and check the solution in this Study Guide.
- Read paragraph 15-41 to 15-45.

**CCPCs - Non-Dividend Investment Income - Tax Reduction And Deferral**

- Read paragraph 15-46 to 15-49.
- Do Exercise Fifteen-3 and check the solution in this Study Guide.
- Do Self Study Problem Fifteen-3 and check the solution in this Study Guide.

**CCPCs - Dividend Income - Tax Reduction And Deferral**

- Read paragraph 15-50 to 15-54.

**Conclusions On Tax Reductions And Deferrals**

- Read paragraph 15-55 to 15-57.
- Do Exercises Fifteen-4 and Fifteen-5 and check the solutions in this Study Guide.
- Do Self Study Problem Fifteen-4 and check the solution in this Study Guide.

**Provincial Taxes And Integration**

- Read paragraph 15-58 to 15-76.
- Do Self Study Problem Fifteen-5 and check the solution in this Study Guide.

**Tax-Free Dividend Calculations**

- Read paragraph 15-77 to 15-88.

### Income Splitting

- Read paragraph 15-89 to 15-91.
- Do Self Study Problem Fifteen-6 and check the solution in this Study Guide.

### Shareholder Benefits Including Loans

- Read paragraph 15-92 to 15-113.
- Do Exercises Fifteen-6 to Fifteen-8 and check the solutions in this Study Guide.
- Do Self Study Problems Fifteen-7 and Fifteen-8 and check the solutions in this Study Guide.

### Management Compensation - General Principles

- Read paragraph 15-114 to 15-120.

### Salary Vs. Dividend Decisions For The Owner-Manager

- Read paragraph 15-121 to 15-151.
- Do Exercise Fifteen-9 and check the solution in this Study Guide.

### Salary Vs. Dividends - Use Of Tax Credits

- Read paragraph 15-152 to 15-168.
- Do Exercises Fifteen-10 and Fifteen-11 and check the solutions in this Study Guide.

### Salary Vs. Dividends - Conclusion

- Read paragraph 15-169 to 15-170.
- Do Self Study Problems Fifteen-9 to Fifteen-11 and check the solutions in this Study Guide.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 15. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 15 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 15 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 15 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 15 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

# Solutions to Chapter Fifteen Exercises

### *Exercise Fifteen - 1 Solution*

As the new corporation would not be allocated any part of the annual business limit, all of the $100,000 would be taxed at full corporate rates:

| | |
|---|---|
| Corporate Income | $100,000 |
| Corporate Taxes [(26.5%)($100,000)] | ( 26,500) |
| Available For Eligible Dividends | $ 73,500 |

| | |
|---|---|
| Eligible Dividends Received By Ms. Ashley | $ 73,500 |
| Gross Up At 38 Percent | 27,930 |
| Taxable Dividends | $101,430 |
| Ms. Ashley's Tax Rate | 45% |
| Tax Payable Before Dividend Tax Credit | $ 45,644 |
| Dividend Tax Credit [(6/11 + 47.1%)($27,930)] | ( 28,390) |
| Personal Tax Payable | $ 17,254 |

| | |
|---|---|
| Eligible Dividends Received | $73,500 |
| Tax Payable | ( 17,254) |
| After Tax Retention | $56,246 |

This Exercise uses a below average corporate tax rate and an above average provincial dividend tax credit, both of which are favourable to the use of a corporation. Even with these favourable rates, use of a corporation only improves the after tax retention by $1,246 ($56,246 - $55,000).

### *Exercise Fifteen - 2 Solution*

Mr. Slater's combined tax rate on income earned by the unincorporated business is 49 percent (33% + 16%). If he incorporates, all of the $126,000 will be eligible for the small business deduction. This means it will be taxed at a corporate rate of 12 percent (38% - 10% - 19% + 3%). Mr. Slater's tax rate on non-eligible dividend income is 41.95 percent [(115%)(49%) - (9/13 + 27%)(15%)].

Using these tax rates, a comparison of the income retained with and without the use of a corporation is as follows:

| | With Corporation | Without Corporation |
|---|---|---|
| Business Income | $126,000 | $126,000 |
| Tax Rate | 12% | 49% |
| Tax Payable | $ 15,120 | $ 61,740 |
| Business Income | $126,000 | $126,000 |
| Tax Payable | ( 15,120) | ( 61,740) |
| Maximum Non-Eligible Dividend Payable | $110,880 | N/A |
| Personal Tax On Dividends [(41.95%)($110,880)] | ( 46,514) | N/A |
| After Tax Income Retained By Mr. Slater | $ 64,366 | $ 64,260 |

There is clearly a significant amount of tax deferral with respect to income left in the corporation. His Tax Payable on direct receipt of the $126,000 of business income would be $61,740, far higher than the $15,120 that would be paid by the corporation. There would also be a small tax savings as the $64,366 in income retained using the corporation is $106 greater than the $64,260 in income retained without the use of the corporation.

### *Exercise Fifteen - 3 Solution*

Mr. Slater's combined tax rate on interest income earned outside the corporation is 51 percent (33% + 18%). His tax on the direct receipt of $126,000 of interest income would be $64,260.

If he incorporates, the interest income will not be eligible for the small business deduction or the general rate reduction, and it will be subject to the ART. This means that, if the investments are transferred to a corporation, the interest will be taxed at a rate of 50-2/3 percent (38% - 10% + 10-2/3% + 12%). Mr. Slater's tax rate on non-eligible dividends received is 44.2 percent [(115%)(51%) - (9/13 + 27%)(15%)].

Using these tax rates, a comparison of the income retained with and without the use of a corporation is as follows:

| | With Corporation | Without Corporation |
|---|---|---|
| Interest Income | $126,000 | $126,000 |
| Tax Rate | 50-2/3% | 51% |
| Tax Payable | $ 63,840 | $ 64,260 |
| Interest Income | $126,000 | $126,000 |
| Tax Payable | ( 63,840) | ( 64,260) |
| Net Corporate Income Before Dividend Refund | $ 62,160 | N/A |
| Maximum Dividend Refund (See Note) | 38,640 | |
| Maximum Dividend Payable | $100,800 | |
| Personal Tax On Dividends [(44.2%)($100,800)] | ( 44,554) | |
| After Tax Income Retained By Mr. Slater | $ 56,246 | $ 61,740 |

As this would be a new corporation, it would have no transitional RDTOH balance from 2018. Given this, the balance in the Non-Eligible RDTOH would as follows:

| | |
|---|---|
| Non-Eligible RDTOH Balance [(30-2/3%)($126,000)] | $ 38,640 |

**Note** The refund is the lesser of 38-1/3 percent of dividends paid and the balance in the Non-Eligible RDTOH account. The available cash of $62,160 would support a dividend of $100,800 ($62,160 ÷ .61667), which includes a potential dividend refund of $38,640 [(38-1/3%)($100,800)]. In this case the two figures are both equal to $38,640.

With Mr. Slater's individual tax rate at 51 percent and the corporate tax rate at 50-2/3 percent, there is a very small amount of deferral. The amount would be $420 ($64,260 - $63,840), not enough to justify the tax cost associated with using a corporation.

The after tax retention results with a corporation are significantly worse than when the income is received directly. After tax retention is reduced from $61,740 to $56,246, a reduction of $5,494. There is clearly a tax cost as a result of transferring the investments to a corporation.

### *Exercise Fifteen - 4 Solution*

**Direct Receipt** If the income is received directly, the total Tax Payable will be as follows:

| | | |
|---|---|---|
| Eligible Dividends Received | $46,000 | |
| Gross Up At 38 Percent | 17,480 | $ 63,480 |
| Non-Eligible Dividends Received | $87,000 | |
| Gross Up At 15 Percent | 13,050 | 100,050 |
| Taxable Dividends | | $163,530 |
| Interest Income | | 32,000 |
| Taxable Income | | $195,530 |
| Personal Tax Rate (33% + 18%) | | 51% |
| Tax Payable Before Dividend Tax Credit | | $ 99,720 |
| Dividend Tax Credit | | |
| [(6/11 + 5/11)($17,480)] | ($17,480) | |
| [(9/13 + 4/13)($13,050)] | ( 13,050) | ( 30,530) |
| Personal Tax Payable | | $ 69,190 |

The after tax retention can be calculated as follows:

| | |
|---|---|
| Cash Received ($46,000 + $87,000 + $32,000) | $165,000 |
| Tax Payable | ( 69,190) |
| After Tax Retention - Direct Receipt | $ 95,810 |

**Transfer To Corporation** If the investments are transferred to a corporation, the tax rate on the interest income is 50-2/3 percent (38% - 10% + 10-2/3% + 12%). Given this, the corporate taxes will be as follows:

| | |
|---|---|
| Part IV Tax On Eligible Dividends Received [(38-1/3%)($46,000)] | $17,633 |
| Part IV Tax On Non-Eligible Dividends Received (100% Of The Dividend Refund Received The Subsidiary) | 29,000 |
| Tax On Interest Income [(50-2/3%)($32,000)] | 16,213 |
| Corporate Tax Payable Before Refund | $62,846 |

As this Tax Payable is smaller than the Tax Payable that would be paid on the direct receipt of income, the use of a corporation provides significant tax deferral. However, as the client needs all of the income produced by these investments, this advantage will not be used by him.

As this would be a new corporation, it would have no transitional RDTOH balance from 2018. Given this, the balance in the Eligible RDTOH would equal the Part IV tax on the eligible dividends received and would as follows:

| | |
|---|---|
| Eligible RDTOH Balance [(38-1/3%)($46,000)] | $17,633 |

The balance in the Non-Eligible RDTOH would be as follows:

| | |
|---|---|
| Part IV Tax On Non-Eligible Dividends Received | $29,000 |
| Part I Addition [(30-2/3%)($32,000)] | 9,813 |
| Non-Eligible RDTOH Balance | $38,813 |

The cash available for paying dividends would be $102,154 ($165,000 - $62,846). This represents 61.667 percent of $165,654. Paying a dividend in this amount would result in a refund of $63,500 [(38-1/3%)($165,654). However, this exceeds the sum of the RDTOH balances. This means that the total refund would be limited to $56,446 ($17,633 + $38,813), with a total dividend of $158,600 ($102,154 + $56,446).

The eligible dividends received by the corporation will be added to the GRIP balance, leaving $46,000 in this account. This means that $46,000 in dividends could be designated as eligible for the enhanced dividend gross up and tax credit procedures. The remainder of the dividends paid of $112,600 ($158,600 - $46,000) would be non-eligible.

This would result in personal taxes as follows:

| | | |
|---|---|---|
| Eligible Dividends Received | $46,000 | |
| Gross Up At 38 Percent | 17,480 | $ 63,480 |
| Non-Eligible Dividends Received | $112,600 | |
| Gross Up At 15 Percent | 16,890 | 129,490 |
| Taxable Dividends | | $192,970 |
| Personal Tax Rate | | 51% |
| Tax Payable Before Dividend Tax Credit | | $ 98,415 |
| Dividend Tax Credit | | |
| [(6/11 + 5/11)($17,480)] | ($17,480) | |
| [(9/13 + 4/13)($16,890)] | ( 16,890) | ( 34,370) |
| Personal Tax Payable | | $ 64,045 |

| | |
|---|---|
| Dividends Received ($46,000 + $112,600) | $158,600 |
| Personal Tax Payable | ( 64,045) |
| After Tax Retention - With Corporation | $ 94,555 |

As this is less than the $95,810 that would be retained on direct receipt of income, there is no tax advantage in going to the trouble and expense of forming a corporation to hold the client's investments.

### *Exercise Fifteen - 5 Solution*

The client's combined tax rate on direct receipt of income is 49 percent (33% + 16%). Based on this, the after tax amount retained on direct receipt of income can be calculated as follows:

| | |
|---|---|
| Capital Gain | $92,000 |
| Personal Taxes On Taxable Capital Gain [(49%)(1/2)($46,000)] | ( 22,540) |
| After Tax Retention - Direct Receipt | $69,460 |

If the investments are transferred to a CCPC, the aggregate investment income will be $46,000 [(1/2)($92,000)]. The applicable tax rate will be 50-2/3% (38% - 10% + 10-2/3% + 12%). As this rate is higher than the client's personal rate on income received directly, there would be no possible deferral of tax through the use of a corporation. However, even if the rate was more favourable, deferral is not an issue here as the client needs all of the income produced by these investments for her forthcoming bicycle trip.

Based on this corporate tax rate, the maximum distribution that can be made would be calculated as follows:

| | |
|---|---|
| Available Cash | $92,000 |
| Corporate Tax Payable [(50-2/3%)($46,000)] | ( 23,307) |
| Tax Free Capital Dividend [(1/2)($92,000)] | ( 46,000) |
| Available For Non-Eligible Dividend | $22,693 |
| Dividend Refund (See Note) | 14,107 |
| Non-Eligible Dividend Received | $36,800 |

As this would be a new corporation, it would have no transitional RDTOH balance from 2018. Given this, the balance in the Non-Eligible RDTOH would as follows:

| | |
|---|---|
| Non-Eligible RDTOH Balance [(30-2/3%)($46,000)] | $14,107 |

**Note** The refund is the lesser of 38-1/3 percent of dividends paid and the balance in the Non-Eligible RDTOH account. The available cash of $22,693 would support a dividend of $36,800 ($22,693 ÷ .61667 with a $1 rounding error), which includes a potential dividend refund of $14,107 [(38-1/3%)($36,800)]. In this case, the two figures are both equal to $14,107.

The client's tax rate on non-eligible dividend income is 41.35 percent [(115%)(49%) - (9/13 + 4/13)(15%)]. Based on this, the net after tax retention when a corporation is used would be as follows:

| | |
|---|---|
| Tax Free Capital Dividend Received | $46,000 |
| Non-Eligible Dividend Received | 36,800 |
| Tax Payable On Non-Eligible Dividend Received [(41.35%)($36,800)] | ( 15,217) |
| After Tax Retention - With Corporation | $67,583 |

As this is less than the $69,460 that would be retained on direct receipt of the income, there is no tax advantage in going to the trouble and expense of forming a corporation to hold the client's investments.

### *Exercise Fifteen - 6 Solution*

It is likely that Ms. Rourke will have to include the $50,000 principal amount of the loan in her Net Income For Tax Purposes in 2019. She owns more than 10 percent of the shares, making her a specified employee. This means that she does not qualify for the exception under ITA 15(2.4)(a). While she is an employee, it is unlikely that this type of loan would be generally available to all employees and, as a consequence, it is likely that she received the loan because of her position as a shareholder. This means that she does not qualify for the acquisition of an automobile exception under ITA 15(2.4)(d). If the loan is included in income, she will be entitled to a $50,000 deduction under ITA 20(1)(j) when she repays the loan in 2023.

In the unlikely event that the loan is not included in income and ITA 15(2) does not apply, she will have to include imputed interest at the prescribed rate for the period of the loan. Her shareholder benefit for 2019 is $500 [(2% - Nil)($50,000)(6/12)]. The imputed interest rate and benefit will vary as the prescribed rate changes. Note, however, if imputed interest is assessed, some portion of the amount may be deductible as it relates to the acquisition of an automobile to be used in employment duties.

### *Exercise Fifteen - 7 Solution*

If the loan is repaid on January 1, 2020, it will not be included in two consecutive Generic Inc. Balance Sheets. As a consequence, the principal amount will not have to be included in Ms. Fisk's income. However, as it is an interest-free loan, she will be assessed with a taxable benefit on the loan. The amount would be $1,890 [($162,000)(2% - Nil)(7/12)].

If the loan is not repaid until December 31, 2020, it will appear in two consecutive Generic Inc. Balance Sheets. This means the $162,000 in principal will have to be included in Ms. Fisk's income for the taxation year ending December 31, 2019. However, there will be no imputed interest benefit based on the loan's low rate of interest. In addition, when the loan is repaid, the payment can be deducted from Ms. Fisk's Net Income For Tax Purposes for the taxation year ending December 31, 2020.

### *Exercise Fifteen - 8 Solution*

Mr. Hasid will repay 25 percent of the loan, or $30,750 on October 31, 2020. This will leave an outstanding balance of $92,250 ($123,000 - $30,750) until October 31, 2021.

**If Granted As Employee** Provided Mr. Hasid receives the loan in his capacity as an employee of Hasid Ltd., the loan is one of the exceptions listed under ITA 15(2). This means that the principal amount will not have to be included in income. However, as the loan is interest free, a taxable benefit will arise. It will be calculated by applying the prescribed rate of 2 percent to the principal of the loan for all periods that it is outstanding.

The amount for 2019 would be $410 [($123,000)(2% - Nil)(2/12)] and $2,358 {[($123,000)(2% - Nil)(10/12)] + [($92,250)(2% - Nil)(2/12)]} for 2020. The taxable benefit calculations for 2021 to 2023 would be calculated in a similar fashion.

**If Granted As Shareholder** If Mr. Hasid cannot claim that he received the loan in his capacity as an employee of Hasid Ltd., $92,250 will be included in his income for 2019. The remaining $30,750 would not be included in income as it will have been repaid before Hasid Ltd.'s second year end. However, this balance will attract an interest benefit of $102.50 [($30,750)(2% - Nil)(2/12)] in 2019, and $512.50 [($30,750)(2% - Nil)(10/12)] in 2020.

As the remaining balance is repaid in 2021 through 2023, the payments can be deducted under ITA 20(1)(j) in the year they are repaid.

### *Exercise Fifteen - 9 Solution*

**(1) Salary Compensation**

If the full $550,000 is paid out as salary, it will be deductible and will reduce the Company's Taxable Income to nil. This means that no corporate taxes will be paid. This salary payment will result in Ms. Broad having Taxable Income of $550,000. Given this, her Tax Payable will be calculated as follows:

| | |
|---|---|
| Tax On First $210,371 (Given) | $ 75,000 |
| Tax On Remaining $339,629 ($550,000 - $210,371) At 51% | 173,211 |
| Tax Payable Before Credits | $248,211 |
| Personal Tax Credits (Given) | ( 5,000) |
| Total Tax Payable | $243,211 |

Based on the preceding Tax Payable, Ms. Broad's after tax retention would be $306,789 ($550,000 - $243,211), ignoring CPP contributions and the Canada employment credit.

**(2) Dividend Compensation**

As dividends are not deductible for tax purposes, corporate taxes will have to be paid prior to the payment of any dividends. While the $50,000 of income in excess of the annual business limit of $500,000 would not get the small business deduction, it would be eligible for the general rate reduction of 13 percent. Given this, the corporate rate on this income would be 29% (38% - 10% - 13% + 14%). On income eligible for the small business deduction, the rate would be 12% (38% - 10% - 19% + 3%). Using these rates, corporate taxes would be calculated as follows:

| | |
|---|---|
| Income Not Eligible For SBD [(29%)($50,000)] | $14,500 |
| Income Eligible For SBD [(12%)($500,000)] | 60,000 |
| Corporate Tax Payable | $74,500 |

After payment of these taxes, the maximum dividend that could be paid would be $475,500 ($550,000 - $74,500). The fact that the corporation's Taxable Income was in excess of the annual business limit of $500,000 will create an addition to the GRIP of $36,000 [(72%)($550,000 - $500,000)]. Given this, $36,000 of the dividend can be designated as eligible, leaving a non-eligible dividend of $439,500 ($475,500 - $36,000). The grossed up taxable dividends would be calculated as follows:

| | |
|---|---|
| Total Eligible And Non-Eligible Dividends Received | $475,500 |
| Gross Up: | |
| Eligible Dividends [(38%)($36,000)] | 13,680 |
| Non-Eligible Dividends [(15%)($439,500)] | 65,925 |
| Taxable Dividends | $555,105 |

Personal taxes on this dividend would be calculated as follows:

| | |
|---|---|
| Tax On First $210,371 (Given) | $ 75,000 |
| Federal Tax On Remaining $344,734 ($555,105 - $210,371) At 51% | 175,814 |
| Taxes Payable Before Credits | $250,814 |
| Personal Tax Credits (Given) | ( 5,000) |
| Dividend Tax Credit: | |
| Eligible Dividends [(6/11 + 30%)($13,680)] | ( 11,566) |
| Non-Eligible Dividends [(9/13 + 30%)($65,925)] | ( 65,418) |
| Personal Tax Payable | $168,830 |

The after tax retention would be equal to $306,670 ($475,500 - $168,830). This is $119 less than the after tax retention in the salary option of $306,789.

### *Exercise Fifteen - 10 Solution*

**Required Salary** Ms. Mortell's combined tax rate on additional salary is 45 percent (29% + 16%). In order to have $30,000 in after tax funds, she would have to receive salary of $54,545 [$30,000 ÷ (1 - .45)].

**Required Dividend** Ms. Mortell's tax rate on non-eligible dividends is 37.6 percent [(115%)(45%) - (9/13 + 25%)(15%)]. In order to have $30,000 in after tax funds, she would have to receive dividends of $48,077 [$30,000 ÷ (1 - .376)].

**Tax Cost Of Salary** The net tax cost of paying salary can be calculated as follows:

| | |
|---|---|
| Personal Tax On Receipt Of Salary [(45%)($54,545)] | $24,545 |
| Tax Savings To Corporation [(12%)($54,545)] | ( 6,545) |
| Net Tax Cost Of Salary Alternative | $18,000 |

**Tax Cost Of Dividend** As the dividend payment would not be deductible, its payment would not change corporate taxes. This means that the only tax cost would be the $18,077 [($48,077)(37.6%)] in personal taxes that Ms. Mortell would pay on the dividends received.

**Conclusion** As the tax cost associated with the payment of dividend is slightly larger, the salary alternative would be marginally preferable.

### *Exercise Fifteen - 11 Solution*

**Salary Alternative** - As the available cash is less than Taxable Income, some corporate taxes will have to be paid since there is insufficient cash to pay a salary equivalent to Taxable Income. To determine the maximum salary that can be paid (X), it is necessary to solve the following equation:

$$X = \$18,500 - [(12\%)(\$21,500 - X)]$$

$$X - 0.12X = [\$18,500 - (12\%)(\$21,500)] = \underline{\underline{\$18,091}}$$

| | | |
|---|---|---|
| Corporate Cash Before Taxes | | $18,500 |
| Corporate Taxes [(12%)($21,500 - $18,091)] | | ( 409) |
| Corporate Cash Available For Salary | | $18,091 |
| Salary Received | | $18,091 |
| Personal Tax Payable: | | |
| Personal Tax On Salary [(25%)(18,091)] | ($4,523) | |
| Personal Tax Credits (Given) | 3,950 | ( 573) |
| After Tax Cash Retained | | $17,518 |

**Dividend Alternative** - After tax cash retained with the dividend alternative would be calculated as follows:

| | |
|---|---|
| Corporate Cash Before Taxes | $18,500 |
| Corporate Taxes [(12%)($21,500)] | ( 2,580) |
| Corporate Cash Available For Dividends | $15,920 |
| Non-Eligible Dividend Received | $15,920 |
| Individual Taxes* | Nil |
| After Tax Cash Retained | $15,920 |

*No taxes would be paid on this amount of dividends (see Paragraph 15-86 of the text).

Given these calculations, it is clear that the preferred approach is to pay the maximum salary. Note, however, some combination of dividends and salary may provide an even better result.

## Self Study Solution Fifteen - 1

### *Part A - Goal Of Integration*

The goal of integration is to ensure that the amount of after tax income that an individual receives from a given income source should be the same regardless of whether that income is earned directly, or whether it is flowed through a corporation.

### *Part B - Tax Payable Without Corporation*

Personal Tax Payable without the corporation would be calculated as follows:

| | Business Income | Eligible Dividends |
|---|---|---|
| Income | $80,000 | $ 96,000 |
| Gross Up (38% Of $96,000) | N/A | 36,480 |
| Taxable Income | $80,000 | $132,480 |
| Tax Rate (33% + 18%) | 51% | 51% |
| Tax Payable Before Dividend Tax Credit | $40,800 | $ 67,565 |
| Dividend Tax Credit [(6/11 + 5/11)($36,480)] | N/A | ( 36,480) |
| Personal Tax Payable | $40,800 | $ 31,085 |

The personal Tax Payable if the income is received directly totals $71,885 ($40,800 + $31,085).

### Part C - Corporate Tax Payable

The portfolio dividends would result in Part IV tax of $36,800 [(38-1/3%)($96,000)]. However, this tax would be refunded on the payment of dividends. As a result, the portfolio dividends received of $96,000 would all be available for distribution.

The after tax corporate income available for distribution would be calculated as follows:

| | Business Income | Dividends |
|---|---|---|
| Income | $80,000 | $96,000 |
| Part I Tax [(28% - 19% + 2%)($80,000)] | ( 8,800) | |
| Part IV Tax [(38-1/3%)($96,000)] | | ( 36,800) |
| Available For Dividends | $71,200 | $59,200 |
| Dividend Refund [($59,200 ÷ .616667) - $59,200] | N/A | 36,800 |
| Total Distributable Income | $71,200 | $96,000 |

The amount of the dividend refund would be limited by the balance in the RDTOH accounts. The balance here would reflect the Part IV taxes paid on the portfolio dividends, all of which would be allocated to the Eligible RDTOH. There would be no allocation to the Non-Eligible RDTOH.

At this point, Slater Ltd. has the cash to support a dividend of $167,200 ($71,200 + $96,000), including a refund of $36,800. As all of the $96,000 of portfolio dividends received were allocated to the Company's GRIP account, this amount of dividends can be designated as eligible. The remaining dividends of $71,200 ($167,200 - $96,000), will be non-eligible.

The $36,800 refund would leave the balance in the Company's Eligible RDTOH at nil.

### Part C - Personal Tax Payable

Keith Slater's personal Tax Payable on receipt of the dividend distribution would be calculated as follows:

| | Non-Eligible Dividends | Eligible Dividends |
|---|---|---|
| Eligible Dividends | N/A | $ 96,000 |
| Gross Up At 38 Percent | N/A | 36,480 |
| After Tax ABI As Non-Eligible Dividends | $71,200 | N/A |
| Gross Up At 15 Percent | 10,680 | N/A |
| Taxable Dividends | $81,880 | $132,480 |
| Tax Rate (33% + 18%) | 51% | 51% |
| Tax Payable Before Dividend Tax Credits | $41,759 | $ 67,565 |
| Dividend Tax Credits: | | |
| Eligible Dividends [(6/11 + 5/11)($36,480)] | N/A | ( 36,480) |
| Non-Eligible Dividends [(9/13 + 4/13)($10,680)] | ( 10,680) | N/A |
| Personal Tax Payable | $31,079 | $ 31,085 |

The corporate and personal Tax Payable if Slater Ltd. is used totals $70,964 ($8,800 + $31,079 + $31,085).

### Part D - Comparison Of Results

Comparing the total Tax Payable under the two alternatives provides the following result:

| | |
|---|---|
| Tax Payable - Without Corporation | $71,885 |
| Tax Payable - With Corporation | ( 70,964) |
| Tax Savings With Corporation | $ 921 |

Flowing the income through Slater Ltd. results in a tax savings of $921. By calculating the tax burden on the active business income separately from the dividends, it is clear that there is perfect integration on the portfolio dividends. The Part IV tax paid at the corporate level is totally refunded and the personal taxes paid on the dividends are the same with or without the corporation.

In this example, the Part I corporate rate of 11 percent on the active business income is lower than the 13.04 percent level that is required for perfect integration. In addition, the combined federal/provincial dividend tax credit is equal to the rate required for perfect integration. As a result, there is a tax savings of $921 when the income is flowed through the corporation.

## Self Study Solution Fifteen - 2

### Advantages Of Incorporation

Among the more commonly cited advantages of incorporation would be the following:

**Tax Deferral** It would appear that, if he incorporates, all of the income earned by the corporation will be eligible for the small business deduction. As the corporate rate on this type of income is given as 11 percent, there would be tax deferral on income left within the corporation. As his marginal tax rate as an individual is in the 45 percent range, the amount of the deferral would be significant.

**Tax Reduction** For CCPCs earning active business income, the tax rate required for perfect integration is 13.04 percent. As the relevant corporate rate in his province is 11 percent, this suggests that there would be a tax savings on income flowed through a corporation. However, the provincial dividend tax credit must also be considered. The required rate for perfect integration is 4/13 of the dividend gross up. If the rate in

Gerald's province is below this, the savings resulting from the low corporate rate could be reduced or even eliminated.

**Income Splitting** With a proper structuring of the ownership of the corporation, income can be channeled into the hands of other members of Mr. Copley's family. This can be in the form of either salary or dividends, and will be subject to what we would assume to be significantly lower rates of taxation. We would note, however, that the ability to use this technique may be limited by the application of the Tax On Split Income (TOSI).

**Lifetime Capital Gains Deduction** For 2019, this provision allows for the deduction of up to $866,912 in capital gains. It is available on the disposition of shares in a qualified small business corporation. Properly structured, incorporation could permit all members of his family access to the lifetime capital gains deduction. To qualify, the corporation must be a Canadian controlled private corporation and have at least 90 percent of the fair market value of its assets being used in an active business in Canada. In addition, the shares:

- must not have been owned by anyone other than the taxpayer or a related party for at least 24 months preceding the disposition; and
- throughout this 24 month period, more than 50 percent of the fair market value of the corporation's assets must be used in an active business carried on primarily in Canada.

This deduction could represent a significant advantage of incorporating his business.

**Employee Benefits** While Mr. Copley's organization may be somewhat small to make this feasible, the corporation can be used to establish various retirement programs, as well as group life and health insurance packages.

**Estate Planning** A corporation can be useful in estate planning, particularly with respect to freezing the asset values in the estate (see Chapters 17 and 19).

**Limited Liability** An investor in a corporation is, in general, not liable to the creditors for the debts of the corporation. In the case of large publicly traded corporations this is a very real and important consideration. However, in the case of a small owner-managed business such as Mr. Copley's, it is unlikely that creditors would extend significant sums without getting his personal guarantee for repayment.

However, limited liability could be important if his business is exposed to any type of product liability risk.

**Liquidation Losses** If the business is unsuccessful and must be liquidated, the loss on corporate shares would be deductible as an allowable business investment loss. This means that one-half of the total amount could be deducted against any other income. However, it would require further analysis to ensure that this would involve a greater amount of deductions than would be the case if the business were liquidated in its present unincorporated form.

### *Disadvantages Of Incorporation*

A list of the disadvantages associated with incorporation would include the following:

**Administrative Costs** There will be higher legal, accounting and other costs associated with meeting the various reporting requirements that are necessary for the startup and maintenance of a corporation.

**Losses** The losses of the corporation cannot be offset against other personal income that the shareholders might have. Further, allowable capital losses of corporations can only be deducted against the corporation's taxable capital gains.

**Termination** If the corporation is terminated, there is no available rollover for transferring the assets back to Mr. Copley. Taxation will occur at fair market values. There is a further possibility of double taxation in that, while the corporation will be taxed on the disposition of its assets, the shareholder may be taxed on the same amounts when he disposes of his shares.

**Higher Taxes** Under advantages we noted that there could be a tax reduction associated with a corporation earning income that is eligible for the small business deduction. On the other hand, if the corporation earns income that is not eligible for the small business deduction, there will be a significant extra payment of combined corporate and personal income tax when such income flows through the corporation in the form of dividends to its shareholders.

**Winding Up Procedures** Because of its status as a separate legal entity, the procedures associated with winding up an incorporated business are significantly more complex than those associated with terminating an unincorporated enterprise.

### *Conclusions On Incorporation*

In evaluating the preceding advantages and disadvantages, a recommendation that Mr. Copley incorporate his business seems to be appropriate. He does not appear to need all of the income produced by the business for personal living expenses and, as a consequence, the ability to defer income within the corporation is attractive. Further, his eligibility for the small business deduction could result in a reduction in taxes, even on amounts that are withdrawn from the corporation. Other advantages related to incorporating Mr. Copley's business are the opportunities that may be available to split income between the various members of his family and for estate planning, especially considering the lifetime capital gains deduction.

## Self Study Solution Fifteen - 3

### *Part A - Direct Personal Investment*

Mrs. Martin's marginal tax rate is 46 percent (29% + 17%). If Mrs. Martin invests the $200,000 as an individual, the after tax return can be calculated as follows:

| | |
|---|---|
| Interest Income (All Taxable) | $14,000 |
| | |
| Interest Received | $14,000 |
| Personal Tax Payable At 46 Percent | ( 6,440) |
| After Tax Retention - Direct Receipt | $ 7,560 |

### *Part B - Investment Through Private Company*

If Mrs. Martin invests the $200,000 through her private company, any dividends paid will be non-eligible. The after tax return would be as follows:

| | |
|---|---|
| Interest Income | $14,000 |
| Corporate Taxes At 52 Percent | ( 7,280) |
| Net Corporate Income Before Dividend Refund | $ 6,720 |
| Maximum Dividend Refund (See Note) | 4,177 |
| Maximum Non-Eligible Dividend Payable | $10,897 |
| Gross Up At 15 Percent | 1,635 |
| Taxable Dividend | $12,532 |
| Personal Tax Rate | 46% |
| Personal Tax Payable Before Dividend Tax Credit | $ 5,765 |
| Dividend Tax Credit [(9/13 + 25%)($1,635)] | ( 1,541) |
| Personal Tax Payable | $ 4,224 |

| | |
|---|---|
| Dividends Received | $10,897 |
| Personal Tax Payable | ( 4,224) |
| After Tax Retention - With Corporation | $ 6,673 |

**Note** The Part I refundable taxes on the interest income would be $4,293 [(30-2/3%)($14,000)]. This full amount would be allocated to the Non-Eligible RDTOH balance.

The available corporate cash would support a dividend of $10,897 ($6,720 ÷ .61667, including a dividend refund of $4,177 [(38-1/3%)($10,897)]. As this refund is less than the balance in the Non-Eligible RDTOH, the refund would be limited to $4,177, for a total dividend of $10,897. The refund will leave a balance in the Non-Eligible RDTOH of $116 ($4,293 - $4,177).

As there is no balance in the new Company's GRIP, all of the $10,897 dividend will be non-eligible.

The difference between the two alternatives is $887 ($7,560 - $6,673) in favour of direct personal investment.

## Self Study Solution Fifteen - 4

### *Part A - Direct Personal Investment*

Mr. Martin's marginal tax rate is 46 percent (29% + 17%). If Mr. Martin invests the $200,000 as an individual, the after tax return can be calculated as follows:

| | |
|---|---|
| Eligible Dividends Received | $14,000 |
| 38 Percent Gross Up | 5,320 |
| Taxable Dividend | $19,320 |
| Personal Tax Rate | 46% |
| Personal Tax Payable Before Dividend Tax Credit | $ 8,887 |
| Dividend Tax Credit [(6/11 + 25%)($5,320)] | ( 4,232) |
| Personal Tax Payable | $ 4,655 |

| | |
|---|---|
| Dividends Received | $14,000 |
| Personal Tax Payable | ( 4,655) |
| After Tax Retention - Direct Receipt | $ 9,345 |

***Part B - Investment Through Private Company***

If Mr. Martin invests the $200,000 through his private company, the eligible dividends received would be classified as portfolio dividends, subject to Part IV tax at 38-1/3 percent. There would also be an addition to the corporation's GRIP account of $14,000 (notice that eligible dividends are not multiplied by 72 percent for the GRIP addition). The after tax retention on the flow through the corporation would be as follows:

| | |
|---|---|
| Eligible Dividends Received | $14,000 |
| Part IV Tax At 38-1/3 Percent (Portfolio Dividends) | ( 5,367) |
| Earnings Retained By Corporation | $ 8,633 |
| Refund When Dividends Paid (See Note) | 5,367 |
| Eligible Dividends Paid | $14,000 |

**Note** The available cash would support a dividend of $14,000 ($8,633 ÷ .61667), including a refund of $5,367 [(38-1/3%)($14,000)]. This refund is available as it is equal to the $5,367 balance in the RDTOH resulting from the payment of Part IV tax on the receipt of the dividends.

At this point, the corporation has paid no net amount of taxes and will be paying exactly the same amount of eligible dividends that it received. This will result in Mr. Martin paying exactly the same amount of taxes that he would have paid on direct receipt of the dividends. With the use of a corporation, the after tax retention would be identical to the after tax retention resulting from direct receipt of the dividends.

## Self Study Solution Fifteen - 5

***Approach 1 (Joins Partnership As Individual)***

Cora's share of the partnership income would be $70,000 [(10%)($700,000)]. Cora's Tax Payable resulting from this approach would be calculated as follows:

| | |
|---|---|
| Tax On First $47,630 At 23 Percent (15% + 8%) | $10,955 |
| Tax On Next $22,370 ($70,000 - $47,630) At 32.5 Percent (20.5% + 12%) | 7,270 |
| Tax Payable Before Credits | $18,225 |
| Personal Tax Credits - Given | ( 3,342) |
| Personal Tax Payable | $14,883 |

| | |
|---|---|
| Business Income | $70,000 |
| Personal Tax Payable | ( 14,883) |
| After Tax Retention - Alternative 1 | $55,117 |

***Approach 2 (All Dividends)***

The total corporate taxes would be calculated as follows:

| | |
|---|---|
| First $50,000 At 12 Percent | $ 6,000 |
| Remaining $20,000 At 27 Percent | 5,400 |
| Corporate Tax Payable | $11,400 |

If all of the after tax income is paid out, the resulting dividend will be $58,600 ($70,000 - $11,400).

As $20,000 of the corporation's income was taxed at the general rate, there would be a GRIP balance of $14,400 [(72%)($20,000)]. This means that of the total dividend of $58,600,

$14,400 could be designated as eligible, with the remaining $44,200 ($58,600 - $14,400) being non-eligible. Based on this, Cora's Taxable Income would be as follows:

| | |
|---|---|
| Eligible Dividend | $14,400 |
| Gross Up On Eligible Dividend At 38 Percent | 5,472 |
| Non-Eligible Dividend | 44,200 |
| Gross Up On Non-Eligible Dividend At 15 Percent | 6,630 |
| Total Taxable Income | $70,702 |

Based on this Taxable Income, her Tax Payable would be as follows:

| | |
|---|---|
| Tax On First $47,630 At 23 Percent (15% + 8%) | $10,955 |
| Tax On Remaining $23,072 ($70,702 - $47,630) | |
| At 32.5 Percent (20.5% + 12%) | 7,498 |
| Tax Payable Before Credits | $18,453 |
| Personal Tax Credits - Given | ( 3,342) |
| Dividend Tax Credit = Gross Up ($5,472 + $6,630) | ( 12,102) |
| Personal Tax Payable | $ 3,009 |

| | |
|---|---|
| Business Income | $70,000 |
| Corporate Tax Payable | ( 11,400) |
| Personal Tax Payable | ( 3,009) |
| After Tax Retention - Alternative 2 | $55,591 |

### *Approach 3 (Salary And Dividends)*

With the payment of $20,000 in salaries to reduce corporate income to her $50,000 share of the small business deduction, corporate taxes would be $6,000 [(12%)($50,000)]. This would leave $44,000 ($70,000 - $20,000 - $6,000) for the payment of dividends.

Since no income was taxed at the general rate, the GRIP balance would be nil. This means that the total dividend of $44,000 would be non-eligible. Cora's Taxable Income would be calculated as follows:

| | |
|---|---|
| Salary | $20,000 |
| Non-Eligible Dividend | 44,000 |
| Gross Up On Non-Eligible Dividend At 15 Percent | 6,600 |
| Taxable Income | $70,600 |

Her Tax Payable would be calculated as follows:

| | |
|---|---|
| Tax On First $47,630 At 23 Percent (15% + 8%) | $10,955 |
| Tax On Next $22,970 ($70,600 - $47,630) | |
| At 32.5 Percent (20.5% + 12%) | 7,465 |
| Tax Payable Before Credits | $18,420 |
| Personal Tax Credits - Given | ( 3,342) |
| Dividend Tax Credit = Gross Up | ( 6,600) |
| Personal Tax Payable | $ 8,478 |

| | |
|---|---|
| Business Income | $70,000 |
| Corporate Tax Payable After Salary [(12%)($70,000 - $20,000)] | ( 6,000) |
| Personal Tax Payable | ( 8,478) |
| After Tax Retention - Alternative 3 | $55,522 |

***Evaluation***

The after tax amount retained for each of the three approaches is as follows:

| | |
|---|---|
| Approach 1 (Joins Partnership As Individual) | $55,117 |
| Approach 2 (All Dividends) | 55,591 |
| Approach 3 (Salary And Dividends) | 55,522 |

If only after tax cash flows are considered, Approach 2 provides the highest value and would be the appropriate choice.

Other factors to consider:

- While Approach 2 provides the largest after tax retention, it does not take into consideration CPP contributions. If the effect of CPP was considered, she would pay two times the annual maximum in Approach 1, no CPP in Approach 2 and in Approach 3 both Cora and her corporation would pay less than the annual maximum. Paying CPP contributions would allow her to receive CPP payments in the future, but would incur a liability at the present time. Without going through the required calculations, it is likely that Approach 2 would be best if the required CPP contributions were considered.
- If the Canada employment credit was considered, it would only be applicable in Approach 3.
- If Cora wanted to participate in the Employment Insurance program on a voluntary basis, it would only be available to her in Approach 1 as a self-employed individual.
- If she wanted to contribute to an RRSP or deduct child care costs, she would need earned income. Dividends are not a component of earned income for either purpose. Earned income would be $70,000 in Approach 1 and $20,000 in Approach 3.
- Depending on the province, there could be additional payroll costs that her corporation would have to pay in Approach 3.
- The opportunity for income splitting may be easier with a corporation given that family members could buy shares that entitle them to share in the dividends. This, however, is likely to be limited by the application of the Tax On Split Income (TOSI). Income splitting through the partnership would be much more difficult given that, for the most part, the family members would have to be involved in partnership activity.
- Although an advantage of incorporation is the availability of the lifetime capital gains deduction, given the current situation, it is questionable whether her corporation could be sold for much of a gain given how important her personal services are to its value.

## Self Study Solution Fifteen - 6

***Part A - Tax Payable With Corporation***

The business income of the corporation would be calculated as follows:

| | | |
|---|---|---|
| Management Fees | | $82,900 |
| Expenses: | | |
| Mr. Ashley's Salary | ($18,400) | |
| Office Salaries | ( 25,400) | |
| Office Rent | ( 8,180) | |
| CCA On Office And Dental Equipment | ( 5,700) | |
| Other Business Expenses | ( 2,170) | ( 59,850) |
| Business Income | | $23,050 |
| Rate On Active Business Income | | 11% |
| Tax Payable On Active Business Income | | $ 2,536 |

Tax Payable on the dividends and investment income would be calculated as follows:

| | |
|---|---:|
| Interest Income | $21,600 |
| Net Rental Income ($34,600 - $27,800) | 6,800 |
| Aggregate Investment Income | $28,400 |
| Rate On Investment Income | 51-2/3% |
| Part I Tax On Investment Income | $14,673 |
| Part IV Tax On Dividends Received [(38-1/3%)($13,900)] | 5,328 |
| Tax Payable On Property Income | $20,001 |

The refundable portion of the Part I Tax Payable would be the least of the following amounts:

- $ 8,709 = 30-2/3% Of Aggregate Investment Income [(30-2/3%)($28,400)]
- $ 8,709 = 30-2/3% Of Taxable Income Less Amount Eligible For Small Business Deduction [(30-2/3%)($23,050 + $28,400 - $23,050)]
- $17,209 = Part I Tax Payable ($2,536 + $14,673)

The balances in the two RDTOH accounts would be as follows:

| | |
|---|---:|
| Non-Eligible RDTOH (Part I Refundable Tax) | $8,709 |
| Eligible RDTOH (Part IV Tax Payable) | $5,328 |

The eligible dividends received by the corporation will be added to the GRIP balance, leaving $13,900 in this account (note that the amount received is added, not the amount received multiplied by 72 percent). This means that $13,900 in dividends could be designated as eligible for the enhanced dividend gross up and tax credit procedures.

Given the preceding calculations, the maximum eligible and non-eligible dividend that could be paid is as follows:

| | |
|---|---:|
| Business Income | $23,050 |
| Taxes On Business Income | ( 2,536) |
| Interest Income | 21,600 |
| Net Rental Income | 6,800 |
| Taxes On Property Income | ( 20,001) |
| Eligible Dividends | 13,900 |
| Balance Before Refund | $42,813 |
| Dividend Refund (See Note) | 14,037 |
| Available For Dividends | $56,850 |
| Eligible Dividends (GRIP Balance) | ( 13,900) |
| Non-Eligible Dividends (Remainder) | $42,950 |

**Note** The available cash of $42,813 would support a dividend of $69,426 ($42,813 ÷ 0.61667), including a refund of $26,613 ([(38-1/3%)($69,426)]. However, the actual refund is the lesser of this figure and the $14,037 ($8,709 + $5,328) total of the two RDTOH accounts. Given this, the total dividend is limited to $56,850 ($42,813 + $14,037).

The refund will be deducted from the two RDTOH accounts, leaving each with a balance of nil.

With respect to the eligible dividends, $8,340 [(60%)($13,900)] would go to Mr. Ashley, and

$5,560 [(40%)($13,900)] would go to Dr. Ashley. With respect to the non-eligible dividends, $25,770 [(60%)($42,950)] would go to Mr. Ashley, and $17,180 [40%)($42,950)] would go to Dr. Ashley. The resulting Tax Payable would be as follows:

| | Dr. Ashley | Mr. Ashley |
|---|---|---|
| Salary | Nil | $18,400 |
| Eligible Dividends ($13,900) | $ 5,560 | 8,340 |
| Gross Up At 38 Percent | 2,113 | 3,169 |
| Non-Eligible Dividends ($42,950) | 17,180 | 25,770 |
| Gross Up At 15 Percent | 2,577 | 3,866 |
| Taxable Income | $27,430 | $59,545 |
| Tax Rate | 47% | 30% |
| Tax Payable Before Dividend Tax Credit | $12,892 | $17,864 |
| Dividend Tax Credits: | | |
| Eligible Dividends [(6/11 + 25%)(Gross Up)] | ( 1,681) | ( 2,521) |
| Non-Eligible Dividends [(9/13 + 25%)(Gross Up)] | ( 2,428) | ( 3,643) |
| Tax Payable | $ 8,783 | $ 11,700 |

This would leave after tax balances available to Dr. and Mr. Ashley as follows:

| | |
|---|---|
| Ashley Management Services | Nil |
| Dr. Ashley ($5,560 + $17,180 - $8,783) | $13,957 |
| Mr. Ashley ($18,400 + $8,340 + $25,770 - $11,700) | 40,810 |
| After Tax Retention - Dr. And Mr. Ashley | $54,767 |

***Part B - Balances With No Corporation***

If Dr. Ashley had received all of the amounts involved directly, her Tax Payable and net retention could be calculated as follows:

| | |
|---|---|
| Business Income ($23,050 + $18,400 Salary To Husband) | $41,450 |
| Interest Income | 21,600 |
| Rental Income (Net) | 6,800 |
| Eligible Dividends | 13,900 |
| Gross Up At 38 Percent | 5,282 |
| Taxable Income | $89,032 |
| Tax Rate | 47% |
| Tax Before Dividend Tax Credit | $41,845 |
| Dividend Tax Credit [(6/11 + 25%)($5,282)] | ( 4,202) |
| Tax Payable | $37,643 |

| | |
|---|---|
| Income Received ($41,450 + $21,600 + $6,800 + $13,900) | $83,750 |
| Tax Payable | ( 37,643) |
| After Tax Retention - Dr. Ashley Only | $46,107 |

It is clear from these calculations that the use of the management company has had a positive effect on after tax retention of income. Without the corporation, Dr. Ashley would have ended up with only $46,107. This compares to a total of $54,767 for Mr. and Dr. Ashley when the corporation is used, an improvement of $8,660.

You should note, however, that Dr. Ashley could have paid a salary to her husband without using a corporation. This would have significantly improved the results in Part B.

The problem asked you to ignore personal tax credits, the Canada employment tax credit,

CPP contributions and GST. Personal tax credits would have made only a small difference, as Dr. Ashley would be able to claim the spousal credit in full if Mr. Ashley had no income.

While it is clear the Canada employment tax credit would favour paying Mr. Ashley salary, the advantage or disadvantage of CPP contributions is less clear cut. Although GST is not covered in detail until Chapter 21, we noted in Chapter 12 that the GST/HST legislation has made management companies for GST exempt services such as dentistry less attractive.

## Self Study Solution Fifteen - 7

### *Dwelling Loan*

As such loans are available to all employees, Ms. Lord can claim that she has received the loan in her capacity as an employee. This means that the $200,000 principal does not have to be included in her 2019 Net Income For Tax Purposes. However, as the rate on the loan is below the prescribed rate, there will be a taxable benefit included in Ms. Lord's Net Income For Tax Purposes.

The amount to be accrued for 2019 is $1,000 [($200,000)(2% - 1%)(6/12)]. For 2020, the amount is $1,600 [($200,000 - $40,000)(2% - 1%)(12/12)], and for 2021, the amount is $1,200 [($200,000 - $80,000)(2% - 1%)(12/12)].

### *Automobile*

As there are no bona fide arrangements for repaying the loan, the $25,000 principal amount must be included in Ms. Lord's 2019 Net Income For Tax Purposes. There will be no taxable interest benefit. However, when the loan is repaid, the $25,000 principal amount can be deducted in the determination of Net Income For Tax Purposes.

### *Other Loans*

- **February 1, 2019** As this loan is not repaid prior to August 31, 2020 (the second corporate year end), it has to be included in Ms. Lord's 2019 Net Income For Tax Purposes. In 2021, the year it is repaid, the $35,000 can be deducted from Ms. Lord's Net Income For Tax Purposes. As the loan is included in her income, there will be no benefit associated with the low interest rate. As this result would not be changed if the loan was interest free, paying interest on this loan was not good tax planning.

- **July 1, 2019** As the loan is repaid prior to August 31, 2020 (the second corporate year end), it does not have to be included in Ms. Lord's 2019 Net Income For Tax Purposes. However, as it is interest free, there will be a taxable benefit for imputed interest. For 2019, the amount will be $250 [(2%)($25,000)(6/12)]. For 2020, the benefit will be $333 [(2%)($25,000)(8/12)].

- **December 10, 2019** This loan is repaid prior to its inclusion in a second corporate Balance Sheet. As a consequence, it does not have to be included in income. In addition, as the interest rate of 2 percent on the loan is equal to the prescribed rate, there will be no imputed interest benefit.

## Self Study Solution Fifteen - 8

### *Alternative Treatments*

The tax consequences here will depend on whether the loan was given to Mr. Blaine in his capacity as an employee or, alternatively, in his capacity as a shareholder. Note that this loan would not qualify for a home relocation loan deduction as it can be assumed that the property that he is acquiring is not 40 kilometers closer to his work since the house seller is a neighbour and he bicycles to work.

***Treatment As Shareholder Loan***

If similar loans are not available to the other employees of Blaine Enterprises, it is likely that the CRA will take the view that Mr. Blaine received the loan in his capacity as a shareholder. If this is the case and the loan is included in the Balance Sheet of Blaine Enterprises at two consecutive year ends, the principal amount of the loan will have to be included in Mr. Blaine's Net Income For Tax Purposes in the year of the loan. In this situation, having the company grant the loan has basically the same tax consequences for Mr. Blaine as having the company pay a similar amount of salary. There are, however, several differences:

- When the loan is repaid, the repayment can be deducted under ITA 20(1)(j). In contrast, the receipt of salary cannot be reversed.
- Mr. Blaine's salary of $77,000 does not provide sufficient earned income to allow him to make maximum RRSP contributions. Paying salary would increase his earned income and allow him to make additional RRSP contributions.
- Salary would serve to reduce corporate Tax Payable. While the loan cannot be deducted by Blaine Enterprises in determining Net Income For Tax Purposes, salary payments can be.

Note that since Arthur is receiving a salary of $77,000, he is already eligible for the Canada employment tax credit and paying the maximum CPP contributions so these factors are not relevant.

***Treatment As Employee Loan***

If similar loans are available to the other employees of Blaine Enterprises, Mr. Blaine can argue that he received the loan in his capacity as an employee. Provided there is a reasonable plan for repayment of the loan, he will not have to include the principal amount of the loan in his Net Income For Tax Purposes. However, he would be assessed a taxable benefit in the amount of imputed interest on the outstanding loan balance. The interest rate to be used in this calculation would be the prescribed rate (ITR 4301).

***Evaluation***

If he can claim that he received the loan in his capacity as an employee, the analysis will depend on the relationship between the prescribed rate and the rate that Mr. Blaine would have to pay if he financed his new home with a conventional mortgage. Generally, the prescribed rate tends to be several percentage points below the going rate for mortgages. Based on this, it would appear that if the loan principal can be kept out of his income, having his company provide the loan would be an effective form of tax planning for Mr. Blaine.

If Mr. Blaine is required to include the loan in income because he has received it as a shareholder, it should be determined whether Blaine Enterprises will require the $125,000 in the future. If the intention is to repay the funds, a loan will allow the deduction of the repayment and there will be no taxable benefit for interest. This analysis requires more information about the corporation to determine whether it is more advantageous to have the $125,000 included in Mr. Blaine's income as a shareholder loan or pay salary when both Mr. Blaine and Blaine Enterprises are considered.

## Self Study Solution Fifteen - 9

### Tax Reduction

***Bonus Down***

As salary payments can be deducted by the corporation, the entire $250,000 can be paid as salary since no taxes would be paid by the Company on this amount. Mrs. Litvak's after tax retention would be as follows:

| | |
|---|---|
| Salary Payment | $250,000 |
| Personal Taxes On Salary [(52%)($250,000)] | ( 130,000) |
| After Tax Cash Retained After Bonus Down (2019) | $120,000 |

***No Bonus Down***

If Morcan Inc. does not pay the additional $250,000 in salary, an additional $67,500 [(27%)($250,000)] in corporate taxes would have to be paid. There would also be a $180,000 [(72%)($750,000 - $500,000)] addition to Morcan's GRIP account.

The after tax retention of funds in the corporation would be $182,500 ($250,000 - $67,500). If this amount is paid out as dividends in 2023, $180,000 (the balance in the GRIP account) could be designated as eligible, with the remaining $2,500 classified as non-eligible. Given this, the tax consequences of paying out these dividends would be as follows:

| | |
|---|---|
| Eligible Dividends Received | $180,000 |
| Gross Up At 38 Percent | 68,400 |
| Non-Eligible Dividends Received | 2,500 |
| Gross Up At 15 Percent | 375 |
| Taxable Dividend Paid In 2023 | $251,275 |
| | |
| Tax At 52 Percent [(52%)($251,275] | $130,663 |
| Dividend Tax Credits: | |
| Eligible [(6/11 + 5/11)($68,400)] + | |
| Non-Eligible [(9/13 + 4/13)($375)] | ( 68,775) |
| Personal Tax Cost Of Dividends | $ 61,888 |
| | |
| Dividends Received ($180,000 + $2,500) | $182,500 |
| Personal Tax Cost | ( 61,888) |
| After Tax Cash Retained - No Bonus Down | $120,612 |

***Conclusion***

The difference in after tax retention between the two alternatives is only $612 ($120,612 - $120,000). While this is slightly in favor of bonusing down, the difference is not significant.

## Tax Deferral

If Morcan Inc. pays the salary, there will be an immediate personal tax cost of $130,000. This is more than the $129,388 ($67,500 + $61,888) in taxes that would be paid if she did not bonus down and instead paid corporate taxes on the $250,000 with the remaining funds paid out as dividends in the future. However, Ms. Litvak has indicated that she does not need the additional income and, as a consequence, the payment of the personal taxes can be deferred until 2023. This means the current tax obligation would be limited to the $67,500 in corporate taxes and would constitute a significant tax deferral.

A potential problem with this is the question of whether the corporation can use the additional funds for business purposes. If not, and the funds were allocated to passive investments, the tax rate on investment income could be higher than the 52 percent rate that is applicable on amounts received directly by Ms. Litvak.

## Conclusion

In terms of tax reduction, there is no significant advantage resulting from bonusing down. However, if the retained funds are not paid out as dividends until 2023, there is a significant tax deferral. This would favour not bonusing down. Note that this conclusion is dependent on how the funds will be used within the corporation.

Whether bonusing down will be advantageous will also depend on what use the funds can be put to directly by Mrs. Litvak. If, for example, she has not contributed fully to her RRSP and TFSA and/or her daughter's, bonusing down could be more advantageous.

An added consideration could be how Mrs. Litvak's father might react if she does not take his advice. This could have ramifications for her personally, but should not affect her tax situation.

## Self Study Solution Fifteen - 10

### *Required Salary*

Given Miss Morgan's personal tax rate of 51 percent (33% + 18%), a salary of $40,816 [$20,000 ÷ (1 - .51)] would be required to provide an additional $20,000 of after tax funds.

### *Tax Cost Of Salary Alternative*

The net tax cost of this alternative would be calculated as follows:

| | |
|---|---|
| Personal Taxes On Salary [(51%)($40,816)] | $20,816 |
| Tax Savings To Corporation [(12%)($40,816)] | ( 4,898) |
| Net Tax Cost Of Salary Alternative | $15,918 |

### *Required Dividend*

Miss Morgan's tax rate on non-eligible dividends would be as follows:

[(115%)(51%) - (9/13 + 25%)(15%)] = 44.52%

This gives after tax retention of dividend income in the amount of 55.48 percent (1 - 44.52%). This means a dividend of $36,049 ($20,000 ÷ 55.48%) will be required to provide an additional $20,000 of after tax funds.

### *Tax Cost Of Dividend Alternative*

The personal Tax Payable on the dividend would be calculated as follows:

| | |
|---|---|
| Non-Eligible Dividends Received | $36,049 |
| Gross Up At 15 Percent | 5,407 |
| Taxable Income | $41,456 |
| Tax Rate (33% + 18%) | 51% |
| Tax Payable Before Dividend Tax Credit | $21,143 |
| Dividend Tax Credit [(9/13 + 25%)($5,407)] | ( 5,095) |
| Personal Tax Payable On Dividend Alternative | $16,048 |

Subtracting the Tax Payable of $16,048 from the dividends received of $36,049 gives $20,001 in after tax funds. (The extra $1 is a rounding issue).

As the dividend payment would not be deductible, its payment would not change corporate taxes. This means that the only tax cost would be the $16,048 in personal taxes that Miss Morgan would pay on the dividends received.

### *Conclusion*

The salary alternative has a net tax cost that is $130 ($16,048 - $15,918) lower than the additional tax cost of paying dividends. Given this, the salary alternative would have a marginally lower tax cost.

Since Geraldine has already received a salary of $84,000, CPP contributions and the Canada employment credit are not relevant to this analysis as they would have already been accounted for and would not affect the conclusion.

## Self Study Solution Fifteen - 11

### *Part A - Taxes And Salary*

The combined federal/provincial tax rate applicable to Speelburg Films Ltd. would be 11% (38% - 10% - 19% + 2%).

As the corporation's Taxable Income exceeds the amount of cash available, the maximum amount of salary that can be paid (X) must be determined using the following simple equation:

$$X = \$49,000 - [(11\%)(\$123,000 - X)]$$

Solving this equation for X indicates that the maximum salary that can be paid is $39,854. This can be verified by the following calculation:

| | |
|---|---:|
| Corporate Taxable Income Before Salary | $123,000 |
| Maximum Salary | ( 39,854) |
| Corporate Taxable Income After Salary | $ 83,146 |
| Corporate Rate | 11% |
| Corporate Tax Payable | $ 9,146 |

Payment of this amount of taxes will leave $39,854 ($49,000 - $9,146) available for payment of salary.

With this amount of salary, Mr. Lucas would have the following amount of after tax cash:

| | |
|---|---:|
| Salary Payment | $39,854 |
| Rate (15% + 6%) | 21% |
| Tax Before Credits | $8,369 |
| Personal Tax Credits (Given) | ( 3,900) |
| Personal Tax Payable | $4,469 |
| Salary Received | $39,854 |
| Personal Tax Payable | ( 4,469) |
| After Tax Cash Retained (All Salary) | $35,385 |

### *Part B - All Dividends*

As dividend payments are not deductible to the Company, taxes of $13,530 [(11%)($123,000)] will have to be paid. This leaves a maximum of $35,470 ($49,000 - $13,530) to be used for the payment of non-eligible dividends. When this is paid, the after tax retention by Mr. Lucas will be as follows:

| | |
|---|---:|
| Non-Eligible Dividends Received | $35,470 |
| Gross Up [(15%)($35,470)] | 5,321 |
| Taxable Dividends | $40,791 |
| Personal Tax Rate (15% + 6%) | 21% |
| Tax Payable Before Credits | $ 8,566 |
| Personal Tax Credits (Given) | ( 3,900) |
| Dividend Tax Credit [(9/13 + 30%)($5,321)] | ( 5,280) |
| Tax Payable (Unused Credits = $614) | Nil |

As there is no Tax Payable, Mr. Lucas will retain all of the $35,470 in dividends.

### *Part C - Possible Improvement*

While the Tax Payable for Mr. Lucas is nil in Part B, subtracting personal and dividend tax credits from the tax balance gives a negative figure of $614. This means that the all dividend

approach leaves unused tax credits. While not conclusive, this suggests that there may be a better solution than either all salary or all dividends.

***Part D - Salary/Dividend Combination***

To examine the possibility of an optimum solution using both salary and dividends, consider the result that occurs when $1,000 in salary is paid in lieu of some dividends. Because the deductible salary payment would reduce corporate taxes, dividends would only have to be decreased by $890 [($1,000)(1 - 0.11)]. The tax effects of this switch can be calculated as follows:

| | |
|---|---|
| Increase In Salary | $1,000.000 |
| Decrease In Dividend [($1,000)(1 - .11)] | ( 890.000) |
| Decrease In Dividend Gross Up [(15%)($890.00)] | ( 133.500) |
| Decrease In Mr. Lucas' Taxable Income | ($ 23.500) |
| Personal Tax Rate | 21% |
| Decrease In Tax Payable Before Dividend Tax Credit | ($ 4.935) |
| Decrease In Dividend Tax Credit | |
| = Increase In Tax Payable [(9/13 + 30%)($133.50)] | 132.473 |
| Net Increase In Personal Tax Payable | $ 127.538 |

The rate on a $1,000 increase in salary is 12.7538 percent ($127.538 ÷ $1,000). Applying this rate to the unused credits of $614 (see Part C), gives a required increase in salary of $4,814 ($614 ÷ 0.127538).

Payment of this amount of salary would result in corporate Tax Payable as follows:

| | |
|---|---|
| Corporate Taxable Income Before Salary | $123,000 |
| Salary | ( 4,814) |
| Corporate Taxable Income After Salary | $118,186 |
| Corporate Rate | 11% |
| Corporate Tax Payable | $ 13,000 |

Based on available cash of $49,000, the amount of dividend that could be paid is as follows:

| | |
|---|---|
| Cash Available | $49,000 |
| Corporate Tax Payable | ( 13,000) |
| Salary Payment | ( 4,814) |
| Available For Dividends | $31,186 |

After tax retention at the personal level would be calculated as follows:

| | |
|---|---|
| Non-Eligible Dividends Received | $31,186 |
| Gross Up [(15%)($31,186)] | 4,678 |
| Taxable Dividends | $35,864 |
| Salary | 4,814 |
| Mr. Lucas' Taxable Income | $40,678 |
| Personal Tax Rate (15% + 6%) | 21% |
| Tax Payable Before Credits | $ 8,542 |
| Personal Tax Credits (Given) | ( 3,900) |
| Dividend Tax Credit [(9/13 + 30%)($4,678)] | ( 4,642) |
| Tax Payable | Nil |

| | |
|---|---:|
| Amounts Received ($31,186 + $4,814) | $36,000 |
| Personal Tax Payable | Nil |
| After Tax Cash Retained (Salary And Dividends) | $36,000 |

The comparative results for the three alternatives are as follows:

| | |
|---|---:|
| All Salary | $35,385 |
| All Dividends | $35,470 |
| Salary/Dividend Combination | $36,000 |

The combination of salary and dividends will produce the maximum after tax cash retention for Mr. Lucas. It is a $615 ($36,000 - $35,385) improvement over the all salary solution and a $530 ($36,000 - $35,470) improvement over the all dividend solution.

### *Part E - Other Factors*

Other factors that might be considered include:

- The Canada employment tax credit was ignored in the calculations as it is not a credit against provincial taxes. However, it would allow the first $1,222 of salary to be received with a nil federal tax cost.
- If the effect of CPP was considered, both Mr. Lucas and Speelburg Films Ltd. would pay CPP contributions if salary was paid. Paying CPP contributions would allow him to receive CPP payments in the future, but would require both a personal and a corporate cash outflow at the present time.
- If Speelburg Films Ltd. has benefits for employees, such as a private health services plan, this could make being an employee (by taking salary) more advantageous.
- Dividend payments are not Earned Income for purposes of making RRSP contributions or deducting child care costs.
- If Mr. Lucas has a CNIL balance, dividend payments will serve to reduce this constraint on the lifetime capital gains deduction.
- Mr. Lucas should consider declaring a bonus (a form of salary) to be paid after the end of the calendar year if he does not require the cash immediately. This would defer the personal taxes without affecting corporate taxes as long as the bonus was paid within 180 days of December 31.
- Though not relevant in this problem, some provinces have payroll taxes which could be incurred.

## Chapter 15 Learning Objectives

After completing Chapter 15, you should be able to:

1. Explain how a corporation can be used to reduce taxes, defer taxes, and facilitate income splitting (paragraph [P hereafter] 15-1 to 15-9).
2. Describe other advantages and disadvantages of incorporation (P 15-10 and 15-11).
3. Use various personal and corporate tax rates in the calculation of after-tax retention of earnings flowed through a corporation (P 15-12 to 15-24).
4. Calculate the amount of tax reduction and tax deferral that is available through the use of a public corporation (P 15-25 to 15-34).
5. Calculate the amount of tax reduction and tax deferral that is available through the use of a CCPC earning active business income (P 15-35 to 15-40).

---

6. Explain the advantages of bonusing down to the owner of a CCPC eligible for the small business deduction (P 15-41 to 15-45).
7. Calculate the amount of tax reduction and tax deferral that is available through the use of a CCPC earning investment income other than dividends (P 15-46 to 15-49).
8. Calculate the amount of tax reduction and tax deferral that is available through the use of a CCPC earning dividend income (P 15-50 to 15-54).
9. Summarize the tax reduction and tax deferral that is available through the use of various types of corporations earning different types of income (P 15-55 to 15-57).
10. Identify the effect of provincial taxes on the decision to incorporate (P 15-58 to 15-76).

---

11. Explain why large amounts of dividends can be received on a tax free basis by individuals with no other source of income (P 15-77 to 15-88).
12. Describe and calculate the benefits that can be achieved by using a corporation to implement income splitting (P 15-89 to 15-91).
13. Determine the tax consequences of various shareholder benefits, including loans (P 15-92 to 15-113).
14. Explain the principles of management compensation in the context of an owner-managed corporation (P 15-114 to 15-120).
15. Describe the basic trade-off between the payment of salary and the payment of dividends for the owner-manager (P 15-121 to 15-127).

---

16. Calculate the appropriate choice between salary and dividends, taking into consideration factors other than federal tax savings (P 15-128 to 15-151).
17. Optimize the salary/dividend mix when all tax credits are not utilized or there is a limited amount of cash in the corporation (P 15-152 to 15-168).
18. Summarize the various non-tax factors that must be taken into consideration in making salary vs. dividend decisions (P 15-169 and 15-170).

# CHAPTER 16

## How To Work Through Chapter 16

We recommend the following approach in dealing with the material in this chapter:

**Rollovers Under Section 85 - General Rules For The Transfer**

- Read paragraph 16-1 to 16-30 (in the textbook).

**Transfer Price Rules - Rules Applicable To All Assets**

- Read paragraph 16-31 to 16-36.

**Transfer Price Rules - Accounts Receivable**

- Read paragraph 16-37 to 16-40.

**Transfer Price Rules - Inventories And Non-Depreciable Capital Property**

- Read paragraph 16-41 to 16-49.
- Do Exercise Sixteen-1 (in the textbook) and check the solution in this Study Guide.

**Transfer Price Rules - Non-Depreciable Capital Property**

- Read paragraph 16-50 to 16-61.

**Transfer Price Rules - Depreciable Property**

- Read paragraph 16-62 to 16-69.
- Do Exercise Sixteen-2 and check the solution in this Study Guide.

**Transfer Price Rules - Depreciable Property And Disallowed Terminal Losses**

- Read paragraph 16-70 to 16-73.

**Transfer Price Rules - Eligible Capital Property**

- Read paragraph 16-74.
- Do Self Study Problems Sixteen-1 and 2 and check the solutions in this Study Guide.

**Allocation Of The Elected Value - Consideration Received By The Transferor**

- Read paragraph 16-75 to 16-76.
- Do Exercise Sixteen-3 and check the solution in this Study Guide.

**Allocation Of The Elected Value - Assets Acquired By The Corporation**

- Read paragraph 16-77 to 16-84.

**Paid Up Capital (PUC) Of Shares Issued - General Rules**

- Read paragraph 16-85 to 16-87.

**Paid Up Capital (PUC) Of Shares Issued - Paid Up Capital Reduction**

- Read paragraph 16-88 to 16-92.

### Paid Up Capital (PUC) Of Shares Issued - More Than One Class Of Shares

- Read paragraph 16-93 to 16-96.
- Do Exercise Sixteen-4 and check the solution in this Study Guide.
- Do Self Study Problem Sixteen-3 and check the solution in this Study Guide.

### Comprehensive Example - Section 85 Rollovers

- Read paragraph 16-97 to 16-112.
- Do Exercise Sixteen-5 and check the solution in this Study Guide.
- Do Self Study Problems Sixteen-4, 5, 6, and 7 and check the solutions in this Study Guide.

### Gift To Related Person - Section 85

- Read paragraph 16-113 to 16-127.
- Do Exercise Sixteen-6 and check the solution in this Study Guide.
- Do Self Study Problem Sixteen-8 and check the solution in this Study Guide.

### Excess Consideration - Section 85

- Read paragraph 16-128 to 16-131.
- Do Exercise Sixteen-7 and check the solution in this Study Guide.
- Do Self Study Problem Sixteen-9 and check the solution in this Study Guide.

### Dividend Stripping - ITA 84.1

- Read paragraph 16-132 to 16-149.
- Do Exercise Sixteen-8 and check the solution in this Study Guide.
- Do Self Study Problem Sixteen-10 and check the solution in this Study Guide.

### Capital Gains Stripping - ITA 55(2)

- Read paragraph 16-150 to 16-167.
- Do Exercise Sixteen-9 and check the solution in this Study Guide.
- Do Self Study Problem Sixteen-11 and check the solution in this Study Guide.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 16. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 16 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 16 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 16 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 16 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

## Solutions to Chapter Sixteen Exercises

### *Exercise Sixteen - 1 Solution*

**Inventories** The $125,000 amount is both the floor and the ceiling, making this the only possible elected value. The transfer would result in a loss of $15,000 ($140,000 - $125,000), an amount that would be fully deductible as a business loss (ITA 23).

**Land** The floor would be the boot of $150,000 and the ceiling would be the fair market value of $350,000. Electing the minimum amount would result in a taxable capital gain of $20,000 [($150,000 - $110,000)(1/2)].

### *Exercise Sixteen - 2 Solution*

**Class 1 Property** The range would be from a floor of $250,000 (the boot) to a ceiling of $475,000 (fair market value). Election of the $250,000 floor value would result in recapture of $70,000 ($220,000 - $150,000) and a taxable capital gain of $15,000 [($250,000 - $220,000)(1/2)].

**Class 10 Asset** The range would be from a floor of $10,000 (the boot) to a ceiling of $12,000 (fair market value). Electing the minimum value of $10,000 would result in recapture of $2,000 ($10,000 - $8,000).

### *Exercise Sixteen - 3 Solution*

The adjusted cost base amounts would be calculated as follows:

| | |
|---|---|
| Elected Value | $62,000 |
| ACB Of Note (Fair Market Value) | ( 51,000) |
| Available For Shares | $11,000 |
| ACB Of Preferred Shares* | ( 11,000) |
| ACB Of Common Shares (Residual) | Nil |

*Balance available as it is less than the fair market value of $53,000.

### *Exercise Sixteen - 4 Solution*

The adjusted cost base amounts would be calculated as follows:

| | |
|---|---|
| Elected Value | $114,000 |
| ACB Of Note (Fair Market Value) | ( 83,000) |
| Available For Shares | $31,000 |
| ACB Of Preferred Shares* | ( 31,000) |
| ACB Of Common Shares (Residual) | Nil |

*Balance available as it is less than the fair market value of $97,000.

The total PUC reduction would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital ($97,000 + $54,000) | | $151,000 |
| Less The Excess Of: | | |
| Total Elected Value | ($114,000) | |
| Over The Total Non-Share Consideration | 83,000 | ( 31,000) |
| PUC Reduction | | $120,000 |

Note that this reduction is equal to the deferred gain on the election ($234,000 - $114,000). The PUC reduction would be allocated on the basis of fair market values as follows:

| | |
|---|---|
| Preferred Stock [($120,000)($97,000 ÷ $151,000)] | $ 77,086 |
| Common Stock [($120,000)($54,000 ÷ $151,000)] | 42,914 |
| Total PUC Reduction | $120,000 |

Subsequent to applying this reduction, the remaining PUC of the two classes of shares would be as follows:

| | Preferred Stock | Common Stock |
|---|---|---|
| Legal Stated Capital | $97,000 | $54,000 |
| PUC Reduction (From Preceding) | ( 77,086) | ( 42,914) |
| Total PUC | $19,914 | $11,086 |

Note that the sum of these two figures equals $31,000 ($19,914 + $11,086), the total adjusted cost base of the preferred and common shares, as well as the difference between the elected value of $114,000 and the total non-share consideration of $83,000.

### *Exercise Sixteen - 5 Solution*

**Part 1** The adjusted cost base of all of the consideration will total the elected value of $275,000. It will be allocated as follows:

| | |
|---|---|
| Elected Value | $275,000 |
| Non-Share Consideration ($83,000 + $17,000) | ( 100,000) |
| Adjusted Cost Base Of All Shares | $175,000 |
| Adjusted Cost Base Of Preferred Shares (FMV) | ( 125,000) |
| Adjusted Cost Base Of Common Shares (Residual) | $ 50,000 |

**Part 2** The PUC of the shares issued must be reduced as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital ($125,000 + $925,000) | | $1,050,000 |
| Less The Excess Of: | | |
| Elected Value | ($275,000) | |
| Over The Non-Share Consideration | 100,000 | ( 175,000) |
| PUC Reduction | | $ 875,000 |

This PUC reduction would be split between the preferred and common shares on the basis of their fair market values:

| | |
|---|---|
| Preferred Stock [($125,000/$1,050,000)($875,000)] | $104,167 |
| Common Stock [($925,000/$1,050,000)($875,000)] | 770,833 |
| Total PUC Reduction | $875,000 |

Subsequent to applying this reduction, the remaining PUC of the two classes of shares would be as follows:

| | Preferred Stock | Common Stock |
|---|---|---|
| Legal Stated Capital | $125,000 | $925,000 |
| PUC Reduction (From Preceding) | ( 104,167) | ( 770,833) |
| Total PUC | $ 20,833 | $154,167 |

**Part 3** The tax consequences of the preferred stock redemption would be as follows:

| | |
|---|---|
| Proceeds Of Redemption | $125,000 |
| PUC Of The Preferred Shares | ( 20,833) |
| ITA 84(3) Deemed Dividend (Non-Eligible) | $104,167 |

| | |
|---|---|
| Proceeds Of Redemption | $125,000 |
| ITA 84(3) Deemed Dividend | ( 104,167) |
| ITA 54 Deemed Proceeds Of Disposition | $ 20,833 |
| Adjusted Cost Base | ( 125,000) |
| Capital Loss | ($104,167) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss - Disallowed | ($ 52,084) |

The grossed up non-eligible dividend of $119,792 [(115%)($104,167)] would qualify for a federal dividend tax credit of $10,817 [(9/13)(15%)($104,167)]. The allowable capital loss would be disallowed because the shareholder and the corporation are affiliated.

### Exercise Sixteen - 6 Solution

Using the reassessed fair market value of $110,000, the calculation of the gift is as follows:

| | |
|---|---|
| Fair Market Value Of Property Transferred (Reassessed Value) | $110,000 |
| Less The Greater Of: | |
| • FMV Of Consideration Received = $65,000 ($50,000 + $15,000) | |
| • Elected Amount = $50,000 | ( 65,000) |
| Excess = Gift To Daughter | $ 45,000 |

Given this gift, the tax consequences of the transfer for Ms. Bellows are as follows:

| | |
|---|---|
| Deemed Elected Value = Deemed Proceeds Of Disposition ($50,000 + $45,000 Gift) | $95,000 |
| Adjusted Cost Base | ( 50,000) |
| Capital Gain | $45,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $22,500 |

The adjusted cost base of her preferred shares would be calculated as follows:

| | |
|---|---|
| Elected Value (Original) | $50,000 |
| Non-Share Consideration | ( 50,000) |
| Adjusted Cost Base Of Preferred Shares | Nil |

As shown in the following calculation, there would be no PUC reduction for the preferred shares issued to Ms. Bellows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $15,000 |
| Less Excess, If Any, Of: | | |
| Deemed Elected Value | ($95,000) | |
| Over Non-Share Consideration | 50,000 | ( 45,000) |
| PUC Reduction | | Nil |

| | |
|---|---|
| PUC Of Preferred Shares ($15,000 - Nil) | $15,000 |

The fair market value of the common shares issued to the daughter is $46,000 ($110,000 Reassessed Value + $1,000 - $50,000 - $15,000).

The sale of the shares for their fair market value would result in the following taxable capital gains:

| | Preferred | Common |
|---|---|---|
| Proceeds (Fair Market Value) | $15,000 | $46,000 |
| Adjusted Cost Base | Nil | ( 1,000) |
| Capital Gain | $15,000 | $45,000 |
| Inclusion Rate | 1/2 | 1/2 |
| Taxable Capital Gain | $ 7,500 | $22,500 |

If the property had simply been sold for its $110,000 post-reassessment fair market value, there would have been a $30,000 [(1/2)($110,000 - $50,000) taxable capital gain. Using ITA 85, Ms. Bellows' total taxable capital gain on the transfer and sale of the preferred shares is also $30,000 ($22,500 + $7,500). However, because the common shares held by the daughter have increased in value by the $45,000 amount of the gift, with their adjusted cost base remaining at $1,000, there is an additional $22,500 taxable capital gain on the sale of her daughter's common shares. This reflects the fact that the $45,000 amount of the gift has been subject to double taxation.

### *Exercise Sixteen - 7 Solution*

On the original transfer in 2018, Larry would have recognized a capital gain of $73,500 [(1/2)($270,000 - $123,000)]. Based on the original estimate of the fair market value of the assets transferred, there was no ITA 15(1) benefit.

With the lower value required by the reassessment, there is excess consideration and an ITA 15(1) benefit.

| | |
|---|---|
| Fair Market Value Of Consideration | $270,000 |
| Reassessed Value Of The Property | ( 217,000) |
| ITA 15(1) Shareholder Benefit | $ 53,000 |

With the value of the property transferred reassessed at $217,000, the elected value cannot exceed this amount. There would be a revised taxable capital gain, calculated as follows:

| | |
|---|---|
| Elected Value Of Property After Reassessment | $217,000 |
| Adjusted Cost Base | ( 123,000) |
| Capital Gain | $ 94,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain On Property After Reassessment | $ 47,000 |

As a result of the reassessment, 2018 Net Income For Tax Purposes is increased from $73,500 to $100,000 ($47,000 + $53,000), an increase of $26,500 as shown in the following table:

| | |
|---|---|
| Taxable Capital Gain After Reassessment | $47,000 |
| Shareholder Benefit After Reassessment | 53,000 |
| Reversal Of Reported Taxable Capital Gain | ( 73,500) |
| Total Addition To Net Income For Tax Purposes | $26,500 |

The reason for this increase is that $53,000 of the capital gain, only one-half of which would be taxed, was converted to a 100 percent taxable shareholder benefit of $53,000. The ITA 15(1) benefit of $53,000 would be added to the adjusted cost base of the non-share consideration, resulting in the following adjusted cost base for the non-share consideration:

| | |
|---|---|
| Elected Value | $217,000 |
| ITA 15(1) Shareholder Benefit | 53,000 |
| Adjusted Cost Base Of Non-Share Consideration | $270,000 |

Both the adjusted cost base and the PUC of the preferred shares would be nil.

### *Exercise Sixteen - 8 Solution*

Miss Cole (an individual) has sold shares of a subject corporation to a purchasing corporation, both corporations do not deal with Miss Cole at arm's length, and the two corporations are connected subsequent to the sale. As a consequence, ITA 84.1 is applicable. Given this, the tax consequences of this transaction to Miss Cole are as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $317,000 |
| Less Excess, If Any, Of: | | |
| PUC And ACB Of Subject Shares | ($125,000) | |
| Over The Non-Share Consideration | 450,000 | Nil |
| PUC Reduction | | $317,000 |

| | |
|---|---|
| PUC Of New Shares ($317,000 - $317,000) | Nil |

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $317,000 |
| Non-Share Consideration | | 450,000 |
| Total | | $767,000 |
| Less The Sum Of: | | |
| PUC And ACB Of Subject Shares | ($125,000) | |
| PUC Reduction | ( 317,000) | ( 442,000) |
| ITA 84.1 Deemed Dividend (Non-Eligible) | | $325,000 |

| | |
|---|---|
| Elected Proceeds Of Disposition For Subject Shares | $767,000 |
| ITA 84.1 Deemed Dividend | ( 325,000) |
| Deemed Proceeds For Capital Gains Purposes | $442,000 |
| ACB Of Subject Shares | ( 125,000) |
| Capital Gain | $317,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $158,500 |

| | |
|---|---|
| ACB Of New Shares ($767,000 - $450,000) | $317,000 |

The grossed up non-eligible dividend of $373,750 [(115%)($325,000)] would qualify for a federal dividend tax credit of $33,750 [(9/13)(15%)($325,000)]. In addition, there would be a taxable capital gain of $158,500 that would be eligible for the lifetime capital gains deduction. If Miss Cole claims the deduction, she may need to pay alternative minimum tax.

**Economic Analysis** Miss Cole is attempting to realize a capital gain of $642,000 ($767,000 - $125,000). However, her non-share consideration was $450,000, $325,000 more than the adjusted cost base of the Cole Inc. shares. ITA 84.1 acts to convert this from a capital gain to a deemed dividend. Note that the remaining $317,000 ($642,000 - $325,000) is allowed to flow through as a capital gain. This reflects the fact that Miss Cole did not attempt to take out the full $767,000 fair market value of the shares in the form of non-share consideration.

### *Exercise Sixteen - 9 Solution*

A deductible dividend has been paid in conjunction with an arm's length sale of shares, and it would appear that the dividend payment served to eliminate the potential capital gain on the transaction. As a consequence, ITA 55 is applicable and the tax consequences of the transaction are as follows:

| | |
|---|---|
| Dividends Received | $750,000 |
| Dividends Attributable To Safe Income (Tax Free) | ( 225,000) |
| Amount Deemed By ITA 55(2)(a) To Not Be A Dividend And By ITA 55(2)(c) To Be A Capital Gain | $525,000 |
| Capital Gain On Sale Of Shares ($90,000 - $75,000) | 15,000 |
| Total Capital Gain | $540,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $270,000 |

The $225,000 of dividends paid from safe income will retain its status as a dividend and will be deducted in calculating Taxable Income, resulting in no tax cost.

## Self Study Solution Sixteen - 1

### *Part A - No Election*

The disposition of a business is a capital transaction and, in the absence of special provisions, any resulting gain or loss must be treated as a capital gain or loss. With respect to the Inventories, a special provision in ITA 23 indicates that, when such assets are sold as part of the disposition of a business, the sale is deemed to be in the ordinary course of carrying on business and any resulting gain or loss is considered business in nature. ITA 23 automatically applies in the disposition of a business and no election is required on the part of the vendor.

ITA 22 provides for a similar treatment of Accounts Receivable. However, a joint election by the vendor and purchaser is required before this business income treatment is applicable. In the absence of this election, losses on Accounts Receivable are treated as capital losses.

If the assets are transferred at fair market values, the Taxable Income resulting from the transfer can be calculated as follows:

| | |
|---|---|
| Inventories - Business Income ($88,000 - $73,000) | $15,000 |
| Furniture And Fixtures - Recaptured CCA ($45,000 - $38,000) | 7,000 |
| Goodwill [(1/2)($150,000)] | 75,000 |
| Taxable Income | $97,000 |

Note that, with the repeal of the CEC legislation, goodwill is a Class 14.1 asset. Following the usual rules for dispositions of capital assets, the result will be a taxable capital gain of $75,000 [(1/2)($150,000)].

There is also an allowable capital loss of $3,000 [(1/2)($51,000 - $45,000)] on the disposition of the Accounts Receivable. However, it is a superficial loss in that the property is re-acquired within 30 days by an affiliated person (the new corporation would be affiliated with Ms. Flack). ITA 40(2)(g) deems such losses to be nil. This loss would be added to the tax cost of the Accounts Receivable on the corporation's books.

### Part B - ITA 22 And ITA 85 Elections

The cash is not eligible to be transferred under ITA 85, but can be transferred to the corporation without a rollover. All of the other assets can be transferred at elected values under ITA 85. Under the provisions of this Section, the tax consequences would be as follows:

> **Accounts Receivable** If the Accounts Receivable are transferred under ITA 85, the maximum value that can be elected is the fair market value of $45,000. This will result in a capital loss of $6,000 (allowable amount of $3,000). However, this loss will be disallowed under ITA 40(2)(g) because the transfer is to a corporation that will be controlled by Ms. Flack.
>
> **Inventories** The Inventories can be transferred at an elected value of $73,000, resulting in no Taxable Income on the transfer.
>
> **Furniture And Fixtures** The Furniture And Fixtures can be transferred at their UCC of $38,000, resulting in no Taxable Income on the transfer.
>
> **Goodwill** The Goodwill can be transferred at a nominal value of $1, resulting in no significant Taxable Income on the transfer.

An alternative with respect to the Accounts Receivable would be to transfer these assets under the provisions of ITA 22. If Ms. Flack and her corporation were to make this joint election, the $6,000 loss resulting from transferring these assets to the corporation would be fully deductible as a business loss. As it is not a capital loss, it would not be disallowed and Ms. Flack would be able to deduct the full $6,000 against any other source of income in the year of transfer. As ITA 22 is a joint election, the corporation would have to include the $6,000 in income, but could then deduct actual bad debts as they occur. Using the ITA 22 election is the preferable approach to the transfer of these Accounts Receivable.

## Self Study Solution Sixteen - 2

### Part A - Assets To Be Transferred

Of the assets in the Balance Sheet, Cash is not among the eligible assets listed in ITA 85(1.1). This is of no consequence as the tax value of cash is always equal to its carrying value and can be transferred to the corporation without a rollover.

Accounts Receivable could be transferred under Section 85, but are usually transferred to the corporation under the provisions of ITA 22. ITA 22 is used for two reasons. First, it means that any loss on the transfer will be a fully deductible business loss, rather than a capital loss that will be disallowed on a transfer to a corporation controlled by the transferor under ITA 40(2)(g). In addition, the use of the ITA 22 joint election to make the transfer will permit the transferee corporation to deduct any additional bad debts as business losses, rather than capital losses, only one-half of which would be deductible.

There is a potential terminal loss on the transfer of the equipment as the fair market value of the equipment is less than the UCC of the class. Given this, ITA 13(21.2) indicates that ITA 85 does not apply and the proceeds of disposition are deemed to be the UCC amount thereby disallowing the terminal loss.

### Part B - Minimum Transfer Values

The minimum transfer values for the assets to be included in the rollover would be as follows:

| | |
|---|---|
| Inventories (Cost) | $261,000 |
| Land (Adjusted Cost Base) | 196,000 |
| Building (UCC) | 103,600 |
| Equipment (UCC) | 67,000 |
| Goodwill (Nominal Value) | 1 |

**Note** The Goodwill has been given a nominal elected value to ensure that it is specifically included in the transfer. A failure to do this could result in the Goodwill being assessed on the basis of a transfer at fair market value.

### Part C - Tax Consequences

The tax consequences of the asset transfers with respect to both Ms. Speaks and Speaks Inc. can be described as follows:

**Inventories** The cost of the Inventories to Speaks Inc. would be the transfer price of $261,000. As this was the cost of the Inventories, there would be no tax consequence to Ms. Speaks.

**Land** The cost of the Land to Speaks Inc. would be the transfer price of $196,000. As this was the adjusted cost base of the Land, there would be no tax consequence to Ms. Speaks.

**Building** The capital cost of the Building to Speaks Inc. would be $155,500, and Speaks Inc. would be deemed to have taken CCA in the amount of $51,900. As the net value of the transfer is equal to UCC, there would be no tax consequence to Ms. Speaks.

**Equipment** The capital cost of the Equipment to Speaks Inc. would be $222,000, and Speaks Inc. would be deemed to have taken CCA in the amount of $155,000. As the net value of the transfer is equal to UCC, there would be no tax consequence to Ms. Speaks.

**Goodwill** The cost of the Goodwill to Speaks Inc. will be $1. In Ms. Speak's tax records, the proceeds of $1 will be subtracted from Class 14.1, leaving a negative balance in that Class. This amount will be treated as recapture and included in Ms. Speak's income. The $1 will also be added to Class 14.1, restoring the balance to nil. In the Speaks Inc.'s records, the $1 will be added to Class 14.1.

## Self Study Solution Sixteen - 3

## Approach 1

**Immediate Tax Consequences** The $230,000 elected value becomes the proceeds of disposition. As this amount is equal to the adjusted cost base of the land, there are no immediate tax consequences resulting from the transfer.

**ACB Of The Land** The ACB of the land to the corporation would be equal to the elected value of $230,000.

**ACB Of Shares** The ACB of the shares issued by the corporation would be calculated as follows:

| | |
|---|---|
| Elected Value | $230,000 |
| Fair Market Value Of Non-Share Consideration | Nil |
| ACB Of Shares | $230,000 |

**PUC Of Shares** The required PUC reduction and resulting PUC would be calculated as follows:

| | | |
|---|---|---|
| Legal Stated Capital Of Shares | | $660,000 |
| Less Excess, If Any, Of: | | |
| Elected Value | ($230,000) | |
| Over The Non-Share Consideration | Nil | ( 230,000) |
| PUC Reduction | | $430,000 |
| PUC Of Shares ($660,000 - $430,000) | | $230,000 |

## Approach 2

**Immediate Tax Consequences** The elected value of $500,000 becomes proceeds of disposition. As this value exceeds the $230,000 adjusted cost base of the land, there is a taxable capital gain of $135,000 [(1/2)($500,000 - $230,000).

**ACB Of The Land** The ACB of the land to the corporation will be equal to the elected value of $500,000.

**ACB Of Shares** The ACB of the shares issued by the corporation would be calculated as follows:

| | |
|---|---|
| Elected Value | $500,000 |
| Fair Market Value Of Non-Share Consideration | Nil |
| ACB Of Shares | $500,000 |

**PUC Of Shares** The required PUC reduction and resulting PUC would be calculated as follows:

| | | |
|---|---|---|
| Legal Stated Capital Of Shares | | $660,000 |
| Less Excess, If Any, Of: | | |
| Elected Value | ($500,000) | |
| Over The Non-Share Consideration | Nil | ( 500,000) |
| PUC Reduction | | $160,000 |
| PUC Of Shares ($660,000 - $160,000) | | $500,000 |

## Approach 3

**Immediate Tax Consequences** The elected value of $500,000 becomes proceeds of disposition. As this value exceeds the $230,000 adjusted cost base of the land, there is a taxable capital gain of $135,000 [(1/2)($500,000 - $230,000)].

**ACB Of The Land** The ACB of the land to the corporation will be equal to the elected value of $500,000.

**ACB Of Shares** The ACB of the shares issued by the corporation would be calculated as follows:

| | |
|---|---|
| Elected Value | $500,000 |
| Fair Market Value Of Non-Share Consideration | ( 500,000) |
| ACB Of Shares | Nil |

**PUC Of Shares** The required PUC reduction and resulting PUC would be calculated as follows:

| | | |
|---|---|---|
| Legal Stated Capital Of Shares | | $160.000 |
| Less Excess, If Any, Of: | | |
| Elected Value | ($500,000) | |
| Over The Non-Share Consideration | 500,000 | Nil |
| PUC Reduction | | $160,000 |
| PUC Of Shares ($160,000 - $160,000) | | Nil |

## Self Study Solution Sixteen - 4

### *Part A - Adjusted Cost Base Of Consideration*

The adjusted cost base for each item of consideration, under the three alternatives, would be calculated as follows:

| | Alternative One | Alternative Two | Alternative Three |
|---|---|---|---|
| Elected Transfer Price | $225,000 | $225,000 | $225,000 |
| ACB - Boot | ( 150,000) | ( 175,000) | ( 210,000) |
| Available For Preferred And Common Stock | $75,000 | $ 50,000 | $ 15,000 |
| ACB - Preferred Stock | ( 50,000) | ( 50,000) | N/A |
| ACB - Common Stock (Residual) | $ 25,000 | N/A | $ 15,000 |

### *Part B - Legal Stated Capital And PUC*

The legal stated capital for the two classes of shares would be as follows:

| | Alternative One | Alternative Two | Alternative Three |
|---|---|---|---|
| Preferred Stock | $ 50,000 | $450,000 | Nil |
| Common Stock | 425,000 | Nil | $415,000 |
| Total Legal Stated Capital | $475,000 | $450,000 | $415,000 |

The required PUC reduction would be calculated as follows:

| | Alternative One | Alternative Two | Alternative Three |
|---|---|---|---|
| Increase In Legal Stated Capital - All Shares (A) | $475,000 | $450,000 | $415,000 |
| Elected Amount | $225,000 | $225,000 | $225,000 |
| Non-Share Consideration | ( 150,000) | ( 175,000) | ( 210,000) |
| Elected Amount, Less Boot (B) | $ 75,000 | $ 50,000 | $ 15,000 |
| Required PUC Reduction (A - B) | $400,000 | $400,000 | $400,000 |

**Alternative One** In Alternative One, the PUC reduction would have to be split between the two classes of shares on the basis of their relative fair market values. The relevant calculation would be as follows:

Preferred Shares: [($400,000)($50,000 ÷ $475,000)] = $42,105

Common Shares: [($400,000)($425,000 ÷ $475,000)] = $357,895

This would leave a PUC of $7,895 for the preferred shares ($50,000 - $42,105), and a PUC of $67,105 for the common shares ($425,000 - $357,895).

**Alternative Two** In Alternative Two, the entire PUC reduction of $400,000 would be allocated to the preferred shares, leaving a PUC of $50,000 ($450,000 - $400,000).

**Alternative Three** In Alternative Three, the entire PUC reduction of $400,000 would be allocated to the common stock, leaving a PUC of $15,000 ($415,000 - $400,000).

## Self Study Solution Sixteen - 5

### *Part A - ACB Of The Shares*

The adjusted cost base of the shares would be as follows:

| | |
|---|---|
| Total Elected Value | $467,000 |
| Non-Share Consideration ($122,000 + $128,000) | ( 250,000) |
| Adjusted Cost Base Preferred And Common Shares | $217,000 |
| Allocated To Preferred Shares (FMV) | ( 150,000) |
| Adjusted Cost Base Of Common Shares (Residual) | $ 67,000 |

### *Part B - PUC Of The Shares*

The legal stated capital of the preferred and common shares would be their respective fair market values of $150,000 and $326,000. The PUC reduction required under ITA 85(2.1) would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital ($150,000 + $326,000) | | $476,000 |
| Less Excess Of: | | |
| Total Elected Value | ($467,000) | |
| Over The Total Non-Share Consideration | 250,000 | ( 217,000) |
| Reduction In Paid Up Capital | | $259,000 |

Note that this total reduction is equal to the deferred gain on the election ($726,000 - $467,000). The PUC reduction would be allocated on the basis of fair market values as follows:

| | |
|---|---|
| Preferred Stock [($259,000)($150,000 ÷ $476,000)] | $ 81,618 |
| Common Stock [($259,000)($326,000 ÷ $476,000)] | 177,382 |
| Total PUC Reduction | $259,000 |

Subsequent to applying this reduction, the remaining PUC of the two classes of shares would be as follows:

| | Preferred Shares | Common Shares |
|---|---|---|
| Legal Stated Capital | $150,000 | $326,000 |
| PUC Reduction | ( 81,618) | ( 177,382) |
| PUC | $ 68,382 | $148,618 |

Note that the combined PUC of the two classes of shares is $217,000 ($68,382 + $148,618). This is the same amount as the combined ACB of the two classes of shares ($150,000 + $67,000).

### Part C - Tax Consequences Of Redemption

The tax consequences to Mr. Lardner, if the corporation redeemed both classes of shares at their respective fair market values, would be calculated as follows:

| | Preferred Shares | Common Shares |
|---|---|---|
| Redemption Proceeds | $150,000 | $326,000 |
| PUC (See Preceding Calculations) | ( 68,382) | ( 148,618) |
| ITA 84(3) Deemed Dividend | $ 81,618 | $177,382 |
| Redemption Proceeds | $150,000 | $326,000 |
| ITA 84(3) Deemed Dividend | ( 81,618) | ( 177,382) |
| Deemed Proceeds Of Disposition | $ 68,382 | $148,618 |
| Adjusted Cost Base (Part A) | ( 150,000) | ( 67,000) |
| Capital Gain (Loss) | ($ 81,618) | $ 81,618 |

Mr. Lardner would have a deemed non-eligible dividend of $259,000 ($81,618 + $177,382). The grossed up non-eligible dividend of $297,850 [(115%)($259,000)] would qualify for a federal dividend tax credit of $26,896 [(9/13)(15%)($259,000)]. He has a net capital gain of nil ($81,618 - $81,618).

## Self Study Solution Sixteen - 6

### Part A - Tax Consequences Of Transfer

With respect to the land, the $250,000 elected value will be both the proceeds of disposition to Mr. Bodin and the adjusted cost base to the corporation. As the elected value is equal to Mr. Bodin's adjusted cost base, there will be no tax consequences resulting from the transfer.

The elected value and proceeds of disposition for the building is $750,000, an amount that is less than its capital cost but more than its UCC. This will result in Mr. Bodin having to report recapture of $116,400 ($750,000 - $633,600). The corporation's tax value will be $750,000. However, the corporation will retain the original capital cost of $1,100,000 ($1,350,000 - $250,000) for recapture and capital gains calculations. The $350,000 difference will be deemed to be CCA taken.

### Part B - Adjusted Cost Base Of The Consideration

The adjusted cost base of all consideration received by Mr. Bodin will be the total elected value of $1,000,000 ($250,000 + $750,000). It will be allocated as follow:

| | |
|---|---|
| Total Elected Value | $1,000,000 |
| Total Non-Share Consideration | |
| ($450,000 Assumed Mortgage + $400,000 New Debt) | ( 850,000) |
| Adjusted Cost Base Of Common Shares | $ 150,000 |

#### *Part C - PUC Of The New Shares*

The calculation of PUC would be as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital (Fair Market Value) | | $950,000 |
| Less Excess Of: | | |
| Elected Amount | ($1,000,000) | |
| Over The Total Non-Share Consideration | 850,000 | ( 150,000) |
| Reduction In PUC | | $800,000 |

The PUC of the common shares would be reduced to $150,000 ($950,000 - $800,000).

#### *Part D - Sale Of Common Shares*

The increase in Net Income For Tax Purposes from a sale of the shares for $950,000 would be as follows:

| | |
|---|---|
| Proceeds Of Disposition | $950,000 |
| Adjusted Cost Base | ( 150,000) |
| Capital Gain | $800,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $400,000 |

As Taxable Income consequences are not required, the effect of the lifetime capital gains deduction has not been considered.

#### *Part E - Redemption*

The tax consequences of a redemption for $950,000 would be as follows:

| | |
|---|---|
| Proceeds From Redemption | $950,000 |
| PUC | ( 150,000) |
| ITA 84(3) Deemed Dividend (Non-Eligible) | $800,000 |

There would be no capital gain on this redemption as shown in the following calculation:

| | |
|---|---|
| Redemption Proceeds | $950,000 |
| ITA 84(3) Deemed Dividend | ( 800,000) |
| Deemed Proceeds Of Disposition | $150,000 |
| Adjusted Cost Base | ( 150,000) |
| Capital Gain | Nil |

The amount to be included in Net Income For Tax Purposes would be $920,000, the $800,000 deemed non-eligible dividend grossed up by 15 percent.

There would also be a federal dividend tax credit of $83,077 [(9/13)(15%)($800,000)]. However, as the problem only asks for the amounts to be included in Net Income For Tax Purposes, this is not a required part of the solution.

## Self Study Solution Sixteen - 7

#### *Part A - Assets To Be Transferred And Their Elected Values*

Of the assets in Mr. Danforth's Balance Sheet accounts, Cash and Prepayments are not among the eligible assets listed in ITA 85(1.1). This is of no consequence as the tax value of these assets is generally equal to their carrying values.

The fair market value of the Accounts Receivable is $1,250 ($13,750 - $12,500) less than their face value, reflecting Mr. Danforth's estimate of accounts that will not be collected. While these Accounts Receivable could be transferred under Section 85, they are usually transferred under the provisions of ITA 22. ITA 22 is used for two reasons. First, it means that the $1,250 loss on the transfer will be a fully deductible business loss, rather than a capital loss that will be disallowed on a transfer to a corporation controlled by the transferor. In addition, the use of the ITA 22 joint election will permit the transferee corporation to deduct actual bad debts as they occur as business expenses, rather than as capital losses.

With respect to Inventories, their fair market value and their carrying value are equal. Given this, there is no reason to transfer them under the provisions of Section 85 and they should be sold to Danforth Inc. for their fair market value.

With respect to the Land, there is an unrealized capital loss which will be disallowed on a transfer to an affiliated person. This is the case, without regard to whether Mr. Danforth makes the transfer directly or under the provisions of ITA 85(1). Given this, there is no reason to use ITA 85(1) for this transfer and it should be sold to Danforth Inc. for its fair market value.

There is a potential terminal loss on the transfer of the equipment. Given this, ITA 13(21.2) indicates that ITA 85 does not apply and the proceeds of disposition are deemed to be the UCC amount thereby disallowing the terminal loss.

If we assume that Mr. Danforth chooses to make the ITA 22 election, the following assets will not be transferred under the provisions of ITA 85(1):

| | |
|---|---|
| Cash (Not Eligible) | $ 2,500 |
| Accounts Receivable (ITA 22 Election Used) | 12,500 |
| Inventories (Cost = FMV) | 17,500 |
| Prepayments (Cost = FMV) | 7,500 |
| Land (Disallowed Capital Loss) | 77,500 |
| Equipment (UCC) | 20,000 |
| Total | $137,500 |

In order to minimize capital gains arising on the transfer of proprietorship assets and liabilities to the corporation, the elected price should be the lower of the tax value or the fair market value. The appropriate elected values for the assets that will be transferred using ITA 85 are indicated in the schedule that follows:

| | Tax Values | Fair Market Value | Elected Value |
|---|---|---|---|
| Temporary Investments | $ 27,500 | $ 37,500 | $27,500 |
| Buildings | 70,000 | 125,000 | 70,000 |
| Goodwill (See Note) | Nil | 117,500 | 1 |
| Total Assets Transferred | $97,500 | $280,000 | $97,501 |

**Note** It is prudent to add at least a nominal elected value for goodwill. A failure to do so could result in the application of ITA 69, with the transfer assessed to the transferor at fair market value.

### *Part B - Maximum Non-Share Consideration*

The liabilities that are assumed by the corporation are considered to be a part of the non-share consideration that is received by the transferor. The maximum amount of non-share consideration that can be received by Mr. Danforth on a tax free basis is $97,501. The non-share consideration would be made up of the corporation's assumption of the proprietorship's liabilities of $20,000, plus debt issued by the new corporation in the amount of $77,501.

### *Part C - Capital Gain On Sale Of Shares*

The adjusted cost base of the shares would be nil, as per the following calculation:

| | |
|---|---|
| Elected Value | $97,501 |
| Non-Share Consideration Received | 97,501 |
| Adjusted Cost Base Of Shares | Nil |

Given this, the taxable capital gain on the sale of the shares would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $208,000 |
| Adjusted Cost Base Of Shares | Nil |
| Capital Gain | $208,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $104,000 |

Since Danforth Inc. is a qualified small business corporation and Mr. Danforth has no CNIL, the taxable capital gain arising on the disposition of its shares would be eligible for the lifetime capital gains deduction. This means that he will be able to deduct an amount equal to the entire taxable capital gain in calculating his Taxable Income. However, use of his lifetime capital gains deduction to eliminate the taxable capital gain could result in a liability for alternative minimum tax.

## Self Study Solution Sixteen - 8

### *Part A*

The following table shows that the post-reassessment fair market value of the assets transferred to the corporation exceeds the fair market value of the consideration received:

| | |
|---|---|
| Fair Market Value Of Assets Transferred ($1,578,000 + $430,000 - $350,000) | $1,658,000 |
| Less The Greater Of: | |
| • Fair Market Value Of Consideration Received ($160,000 + $947,000 + $471,000) = $1,578,000 | |
| • Elected Value = $1,107,000 | ( 1,578,000) |
| Excess = Gift | $ 80,000 |

As Sarah Cheng is the only common shareholder of the new corporation, it is clear that Mr. Cheng has made a gift to his daughter. As a consequence, the amount of the gift must be added to the elected value in the rollover to arrive at a deemed proceeds of disposition. As the reassessment was on the non-depreciable capital asset land, the result will be a capital gain. This results in the following tax consequences for Mr. Cheng:

| | |
|---|---|
| Deemed Elected Value = Deemed Proceeds Of Disposition ($1,107,000 + $80,000) | $1,187,000 |
| Tax Values Of Assets Transferred | ( 1,107,000) |
| Capital Gain | $ 80,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 40,000 |

The adjusted cost base of the preferred shares received by Mr. Cheng would be calculated as follows:

| | |
|---|---|
| Elected Value (Original) | $1,107,000 |
| Non-Share Consideration ($160,000 + $947,000) | (1,107,000) |
| Adjusted Cost Base Of Preferred Shares | Nil |

The required PUC reduction and resulting PUC would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $471,000 |
| Excess, If Any, Of: | | |
| Deemed Elected Value | | |
| ($1,107,000 + $80,000) | ($1,187,000) | |
| Over Non-Share Consideration | 1,107,000 | ( 80,000) |
| PUC Reduction | | $391,000 |
| PUC Of Preferred Shares ($471,000 - $391,000) | | $ 80,000 |

***Part B***

The tax consequences to Mr. Cheng of having his shares redeemed would be as follows:

| | |
|---|---|
| Proceeds Of Redemption | $471,000 |
| PUC Of Shares | ( 80,000) |
| ITA 84(3) Deemed Dividend | $391,000 |

| | |
|---|---|
| Proceeds Of Disposition | $471,000 |
| ITA 84(3) Deemed Dividend | ( 391,000) |
| Adjusted Proceeds Of Disposition | $ 80,000 |
| Adjusted Cost Base Of Shares | Nil |
| Capital Gain (Loss) | $ 80,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 40,000 |

This non-eligible deemed dividend would be grossed up to $449,650 [(115%)($391,000)] of Taxable Income and will generate a federal dividend tax credit of $40,604 [(9/13)(15%)($391,000)].

***Part C***

The tax consequences of Sarah selling her shares would be as follows:

| | |
|---|---|
| Proceeds Of Disposition | $90,000 |
| Adjusted Cost Base Of Shares | ( 10,000) |
| Capital Gain | $80,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $40,000 |

### *Economic Analysis (Not Required)*

If Mr. Cheng had simply sold his business assets for their post reassessment fair market value, he would have had income as in the following calculation:

| | |
|---|---|
| Fair Market Value After Reassessment | |
| ($1,578,000 + $80,000) | $1,658,000 |
| Tax Values Of Assets | ( 1,107,000) |
| Income (Capital Gains And Recapture) | $ 551,000 |

Using the procedures in the problem, the results for Mr. Cheng are as follows:

| | |
|---|---|
| Capital Gain At Transfer | $ 80,000 |
| ITA 84(3) Deemed Dividend | 391,000 |
| Capital Gain On Redemption | 80,000 |
| Total | $551,000 |

While the composition of the income is different, the overall result is the same $551,000 that would have resulted from a simple sale of the listed business assets.

However, there is an impact on Sarah. The $80,000 gift added to the value of her shares with no corresponding increase in the adjusted cost base of the shares. As a result, when she sells the shares, there is a capital gain. In effect, the $80,000 amount of the gift will be subject to double taxation.

Overall, the procedures used in this situation resulted in Mr. Cheng being taxed on the same amount of income as would have been the case without the ITA 85(1) rollover. In addition, Sarah paid taxes on an additional capital gain of $80,000 ($40,000 taxable amount) that would not have occurred if Mr. Cheng had heeded the warnings of his accountant and used a valid fair market value for the land.

## Self Study Solution Sixteen - 9

### *Part A*

The original values used in the transfer resulted in a taxable capital gain of $162,500. Using these values did not indicate any excess consideration. However, with the reassessment value of $650,000 there is an excess, resulting in the following ITA 15(1) benefit:

| | |
|---|---|
| Fair Market Value Of Consideration | $800,000 |
| Reassessed Fair Market Value Of The Property | ( 650,000) |
| ITA 15(1) Shareholder Benefit | $150,000 |

With the value of the transferred property reassessed at $650,000, the elected value cannot exceed this amount. Based on this, there would be a revised taxable capital gain on the transfer, calculated as follows:

| | |
|---|---|
| Elected Value Of Property After Reassessment | $650,000 |
| Adjusted Cost Base | ( 475,000) |
| Capital Gain | $175,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain On Property After Reassessment | $ 87,500 |

The net effect of the reassessment would be calculated as follows:

| | |
|---|---|
| Taxable Capital Gain After Reassessment | $ 87,500 |
| Shareholder Benefit After Reassessment | 150,000 |
| Reversal Of Reported Taxable Capital Gain | ( 162,500) |
| Net Addition To Net Income For Tax Purposes | $ 75,000 |

The reason for this increase is that $75,000 ($162,500 - $87,500) of the original taxable capital gain was converted to a 100 percent taxable shareholder benefit of $150,000.

***Part B***

Because a $150,000 benefit will be included in Mel's income as a result of a property acquisition, ITA 52(1) requires that this amount be added to the adjusted cost base of the non-share consideration. Given this, the adjusted cost base of the non-share consideration would be as follows:

| | |
|---|---|
| Revised Elected Value | $650,000 |
| ITA 15(1) Shareholder Benefit | 150,000 |
| Adjusted Cost Base Of Non-Share Consideration | $800,000 |

Both the adjusted cost base and the PUC of the preferred shares issued is nil.

## Self Study Solution Sixteen - 10

***Part A - Tax Consequences Of Proposed Plan***

Ms. Chadwick's plan involves the disposition of shares of a corporation resident in Canada to a corporation with which she does not deal at arm's length (Mr. Borque would be considered Ms. Chadwick's common-law partner.). Subsequent to the transaction, the two corporations are connected (Borque Inc. controls Norton Ltd.). Given these facts, the provisions of ITA 84.1 apply to this transaction.

The required calculations begin with the PUC reduction under ITA 84.1(1)(a):

| | | |
|---|---|---|
| Increase In Legal Stated Capital Of Borque Inc. | | $1,590,000 |
| Less The Excess, If Any, Of: | | |
| Greater Of PUC And ACB Of Norton Ltd. Shares | ($225,000) | |
| Over The Fair Market Value Of The Boot | 875,000 | Nil |
| PUC Reduction | | $1,590,000 |
| PUC After Reduction ($1,590,000 - $1,590,000) | | Nil |

The nil PUC reflects the fact that all of the PUC of the Norton Ltd. shares was taken out as non-share consideration.

The deemed non-eligible dividend under ITA 84.1(1)(b), and federal dividend tax credit, would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital Of Borque Inc. | | $1,590,000 |
| Fair Market Value Of Boot | | 875,000 |
| Total | | $2,465,000 |
| PUC Of Norton Ltd. Shares | ($ 225,000) | |
| PUC Reduction Under ITA 84.1(1)(a) | ( 1,590,000) | ( 1,815,000) |
| Deemed Dividend Under ITA 84.1(1)(b) | | $ 650,000 |
| Gross Up At 15 Percent | | 97,500 |
| Taxable Non-Eligible Dividend | | $ 747,500 |

| | |
|---|---|
| Federal Dividend Tax Credit [(9/13)(15%)($650,000)] | $ 67,500 |

You will note that, because of the application of ITA 84.1, no capital gain eligible for the lifetime capital gains deduction results from this transaction. This can be seen in the following calculation:

| | |
|---|---|
| Proceeds Before Adjustment Of Norton Shares (Elected Amount) | $875,000 |
| ITA 84.1(1)(b) Deemed Dividend | ( 650,000) |
| Adjusted Proceeds Of Disposition (ITA 54) | $225,000 |
| Adjusted Cost Base Of Shares | ( 225,000) |
| Capital Gain | Nil |

### *Part B - An Improved Solution*

The approach suggested by Ms. Chadwick will not be successful in producing the required $650,000 capital gain. The reason that this approach cannot be successful is that Ms. Chadwick is trying to take out non-share consideration in excess of the $225,000 PUC and ACB of her Norton Ltd. shares. Fortunately, this situation can be corrected by reducing the amount of non-share consideration to $225,000. In conjunction with this reduction in the amount of non-share consideration, the PUC and fair market value of the retractable preferred shares will have to be increased to $2,240,000, so that the total fair market value of the consideration received by Ms. Chadwick equals $2,465,000, the fair market value of the Norton Ltd. shares given up in the transaction. Using this approach, the required PUC reduction under ITA 84.1(1)(b) would be as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital Of Borque Inc. | | $2,240,000 |
| Less The Excess, If Any, Of: | | |
| Greater Of PUC And ACB Of Norton Ltd. Shares | ($225,000) | |
| Over The Fair Market Value Of The Boot | 225,000 | Nil |
| PUC Reduction | | $2,240,000 |

| | |
|---|---|
| PUC After Reduction ($2,240,000 - $2,240,000) | Nil |

The deemed non-eligible dividend under ITA 84.1(1)(b) would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital Of Borque Inc. | | $2,240,000 |
| Fair Market Value Of Boot | | 225,000 |
| Total | | $2,465,000 |
| PUC Of Norton Ltd. Shares | ($ 225,000) | |
| PUC Reduction Under 84.1(1)(b) | ( 2,240,000) | ( 2,465,000) |
| Deemed Dividend Under ITA 84.1(1)(b) | | Nil |

Given the preceding, the capital gain resulting from this transaction is calculated as follows:

| | |
|---|---|
| Proceeds Before Adjustment Of Norton Ltd. Shares (Elected Amount) | $875,000 |
| ITA 84.1(1)(b) Deemed Dividend | Nil |
| Proceeds Of Disposition | $875,000 |
| Adjusted Cost Base Of Norton Ltd. Shares | ( 225,000) |
| Capital Gain | $650,000 |

There would be no tax consequences using this approach, except for the possibility that the alternative minimum tax may be payable. While there would be a $650,000 capital gain, it could be completely eliminated by using Ms. Chadwick's lifetime capital gains deduction.

### *Part C - Sale Of Shares*

As in the other Parts of this question, there is a sale of shares by an individual to a corporation with which the individual is not at arm's length. This means that ITA 84.1 is still applicable.

As no new Borque Inc. shares are issued, no PUC reduction is required.

The ITA 84.1(1)(b) deemed non-eligible dividend would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital Of Borque Inc. | | Nil |
| Non-Share Consideration Of Shares Sold [(6,530 Shares)($2,465,000 ÷ 22,500)] | | $715,398 |
| Total | | $715,398 |
| PUC Of Norton Ltd. Shares [(6,530 Shares)($10)] | ($65,300) | |
| PUC Reduction Under ITA 84.1(1)(a) | Nil | ( 65,300) |
| Deemed Dividend Under ITA 84.1(1)(b) | | $650,098 |

The taxable non-eligible dividend of $747,613 [(115%)($650,098)] would qualify for a federal dividend tax credit of $67,510 [(9/13)(15%)($650,098)]. Given this deemed dividend, the sale of shares will not result in the desired capital gain. This can be seen in the following calculation:

| | |
|---|---|
| Unadjusted Proceeds Of Disposition [(6,530 Shares)($2,465,000 ÷ 22,500)] | $715,398 |
| Deemed Dividend Under ITA 84.1(1)(b) | ( 650,098) |
| Adjusted Proceeds Of Disposition | $ 65,300 |
| Adjusted Cost Base Of Shares [(6,530 Shares)($10)] | ( 65,300) |
| Capital Gain | Nil |

## Self Study Solution Sixteen - 11

### Part A

In the absence of ITA 55(2), the entire $2,000,000 dividend could be deducted in the determination of Lardley's Taxable Income. However, as a dividend has been paid in conjunction with a disposition of property to an arm's length party, ITA 55(2) is applicable. As a result, the following calculation is required for the dividend received by Lardley:

| | |
|---|---|
| Dividends Received From Domas | $2,000,000 |
| Dividend Attributable To Safe Income (Tax Free) | ( 565,000) |
| Amount Deemed By ITA 55(2)(a) To Not Be A Dividend And By ITA 55(2)(c) To Be A Capital Gain | $1,435,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 717,500 |

As shown, $565,000 of the funds would be received by Lardley as a dividend from safe income and could be deducted under ITA 112, resulting in no tax cost. However, the remainder would be converted to deemed proceeds of disposition, resulting in a taxable capital gain of $717,500.

### Part B

In the absence of ITA 55(2), the results for Lardley would be as follows:

| | |
|---|---|
| Proceeds Of Redemption | $2,300,000 |
| Paid Up Capital Of Preferred Shares | ( 300,000) |
| ITA 84(3) Deemed Dividend | $2,000,000 |

| | |
|---|---|
| Proceeds Of Disposition | $2,300,000 |
| ITA 84(3) Dividend | ( 2,000,000) |
| Adjusted Proceeds Of Disposition | $ 300,000 |
| Adjusted Cost Base | ( 300,000) |
| Capital Gain | Nil |

As the ITA 84(3) dividend can be deducted in the determination of Lardley's Taxable Income, the Company would have succeeded in disposing of the Domas shares without tax consequences.

However, as the redemption was in conjunction with a disposition of the property to an arm's length purchaser, ITA 55(2) alters this result. ITA 55(2)(a) would deem $1,435,000 ($2,000,000, less the Safe Income of $565,000) of the ITA 84(3) dividend to not be a dividend. ITA 55(2)(b) would then deem the $1,435,000 to be proceeds of disposition. The result would be a capital gain determined as follows:

| | |
|---|---|
| Adjusted Proceeds Of Disposition | $ 300,000 |
| Deemed Proceeds Of Disposition | 1,435,000 |
| Total Proceeds Of Disposition | $1,735,000 |
| Adjusted Cost Base | ( 300,000) |
| Capital Gain | $1,435,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 717,500 |

The overall result would be the same as in Part A. That is, a $565,000 tax free dividend and a taxable capital gain of $717,500.

## Chapter 16 Learning Objectives

After completing Chapter 16, you should be able to:

1. Describe the type of situation where ITA 85 is applicable (paragraph [P hereafter] 16-1 to 16-4).
2. Explain the general rules that are applicable to the transferor and the transferee under ITA 85 (P 16-5 to 16-11).
3. Describe the types of consideration that can be received by the transferor under ITA 85 (P 16-12 to 16-14).
4. Describe the procedures required for making the ITA 85 election (P 16-15 to 16-17).
5. Calculate the range of values that can be used in a transfer under the provisions of ITA 85 (P 16-18 to 16-30).

---

6. Apply the general rules applicable to all assets that determine the range of values that can be used in a transfer under the provisions of ITA 85 (P 16-31 to 16-36).
7. Apply the detailed rules for the transfer of accounts receivable, inventories, and non-depreciable capital property under ITA 85 (P 16-37 to 16-49).
8. Describe the rules related to the transfer of non-depreciable capital property, including disallowed capital losses on transfers to affiliated persons and the associated tax planning issues (P 16-50 to 16-61).
9. Apply the detailed rules for the transfer of depreciable assets under ITA 85 (P 16-62 to 16-69).
10. Describe the rules related to the disallowance of terminal losses arising on transfers of depreciable capital property to affiliated persons and associated tax planning issues (P 16-70 to 16-73).

---

11. Summarize the transfer price rules for all assets under ITA 85 (P 16-74).
12. Calculate the amount of the elected value that will be allocated to each component of the consideration received by the transferor under ITA 85 (P 16-75 and 16-76).
13. Calculate the amount of the elected value that will be allocated to each of the assets acquired by the transferee under ITA 85 (P 16-77 to 16-84).
14. Calculate the Paid Up Capital of the shares received by the transferor in an ITA 85 rollover (P 16-85 to 16-96).
15. Apply the ITA 85 rules to situations involving the incorporation of an unincorporated business (P 16-97 to 16-112).

---

16. Identify situations where the ITA 85 rules on gifts to related persons are applicable and make the appropriate adjustments that are required by these rules (P 16-113 to 16-127).
17. Identify situations where the ITA 85 rules on benefits to the transferor are applicable and make the appropriate adjustments that are required by these rules (P 16-128 to 16-131).
18. Identify situations where ITA 84.1 (dividend stripping rules) is applicable (P 16-132 to 16-139).
19. Apply the ITA 84.1 rules to situations involving dividend stripping (P 16-140 to 16-149).
20. Identify situations where ITA 55(2) (capital gains stripping rules) is applicable (P 16-150 to 16-154).
21. Apply the ITA 55(2) rules to situations involving capital gains stripping (P 16-155 to 16-167).

# CHAPTER 17

## How To Work Through Chapter 17

We recommend the following approach in dealing with the material in this chapter:

**Introduction**

- Read paragraph 17-1 to 17-2 (in the textbook).

**Share For Share Exchanges (ITA 85.1)**

- Read paragraph 17-3 to 17-11.
- Do Exercise Seventeen-1 (in the textbook) and check the solution in this Study Guide.
- Read paragraph 17-12 to 17-13.
- Do Self Study Problems Seventeen-1 and Seventeen-2 which are available on MyLab and check the solutions in this Study Guide.

**Exchange Of Shares In A Reorganization (ITA 86)**

- Read paragraph 17-14 to 17-29.
- Do Exercises Seventeen-2 to Seventeen-4 and check the solutions in this Study Guide.
- Do Self Study Problem Seventeen-3 and check the solution in this Study Guide.

**Gift To Related Party - ITA 86(2) (Benefit Rule)**

- Read paragraph 17-30 to 17-40.
- Do Exercise Seventeen-5 and check the solution in this Study Guide.

**Using ITA 86 - Practical Considerations And Tax Planning Considerations**

- Read paragraph 17-41 to 17-46.
- Do Self Study Problems Seventeen-4 and Seventeen-5 and check the solutions in this Study Guide.

**Amalgamations (ITA 87)**

- Read paragraph 17-47 to 17-65.
- Do Exercise Seventeen-6 and check the solution in this Study Guide.

**Winding-Up Of A 90 Percent Owned Subsidiary**

- Read paragraph 17-66 to 17-81.
- Do Exercise Seventeen-7 and check the solution in this Study Guide.
- Read paragraph 17-82 to 17-84.
- Do Exercise Seventeen-8 and check the solution in this Study Guide.
- Read paragraph 17-85 to 17-86.

**Tax Planning Considerations - Amalgamation Vs. Winding-Up**

- Read paragraph 17-87 to 17-93.
- Do Self Study Problem Seventeen-6 and check the solution in this Study Guide.

**Winding-Up Of A Canadian Corporation**

- Read paragraph 17-94 to 17-109.
- Do Exercise Seventeen-9 and check the solution in this Study Guide.
- Do Self Study Problem Seventeen-7 and check the solution in this Study Guide.

**Convertible Properties**

- Read paragraph 17-110 to 17-116.

**Sale Of An Incorporated Business - Assets Vs. Shares**

- Read paragraph 17-117 to 17-155.
- Do Self Study Problem Seventeen-8 and check the solution in this Study Guide.

**To Complete This Chapter**

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 17. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 17 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 17 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 17 that is on MyLab.

**Practice Examination**

- Write the Practice Examination for Chapter 17 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

## Solutions to Chapter Seventeen Exercises

### *Exercise Seventeen - 1 Solution*

This transaction involves a share for share exchange that meets the conditions of ITA 85.1. Unless Ms. Alee opts out of this rollover provision in her income tax return, the tax consequences of this transaction for Ms. Alee would be as follows:

- Ms. Alee would be deemed to have disposed of her Aayee Ltd. shares at a value equal to their adjusted cost base of $450,000. As a consequence, there would be no capital gain on the disposition.
- Ms. Alee would be deemed to have acquired her Global Outreach Inc. shares at a cost equal to the adjusted cost base of the Aayee Ltd. shares, or $450,000.
- The adjusted cost base of the Aayee Ltd. shares that have been acquired by Global Outreach Inc. would be deemed to be the lesser of their fair market value and their paid up capital. In this case, the $450,000 paid up capital amount is the lower figure.
- The PUC of the Global Outreach Inc. shares that have been issued to Ms. Alee would be $450,000, the PUC of the Aayee Ltd. shares that were given up.

### *Exercise Seventeen - 2 Solution*

The required PUC reduction on the redeemable preferred shares would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $1,300,000 |
| Less The Excess, If Any, Of: | | |
| PUC Of Common Shares | ($1,000,000) | |
| Over The Non-Share Consideration | 1,000,000 | Nil |
| PUC Reduction | | $1,300,000 |

This means that the redeemable preferred shares would have a PUC of nil ($1,300,000 - $1,300,000).

The adjusted cost base of the redeemable preferred shares would be calculated as follows:

| | |
|---|---|
| Adjusted Cost Base Of Common Shares | $1,000,000 |
| Non-Share Consideration | ( 1,000,000) |
| Adjusted Cost Base Of Redeemable Preferred Shares | Nil |

Because Sam took back cash equal to his PUC and ACB, there would be no ITA 84(3) deemed dividend and no capital gain or loss. These calculations would be as follows:

| | |
|---|---|
| PUC Of New Shares | Nil |
| Plus Non-Share Consideration | $1,000,000 |
| Proceeds Of Redemption Under ITA 84(5)(d) | $1,000,000 |
| PUC Of Old Shares | ( 1,000,000) |
| ITA 84(3) Deemed Dividend | Nil |

| | |
|---|---|
| Adjusted Cost Base Of New Shares | Nil |
| Plus Non-Share Consideration | $1,000,000 |
| Proceeds Of Disposition Under ITA 86(1)(c) | $1,000,000 |
| ITA 84(3) Deemed Dividend | Nil |
| Adjusted Proceeds | $1,000,000 |
| Adjusted Cost Base Of Old Shares | ( 1,000,000) |
| Capital Gain (Loss) | Nil |

### *Exercise Seventeen - 3 Solution*

The required PUC reduction on the redeemable preferred shares would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $1,300,000 |
| Less The Excess, If Any, Of: | | |
| PUC Of Common Shares | ($1,000,000) | |
| Over The Non-Share Consideration | 1,000,000 | Nil |
| PUC Reduction | | $1,300,000 |

This means that the redeemable preferred shares would have a PUC of nil ($1,300,000 - $1,300,000).

The adjusted cost base of the redeemable preferred shares would be calculated as follows:

| | |
|---|---|
| Adjusted Cost Base Of Common Shares | $1,250,000 |
| Non-Share Consideration | ( 1,000,000) |
| Adjusted Cost Base Of Redeemable Preferred Shares | $ 250,000 |

Because Sam took back cash equal to his PUC and less than his ACB, there would be no ITA 84(3) deemed dividend and no capital gain or loss. These calculations would be as follows:

| | |
|---|---|
| PUC Of New Shares | Nil |
| Plus Non-Share Consideration | $1,000,000 |
| Proceeds Of Redemption Under ITA 84(5)(d) | $1,000,000 |
| PUC Of Old Shares | ( 1,000,000) |
| ITA 84(3) Deemed Dividend | Nil |

| | |
|---|---|
| Adjusted Cost Base Of New Shares | $ 250,000 |
| Plus Non-Share Consideration | 1,000,000 |
| Proceeds Of Disposition Under ITA 86(1)(c) | $1,250,000 |
| ITA 84(3) Deemed Dividend | Nil |
| Adjusted Proceeds | $1,250,000 |
| Adjusted Cost Base Of Old Shares | ( 1,250,000) |
| Capital Gain (Loss) | Nil |

***Exercise Seventeen - 4 Solution***

The required PUC reduction on the redeemable preferred shares would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $1,100,000 |
| Less The Excess, If Any, Of: | | |
| PUC Of Common Shares | ($1,000,000) | |
| Over The Non-Share Consideration | 1,200,000 | Nil |
| PUC Reduction | | $1,100,000 |

This means that the redeemable preferred shares would have a PUC of nil ($1,100,000 - $1,100,000).

The adjusted cost base of the redeemable preferred shares would be calculated as follows:

| | |
|---|---|
| Adjusted Cost Base Of Common Shares | $1,250,000 |
| Non-Share Consideration | ( 1,200,000) |
| Adjusted Cost Base Of Redeemable Preferred Shares | $ 50,000 |

Because the non-share consideration was greater than the PUC of the old shares, the resulting ITA 84(3) deemed dividend and the allowable capital loss would be calculated as follows:

| | |
|---|---|
| PUC Of New Shares | Nil |
| Plus Non-Share Consideration | $1,200,000 |
| Proceeds Of Redemption Under ITA 84(5)(d) | $1,200,000 |
| PUC Of Old Shares | ( 1,000,000) |
| ITA 84(3) Deemed Dividend (Non-Eligible) | $ 200,000 |

| | |
|---|---|
| Adjusted Cost Base Of New Shares | $ 50,000 |
| Plus Non-Share Consideration | 1,200,000 |
| Proceeds Of Disposition Under ITA 86(1)(c) | $1,250,000 |
| ITA 84(3) Deemed Dividend | ( 200,000) |
| Adjusted Proceeds | $1,050,000 |
| Adjusted Cost Base Of Old Shares | ( 1,250,000) |
| Capital Gain (Loss) | ($ 200,000) |
| Inclusion Rate | 1/2 |
| Allowable Capital Loss | ($ 100,000) |

The taxable amount of the non-eligible dividend would be $230,000 [(115%)($200,000)]. It would qualify for a federal dividend tax credit of $20,769 [(9/13)(15%)($200,000)].

### Exercise Seventeen - 5 Solution

The amount of the gift can be calculated as follows:

| | |
|---|---|
| Fair Market Value Of Shares [(80%)($1,600,000)] | $1,280,000 |
| Consideration Received ($300,000 + $800,000) | ( 1,100,000) |
| Gift To Daughter | $ 180,000 |

As a gift is present in this transaction, ITA 86(2) is applicable.

The PUC reduction on the new shares would be calculated as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital | | $800,000 |
| Less The Excess, If Any, Of: | | |
| PUC Of Common Shares [(80%)($250,000)] | ($200,000) | |
| Over The Non-Share Consideration | 300,000 | Nil |
| PUC Reduction | | $800,000 |

This means that the redeemable preferred shares would have a PUC of nil ($800,000 - $800,000).

Under ITA 86(2)(e), the adjusted cost base of the redeemable preferred shares would be calculated as follows:

| | | |
|---|---|---|
| Adjusted Cost Base Of Common Shares | | $200,000 |
| Deduct: | | |
| Non-Share Consideration | ($300,000) | |
| Gift | ( 180,000) | ( 480,000) |
| Adjusted Cost Base Of Preferred Shares | | Nil |

Given the $180,000 gift, the ITA 84(3) deemed dividend and the taxable capital gain would be calculated as follows:

| | |
|---|---|
| PUC Of New Preferred Shares | Nil |
| Plus Non-Share Consideration | $300,000 |
| Proceeds Of Redemption Under ITA 84(5)(d) | $300,000 |
| PUC Of Shares Given Up | ( 200,000) |
| ITA 84(3) Deemed Dividend (Non-Eligible) | $100,000 |

| | |
|---|---|
| Proceeds Of Disposition Under ITA 86(2)(c) - Lesser Of: | |
| • Fair Market Value Of Shares Given Up = $1,280,000 | |
| • Non-Share Consideration Plus Gift ($300,000 + $180,000) = $480,000 | $480,000 |
| Less ITA 84(3) Deemed Dividend | ( 100,000) |
| Adjusted Proceeds | $380,000 |
| Adjusted Cost Base Of Shares Given Up | ( 200,000) |
| Capital Gain | $180,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 90,000 |

The taxable amount of the non-eligible dividend would be $115,000 [(115%)($100,000)]. It would qualify for a federal dividend tax credit of $10,385 [(9/13)(15%)($100,000)].

Her total gain is $280,000 ($100,000 + $180,000). In economic terms this reflects the $100,000 excess of the non-share consideration over the PUC and adjusted cost base of the old shares ($300,000 - $200,000), plus the $180,000 gift. Ms. Reviser would also have a deferred gain of $800,000, the excess of the $800,000 fair market value of the preferred shares over their PUC and adjusted cost base of nil.

The combination of the current and deferred gains is $1,080,000 ($800,000 + $280,000). This is the same amount of gain that would have occurred if Ms. Reviser had simply sold her shares for their fair market value of $1,280,000 ($1,280,000 - $200,000 = $1,080,000).

While this transaction has not changed Ms. Reviser's economic position, it has created an additional taxable amount for her daughter. Before this transaction, the fair market value of the daughter's holding was $320,000 [(20%)($1,600,000)]. This holding now has a value of $500,000. This is the $1,600,000 total value of Janrev Inc. prior to the transaction, less the cash of $300,000, less the fair market value of the preferred shares of $800,000. As there is no increase in her adjusted cost base, this extra $180,000 ($500,000 - $320,000) represents a deferred gain that will be taxed if her shares are redeemed or if she chooses to sell them.

### *Exercise Seventeen - 6 Solution*

As Upton Inc. has a clear majority of the shares in Amalgo Inc., it would appear that they have acquired control of Downer Ltd. As the acquisition of control rules would be applicable, there would be a deemed year end for both Companies that coincides with the amalgamated year end. The non-capital loss carry forward of Downer Ltd. will be flowed through to the amalgamated company, Amalgo Inc. However, because of the acquisition of control, the net capital loss carry forward cannot be used. In addition, the non-capital loss can only be applied against profits earned in the same business or a similar business.

### *Exercise Seventeen - 7 Solution*

Subsequent to an ITA 88(1) winding-up, the parent company can deduct subsidiary losses in its first taxation year beginning after that date. This would be the year beginning on September 16, 2019.

Side's loss is deemed to occur in Park's taxation year that includes Side's year end. This would be the year ending September 15, 2019. This means that it will expire, after 20 taxation years, at the end of Park's taxation year ending September 15, 2039.

### *Exercise Seventeen - 8 Solution*

Under ITA 88(1), a limited bump-up of non-depreciable capital assets is available. The basic limit would be calculated as follows:

| | |
|---|---|
| Adjusted Cost Base Of Lorne Inc. Shares | $1,200,000 |
| Tax Values Of Lorne Inc.'s Net Assets | |
| At Winding-Up ($500,000 - $75,000) | ( 425,000) |
| Dividends Paid By Lorne Since Acquisition | Nil |
| Excess | $ 775,000 |

However, this basic amount cannot exceed the difference between the fair market value of the non-depreciable capital assets at the time of the share acquisition and their tax cost at that time. This amount would be $130,000 ($270,000 - $140,000). The bump-up in the Land value is limited to that amount, resulting in the following tax values for Lorne's assets at the time of the ITA 88(1) winding-up:

| | |
|---|---|
| Cash | $120,000 |
| Land ($140,000 + $130,000) | 270,000 |
| Depreciable Assets - At UCC | 240,000 |
| Total Assets | $630,000 |

Note that the remaining $645,000 ($775,000 - $130,000) of the excess is lost as a result of this wind up.

#### *Exercise Seventeen - 9 Solution*

Given the size of the proceeds, the balance in the combined RDTOH accounts will clearly be less than 38-1/3 percent of the dividends to be declared. Given this, the total distribution to shareholders will be $912,000 ($865,000 + $47,000).

The taxable dividend component of the total distribution to the shareholders is calculated as follows:

| | |
|---|---|
| Total Distribution ($865,000 + $47,000) | $912,000 |
| Paid Up Capital | ( 88,000) |
| ITA 84(2) Deemed Dividend On Winding-Up | $824,000 |
| Capital Dividend Account (Election Required) | ( 26,000) |
| Non-Eligible Dividend Subject To Tax* | $798,000 |

*As the company's GRIP balance is nil, all of the dividends will be non-eligible.

The non-eligible dividend will be grossed up to $917,700 [(115%)($798,000)]. The shareholders will also have a federal dividend tax credit of $82,869 [(9/13)(15%)($798,000)].

As shown in the following calculation, the shareholders will not have a capital gain on the disposition of their shares:

| | |
|---|---|
| Total Distribution To Shareholders | $912,000 |
| ITA 84(2) Deemed Dividend | ( 824,000) |
| Deemed Proceeds Of Disposition | $ 88,000 |
| Adjusted Cost Base Of Shares | ( 88,000) |
| Capital Gain | Nil |

## Self Study Solution Seventeen - 1

#### *Part A - ITA 85.1 Applies*

Jerry elected to transfer his business using ITA 85(1) at a value of $986,000. Given that he took back non-share consideration of $500,000, the adjusted cost base of his Jerry's Flowers common shares would be calculated as follows:

| | |
|---|---|
| Elected Value | $986,000 |
| Non-Share Consideration | ( 500,000) |
| Adjusted Cost Base Of Common Shares | $486,000 |

The PUC of these shares would be calculated as follows:

| | | |
|---|---|---|
| Increase in Legal Stated Capital | | $1,840,000 |
| Less Excess, If Any, Of: | | |
| Elected Value | ($986,000) | |
| Non-Share Consideration | 500,000 | ( 486,000) |
| PUC Reduction | | $1,354,000 |
| PUC Of Common Shares ($1,840,000 - $1,354,000) | | $ 486,000 |

Using these values for the Jerry's Flowers shares, if Jerry does not opt out of ITA 85.1, the tax consequences would be as follows:

- Jerry would be deemed to have disposed of his Jerry's Flowers shares at a value equal to their adjusted cost base of $486,000. Given this, there would be no capital gain on the disposition.
- Jerry would be deemed to have acquired his Large Flowers Inc. shares at a cost equal to the $486,000 adjusted cost base of his Jerry's Flowers shares.
- The PUC of the Large Flowers Inc. shares that have been issued to Jerry would be $486,000, the PUC of the Jerry's Flowers shares that were given up.

### *Part A - Opting Out Of ITA 85.1*

The total fair market value of the Large Flowers shares is $3,750,000. In order to opt out of ITA 85.1, he will have to include a taxable capital gain of $1,632,000 [(1/2)($3,750,000 - $486,000)] in his 2019 tax return. This has the advantage of absorbing his $800,000 net capital loss carry forward. However, it will result in his being required to pay taxes on the remaining $832,000 ($1,632,000 - $800,000). Because all of his shares are involved in the exchange, he has no choice as to the amount of the gain to be recognized.

### *Part B - ACB For Large Flowers Inc.*

The adjusted cost base of the Jerry's Flowers shares in the hands of Large Flowers Inc. would be the lesser of their $3,750,000 fair market value and their PUC. In this case, the PUC amount of $486,000 is lower and will be the adjusted cost base amount.

### *Part C - Alternative Solutions*

There are two possible solutions that would make full use of the $800,000 net capital loss carry forward and minimize the current payment of taxes.

**Alternative One** Jerry could use ITA 85(1) to exchange the shares at an elected value of $2,086,000. If this value was elected, the resulting taxable capital gain would be equal to the required amount of $800,000 [(1/2)($2,086,000 - $486,000)]. Note that this would leave the adjusted cost base of the acquired shares at the elected value of $2,086,000. This compares to $486,000 if ITA 85.1 is used.

**Alternative Two** Each share of Jerry's Flowers Ltd. has a fair market value of $3,750 ($3,750,000 ÷ 1,000) and an adjusted cost base of $486 ($486,000 ÷ 1,000). This means that each share that is sold to Large Flowers would generate a taxable capital gain of $1,632 [(1/2)($3,750 - $486)]. Given this, selling 490 of these shares to Large Flowers would result in a taxable capital gain of $799,680 [(490)($1,632)]. This would be eliminated by the application of the $800,000 net capital loss carry forward. The remaining 510 (1,000 - 490) shares of Jerry's Flowers could then be exchanged for Large Flowers Inc. shares on a tax free basis under either of ITA 85(1) or ITA 85.1.

## Self Study Solution Seventeen - 2

### *Part A - ITA 85.1 Applies*

Sarah elected to transfer her business using ITA 85(1) at a value of $842,000. Given that she took back non-share consideration of $360,000, the adjusted cost base of her Hartman shares would be calculated as follows:

| | |
|---|---|
| Elected Value | $842,000 |
| Non-Share Consideration | ( 360,000) |
| Adjusted Cost Base Of Common Shares | $482,000 |

The PUC of these shares would be calculated as follows:

| | | |
|---|---|---|
| Increase in Legal Stated Capital | | $1,200,000 |
| Less Excess, If Any, Of: | | |
| Elected Value | ($842,000) | |
| Non-Share Consideration | 360,000 | ( 482,000) |
| PUC Reduction | | $ 718,000 |
| PUC Of Common Shares ($1,200,000 - $718,000) | | $ 482,000 |

Using these values for the Hartman shares, if Sarah does not opt out of ITA 85.1, the tax consequences would be as follows:

- Sarah would be deemed to have disposed of her Hartman shares at a value equal to their adjusted cost base of $482,000. Given this, there would be no capital gain on the disposition.
- Sarah would be deemed to have acquired her Grande Ltd. shares at a cost equal to the $482,000 adjusted cost base of her Hartman shares.
- The PUC of the Grande Ltd. shares that have been issued to Sarah would be $482,000, the PUC of the Hartman shares that were given up.

### *Part A - Opting Out Of ITA 85.1*

Sarah can opt out of ITA 85.1 by including a $1,109,000 [(1/2)($2,700,000 - $482,000)] taxable capital gain in her income tax return. This may be desirable in that it will allow her to make use of her $625,000 net capital loss carry forward. However, the disadvantage of opting out of ITA 85.1 is that she will have to pay taxes on the net taxable capital gain of $484,000 ($1,109,000 - $625,000).

Because all of her shares are involved in the exchange, she has no choice as to the amount of the gain to be recognized.

### *Part B - ACB For Grande Ltd.*

The adjusted cost base of the Hartman shares in the hands of Grande would be the lesser of their $2,700,000 fair market value and their PUC. In this case, the PUC amount of $482,000 is lower and will be the adjusted cost base amount.

### *Part C - Alternative Solutions*

There are two possible solutions that would make full use of the $625,000 net capital loss carry forward and minimize the current payment of taxes.

**Alternative One** Sarah could use ITA 85(1) to exchange the shares at an elected value of $1,732,000. If this value was elected, the resulting taxable capital gain would be equal to the required amount of $625,000 [(1/2)($1,732,000 - $482,000)]. Note that this would leave the adjusted cost base of the acquired shares at the elected value of $1,732,000. If ITA 85.1 were used, this value would be the $482,000 PUC of the shares.

**Alternative Two** Each share of Hartman Inc. has a fair market value of $450 ($2,700,000 ÷ 6,000) and an adjusted cost base of $80.33 ($482,000 ÷ 6,000). This means that each share that is sold to Grande would generate a taxable capital gain of $184.84 [(1/2)($450 - $80.33)]. Given this, selling 3,382 of these shares to Grande would result in a taxable capital gain of $625,128.88 [(3,382)($184.84)]. This would be largely eliminated by the application of the $625,000 net capital loss carry forward. The remaining 2,618 (6,000 - 3,382) shares of Hartman could then be exchanged for Grande Ltd. shares on a tax free basis under either of ITA 85(1) or ITA 85.1.

## Self Study Solution Seventeen - 3

The fair market value of the business is $10,985,000 , which is composed of tangible assets of $12,450,000, plus goodwill of $2,000,000, less the bank loan of $3,465,000.

To implement the ITA 86(1) rollover, the twins should each invest $10,000 in exchange for new common shares of BIL.

At this point, Ms. Boswick can exchange, on a tax free basis, her common shares for new preferred shares with a redemption value of $10,985,000. This would have no immediate tax consequences. The ACB and PUC of the new preferred shares would be calculated as follows:

| | | |
|---|---|---|
| Adjusted Cost Base Of Shares Given Up | | $250,000 |
| Non-Share Consideration | | Nil |
| Adjusted Cost Base Of Preferred Shares | | $250,000 |
| | | |
| Legal Stated Capital - Preferred Shares | | $10,985,000 |
| Less Excess, If Any, Of: | | |
| PUC - Shares Given Up | ($250,000) | |
| Non-Share Consideration | Nil | ( 250,000) |
| Required PUC Reduction | | $10,735,000 |
| | | |
| PUC - Preferred Shares ($10,985,000 - $10,735,000) | | $250,000 |

Ms. Boswick's preferred shares will not participate in the future growth of the company. This means that all of the future growth in Boswick Industries will accrue to the two children who are holding the common shares.

In order for Ms. Boswick to retain control, the preferred shares should be voting shares.

Subsequent to these transactions, the July 1, 2019 Balance Sheet would be as follows:

**Boswick Industries Ltd.**
**Shareholders' Equity**
**As At July 1, 2019**

| | |
|---|---|
| Tangible Assets At Tax Values ($12,450,000+ $10,000 + $10,000) | $12,470,000 |
| | |
| Bank Loan | $ 3,465,000 |
| Preferred Shares (Paid Up Capital) | 250,000 |
| Common Shares ($10,000 + $10,000) | 20,000 |
| Retained Earnings | 8,735,000 |
| Total | $12,470,000 |

## Self Study Solution Seventeen - 4

### Part A

**Gift To Jack** This transaction involves a gift of $320,000 to Mr. Mark's son, Jack, calculated as follows:

| | |
|---|---|
| Fair Market Value Of Common Shares Given Up [(80%)($2,400,000)] | $1,920,000 |
| Fair Market Value Of Preferred Shares Received | ( 1,600,000) |
| Gift | $ 320,000 |

It is fair to assume that this amount is a gift to Jack, as he is the only remaining holder of common shares in Markit Ltd.

**PUC Of New Preferred Shares** The PUC reduction required under ITA 86(2.1) would be calculated as follows:

| | | |
|---|---|---|
| Legal Stated Capital Of New Shares | | $8,000 |
| Deduct: | | |
| PUC Of Old Shares | ($8,000) | |
| Non-Share Consideration | Nil | ( 8,000) |
| PUC Reduction | | Nil |
| PUC Of Preferred Shares ($8,000 - Nil) | | $8,000 |

As the required PUC reduction is nil, the PUC of the new shares would be equal to the $8,000 PUC of the old shares.

**Adjusted Cost Base Of New Preferred Shares** This amount would be calculated as follows:

| | | |
|---|---|---|
| Adjusted Cost Base Of Old Shares | | $ 8,000 |
| Deduct: | | |
| Non-Share Consideration | $ Nil | |
| Gift | ( 320,000) | ( 320,000) |
| Adjusted Cost Base Of New Shares | | Nil |

**Proceeds Of Redemption For Old Common Shares - ITA 84(5)(d)** For purposes of determining any ITA 84(3) deemed dividend on the redemption of the old shares, the proceeds of redemption would be as follows:

| | |
|---|---|
| PUC Of New Preferred Shares | $8,000 |
| Non-Share Consideration | Nil |
| Proceeds Of Redemption | $8,000 |

As this amount is equal to the old PUC, there is no ITA 84(3) deemed dividend on the transaction.

**Proceeds Of Disposition For Old Common Shares - ITA 86(2)(c)** For purposes of determining any capital gain on the redemption of the old common shares, the proceeds of disposition would be the lesser of the $1,920,000 fair market value of the old common shares and the following amount:

| | |
|---|---|
| Non-Share Consideration | $ Nil |
| Gift | 320,000 |
| Proceeds Of Disposition | $320,000 |

Using the lesser figure of $320,000, there would be a taxable capital gain on the transaction calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $320,000 |
| ITA 84(3) Deemed Dividend | Nil |
| Adjusted Proceeds Of Disposition | $320,000 |
| Adjusted Cost Base | ( 8,000) |
| Capital Gain | $312,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $156,000 |

The total potential gain on Mr. Mark's shares is $1,912,000 ($1,920,000 - $8,000). Because there was a gift to his son, $312,000 of this amount must be recognized at the time of the roll-over. The remaining $1,600,000 is deferred until the preferred shares are sold or redeemed. In the absence of the gift, all of this gain could have been deferred.

### Part B

This transaction will not alter the total fair market value of the Company and, as a consequence, the value of Jack's common shares will increase by the $320,000 amount of the gift. There will be no corresponding increase in the amount of the tax cost of these shares and, as a consequence, this value will be taxed when Jack sells the common shares. As this value has already been taxed in the hands of Mr. Mark, there will be double taxation on this amount.

### Part C

If Mr. Mark's preferred shares were redeemed at their fair market value of $1,600,000, the tax consequences would be as follows:

| | |
|---|---|
| Redemption Proceeds | $1,600,000 |
| PUC | ( 8,000) |
| ITA 84(3) Deemed Dividend (Non-Eligible) | $1,592,000 |

| | |
|---|---|
| Redemption Proceeds | $1,600,000 |
| Deemed ITA 84(3) Dividend | ( 1,592,000) |
| Adjusted Proceeds Of Disposition | $ 8,000 |
| Adjusted Cost Base | ( Nil) |
| Capital Gain | $ 8,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 4,000 |

The overall tax consequences of the redemption would be as follows:

| | |
|---|---|
| Taxable Dividend [($1,592,000)(115%)] | $1,830,800 |
| Taxable Capital Gain | 4,000 |
| Income Inclusion | $1,834,800 |

The deemed non-eligible dividend would qualify for a federal dividend tax credit of $165,323 [(9/13)(15%)($1,592,000)].

Note that Mr. Mark's dividends and capital gains from the rollover total $1,912,000 ($312,000 + $1,592,000 + $8,000). This is equal to the $1,912,000 [(80%)($2,400,000) - $8,000] capital gain that would have resulted from a sale of his shares at fair market value. From his point of view, the redemption result is less favourable in that part of the gain is in the form of more heavily taxed non-eligible dividends. In addition, if his son were to sell his shares, there would be additional income subject to tax of $320,000.

## Self Study Solution Seventeen - 5

### Approach One - No Gift

#### *Part A*

As the fair market value of the cash and preferred shares ($50,000 + $1,300,000) received by Ms. Platt is equal to the fair market value of the common shares she has given up ($1,350,000), no gift is involved.

#### *Part B*

The paid up capital of the new shares would be reduced as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital - New Shares | | $90,000 |
| Less The Excess, If Any, Of: | | |
| PUC - Old Shares [(75%)($120,000)] | ($90,000) | |
| Over Non-Share Consideration | 50,000 | ( 40,000) |
| Reduction In PUC - New Shares | | $50,000 |

Given this reduction, the PUC of the new preferred shares would be as follows:

| | |
|---|---|
| Increase In Legal Stated Capital - New Shares | $90,000 |
| Reduction In PUC | ( 50,000) |
| PUC - New Shares | $40,000 |

#### *Part C*

The adjusted cost base of the preferred shares would be calculated as follows:

| | |
|---|---|
| Adjusted Cost Base - Old Shares [(75%)($120,000)] | $90,000 |
| Non-Share Consideration | ( 50,000) |
| Adjusted Cost Base - New Shares | $40,000 |

#### *Part D*

The Proceeds Of Redemption would be calculated as follows:

| | |
|---|---|
| PUC - New Shares | $40,000 |
| Plus Non-Share Consideration | 50,000 |
| Proceeds Of Redemption [ITA 84(5)(d)] | $90,000 |

The Proceeds Of Disposition would be calculated as follows:

| | |
|---|---|
| Adjusted Cost Base - New Shares | $40,000 |
| Plus Non-Share Consideration | 50,000 |
| Proceeds Of Disposition [ITA 86(1)(c)] | $90,000 |

### Part E Immediate Tax Consequences

As the ITA 84(5)(d) proceeds of redemption are equal to the PUC of the old shares, there is no ITA 84(3) deemed dividend. As the ITA 86(1)(c) proceeds of disposition are equal to the adjusted cost base of the old shares, there is no capital gain. This means there are no immediate tax consequences.

### Part F Tax Consequences Of Redemption Of New Shares

| | |
|---|---|
| Redemption Proceeds | $1,300,000 |
| PUC - New Shares | ( 40,000) |
| ITA 84(3) Deemed Dividend (Non-Eligible) | $1,260,000 |

| | |
|---|---|
| Proceeds Of Disposition | $1,300,000 |
| ITA 84(3) Deemed Dividend | ( 1,260,000) |
| Adjusted Proceeds Of Disposition | $ 40,000 |
| Adjusted Cost Base - Preferred Shares | ( 40,000) |
| Capital Gain | Nil |

The tax consequence would be an income inclusion of $1,449,000 [(115%)($1,260,000)], the grossed up value of the deemed non-eligible dividend. This would qualify for a federal dividend tax credit of $130,846 [(9/13)(15%)($1,260,000)].

### Additional Analysis

While not a required part of the problem, you might wish to note that the $1,260,000 deemed dividend is the same amount of unadjusted income that would have been assessed to Ms. Platt if she had simply sold her shares ($1,350,000 - $90,000). However, it would have been more favourably taxed as a capital gain, rather than as a non-eligible dividend.

## Approach Two - Gift

### Part A

Under this approach, the fair market value of the cash and preferred shares received by Ms. Platt of $1,320,000 ($50,000 + $1,270,000) is less than the fair market value of the common shares she has given up ($1,350,000). As her son is in a residual equity position in PIL, there would appear to be a gift to him in the amount of $30,000 [$1,350,000 - ($50,000 + $1,270,000)]. Given this, ITA 86(2) is applicable.

### Part B

The paid up capital of the preferred shares would be reduced under ITA 86(2.1)(a) as follows:

| | | |
|---|---|---|
| Increase In Legal Stated Capital - New Shares | | $1,270,000 |
| Less The Excess, If Any, Of: | | |
| PUC - Old Shares [(75%)($120,000)] | ($90,000) | |
| Over Non-Share Consideration | 50,000 | ( 40,000) |
| Reduction In PUC - New Shares | | $1,230,000 |

| | |
|---|---|
| Increase In Legal Stated Capital - New Shares | $1,270,000 |
| Reduction In PUC | ( 1,230,000) |
| PUC - New Shares | $ 40,000 |

**Part C**

The adjusted cost base of the preferred shares would be calculated as follows:

| | | |
|---|---|---|
| Adjusted Cost Base - Old Shares | | $90,000 |
| Deduct: | | |
| Non-Share Consideration | ($50,000) | |
| Gift | ( 30,000) | ( 80,000) |
| Adjusted Cost Base - New Shares | | $10,000 |

**Part D**

The Proceeds Of Redemption would be calculated as follows:

| | |
|---|---|
| PUC - New Shares | $40,000 |
| Non-Share Consideration | 50,000 |
| Proceeds Of Redemption [ITA 84(5)(d)] | $90,000 |

The Proceeds Of Disposition would be calculated as follows:

| | |
|---|---|
| Non-Share Consideration | $50,000 |
| Gift | 30,000 |
| Proceeds Of Disposition [ITA 86(2)(c)] | $80,000 |

***Part E Immediate Tax Consequences***

As the ITA 84(5)(d) proceeds of redemption are equal to the PUC of the old shares, there is no ITA 84(3) deemed dividend. However, the ITA 86(2)(c) proceeds of disposition are less than the adjusted cost base of the old shares, resulting in a capital loss of $10,000 ($80,000 - $90,000). This loss would be disallowed by ITA 86(2)(d).

***Part F Tax Consequences Of Redemption***

| | |
|---|---|
| Redemption Proceeds | $1,270,000 |
| PUC - New Shares | ( 40,000) |
| ITA 84(3) Deemed Dividend (Non-Eligible) | $1,230,000 |

| | |
|---|---|
| Proceeds Of Disposition | $1,270,000 |
| ITA 84(3) Deemed Dividend | ( 1,230,000) |
| Adjusted Proceeds Of Disposition | $ 40,000 |
| Adjusted Cost Base - New Shares | ( 10,000) |
| Capital Gain | $ 30,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 15,000 |

The overall tax consequences of the redemption would be as follows:

| | |
|---|---|
| Taxable Dividend [(115%)($1,230,000)] | $1,414,500 |
| Taxable Capital Gain | 15,000 |
| Income Inclusion | $1,429,500 |

The deemed non-eligible dividend would qualify for a federal dividend tax credit of $127,731 [(9/13)(15%)($1,230,000)].

### Additional Analysis

While this analysis is not required by the problem, you might note that the total unadjusted income accruing to Ms. Platt is $1,260,000 ($1,230,000 + $30,000). This is the same total that would have resulted from a sale of her shares [($1,350,000 - $90,000) = $1,260,000]. However, it is received in a less favourable form ($1,230,000 in non-eligible dividends as opposed to all capital gains on a sale of shares). In addition, the market value of her son's shares has increased by the $30,000 amount of the gift. Given that there is no corresponding increase in the adjusted cost base of his shares, this additional amount will be subject to tax if the shares are redeemed or sold.

## Self Study Solution Seventeen - 6

### Use Of Section 87

If ITA 87 is used, the tax consequences are as follows:

- The land will flow through to the amalgamated corporation at its adjusted cost base of $175,000. No capital gain or loss will be recorded.
- As the subsidiary is 100 percent owned, the ITA 88(1) bump-up provision is available. The bump-up will be the lesser of:

| | | |
|---|---|---|
| Adjusted Cost Base Of Lynn Shares | | $390,000 |
| Deduct: | | |
| Lynn's Tax Value For Land - Original Cost | ($175,000) | |
| Dividends Paid By Lynn | Nil | ( 175,000) |
| 1st Value | | $215,000 |
| Value Of Land At Acquisition Of Lynn | | $390,000 |
| Adjusted Cost Base Of Land | | ( 175,000) |
| 2nd Value | | $215,000 |

This will leave the adjusted cost base of the land at $390,000 ($175,000 + $215,000).

### Use Of Section 88(1)

If ITA 88(1) is used, the tax consequences are as follows:

- Lynn will have proceeds of disposition equal to the adjusted cost base of the land of $175,000. No capital gain or loss will be recorded.
- Ricon Ltd. will have the same bump-up on the land as calculated under the ITA 87 approach. The adjusted cost base of the land will also be the same $390,000 that was calculated in the ITA 87 solution.

### Conclusion

Both approaches result in a bump-up of $215,000 and an adjusted cost base for the land of $390,000. It does not appear to make any difference which of the two alternative approaches is used.

## Self Study Solution Seventeen - 7

### *Part A - Funds Available For Distribution*

The taxable capital gains and active business income (recapture) at the corporate level can be calculated as follows:

| Asset | Taxable Capital Gains | Active Business Income |
|---|---|---|
| Inventories | Nil | Nil |
| Taxable Capital Gains: | | |
| On Land [(1/2)($1,243,000 - $623,000)] | $310,000 | Nil |
| On Building [(1/2)($1,173,000 - $775,000)] | 199,000 | |
| Recapture On Building ($775,000 - $586,000) | | $189,000 |
| Totals | $509,000 | $189,000 |

As the active business income is less than the $500,000 annual business limit, there will be no addition to the General Rate Income Pool Balance. The taxable capital gains are not eligible for addition to the GRIP balance.

Taxable Income will be $698,000 ($509,000 + $189,000). Tax Payable on this amount will be calculated as follows:

| | |
|---|---|
| Federal Tax On Business Income [(38% - 10% - 19%)($189,000)] | $ 17,010 |
| Federal Tax On Investment Income [(38% - 10% + 10-2/3%)($509,000)] | 196,813 |
| Part I Tax Payable | $213,823 |
| Provincial Tax On Business Income [(3%)($189,000)] | 5,670 |
| Provincial Tax On Investment Income [(13%)($509,000)] | 66,170 |
| Total Corporate Tax Payable | $285,663 |

### *Non-Eligible RDTOH Balance*

As Kruger's GRIP was nil, all of the opening RDTOH of $27,000 would be allocated to the Non-Eligible RDTOH.

The refundable portion of the Part I tax would be $156,093, the least of:

| | |
|---|---|
| • 30-2/3 Percent Of Investment Income [(30-2/3%)($509,000)] | $156,093 |
| • 30-2/3 Percent Of Taxable Income, Less The Amount Eligible For The Small Business Deduction [(30-2/3%)($698,000 - $189,000)] | $156,093 |
| • Part I Tax Payable | $213,823 |

This amount would be added to the Non-Eligible RDTOH. Based on this, the ending balance in this account would be calculated as follows:

| | |
|---|---|
| Opening Non-Eligible RDTOH | $ 27,000 |
| Refundable Portion Of Part I Tax | 156,093 |
| Ending Non-Eligible RDTOH | $183,093 |

The amount available for distribution to the shareholders, after the payment of taxes at the corporate level, can be calculated as follows:

| | |
|---|---|
| Fair Market Values: | |
| Inventories | $ 35,000 |
| Land | 1,243,000 |
| Building | 1,173,000 |
| Gross Proceeds | $2,451,000 |
| Corporate Tax Payable | ( 285,663) |
| Dividend Refund (Note) | 183,093 |
| Funds Available For Distribution | $2,348,430 |

**Note** Technically, the dividend refund is the lesser of the $183,093 balance in the RDTOH account and 38-1/3 percent of taxable dividends paid. However, given the size of the distribution in this problem, it is clear that $183,093 will be the lower figure.

With respect to the capital dividend account, the final balance is calculated as follows:

| | |
|---|---|
| Balance Before Dispositions | $215,000 |
| Disposition Of Land | 310,000 |
| Disposition Of Building | 199,000 |
| Ending Balance | $724,000 |

### *Part B - Components Of Distribution*

Assuming an election has been made to declare the maximum capital dividend, the taxable dividend component of the total distribution to the shareholders can be calculated as follows:

| | |
|---|---|
| Distribution To Shareholders | $2,348,430 |
| Paid Up Capital | ( 447,000) |
| ITA 84(2) Deemed Dividend | $1,901,430 |
| Capital Dividend (Balance In Account) | ( 724,000) |
| Deemed Dividend Subject To Tax (Non-Eligible) | $1,177,430 |

As Kruger has no GRIP balance, all of this dividend will be non-eligible. The taxable amount will be $1,354,045 [(115%)($1,177,430)]. This dividend will qualify for a federal dividend tax credit of $122,272 [(9/13)(15%)($1,177,430)].

### *Part B - Capital Gain*

With respect to capital gains, ITA 54 indicates that the proceeds of disposition for purposes of determining any capital gain on the disposition of shares does not include any amount paid out as ITA 84(2) dividends. Given the preceding calculation, the capital gain to the shareholders would be calculated as follows:

| | |
|---|---|
| Actual Distribution To Shareholders | $2,348,430 |
| ITA 84(2) Deemed Dividend | ( 1,901,430) |
| Deemed Proceeds Of Disposition | $ 447,000 |
| Adjusted Cost Base For Shares | ( 447,000) |
| Capital Gain | Nil |

## Self Study Solution Seventeen - 8

### Sale Of Assets

This calculation requires two steps. First, we must determine the after tax proceeds that will be available at the corporate level subsequent to the sale of the assets. Then, a second stage analysis is required to determine the amount that will be retained by Mr. Lange after he pays all of the taxes that are due on the proceeds that are distributed to him.

***Cash Proceeds, Capital Gains, And Business Income***

The direct sale of the assets would create the following amounts of cash, taxable capital gains, and business income:

| Asset | Cash Proceeds | Taxable Capital Gains | Active Business Income |
|---|---|---|---|
| Accounts Receivable | | | |
| ($91,000 - $83,000) | $ 91,000 | | $ 8,000 |
| Inventories ($298,000 - $237,000) | 298,000 | Nil | 61,000 |
| Land [(1/2)($656,000 - $167,000)] | 656,000 | 244,500 | |
| Building: | | | |
| [(1/2)($652,000 - $582,000)] | | 35,000 | |
| ($582,000 - $176,000) | 652,000 | | 406,000 |
| Goodwill | 719,000 | 359,500 | Nil |
| Totals For Purchased Assets | $2,416,000 | $639,000 | $475,000 |
| Term Deposits | 529,000 | Nil | Nil |
| Totals | $2,945,000 | $639,000 | $475,000 |

***Taxable Income And Tax Payable***

Taxable Income will total $1,114,000 ($639,000 + $475,000). The Tax Payable on this amount would be calculated as follows:

| | |
|---|---|
| Federal Tax On: | |
| Business Income [(38% - 10% - 19%)($475,000)] | $ 42,750 |
| Investment Income [(38% - 10% + 10-2/3%)($639,000)] | 247,080 |
| Part I Tax Payable | $289,830 |
| Provincial Tax On Business Income [(3%)($475,000)] | 14,250 |
| Provincial Tax On Investment Income [(14%)($639,000)] | 89,460 |
| Total Corporate Tax Payable | $393,540 |

***Non-Eligible RDTOH Balance***

There is no transitional balance in the RDTOH account. The only addition for 2019 would be the refundable portion of Part I tax. This amount would be the least of:

- 30-2/3 Percent Of Investment Income [(30-2/3%)($639,000)] $195,960
- 30-2/3 Percent Of Taxable Income, Less The Amount Eligible For The Small Business Deduction [(30-2/3%)($1,114,000 - $475,000)] $195,960
- Part I Tax Payable $289,830

The least of these items is the $195,960. This amount would be added to the Non-Eligible RDTOH and this would be the ending balance in that account.

***Funds Available For Distribution***
Based on the preceding figures, the amount of cash available for distribution would be calculated as follows:

| | |
|---|---|
| Gross Proceeds For Assets | $2,945,000 |
| Payment Of Liabilities | ( 355,000) |
| Tax Payable | ( 393,540) |
| Dividend Refund (Note) | 195,960 |
| Total Funds Available For Distribution | $2,392,420 |

**Note** Technically, the dividend refund is the lesser of the $195,960 balance in the Non-Eligible RDTOH account and 38-1/3 percent of taxable dividends paid. However, given the size of the distribution in this problem, it is clear that $195,960 will be the lower figure.

***Capital Dividend Account***
The balance in the capital dividend account would be calculated as follows:

| | |
|---|---|
| Opening Balance | Nil |
| Non-Taxable One-Half Of Capital Gains (From Table Calculating Corporate Income On Asset Dispositions) | $639,000 |
| Capital Dividend Account Balance | $639,000 |

***Taxable Dividends Resulting From Distribution***
Assuming an election has been made to declare the maximum capital dividend, the taxable dividend component of the total distribution to Mr. Lange can be calculated as follows:

| | |
|---|---|
| Funds Available For Distribution | $2,392,420 |
| Paid Up Capital | ( 135,000) |
| ITA 84(2) Deemed Dividend | $2,257,420 |
| ITA 83(2) Capital Dividend (Balance In Account) | ( 639,000) |
| Non-Eligible Dividend | $1,618,420 |

There would be no capital gain on the disposition, as demonstrated in the following calculation:

| | |
|---|---|
| Amount Distributed | $2,392,420 |
| ITA 84(2) Deemed Dividend | ( 2,257,420) |
| Deemed Proceeds Of Disposition | $ 135,000 |
| Adjusted Cost Base | ( 135,000) |
| Capital Gain | Nil |

***Personal Tax Payable***

As there is no capital gain and the capital dividend is received tax free, the personal Tax Payable on the dividend subject to tax would be calculated as follows:

| | |
|---|---|
| Non-Eligible Dividend | $1,618,420 |
| 15 Percent Gross Up | 242,763 |
| Taxable Amount Of Dividends | $1,861,183 |
| Combined Rate (33% + 18%) | 51% |
| Tax Before Dividend Tax Credit | $ 949,203 |
| Dividend Tax Credit [(9/13 + 4/13)($242,763)] | ( 242,763) |
| Personal Tax Payable | $ 706,440 |

## Sale Of Shares

The tax payable resulting from a sale of shares would be calculated as follows:

| | |
|---|---|
| Proceeds From The Sale Of Shares | $2,380,000 |
| Adjusted Cost Base | ( 135,000) |
| Capital Gain | $2,245,000 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $1,122,500 |
| Tax Rate (33% + 18%) | 51% |
| Personal Tax Payable | $ 572,475 |

**Note** This capital gain would not qualify for the lifetime capital gains deduction because shares of Alcove are not qualified small business corporation shares. The Term Deposits are not involved in producing active business income. As they clearly exceed 10 percent of the fair market value of the assets, Alcove shares are not qualified small business corporation shares.

## Conclusion

Given the preceding calculations, the after tax, personal cash retention under both alternatives would be as follows:

| | Asset Sale | Share Sale |
|---|---|---|
| Proceeds From Sale | $2,392,420 | $2,380,000 |
| Personal Tax Payable | ( 706,440) | ( 572,475) |
| After Tax Retention | $1,685,980 | $1,807,525 |

As the after tax retention is $121,545 ($1,807,525 - $1,685,980) larger when shares are sold, this would be the preferable alternative. If the lifetime capital gains deduction was available, this alternative would have been even more favourable. We would note that this would not have been difficult to accomplish. All that would have been required was the sale of the term deposits and distribution of the proceeds prior to selling the shares.

# Chapter 17 Learning Objectives

After completing Chapter 17, you should be able to:

1. Identify situations where the ITA 85.1 rollover provision is applicable (paragraph [P hereafter] 17-1 to 17-13).
2. Identify situations where the ITA 86 rollover provision is applicable (P 17-14).
3. Apply the ITA 86 rollover procedures to freeze an estate (P 17-15 to 17-16).
4. List the conditions that must be met in order to use the ITA 86 rollover provision (P 17-17 to 17-18).
5. Explain the procedures that are required in implementing an ITA 86 rollover (P 17-19 to 17-29).

---

6. Identify situations where the ITA 86(2) benefit rule is applicable and apply the required procedures to specific examples (P 17-30 to 17-40).
7. Describe the major tax planning considerations related to the use of ITA 86 (P 17-41 to 17-46).
8. Explain the nature of an ITA 87 amalgamation (P 17-47 to 17-50).
9. Describe the position of the amalgamated company subsequent to an ITA 87 amalgamation (P 17-51 to 17-55).
10. Describe the position of the shareholders of the amalgamated company subsequent to an ITA 87 amalgamation (P 17-56).

---

11. Identify the specific considerations involved in vertical amalgamations (P 17-57).
12. Explain the "asset bump-up" that is available under both ITA 87 and ITA 88(1) (P 17-58 to 17-61).
13. Explain both the non-tax considerations and tax planning considerations related to ITA 87 amalgamations (P 17-62 to 17-65).
14. Explain the nature of an ITA 88(1) winding-up of a 90 percent owned subsidiary (P 17-66 to 17-73).
15. Apply the procedures for recording the assets acquired by the parent company in an ITA 88(1) winding-up of a 90 percent owned subsidiary (P 17-74 to 17-84).

---

16. Apply the procedures required for the disposition of shares that occurs in the winding-up of a 90 percent owned subsidiary (P 17-85 and 17-86).
17. Compare the results of applying ITA 87 vs. the results of applying ITA 88(1) and any associated tax planning issues (P 17-87 to 17-93).
18. Apply the procedures required in an ITA 88(2) winding-up of a Canadian corporation (P 17-94 to 17-109).
19. Explain the procedures used under ITA 51 when there is a conversion of a corporation's preferred shares or debt securities (P 17-110 to 17-116).
20. Explain the basic alternatives for the sale of an incorporated business (P 17-117 to 17-118).

---

21. Explain the provisions relating to restrictive covenants (a.k.a. non-competition agreements) (P 17-119 to 17-122).
22. Describe the procedures used when the individual assets of a business are sold (P 17-123 to 17-125).
23. Describe the procedures used when the assets of a business are sold as a going concern (P 17-126 to 17-135).
24. Describe the procedures used when the shares of a business are sold (P 17-136 to 17-140).
25. Compare an offer to purchase the shares of a business and an offer to purchase its assets and determine the preferable alternative (P 17-141 to 17-155).

# CHAPTER 18

## How To Work Through Chapter 18

We recommend the following approach in dealing with the material in this chapter:

**Introduction To Partnerships**

- Read paragraph 18-1 to 18-7 (in the textbook).

**Partnerships Defined**

- Read paragraph 18-8 to 18-23.
- Do Self Study Problem Eighteen-1 which is available on MyLab and check the solution in this Study Guide.

**Co-Ownership, Joint Ventures, And Syndicates**

- Read paragraph 18-24 to 18-36.
- Do Self Study Problem Eighteen-2 and check the solution in this Study Guide.

**Determining Partnership Income, Losses, And Tax Credits**

- Read paragraph 18-37 to 18-52.
- Do Exercise Eighteen-1(in the textbook) and check the solution in this Study Guide.
- Read paragraph 18-53 to 18-56.
- Do Exercise Eighteen-2 and check the solution in this Study Guide.
- Read paragraph 18-57 to 18-58.
- Do Exercise Eighteen-3 and check the solution in this Study Guide.

**Allocations To Partners And Partner Expenses**

- Read paragraph 18-59.
- Do Exercise Eighteen-4 and check the solution in this Study Guide.
- Read paragraph 18-60 to 18-62.
- Do Self Study Problems Eighteen-3 and Eighteen-4 and check the solutions in this Study Guide.

**The Partnership Interest**

- Read paragraph 18-63 to 18-74.
- Do Exercise Eighteen-5 and check the solution in this Study Guide.

**Adjustments To The ACB Of A Partnership Interest**

- Read paragraph 18-75 to 18-88.
- Do Exercise Eighteen-6 and check the solution in this Study Guide.
- Read paragraph 18-89 to 18-90.
- Do Self Study Problems Eighteen-5 and Eighteen-6 and check the solutions in this Study Guide.

**Limited Partnerships And Limited Partners**
- Read paragraph 18-91 to 18-102.
- Do Exercise Eighteen-7 and check the solution in this Study Guide.
- Do Self Study Problem Eighteen-7 and check the solution in this Study Guide.

**Transfers Of Property To And From A Partnership - No Rollover**
- Read paragraph 18-103 to 18-108.
- Do Exercise Eighteen-8 and check the solution in this Study Guide.
- Read paragraph 18-109.
- Do Exercise Eighteen-9 and check the solution in this Study Guide.

**Common Partnership Rollovers**
- Read paragraph 18-110 to 18-112.
- Do Exercise Eighteen-10 and check the solution in this Study Guide.
- Read paragraph 18-113 to 18-127.
- Do Self Study Problem Eighteen-8 and check the solution in this Study Guide.

**To Complete This Chapter**
- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 18. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 18 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 18 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 18 that is on MyLab.

**Practice Examination**
- Write the Practice Examination for Chapter 18 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

## Solutions to Chapter Eighteen Exercises

### *Exercise Eighteen - 1 Solution*
The following amounts would be added to Mr. Peter's Net Income For Tax Purposes:

| | |
|---|---|
| Business Income [(50%)($55,000)] | $27,500 |
| Taxable Capital Gains [(50%)(1/2)($40,000)] | 10,000 |
| Eligible Dividends [(50%)($10,000)] | 5,000 |
| Gross Up [(38%)($5,000)] | 1,900 |
| Total Addition | $44,400 |

In addition, Mr. Peters would be eligible for a federal dividend tax credit of $1,036 [(6/11)($1,900)]. The drawings that he made during the year are not included in his 2019 Net Income For Tax Purposes.

### *Exercise Eighteen - 2 Solution*

The JL Partnership's Net Business Income would be calculated as follows:

| | | |
|---|---|---|
| Accounting Net Income | | $262,000 |
| Add: | | |
| Salary To J | $45,000 | |
| Interest To L | 22,000 | |
| Amortization Expense | 26,000 | |
| Donations | 2,500 | 95,500 |
| Subtotal | | $357,500 |
| Deduct: | | |
| Maximum CCA | ($42,000) | |
| Accounting Gain On Sale Of Land | ( 24,000) | ( 66,000) |
| Net Business Income | | $291,500 |
| Priority Allocations For Salary And Interest | | ( 67,000) |
| Residual To Be Split 60:40 | | $224,500 |

The allocation of this Net Business Income to the two partners would be as follows:

| | Partner J | Partner L |
|---|---|---|
| Priority Allocation For Salary | $ 45,000 | N/A |
| Priority Allocation For Interest | N/A | $22,000 |
| Allocation Of Residual | | |
| [(60%)($224,500)] | 134,700 | |
| [(40%)($224,500)] | | 89,800 |
| Total Business Income Allocation | $179,700 | $111,800 |

While not required, you might note that a taxable capital gain of $12,000 [(1/2)($24,000)] would be allocated to the partners on a 60:40 basis. With respect to the donations, the amount of the charitable donations of $2,500 would allocated on a 60:40 basis, leaving the individual partners to calculate the available credit.

### *Exercise Eighteen - 3 Solution*

The ST Partnership's Net Business Income would be calculated as follows:

| | |
|---|---|
| Accounting Net Income | $146,000 |
| Amortization Expense = CCA | Nil |
| Eligible Dividends | ( 12,000) |
| Accounting Gain On Sale Of Land | ( 31,000) |
| Net Business Income | $103,000 |

The addition to Net Income For Tax Purposes for each of the two partners would be calculated as follows:

| | Partner S | Partner T |
|---|---|---|
| Net Business Income [(50%)($103,000)] | $51,500 | $51,500 |
| Eligible Dividends [(50%)($12,000)] | 6,000 | 6,000 |
| Gross Up [(38%)($6,000)] | 2,280 | 2,280 |
| Taxable Capital Gain [(50%)(1/2)($31,000)] | 7,750 | 7,750 |
| Net Income For Tax Purposes Addition | $67,530 | $67,530 |

While not required, you might note that each partner would be eligible for a federal dividend tax credit of $1,244 [(6/11)($2,280)].

### Exercise Eighteen - 4 Solution

The tax credits that would be allocated to each of the partners would be calculated as follows:

| | |
|---|---|
| **Charitable Donations** ($1,750 Each) | |
| [(15%)($200) + (29%)($1,750 - $200)] | $ 480 |
| **Political Contributions** ($600 Each) | |
| [(3/4)($400)] + [(1/2)($200)] | 400 |
| **Eligible Dividends** ($2,100 Each) | |
| [(6/11)(38%)($2,100)] | 435 |
| Total Of Credits To Each Partner | $1,315 |

These amounts would serve to reduce the Tax Payable of each of the two partners for the year ending December 31, 2019.

### Exercise Eighteen - 5 Solution

After the admission of Caitlan, Alan and Balan will each have a one-third interest in the partnership, down from the previous interest of one-half. They are each, in effect, selling one-third of their partnership interest [(1/2 - 1/3) ÷ 1/2)]. The ACB of their distribution to Caitlan is $16,000 [(1/3)($48,000)], resulting in a capital gain of $24,000 ($40,000 - $16,000). The taxable capital gain is one-half of this amount or $12,000.

The partner capital account transactions and ending balances will be:

| | Alan | Balan | Caitlin |
|---|---|---|---|
| Opening Capital Accounts | $48,000 | $48,000 | Nil |
| Adjustment For Caitlin's Admission | ( 16,000) | ( 16,000) | $32,000 |
| Ending Capital Accounts (Accounting Values) | $32,000 | $32,000 | $32,000 |
| ACB Of Partnership Interest | $32,000 | $32,000 | $80,000 |

### Exercise Eighteen - 6 Solution

The ACB of Robert's partnership interest on December 31, 2019 and January 1, 2020 would be determined as follows:

| | |
|---|---|
| Original Capital Contribution | $12,500 |
| Additional Contribution | 7,200 |
| Drawing | ( 4,000) |
| ACB - December 31, 2019 | $15,700 |
| Adjustment For 2019 Income | |
| [(40%)($11,600 + $3,100 + $46,700)] | 24,560 |
| ACB - January 1, 2020 | $40,260 |

Robert's inclusion in Net Income For Tax Purposes would be as follows:

| | |
|---|---|
| Taxable Capital Gain [(40%)(1/2)($11,600)] | $ 2,320 |
| Dividends Received [(40%)($3,100)] | 1,240 |
| Gross Up On Dividends [(40%)(38%)($3,100)] | 471 |
| Net Business Income [(40%)($46,700)] | 18,680 |
| Inclusion In 2019 Net Income For Tax Purposes | $22,711 |

Note that this $22,711 addition to Robert's Net Income For Tax Purposes is not the same amount as the $24,560 that was added to the ACB of Robert's partnership interest to reflect his share of 2019 partnership income. While not required by the problem, Robert can claim a federal dividend tax credit of $257 [(6/11)($471)].

### Exercise Eighteen - 7 Solution

| | | |
|---|---|---|
| ACB Of Partnership Interest | | $200,000 |
| Share Of Partnership Income (Not Loss) For 2019 | | Nil |
| Subtotal | | $200,000 |
| Amounts Owed To The Partnership | ($150,000) | |
| Other Amounts Intended To Reduce Investment Risk (General Partner Guarantee) | ( 50,000) | ( 200,000) |
| At-Risk Amount - December 31, 2019 | | Nil |

As the at-risk amount is nil, none of the loss can be deducted in 2019. The limited partnership loss at the end of 2019 is 100 percent of the $75,000 loss allocation.

### Exercise Eighteen - 8 Solution

**Part A** Charles is considered to have disposed of the land for $100,000, resulting in a $33,500 [(1/2)($100,000 - $33,000)] taxable capital gain. LIU will be considered to have acquired the land for $100,000. Charles is considered to have made a capital contribution of $100,000 that will be added to the ACB of his partnership interest.

**Part B** Charles will have the same $33,500 taxable capital gain as in Part A and LIU will be considered to have acquired the land for $100,000. The capital contribution and the addition to the ACB of the partnership interest is equal to $75,000. This is the difference between the fair market value of the land transferred to LIU of $100,000 and the $25,000 in other consideration received by Charles on the property transfer.

**Part C** Charles will have the same $33,500 taxable capital gain as in Part A and LIU will be considered to have acquired the land for $100,000. No capital contribution is made. As Charles withdrew $12,000 ($112,000 - $100,000) more from LIU than he transferred in, Charles will be considered to have made a net withdrawal. The ACB of his partnership interest will be reduced by $12,000.

### Exercise Eighteen - 9 Solution

ITA 98(2) deems DG to have disposed of the share investments for the fair market value of $94,000, resulting in a $55,000 ($94,000 - $39,000) capital gain. One-fifth of the capital gain, or $11,000, will be allocated to Darlene. One-half of this amount, or $5,500, will be a taxable capital gain that she will include in her income for 2019.

Darlene's adjusted cost base for the share investments is $18,800 [(20%)($94,000)].

The adjusted cost base of her partnership interest on December 31, 2019 and on January 1, 2020 is calculated as follows:

| | |
|---|---|
| Partnership ACB Prior To Distribution | $30,000 |
| Drawings [(20%)($94,000)] | ( 18,800) |
| Partnership ACB - December 31, 2019 | $11,200 |
| Allocated Capital Gain [(20%)($94,000 - $39,000)] | 11,000 |
| Partnership ACB - January 1, 2020 | $22,200 |

### *Exercise Eighteen - 10 Solution*

Using the ITA 85(1) rollover provision, the property would be transferred at the $156,000 ACB of the land. Given this, the transfer would not result in any current income for Samantha. The cost of the land to the partnership would be the $156,000 elected value for the transfer. This same amount would be added to the adjusted cost base of Samantha's partnership interest.

## Self Study Solution Eighteen - 1

The determination of the existence of a partnership is a mixed question of fact and law, based upon the intention of the parties that may be expressed clearly through a valid written partnership agreement or inferred from actions. In Canada, the relevant provincial partnership legislation is applicable to answering this question.

In this case, an analysis of the three elements of a partnership is as follows:

1. **Was the business carried on in common by two or more persons?**

   The details of the partnership agreement contain many of the necessary ingredients that the courts will look to in support of this element. Accordingly, it appears that this element has been met.

2. **Was a business carried on by the partnership?**

   A business has a beginning and an end. Ongoing profitable activity within the business may actually only occur between these two extremes, but the activity remains a business throughout the period. In other words, profitability is generally irrelevant to a finding that a business exists. In this case, the selling off of store property will likely occur as part of the wind up process of the two stores. Accordingly, there are arguments that support the carrying on of a business.

3. **Was there a view to profit?**

   This element will be satisfied if there is a potential for profit even though one may never be realized. The facts clearly lead to a conclusion that there is no hope of profit. The additional fact that the partnership will be terminated once the property is sold and that losses are not only expected, but anticipated, speaks for itself. A tax motivation that predominates, such as this, will not invalidate a partnership as long as there is a profit potential and the other elements are met. This is not the case.

**Conclusion:** A partnership will not be created. As a result, no losses can be allocated to the investors. The losses belong to Wayout Ltd. only.

## Self Study Solution Eighteen - 2

### *Part A - Partnership Results*

As the original intention when the land was purchased was to develop and sell lots, the income from the sale of the lots would be reported as business income and not as a capital gain.

Using the provisions of ITA 97(2), Mr. Marrazzo could transfer the land to the partnership at its ACB of $400,000. There would be no effect on his Net Income For Tax Purposes in 2019. His partnership income inclusion for the two years would be calculated as follows:

| | |
|---|---|
| 2019 Addition To Net Income For Tax Purposes | Nil |

The total net business income resulting from the 2020 sale of the property would be as follows:

| | |
|---|---|
| Proceeds From Lot Sales | $4,400,000 |
| Cost Of Land | ( 400,000) |
| Site Servicing Costs | ( 1,200,000) |
| Net Business Income | $2,800,000 |

Mr. Marrazzo's 2020 addition to his Net Income For Tax Purposes would be calculated as follows:

| | |
|---|---|
| Priority Claim Of Accrued Gain ($1,300,000 - $400,000) | $ 900,000 |
| Allocation Of Remaining Business Income [(50%)($2,800,000 - $900,000)] | 950,000 |
| 2020 Addition To Net Income For Tax Purposes | $1,850,000 |

***Part A - Joint Venture Results***

No rollover under ITA 85(1) could take place because land inventory is not an eligible property. As a result, Mr. Marrazzo would recognize a 2019 gain on the transfer to Digger Inc. of $900,000 ($1,300,000 - $400,000). As previously noted, this gain would be treated as business income. His partnership income inclusion for the two years would be calculated as follows:

| | |
|---|---|
| 2019 Addition To Net Income For Tax Purposes | $ 900,000 |
| Proceeds Of Disposition - Digger's Sale Of The Land | $4,400,000 |
| Adjusted Cost Base Of Land | ( 1,300,000) |
| Site Servicing Costs | ( 1,200,000) |
| Net Business Income | $1,900,000 |
| Mr. Marrazzo's Share | 50% |
| 2020 Addition To Net Income For Tax Purposes | $ 950,000 |

The addition to his Net Income For Tax Purposes over the two years is $1,850,000 ($900,000 + $950,000), the same total as in Part A.

***Part A - Comparison***

In total, Mr. Marrazzo will report the same increase in Net Income For Tax Purposes regardless of which form of organization is used. However, with the joint venture, he would have to report $900,000 of the income in 2019 and $950,000 in 2020. With the partnership, the entire $1,850,000 in income would be reported in 2020. Given that this approach provides significant tax deferral, the partnership approach appears preferable.

***Part B - Adjusted Cost Base***

The ACB of Mr. Marrazzo's partnership interest would be calculated as follows:

| | |
|---|---|
| Capital Contribution - 2019 | $ 400,000 |
| Income Allocated To Mr. Marrazzo For 2019 | Nil |
| ACB - December 31, 2020 | $ 400,000 |
| Income Allocated To Mr. Marrazzo For 2020 (Part A) | 1,850,000 |
| Mr. Marrazzo's ACB - January 1, 2021 | $2,250,000 |

At this point, a winding up of the partnership would have no tax consequences for Mr. Marrazzo.

The ACB of Digger Inc.'s partnership interest would be calculated as follows:

| | |
|---|---|
| Capital Contribution - 2019 | Nil |
| Income Allocated To Digger For 2019 | Nil |
| Capital Contribution - 2020 = Servicing Costs | $1,200,000 |
| ACB - December 31, 2020 | $1,200,000 |
| Income Allocated To Digger For 2020 | |
| [(50%)($2,800,000 - $900,000) - See Part A] | 950,000 |
| Digger Inc.'s ACB - January 1, 2021 | $2,150,000 |

## Self Study Solution Eighteen - 3

### *Partnership Net Business Income*

The Net Business Income of the partnership is calculated as follows:

| | | |
|---|---|---|
| Net Income As Per Income Statement | | $192,100 |
| Additions: | | |
| Partners' Salaries [(2)($44,000)] | $88,000 | |
| Amortization Deducted | 12,500 | |
| Charitable Donations | 7,200 | |
| Closing Accounts Receivable (Note One) | 56,000 | 163,700 |
| Deductions: | | |
| Opening Accounts Receivable (Note One) | ($27,000) | |
| Capital Gains On Securities (Note Two) | ( 14,000) | |
| Dividends Received (Note Three) | ( 48,000) | |
| CCA: | | |
| Class 8 [(20%)($26,000)] | ( 5,200) | |
| Class 50 [(55%)(150%)($8,500)] | ( 7,013) | ( 101,213) |
| Net Business Income | | $254,587 |

**Note One** The addition of closing accounts receivable and the deduction of the opening accounts receivable are required to adjust the cash based income figure to an accrual based income figure.

**Note Two** The total capital gain is deducted in the calculation of net business income. The taxable one-half of these gains is included on a flow through basis in the income of the individual partners.

**Note Three** The dividends received are deducted in the calculation of net business income. They are flowed through as eligible dividends in the income of the individual partners.

***Mr. Caldwell's Personal Income***

Mr. Caldwell's Net Income For Tax Purposes would be calculated as follows:

| | | |
|---|---|---|
| Partnership Net Business Income | $254,587 | |
| Mr. Caldwell's Share | 50% | $127,294 |
| Automobile Costs: | | |
| CCA [($13,500)(30%)(75%)] | | ( 3,038) |
| Operating Costs [($4,000)(75%)] | | ( 3,000) |
| Net Business Income From Professional Practice | | $121,256 |
| Other Partnership Income: | | |
| Taxable Capital Gains [(1/2)($14,000)] | $ 7,000 | |
| Eligible Dividends Received | 48,000 | |
| Gross Up On Dividends [(38%)($48,000)] | 18,240 | |
| Subtotal | $73,240 | |
| Mr. Caldwell's Share | 50% | 36,620 |
| Net Income For Tax Purposes | | $157,876 |

Mr. Caldwell's $3,600 [(50%)($7,200)] share of the charitable donations can be used as the basis for a credit against his personal Tax Payable. The amount of the credit would be $1,016 [(15%)($200) + (29%)($3,600 - $200)] assuming this is his only charitable donation.

He is also entitled to a federal dividend tax credit of $4,975 [(50%)(6/11)($18,240)].

## Self Study Solution Eighteen - 4

***Part A - Income Inclusions***

CCC has three sources of income. These are business income, property income (dividends), and taxable capital gains.

The calculation of the partnership's Net Business Income is as follows:

| | | |
|---|---|---|
| Net Income From Coffee Roasting | | $37,200 |
| Add: | | |
| Salaries To Partners [(3)($2,400)] | $7,200 | |
| Interest On Capital Contributions | 2,000 | |
| Personal Partner Expenses | 1,100 | |
| Charitable Donations | 1,000 | |
| Accounting Amortization | 1,450 | 12,750 |
| Deduct: | | |
| CCA | | ( 2,000) |
| Net Business Income | | $47,950 |
| Priority Allocations For Salaries And Interest ($7,200 + $2,000) | | ( 9,200) |
| Residual To Be Allocated | | $38,750 |

This amount would be allocated to the three partners as follows:

| | Christine | Jennifer And Danny (Each) |
|---|---|---|
| Priority Allocation For Salaries | $2,400 | $2,400 |
| Priority Allocation For Interest | 2,000 | N/A |
| Allocation Of Residual On Equal Basis [(1/3)($38,750)] | 12,917 | 12,917 |
| Total Business Income Allocation | $17,317 | $15,317 |

Other non-business income inclusions for each partner related to partnership activities would be as follows:

| | |
|---|---|
| Eligible Dividends Received | $3,440 |
| Gross Up [(38%)($3,440)] | 1,307 |
| Taxable Capital Gains [(1/2)($6,000)] | 3,000 |
| Total To Be Allocated | $7,747 |
| Each Partner's Share | 1/3 |
| Non-Business Income Allocation | $2,582 |

This results in an addition to Net Income For Tax Purposes for Jennifer and Danny of $17,899 ($15,317 + $2,582). For Christine, the increase would include the $2,000 in interest and would equal $19,899 ($17,317 + $2,582).

***Part B - Tax Credits***

**Charitable Donations** Each partner would be allocated $333 ($1,000 ÷ 3) in charitable donations. This would provide a federal tax credit of $69 [(15%)($200) + (29%)($133)] assuming this is their only charitable donation.

**Dividends** Each of the partners would be eligible for a federal dividend tax credit of $238 [(1/3)(6/11)(38%)($3,440)].

## Self Study Solution Eighteen - 5

***Barry's Federal Tax Payable***

The Net Business Income of the partnership would be calculated as follows:

| | | |
|---|---|---|
| Operating Income | | $458,668 |
| Additions: | | |
| Amortization Expense | $17,466 | |
| One-Half Meals And Entertainment [(1/2)($9,740)] | 4,870 | |
| Charitable Donations | 8,658 | |
| Opening Work In Progress [(80%)($65,464)] - See Note | 52,371 | 83,365 |
| Deductions: | | |
| CCA | ($23,562) | |
| Ending Work In Progress [(60%)($90,210)] - See Note | ( 54,126) | ( 77,688) |
| Net Business Income | | $464,345 |

**Note** As discussed in Chapter 6, the billed basis of revenue recognition is being phased out over a five year period beginning in 2018. Beginning in that year, the amount of unbilled work in process that can be deferred is reduced by 20 percent each year. This means that, in 2018, 80 percent of the unbilled work in process was deferred. This must be added back in this year. For 2019, 60 percent of unbilled work in process can be deferred.

Barry's Taxable Income and share of charitable donations for the year ending December 31, 2019 would be calculated as follows:

| | Partnership | Share | Taxable Income |
|---|---|---|---|
| Partnership Business Income | $464,345 | 60% | $278,607 |
| Taxable Capital Gain [(1/2)($18,660)] | 9,330 | Nil | Nil |
| Partnership Dividends Received | 12,390 | 50% | 6,195 |
| 38% Gross Up On Dividends Received | N/A | | 2,354 |
| Taxable Income | | | $287,156 |

| | | | |
|---|---|---|---|
| Charitable Donations | $8,658 | 50% | $4,329 |

Based on the preceding calculation, Barry's 2019 federal Tax Payable would be calculated as follows:

| | |
|---|---|
| Tax On The First $210,371 | $48,719 |
| Tax On Additional | |
| $76,785 ($287,156 - $210,371) At 33 Percent | 25,339 |
| Tax Payable Before Credits | $74,058 |
| Basic Personal Credit [(15%)($12,069)] | ( 1,810) |
| Dividend Tax Credit [(6/11)($2,354)] | ( 1,284) |
| Charitable Donations Credit (See Note) | ( 1,393) |
| Federal Tax Payable | $69,571 |

**Note** The charitable donations tax credit would be calculated as follows:

[(15%)(A)] + [(33%)(B)] + [(29%)(C)], where

A = $200
B = The Lesser Of:
- $4,329 - $200 = $4,129
- $28,7156 - $210,371 = $76,785

C = Nil [$4,329 - ($200 + $4,129)]

The charitable donation credit would be equal to $1,393, calculated as [(15%)($200) + (33%)($4,129)].

### *Taxable Capital Gain From Sale Of Partnership Interest*

The adjusted cost base of Barry's partnership interest on January 1, 2020 would be calculated as follows:

| | Partnership | Share | ACB |
|---|---|---|---|
| Capital Contribution | N/A | | $275,000 |
| 2018 Partnership Business Income | $372,466 | 60% | 223,480 |
| 2018 Drawings | N/A | | ( 114,000) |
| 2019 Drawings | N/A | | ( 142,000) |
| December 31, 2019 | | | $242,480 |
| 2019 Partnership Business Income | $459,396 | 60% | 278,607 |
| 2019 Capital Gain | 9,330 | Nil | Nil |
| 2019 Partnership Dividends Received | 12,390 | 50% | 6,195 |
| 2019 Charitable Donations | ( 8,658) | 50% | ( 4,329) |
| January 1, 2020 Adjusted Cost Base | | | $522,953 |

Given this calculation, the taxable capital gain on Barry's sale of the partnership interest would be calculated as follows:

| | |
|---|---|
| Proceeds Of Disposition | $656,000 |
| Adjusted Cost Base | ( 522,953) |
| Capital Gain | $133,047 |
| Inclusion Rate | 1/2 |
| Taxable Capital Gain | $ 66,524 |

## Self Study Solution Eighteen - 6

### *Part A - Adjusted Cost Base*

The adjusted cost base of John Mathis' partnership interest would be calculated as follows:

| | |
|---|---|
| Initial Capital Contribution | $200,000 |
| Additional Capital Contribution | 75,000 |
| Total Capital Contribution | $275,000 |
| Drawings | ( 55,000) |
| Net Business Income [(1/3)($233,460)] | 77,820 |
| Capital Gains To Monroe and Mathis [(50%)($18,464)] | 9,232 |
| Dividends To Darin | Nil |
| Charitable Donations [(1/3)($8,460)] | ( 2,820) |
| Adjusted Cost Base - January 1, 2020 | $304,232 |

**Note** Only the taxable one-half of the capital gain is included in the partner's income on the flow through of capital gains realized by a partnership. However, the remaining one-half is included in the assets of the partnership and, in the absence of a special provision to deal with this situation, the realization of this amount would be added to any capital gain realized on the disposition of the partnership interest. Given this, the full amount of John's share of realized capital gains is added to the partnership adjusted cost base.

### *Part B - Taxable Capital Gain On Disposition*

Given the preceding calculation, the gain on the disposition of the partnership interest can be calculated as follows:

| | | |
|---|---|---|
| Proceeds Of Disposition | | $320,000 |
| Adjusted Cost Base: | | |
| From Preceding Calculation | ($304,232) | |
| Legal And Accounting Fees | ( 1,800) | ( 306,032) |
| Capital Gain | | $ 13,968 |
| Inclusion Rate | | 1/2 |
| Taxable Capital Gain | | $ 6,984 |

This amount would be included in John Mathis's Net Income For Tax Purposes for 2020 as a taxable capital gain. He would not include any partnership income for January as he was not allocated any of this income.

### *Part C - Effect On Other Partners*

The fact that each partner paid $160,000 to John in return for one-half of his interest means that both Bob Darin and Matt Monroe would have a $160,000 increase in the adjusted cost base of their partnership interest.

## Self Study Solution Eighteen - 7

### *Timing Of Income Inclusions For At-Risk Amounts vs. ACB*

The addition of the share of the partnership income amounts to the at-risk balance as at December 31 is intended to ensure that this amount is taken into consideration in determining the amount that is actually at risk on that date. Notice, however, losses are not deducted at this time in the determination of the at-risk amount.

We would remind you that in calculating the adjusted cost base of the partnership interest, a partner's share of either a loss or a gain is not added until the first day of the following taxation year.

**2019 Results**

The required amounts would be calculated as follows:

| | |
|---|---|
| ACB Of Partnership Interest - December 31, 2019 | $50,000 |
| Add: Share Of 2019 Partnership Income (Not Loss) | Nil |
| Subtotal | $50,000 |
| Amounts Owed To The Partnership | ( 20,000) |
| At-Risk Amount - December 31, 2019 | $30,000 |

| | |
|---|---|
| Share of 2019 Loss [(10%)($400,000)] | ($40,000) |
| At-Risk Amount - December 31, 2019 | 30,000 |
| Limited Partnership Loss - December 31, 2019 | ($10,000) |

| | |
|---|---|
| Share of 2019 Loss [(10%)($400,000)] | ($40,000) |
| Limited Partnership Loss - December 31, 2019 | 10,000 |
| Deductible Loss For 2019 | ($30,000) |

There is a limited partnership loss carry forward of $10,000 at the end of 2019.

**2020 Results**

| | |
|---|---|
| ACB Of Partnership Interest - December 31, 2019 | $50,000 |
| Loss Deducted For 2019 | ( 30,000) |
| ACB Of Partnership Interest - December 31, 2020 | $20,000 |
| Add: Share Of 2020 Partnership Income (Not Loss) | Nil |
| Subtotal | $20,000 |
| Amounts Owed To The Partnership | Nil |
| At-Risk Amount - December 31, 2020 | $20,000 |

| | |
|---|---|
| Share of 2020 Loss [(10%)($70,000)] | ($ 7,000) |
| Limited Partnership Loss Carry Forward | ( 10,000) |
| At-Risk Amount - December 31, 2020 | 20,000 |
| Limited Partnership Loss - December 31, 2020 | Nil |

| | |
|---|---|
| Share of 2020 Loss [(10%)($70,000)] | ($ 7,000) |
| Limited Partnership Loss Carry Forward | ( 10,000) |
| Limited Partnership Loss - December 31, 2020 | Nil |
| Deductible Loss For 2020 | ($17,000) |

The $10,000 limited partnership loss carry forward from 2019 can be deducted as it is less than $13,000, the December 31, 2020 at-risk amount of $20,000 reduced by the allocated share of the 2020 partnership loss of $7,000. As a result, there is no limited partnership loss carry forward at the end of 2020.

**2021 Results**

| | |
|---|---|
| ACB Of Partnership Interest - December 31, 2020 | $20,000 |
| Loss Deducted For 2020 | ( 17,000) |
| ACB Of Partnership Interest - December 31, 2021 | $ 3,000 |
| Add: Share Of 2021 Partnership Income | Nil |
| Subtotal | $ 3,000 |
| Amounts Owed To The Partnership | Nil |
| At-Risk Amount - December 31, 2021 | $ 3,000 |

There is no limited partnership loss or deductible loss for 2021 and no limited partnership loss carry forward at the end of 2021.

**Summary Of Results**

The results are summarized in the following table:

| | 2019 | 2020 | 2021 |
|---|---|---|---|
| ACB Of The Partnership Interest - December 31 | $50,000 | $20,000 | $ 3,000 |
| At-Risk Amount - December 31 | 30,000 | 20,000 | 3,000 |
| Limited Partnership Loss | 10,000 | Nil | Nil |
| Deductible Loss | 30,000 | 17,000 | Nil |
| Limited Partnership Loss Carry Forward - December 31 | 10,000 | Nil | Nil |

## Self Study Solution Eighteen - 8

***Part A - Adjusted Cost Base Of Consideration***

**Cash** With all non-share consideration, the ACB is equal to its fair market value. In the case of cash, the fair market value is equal to the face value. These amounts would be $78,000 for Porter, $222,000 for Quinn, and $422,000 for Roberts.

**Part A - Adjusted Cost Base Of Preferred Shares** With respect to the preferred shares received by each partner, ITA 85(3)(e) indicates that their ACB will be the lesser of:

- Their fair market value, which would be $180,000 for each of the three partners.
- The ACB of each partnership interest, reduced by the amount of non-share consideration received by the partner.

This latter value would be calculated as follows for each of the three partners:

| | Porter | Quinn | Roberts |
|---|---|---|---|
| ACB (Equals Total Elected Value Of Corporate Assets Received) | $382,000 | $526,000 | $726,000 |
| Cash Received | ( 78,000) | ( 222,000) | ( 422,000) |
| Balance | $304,000 | $304,000 | $304,000 |

For each of the three partners, the lower figure would be the fair market value of $180,000 and, as a consequence, this would be the ACB of their preferred shares.

**Part A - Adjusted Cost Base Of Common Shares** Under ITA 85(3)(f), the ACB of the common shares received by each partner would be the ACB of their partnership interest, less the sum of the value of the non-share consideration received and the value assigned to the preferred shares received. These amounts would be calculated as follows:

| | Porter | Quinn | Roberts |
|---|---|---|---|
| ACB - Partnership Interest | $382,000 | $526,000 | $726,000 |
| Cash Received | ( 78,000) | ( 222,000) | ( 422,000) |
| ACB - Preferred Shares | ( 180,000) | ( 180,000) | ( 180,000) |
| ACB - Common Shares | $124,000 | $124,000 | $124,000 |

***Part B - Capital Gain Or Loss***

As the non-share consideration had a value that was less than the value of the assets transferred, there will be no immediate gain or loss on this rollover. This can be demonstrated with the following calculation:

| | Porter | Quinn | Roberts |
|---|---|---|---|
| Proceeds Of Disposition: | | | |
| Cash | $ 78,000 | $222,000 | $422,000 |
| Preferred Shares | 180,000 | 180,000 | 180,000 |
| Common Shares | 124,000 | 124,000 | 124,000 |
| Total Proceeds | $382,000 | $526,000 | $726,000 |
| ACB | ( 382,000) | ( 526,000) | ( 726,000) |
| Capital Gain (Loss) | Nil | Nil | Nil |

From an economic point of view the gain is still present. The partners have simply deferred recording it for tax purposes by placing a value on the common shares of $372,000 [(3)($124,000)]. This is significantly below their current fair market value of $1,080,000. Note that the difference of $708,000 ($1,080,000 - $372,000) is also the difference between the $2,342,000 fair market value of the total consideration given and the $1,634,000 value for the total ACB of the partnership interests.

## Chapter 18 Learning Objectives

1. Explain the basic approach of Canadian income tax legislation to the taxation of partnerships (paragraph [P hereafter] 18-1 to 18-7).
2. Define, for income tax purposes, a partnership arrangement (P 18-8 to 18-15).
3. List the various types of partnership arrangements that are used in Canada (P 18-16 to 18-23).
4. Describe the difference between partnership arrangements and such other forms of organization as co-ownership, joint ventures, and syndicates (P 18-24 to 18-36).
5. Explain the basic concepts that are involved in the determination of the partnership income, losses, and tax credits to be allocated to the partners (P 18-37 to 18-52).

---

6. Calculate the Net Business Income of the partnership (P 18-53 to 18-54).
7. Calculate the amount and type of partnership income other than business income that will be allocated to each partner under the terms of the partnership agreement (P 18-55 to 18-62).
8. Explain the concept of the adjusted cost base of a partnership interest (P 18-63 to 18-66).
9. Apply the procedures required to record the acquisition of a partnership interest (P 18-67 to 18-74).
10. Calculate the amount of the adjusted cost base of a partnership interest (P 18-75 to 18-88).

---

11. Apply the procedures required to record the disposition of a partnership interest because of a sale or withdrawal (P 18-89 to 18-90).
12. Define limited partner and limited partnership arrangement (P 18-91 to 18-93).
13. Apply the at-risk rules to limited partnership losses (P 18-94 to 18-102).
14. Define a Canadian partnership (P 18-103 to 18-106).
15. Apply the procedures related to transfers between a partnership and its partners when no rollover provision is used (P 18-107 to 18-109).
16. List and apply the common rollover provisions for transfers between a partnership and its partners (P 18-110 to 18-127).

# CHAPTER 19

## How To Work Through Chapter 19

We recommend the following approach in dealing with the material in this Chapter:

**Introduction To Trusts And Estate Planning**

- Read the Note at the beginning of the Chapter to 19-7 (in the textbook).

**Basic Concepts**

- Read paragraph 19-8 to 19-23.

**Establishing A Trust**

- Read paragraph 19-24 to 19-27.
- Do Exercise Nineteen-1 (in the textbook) and check the solution in this Study Guide.

**Returns And Payments - Trusts**

- Read paragraph 19-28 to 19-29.

**Non-Tax Reasons For Using Trusts**

- Read paragraph 19-30 to 19-31.

**Classification Of Trusts (Personal, Testamentary And Inter Vivos)**

- Read paragraph 19-32 to 19-51.

**Taxation Of Trusts - The Basic Model**

- Read paragraph 19-52 to 19-55.
- Do Exercise Nineteen-2 and check the solution in this Study Guide.

**Rollovers To A Trust**

- Read paragraph 19-56 to 19-64.
- Do Exercise Nineteen-3 and check the solution in this Study Guide.
- Read paragraph 19-65 to 19-68.
- Do Exercise Nineteen-4 and check the solution in this Study Guide.

**Rollovers To Capital Beneficiaries**

- Read paragraph 19-69 to 19-74.
- Do Self Study Problem Nineteen-1 which is available on MyLab and check the solution in this Study Guide.

**21 Year Deemed Disposition Rule And Other Deemed Dispositions**

- Read paragraph 19-75 to 19-78.

**Net Income For Tax Purposes And Taxable Income Of A Trust**

- Read paragraph 19-79 to 19-92.
- Do Exercise Nineteen-5 and check the solution in this Study Guide.

**Income Allocations To Beneficiaries**

- Read paragraph 19-93 to 19-109.
- Do Exercise Nineteen-6 and check the solution in this Study Guide.

**Allocation Of Business Income, CCA, Recapture of CCA, And Terminal Losses**

- Read paragraph 19-110 and 19-111.
- Do Exercise Nineteen-7 and check the solution in this Study Guide.

**Principal Residence Exemption**

- Read paragraph 19-112.

**Tax Payable Of Personal Trusts**

- Read paragraph 19-113 to 19-125.
- Do Exercise Nineteen-8 and check the solution in this Study Guide.
- Do Self Study Problems Nineteen-2 to Nineteen-4 and check the solutions in this Study Guide.

**Income Attribution - Trusts**

- Read paragraph 19-126 to 19-128.
- Do Exercise Nineteen-9 and check the solution in this Study Guide.
- Do Self Study Problems Nineteen-5 and Nineteen-6 and check the solutions in this Study Guide.
- Read paragraph 19-129 to 19-131.

**Purchase Or Sale Of An Interest In A Trust**

- Read paragraph 19-132 to 19-137.
- Do Exercise Nineteen-10 and check the solution in this Study Guide.

**Tax Planning Using Trusts (Family, Spousal And Alter Ego Trusts)**

- Read paragraph 19-138 to 19-146.
- Do Exercise Nineteen-11 and check the solution in this Study Guide.
- Read paragraph 19-147 to 19-151.

**Estate Planning - Tax And Non-Tax Considerations**

- Read paragraph 19-152 to 19-156.

**Estate Freeze - Objectives And Techniques, Including ITA 86 Share Exchange**

- Read paragraph 19-157 to 19-178.

**SIFT Partnerships And Trusts**

- Read paragraph 19-179.

**To Complete This Chapter**

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 19. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 19 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 19 Learning Objectives listed in this Study Guide.

# Solutions to Chapter Nineteen Exercises

### Exercise Nineteen - 1 Solution

**Case A** While Mr. Black has transferred property, it is not clear that his intention was to create a trust. No trust would be created by his transfer.

**Case B** Jane's "friends" cannot be considered to be an identifiable class. As a consequence, there is no certainty as to beneficiaries and no trust would be created by her transfer.

**Case C** Robert's "children" would be an identifiable class. It would appear that a trust has been created.

**Case D** While Suzanne has signed the agreement, it does not appear that the property has been transferred. This means that no trust has been created.

### Exercise Nineteen - 2 Solution

With respect to Joanne's transfer of her securities to the trust, the transaction would be deemed to take place at fair market value. This would result in a taxable capital gain to Joanne of $10,000 [(1/2)($220,000 - $200,000)]. There would be no tax consequences to Jocelyn or the trust as a result of this transfer.

As the trust distributed all of its income during the year, none of the interest would be taxed in the trust. All of the interest would be included in Jocelyn's income and, because she is an adult, there would be no income attribution to Joanne.

Under ITA 107(2), the transfer from the trust to Jocelyn on January 1, 2020 would take place at the trust's tax cost of $220,000. There would be no tax consequences for Joanne, Jocelyn, or the trust as a result of this transfer. However, as Jocelyn's adjusted cost base is $220,000, the sale at the fair market value of $230,000 would result in a taxable capital gain of $5,000 [(1/2)($230,000 - $220,000)].

### Exercise Nineteen - 3 Solution

As there is a rollover available on transfers to a qualifying spousal trust, the accrued $30,000 gain ($90,000 - $60,000) will not be recognized until her husband or the spousal trust eventually disposes of the stocks. The spousal trust acquires the stocks (a non-depreciable capital asset) at Louise's adjusted cost base of $60,000, which will be her husband's adjusted cost base if the trust transfers the stocks to him personally rather than selling them.

### Exercise Nineteen - 4 Solution

In Scenarios 1, 2 and 3, the settlor has a taxable capital gain of $300 [(1/2)($1,600 - $1,000)] and the adjusted cost base to the trust is the fair market value of $1,600. In Scenarios 4 to 7, there is a tax free rollover. The results can be summarized as follows:

| Scenario | Taxable Capital Gain (Settlor) | Adjusted Cost Base (Trust) |
|---|---:|---:|
| 1. Inter vivos trust for adult child | $300 | $1,600 |
| 2. Inter vivos trust for minor child | 300 | 1,600 |
| 3. Testamentary trust for friend | 300 | 1,600 |
| 4. Inter vivos qualifying spousal trust | Nil | 1,000 |
| 5. Testamentary qualifying spousal trust | Nil | 1,000 |
| 6. Joint spousal trust | Nil | 1,000 |
| 7. Alter ego trust | Nil | 1,000 |

### *Exercise Nineteen - 5 Solution*

The required calculations are as follows:

| | |
|---|---|
| Business Income | $220,000 |
| Preferred Beneficiary Election | ( 50,000) |
| Distributions To Other Beneficiaries | ( 170,000) |
| Designation Under ITA 104(13.1) Amounts Deemed Not Paid | 35,000 |
| Net Income For Tax Purposes | $ 35,000 |
| Business Loss Carry Forward | ( 35,000) |
| Taxable Income | Nil |

The preferred beneficiary election would mean that the $50,000 would be taxed in the hands of the disabled beneficiary even though the funds are retained in the trust. Since this is an inter vivos trust, without the election, the $50,000 would be taxed at the maximum rate in the trust. As the disabled beneficiary has no other source of income, the $50,000 would be subject to tax at lower rates than would be the case if it was taxed in the trust.

By designating $35,000 as amounts not paid, the trust can absorb the loss carry forward. As a result, the beneficiaries will not pay tax on this amount even though it has been distributed to them.

### *Exercise Nineteen - 6 Solution*

The income allocation would be as follows:

| | Received By Trust | Paid To Bryan | Retained By Trust |
|---|---|---|---|
| Eligible Dividends | $100,000 | $ 60,000 | $40,000 |
| Non-Eligible Dividends From CCPC | 30,000 | 30,000 | Nil |
| Capital Gain | 20,000 | 20,000 | Nil |
| Totals | $150,000 | $110,000 | $40,000 |

The Net Income For Tax Purposes of the trust would be calculated as follows:

| | |
|---|---|
| Eligible Dividends | $ 40,000 |
| Gross Up Of Eligible Dividends At 38 Percent | 15,200 |
| Net Income For Tax Purposes - Trust | $ 55,200 |

The corresponding calculation for Bryan would be as follows:

| | |
|---|---|
| Eligible Dividends | $ 60,000 |
| Gross Up Of Eligible Dividends At 38 Percent | 22,800 |
| Non-Eligible Dividends From CCPC | 30,000 |
| Gross Up Of Non-Eligible Dividends At 15 Percent | 4,500 |
| Taxable Capital Gains [(1/2)($20,000)] | 10,000 |
| Net Income For Tax Purposes - Bryan | $127,300 |

Note that the non-taxable one-half of the capital gain would be received by Bryan on a tax free basis. Both the trust and Bryan will be able to deduct a federal dividend tax credit against federal Tax Payable. The TOSI is not applicable as Bryan is over 18 years of age and is actively engaged in the private corporation on a regular and continuous basis.

### Exercise Nineteen - 7 Solution

If the property is sold in December, 2019, no CCA can be deducted. This means that the total amount of property income to be distributed to Martin and taxed in his hands is $97,000 ($32,000 of rental income, plus $65,000 of recapture). Given this distribution, the trust's Net Income For Tax Purposes will be nil.

Alternatively, if the rental property is not sold and all of the income is distributed to Martin, he will include $6,000 ($32,000 - $26,000) in his 2019 Net Income For Tax Purposes. The trust's 2019 Net Income For Tax Purposes will be nil.

### Exercise Nineteen - 8 Solution

The Taxable Income in Parts A, B and C is the same and would be calculated as follows:

| | |
|---|---|
| Eligible Dividends Received | $100,000 |
| Gross Up At 38 Percent | 38,000 |
| Taxable Income | $138,000 |

**Part A** As all of its 2019 income has been distributed, there would be no Taxable Income or Tax Payable for the trust. This conclusion would not be changed if the trust was an inter vivos trust, rather than a testamentary trust. The beneficiary's federal Tax Payable on the Taxable Income of $138,000 is calculated in the following table.

**Part B** As none of the dividends are distributed by the trust to the beneficiary, there would be no Taxable Income or Tax Payable for the beneficiary. The trust's federal Tax Payable on the Taxable Income of $138,000 is calculated in the table which follows.

The federal Tax Payable for Parts A and B would be calculated as follows:

| | Part A | Part B |
|---|---|---|
| Tax On First $95,259 | $16,908 | $16,908 |
| Tax On Next $42,741 ($138,000 - $95,259) At 26 Percent | 11,113 | 11,113 |
| Total Tax Before Credits | $28,021 | $28,021 |
| Personal Tax Credit [(15%)($12,069)] | ( 1,810) | N/A |
| Federal Dividend Tax Credit [(6/11)($38,000)] | ( 20,727) | ( 20,727) |
| Federal Tax Payable | $ 5,484 | $ 7,294 |

Notice that the difference between the Tax Payable in Part A and Part B is $1,810 ($7,294 - $5,484). This amount is equal to the basic personal tax credit.

**Part C** Once again, with no distributions to the beneficiary, the trust's Taxable Income would be $138,000. There would be no Taxable Income or Tax Payable for the beneficiary. Based on this, the Tax Payable for the inter vivos trust would be calculated as follows:

| | |
|---|---|
| Tax On $138,000 At 33 Percent | $45,540 |
| Federal Dividend Tax Credit [(6/11)($38,000)] | ( 20,727) |
| Federal Tax Payable | $24,813 |

**Comparison** As a comparison of these examples makes clear, if a trust has beneficiaries with no other sources of income, overall tax payments will be reduced by distributing eligible dividends to beneficiaries (Part A). While these examples do not illustrate this possibility, the conclusion would be the same if non-eligible dividends were involved. Note that the results in Part C would be the same for a testamentary trust that was not designated a graduated rate estate. In Parts B and C where the trust has paid the tax, the dividends would be distributed to the beneficiary on a tax free basis. However, in Part C, if the beneficiaries have a marginal federal tax rate that is less than 33 percent, there will be a tax cost in having the trust pay the tax.

### *Exercise Nineteen - 9 Solution*

Income on the bonds is subject to the attribution rules to the extent that the income is allocated to Trevor's spouse, Carmen, and to their minor son, Mitch. This means that two-thirds of the interest will be attributed back to Trevor. With respect to the capital gain, the attribution rules do not apply on transfers to minors. This means that only Carmen's share of the gain will be attributed back to Trevor. The increase in Taxable Income for Trevor and the trust's beneficiaries are calculated as follows:

| | Carmen | Mitch | Rhonda | Attributed To Trevor |
|---|---|---|---|---|
| Interest Income ($27,000 ÷ 3) | $9,000 | $9,000 | $ 9,000 | |
| Interest Attribution To Trevor | ( 9,000) | ( 9,000) | Nil | $18,000 |
| Taxable Capital Gain [(1/2)($6,000) ÷ 3] | 1,000 | 1,000 | 1,000 | |
| Capital Gain Attribution To Trevor | ( 1,000) | Nil | Nil | 1,000 |
| Increase In Taxable Income | Nil | $1,000 | $10,000 | $19,000 |

If Trevor had died on January 1 of the current year, there would be no income attribution for the year. Each of the beneficiaries would have Taxable Income of $10,000.

### *Exercise Nineteen - 10 Solution*

With respect to Sam, he has acquired a capital interest for consideration of $190,000. This will be the adjusted cost base of the interest he has acquired.

With respect to Mehrdad, he has disposed of a capital asset for proceeds of disposition of $190,000. Since he did not purchase the interest in the trust, his adjusted cost base as usually determined would be nil. However, for this disposition, the adjusted cost base of the capital interest is the greater of nil and the cost amount as determined under ITA 108(1). The cost amount would be $125,000, one-half of the $250,000 tax cost of the assets in the trust. The result would be a taxable capital gain of $32,500 [(1/2)($190,000 - $125,000)].

The original cost of the securities of $120,000 is not relevant in these calculations as the father was taxed on the $130,000 ($250,000 - $120,000) capital gain in the year the securities were transferred.

### *Exercise Nineteen - 11 Solution*

As Sarah's other income places her in the maximum federal tax bracket of 33 percent, her federal tax savings resulting from transferring the assets to the family trust would be $36,300 [($110,000)(33%)]. The federal tax that would be payable on the additional $55,000 received by Jerri is as follows:

| | |
|---|---|
| Tax On First $47,630 | $7,145 |
| Tax On Additional $7,370 ($55,000 - $47,630) At 20.5 Percent | 1,511 |
| Tax Before Credit | $8,656 |
| Personal Tax Credit | ( 1,810) |
| Tax Payable - Jerri | $6,846 |

The alternative minimum tax is not relevant for Jerri because the income is in the form of interest, not dividends. As Mark would be in a position to use all of his tax credits prior to receiving the additional $55,000 in income, they are not relevant to the determination of his marginal increase in taxes. The federal tax that would be payable on the additional $55,000 received by Mark is as follows:

| | |
|---|---|
| Tax At 20.5 Percent ($95,259 - $48,000 = $47,259 @ 20.5%) | $ 9,688 |
| Tax At 26 Percent ($55,000 + $48,000 - $95,259 = $7,741 @ 26%) | 2,013 |
| Additional Tax Payable - Mark | $11,701 |

The total tax paid by the two children would be $18,547 ($6,846 + $11,701). This is $17,7531 ($36,300 - $18,547) per year less than the amount that would be paid by Sarah without the trust. When combined with a reduction in provincial taxes, the total tax savings could be significantly larger. This should be more than enough to cover the costs of establishing and maintaining this trust.

One tax planning consideration would be to have the trust pay Mark's wife rather than Mark. Since she has no income, her federal tax payable would be the same as in Jerri's calculation. Although Mark would lose the spousal credit in this case, his wife would claim the basic personal credit herself. Despite the fact that having Mark's wife as the beneficiary would result in less taxes being paid, whether this would be advantageous for Mark (and his mother) would also depend on non-tax considerations such as the state of the marriage.

## Self Study Solution Nineteen - 1

### *Case A*

1. The settlor has deemed proceeds of disposition of the fair market value of $26,400, and will record a taxable capital gain of $1,550 [(1/2)($26,400 - $23,300)]. In addition, there will be recapture of CCA of $7,900 ($23,300 - $15,400).
2. The trust acquires the property at a deemed capital cost of $26,400. However, for purposes of calculating CCA and recapture, the ITA 13(7)(e) rules for non-arm's length transactions apply and the value will be $24,850 [$23,300 + (1/2)($26,400 - $23,300)].

### *Case B*

1. The settlor has deemed proceeds of disposition of the fair market value of $15,200. This would result in the settlor having recapture of $2,800 ($15,200 - $12,400).
2. The asset would be recorded in the trust records at the settlor's capital cost of $19,500, with deemed CCA of $4,300, resulting in a UCC of $15,200.
3. When the asset is transferred to the capital beneficiary, the deemed proceeds to the trust will be the UCC at the date of distribution of $13,600, resulting in no gain or loss on the transfer. The beneficiary will be deemed to have acquired the property for the UCC amount of $13,600. However, the beneficiary will have a capital cost of $19,500 for subsequent recapture and capital gains calculation purposes.

### *Case C*

1. Under the general ITA 70(6) rollover provision, the deemed proceeds to the decedent would be the property's cost of $18,200, resulting in no gain or loss on the transfer. As the deceased has net capital loss carry forwards, a better alternative would be to elect out of ITA 70(6) and transfer the property at its fair market value of $76,400. The loss carry forwards could then be used to eliminate taxation on the resulting taxable capital gain of $29,100 [(1/2)($76,400 - $18,200)].

   Note that in the year of death, net capital loss carry forwards can be deducted against any type of income. If the decedent has other income against which the net capital loss carry forward can be deducted, it may not be advantageous to elect out of the rollover. More information on the spouse's current and future taxable income would be needed to optimize the use of the net capital loss carry forward.

2. Under the general ITA 70(6) rollover provision, the trust would record the property at the decedent's cost of $18,200. If the fair market value election is made, the spousal trust will have acquired the property at a deemed cost of $76,400. This higher value will serve to reduce any future gain on the property when it is sold.

***Case D***

1. The settlor has deemed proceeds of disposition of the fair market value of $123,200 and will record a taxable capital gain of $18,900 [(1/2)($123,200 - $85,400)].
2. The trust will record the property at a deemed cost equal to the fair market value of $123,200.

***Case E***

1. The settlor has deemed proceeds of disposition of the fair market value of $51,600 and will record a taxable capital gain of $4,200 [(1/2)($51,600 - $43,200)].
2. The asset would be recorded in the trust records at the fair market value of $51,600.
3. When the asset is transferred to the capital beneficiary, the deemed proceeds to the trust will be the carrying value of $51,600, resulting in no gain or loss on the transfer. The beneficiary will be deemed to have acquired the property at a cost of $51,600.

***Case F***

1. The deemed proceeds for the settlor would be the tax cost of $14,200, resulting in no gain or loss on the transfer.
2. The trust acquires the property at a deemed cost of $14,200.

## Self Study Solution Nineteen - 2

***Part A - Taxable Income For The GRE And Its Beneficiaries***

The payments made by the GRE administrator will result in the following amounts of Taxable Income for the GRE and the two children:

| | Daughter (30%) | Son (50%) | GRE (20%) |
|---|---|---|---|
| Eligible Dividends Received | $26,100 | $43,500 | $17,400 |
| Gross Up Of 38 Percent | 9,918 | 16,530 | 6,612 |
| British Interest (Gross Amount Of $110,000) | 33,000 | 55,000 | 22,000 |
| Net Rental Income ($21,000) | 6,300 | 10,500 | 4,200 |
| Net And Taxable Income | $75,318 | $125,530 | $50,212 |
| British Taxes Paid* ($16,500) | $ 4,950 | $ 8,250 | $ 3,300 |

*The net interest receipt of $93,500 equals 85 percent of $110,000 ($93,500 ÷ 85%). This means that the taxes withheld totaled $16,500 [(15%)($110,000)].

***Part B - Federal Tax Payable For The GRE***

Income that remains in a GRE is taxed using the same rates as would be applicable to an individual. However, the GRE would not be able to claim personal tax credits under ITA 118 to reduce the amount of Tax Payable.

The after tax income of the GRE can be distributed tax free to the beneficiaries of the GRE.

Federal Tax Payable for the GRE would be calculated as follows:

| | |
|---|---|
| Federal Tax Payable: | |
| On First $47,630 | $7,145 |
| On Remaining $2,582 ($50,212 - $47,630) At 20.5 Percent | 529 |
| Federal Tax Payable Before Credits | $7,674 |
| Federal Dividend Tax Credit [(6/11)($6,612)] | ( 3,607) |
| Foreign Tax Credit (See Note) | ( 3,300) |
| Federal Tax Payable | $ 767 |

**Note** The amount that can be deducted for the foreign tax credit is the lesser of the $3,300 of foreign taxes withheld and an amount determined by the following formula:

[(Foreign Non-Business Income ÷ Adjusted Net Income)(Tax Payable Before Credits)]

= [($22,000 ÷ $50,212)($7,674)]

= $3,362

As this amount is more than the actual foreign taxes of $3,300 allocated to the GRE, the actual foreign taxes paid would be the lesser amount, and would be the foreign tax credit.

Note that, if the foreign taxes withheld had exceeded 15 percent of the gross amount of foreign income, the excess would have been deductible under ITA 20(11), rather than added to the amount of foreign tax withheld in the formula.

## Self Study Solution Nineteen - 3

### *Parts A And B - Alternative One*

The following tables assume that one-half of the dividend income will remain in the GRE. They provide the required information on Taxable Income and Tax Payable for the relevant taxation years:

| **Income Allocation** | **GRE** | **Rowena** | **Roger** |
|---|---|---|---|
| Business Income | $ Nil | $12,000 | $ 8,000 |
| Interest | Nil | 1,800 | 1,200 |
| Non-Eligible Dividends Received | 25,000 | 15,000 | 10,000 |
| Dividend Gross Up (15%) | 3,750 | 2,250 | 1,500 |
| Net Rental Income (Note) | Nil | 2,400 | 1,600 |
| Net Income And Taxable Income | $28,750 | $33,450 | $22,300 |
| | | | |
| Federal Income Tax At 15 Percent | $ 4,313 | $5,018 | $ 3,345 |
| Basic Personal Credit | N/A | ( 1,810) | ( 1,810) |
| Federal Dividend Tax Credit | | | |
| [(9/13)(Gross Up)] | ( 2,596) | ( 1,558) | ( 1,038) |
| Federal Tax Payable (Total = $3,864) | $ 1,717 | $1,650 | $ 497 |

**Note** The $4,000 net rental income is calculated as the rent receipts of $12,000, less the operating expenses of $6,000 and CCA of $2,000. The CCA is claimed at the GRE level.

### *Parts A And B - Alternative Two*

The following income allocation assumes that all of the GRE's income will be allocated to Rowena and Roger. This means that the Taxable Income and federal Tax Payable of the GRE will be nil. The calculations for Rowena and Roger for the year ending December 31, 2019 are as follows:

| Income Allocation | Rowena | Roger |
|---|---|---|
| Business Income | $12,000 | $ 8,000 |
| Interest | 1,800 | 1,200 |
| Non-Eligible Dividends Received | 30,000 | 20,000 |
| Dividend Gross Up (15%) | 4,500 | 3,000 |
| Net Rental Income | 2,400 | 1,600 |
| Net And Taxable Income | $50,700 | $33,800 |

| | | |
|---|---|---|
| Federal Income Tax: | | |
| Roger: [(15%)($33,800)] | | $5,070 |
| Rowena: On First $47,630 At 15 Percent | $7,145 | |
| Rowena: On Remaining $3,070 ($50,700 - $47,630) At 20.5 Percent | 629 | |
| Basic Personal Credit | ( 1,810) | ( 1,810) |
| Federal Dividend Tax Credit [(9/13)(Gross Up)] | ( 3,115) | ( 2,077) |
| Federal Tax Payable (Total = $4,032) | $2,849 | $1,183 |

***Part C - Comparison***

The total federal Tax Payable in Alternative Two is $168 ($4,032 - $3,864) higher than the total in Alternative One. This difference reflects the fact that in Alternative Two, $3,070 of the total income was taxed at 20.5 percent, while in Alternative One, all of the income was taxed at 15 percent [(20.5% - 15%)($3,070)] = $169. ($1 rounding difference.)

## Self Study Solution Nineteen - 4

***Part A - Calculation Of Taxable Income***

All amounts are allocated 45 percent to Jessica Jurgens, 40 percent to Joseph Jurgens, and 15 percent to the trust. The Taxable Income of the two beneficiaries and the trust would be calculated as follows:

| | Jessica (45%) | Joseph (40%) | Trust (15%) |
|---|---|---|---|
| Interest On GICs | $ 56,700 | $ 50,400 | $ 18,900 |
| Eligible Dividends Received | 207,900 | 184,800 | 69,300 |
| Gross Up Of 38 Percent | 79,002 | 70,224 | 26,334 |
| Taxable Capital Gain On Land [(1/2)($250,000 - $85,000)] | 37,125 | 33,000 | 12,375 |
| Taxable Capital Gain On Building [(1/2)($962,000 - $725,000)] | 53,325 | 47,400 | 17,775 |
| Net Rental Income (Note) | 63,000 | 56,000 | 21,000 |
| Net And Taxable Income | $497,052 | $441,824 | $165,684 |

**Note** The net rental income, including the recapture of CCA, can be calculated as follows:

| | | |
|---|---|---|
| Revenues From Rental Property | | $125,000 |
| Cash Expenses On Rental Property | | ( 83,000) |
| Recapture Of CCA: | | |
| Capital Cost Of The Building | $725,000 | |
| UCC | ( 627,000) | 98,000 |
| Net Rental Income, Including Recapture | | $140,000 |

***Part B - Tax Payable For The Trust***

The federal Tax Payable for the trust is as follows:

| | |
|---|---|
| Federal Tax Before Credits [(33%)($165,684)] | $54,676 |
| Federal Dividend Tax Credit [(6/11)($26,334)] | ( 14,364) |
| Federal Tax Payable | $40,312 |

As this trust is an inter vivos trust, all of its income is subject to federal tax at 33 percent [ITA 122(1)].

## Self Study Solution Nineteen - 5

A. It is an inter vivos trust. In less technical terms, it could also be described as a family trust in that all of the beneficiaries are family members. In addition, it could be referred to as partially discretionary in that the trustee determines the timing of the income payments.

B. As the trust is an inter vivos trust, the year end will have to be December 31 of each year.

C. All of the income that is allocated to Mr. Dion will be subject to the income attribution rules. As a consequence, it will be included in the Net Income For Tax Purposes of Mrs. Dion. This includes interest, dividends, and capital gains earned by the trust.

   As the twins are over the age of 17, the attribution rules will not apply to their share of the trust's income. This means that the income that is allocated to them will be reported as a part of their Net Income For Tax Purposes.

   As all of the trust's income is either attributed back to Mrs. Dion or allocated to beneficiaries, the trust's Net Income For Tax Purposes will be nil.

D. The answer here will depend on the terms of the loan to the trust as the rules for non-arm's length loans apply. If it is an interest free loan, the results will be the same as in Part C. That is, the income allocated to Mr. Dion will be attributed back to Mrs. Dion, while the income allocated to the twins will be included in their Net Income For Tax Purposes. This would also be the result if the interest rate on the loan was less than the prescribed rate.

   Alternatively, if the loan paid interest at the prescribed rate or higher, the income attribution rules would not apply and the trust income allocated to Mr. Dion would be taxed in his hands. Note that the loan would have to have bona fide repayment terms and the interest would have to be paid within 30 days of the end of each calendar year.

E. ITA 74.5(3) indicates that the income attribution rules do not apply to any income or loss from property that relates to the period throughout which the individuals are living separate and apart because of a breakdown of their marriage or common-law partnership. The attribution rules do not apply to income that accrues subsequent to a separation.

## Self Study Solution Nineteen - 6

### *Part A - Trust For Daughter*

The first trust created is a testamentary trust for the benefit of Mrs. Turner's daughter, Melanie. When there is a transfer of assets at death to any taxpayer other than a spouse or a spousal trust, there is a deemed disposition with proceeds equal to fair market value. Capital gains on all of the assets transferred would need to be realized along with recapture of CCA on the warehouse building.

The principal residence exemption could be used to eliminate the $165,000 [($120,000 - $20,000) + ($145,000 - $80,000)] capital gain on the principal residence. Melanie will not have a taxable benefit from use of the residence. However, since the trust pays for the upkeep and maintenance of the residence, the trust can deduct the costs and they are taxable as income to Melanie.

The capital gain and recapture on the disposition of the warehouse building would be included in Mrs. Turner's final tax return. The taxable capital gain on the warehouse land is $10,000 [(1/2)($75,000 - $55,000)]. As the fair market value of the warehouse is equal to its capital cost, there is no capital gain on the warehouse building. However, there would be $40,000 ($85,000 - $45,000) of recaptured CCA. This amount would be included in Mrs. Turner's final tax return.

The trust will be deemed to acquire all of the assets at their fair market values. In the case of the warehouse land, the adjusted cost base will be the fair market value of $75,000. In the case of the warehouse building, the capital cost and the new UCC will be the fair market value of $85,000 which is equal to its original cost.

### *Part A - Trust For Husband*

The second trust appears to be a qualifying spousal trust. Where there is a transfer at death to a qualifying spousal trust, the transfer is deemed to be a disposition with proceeds equal to the deceased taxpayer's tax cost. This would be the capital cost of the cottage and stock portfolio and, as a consequence of using this value, the transfer of assets to the trust will have no tax consequences for Mrs. Turner's final tax return.

The trust will be deemed to have acquired all of the assets at the same capital cost values that were used as proceeds of disposition by Mrs. Turner.

### *Part B - Death Of Husband*

Unless Mr. West has remarried with great haste and can pass these assets on to a new spouse or qualifying spousal trust, his death will result in a deemed disposition of the trust's assets for proceeds equal to fair market value. In the case of the cottage, there is a capital gain of $170,000 [($200,000 - $40,000) + ($122,000 - $112,000)], one-half, or $85,000 of which is taxable. On the stock market portfolio there will be a taxable capital gain of $30,000 [(1/2)($280,000 - $220,000)].

Mr. West's death would have no effect on Mrs. Turner's final return or tax effect on Melanie. Of course if Melanie is a beneficiary in Mr. West's will, his death will result in additional income and income tax for Melanie in the future, but this information is not in the problem.

### *Part C - Graduated Rate Estate*

The principal advantage of a Graduated Rate Estate is that any income that is not distributed is taxed at graduated rates, rather than at the maximum federal rate of 33 percent. As the problem does not state the marginal tax rates for either Mr. Turner or Melanie, we cannot determine whether or not this would be advantageous. If either of their marginal rates are above the minimum 15 percent rate, GRE status for the income producing properties could be advantageous.

Given Mr. West's short remaining life, any benefits from the GRE would be quite limited in his case.

## Chapter 19 Learning Objectives

After completing Chapter 19, you should be able to:

1. Explain the basic concepts of trusts (paragraph [P hereafter] 19-1 to 19-16).
2. Explain the difference between a trust and an estate, including the concept of a GRE (P 19-17 to 19-23).
3. Describe the procedures required to establish a trust (P 19-24 to 19-27).
4. Describe the procedures applicable to the filing of trust tax and information returns (P 19-28 to 19-29).
5. List the major non-tax reasons for using trusts (P 19-30 and 19-31).

---

6. Describe the different classifications of trusts (P 19-32 to 19-51).
7. Explain the basic model for the taxation of trusts (P 19-52 and 19-55).
8. Describe the rollovers available for contributions to a trust (P 19-56 to 19-68).
9. Describe the rollovers available to transfer assets to the capital beneficiaries of a trust (P 19-69 to 19-74).
10. Apply the deemed disposition rules after a trust has existed for 21 years and on the death of a settlor of an alter ego trust or survivor spouse of a qualifying spousal trust (P 19-75 to 19-78).

---

11. Calculate the Net Income For Tax Purposes and Taxable Income of a trust (P 19-79 to 19-92).
12. Describe the provisions relating to income allocations to beneficiaries (P 19-93 to 19-112).
13. Calculate the Tax Payable for testamentary and inter vivos trusts (P 19-113 to 19-125).
14. Explain how the income attribution rules may be applicable to trusts and describe any related tax planning considerations (P 19-126 to 19-131).
15. Explain the tax treatment of the purchase and sale of an interest in a trust (P 19-132 to 19-137).

---

16. Describe the major tax planning factors that should be considered when evaluating various types of trusts such as family, spousal and alter ego (P 19-138 to 19-151).
17. List the non-tax and tax considerations that should be considered in estate planning (P 19-152 to 19-156).
18. Explain the objectives of an estate freeze (P 19-157 and 19-158).
19. Describe the estate freeze techniques that do not involve rollovers (P 19-159 to 19-166).
20. Describe the application of an ITA 86(1) share exchange to implement an estate freeze (P 19-167 to 19-175).
21. List the major considerations involved in choosing between a Section 85 and Section 86 rollover when implementing an estate freeze (P 19-176 to 19-178).

# CHAPTER 20

## How To Work Through Chapter 20

We recommend the following approach in dealing with the material in this Chapter:

**Subjects Covered In Chapter**

- Read paragraph 20-1 to 20-5 (in the textbook).

**Part I Tax On Non-Residents - Introduction**

- Read paragraph 20-6 to 20-14.

**Non-Residents Carrying On Business In Canada - Part I Tax**

- Read paragraph 20-15 to 20-20.
- Do Exercise Twenty-1 and check the solution in this Study Guide.

**Non-Residents Earning Employment Income In Canada - Part I Tax**

- Read paragraph 20-21 to 20-25.
- Do Exercises Twenty-2 and Twenty-3 and check the solutions in this Study Guide.

**Non-Residents Disposing Of Taxable Canadian Property - Part I Tax**

- Read paragraph 20-26 to 20-30.
- Do Exercise Twenty-4 and check the solution in this Study Guide.
- Do Self Study Problem Twenty-1 and check the solution in this Study Guide.

**Part XIII Tax On Non-Residents - Introduction And Applicability**

- Read paragraph 20-31 to 20-37.

**Interest Income Earned By Non-Residents - Part XIII Tax**

- Read paragraph 20-38 to 20-41.
- Do Exercise Twenty-5 and check the solution in this Study Guide.

**Dividend, Royalty And Rental Income Earned By Non-Residents - Part XIII Tax**

- Read paragraph 20-42 to 20-52.
- Do Exercise Twenty-6 and check the solution in this Study Guide.

**Pension And Other Benefits Earned By Non-Residents - Part XIII Tax**

- Read paragraph 20-53 to 20-62.
- Do Self Study Problem Twenty-2 and check the solution in this Study Guide.

**Entering Canada - Immigration**

- Read paragraph 20-63 to 20-65.

### Departing From Canada - Emigration

- Read paragraph 20-66.
- Do Exercises Twenty-7 and Twenty-8 and check the solutions in this Study Guide.
- Read paragraph 20-67 to 20-74.
- Do Exercise Twenty-9 and check the solution in this Study Guide.
- Read paragraph 20-75 to 20-79.
- Do Self Study Problem Twenty-3 and check the solution in this Study Guide.
- Read paragraph 20-80 to 20-87.
- Do Exercise Twenty-10 and check the solution in this Study Guide.

### Foreign Source Income Of Canadian Residents - Introduction

- Read paragraph 20-88 to 20-90.

### Foreign Source Income Of Canadian Residents - Reporting Requirements (T1135)

- Read paragraph 20-91 to 20-98.
- Do Exercise Twenty-11 and check the solution in this Study Guide.
- Do Self Study Problem Twenty-4 and check the solution in this Study Guide.

### Foreign Source Employment Income Of Canadian Residents

- Read paragraph 20-99 to 20-100.
- Do Self Study Problem Twenty-5 and check the solution in this Study Guide.

### Foreign Source Unincorporated Business Income Of Canadian Residents

- Read paragraph 20-101 to 20-103.
- Do Exercise Twenty-12 and check the solution in this Study Guide.

### Foreign Source Interest Income And Capital Gains Of Canadian Residents

- Read paragraph 20-104 to 20-107.

### Foreign Source Dividend Income Of Canadian Residents - Including From Foreign Affiliates And FAPI

- Read paragraph 20-108 to 20-120.
- Do Self Study Problem Twenty-6 and check the solution in this Study Guide.
- Read paragraph 20-121 to 20-125.
- Do Exercise Twenty-13 and check the solution in this Study Guide.
- Read paragraph 20-126 to 20-151.
- Do Exercise Twenty-14 and check the solution in this Study Guide.
- Read paragraph 20-152 and 20-153.
- Do Exercise Twenty-15 and check the solution in this Study Guide.
- Do Self Study Problem Twenty-7 and check the solution in this Study Guide.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 20. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 20 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 20 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 20 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 20 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

## Solutions to Chapter Twenty Exercises

### *Exercise Twenty - 1 Solution*

**Case 1** Jazzco is not carrying on business in Canada and would not be subject to Canadian taxes.

**Case 2** Jazzco is carrying on business in Canada in a permanent establishment located in Toronto. Therefore, Jazzco is taxable in Canada under ITA 2(3) on the profits attributable to the Canadian factory.

**Case 3** The tax treaty allows Canada to tax business income only if such income is attributable to a permanent establishment in Canada. The warehouse constitutes a fixed place of business regardless of whether it is owned or leased. However, since it appears to be used exclusively to maintain an inventory for delivery, under the Canada/U.S. tax treaty, it would be an excluded facility and would not be considered to be a permanent establishment. Jazzco would not be taxable under ITA 2(3) on its Canadian profits. The fact that the employee acts on behalf of the non-resident employer would not alter the conclusion since the employee does not have the authority to conclude contracts.

**Case 4** In this Case, because the employee has authority to conclude contracts on behalf of a non-resident enterprise, the employee is deemed to be a permanent establishment. This means that Jazzco is taxable in Canada under ITA 2(3) on its business profits attributable to the permanent establishment (i.e., the employee).

**Case 5** Since the warehouse is not used exclusively for maintaining an inventory, the permanent establishment exception in the tax treaty would not apply with the result that profits attributable to that warehouse would be taxable in Canada.

### *Exercise Twenty - 2 Solution*

Dawn is an individual who has become a resident of another country, but continues to receive remuneration from a resident Canadian taxpayer. Given that the tax treaty exempts her salary from taxation in Egypt, ITA 115(2) deems her to be employed in Canada and, as a consequence, she would be subject to Canadian taxes on her salary.

### *Exercise Twenty - 3 Solution*

**Case 1** The employment income is taxable in Canada. The Canada/U.S. tax treaty allows Canada to tax employment income earned in Canada unless either of two exceptions is applicable. The first exception is the $10,000 rule. This exception however does not apply since David earned $11,200 Canadian in 2019 [($2,800)(4 months)]. The second exception is the 183 day rule. Although David was in Canada for only 122 days during 2019 and therefore met the first part of the test, he failed the remaining part of the test since the employer was a Canadian resident and could deduct the payments.

**Case 2** The employment income is not taxable in Canada. The 183 day rule exempts the income from Canadian taxation because the employer was not resident in Canada, did not have a permanent establishment in Canada, and could not deduct the payments for Canadian tax purposes.

**Case 3** The employment income is taxable in Canada. The Canada/U.S. tax treaty would exempt the income from Canadian tax if the amount was less than $10,000 Canadian, or if Sandra spent less than 183 days in Canada in any 12 month period beginning or ending in 2019. As she earned $50,000 Canadian and spent 238 days at her job in Canada, neither of these exceptions are applicable.

### Exercise Twenty - 4 Solution

**Case 1** Nancy is not taxable on the gain. As a non-resident, Nancy is only taxable in Canada on the disposition of taxable Canadian property. Shares of a resident public company are only taxable Canadian property if Nancy had owned more than 25 percent of the issued shares of any class of the company in the 60 months preceding the disposition.

**Case 2** Joe is taxable on the gain. The condo is taxable Canadian property since it is real property (e.g. land and buildings) situated in Canada. The Canada/U.S. tax treaty gives Canada the right to tax such gains. The property is not exempt from Canadian tax as a principal residence since Joe did not acquire the condo for his own habitation.

**Case 3** Joe would be taxable on the gain on the shares. Shares of an unlisted corporation are taxable Canadian property if at any time within the preceding 60 months more than 50 percent of the fair market value of the company is derived from Canadian real property. In addition, the Canada/U.S. tax treaty allows Canada to tax the gain on the disposition of shares if the corporation is resident in Canada and the value of the shares is derived principally from real property situated in Canada.

**Case 4** Joe would not be taxable on the gain on the shares. The shares are taxable Canadian property because they represent shares of an unlisted non-resident corporation that, at some time in the 60 months preceding the disposition, derived more than 50 percent of their value from taxable Canadian property. However, the Canada/U.S. tax treaty does not list this as one of the items where Canada is allowed to tax U.S. residents.

### Exercise Twenty - 5 Solution

**Case 1** As Jason is at arm's length from the bank and the interest is not participating debt interest, he would not be subject to Part XIII tax.

**Case 2** As Janice is at arm's length with the Canadian government and the interest is not participating debt interest, the interest would not be subject to Part XIII tax. Note that interest on Government Of Canada bonds is fully exempt interest, but this fact does not affect the result in this case.

**Case 3** As Julian is at arm's length from the bank and the interest is not participating debt interest, he would not have to withhold Part XIII tax.

**Case 4** The Canada/U.S. tax treaty exempts U.S. residents from Part XIII tax. This means that Jasmine does not have to withhold Part XIII tax despite the fact that her brother is a non-arm's length party.

### Exercise Twenty - 6 Solution

**Case 1** Rentco appears to be carrying on business in Canada through a permanent establishment. As a result, no Part XIII tax is payable. However, Rentco would be subject to Part I tax on its income attributable to the permanent establishment in Saskatchewan.

**Case 2** Jack would be subject to Part XIII tax of $10,500 [(25%)($42,000)]. This represents an effective tax rate of 37.5 percent on his net rental income of $28,000. Alternatively, Jack could elect under ITA 216 to be taxed under Part I on the net rental income of $28,000 ($42,000 - $14,000). Whether this is would be a good alternative depends on Jack's marginal tax rate. The break-even rate would be 37.5 percent ($10,500 ÷ $28,000). If his marginal rate is below this, taxation under Part I would be the better alternative. If his marginal rate exceeds 37.5 percent, taxation under Part XIII would be preferable.

**Case 3** Jack would be subject to Part XIII tax on the gross rents received for the boats unless he would be considered to be carrying on a business. However, the Canada/U.S. tax treaty reduces the withholding tax to 10 percent of the gross rents received, or $800. Note that Jack would not be eligible to elect under ITA 216 to be taxed under Part I on the boat rents, since this election is generally restricted to real property.

### Exercise Twenty - 7 Solution

There would be a deemed disposition on her departure, leaving her liable for the taxes on a $10,500 [(1/2)($49,000 - $28,000)] taxable capital gain.

### Exercise Twenty - 8 Solution

As real property is exempt from the deemed disposition provision contained in ITA 128.1(4)(b), there would be no tax consequences with respect to the rental property at the time of Mr. Chrysler's departure. However, real property is Taxable Canadian Property and, as a consequence, he would be liable for Canadian taxes on both recapture and capital gains resulting from a subsequent sale of the property, even though he will be a non-resident.

### Exercise Twenty - 9 Solution

With respect to the shares of the Canadian private company, there would be a required deemed disposition, resulting in a taxable capital gain of $57,500 [(1/2)($235,000 - $120,000)]. In the absence of an election on the rental property, this would be the only tax consequence resulting from her departure.

However, if Ms. Lopez elects under ITA 128.1(4)(d) to have a deemed disposition on her rental property, the results will be as follows:

| | |
|---|---|
| Deemed Proceeds Of Disposition For Land | $30,000 |
| Adjusted Cost Base | ( 60,000) |
| Capital Gain (Loss) On Land | ($30,000) |

| | |
|---|---|
| UCC Of Building | $142,000 |
| Lesser Of: | |
| Capital Cost = $160,000 | |
| Deemed Proceeds Of Disposition = $100,000 | ( 100,000) |
| Terminal Loss | $42,000 |

The net result would be as follows:

| | |
|---|---|
| Taxable Capital Gain On Shares | $57,500 |
| Allowable Capital Loss On Land [(1/2)($30,000)] | ( 15,000) |
| Terminal Loss On Building | ( 42,000) |
| Net Income Inclusion | $ 500 |

### Exercise Twenty - 10 Solution

In the absence of ITA 128.1(4)(b)(iv), there would be a deemed disposition of both the U.K. shares and the Canadian shares at the time of Mr. Brookings' departure from Canada. As it appears that he has been in Canada for less than 60 months in the last 10 years, there will be no deemed disposition of the U.K. shares that he owned prior to his arrival in Canada. There will, however, be a deemed disposition of the Canadian shares acquired during his stay in Canada. This will result in a taxable capital gain of $8,500 [(1/2)($92,000 - $75,000)].

There will be no deemed disposition of the vacant Canadian land because real property is exempt from the deemed disposition requirement of ITA 128.1(4)(b). Note, however, that vacant land is Taxable Canadian Property. This means that any gain resulting from its disposition will be subject to Canadian taxes, without regard to whether the vendor is a Canadian resident.

### Exercise Twenty - 11 Solution

The cost of Simon's foreign investments total £197,000 (£52,000 + £145,000) which put him over the $100,000 Canadian reporting limit [(£197,000)($1.70) = $334,900] for filing Form T1135 and over the $250,000 limit for the simplified method. He is required to report the following information on the T1135:

**Funds Held Outside Canada**

- The name of the bank that holds the funds - Bank of Scotland
- The country code for the country of residence of the bank (Scotland) - GBR (Available from the CRA website)
- The maximum amount of funds held during the year - $88,400 [(£52,000)($1.70)]
- The funds held at year end - $69,700 [(£41,000)($1.70)]
- Income from the property - $1,700 [(£1,000)($1.70)]

**Indebtedness Owed By A Non-Resident**

- A description of the indebtedness - Interest free loan to brother-in-law
- The country code for the non-resident issuer's country of residence (Scotland) - GBR (Available from the CRA website)
- The maximum cost amount during the year - $246,500 [(£145,000)($1.70)]
- The year end cost amount - $246,500 [(£145,000)($1.70)]
- The income or loss - Nil
- The gain or loss on disposition - N/A

### Exercise Twenty - 12 Solution

The gross amount of the U.S. business income will be subject to tax in Canada. Jason's foreign business income tax credit is $1,800, the lesser of the $1,800 foreign tax withheld and $3,780 [($18,000 ÷ $100,000)($21,000)].

The required solution would be as follows:

| | |
|---|---|
| Gross Foreign Business Income | $18,000 |
| Canadian Tax Rate | 44% |
| Canadian Tax Payable Before Credit | $ 7,920 |
| Foreign Tax Credit = Foreign Tax Withheld | ( 1,800) |
| Net Canadian Tax Payable | $ 6,120 |
| Foreign Tax Withheld | 1,800 |
| Total Taxes Payable | $ 7,920 |

Based on these figures, his after tax retention and overall tax rate on his foreign source income would be as follows:

| | |
|---|---|
| After Tax Retention ($18,000 - $7,920) | $10,080 |
| Overall Tax Rate ($7,920 ÷ $18,000) | 44% |

### Exercise Twenty - 13 Solution

**Forco 1** Canvest has the required 1 percent investment and, with its related subsidiary, has the required 10 percent investment. Forco 1 is a foreign affiliate.

**Forco 2** Canvest has the required 1 percent investment. However, as it is not related to any of the other shareholders, the 10 percent test is not met. This means that Forco 2 is not a foreign affiliate.

**Forco 3** Canvest has the required 1 percent investment and, with the controlling shareholder's spouse (a related person), has the required 10 percent investment. Forco 3 is a foreign affiliate.

### *Exercise Twenty - 14 Solution*

Since Forco is a controlled foreign affiliate of Canco, Canco must accrue its proportionate share (100%) of Forco's investment income. The required calculations are as follows:

| | |
|---|---|
| FAPI [ITA 91(1)] | $100,000 |
| Deduct Lesser Of: | |
| • FAPI = $100,000 | |
| • ITA 91(4) Deduction [(4)(18%)($100,000)] | ( 72,000) |
| Net Addition To Net Income For Tax Purposes | $ 28,000 |

### *Exercise Twenty - 15 Solution*

| | |
|---|---|
| Foreign Source Dividend – ITA 90(1) | $82,000 |
| Deduct Lesser Of: | |
| • Previous FAPI After ITA 91(4) Deduction = $28,000 | |
| • Dividend Received = $82,000 | ( 28,000) |
| Net Addition To Net Income For Tax Purposes | $54,000 |

Note that the additions to Net Income For Tax Purposes for the two years total $82,000 ($28,000 + $54,000). This is equal to the $100,000, less the $18,000 in taxes paid in the foreign jurisdiction. Had there been any withholding taxes on the dividend, they would not have been eligible for a foreign tax credit.

While this is not a required part of the problem, you should note that Taxable Income and Tax Payable would be nil in this example. There would be a deduction under ITA 113(1)(b) equal to $54,000 [($18,000)(4 - 1). The resulting Taxable Income of nil reflects the fact that on Forco's income of $100,000, taxes at the usual Canadian rate of 25 percent have already been paid. This $25,000 [(25%)($100,000)] is made up of the $18,000 [(18%)($100,000)] paid by Forco in the foreign jurisdiction, plus the $7,000 [(25%)($28,000)] of Canadian taxes on Canco's 2019 addition to Net Income For Tax Purposes.

## Self Study Solution Twenty - 1

### *Case A*

As Sharon is earning employment income in Canada, she would generally be taxable under ITA 2(3). With respect to the Canada/U.S. tax treaty provisions, while her income exceeds $10,000, her stay in Canada is less than 183 days. However, her employment income would be deductible by the payor Canadian corporation. This means that Sharon would be subject to Part I tax on her Canadian employment income.

### *Case B*

As Mariah is earning employment income in Canada, she would generally be taxable under ITA 2(3). With respect to the Canada/U.S. tax treaty provisions, while her income exceeds $10,000, her stay in Canada is less than 183 days. In addition, the payor is not a Canadian entity that will be able to deduct these payments against Canadian taxes. Given this, Mariah would be exempt from Part I tax under the provisions of the Canada/U.S. tax treaty.

### *Case C*

With respect to private companies incorporated in Canada if, within the preceding 60 month, more than 50 percent of their value is derived from Canadian real property, their shares are considered to be Taxable Canadian Property. This means that gains on the sale of such shares would be taxable under ITA 2(3). While the Canada/U.S. tax treaty serves to exempt gains on certain types of Taxable Canadian Property (generally, shares that during the last five years did not derive their value largely from Canadian real property), shares of Canadian incorporated private companies is not on this list. Therefore, Part I tax would be applicable on the gain.

### Case D

Shares of unlisted companies are viewed as Taxable Canadian Property if, within the preceding 60 months, more than 50 percent of their value is derived from Canadian real property. This means that Rae's shares would be considered Taxable Canadian Property and the gain would be considered taxable under ITA 2(3). However, Rae's corporation is not a "Canadian" corporation and this means that it is not on the Canada/U.S. tax treaty list of Taxable Canadian Property where gains accruing to U.S. residents are subject to Canadian tax. Therefore, Part I tax would not be applicable on the gain.

### Case E

Under the Canada/U.S. tax treaty, Part I tax is applicable to a U.S. resident only when the business is carried on through a permanent establishment. While the U.S. firm in this Case is carrying on business, it is not through a permanent establishment. The treaty specifically exempts the warehouse as it is used exclusively for holding inventories. In addition, Martha Faulk could not be viewed as a permanent establishment as she does not have authority to conclude individual sales contracts. Part I tax would not be applicable in this case.

### Case F

This Case differs from Case E in that the warehouse is used for more than holding inventories. This means that it is not an excluded facility under the Canada/U.S. treaty. Further, as Martha Faulk has the authority to conclude contracts, she, as a person, would be viewed as a permanent establishment. This means that Orex would be considered to be carrying on business in Canada through a permanent establishment. Therefore, Part I tax would be applicable.

## Self Study Solution Twenty - 2

### Case A

The interest she has received is not from holding participating debt and she is at arm's length with the bank. The interest would not be subject to Part XIII tax.

### Case B

As the amount of interest is calculated on the basis of the corporation's revenues, it would appear that Mark is receiving interest on a participating debt security. The interest would be subject to Part XIII tax.

### Case C

Because the interest is from participating debt, it would normally be subject to Part XIII tax. However, the Canada/U.S. tax treaty exempts U.S. residents from all Canadian taxation on interest income. The interest would not be subject to Part XIII tax.

### Case D

As she is not a resident of a country with which Canada has a tax treaty, Darlene would be subject to Part XIII tax at a rate of 25 percent. Depending on whether she uses the available election to be taxed under Part I, the Tax Payable would be as follows:

| | |
|---|---|
| **Without Election - Part XIII** [(25%)($35,000)] | $8,750 |
| **With Election - Part I** [(15%)(148%*)($35,000 - $27,000)] | $1,776 |

*The 148% reflects the additional federal tax on individual income that is not earned in a province.

The use of the election is clearly desirable in this Case.

### *Case E*

The Canada/U.S. tax treaty reduces the Part XIII rate on rental properties that are not real property from 25 to 10 percent. As Darlene is renting out real property, the 25 percent rate is applicable and the results are the same as Case D. Here again, the use of the election is clearly desirable.

### *Case F*

Dividends from Canadian companies that are received by non-residents are subject to Part XIII tax. Under the Canada/U.S. tax treaty the statutory 25 percent rate is reduced to either 5 percent or 15 percent. Although Brian owns more than 10 percent of the voting shares of the Canadian corporation, he is an individual, not a corporation, so the applicable rate is 15 percent, not 5 percent. Brian's Part XIII tax payable would be $3,300 [(15%)($22,000)].

When an individual leaves Canada, there is a deemed disposition of all property owned at the time of departure at fair market value with certain exceptions. For each of the listed assets, the tax consequences that result from Mr. Rankin's departure are as follows:

**City Home*** Real property situated in Canada is exempted from the deemed disposition rule. There would be no deemed disposition and no tax consequences at the time of Jonathan's departure. However, the city home would be classified as Taxable Canadian Property and, as a result, any gain on the disposition of the property would be subject to Canadian taxation even though Mr. Rankin is no longer a Canadian resident.

**Cottage*** As was the case with the city home, for the cottage there would be no deemed disposition and no tax consequences at the time of Jonathan's departure. However, the cottage would also be classified as Taxable Canadian Property and, as a result, any gain on the disposition of the property would be subject to Canadian taxation even though Mr. Rankin is no longer a Canadian resident.

*While this is not a required part of the solution, we would note that either the city home and/or the cottage could qualify for the principal residence exemption. However, this would require an election for a deemed disposition of the relevant property.

**Automobile** While gains or personal use property are taxable, losses are not deductible. Given this, there would be no tax consequences associated with the deemed disposition of the automobile.

**Cash** There are never any tax consequences associated with dispositions of cash.

**RRSP** As an "excluded right", RRSP assets are exempted from the deemed disposition rule. There would be no deemed disposition of the RRSP assets and no tax consequences when Jonathan departs from Canada. Payments from the RRSP will be taxed under Part XIII when they are withdrawn and remitted to Mr. Rankin as a non-resident.

**Shares In A CCPC** There is no exemption from the deemed disposition rules for any type of shares. There would be a deemed disposition of these shares on Mr. Rankin's departure resulting in a taxable capital gain of $7,500 [(1/2)($80,000 - $65,000)].

**Shares In Public Companies** There would be a deemed disposition of these shares, resulting in a taxable capital gain of $39,000 [(1/2)($120,000 - $42,000)].

## Self Study Solution Twenty - 3

When an individual leaves Canada, there is a deemed disposition of all property owned at the time of departure at fair market value with certain exceptions. For each of the listed assets, the tax consequences that result from Mr. Rankin's departure are as follows:

**City Home*** Real property situated in Canada is exempted from the deemed disposition rule. There would be no deemed disposition and no tax consequences at the time of Jonathan's departure. However, the city home would be classified as Taxable Canadian Property and, as a result, any gain on the disposition of the property would be subject to Canadian taxation even though Mr. Rankin is no longer a Canadian resident.

**Cottage*** As was the case with the city home, for the cottage there would be no deemed disposition and no tax consequences at the time of Jonathan's departure. However, the cottage would also be classified as Taxable Canadian Property and, as a result, any gain on the disposition of the property would be subject to Canadian taxation even though Mr. Rankin is no longer a Canadian resident.

*While this is not a required part of the solution, we would note that either the city home and/or the cottage could qualify for the principal residence exemption. However, this would require an election for a deemed disposition of the relevant property.

**Automobile** While gains or personal use property are taxable, losses are not deductible. Given this, there would be no tax consequences associated with the deemed disposition of the automobile.

**Cash** There are never any tax consequences associated with dispositions of cash.

**RRSP** As an "excluded right", RRSP assets are exempted from the deemed disposition rule. There would be no deemed disposition of the RRSP assets and no tax consequences when Jonathan departs from Canada. Payments from the RRSP will be taxed under Part XIII when they are withdrawn and remitted to Mr. Rankin as a non-resident.

**Shares In A CCPC** There is no exemption from the deemed disposition rules for any type of shares. There would be a deemed disposition of these shares on Mr. Rankin's departure resulting in a taxable capital gain of $7,500 [(1/2)($80,000 - $65,000)].

**Shares In Public Companies** There would be a deemed disposition of these shares, resulting in a taxable capital gain of $39,000 [(1/2)($120,000 - $42,000)].

## Self Study Solution Twenty - 4

1. Foreign investment reporting is not required. Since the cottage is personal use property, the fact that the cost is greater than $100,000 is not relevant. The fair market value is also not relevant.

2. Foreign investment reporting is required as the balance was greater than $100,000 at some point in the year.

3. Foreign investment reporting is not required as the cost of the shares is less than $100,000. The fact that their current fair market value exceeds $100,000 is not relevant.

4. No foreign investment reporting is required as the assets are used in an active business.

## Self Study Solution Twenty - 5

A. Because he is a resident of Canada, the hockey player will have all US$14,000 of hockey school income subject to tax in Canada. With respect to U.S. taxation, he would not have a tax obligation in that country because his total earnings are only $7,000. The Canada/U.S. tax treaty exempts non-residents from U.S. taxation when their earnings in that country are less than $10,000.

B. Because the expert is a resident of Canada, the full $150,000 of income would be subject to tax in Canada. He would not be taxed in the U.S. because the provisions of the Canada/U.S. tax treaty exempt Canadian residents from U.S. taxation provided they are in the U.S. less than 183 days, their employer does not have a permanent establishment in the U.S., and their employer does not deduct the compensation in computing U.S. taxes. The expert was in the U.S. for only 180 days [(3)(60)], and his compensation is paid by a Canadian company.

## Self Study Solution Twenty - 6

The Hispanic Ltd. tax withholding equals 25 percent ($5,750 ÷ $23,000) of the dividend paid. The Deutsch Inc. tax withholding equals 10 percent ($1,400 ÷ $14,000) of the dividend paid. As the foreign non-business tax credit is limited to 15 percent, the additional 10 percent ($2,300) withheld by Foreign Country 1 will have to be deducted in the determination of Mona's Net Income For Tax Purposes.

| | |
|---|---|
| Net Employment Income | $ 87,000 |
| Hispanic Ltd. Gross Dividends (No Gross Up) | 23,000 |
| Deutsch Inc. Gross Dividends (No Gross Up) | 14,000 |
| Excess Withholding [(25% - 15%)($23,000)] | ( 2,300) |
| Net Income For Tax Purposes And Taxable Income | $121,700 |

Using this result, her federal Tax Payable would be calculated as follows:

| | | |
|---|---|---|
| Tax On First $95,259 | | $16,908 |
| Tax On Next $26,441 ($121,700 - $95,259) At 26% | | 6,875 |
| Tax Payable Before Credits | | $23,783 |
| Basic Personal Credit | ($12,069) | |
| EI | ( 860) | |
| CPP | ( 2,749) | |
| Canada Employment | ( 1,222) | |
| Total Credit Amount | ($16,900) | |
| Applicable Rate | 15% | ( 2,535) |
| Tax Otherwise Payable | | $21,248 |
| Foreign Tax Credits (See Note) | | |
| Hispanic Ltd. | | ( 3,450) |
| Deutsch Inc. | | ( 1,400) |
| Federal Tax Payable | | $16,398 |

**Note** The foreign non-business tax credits are calculated on a country by country basis (see Chapter 11).

The tax credit on the Hispanic Ltd. shares would be the lesser of:

- Amount Withheld (Limited To 15%) = [(15%)($23,000)] = $3,450
- $\left[\frac{\text{Foreign Non - Business Income}}{\text{Adjusted Division B Income}}\right](\text{Tax Otherwise Payable})$

$$= \left[\frac{\$23,000}{\$121,700}\right](\$21,248) = \$4,016$$

The tax credit on the Deutsch Inc. shares would be the lesser of:

- Amount Withheld (Less Than 15%) = $1,400
- $\left[\frac{\text{Foreign Non - Business Income}}{\text{Adjusted Division B Income}}\right](\text{Tax Otherwise Payable})$

$$= \left[\frac{\$14,000}{\$121,700}\right](\$21,248) = \$2,444$$

## Self Study Solution Twenty - 7

### *Alta Inc. Dividends*

As BK Inc. owns more than 10 percent of the Alta Inc. shares, Alta Inc. is a foreign affiliate of BK Inc. Alta Inc. is operating in a country with which Canada has a tax treaty. In addition, all of its income is from active business activities. Given this, all of the dividend is being paid from Exempt Surplus. This means that, while the pre-withholding amount of the dividend will be included in Net Income For Tax Purposes, this amount can be deducted in full under ITA 113(1)(a).

### Bolt Ltd. Dividends

While Bolt Ltd. earns all of its income through active business activities, it is not located in a country which has a tax treaty or a TIEA with Canada. Given this, the dividend will be paid from Taxable Surplus. It will be included in Net Income For Tax Purposes and not deductible under ITA 113(1)(a). However, it will be eligible for a deduction under ITA 113(1)(b) for taxes paid by Bolt Ltd. in the foreign jurisdiction, as well as a deduction under ITA 113(1)(c) for taxes withheld on the distribution to BK Inc.

### Taxable Income And Tax Payable Calculation

The required calculations for Taxable Income and Tax Payable would be as follows:

| | |
|---|---|
| Alta Inc. Dividends (Before Withholding) | $ 34,000 |
| Bolt Ltd. Dividends (Before Withholding) | 76,000 |
| Addition To Net Income For Tax Purposes | $110,000 |
| Deductions: | |
| ITA 113(1)(a) Alta Dividends | ( 34,000) |
| ITA 113(1)(b) - Note 1 | ( 12,000) |
| ITA 113(1)(c) - Note 2 | ( 45,600) |
| Taxable Income | $ 18,400 |
| Rate | 25% |
| Canadian Tax Payable | $ 4,600 |

**Note 1** Given Bolt's local tax rate of 5 percent, the pre-tax income that formed the base for the dividend to BK Inc. was $80,000 [$76,000 ÷ (1 - 5%)]. This means that the local taxes paid by Bolt were $4,000 [(5%)($80,000)] and that the ITA 113(1)(b) deduction would be $12,000 [($4,000)(3)]. See the text for an explanation of the relevant factor of 3.

**Note 2** Taxes withheld were $11,400. Given this, the ITA 113(1)(c) deduction is equal to $45,600 [($11,400)(4)]. See the text for an explanation of the relevant factor of 4.

### Verification

As indicated in the text, the goal here is to have foreign affiliate dividends paid from Taxable Surplus subject to total Canadian and foreign taxes at a rate of 25 percent. The preceding calculation has achieved this goal as supported by the following calculations:

| | |
|---|---|
| Bolt's Pre-Tax Income [$76,000 ÷ (1 - 5%)] | $80,000 |
| Rate | 25% |
| Total Tax At 25% Rate | $20,000 |

| | |
|---|---|
| Foreign Tax Paid On Bolt's Income [(5%)($80,000)] | $ 4,000 |
| Taxes Withheld From Dividend | 11,400 |
| Canadian Tax Payable | 4,600 |
| Total Tax Paid | $20,000 |

## Chapter 20 Learning Objectives

After completing Chapter 20, you should be able to:

1. Describe the role of international tax treaties (paragraph [P hereafter] P 20-1 to 20-5).
2. Describe the liability for Part I tax of non-residents earning Canadian source income from business, employment and the disposition of taxable Canadian property (P 20-6 to 20-30).
3. Describe the liability for Part XIII tax of non-residents earning Canadian source property income including income from interest, dividends, royalties, rents and pensions (P 20-31 to 20-62).
4. Describe the deemed disposition/reacquisition provisions related to immigration to Canada (P 20-63 to 20-65).
5. Describe the tax provisions related to emigration from Canada, including those related to elective dispositions and security for departure tax (P 20-66 to 20-79).

---

6. Describe the provisions available for unwinding a deemed disposition on departure from Canada (P 20-80 to 20-84).
7. Explain the rules applicable to short-term residents of Canada (P 20-85 to 20-87).
8. Describe the foreign investment reporting requirements of form T1135 (P 20-88 to 20-98).
9. Apply the appropriate tax treatment for Canadian residents of foreign source employment income, business income and capital gains (P 20-99 to 20-107).
10. Describe the basic concepts behind the taxation of foreign source dividends received by resident individuals (P 20-108 to 20-120).

---

11. Describe the taxation of dividends received by resident corporations from non-affiliated corporations (P 20-121).
12. Identify foreign affiliates (P 20-122 to 20-125).
13. Describe the tax treatment of dividends received from non-controlled foreign affiliates, including identification of their various types of surplus balances (P 20-126 to 20-139).
14. Explain the concept of a controlled foreign affiliate (P 20-140 to 20-143).
15. Apply the rules associated with, and the appropriate tax treatment of, foreign property accrual income (FAPI) (P 20-144 to 20-151).
16. Describe the tax treatment of dividends paid from FAPI (P 20-152 to 20-153).

# CHAPTER 21

## How To Work Through Chapter 21

We recommend the following approach in dealing with the material in this chapter:

**Introduction To The GST/HST**

- Read paragraph 21-1 to 21-7 (in the textbook).

**The Current Situation And How We Will Deal With The Complexity**

- Read paragraph 21-8 to 21-16.

**Transaction Tax Concepts, Including VATs**

- Read paragraph 21-17 to 21-41.
- Do Exercise Twenty-One-1 (in the textbook) and check the solution in this Study Guide.
- Do Self Study Problem Twenty-One-1 which is available on MyLab and check the solution in this Study Guide.

**Liability For GST/HST And The Concept Of Supply**

- Read paragraph 21-42 to 21-46.

**Supply Categories (Fully Taxable, Zero-Rated And Exempt)**

- Read from the Note before paragraph 21-47 to 21-60.

**Applying the GST/HST Rate Using the Place Of Supply Rules**

- Read paragraph 21-61 to 21-69.

**Responsibility For Collection And Remittance Of GST/HST**

- Read paragraph 21-70 to 21-73.

**Registration - Including The Small Supplier Exemption**

- Read paragraph 21-74 to 21-88.
- Do Exercise Twenty-One-2 and check the solution in this Study Guide.
- Read paragraph 21-89 to 21-92.
- Do Self Study Problem Twenty-One-2 and check the solution in this Study Guide.

**Input Tax Credits**

- Read paragraph 21-93 to 21-112.
- Do Exercises Twenty-One-3 to Twenty-One-5 and check the solutions in this Study Guide.
- Do Self Study Problems Twenty-One-3 and Twenty-One-4 and check the solutions in this Study Guide.

### Relief For Small Businesses (Quick Method And Simplified ITC Method)

- Read paragraph 21-113 to 21-124.
- Do Exercises Twenty-One-6 and Twenty-One-7 and check the solutions in this Study Guide.
- Do Self Study Problems Twenty-One-5 and Twenty-One-6 and check the solutions in this Study Guide.
- Read paragraph 21-125 to 21-130.
- Do Exercise Twenty-One-8 and check the solution in this Study Guide.

### GST/HST Procedures And Administration, Including GST/HST Returns And Payments

- Read paragraph 21-131 to 21-157.

### Employee And Partner GST/HST Rebate

- Read paragraph 21-158 to 21-166.
- Do Self Study Problem Twenty-One-7 and check the solution in this Study Guide.

### Residential Property And New Housing Rebate

- Read paragraph 21-167 to 21-173.
- Do Self Study Problems Twenty-One-8 and Twenty-One-9 and check the solutions in this Study Guide.

### Sale Of A Business

- Read paragraph 21-174 to 21-187.

### Specific Applications Including Charities, Not-For-Profits And MUSH

- Read paragraph 21-188 and 21-189.

### Partnerships And GST/HST

- Read paragraph 21-190 to 21-198.

### Trusts And GST/HST

- Read paragraph 21-199 to 21-201.

### To Complete This Chapter

- If you would like more practice in problem solving, do the Supplementary Self Study Problems for the chapter. These problems and solutions are available on MyLab.
- Review the Key Terms Used In This Chapter in the textbook at the end of Chapter 21. Consult the Glossary for the meaning of any key terms you do not know.
- Test yourself with the Chapter 21 Glossary Flashcards available on MyLab.
- Ensure you have achieved the Chapter 21 Learning Objectives listed in this Study Guide.
- As a review, we recommend you view the PowerPoint presentation for Chapter 21 that is on MyLab.

### Practice Examination

- Write the Practice Examination for Chapter 21 that is on MyLab. Mark your examination using the Practice Examination Solution that is on MyLab.

## Solutions to Chapter Twenty-One Exercises

### *Exercise Twenty-One - 1 Solution*

**Account-Based System** Under an account-based system, the 5 percent would be applied to the value added, resulting in a tax of $7,600 [(5%)($416,000 - $264,000)].

**Invoice-Credit System** Alternatively, under an invoice-credit system, $20,800 [(5%)($416,000)] would be owing on sales, but would be offset by an input tax credit of $11,650 [(5%)($233,000)] on purchases. The net tax owing in this case would be $9,150, $1,550 larger than the $7,600 tax using the account based system. Note that this $1,550 is equal to 5 percent of $31,000, the difference between the $233,000 in purchases and the $264,000 cost of the merchandise sold.

### *Exercise Twenty-One - 2 Solution*

As Ms. Salome's sales **exceed** $30,000 in the October to December, 2019 quarter, she will be required to begin collecting GST on the first sale in that quarter that causes her to exceed the $30,000 threshold. This means she will have to begin collecting GST sometime between October 1 and December 31. She will be required to register within 29 days of that date.

As Mr. Laughton's sales **accumulate** to more than $30,000 ($8,000 + $13,000 + $4,000 + $17,000 = $42,000) by the end of the January to March, 2020 quarter, he is required to start collecting GST on the first sale on or after May 1, 2020, one month after the quarter in which the $30,000 threshold is reached. Registration is required within 29 days of the first sale on which GST is collected.

### *Exercise Twenty-One - 3 Solution*

The HST payable would be calculated as follows:

| | |
|---|---|
| HST On Sales [(13%)($1,223,000)] | $158,990 |
| Input Tax Credits: | |
| Purchases [(13%)($843,000 + $126,000)] | ( 125,970) |
| Salaries | Nil |
| Interest | Nil |
| Amortization | Nil |
| HST Payable For The Quarter | $ 33,020 |

### *Exercise Twenty-One - 4 Solution*

The HST payable would be calculated as follows:

| | |
|---|---|
| HST On Sales [(15%)($224,000)] | $33,600 |
| Input Tax Credits: | |
| Rent [(15%)($25,800)] | ( 3,870) |
| Assistant's Salary | Nil |
| Capital Expenditures [(15%)($36,000 + $20,000)] | ( 8,400) |
| HST Payable For The Year | $ 21,330 |

### *Exercise Twenty-One - 5 Solution*

The pro rata input tax credit for the land and building acquisition would be $24,000 [(5%)(40%)($1,200,000)]. There would be no input tax credit for the office equipment as it is used less than 50 percent for taxable supplies.

### *Exercise Twenty-One - 6 Solution*

The purchases made do not affect the Quick Method calculation since they are non-capital. The GST payable under the Quick Method would be calculated as follows:

| | |
|---|---|
| Basic Tax [(1.8%)(105%)($42,500)] | $803.25 |
| Credit On First $30,000 [(1%)($30,000)] | ( 300.00) |
| GST Payable For The Quarter | $503.25 |

### *Exercise Twenty-One - 7 Solution*

If the Quick Method is not used, the HST payable (refund) would be calculated as follows:

| | |
|---|---|
| HST On Sales [(13%)($56,100)] | $7,293.00 |
| Input Tax Credits: | |
| Current Expenditures [(13%)($23,400)] | ( 3,042.00) |
| Capital Expenditures [(13%)($42,000)] | ( 5,460.00) |
| HST Payable (Refund) For The Quarter - Regular Method | ($1,209.00) |

Alternatively, under the Quick Method, the calculation would be as follows:

| | |
|---|---|
| Basic Tax [(4.4%)(113%)($56,100)] | $2,789.29 |
| Credit On First $30,000 [(1%)($30,000)] | ( 300.00) |
| Subtotal | $2,489.29 |
| Input Tax Credits: | |
| Current Expenditures | Nil |
| Capital Expenditures [(13%)($42,000)] | ( 5,460.00) |
| HST Payable (Refund) For The Quarter - Quick Method | ($2,970.71) |

As the Quick Method produces a larger refund, it would be the preferable method. Note that input tax credits on capital expenditures are available, even when the Quick Method is used.

### *Exercise Twenty-One - 8 Solution*

To apply the simplified method, we need to know the tax inclusive amounts of current expenditures (given in the problem), as well as the tax inclusive amounts of capital personal property expenditures. This latter figure is $52,500 [(105%)($50,000)]. Using the simplified method, the GST payable (refund) would be calculated as follows:

| | |
|---|---|
| GST Sales [(5%)($315,000 ÷ 1.05)] | $15,000 |
| Input Tax Credits On Purchases And Capital Personal Property [(5/105)($189,000 + $52,500)] | ( 11,500) |
| Input Tax Credits On Capital Real Property [(5%)($150,000)] | ( 7,500) |
| GST Payable (Refund) For The Year | ($ 4,000) |

## Self Study Solution Twenty-One - 1

### *GST Calculation*

Under the normal GST system, a 5 percent tax is applied on the selling price at each stage and the business gets an input tax credit for the tax paid on purchased inputs. The net result is that all payments of GST by vendors are refunded as input tax credits, so there is no net out-of-pocket cost (other than administration) to vendors from the GST.

| Vendor | Cost | Selling Price | GST Charged | ITC Claimed |
|---|---|---|---|---|
| Raw Materials Supplier | | $ 100 | $ 5.00 | Nil |
| Manufacturer | $100 | 150 | 7.50 | $ 5.00 |
| Wholesaler | 150 | 225 | 11.25 | 7.50 |
| Distributor | 225 | 338 | 16.90 | 11.25 |
| Retailer | 338 | 507 | 25.35 | 16.90 |
| Totals | | $1,320 | $66.00 | $40.65 |

The net GST charged for all stages is $25.35 ($66.00 - $40.65). The consumer bears the full cost of the tax by paying GST of $25.35 [(5%)($507)] with no opportunity to get an input tax credit.

### *Turnover Tax Calculation*

The turnover tax is similar to the GST, as it applies to revenue. However, the turnover tax is significantly different as there is no input tax credit for tax paid at each stage on purchased goods (inputs). The tax is passed on to the purchasers in the chain, resulting in pyramiding of the tax. Because of the multiple times goods get taxed, to raise the same amount of tax revenue, the turnover tax rate of 1.92 percent (as shown in the following calculation) is much lower than the 5 percent GST rate.

[($100)(X%)] + [($150)(X%)] + [($225)(X%)] + [($338)(X%)] + [($507)(X%)] = $25.35
[($100 + $150 + $225 + $338 + $507)(X%)] = $25.35
[($1,320)(X%)] = $25.35
X% = $25.35 ÷ $1,320
X% = 1.92%

As verification, the total of the selling price in the above table is $1,320. If the rate of 1.92 percent is applied to this total (the equivalent of each stage charging a turnover tax), the total tax collected would be equivalent to $25.34 (rounding error of $0.01).

## Self Study Solution Twenty-One - 2

### *Calendar Quarter Test*

As taxable sales did not exceed $30,000 in any of the quarters under consideration, the application of this test would not result in Name-Your-Income being required to register.

### *Last Four Calendar Quarters Test (Cumulative)*

Application of this test requires the following analysis of the cumulative last four quarters results:

| Period | Taxable Sales | Net Increase Or Decrease | Cumulative Last Four Quarters |
|---|---|---|---|
| First Quarter 2018 | $ 8,500 | $ 8,500 | $ 8,500 |
| Second Quarter | 6,200 | 6,200 | 14,700 |
| Third Quarter | 7,400 | 7,400 | 22,100 |
| Fourth Quarter | 7,600 | 7,600 | 29,700 |
| First Quarter 2019 | 8,400 | (-8,500+8,400) | 29,600 |
| Second Quarter | 9,200 | (-6,200+9,200) | 32,600 |

The small supplier threshold of $30,000 was exceeded in the second quarter of 2019 (April to June). As a result, Name-Your-Income will have to begin collecting GST on the first sale in the second month following the end of the quarter in which the $30,000 threshold was exceeded. This means that it will have to collect GST on the first sale in August, 2019.

Registration is required within 29 days of the first sale in August, the day GST collection is required to begin.

## Self Study Solution Twenty-One - 3

The HST refund for Norton's Variety for the current period would be calculated as follows:

| | |
|---|---|
| HST Collected [(13%)($250,000)] | $32,500 |
| Input Tax Credits - Current Expenditures: | |
| Purchases Of Fully Taxable Goods | |
| [(13%)($175,000 + $10,000)] | ( 24,050) |
| Purchases Of Zero-Rated Goods (Note 1) | Nil |
| Amortization Expense (Note 2) | Nil |
| Salaries And Wages (Note 3) | Nil |
| Interest Expense (Note 3) | Nil |
| Other Operating Expenses [(13%)(100%)($10,000)] (Note 4) | ( 1,300) |
| Input Tax Credits - Capital Expenditures: | |
| Building [(13%)(40%)($480,000)] (Note 5) | ( 24,960) |
| Equipment (Note 6) | Nil |
| HST Payable (Refund) | ($17,810) |

**Note 1** HST is not paid on purchases of zero-rated goods. As a consequence, there are no input tax credits to be claimed on these purchases.

**Note 2** Amortization expense does not affect the HST calculation.

**Note 3** No HST is paid on salaries and wages, or interest. As a result, no input tax credits are available.

**Note 4** As more than 90 percent of the Other Expenses related to the provision of taxable supplies, the company is eligible for a 100 percent input tax credit.

**Note 5** Input tax credits on real property are available based on a pro rata portion of their usage in providing taxable supplies.

**Note 6** No input tax credits are available on capital expenditures other than real property if less than 50 percent of their usage is to provide fully taxable and zero-rated supplies.

## Self Study Solution Twenty-One - 4

For Part A and Part B, the HST refund for the year would be calculated as follows:

| | Part A | Part B |
|---|---|---|
| HST Collected [(13%)($1,955,000)] | $254,150 | $254,150 |
| Input Tax Credits: | | |
| Purchases [(13%)($1,356,000 - $212,000)] | ( 148,720) | ( 148,720) |
| Amortization Expense | Nil | Nil |
| Salaries And Wages | Nil | Nil |
| Interest Expense | Nil | Nil |
| Other Expenses [(13%)($162,000 - $5,000)] | ( 20,410) | ( 20,410) |
| Equipment [(13%)($725,000)] | ( 94,250) | Nil |
| Building [(13%)(($1,450,000)] | ( 188,500) | |
| [(13%)(73%)($1,450,000)] | | ( 137,605) |
| HST Payable (Refund) | ($197,730) | ($ 52,585) |

In both Part A and Part B, no input tax credit is allowed for HST paid on membership fees or dues in any club whose main purpose is to provide dining, recreational, or sporting facilities.

In Part A, input tax credits are available on both the equipment and the building because 100 percent of their usage is for taxable supplies (fully taxable and zero-rated).

In Part B, there is no input tax credit available on the equipment as it is used less than 50 percent to provide taxable supplies. The building's input tax credit is limited to 73 percent of the HST paid.

## Self Study Solution Twenty-One - 5

The following recommendations are based solely on the minimization of the GST payment. No consideration is given to the reduction in accounting costs available through the use of the Quick Method.

***Claire - Service Business***

The Quick Method would be preferable in this case.

**Regular Method**

| | |
|---|---|
| [($150,000 - $35,000) ÷ 1.05][5%] | $5,476 |

**Quick Method**

| | |
|---|---|
| Basic Tax [($150,000)(3.6%)] | $5,400 |
| Credit On First $30,000 [(1%)($30,000)] | ( 300) |
| Net GST | $5,100 |

***Barbara - Retailer***

The Regular Method is preferable in this case.

**Regular Method**

| | |
|---|---|
| [($150,000 - $100,000) ÷ 1.05][5%] | $2,381 |

**Quick Method**

| | |
|---|---|
| Basic Tax [($150,000)(1.8%)] | $2,700 |
| Credit On First $30,000 [(1%)($30,000)] | ( 300) |
| Net GST | $2,400 |

***Nicole - Service Business***

The Quick Method would be preferable in this case.

**Regular Method**

| | |
|---|---|
| [($120,000 - $35,000) ÷ 1.05][5%] | $4,048 |

**Quick Method**

| | |
|---|---|
| Basic Tax [($120,000)(3.6%)] | $4,320 |
| Credit On First $30,000 [(1%)($30,000)] | ( 300) |
| Net GST | $4,020 |

***Elizabeth - Retailer***

The Quick Method would be preferable in this case.

**Regular Method**

| | |
|---|---|
| [($120,000 - $75,000) ÷ 1.05][5%] | $2,143 |

**Quick Method**

| | |
|---|---|
| Basic Tax [($120,000)(1.8%)] | $2,160 |
| Credit On First $30,000 [(1%)($30,000)] | ( 300) |
| Net GST | $1,860 |

## Self Study Solution Twenty-One - 6

### *Part A*

Using the regular calculations, the HST payable for Larkin Ltd. for the current year would be calculated as follows:

| | |
|---|---|
| HST Collected [(13%)($103,000)] | $13,390 |
| Input Tax Credits On Current Expenditures: | |
| Purchases [(13%)($63,000 + $6,000)] | ( 8,970) |
| Amortization Expense | Nil |
| Salaries And Wages | Nil |
| Rent [(13%)($24,000)] | ( 3,120) |
| Interest Expense | Nil |
| Other Operating Expenses [(13%)($12,000)] | ( 1,560) |
| Input Tax Credits On Capital Expenditures [(13%)(100%)($36,160 ÷ 1.13)] | ( 4,160) |
| HST Payable | ($ 4,420) |

**Notes:**

- Amortization expense does not affect the HST calculation.
- No HST is paid on salaries and wages, or interest. As a result no input tax credits are available.
- Full input tax credits are available on capital expenditures other than real property if more than 50 percent of their usage is to provide fully taxable supplies.

### *Part B*

As Larkin's HST included taxable sales of $116,390 [(113%)($103,000)] is less than $400,000 and it is not engaged in an ineligible business such as accounting, Larkin can use the Quick Method.

### *Part C*

The Quick Method calculations would be as follows:

| | |
|---|---|
| Basic Tax [(4.4%)(113%)($103,000)] | $5,121 |
| Credit On First $30,000 [(1%)($30,000)] | ( 300) |
| Total Before Capital Expenditures | $4,821 |
| Input Tax Credit On Capital Expenditures [(13%) (100%)($36,160 ÷ 1.13)] | ( 4,160) |
| HST Payable | $ 661 |

In this case, the regular HST calculations are preferable as it produces a refund rather than requiring a remittance.

## Self Study Solution Twenty-One - 7

The maximum CCA that George can claim is as follows:

| | |
|---|---|
| Opening UCC ($27,750 - $4,163) | $23,587 |
| GST Rebate Claimed On Car CCA In Preceding Year | ( 198) |
| Adjusted UCC | $23,389 |
| Class 10 Rate | 30% |
| Maximum CCA | $ 7,017 |

The employee GST rebate for George would be calculated as follows:

| | | |
|---|---|---|
| Total Expenses Other Than CCA | $28,000 | |
| GST Exempt Purchases: | | |
| Interest | ( 2,600) | |
| Insurance | ( 1,200) | |
| Eligible Expenses Other Than CCA | $24,200 | |
| Rate | 5/105 | $1,152 |
| Eligible CCA | $7,017 | |
| Rate | 5/105 | 334 |
| Employee GST Rebate | | $1,486 |

## Self Study Solution Twenty-One - 8

The calculation of the new housing GST rebate is as follows:

**[A][($450,000 - B) ÷ $100,000],** where

**A** = The lesser of 36 percent of the GST paid and $6,300; and
**B** = The greater of $350,000 and the cost of the home.

The GST and total cost of each purchase would be as follows.

### *Property A*

As the renovations involve more than 90 percent of the interior, they will be considered substantial. Since the renovations would be done by the vendor prior to the sale, the purchase would be deemed to be that of a "new" home. As a result, the total purchase price would be subject to GST and a new housing rebate could be claimed on the total, as follows:

| | |
|---|---|
| GST Payable [($370,000)(5%)] | $ 18,500 |
| Less New Housing Rebate, where | |
| A = the lesser of [(36%)($18,500)] = $6,660 and $6,300 | |
| B = the greater of $350,000 and $370,000 | |
| [$6,300][($450,000 - $370,000) ÷ $100,000] | ( 5,040) |
| Net GST Payable | $ 13,460 |
| Purchase Price | 370,000 |
| Total Cost | $383,460 |

### *Property B*

As this property is a used residential unit, no GST will be payable. This means that the total cost will be $387,000.

***Property C***

GST will be paid on the purchase price of $323,000, plus all of the improvements. However, the new housing rebate is only available on the $10,000 cost of the improvements done by the builder in addition to the purchase price. It is not available on the additional $12,000 of costs incurred by Martin.

| | |
|---|---|
| GST Payable [($323,000 + $10,000 + $12,000)(5%)] | $ 17,250 |
| Less New Housing Rebate, where | |
| A = the lesser of [(36%)(5%)($323,000 + $10,000)] = $5,994 and $6,300 | |
| B = the greater of $350,000 and $345,000 | |
| [$5,994][($450,000 - $350,000) ÷ $100,000] | ( 5,994) |
| Net GST Payable | $ 11,256 |
| Purchase Price ($323,000 + $10,000 + $12,000) | 345,000 |
| Total Cost | $356,256 |

## Self Study Solution Twenty-One - 9

***GST Consequences***

As used residential properties are not subject to GST, the renovator would not have paid any tax on the $85,000 purchase.

With respect to the sale, the GST treatment will depend on whether the upgrading was a substantial or non-substantial renovation. Given that 100 percent of the interior was replaced, it would be considered a substantial renovation. As a result, the sale would be treated as a taxable supply of a new home and would be subject to GST. This, in turn, means that GST paid on the costs of renovations can be claimed as input tax credits.

These credits can be claimed when the expenses are incurred, without regard to when the house is sold. The renovator could also claim input tax credits on GST that would be paid on commissions and transfer fees.

***Cost Of House And Net Profit***

For the purchaser, the usual 5 percent rate applied to the sales price of $200,000 would result in a basic GST figure of $10,000. However, as the house has a purchase price below $350,000, the purchaser would be eligible for a rebate equal to 36 percent of the GST paid. This rebate would be $3,600 [(36%)($10,000)], leaving a net GST payable of $6,400 ($10,000 - $3,600). The net cost of the house to the purchaser would then be $206,400.

The net profit on the transaction for the renovator, calculated net of GST payment and input tax credits, would be calculated as follows:

| | | |
|---|---|---|
| Selling Price | | $200,000 |
| Less Costs: | | |
| Purchase Price | ($85,000) | |
| Subcontractors - No GST Included | ( 10,700) | |
| Subcontractors (Net Of $1,000 GST) | ( 20,000) | |
| Materials (Net Of $1,500 GST) | ( 30,000) | |
| Employee Wages - No GST Included | ( 6,000) | ( 151,700 |
| Net Profit | | $ 48,300 |

***GST Remittance***

The contractor will have a liability for GST as follows:

| | | |
|---|---|---|
| GST Charged (Net Of Rebate) | | $ 6,400 |
| Less Input Tax Credits: | | |
| Subcontractors [($21,000 ÷ 105%)(5%)] | ($1,000) | |
| Materials [($31,500 ÷ 105%)(5%)] | ( 1,500) | ( 2,500) |
| GST Remittance | | $ 3,900 |

This solution assumes the purchaser assigns the rebate to the builder on closing. If this is not the case, the purchaser would apply personally for the $3,600 GST rebate, and the renovator's GST remittance would be $3,600 larger.

## Chapter 21 Learning Objectives

After completing Chapter 21, you should be able to:

1. Describe, in general terms, the current transaction tax situation (GST/HST) in all of the provinces (paragraph [P hereafter] 21-1 to 21-16).
2. Describe the different ways in which transaction taxes can be assessed and the approach the GST/HST uses (P 21-17 to 21-41).
3. Explain the basic charging provision for GST/HST and the concept of supply (P 21-42 to 21-46).
4. Outline the difference between fully taxable supplies, zero-rated supplies, and exempt supplies (P 21-47 to 21-60).
5. Explain the place of supply rules and how the GST/HST is applied to tangible goods, real property and services (P 21-61 to 21-69).

6. Explain who is responsible for collecting and remitting the GST/HST (P 21-70 to 21-73).
7. Determine whether an entity is required to register for GST and if so, at what point in time registration is required (P 21-74 to 21-92).
8. Apply the rules for calculating input tax credits on current and capital expenditures (P 21-93 to 21-99).
9. Explain some of the basic restrictions on claiming input tax credits (P 21-100 to 21-102).
10. Discuss input tax credits as they relate to vendors of exempt supplies (P 21-103).

11. Describe the relationship between amounts determined for accounting, income tax and GST/HST purposes (P 21-104 to 21-108).
12. Calculate the GST/HST payable or refund when fully taxable, zero-rated and exempt supplies are provided (P 21-109 to 21-112).
13. Apply the quick method of accounting for GST/HST (P 21-113 to 21-124).
14. Apply the simplified method of accounting for input tax credits (P 21-125 to 21-130).
15. Outline the basic procedures and administration of the GST/HST (P 21-131 to 21-157).

16. Calculate the employee and partner GST/HST rebate (P 21-158 to 21-166).
17. Calculate the effects of GST/HST on the acquisition and disposition of residential property, including new homes (P 21-167 to 21-173).
18. Describe the possible GST/HST implications resulting from the sale of a business (P 21-174 to 21-187).
19. Briefly describe how the GST/HST applies to certain types of organizations such as those included in MUSH (P 21-188 and 21-189).
20. Describe the GST/HST implications related to partner expenses, dispositions of partnership interests, transfers between a partnership and its partners and the reorganization of partnerships (P 21-190 to 21-198).
21. Explain the applicability of GST/HST legislation to trusts (P 21-199 to 21-201).

# GLOSSARY

## A

**Accelerated Investment Incentive (AccII)** A temporary program that encourages investments in capital assets by providing an accelerated CCA deduction on net acquisitions during the year of acquisition.

**Accrual Basis** A method of accounting for Income based on recording assets when the right to receive them is established and liabilities when the obligation to pay them arises.

**Acquisition Of Control** Acquisition of sufficient voting shares of a corporation, by a Person, or Group Of Persons, that they have the right to elect a majority of the board of directors of the Corporation.

**Active Business** A business carried on by a Taxpayer, other than a Specified Investment Business or a Personal Services Business.

**Active Business Income** Income earned by an Active Business.

**Additional Refundable Tax On Investment Income (ART)** A 10-2/3% tax on the Aggregate Investment Income of a CCPC.

**Adjusted Active Business Income** A term used in calculating the M&P Deduction, defined as the excess of a Corporation's Income from Active Business, less a Corporation's losses from Active Business. It does not appear to be a different concept than Active Business Income of a Corporation.

**ADJUSTED Aggregate Investment Income** A modified version of Aggregate Investment Income that is used to calculate a possible grind of the annual business limit for the small business deduction.

**Adjusted Cost Base** For depreciable capital property it is the cost of the property to the Taxpayer. For non-depreciable capital property it is the cost of the property to the Taxpayer, subject to ITA 53 adjustments (e.g., deduction of government grants on land purchase).

**Adjusted Taxable Income** Regular Taxable Income, adjusted to remove certain tax preferences. Used to calculate the Alternative Minimum Tax.

**Adoption Expenses Tax Credit** A credit against Tax Payable that is available to individuals with eligible adoption expenses.

**Advance Tax Ruling** Interpretations provided, at the request of a taxpayer, by the Income Tax Rulings Directorate as to how a particular transaction will be treated for tax purposes. Such interpretations are not binding on the CRA.

**Affiliated Group Of Persons** A Group Of Persons each member of which is affiliated with every other member.

**Affiliated Person [ITA 251.1(1)]** For an Individual, an Affiliated Person is that individual's Spouse or Common-Law Partner. For a Corporation, an Affiliated Person is a Person or an Affiliated Group Of Persons who Controls the Corporation, or the Spouse or Common-Law Partner of either the Person who Controls, or a member of the group that Controls. More complex rules apply to determine affiliation between two Corporations.

**Age Tax Credit** A credit against Tax Payable that is available to Individuals who are 65 years of age or older.

**Aggregate Investment Income** As defined in ITA 129(4), this concept of investment income includes net Taxable Capital Gains for the year reduced by any Net Capital Loss carry overs deducted in the year, Interest Income, rents, and royalties.

**Alimony** A term that was used at an earlier point in time to refer to both Spousal Support and Child Support.

**Allowable Business Investment Loss** The deductible portion (currently one-half) of a Business Investment Loss.

**Allowable Capital Loss** The deductible portion (currently one-half) of a Capital Loss.

**Allowance** An amount paid by an employer to an Employee to provide for certain types of costs incurred by the Employee, usually travel costs or automobile costs.

**Alter Ego Trust** An Inter Vivos Trust established by an Individual aged 65 years or more, subject to the conditions that the Individual must be entitled to all of the Trust's Income during his/her lifetime, and the Individual must be the only Person who can access the capital of the Trust during his/her lifetime.

**Alternative Minimum Tax (AMT)** A tax, calculated at the minimum federal rate on Adjusted Taxable Income, less a basic $40,000 exemption.

**Amalgamation** A Rollover provision which allows two Taxable Canadian Corporations to be combined into a single Taxable Canadian Corporation, without tax consequences.

**Annual Business Limit** The maximum amount of Active Business Income that is eligible for the Small Business Deduction in a particular taxation year (currently $500,000).

**Annual Child Care Expense Amount** The annual per child limit for deductible Child Care Expense. The amount is $5,000, $8,000, or $11,000, depending on the age and health of the child.

**Annual Gains Limit** Taxable Capital Gains for the current year on qualified assets, less the sum of Allowable Capital Losses and Net Capital Loss Carry Overs deducted during the current year, plus Allowable Business Investment Losses realized during the current year. Used to determine the Lifetime Capital Gains Deduction for the current year.

**Annuitant** This term is used to describe a Person who is receiving an Annuity. However, in tax publications this term is often (and incorrectly) used to refer to the Beneficiary of an RRSP or RPP.

**Annuity** A series of periodic payments that continues for a specified period of time, or until the occurrence of some event (e.g., the death of the Annuitant).

**Anti-Avoidance Provision** A provision in the *Income Tax Act* that is designed to prevent a Taxpayer from taking some action that would allow him to avoid taxes.

**Apprenticeship Job Creation Tax Credit** An Investment Tax Credit that is available to eligible employers (individuals and corporations) for salaries and wages paid to qualifying apprentices.

**Arm's Length** ITA 251(1) indicates that Related Persons (see definition) do not deal with each other at arm's length. Also, a taxpayer and a personal trust do not deal with each other at arm's length. In other cases, it is a question of fact as to whether an arm's length relation exists.

**ART** An acronym for "additional refundable tax on investment income".

**Assessment** A formal determination of taxes to be paid or refunded. A Reassessment is a form of Assessment.

**Associated Corporations** Two or more Corporations that have an ownership/control arrangement that falls into one of the categories described in ITA 256(1) (e.g., two Corporations controlled by the same Person).

**At-Risk Amount** A defined measure that limits the amount of deductions that can be flowed through to a Limited Partner.

**At-Risk Rules** A set of rules, directed largely at Limited Partners, designed to prevent an investment from creating tax deductions that exceed the amount invested (the At-Risk Amount).

## B

**Basic Federal Tax Payable** An amount of individual Tax Payable that has been reduced by some, but not all of the Tax Credits available to individuals. Used in the calculation of Tax Payable of Canadian Residents who do not live in a province.

**Beneficiary** The Person who will receive the benefits from a Trust.

**Billed Basis** A method of determining Net Business Income based on recording inclusions when the relevant amounts are billed. Can only be used by certain specified types of professionals (e.g., accountants).

**Bonus Arrangement** As used in this material, a tax planning arrangement for Employees. A Corporation declares and deducts a bonus near the end of its fiscal year. It is usually designed to be paid to the Employee early in the following calendar year. As Employment Income is taxed on a Cash Basis, the bonus will not be taxed in the employee's hands until that year.

**Bonusing Down** A process of paying deductible salary to the owner-manager of a CCPC, or related parties, in order to eliminate corporate Taxable Income that is not eligible for the Small Business Deduction.

**Boot** A colloquial term used by tax practitioners to refer to Non-Share Consideration.

**Business** A business is a self-sustaining integrated set of activities and assets conducted and managed for the purpose of providing a return to investors. A business consists of (a) inputs, (b) processes applied to those inputs, and (c) resulting outputs that are used to generate revenues.

**Business Combination** A transaction in which an enterprise acquires net assets that constitute a business, or acquires an equity interest in a Corporation that gives the enterprise Control over the operating, financing, and investing decisions of that Corporation.

**Business Income** Income that is earned through Active Business activity. This would include amounts earned by producing goods, selling goods or services, or delivering services. While usage is not always consistent, this term usually refers to a net amount (i.e., inclusions less deductions, or revenues less expenses).

**Business Investment Loss** A loss resulting from the Disposition of shares or debt of a Small Business Corporation.

## C

**Canada Caregiver Amount For Child** A credit against tax payable that is available to an individual who provides care and/or support for a child under 18 years of age who has a mental or physical infirmity.

**Canada Caregiver Tax Credit** A credit against tax payable that is available to an individual who provides care and/or support for certain specified dependants who have a mental or physical infirmity.

**Canada Child Benefit** A monthly payment that is available to Individuals with children. The non-taxable payments may be reduced or eliminated if Income is in excess of a threshold amount.

**Canada Disability Savings Bonds** A system of grants under which the federal government makes contributions to an Individual's RDSP based on family net income.

**Canada Disability Savings Grants** A system of grants under which the federal government makes contributions to an Individual's RDSP based on a percentage of the contributions to that Individual's RDSP that have been made by others.

**Canada Education Savings Grants** A system of grants under which the federal government makes contributions to an Individual's RESP based on a percentage of the contributions to that Individual's RESP that have been made by others.

**Canada Employment Credit** A credit against Tax Payable that is available to individuals with employment income.

**Canada Learning Bonds** A system of grants under which the federal government makes contributions to an Individual's RESP based on the number of years in which the Individual's family is eligible for the National Child Benefit supplement.

**Canada Pension Plan (CPP)** A pension plan sponsored by the federal government. Individuals with Employment or Business Income must make contributions based on their income and, in return, receive benefits in future years.

**Canada Pension Plan Tax Credit** A credit against Tax Payable that is available to Individuals making contributions to the Canada Pension Plan.

**Canada Training Credit** A refundable credit that provides a refund to eligible individuals for a portion of training related costs.

**Canada Workers Benefit** A refundable credit available to low income individuals who are earning employment and business income (formerly Working Income Tax Benefit).

**Canadian Controlled Private Corporation** A Corporation that is controlled by Persons Resident in Canada and that does not have any of its shares listed on a designated stock exchange.

**Canadian Corporation** A Corporation that is resident in Canada.

**Canadian Partnership** A Partnership, all of the members of which are Residents of Canada at the time the term is relevant.

**Capital Asset** An asset that is held for the purpose of producing Income.

**Capital Cost** The amount paid to acquire a depreciable asset. The tax equivalent of acquisition cost in accounting.

**Capital Cost Allowance (CCA)** A deduction in the determination of Business or Property Income based on the capital cost of capital assets. The tax equivalent of accounting amortization.

**Capital Dividend** A Dividend paid out of a Private Corporation's Capital Dividend Account. It is received on a tax free basis.

**Capital Dividend Account** An account that tracks a group of items, defined in ITA 89(1), that can be distributed by Private Corporations to shareholders as a tax free Capital Dividend (e.g., the non-taxable portion of realized Capital Gains).

**Capital Gain** The excess of proceeds resulting from the Disposition of a capital asset, over the sum of the Adjusted Cost Base of the asset plus any costs of disposition.

**Capital Gains Reserve** A Reserve that is deductible against Capital Gains. It is available when some part of the Proceeds Of Disposition is not collected in the period of disposition.

**Capital Gains Stripping** Procedures designed to allow a Corporation to convert a taxable capital gain resulting from the Disposition of investment shares to an arm's length party, into a tax free intercorporate Dividend.

**Capital Interest (In A Trust)** All rights of the Taxpayer as a Beneficiary under the trust, other than those that are an Income Interest in the Trust.

**Capital Loss** The excess of the sum of the Adjusted Cost Base of a capital asset plus any costs of disposition, over the proceeds resulting from the Disposition of the asset.

**Capital Personal Property** For GST purposes, any capital property other than Real Property.

**Capital Tax** A tax assessed on the capital of a Corporation, without regard to its Income.

**Carry Over** As used in tax work, the ability to apply current year losses against Income in earlier or later years.

**Cash Basis** A method of accounting for Income based on cash receipts and cash disbursements.

**Cash Damming** Situations in which a separate bank account is established to receive all deposits of borrowed funds. Expenditures from this account are then limited to those which qualify for interest deductibility. This procedure facilitates linking the borrowed money to income producing investments.

**CCPC** An acronym for "Canadian controlled private corporation".

**Charitable Donations Tax Credit** A credit against Tax Payable that is available to Individuals making donations to qualifying charitable organizations.

**Charitable Gifts** Donations to a registered charity, a registered Canadian amateur athletic association, a housing corporation resident in Canada that is exempt from tax under ITA 149(1)(i), a Canadian municipality, the United Nations or an agency thereof, a university outside of Canada which normally enrolls Canadian students, and a charitable organization outside of Canada to which Her Majesty in right of Canada has made a gift in the year or in the immediately preceding year.

**Child Care Expenses** Costs associated with caring for an Eligible Child.

**Child Support** A Support Amount that is not identified as being for the benefit of a Spouse or Common-Law Partner, or a former Spouse or Common-Law Partner.

**Class** As used in tax work, a defined group of depreciable assets for which the *Income Tax Regulations* specify the CCA rate to be applied, as well as the method to be used in applying the rate.

**Clawback** An income tested taxing back, or reduction, in the payment of Old Age Security benefits and Employment Insurance benefits.

**Climate Action Incentive Payments** A refundable credit based on family size that is available to the residents of four provinces and two territories, specifically Manitoba, New Brunswick, Ontario, Saskatchewan, Nunavut and Yukon.

**Commercial Activity** This is a GST term which refers to any business or trade carried on by a Person, or any supply of real property made by a Person. Commercial Activity does not include any activity involved with making an exempt supply or any activity engaged in by an Individual without a Reasonable Expectation Of Profit.

**Commodity Tax** A type of Transaction Tax that is applied to the sale of certain types of commodities (e.g., taxes on the sale of tobacco products).

**Common Shares** Corporate shares that normally have all of the rights which are provided for under the relevant corporate enabling legislation. While there may be variations in the rights of such shares, at a minimum, voting rights would have to be present for the shares to be considered Common Shares.

**Common-Law Partner** A Person who cohabits in a conjugal relationship with the Taxpayer and (a) has so cohabited with the Taxpayer for a continuous period of at least one year, or (b) is a parent of a child of whom the Taxpayer is also a parent.

**Comparable Uncontrolled Price** A Transfer Pricing method that bases transfer prices on the prices used in comparable transactions between arm's length buyers and sellers, operating in the same market and under the same terms and conditions.

**Connected Corporation** Corporation A is connected with Corporation B if Corporation B Controls Corporation A, or if Corporation B owns more than 10% of the voting shares of Corporation A and more than 10% of the fair market value of all issued shares of Corporation A.

**Consent Form** A form that is used when a taxpayer wishes to have a different person represent him in dealing with the CRA. This form (T1013) authorizes the CRA to disclose information to, and deal with, a specified representative.

**Consumption Tax** A tax levied on the consumption of some product or service. This type of tax is also called a sales tax.

**Contributed Capital** In accounting usage, the amount of a Corporation's Shareholders' Equity that was received in return for issuing the shares that are currently outstanding.

**Control [ITA 256(1.2)(c)]** A Corporation, Person or Group Of Persons has Control of a Corporation if that Corporation, Person or Group Of Persons owns either more than 50% of the Common Shares of that Corporation or, alternatively, owns shares (common and/or preferred) with a fair market value that exceeds 50% of the fair market value of all of the outstanding shares of that Corporation.

**Control (IAS 27)** Control is the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities.

**Controlled [ITA 251.1(3)]** Under ITA 251.1(3), Controlled means controlled, directly or indirectly in any manner whatever. [The reference here is to de facto control, which does not necessarily require majority ownership of shares.]

**Controlled Foreign Affiliate** A Foreign Affiliate of the Taxpayer that was controlled by (a) the Taxpayer, (b) the Taxpayer and not more than four other Persons Resident in Canada, (c) not more than four Persons Resident in Canada, other than the Taxpayer, (d) a Person or Persons with whom the Taxpayer does not deal at arm's length, or (e) the Taxpayer and a Person or Persons with whom the Taxpayer does not deal at arm's length.

**Convertible Property** A debt or equity financial instrument of a Corporation that can be exchanged for an equity financial instrument of the same Corporation, without the payment of additional consideration.

**Co-Ownership** Ownership of a single real or personal property by two or more Persons.

**Corporation** An artificial legal entity created through either federal or provincial legislation.

**Cost Of Capital (M&P)** For purposes of calculating the M&P Deduction, this amount is 10% of the Gross Cost of Capital Assets used by the corporation, plus 100% of rents paid for Capital Assets used by the Corporation.

**Cost Of Labour (M&P)** For purposes of calculating the M&P Deduction, this is the total cost of salaries and wages, plus non-salary amounts paid for employee-like services.

**Crowdfunding** Funding a project, venture or business by raising funds from a large number of people, usually in small amounts and usually via the internet.

**Crown Gifts** Gifts made to Her Majesty in right of Canada or to Her Majesty in right of a province.

**Cultural Gifts** Gifts of objects that the Canadian Cultural Property Export Review Board has determined meet the criteria of the *Cultural Property And Import Act*.

**Cumulative Eligible Capital (CEC)** This term was used to refer to the amortized balance of Eligible Capital Expenditures. No longer available after 2016.

**Cumulative Gains Limit** Taxable Capital Gains on qualified assets that have been realized since 1984, less the sum of Allowable Capital Losses and Net Capital Loss Carry Overs deducted after 1984, plus Allowable Business Investment Losses realized after 1984, capital gains deductions claimed in previous taxation years, and the Cumulative Net Investment Loss at the end of the year. Used to determine the Lifetime Capital Gains Deduction for the current year.

**Cumulative Net Investment Loss (CNIL)** The amount by which the aggregate of investment expenses for the current year and prior years ending after 1987, exceeds the aggregate of investment income for that period.

**Customs Duties** A tax imposed on the importation or exportation of certain goods or services.

## D

**Death Benefit** All amounts in excess of $10,000 that are received by a Taxpayer in a taxation year, on or after the death of an Employee, in recognition of the Employee's service in an office or employment.

**Declining Balance Method** A method of calculating CCA in which a specified rate is applied to the ending UCC balance in a depreciable asset Class in order to determine the CCA for the period.

**Deemed Disposition** A requirement to assume that a Disposition has taken place when, in fact, a disposition transaction has not occurred (e.g., a change in use is deemed to be a Disposition).

**Deemed Dividends** A group of capital transactions and distributions, as specified in ITA 84(1), that are deemed to be Dividend payments.

**Deemed Resident** An Individual who is considered a Resident of Canada because of some factor other than physical presence in Canada (e.g., members of the Canadian armed forces are deemed to be Canadian Residents under ITA 250 without regard to where they are physically located).

**Deemed Year End** A requirement to have a taxation year end at a specified date, or as the result of a specified event.

**Deeming Rules** Rules that are used to require that an item or event be given a treatment for tax purposes that is not consistent with the actual nature of the item or event (e.g., members of the Canadian armed forces are deemed to be Canadian Residents even if they are not present in Canada at any time during the year).

**Deferred Income Plans** A group of plans that allow Individuals to receive Income on a tax deferred basis. These include Registered Pension Plans, Deferred Profit Sharing Plans, Registered Retirement Savings Plans, and Registered Retirement Income Funds.

**Deferred Profit Sharing Plan (DPSP)** A trusteed plan to which employers can make deductible contributions, the amount of which is related to the profits of the enterprise, and which do not create a Taxable Benefit for the recipient employees. Earnings accumulate tax free within the plan. Withdrawals from the plan are subject to tax.

**Defined Benefit Plan** A retirement savings plan in which the plan sponsor (usually an employer) promises a known or determinable retirement benefit and assumes financial responsibility for providing that benefit.

**Defined Contribution Plan (a.k.a., Money Purchase Plan)** A retirement savings plan in which the plan sponsor (employer or individual) makes known or determinable contributions. The retirement benefit is based on the accumulated contributions and earnings on investments within the plan.

**Dependant** As defined in ITA 118(6), an Individual who, at any time during the year, is dependent on the taxpayer for support and is the child or grandchild of the Individual or of the individual's Spouse or Common-Law Partner, the parent, grandparent, brother, sister, uncle, aunt, niece, or nephew, if resident in Canada at any time in the year, of the Individual or of the individual's Spouse or Common-Law Partner.

**Depreciable Capital Property** Capital property, such as equipment or furniture and fixtures, that is subject to depreciation or amortization.

**Designated Stock Exchange** A stock exchange that has been designated as such by the Minister of Finance. Replaces the term "prescribed stock exchange".

**Digital News Subscriptions Credit** A non-refundable tax credit for individuals based on their expenditures for digital subscriptions with a Qualifying Canadian Journalism Organization.

**Disability Supports Deduction** A deduction available to individuals for attendant care and other disability support expenses, incurred to allow the disabled individual to work or to attend a designated educational institution.

**Disability Tax Credit** A credit against Tax Payable that is available to Individuals with a doctor certified severe mental or physical disability. Can be transferred to a supporting Individual.

**Disability Tax Credit Supplement** A supplement to the Disability Tax Credit available to individuals who are under 18 years of age at the end of the year.

**Disappearing Source Rules** Rules designed to provide relief to investors who have borrowed money to make an investment and subsequently sold the investment for less than the related borrowings. These rules provide that any amount of debt that remains after the proceeds of the sale are used to pay off a portion of the total balance is deemed to be debt that is used to produce income.

**Discretionary Trust** A Trust for which the Settlor has given the Trustee discretion to decide the amounts of income or capital to be allocated to each Beneficiary.

**Disposition** The disposal of an asset through sale, gift, physical destruction, conversion, expropriation, or other means.

**Dividend Gross Up** An amount that is based on a percentage of the Dividends from Taxable Canadian Corporations that have been received by an Individual or Trust. This amount must be included in the Net Income For Tax Purposes of the Individual or Trust.

**Dividend Stripping** Procedures designed to allow an Individual to remove accumulated Income from a Corporation in the form of tax-free capital gains, while still retaining Control of the Corporation.

**Dividend Tax Credit** A credit against the Tax Payable of an Individual or Trust. The amount is based on a fraction of the Dividend Gross Up that has been included in Net Income For Tax Purposes.

**Dividends** Amounts declared and paid, at the discretion of management, as a return on equity investments.

**Dividends In Kind** Dividends, other than Stock Dividends, paid in corporate assets other than cash.

**Division B Income** An alternative name for Net Income For Tax Purposes.

**Double Taxation** A reference to situations in which the same stream of Income is subject to tax a second time.

**Dual Resident** A taxpayer who is considered to be a Resident of two countries.

## E

**Earned Capital (a.k.a. Retained Earnings)** In accounting usage, the amount of a Corporation's Shareholders' Equity that resulted from the retention of earnings in the corporation.

**Earned Income (Child Care Expenses)** For purposes of determining the deductible amount of Child Care Expenses, Earned Income is defined as Employment Income (gross), Business Income (not losses), and Income from scholarships, training allowances, and research grants.

**Earned Income (RRSP Deduction Limit)** The sum of Employment Income (without the RPP deduction), Business Income (losses), royalties (if the taxpayer is the author, inventor, or composer), taxable (deductible) support payments, supplementary unemployment benefits, income (loss) as an active partner, net rental income (loss), research grants (net of certain expenses), and CPP disability benefits.

**Earned Surplus** An archaic accounting description of what now is called Retained Earnings. However, the term continues to be found in the *Income Tax Act*.

**Ecological Gifts** Gifts of land certified by the Minister of the Environment to be ecologically sensitive land, the conservation and protection of which is important to the preservation of Canada's environmental heritage.

**Election** A choice that is available to a Taxpayer with respect to a particular tax outcome (e.g., a Taxpayer can elect to have the spousal Rollover provision not be applicable).

**Eligible Capital Expenditure** This term was used to refer to an amount expended to acquire an intangible asset that was not eligible for CCA or deduction. No longer available after 2016.

**Eligible Capital Property** An intangible asset that results from making an Eligible Capital Expenditure.

**Eligible Child** With respect to the deductibility of Child Care Expenses, a child of the Taxpayer, his Spouse, or a child who is dependent on the Taxpayer or his Spouse, and whose Income does not exceed the basic personal tax credit base amount. An Eligible Child must either be under 16 years of age at some time during the year, or dependent on the Taxpayer or his Spouse by reason of physical or mental infirmity.

**Eligible Dependant Tax Credit** A credit against Tax Payable that is available to a single Individual supporting a Dependant in a self-contained domestic establishment.

**Eligible Dividends** Dividends that have been designated by the payor as eligible for the enhanced gross up and tax credit procedure.

**Eligible Newsroom Employee** An individual who is employed by a Qualifying Canadian News Organization and who spends at least 75% of their time engaged in the production of news content, including researching, collecting information, verifying facts, photographing, writing, editing, designing, and otherwise preparing content.

**Eligible RDTOH** A balance containing refundable taxes that are available for dividend refunds on eligible dividends paid.

**Emigration** Leaving a country, usually in order to establish permanent residency in another country.

**Employee** An Individual who has an employment relationship with an entity that provides remuneration. Whether or not an Individual is working as an Employee or a Self-Employed Individual is dependent on factors such as control, ownership of tools, chance of profit or risk of loss, and the ability to subcontract or hire an assistant.

**Employee and Partner GST Rebate** A provision that allows employees and partners to recover the GST paid on their employment or partnership related expenses.

**Employer/ Employee Relationship** A written, verbal, or tacit agreement in which an Employee agrees to work on a full-time or part-time basis for an employer for a specified or indeterminate period of time, in return for Salary or wages. The employer has the right to decide where, when, and how the work will be done. In this type of relationship, a contract of services exists.

**Employment Income** The Salary, wages, and other remuneration, including gratuities, received by an Employee in the year (see Employer/Employee Relationship).

**Employment Insurance (EI)** A federal insurance plan designed to provide benefits to unemployed Individuals. In order to receive benefits, Employees must make contributions when they are employed.

**Employment Insurance Tax Credit** A credit against Tax Payable that is available to Employees making payments to the federal Employment Insurance plan.

**Estate** As the term is used in the *Income Tax Act*, the property of a deceased Individual.

**Estate Freeze** Procedures undertaken by an Individual in order to fix a tax value for all or part of the Individual's property, and to Transfer future growth in the value of this property to other Individuals.

**Estate Planning** Tax planning directed towards the distribution of an Individual's property at death.

**Excessive Eligible Dividend Designation (EEDD)** A balance, subject to Part III.1 tax, which reflects an inappropriate designation of an amount of dividends paid as an Eligible Dividend.

**Exchange Of Shares In A Reorganization (ITA 86)** A Rollover provision that allows one class of shares in a Corporation to be exchanged for a different class of shares, without tax consequences.

**Excluded Business** A business is an Excluded Business of a Specified Individual if that individual is actively engaged in its activities on a regular, continuous and substantial basis, either in the current taxation year or, alternatively, in any 5 prior taxation years.

**Excluded Shares** For shares to be classified as Excluded Shares, the Specified Individual must be aged 25 or older and must own, in terms of both fair market value and voting rights, at least 10 percent of the outstanding shares of the corporation. In addition, the corporation must not be a Professional Corporation, less than 90 percent of its business in the previous taxation year is from services, and less than 10 percent of its income in the previous year is from a related business.

**Executor** A Person appointed by an Individual in their Will to oversee the administration of the Estate on their death in accordance with the terms of that Will.

**Exempt Goods And Services** Goods and services that are not subject to the GST. Registrants who sell Exempt Goods And Services are not eligible for Input Tax Credits for GST paid. Examples include sales of used residential housing, most medical services, and most financial services.

**Exempt Surplus** A surplus account that tracks certain sources of income of a Foreign Affiliate.

## F

**Fairness Package** Replaced by the Taxpayer Relief Provisions.

**Family Trust** An Inter Vivos Trust, established by an Individual, with family members as Beneficiaries.

**Farm Property** Farm Property includes real estate and property that is used in farming activities, a share of a Corporation that is carrying on a farming business, or an interest in a Partnership that is carrying on a farming business.

**Federal Tax Abatement** A 10 percentage point reduction in the federal tax rate on Corporations, applicable to Income earned in a province.

**Final Tax Return** A term used to describe the tax return filed for an Individual for the year of their death.

**First Time Home Buyer's Tax Credit** A credit against Tax Payable equal to 15% of $5,000 of the cost of an individual's first Principal Residence.

**First Year Rules** See Half-Year Rules.

**Fiscal Period** A taxation year that does not exceed 53 weeks.

**Fishing Property** Fishing Property includes real estate and property that is used in fishing activities, a share of a Corporation that is carrying on a fishing business, or an interest in a Partnership that is carrying on a fishing business.

**Fixed Term Annuity** An Annuity that is paid for a specified number of periods.

**Flat Tax System** A tax on Income that is applied at the same rate to all Taxpayers, without regard to the level of their Income.

**Foreign Accrual Property Income (FAPI)** Income of a Controlled Foreign Affiliate from property (interest, Dividends, rents, royalties), Income from inactive businesses, Taxable Capital Gains from properties not used in an Active Business, and Income from an investment business, defined as a business the principal purpose of which is to earn Property Income.

**Foreign Affiliate** A non-resident Corporation in which a Canadian Taxpayer has an equity percentage of at least 1 percent. As well, the aggregate equity percentages of the Taxpayer and each Person related to the Taxpayer must be at least 10 percent.

**Foreign Taxes Paid Credit** A credit against Tax Payable based on taxes withheld by a foreign taxing authority on foreign source income.

**Former Business Property** Real property that is used in the operation of a business.

**Fringe Benefits** Non-cash benefits provided to Employees by an employer (e.g., contributions to an Employee's Registered Pension Plan).

**Full Rate Taxable Income** For purposes of calculating the General Rate Reduction, Taxable Income reduced by amounts which have received preferential treatment under some other provision (e.g., the Small Business Deduction).

**Fully Taxable Goods And Services** Goods and services that are taxable at the full 5% GST rate. Registrants who sell Fully Taxable Goods And Services are entitled to Input Tax Credits for GST paid. Examples include clothing, furniture, legal fees, hydro services, building materials, and restaurant meals.

## G

**GAAP** An acronym for "generally accepted accounting principles".

**GAAR** An acronym for "general anti-avoidance rule". This ITA 245 provision attempts, in a very generalized manner, to limit the ability of Taxpayers to avoid tax through certain types of transactions that have no bona fide purpose other than to obtain a tax benefit.

**General Partner** A Partner whose personal liability for the debts and obligations of the partnership are not limited.

**General Partnership** A Partnership, all of the members of which are General Partners.

**General Rate Income Pool (GRIP)** A notional account that tracks amounts of a CCPC's income that can be used for the payment of Eligible Dividends.

**General Rate Reduction** A percentage point deduction in the calculation of corporate Tax Payable that is designed to reduce the general corporate tax rate of 38 percent.

**Gift** A voluntary Transfer of goods or services without remuneration.

**Goods And Services Tax (GST)** A type of Transaction Tax that is assessed on the sale of goods and services. As it is assessed at all stages of the production/distribution chain, the tax that an enterprise must collect and pay to the government is offset by Input Tax Credits for the tax paid on the various inputs required to produce or distribute the goods and services.

**Goodwill** The excess, if any, of the total fair value of a business enterprise, over the sum of the fair values of its identifiable tangible and intangible assets.

**Graduated Rate Estate** A testamentary trust that is designated as a graduated rate estate. Its special features include the ability to use graduated tax rates and a non-calendar fiscal period for the 36 month period following an individual's death.

**Grind** A programmed reduction in some specified tax variable (e.g. the spousal tax credit is ground down by the spouse's Net Income For Tax Purposes).

**Gross Cost** For purposes of calculating Capital Cost in the determination of the M&P Deduction, this is the cost of Capital Assets, without the deduction of government grants or Investment Tax Credits.

**Group Of Persons** For purposes of determining Control of a Corporation, a Group Of Persons is any two or more Persons, each of whom owns shares in the Corporation.

**GST** An acronym for the "goods and services tax".

**GST Tax Credit** A Refundable Tax Credit that is available to all Resident Individuals aged 19 or older who file a T1 tax return. May be reduced or eliminated by a deduction of Income in excess of a threshold amount.

## H

**Half-Year Rules (a.k.a. First Year Rules)** A group of rules which require the subtraction of one-half of the year's net additions (additions, less the amount subtracted from the class because of disposals) from the Class, prior to calculating the CCA for the year. The great majority of post-2018 capital asset acquisitions are eligible for the Accelerated Investment Incentive (AccII) so the Half-Year Rules don't apply to those acquisitions.

**Harmonized Sales Tax (HST)** A combined federal/provincial sales tax that is generally assessed on the same basis as the federal Goods And Services Tax (GST). The combined rate varies across the provinces and is notionally a combination of the 5% GST plus a provincial sales tax ranging from 7% to 10%.

**Head Tax** A tax levied on the Individuals that are included in a specified classification.

**Hobby Farmer** A part-time farmer who does not have a Reasonable Expectation Of Profit.

**Home Accessibility Tax Credit** A tax credit that is available on expenditures made for renovations that will allow seniors and disabled individuals to gain access to, or be more mobile within a dwelling.

**Home Buyers' Plan (HBP)** A provision that allows Individuals to make a temporary, non-taxable withdrawal from their RRSP for purposes of acquiring a residence.

## I

**Identical Property Rules** Rules which require that, for a group of identical Capital Assets (e.g., Common Shares) acquired at different prices, the Adjusted Cost Base used to determine the gain or loss will be the average cost of the group. The rules are used when there is a partial Disposition of the group.

**Immigration** Entering a new country, usually for purposes of establishing permanent residence.

**Imputed Interest** Interest on outstanding debt calculated at a specified interest rate without regard to the actual interest rate being paid. This concept is used to determine the Taxable Benefit on loans to Employees and Shareholders.

**Inadequate Consideration** A term used to refer to a situation where a non-arm's length transfer of property has been made and the Proceeds Of Disposition are not equal to the fair market value.

**Income** A measure of either how much an entity has earned during a period or, alternatively, how much its net worth has increased during a period. As the term is used in accounting and tax, it is a rules-based calculation. In the case of accounting, the rules are referred to as generally accepted accounting principles (GAAP), while in tax the rules are found in the *Income Tax Act* and other sources.

**Income Attribution** The allocation of some types of Income, on assets that have been transferred to a Spouse or related minors, back to the Transferor for inclusion in the Transferor's Net Income For Tax Purposes.

**Income Interest (In A Trust)** A right of the Taxpayer as a Beneficiary under a Personal Trust to receive all or any part of the Income of the Trust.

**Income Splitting** A group of Tax Planning techniques designed to divide a given stream of Income among family members or other related parties. The value of these techniques is based on progressive tax rates which means that, if a stream of Income can be divided into a group of smaller streams, a larger portion of it will be taxed at lower rates, resulting in aggregate tax savings.

**Income Tax** A tax on the Income of certain defined entities.

**Income Tax Application Rules** A set of rules designed to deal with transitional problems associated with the introduction of Capital Gains taxation in 1972. While these rules were very important in the years immediately after 1971, they are of declining importance at this point in time.

**Income Tax Folios** A CRA publication providing their interpretation of various technical issues related to income taxes. These will gradually replace the CRA's Interpretation Bulletins.

**Income Tax Regulations** A set of rules concerning administration and enforcement of the *Income Tax Act*. One of the major issues covered here is Capital Cost Allowance rates and procedures.

**Income Tax Technical News** An irregularly published newsletter prepared by the Income Tax Rulings Directorate.

**Income Trust** A Trust that has sold its beneficial interest units to the public in order to raise funds to acquire a business operation. All cash flows from the business are distributed to the unit holders.

**Indexation** The process of adjusting tax brackets and some Tax Credits to reflect changes in the consumer price index.

**Individual** A single human being.

**Individual Pension Plan** A defined benefit pension plan established for one individual.

**Information Circulars** A group of separate publications that provides information regarding procedural matters that relate to both the *Income Tax Act* and the provisions of the Canada Pension Plan.

**Information Return** ITA 221(1)(d) gives the CRA the right to require any class of Taxpayer to file a return providing any class of information that it would like to have. A common example of an Information Return would be the T4 which employers are required to file in order to provide information on their Employees' earnings and withholdings.

**Input Tax Credit (ITC)** An amount, claimable by a registrant, for GST paid or payable on goods or services that were acquired or imported for consumption, use, or supply in the course of the Registrant's Commercial Activity.

**Instalment Threshold** An amount, currently $3,000 of net tax owing for Individuals or taxes payable for Corporations that is used to determine the need to make Instalment payments (i.e., Individuals are required to make Instalment payments if their Net Tax Owing in the current year and one of the two preceding years exceeds the Instalment Threshold of $3,000).

**Instalments** Payments made during a taxation year by both Individuals and Corporations. They are designed to accumulate to an amount sufficient to cover the tax liability for the year. Individuals and Small CCPCs make quarterly Instalments. Corporations that are not Small CCPCs are required to remit monthly.

**Integration** An approach to the taxation of Corporations that attempts to ensure that amounts of Income that are flowed through a Corporation to its Individual shareholders, are subject to the same amount of tax as would be the case if the Individuals had received the Income directly from its source.

**Inter Vivos Transfer** A Transfer made by a living Individual, as opposed to a Transfer made subsequent to that Individual's death.

**Inter Vivos Trust** A Trust that is not a Testamentary Trust.

**Interest Income** An amount that represents compensation for the use of money, is calculated with reference to a principal sum, and that accrues on a continuous basis.

**International Tax Treaty (a.k.a., International Tax Convention)** A bilateral agreement between two countries which establishes rules for dealing with cross-jurisdictional tax issues.

**International Taxation** Income and other types of taxation related to transactions and events that take place in multiple jurisdictions.

**Interpretation Bulletins** A group of over 500 individual publications which provides the CRA's interpretation of the various laws that they administer. Gradually being replaced by Income Tax Folios.

**In-The-Money** A term that is used to describe stock options in situations where the fair market value of the stock exceeds the option price.

**Inventory** Property, the cost or value of which is relevant in computing a taxpayer's income from a business for a taxation year. The property is being held for resale, as opposed to being held to produce income.

**Investment Tax Credit** A credit against Tax Payable, calculated as a percentage of some specified type of expenditure made by the Taxpayer.

**Involuntary Disposition** A Disposition of a capital property resulting from theft, destruction through natural causes, or expropriation by a statutory authority.

## J

**Joint Spousal Or Common-Law Partner Trust** An Inter Vivos Trust established by an Individual aged 65 years or more, subject to the conditions that the Individual and his/her Spouse or Common-Law Partner must be entitled to all of the Trust's Income during their lifetimes, and the Individual and his Spouse or Common-Law Partner must be the only Individuals who can access the capital of the Trust during his/her lifetime.

**Joint Tenancy** A holding of property, either real or personal, by two or more Persons with each sharing the undivided interest that cannot be sold without the consent of all joint tenants.

**Joint Venture** An arrangement in which two or more Persons work together in a limited and defined business undertaking, which does not constitute a Partnership, a Trust, or a Corporation, the expenses and revenues of which will be distributed in mutually agreed portions.

## L

**Labour Sponsored Funds Tax Credit** A credit against Tax Payable that is available to Individuals making investments in prescribed labour sponsored venture capital corporations.

**Legal Stated Capital** An amount that is specified in corporate enabling legislation. In general, it is equal to the amount of consideration received for the issuance of shares.

**Life Annuity** An Annuity that continues until the death of the Annuitant.

**Lifelong Learning Plan (LLP)** A provision that allows Individuals to make temporary, non-taxable withdrawals from their RRSP when they are enrolled in a qualifying education program at a qualifying educational institution.

**Lifetime Capital Gains Deduction** A deduction in the calculation of the Taxable Income of an Individual. It permits the deduction of a cumulative lifetime amount of Capital Gains resulting from the Disposition of Qualified Small Business Corporation shares or Qualified Farm or Fishing Property.

**Limited Liability** A reference to the fact that the liability of investors in equity shares of a Corporation is limited to the amount of their invested capital.

**Limited Liability Partnerships** A Partnership, all of the members of which are legislatively specified professionals. The members of such Partnerships are relieved of any personal liability arising from the wrongful or negligent action of their professional Partners, as well as Employees, agents, or representatives of the Partnership who conduct partnership business.

**Limited Partner** As defined in most provincial legislation, a Partner whose liabilities for partnership debts is limited to the amount of his contribution to the Partnership, and who is not permitted to participate in the management of the Partnership.

**Limited Partnership** A Partnership composed of at least one General Partner and at least one Limited Partner. To be considered a Limited Partnership, the Partnership has to be registered as such under the appropriate provincial registry.

**Limited Partnership Loss** The excess of losses allocated to a Limited Partner (other than farming or capital losses), over his At-Risk Amount.

**Liquidating Dividend** A Dividend that represents a return of invested capital, as opposed to a distribution from earnings.

**Listed Personal Property** A defined subset of Personal Use Property. The included items are works of art, jewelry, rare books, stamps, and coins.

**Loss Carry Back** The application of a loss incurred in the current taxation year against the Income reported in a previous taxation year, resulting in a refund of taxes paid in that previous year.

**Loss Carry Forward** The application of a loss incurred in the current taxation year against Income reported in a subsequent taxation year, resulting in a reduction of Tax Payable in that subsequent year.

**Low Rate Income Pool (LRIP)** A notional account that tracks amounts of a non-CCPC's income that cannot be used for the payment of Eligible Dividends.

**Lump-Sum Payments** Retroactive payments for Spousal or Child Support, pension benefits, EI benefits, and Employment Income (including payments for termination), that relate to prior years. Qualifying amounts of such payments are eligible for an alternative Tax Payable calculation.

## M

**M&P** An acronym for "manufacturing and processing" usually used in connection with the calculation of the Manufacturing And Processing Profits Deduction.

**M&P Capital** 100/85 of the Cost Of Capital related to Qualified Activities for M&P.

**M&P Labour** 100/75 of the Cost Of Labour related to Qualified Activities for M&P.

**M&P Profits** A concept of Income based on M&P Capital and M&P Labour, applied in a formula contained in ITR 5200.

**Manufacturing And Processing Profits Deduction (M&P Deduction)** A deduction in the calculation of corporate Tax Payable. It is equal to the General Rate Reduction rate applied to M&P Profits.

**Median Rule** A rule applicable to Capital Assets acquired before 1972. For purposes of calculating Capital Gains on Dispositions of these assets, the Adjusted Cost Base is equal to the median of the cost of the asset, the Valuation Day value of the asset, and the Proceeds Of Disposition.

**Medical Expense Tax Credit** A credit against Tax Payable that is available to Individuals with qualifying medical expenses.

**Merger** A combination of two or more business enterprises. While widely used in the *Income Tax Act*, this term does not have a formal definition in that legislation.

**Money Purchase Limit** An amount, specified in tax legislation that represents the maximum amount of Employee and employer contributions that can be added, for the benefit of a given Employee, to an RPP in the specified taxation year.

**Money Purchase Plan (a.k.a., Defined Contribution Plan)** A retirement savings plan in which the plan sponsor (employer or Individual) makes known or determinable contributions. The retirement benefit is based on the accumulated contributions and earnings on investments within the plan.

**Moving Expenses** Costs, as described in ITA 62(3), that can be deducted when an Individual is moving; to a new work location, to commence full-time attendance at a post-secondary institution, to a new work location after ceasing to be a full-time student at a post-secondary institution, or to a new location to take up employment, if unemployed prior to the move.

**MUSH** An acronym for "municipalities, universities, schools, and hospitals". It is used in GST work to refer to the special rules applicable to these organizations.

**Mutual Fund** A taxable entity, either a Trust or a Corporation, that manages a portfolio of investments on behalf of its unitholders or shareholders.

## N

**"Negative" Adjusted Cost Base** A term used to refer to situations where negative adjustments to the Adjusted Cost Base of a Capital Asset exceed its original cost plus positive adjustments. While, in general, such amounts must be taken into Income, an exception is made for Partnership Interests, for which such amounts can be carried forward.

**Net Assets** Assets minus the liabilities of a business enterprise.

**Net Business Income** As used in this text, the net of inclusions less deductions, related to Business Income, with all amounts determined as per Division B, Subdivision b, of the *Income Tax Act*.

**Net Capital Loss** The excess of Allowable Capital Losses over Taxable Capital Gains for the current year.

**Net Income** As used in this text, the net of revenues plus gains, less expenses plus losses, with all amounts determined through the application of GAAP.

**Net Income For Tax Purposes** The sum of Employment Income, Business and Property Income, net Taxable Capital Gains, other sources of income, and other deductions from income, determined using income tax procedures and concepts. These amounts are combined as per the rules in ITA 3. This amount is also referred to as Division B Income or simply Net Income. However, we tend to use the full Net Income For Tax Purposes title in order to avoid confusion with Net Income as determined by accounting rules.

**Net Property Income** As used in this text, the net of inclusions less deductions, related to Property Income, with all amounts determined as per Division B, Subdivision b, of the *Income Tax Act*.

**Net Tax Owing** A term, applicable to Taxpayers who are Individuals, used to describe the sum of federal and provincial taxes owing for the year, less amounts withheld for the year.

**NETFILE** An electronic filing system that requires the use of an approved software program. An Individual uses the Internet to transmit their return directly to the CRA, without the use of a third party.

**New Housing GST Rebate** A provision that allows an individual to recover a portion of the GST paid on the acquisition of a new residence.

**Non-Arm's Length** ITA 251(1) indicates that Related Persons (see definition) do not deal with each other at arm's length. Also, a taxpayer and a personal trust do not deal with each other at arm's length. In other cases, it is a question of fact as to whether an arm's length relation exists.

**Non-Capital Loss** The sum of employment losses (for Individuals), business losses, property losses, Net Capital Losses deducted, and deductible Dividends received (for Corporations), less Income as calculated under ITA 3(c).

**Non-Depreciable Capital Property** Capital property, such as land or holdings of securities, that is not subject to depreciation or amortization.

**Non-Discretionary Trust** A Trust for which the Trust documents have specified the amounts of Income and capital to be allocated to each Beneficiary.

**Non-Eligible Dividends** Dividends that have not been designated by the payor as eligible for the enhanced gross up and tax credit procedure.

**Non-Eligible RDTOH** A balance containing refundable taxes that are available for dividend refunds on non-eligible dividends paid.

**Non-Portfolio Property** (Definition relevant only to SIFT entities) These properties are made up of (1) securities of a subject entity (corporation, trust, or partnership) where the securities held have a value that is greater than 10% of the equity value of the subject entity or, the securities held, along with securities of entities affiliated with the subject entity, have a fair market value that is greater than 50% of the equity value of the trust or partnership, (2) real estate and resource properties where such properties total more than 50% of the equity value of the trust or partnership, and (3) property used in the course of carrying on a business in Canada.

**Non-Refundable Tax Credit** A Tax Credit that can only be used against the Tax Payable of an Individual. It will not be "refunded" to Individuals without sufficient Tax Payable to make use of it.

**Non-Resident** A Corporation, Trust, or any other type of entity that exists, was formed or organized, or was last continued under the laws of a country, or a political subdivision of a country, other than Canada.

**Non-Share Consideration** Consideration received by a Taxpayer from a Corporation that is in the form of assets other than shares of the Corporation.

**Northern Residents Deductions** Deductions from the Taxable Income of residents of prescribed areas in northern Canada, designed to compensate them for the higher costs of living in these regions.

**Notice Of Assessment** A form that the CRA sends to all Taxpayers after they process their returns. It tells Taxpayers whether there were any changes made to the returns and, if so, what they are. It also informs Taxpayers of the amount of their additional tax payable or their refund.

**Notice Of Objection** A statement made to the CRA which provides a statement of facts and reasons, detailing why a Taxpayer or GST Registrant disagrees with an Assessment. The notice can be filed using Form T400A or by simply writing a letter to the CRA.

## O

**OAS Clawback** A taxing back, or reduction, in the payment of Old Age Security benefits. The federal government taxes back, or retains, an amount of these payments equal to 15% of the Individual's Income in excess of an indexed threshold amount.

**Old Age Security Benefits (OAS)** A monthly payment to Residents of Canada who are 65 years of age or older (see also OAS Clawback).

**Operating Cost Benefit** A Taxable Benefit assessed to Employees whose employers pay the operating costs of an automobile provided to the Employee. It is designed to reflect, on a notional basis, the value of these operating costs.

**Ordering Rule** Rules which establish the sequence or order in which a group of deductions must be made.

**Over Integration** An application of integration procedures (e.g., gross up and dividend tax credit rates) that results in a situation where income flowed through a corporation is subject to less tax payable than the same income received directly by an individual.

## P

**Paid Up Capital (PUC)** A balance that is, in general, equal to Legal Stated Capital as determined under the legislation governing the particular Corporation. The equivalent of Contributed Capital in accounting usage.

**Parent Company** A Corporation that Controls one or more Subsidiaries.

**Part IV Tax** A refundable tax, applicable to Private Corporations and Subject Corporations, and assessed on Portfolio Dividends received as well as some Dividends received from Connected Corporations.

**Part Year Resident** An Individual who either enters Canada during the year and becomes a Resident or, alternatively, an Individual who departs from Canada during the year and gives up their Resident status. In either case, the Individual will be taxed on their worldwide income for the part of the year that they were considered to be a Resident of Canada.

**Partner** A Person who is a member of a Partnership.

**Partner and Employee GST Rebate** A provision that allows partners and employees to recover the GST paid on their partnership or employment related expenses.

**Partnership** Two or more Persons who combine forces to carry on a business together for the purpose of making a profit by contributing their skills, knowledge, labour, experience, time, or capital.

**Partnership Interest** A Non-Depreciable Capital Property that reflects the Partner's original cost, adjusted for earnings, withdrawals, and other factors.

**Past Service Cost** The cost of starting a pension plan and extending the benefits/contributions to years of service prior to the inception of the plan or, alternatively, amending the benefit/contribution formula of an existing plan and extending the change retroactively to years of service prior to the amendment.

**Past Service Pension Adjustment (PSPA)** An adjustment to reflect the past service benefits/contributions allocated to an Employee for years of service prior to the current year.

**Penalties** Amounts taxpayers or GST registrants must pay if they fail to file returns or remit or pay amounts owing on time, or if they try to evade paying or remitting tax by not filing returns. Penalties must also be paid by people who knowingly, or under circumstances amounting to gross negligence, participate in or make false statements or omissions in their returns, and by those who do not provide the information required on a prescribed form.

**Pension Adjustment (PA)** An adjustment reported by employers which reflects, for an individual Employee, the Employee and employer contributions to RPPs and DPSPs for the previous year (in the case of Defined Benefit RPPs, benefits are converted to an equivalent amount of contributions).

**Pension Adjustment Reversal (PAR)** An adjustment for amounts of benefits/contributions that were included in previously issued Pension Adjustments, but have subsequently been lost to the Individual (e.g., benefits earned during a pre-vesting period that did not ultimately vest).

**Pension Income Tax Credit** A credit against Tax Payable that is available to Individuals with qualifying pension income.

**Periodic Child Care Expense Amount** A weekly limit on deductible child care costs, defined as 1/40 of the Annual Child Care Expense Amount.

**Permanent Establishment** A fixed place of business of a Corporation, including an office, a branch, a mine, an oil well, a farm, a timberland, a factory, a workshop, or a warehouse.

**Person** A term used in the *Income Tax Act* to refer to taxable entities. For income tax purposes, the three taxable entities are Individuals, Corporations, and Trusts.

**Personal Services Business** A Corporation that provides the services of a Specified Shareholder [ITA 248(1)] who could reasonably be regarded as an officer or Employee of the business, and that does not have five or more other full time Employees throughout the year.

**Personal Tax Credits** A group of credits against Tax Payable that are specified in ITA 118(1). They include credits for Individuals, Spouses, Common-Law Partners and various Dependants, as well as credits for types of income such as pension or employment.

**Personal Trust** A Testamentary or Inter Vivos Trust in which no beneficial interest was acquired for consideration paid to the Trust or to a Person who contributed property to the Trust.

**Personal Use Property** Any property that is owned by the Taxpayer and used primarily for his enjoyment, or for the enjoyment of one or more Individuals Related to the Taxpayer.

**Phased Retirement** A term used to refer to situations where an individual over 55 years of age continues to earn partial pension benefits, despite the fact that he or she has started to receive pension benefits from that employer.

**Political Contributions Tax Credit** A credit against Tax Payable that is available to Individuals who have made contributions to a registered federal political party or to a candidate at the time of a federal election.

**Pooled Registered Pension Plan** A registered pension plan established by a financial institution. Eligible registrants would be employees and other individuals who are not members of a registered pension plan established by an employer.

**Portfolio Dividend** A Dividend received from a Corporation to which the recipient is not connected (see Connected Corporation). Usually applicable if 10% or less of the voting shares are owned.

**Post-1971 Undistributed Surplus** Amounts earned by a Corporation after 1971 and retained in the Corporation.

**Pre-1972 Capital Surplus On Hand** Capital Gains accrued before 1972 that have been realized as the result of a Disposition after 1971, less Capital Losses that accrued before 1972 that have been realized as the result of a Disposition after 1971.

**Pre-1972 Undistributed Surplus** Amounts earned by a Corporation prior to 1972 and retained in the Corporation.

**Preferred Beneficiary** An Individual who is a Beneficiary of a Trust and who is either eligible for the Disability Tax Credit or, alternatively, 18 years of age or older and can be claimed by another Individual for purposes of the dependant tax credit for Individuals who are dependant because of mental or physical infirmity.

**Preferred Beneficiary Election** An Election which allows trust income to be allocated to a Preferred Beneficiary without being distributed to that Beneficiary by the Trust.

**Preferred Shares** Shares that do not have all the rights which are provided for under the relevant corporate enabling legislation. While there are many variations in the rights that such securities have, Preferred Shares would normally have a fixed or determinable Dividend and would not have voting rights.

**Prescribed Debt Obligations** A group of non-standard debt contracts that are defined in ITR 7001 (e.g., a debt contract with no interest stipulated as payable).

**Prescribed Proxy Amount** An alternative basis for calculating Scientific Research And Experimental Development overhead costs. Instead of calculating actual overhead costs, a Prescribed Proxy Amount, based on 65% of the Salaries and wages of Employees involved in Scientific Research And Experimental Development activities, can be used.

**Prescribed Rate** An interest rate which, as described in ITR 4301, changes quarterly and is based on the average interest rate paid on 90 day Treasury Bills during the first month of the preceding quarter. The basic rate is used for a variety of purposes (e.g., calculation of the Taxable Benefits on interest free loans to Employees). The basic rate, plus 2 percentage points, is used to calculate interest owing from the government to Taxpayers (e.g., interest on late payment of a tax refund). The basic rate, plus 4 percentage points, is used to calculate interest owed by Taxpayers to the government (e.g., interest on late Instalments).

**Prescribed Stock Exchange** This term has been replaced by “designated stock exchange”.

**Principal Residence** Any accommodation owned by the Taxpayer that was ordinarily inhabited in the year by the Taxpayer, his Spouse, a former Spouse, or a dependent child, and is designated by the Taxpayer as a Principal Residence.

**Private Corporation** A Corporation that is a resident of Canada, but is not a Public Corporation.

**Proceeds Of Disposition** Amounts received as the result of a Disposition. Usually related to a capital property Disposition.

**Professional Corporation** ITA 248(1) defines a Professional Corporation as a Corporation that carries on the professional practice of an accountant, dentist, lawyer, medical doctor, veterinarian, or chiropractor. Corporations carrying on the practice of other professionals, for example architects, do not fall within this definition.

**Profit Sharing Plan** A trusteed plan to which employers can make deductible contributions, the amount of which is related to the profits of the enterprise. Both the contributions and the earnings resulting from their investment are taxed in the hands of the Employees as they occur. Payments from the plan are received by the Employees on a tax free basis.

**Progressive Tax System** A tax system that applies higher effective rates for Individuals with higher Incomes and lower effective rates for Individuals with lower Incomes (e.g., personal income taxes).

**Property Income** Income that is earned through the passive ownership of property. It would include rents, interest, Dividends, and some royalties (i.e., royalties paid on assets that have been purchased). While usage is not always consistent, this term usually refers to a net amount (i.e., inclusions less deductions, or revenues less expenses).

**Property Tax** A tax on the ownership of some particular set of goods.

**Public Corporation** A Corporation that has at least one class of its shares listed on a designated stock exchange in Canada.

**PUC** An acronym for "paid up capital".

**Purification Of A Small Business Corporation** A process of disposing of corporate assets that are not being used to produce Active Business Income, so that the Corporation meets the 90% of assets test required to qualify as a Small Business Corporation.

## Q

**Qualified Activities** Types of activity, as defined in ITR 5202, that are considered to be manufacturing and processing activities.

**Qualified Farm Property** A Qualified Farm Property is a Farm Property that, prior to its Disposition was owned by the Taxpayer, his Spouse, or his Common-Law Partner, or their children for a period of 24 months or more.

**Qualified Fishing Property** A Qualified Fishing Property is a Fishing Property that, prior to its Disposition was owned by the Taxpayer, his Spouse, or his Common-Law Partner, or their children for a period of 24 months or more.

**Qualified Property** Certain specified types of property that, when acquired, qualify the Taxpayer for an Investment Tax Credit.

**Qualified Scientific Research And Experimental Development Expenditures** Scientific Research And Experimental Development expenditures that qualify the Taxpayer for Investment Tax Credits.

**Qualified Small Business Corporation** A Small Business Corporation that, at the time of its Disposition, has been owned by no one other than the Taxpayer or a related party during the preceding 24 months, and during that 24 month period, more than 50% of the fair market value of its assets were used in an Active Business carried on primarily in Canada.

**Qualifying Canadian Journalism Organization** A Canadian organization that is primarily involved in the production of written news content.

**Qualifying Corporation** A CCPC throughout the year with Taxable Income in the immediately preceding year of no more than $500,000 and previous year Taxable Capital Employed In Canada of $10 million or less, thereby qualifying for the additional 15% tax credit on the first $3,000,000 of Qualified Scientific Research And Development Expenditures.

**Qualifying Spousal Or Common-Law Partner Trust** A Spousal Or Common-Law Partner Trust that qualifies for the Rollover of assets into the Trust under ITA 73(1.01) for Inter Vivos Trusts or ITA 70(6) for Testamentary Trusts.

**Qualitative Characteristics** This term is used in our text to refer to non-quantitative characteristics of a tax system that are considered to be desirable (e.g., fairness).

**Quick Method** A method of determining GST amounts payable or receivable that is available to Registrants with annual GST taxable sales, including those of associated businesses, of $400,000 or less. Specified percentages are applied to the GST inclusive sales figures to determine the GST payable or the refund. Accounting for Input Tax Credits on non-capital expenditures is not required. Input Tax Credits on capital expenditures are tracked separately.

## R

**RDTOH** An acronym for "refundable dividend tax on hand".

**Real Property** Land and all appurtenances to it, including buildings, crops, and mineral rights, a.k.a., real estate.

**Reasonable Expectation Of Profit (REOP)** A test that involves the determination of whether a business or an investment is likely to have a profit. The CRA has tried to use this test to limit the ability of Taxpayers to deduct losses resulting from businesses and investments that fail their REOP test.

**Reassessment** A revision of an original Assessment (see Assessment and Notice Of Assessment).

**Recapture Of CCA** An inclusion in Business and Property Income that arises when deductions from a CCA Class, engendered by disposals, leave a negative balance in that Class at the end of the taxation year.

**Redemption Of Shares** A transaction in which a Corporation purchases some of its own outstanding shares, either in the open market, or through a direct purchase from shareholders.

**Refundable Dividend Tax On Hand (RDTOH)** A balance made up of refundable taxes paid, less refunds received as the result of paying Dividends. There are two separate RDTOH balances, Eligible RDTOH and Non-Eligible RDTOH.

**Refundable Investment Tax Credit** An Investment Tax Credit that will be paid to the Taxpayer, even if the amount resulting from the Investment Tax Credit exceeds the Taxpayer's Tax Payable.

**Refundable Journalism Labour Tax Credit** A refundable credit for salaries and wages paid to Eligible Newsroom Employees of a Qualifying Canadian Journalism Organization.

**Refundable Medical Expense Supplement** A refundable credit against Tax Payable that increases the amount available to certain low income individuals for their eligible medical expenses.

**Refundable Part I Tax** The portion of Part I tax that is applicable to a notional amount of Aggregate Investment Income earned by a CCPC.

**Refundable Part XI.3 Tax** A 50% tax that is assessed on contributions to a Retirement Compensation Arrangement and on the earnings of amounts invested in the plan. It is fully refundable when amounts are distributed from the arrangement and taxed in the hands of the recipient Employees.

**Refundable Tax Credit** An amount, based on a Tax Credit calculation, that will be paid to an Individual even if the amount resulting from the Tax Credit calculation exceeds the Individual's Tax Payable.

**Registered Disability Savings Plan (RDSP)** A trusteed arrangement that allows Individuals to make non-deductible contributions that will be invested on a tax-free basis, with the accumulated funds being used to make distributions to an individual who qualifies for the disability tax credit.

**Registered Education Savings Plan (RESP)** A trusteed arrangement that allows Individuals to make non-deductible contributions that will be invested on a tax-free basis, with the accumulated funds being used to provide for the post-secondary education of a child.

**Registered Pension Plan (RPP)** A retirement savings plan sponsored by an employer, to which the employer will make contributions which are not taxable to the Employee, and the Employee may make contributions which are deductible. Earnings accumulate tax free within the plan. Withdrawals from the plan are subject to tax.

**Registered Retirement Income Fund (RRIF)** A trusteed plan to which a Resident Individual can transfer balances from retirement savings plans on a tax free basis. Earnings accumulate tax free within the plan. Withdrawals from the plan are subject to tax. Unlike RRSPs, a minimum withdrawal is required each year.

**Registered Retirement Savings Plan (RRSP)** A trusteed plan to which a Resident Individual can make deductible contributions. Earnings accumulate tax free within the plan. Withdrawals from the plan are generally subject to tax.

**Registrant** An entity who is registered to collect and remit the GST.

**Regressive Tax System** A tax system that applies higher effective rates for Individuals with lower Incomes and lower effective rates for Individuals with higher Incomes (e.g., most sales taxes).

**Related Persons** ITA 251(2)(a) indicates that two Individuals are related if they are connected by blood relationship, marriage or common-law partnership, or adoption. ITA 251(2)(b) describes various situations in which a Corporation would be related to other Persons (e.g., a Corporation is related to the Person who Controls it). ITA 251(2)(c) describes various situations in which two Corporations would be related to each other (e.g., the two Corporations are controlled by the same Person).

**Reorganization Of Capital (ITA 86)** A Rollover provision that allows one class of shares in a Corporation to be exchanged for a different class of shares, without tax consequences.

**Replacement Property Rules** A set of rules which provide for the deferral of both Recapture and Capital Gains on Involuntary Dispositions and some voluntary Dispositions of capital property. Deferral is conditional on replacing the property within a specified period after the Proceeds Of Disposition are received.

**Reserve** A deduction in the calculation of net Business Income or net Taxable Capital Gains.

**Resident** A Person who is located in a place. This is the basis on which Canadian income taxes are assessed. That is, Canadian Resident Persons are liable for the payment of Canadian income tax, without regard to their citizenship or the source of their Income. While not defined in the *Income Tax Act*, IT Folio S5-F1-C1 provides guidance on the determination of residency for Individuals and IT-447 provides similar guidance for Trusts.

**Residential Ties** Factors that will be considered in determining whether or not an Individual is a Resident of Canada. While there are many such ties, ITF S5-F1-C1 indicates that the most commonly used would be the maintenance of a dwelling in Canada, having one's Spouse or Common-Law Partner remain in Canada, and having one's Dependants remain in Canada.

**Restricted Farm Loss** A farmer whose chief source of Income is not farming or a combination of farming and some other source of Income, but who has a reasonable expectation of long-run profitability, can only deduct losses to the extent of the first $2,500, plus one-half of the next $12,500. Losses in excess of this deductible amount are referred to as Restricted Farm Losses.

**Restrictive Covenant** An agreement entered into, an undertaking made, or a waiver of an advantage or right by the Taxpayer. This would include, but would not be limited to, non-competition agreements.

**Retained Earnings (a.k.a. Earned Capital)** In accounting usage, the amount of a Corporation's Shareholders' Equity that resulted from the retention of earnings in the Corporation.

**Retirement Compensation Arrangement** An unregistered plan to which employers make deductible contributions to provide Employees with benefits subsequent to their retirement. Both contributions and earnings are subject to a Refundable Part XI.3 Tax.

**Retiring Allowance** Amounts received at retirement as recognition for long service, or as the result of loss of employment.

**Reversionary Trust** A trust agreement under which the property held by the Trustee can revert to the Settlor.

**Rights Or Things** With respect to a deceased Taxpayer, these are amounts that are due, but have not been received (e.g., wages to the end of a pay period prior to death, but not yet received).

**Rollover** As this term is used in tax work, it refers to a tax free Transfer of assets under circumstances that, in the absence of a special Rollover provision, would be considered a taxable Transfer.

**RRSP Deduction Limit** The amount that is the sum of the Unused RRSP Deduction Room at the end of the preceding year, plus the amount by which the lesser of the RRSP Dollar Limit and 18% of Earned Income for the preceding year exceeds the Pension Adjustment for the preceding year. This sum is adjusted for any Past Service Pension Adjustment or Pension Adjustment Reversal. In simplified terms, it represents the maximum amount of contributions that have been made to an RRSP that can be deducted for a year.

**RRSP Deduction Room** The excess of the RRSP Deduction Limit, over the amount of RRSP contributions that have been deducted.

**RRSP Dollar Limit** Generally, the Money Purchase Limit for the preceding year.

## S

**Safe Income** For purposes of applying ITA 55(2) to Capital Gains Stripping, Safe Income is made up of amounts earned by a Corporation after 1971, or if the investment shares in that Corporation were acquired after that date, amounts earned after the acquisition.

**Salary** The amount an employer pays an Employee for work done. An employer records this type of Employment Income on a T4. A common component of Employment Income.

**Salary Deferral Arrangement** An arrangement, whether funded or not, under which an Individual who has the right to receive compensation postpones the receipt of that compensation, and it is reasonable to assume that one of the main purposes of this postponement was to defer the payment of taxes.

**Scientific Research And Experimental Development (SR&ED)** Activities related to basic or applied research, and for the development of new products and processes.

**Self-Employed Individual** An Individual who has a business relationship with an entity. Whether or not an Individual is working as an Employee or a Self-Employed Individual is dependent on factors such as control, ownership of tools, chance of profit or risk of loss, and the ability to subcontract or hire an assistant.

**Separate Class Rules** Rules that require certain types of assets that would, in the absence of these special rules, be included in a single Class, be allocated to a separate balance for that Class (e.g., each rental property with a cost greater than $50,000 must be placed in a different Class 1).

**Settlor** The Individual who creates a Trust by contributing property to be managed and administered by a Trustee for the Beneficiaries.

**Share For Share Exchange (ITA 85.1)** A Rollover provision that allows one Corporation to acquire shares in another Corporation by issuing its own shares, without tax consequences to either of the Corporations or their shareholders.

**Shared Use Capital Equipment** Capital Assets that are used more than 50 percent, but less than 90 percent, in Scientific Research And Experimental Development activities.

**Shareholders' Equity** The residual interest of the shareholders of a Corporation in the Net Assets of the Corporation.

**Short Fiscal Year** A taxation year that is less than 12 months in duration. Can occur in the first and last years of operation, as well as certain other situations.

**SIFT Partnership** To be a Specified Investment Flow-Through (SIFT) partnership, (1) the partnership must be a Canadian resident partnership; (2) investments in the partnership must be publicly traded; and (3) the partnership must hold one or more non-portfolio properties.

**SIFT Trust** To be a Specified Investment Flow-Through (SIFT) trust, (1) the trust must be resident in Canada; (2) investments in the trust must be publicly traded; and (3) the trust must hold one or more non-portfolio properties.

**Simplified ITC Accounting** A method of determining Input Tax Credits available to small businesses, charities, not-for-profit organizations, and certain public service bodies. The organization must have annual GST taxable sales, including those of associated businesses, of $1,000,000 or less and annual GST taxable purchases of $4,000,000 or less. Input Tax Credits are determined by multiplying all GST inclusive purchases, except real property purchases, by 5/105 rather than using the actual GST paid. Input Tax Credits on real property are tracked separately.

**Small Business Corporation** A Corporation that is a Canadian Controlled Private Corporation that uses all or substantially all (90% or more) of the fair market value of its assets in an Active Business that is carried on primarily (more than 50 percent) in Canada.

**Small Business Deduction** A deduction in the calculation of corporate Tax Payable equal to 17.5 percentage points on the first $500,000 of Active Business Income earned by a CCPC.

**Small CCPC** A Canadian Controlled Private Corporation that has (1) Taxable Income in the current or previous year of $500,000 or less, (2) has Taxable Capital Employed In Canada in the current or previous year of $10 million or less, (3) is able to claim some amount of the Small Business Deduction in the current or previous year, and (4) has a perfect payment compliance record for the last 12 months.

**Small Suppliers Exemption** An exemption from the requirement to register for the collection and remittance of GST for those entities with less than $30,000 in taxable supplies.

**Social Benefits Repayment (a.k.a., Clawback)** An income tested taxing back, or reduction, in the payment of Old Age Security Benefits and Employment Insurance Benefits.

**Soft Costs** Costs, such as interest and property tax, on land and buildings that are incurred prior to the capital asset being used for business or income producing purposes.

**Sojourner** An Individual who is deemed under ITA 250 to be a Canadian Resident for the full taxation year as the result of having sojourned (i.e., been temporarily present) in Canada for 183 days or more.

**Source Deductions** Amounts that are withheld by an employer from the Income of Employees. The withholdings for income taxes, Canada Pension Plan contributions, and Employment Insurance premiums must be remitted to the government.

**Source Individual** A Source Individual (with respect to a Specified Individual) is a resident of Canada who is related to the Specified Individual.

**Specified Class [ITA 256(1.1)]** A class of shares that has certain specified terms and conditions, including a fixed or determinable Dividend and an absence of voting rights. Would generally be referred to as Preferred Shares.

**Specified Employee** An Employee who owns 10% or more of the shares of the Corporation, or who does not deal at arm's length with the Corporation.

**Specified Individual** Under the Tax On Split Income (TOSI) legislation a Specified Individual is an individual who is a resident of Canada and, if the individual is under 18, has a parent who is also a resident of Canada.

**Specified Investment Business** A Corporation that does not have five or more full time Employees throughout the year, whose principal purpose is to derive Income from property.

**Specified Non-Resident Shareholder** A specified shareholder who is a non-resident Person or non-resident investment company.

**Specified Shareholder [(ITA 18(5)]** A shareholder of a Corporation who owns, either alone or together with other related persons, more than 25% of the voting shares of a corporation or, alternatively, shares that have more than 25% of the market value of all of the corporation's shares.

**Specified Shareholder [ITA 248(1)]** A shareholder of a Corporation who owns, directly or indirectly, at any time in the year, not less than 10% of the issued shares of any class of the capital stock of the Corporation, or of any other Corporation that is related to the Corporation.

**Split Income** Certain types of Income received by a Specified Individual from non-arm's length sources that will be taxed at the maximum federal rate.

**Spousal Or Common-Law Partner Trust** An Inter Vivos or Testamentary Trust that has an individual's Spouse or Common-Law Partner as a Beneficiary (see also Qualifying Spousal Or Common-Law Partner Trust).

**Spousal RRSP** An RRSP to which the Spouse or Common-Law Partner of the Annuitant (i.e., Beneficiary of the RRSP) has made contributions that the Spouse or Common-Law Partner can deduct in calculating Net Income For Tax Purposes.

**Spousal Support** A Support Amount that is for the benefit of a Spouse or Common-Law Partner, or a former Spouse or Common-Law Partner.

**Spousal Tax Credit** A credit against Tax Payable that is available to individuals who have a Spouse or Common-Law Partner.

**Spouse** An Individual to whom a Taxpayer is legally married.

**Standby Charge** A Taxable Benefit assessed to Employees who have been provided with an automobile by their employer. It is designed to reflect, on a notional basis, the value of having the car available on a standby basis for personal usage.

**Stock Dividend** A pro rata distribution of corporation shares to existing shareholders of the corporation.

**Stock Option** A contractual arrangement which gives the holder the right to purchase a specified number of shares for a specified period of time at a specified acquisition price.

**Stop Loss Rules** A group of rules which, under specified conditions, prevent the deduction of a loss.

**Straight-Line Method** A method of calculating CCA in which a specified or determinable rate is applied to the Capital Cost of acquired assets in order to determine the CCA for the period.

**Student Loan Interest Tax Credit** A credit against Tax Payable that is based on the amount of interest on a loan under the *Canada Student Loans Act*, or the *Canada Student Financial Assistance Act*.

**Subject Corporation** For purposes of the Part IV Tax, a Public Corporation that is controlled by, or for the benefit of, an Individual or a related group of Individuals. Also used in the determination of Dividend Stripping (ITA 84.1) and share sales to non-residents (ITA 212.1) to describe a Corporation, the shares of which have been sold.

**Subsidiary** An enterprise that is controlled by another enterprise (the Parent Company). The Parent Company has the right and ability to obtain future economic benefits from the resources of the Subsidiary and is exposed to the related risks.

**Superficial Loss (ITA 54)** A loss on the Disposition of property that is disallowed for tax purposes because the Taxpayer has acquired an identical property, either 30 days before the Disposition or, alternatively, 30 days after the Disposition.

**Supply** A broad range of transactions between Persons. To "make a supply of property or a service" means to provide it in any way, including sale, transfer, barter, exchange, licence, rental, lease, gift, or Disposition.

**Support Amount** Amounts paid as the result of the separation or divorce of two Individuals who were Spouses or Common-Law Partners. Can be divided into Spousal Support and Child Support.

**Surtax** An additional or extra tax on something already taxed.

**Syndicates** A group of Persons combined or making a joint effort to undertake some specific project or to carry out a specific transaction.

## T

**Target Benefit Plan** A hybrid pension plan that is based on defined contributions combined with a target or proposed benefit for retirees. However, unlike defined benefit plans, these plans also allow the benefit to be reduced if funding is not adequate to produce the target benefit.

**Tariffs** A tax imposed on the importation or exportation of certain goods or services.

**Tax Avoidance** The undertaking of transactions or arrangements with a view to avoiding or minimizing the payment of taxes. As the term is generally used, it refers to legitimate procedures that could also be described as Tax Planning.

**Tax Base** The income source, class of transaction, type of property, or other factor on which tax is assessed (e.g., sales tax is assessed on sales).

**Tax Court Of Canada** A court that hears appeals about income tax and GST/HST assessments. In addition, the Court has jurisdiction to hear appeals under the Canada Pension Plan Act, Employment Insurance Act, and several other Acts. The Tax Court maintains four offices (Vancouver, Ottawa, Toronto, and Montreal) and regularly conducts hearings in major centres across Canada.

**Tax Credit** A credit against Tax Payable.

**Tax Deferral** An important type of Tax Planning. The basic idea here is to find procedures that will put off the payment of taxes until a later taxation year. The value of these procedures reflects the time value of money. That is, there is a value associated with making a payment later, rather than sooner.

**Tax Evasion** This typically involves deliberately ignoring a specific part of the law or willfully refusing to comply with legislated reporting requirements. Tax evasion, unlike tax avoidance, has criminal consequences.

**Tax Expenditures** Foregone tax revenues due to special exemptions, rate reductions, rebates, and credits that reduce the amount of tax that would otherwise be payable. Often designed to encourage certain kinds of activities or to serve other objectives, such as providing assistance to lower-income Canadians.

**Tax Free Savings Accounts (TFSAs)** A trusteed arrangement that allows Individuals to make non-deductible contributions that will be invested in qualified assets. Earnings accumulate on a tax free basis within the plan and can be distributed to the Individual who established the plan on a tax free basis.

**Tax Haven** A foreign country used to avoid or reduce income taxes, especially by investors from another country.

**Tax Incidence** The Person who ultimately pays a tax, regardless of the legal basis of assessment (e.g., taxes paid by Corporations may be passed on to either Employees or customers).

**Tax Planning** The undertaking of legitimate transactions or arrangements with a view to avoiding or minimizing the payment of taxes. Some or all of such efforts could also be referred to as Tax Avoidance.

**Tax Shelter (ITA 237.1)** The acquisition of a property, in respect of which it is represented that the acquisition of the property, or the donation or contribution of the property under a gifting arrangement, would generate any combination of tax credits or deductions that in total would equal or exceed the cost of acquiring the property.

**Tax Shelter (Other Meanings)** An investment that shelters Income from other sources (e.g., Employment Income) by producing tax losses, or an investment with a positive cash flow that is sheltered by sufficient non-cash deductions (e.g., CCA) to produce a nil Taxable Income.

**Taxable Allowance** An allowance provided by an employer to an Employee that must be included in the Employee's Employment Income. The amount is included on the Employee's T4.

**Taxable Benefit** An amount of money, or the value of goods or services, that an employer pays or provides in addition to Salary.

**Taxable Canadian Corporation** A Canadian Corporation that is not exempt from Canadian income tax by way of a statutory provision.

**Taxable Canadian Property** A group of assets that are listed under the definition of Taxable Canadian Property in ITA 248(1). These assets are distinguished by the fact that gains on their Disposition are taxable without regard to the residence of the selling Taxpayer. For example, if a U.S. Resident sells Canadian real estate, Canadian income tax will be assessed on any gain resulting from the sale.

**Taxable Capital Employed In Canada** This amount is the GAAP-determined capital of the Corporation, less the allowance for investments in other Corporations, multiplied by the percentage of the Corporation's activity at Permanent Establishments in Canada as determined under ITR 402. It is used in a number of calculations, including the determination of a small CCPC and the calculation of the reduction of the Small Business Deduction.

**Taxable Capital Gain** The taxable portion (currently one-half) of a Capital Gain.

**Taxable Entity** A defined organization or Individual that is subject to tax (e.g., Corporations are taxable entities for income tax purposes).

**Taxable Income** Net Income For Tax Purposes, less certain deductions that are largely specified in Division C of Part I of the *Income Tax Act*. These deductions include loss carry overs, the Lifetime Capital Gains Deduction, and for Corporations, Dividends and Charitable Gifts.

**Taxable Surplus** A surplus account that tracks certain sources of Income of a Foreign Affiliate.

**Taxation Year** The period that is covered by a Taxpayer's return. As defined in ITA 249, it is equal to a calendar year for Individuals and Inter Vivos Trusts, and a Fiscal Period for Corporations and Testamentary Trusts.

**Taxpayer** An entity that is required to file a tax return and pay taxes. For income tax purposes, a Taxpayer is an Individual, a Corporation, or a Trust.

**Taxpayer Relief Provisions** Information Circular 07-01 contains guidelines on the discretionary authority the Minister has to grant relief based on a Taxpayer's situation. An example would be a waiver of late filing interest and penalties because the Individual suffered a serious illness. It replaces the fairness provisions.

**Teacher And Early Childhood Educator School Supply Tax Credit** A refundable tax credit available to eligible educators for up to $1,000 of eligible expenditures.

**Tenancy In Common** A holding of property, either real or personal, by two or more Persons, with each having a divisible interest that can be sold.

**Term Preferred Shares** Preferred Shares which have a provision which allows them to be redeemed by the issuer or redeemed at the request of the holder.

**Terminal Loss** A deduction in the calculation of Business and Property Income which arises when the last asset in a CCA Class is retired and a positive balance is left in the Class.

**Testamentary Trust** A Trust that arises on, and as a consequence of, the death of an Individual.

**Thin Capitalization** A reference to situations where a non-resident Specified Shareholder is receiving interest on an amount of debt that exceeds two times the sum of his share of contributed capital plus 100% of Retained Earnings.

**Tie-Breaker Rules** Provisions in International Tax Treaties that are designed to prevent the Double Taxation of Dual Residents.

**TOSI** An acronym for Tax On Split Income. (See Split Income definition.)

**Transaction Tax** A tax that is assessed on specified types of transactions. Such taxes are most commonly applied to transactions involving the sale of goods or services.

**Transfer** To convey or move from one Taxpayer to a different Taxpayer.

**Transfer Pricing** An expression used to describe the price at which services, tangible property, and intangible property are traded across international borders between related or non-arm's length parties.

**Transfer Tax** A tax on the Transfer of property from one owner to another.

**Transferee** A Taxpayer to whom a Transfer is made.

**Transferor** A Taxpayer who makes a Transfer.

**Trust** A relationship in which one Person holds the title to property for the benefit of another Person.

**Trustee** An Individual or trust institution that holds legal title to property in trust for the benefit of the Trust Beneficiaries.

**Tuition Fees Tax Credit** A credit against Tax Payable that is available to Individuals making qualifying tuition payments. The base includes specified ancillary fees and fees and ancillary costs associated with writing university examinations and required examinations in professional programs.

**Twenty-One (21) Year Deemed Disposition Rule** A requirement, applicable to some types of Personal Trusts, that requires a deemed disposition of the Trust's capital property at the end of every twenty-one years.

## U

**Undepreciated Capital Cost (UCC)** The Capital Cost of a depreciable asset class, less the cumulative CCA that has been taken to date. The tax equivalent of net book value in accounting.

**Under Integration** An application of integration procedures (e.g., gross up and dividend tax credit rates) that results in a situation where income flowed through a corporation is subject to more tax payable than the same income received directly by an individual.

**Unused RRSP Deduction Room** The cumulative total of all RRSP Deduction Limits, less amounts deducted in those years. The end of the preceding year balance is used when calculating the RRSP Deduction Limit.

## V

**Valuation Day (V-Day)** December 22, 1971 for publicly traded assets and December 31, 1971 for other assets.

**Value Added Tax (VAT)** A tax based on the value added to a product at each stage of production or distribution by a particular entity. It is generally based on some accounting measurement of Income.

**Vertical Amalgamation** An Amalgamation of a Parent Company and one or more of its Subsidiaries.

**Vested Benefit** A benefit is vested if the beneficiary has an irrevocable right to receive it.

**Vested Contribution** A contribution is vested if the Individual making the contribution has an irrevocable right to either the amount of the contribution or a benefit of equivalent value.

**Volunteer Firefighters Tax Credit** A credit against Tax Payable that is available to volunteer firefighters who perform at least 200 hours of volunteer firefighting services during a taxation year.

**Volunteer Search And Rescue Workers Tax Credit** A credit against Tax Payable that is available to volunteer search and rescue workers who perform at least 200 hours of volunteer search and rescue services during a taxation year.

## W - Z

**Wholly Dependent Person** A Dependant who lives with the Taxpayer (this requirement is not applicable if the Dependant is the Taxpayer's child) in a self-contained domestic establishment and is eligible for the Eligible Dependant Tax Credit.

**Will** A document that is a legal declaration of an Individual's wishes as to the Disposition of his or her property after death.

**Winding-Up Of A 90% Owned Subsidiary** A Rollover provision that allows the asset of a 90% or more owned Subsidiary to be combined with the assets of its Parent Company, without tax consequences.

**Winding-Up Of A Canadian Corporation** A series of transactions that result in substantially all of the assets of a Canadian Corporation being distributed to the shareholders of that Corporation.

**Zero Emission Vehicles** A motor vehicle that is fully powered by electricity or hydrogen, or partially powered by electricity with a minimum battery capacity of 15 kwh.

**Zero-Rated Goods And Services** Goods and services that are taxable at a zero GST rate. The fact that they are designated as "taxable" means that Registrants who sell such goods and services are eligible for Input Tax Credits for the GST that they pay. Examples include basic groceries (e.g., milk, bread, and vegetables), prescription drugs, and exports.
